The *Turf* made no comment on this, devoting its energies to abusing poor Lou, who was not competing. *Field*, April 19, calls her a "nice little bitch." Nellie was not at Philadelphia. At Boston she again won first. Thus the dog Solons speak:

Turf, May 16: "Even the winner we did not greatly fancy."

Field, 17th: "First went, as it should have done, to Nellie, a real good one."

Open Class Black and Tan Dogs—Twenty-eight entries. First, Turk; second, Ben; third, Brownell's Dash.

Out of this entire class but two dogs went to Philadelphia—to wit, Turk and Ben; and but two went to Boston—to wit, Brownell's Duke and Dash. New York first and second at Philadelphia. Her third and the unplaced Duke to Boston. What say the wiseacres of these awards?

Turf, April 18: "In the open class Turk won first. While, to our idea, not the true Gordon type, having too narrow and long a head and too long a nose, he is, for all that, an unusually fine animal * * * Second went to Mills' Ben, another good animal of the Irish type."

Field, April 19: "I do not think him the best type of a true Gordon, as he has the long, narrow head and nose of the Irish, etc. Second went to Mill's Ben, another long-faced one. Third went to a snipey-nosed fellow, Brownell's Dash. * * * Where no rules are observed in judging, luck must then govern all awards. Where prize-getting becomes a lottery, of what use is it to breed a certain form?"

Now, compared with results, the above is rich. Turk not a true Gordon, eh? Mills' Ben another long-faced one, eh? Brownell's Dash snipey-nosed fellow! At Philadelphia Turk won first in a class of seventeen, described in *Turf*, May 2, thus: "This class was a capital one, containing as many good dogs of average standard as we remember to have seen." And described thus in the Chicago *Field*, May 3: "This was one of the best portions of this exhibition, and comprised seventeen entries, all more or less good. In fact, I was surprised to see so much merit in all." When these writers, or this writer, saw Turk score another victory how changed the tune!

Turf, May 2: "Turk * * repeated his New York victory. He is an undeniably good animal, whose only fault is too long a head, but which, according to the present system of making awards, is not looked upon as a faulty shape."

Field, May 3: "First went, as was natural, to Turk, and I have no desire to find fault. He is all that I said of him in my report of his winning first at the late Westminster show. Mills' Ben, Westminster's second, received a V. H. C."

Now compare these original criticisms with results and subsequent comments of the *Turf* and the *Field*. Could anything be more contemptible.

At Boston but two prizes were given. The first and only V. H. C. was given Brownell's Dash. What that means we are told:

Field, May 17: "Ribbons of commendation were not emptied out of a basket to solace disappointed exhibitors, but V. H. C. was equivalent to a third prize."

This equivalent of a third prize was given to the "snipey-nosed fellow" who got it at New York. The *Field* man evidently didn't remember Dash.

Field, May 17: "V. H. C. went to C. Brownell's Dash. There was but little difference between him and his kennel companion, Duke, whom we had marked in our minutes as equally good," etc.

What a change Boston air must have wrought in the "snipey-nosed fellow."

This brace, Dash and Duke, won the special at New York for best brace of black and tans. No criticism could have been more random and false than the one above quoted. Dash has a short, square head and bluff look, peculiar to the Gordon proper, and judged by the strict Gordon rule, instead of under the black and tan classification, which is freer and gives more latitude, Dash was the best Gordon at New York.

Open Class Black-Tan Bitches.—First, Lady Gordon; second, Nelly; third, Bess. Out of this class, which contained twelve entries, three went to Philadelphia, to wit.: Lady Gordon, Bess, and Belfast. Two went to Boston, to wit.: Bess and Bessie B, who got a C. at New York. Hear comments, then see results:

Turf, April 18: "First went to Lady Gordon * * * The Lady was a fair specimen of her kind."

Field, April 19: "A good, fair bitch, I thought, but not up to Tilley's 'Whip,'" etc.

At Philadelphia, in a class containing six entries, Lady Gordon again took first. Bess was the only bitch in the class unnoticed, and Belfast, who was unnoticed at New York, got V. H. C. Lady Gordon was sweetly spoken of at Philadelphia, thus:

Turf, May 2: "First went to Lady Gordon, and a good one she is, too. No white, black of the blackest, and her tan of deep rich red color. * * * In her Mr. Roach has a fine one."

Field, May 3: "Lady Gordon, by Grouse ex-Belle, going to the front for a good first, * * * was a grand-looking bitch, the best in her class by odds. The three bitches (winners at Philadelphia) were all first-class, and it was 'Hobson's choice' to select a winner."

I actually believe they did not recognize her as the winner in New York, as she was there entered by the "Aldine Kennel, two years, Grouse-Belle."

Poor little Bess! third in New York. The only unnoticed bitch at Philadelphia had joy in store for her. She is a dog Cinderella. Unnoticed by *Turf* or *Field* at New York or Philadelphia, snubbed by judges at Philadelphia, she went to Boston and took first in a class of twelve, twice the size of that at Philadelphia. Now the *Turf* and *Field* have their eyes opened, and the fawning and flattery begins:

Turf, May 16: "First went to Bess, and she deserved it. She is a broad-headed, full-eyed bitch, of good coat and form."

Field, May 17: "Bitches—a good class of eleven entries. These were more than a good lot, taken together. Mr. Curtis has got a remarkably good bitch, far ahead even of the company she was in."

Now, is not this a real Waterloo? The other little New York bitch with a C., little Bessie B., came off gaily with an H. C.

Black and Tan Puppies.—*Turf* and *Field* abused awards here to dogs and bitches, large and small. No puppy in these classes at New York went to Philadelphia, and none to my knowledge went to Boston. Huntington's Duke, who in New York took first in large puppy dog class, did not go, although entered.

In the light of these facts, let the public judge whether the Westminster judges know how to judge in black and tan classes. Let them re-read the criticisms above quoted and say, not whether the writer in *Turf* and Chicago *Field* knows what a true black and tan is—for it is patent he does not—but let them say whether he is a fit person to report such proceedings. Let us now pass to the

Irish Setter Classes.—Of the judging in these classes at New York read the following:

Turf, April 18: "The Irish classes were composed of long-coated and short-coated, foxy-nosed and straight-nosed, broad heads and narrow heads, soft and silky coats, hard and wiry coats, etc. We had in the Irish classes dogs coming to the front which had the broad head and comparatively short nose of the English type, which dogs, if judged according to the standard, would not have stood a ghost of a chance, etc. As the dogs were of all kinds, so was the judging. The awards here puzzled the exhibitors, and would have puzzled Satan to know 'the why you know' such dogs got prizes."

Chicago *Field*, April 19: "Breeders who * * * might have fancied they were breeding to a recognized standard, found themselves in this exhibition all at sea. Exhibitors were hot in their denunciation of the way prizes went. * * * * It is provoking * * * to find this standard is set aside, and nothing but the ideas of a judge are to rule, etc."

I will prove by the record that these statements are maliciously false. Never were judgments so thoroughly vindicated. Now to the work:

Champion Irish Dogs.—Rory O'Moore first; two entries:

Turf, April 18: "He is a mighty good little dog at all points, coat, color and shape."

Chicago *Field*, April 19: "He won his honors rightly."

Rory O'Moore met Berkeley, a much better dog, at Philadelphia, and was beaten by him rightly. *Turf* and *Field* both thought it the toss of a penny between him and Berkeley. At Boston Ben beat him again, and *Turf* and *Field* still praising him, said the trouble with him was he was fatigued by the frequent shows, and in the "hottest" company he ever met. Surely, then, he was well judged at New York, when Berkeley and Ben were absent, and he had but one competitor.

Champion Irish Setters.—First, Red Rival.

Turf, 18th: "Magnificent in coat. * * * She was so pointed at the nose that we could not but dislike her."

Field, 19th: "Red Rival, the winner, is a fair-sized and put together elegant looking bitch, of grand color, and so far ahead of her companions that there was no comparison."

This writer abuses an award to one Ruby as second in this class, when no such award was made, there being but one prize.

Surely this was not badly judged. Red Rival was not in Philadelphia, but met Fire Fly, the Philadelphia winner, at Boston and was defeated by her. But two were in the class. *Turf* says Fire Fly "is a capital little bitch of wondrous quality in color." *Field* says she "is of typical form and grand color."

Open Class Irish Dogs.—"Now, Infidel, I have thee on the hip." First, Derg; second, Biddle's Grouse; third, Sprong's Smuggler. When the awards were announced thus were they greeted:

Turf, April 18: "We must close on the Gordons and take up a class in which the judging caused more howling than in that of any other class, the Irish setters. * * * The fun commenced, however, in the open classes. First was given to Derg, a good, fair dog no doubt, but not so good as the dog Grouse, who only got second. * * * Grouse, second prize, is an excellent dog with a capital head, deep chest, and looks an Irish dog. We do not want our readers to remain under the impression we do not like Derg. * * As a dog alone would rather have him than any of the others, but as an exponent of the Irish blood we look upon him as most lamentably faulty. Third went to Smuggler, an ordinary dog with nothing more to commend him than a dozen others in his class."

Thanks, *Turf*, we'll show your judgment to be valuable. What says *alter ego?*

Chicago *Field*, April 19: "The music commenced in earnest upon the announcement of the awards in open classes. First went to Derg, a good solid dog, probably not the true type, but an undeniably good dog. Derg * * * is too stocky and heavy to be a standard dog."

How sweet are thy words unto my lips. Yea, sweeter than honey unto my mouth.

Derg, Grouse and Smuggler all appeared at Philadelphia. Derg won first in a class of 19 splendid animals. Grouse and Smuggler were unplaced by new dogs and judged of equal merit, each receiving V. H. C. Now read *Turf* and Chicago *Field:*

Turf, May 2: "First went, as we supposed it would, to Derg, winner of first in same class at N. Y. Robert Emmet was a good one though unplaced, as was also the pure red Grouse of Alfred Biddle."

Oh my! How modest about Grouse. Not one word of his being better than Derg. He is afraid to fight for the dog at his own home.

Chicago *Field*, May 3: "Derg repeated his New York victory and won first again. Derg is a large-sized, deep-chested dog, a little leggy I fancied and with a little too heavy a head, but for all that a good dog and undeniably the best here in his class."

Hello! Thought you said he was not the true type, too stocky and heavy to be a standard dog? Coming round are you? That's right. He is not too stocky and heavy to be slandered. Stick to New York winners and you'll learn something about dogs some day.

But, gentle reader, the *Turf's* Grouse had enough and never went to Boston. Derg did go, and in a class exclusively for imported Irish setters, a class thus described:

Turf, May 16: "Fifteen entries and some of them remarkably good."

Field, May 17: "Sixteen entries and scarce an inferior one in the sixteen."

Derg again won first!

Yet this is the winner, who, according to *Turf* and Chicago *Field*, caused more howling and made more music than any dog in the show. A clean score—first, New York; first, Philadelphia; first, Boston. Does this look like bad judging? He was not picked out for his record. He had none. He was pitted against well known dogs, prize winners. The New York judges hailed him as a new risen star, and he has been so acknowledged everywhere, while the disappointed sit on their haunches and "howl"—fit word to describe them. That's what's the matter with Hannah! When Derg scored first a third time—

Turf, May 16: "Derg is a good dog, but as we disagreed with his winning at New York we must again here. His head is not the true Irish dog's, and another disqualification is his pure white whiskers."

The barbers forgive him. Here is the fellow who examined Sensation's toe nails fumbling around Derg's whiskers. Was ever such ridiculous nonsense written down before? He would drag this thrice-crowned champion from his throne by the whiskers.

Chicago *Field*, May 17: "First, as we expected, went to Derg. He is a good dog, undeniably of good body, grand color, but with a bad head. It is too heavy, both in breadth of ear and clumsiness of muzzle," etc.

Pshaw! You expected no such thing. You said you would submit your judgment to the knowing ones. You've been thrice whipped on Derg. Stop your idle prattle and listen and learn something.

Open Class Irish Bitches.—First, Phantom; second, Nora; third, Gypsy.

Turf, April 18, abused all three, but preferred Nora for first. *Field*, April 19, followed suit. None of these bitches went to Philadelphia. Phantom alone went to Boston and was beaten by Flora, her kennel companion, and not noticed. This bitch did badly there undoubtedly.

Red Irish Puppies.—Puppy awards approved by both *Turf* and *Field*. They were more complaisant than on any other awards. But one of these pups has been shown either in Philadelphia or New York, that is Florence II., winner of first in bitches over 6 months. In Philadelphia she was the only one in her class, but the award was withheld. She took first at Boston in a class for puppies, dogs and bitches. She was very sick in New York, and I fancy she was still so in Philadelphia. If she did not her winning first in Boston is a severe set back to the Philadelphia judges, who refused to recognize her with no competition.

Reviewing these Irish awards, please tell me what but foolish malignity could have prompted the criticisms of the *Turf* and the *Field* upon them.

Red and Red-and-White Setter Dogs.—This was a new class at New York. There was a similar class at Philadelphia. None at Boston. The success of the New York winners in this class at the Philadelphia Show was really wonderful. There were 37 entries in New York.

First, Duke; second, Montague; third, Fassitt's Dash. Duke did not go to Philadelphia. Montague and Dash and a dog named Red Gauntlet, and two dogs owned by Mr. Furness went there. Red Gauntlet was commended at New York; Furness' dogs unnoticed. These five were all that went from the New York red and white class. Here are the criticisms:

Turf, April 18: "Prizes were judged as would have been faulty Irish dogs. * * * We also have marked as good ones Frank Furness', etc."

Field, April 19: "The class is an absurd one. * * * * * Montague, winner of second, in open class could fairly be called Irish. * * * All the prizes, as I have stated, went, I think, in a most unjust manner to the nearly red ones."

Indeed! Well, at Philadelphia this class contained nineteen dogs. Five from New York. The two that *Turf* marked as good in New York, but unnoticed there, were again unnoticed in Philadelphia. The three noticed in New York took all three prizes. Montague second N. Y., first Philadelphia; Red Gauntlet C. in N. Y., second in Philadelphia; Fassitt's Dash third in N. Y., third in Philadelphia. Now, *Field*, read over your New York criticism. Let us see whether the same impertinent abuse was heaped on the Philadelphia judges.

Field, May 3: "First prize was given to Montague * * He was the best dog shown, but had not the long, narrow head of the true Irish dog * * * I shall not stop to dispute the award, for he was by far the best in form and looks. Second went to Red Gauntlet, and he was a good, fair dog. Third award I must object to, etc."

Now, compare this with his criticisms on these same dogs in New York. Not one syllable is said in either *Turf* or *Field* of their wonderful running together in New York and Philadelphia. The New York judges had been called fools for giving them prizes too shortly before, and the Philadelphia judges had been praised too highly to admit of such a thing.

Red and White Bitches—No bitch from this class went to Philadelphia. Both *Turf*, 18th, and *Field*, 19th April, claimed the second should have been first and first second, and so of pups no comment was made, and none went to Philadelphia.

Irish Water Spaniels.—First, Mack; second, Judy. Both the *Turf* and *Field* approved Mack and denounced Judy. No Irish spaniel went from New York to Philadelphia. Both Mack and Judy went to Boston. Mack in a class of eight entries scored first. Judy was beaten by a new dog named Sport.

Clumbers.—First, Trimbush; second, Nap; third, Fairy.

Turf, April 18: "But five entries, of which the manager W. M. Tileston, had two. He was given first, and second went to a capital dog—F. Austin's Nap. The class was not a good one."

Field, April 19: "In clumbers we have the anamoly of the chairman of the executive committee making an entry and gaining an award. He reaches for a coveted prize, and, there being little if any opposition, given, as he did formerly with the setter Lou, first."

It is plain these dog sages didn't like Trimbush. There was no class for clumbers at Philadelphia, and Trimbush did not go, nor did Fairy. At Boston there was a class for field spaniels of any other breed than cockers. Trimbush entered with six others and took first. Did the *Turf* and *Field* abuse him then? No; like sycophants, they fawn upon him.

Turf, May 16: "Seven entries, of which W. M. Tileston had by far the best. This dog was a clumber of good size and good looks. He appeared to more advantage here than in N. Y. We saw him on the Common * * * and confess that he improves on acquaintance."

Chicago *Field*, May 17: A Clumber was awarded first—a good dog, too, as I understand the strain—owned by Wm. M. Tileston, a bright orange and white in color, weighing, I should think, all of 30 or 40lbs.; heavily but silkily coated. He deserved what he got. I wish there were more of them in this country."

Think of two men, or one man, eating dirt in this style within a month! Verily, "The arms of the wicked shall be broken, for the Lord upholdeth the righteous."

Cockers—Dogs—First, Toby; second, Charley, in a class of six. Both Toby and Charley were entered at Philadelphia in a class containing seventeen entries for dogs and bitches. Toby failed, but Charley took first. I hardly think Toby was exhibited, although entered. Neither *Turf* nor *Field* noticed poor Charlie at New York, but now—

Turf, May 2: "First went to liver and white ticked Charley, a fair dog, with good head and ears."

Field, May 3: "First went to Charlie, a rather medium liver and white mottled dog."

Neither refer in the slightest to his being a New York winner, for they said the judges there didn't know what a cocker ought to be. None of these went to Boston.

Cocker Bitches.—First, Feather; second, Gip, third, Madge.

Turf, April 18, called Feather a toy; *Field*, 18th, "a toy, a little fairy of a thing."

Feather alone went to Philadelphia and met another little bitch, who took first and made her second in a class of but two entries. This rejoiced the souls of

Turf, May 2: "In bitches, our estimate of Feather, who was first at New York, was fully supported by the award * * * In a class of but two entries Feather was placed second."

Field, May 3: "Bitches only two entries, one of which, Feather, which took first at Westminster, and which award I commented upon at the time as being given to an animal which was of no use in the field, and only pretty as a toy. * * * This admonition was evidently heeded, for Nellie, a bitch not so good-looking, but of some use, was awarded first and Feather second. If the class had been larger, I doubt much if she would have gotten that."

What a brilliant success *Turf* and *Field* prove as judges of spaniels! No New York cockers were at Boston.

Foxhounds.—Mr. A. Belmont Purdy's magnificent brace of imported English foxhounds—the handsomest brace in the United States, I fancy—have not, nor have any other hounds at New York, appeared elsewhere since. When they took first this was their greeting:

Turf, April 18: "First went to a couple of crop-eared ones * * * and, from their style, we should judge both imported animals." *Field*, 19th, referred to this glorious brace, Lifeguard and Favorite, in the same contemptuous strain.

Beagles.—First, Charlie; second, Lottie.

Turf, April 18: "Both fair specimens, but too small in size. *Field* approves.

Dachshunde.—*Turf* and *Field* both approved first, *Field* saying: "There could be no mistake here, for he was the only true type of the strain in the whole lot." *Turf* condescended to approve second also. None went to Philadelphia or Boston.

In the light of the above, I appeal to a candid public to say whether, in the whole history of dog shows, the judgment of any set of judges has been followed with as few setbacks as those of the Westminster Judges of 1879. Look at the following table:

A Table Showing Record of Westminster Winners of 1879 *who Competed at Philadelphia and Boston.*

Pointers.	New York.	Phila.	Boston.
Champion Fan	1	A	*

* The star marks that Fan was beaten by another Westminster champion—both could not win.

"A" marks absence from show.

Where no entry in column, it means that the dog was defeated.

Verily, he laughs best who laughs last. At considerable sacrifice of time and great personal inconvenience I have prepared this review of these reviewers, because I wish to see gentlemen to the fore in dog matters, and they can only take that rank by defending themselves and asserting their rights. This is no assault, but has been provoked by wanton and false attack.

While ignorant of the causes of malignity prompting these writers, or this writer, for *Turf, Field and Farm* and Chicago *Field* to attack individuals, I think I see the animus prompting the general assaults. I saw it the instant one of the Westminster judges was called an aristocrat, and foresaw then all that followed. The Westminster Club is composed of gentlemen. Nothing could more aggravate a

vulgarian than to be ignored by gentlemen in their arrangements, especially when he affects a knowledge and superiority in the affairs about which they assume representative control. Besides the inexplicable innate animosity which the *sans culotte* all over the world entertains toward the gentleman, to be in New York and to be unrecognized and unplaced in her great Kennel Club, must be very galling to those who boast of their wonderful dog lore and experience. Yet I fancy that if every professional pigeon-shooter were taken up by the Westminster Kennel Club and admitted into its counsels, it would very soon loose its well-earned prestige as a gentlemen's organization, and become a mere organization of "sports." The flattery bestowed on the Philadelphia and Boston Clubs by such fellows is from no genuine feeling; it is through resentment to the Westminster Club, and from a desire to belittle it by comparison. I do not doubt that the Philadelphia and "Boston" organizations are composed of gentlemen. I know they are. And the judges of both are not only good judges, but gentlemen in public and private. I doubt not that they are disgusted at the invidious comparisons made between themselves and the New York Dog Show, and know that they are made from transparent motives of spleen.

Such fellows as I have described, when the longed-for opportunity occurs hesitate at nothing to vent their pique and ill-will; falsely belittle the exhibition which every dispassionate observer knows is the finest by long odds in the country; violate even the hospitality of the metropolis by publishing and giving utterance to libels upon gentlemen judges who, from mere love of sport and sporting matters, travel hundreds of miles to elevate and give tone to such affairs; attempt to convert what should be delightful reunions into angry recriminating wrangles, and bring in their low tastes, language and thoughts, as a stable-boy would befoul his master's parlor.

Brother sportsmen of every section—I mean gentlemen sportsmen—if we intend to submit to this, it is better that we stop at once. If we intend to pursue our pleasures, let us forthwith band to stamp out the blackguards. Like all blackguards, they are cowards at heart. Let us order them out, and put them down, and if they cannot otherwise be taught their place, let us kick them out. It is our only alternative, and while they will doubtless thank us for the attention and notoriety, it is our only resource. My name can be had of the Editor of FOREST AND STREAM.

GOSHAWK.

ST. BERNARDS.—The St. Bernard bitch Hero, winner of first prize at the Crystal Palace dog show when 11 months old, and owned by Mr. Le Roy Z Collins, of Lancaster, Mass., whelped on May 30th sixteen puppies, sired by same owner's Alp.

THE METROPOLITAN SEASON.

THOUGH straggling events and short cruising had already marked the previous month, the advent of Decoration Day, May 30, may fairly be said to have opened the yachting season in metropolitan waters. The commendable custom of bringing together the squadrons for an "opening cruise" under the flag officer's charge seems to be coming more into popular favor. Anything which tends to unity of purpose and practical experience is to be encouraged by all who are anxious to see our yachtsmen gradually rise to that state of proficiency which is so characteristic of our cousins across the sea. To arrive at their thoroughness in practical seamanship, we need all the squadron cruising possible with little touches of breeze and sea thrown in, such as we can find in early spring or late in fall. It is only when in company with others that a yacht's crew is put to a test and that amateurs are most anxious to develop what seamanship they possess; for to the yachstman there is no more coveted reward than the indorsement of his sailor qualities by his shipmates.

This year, the 30th of May, brought with it a fine breeze from the S. E. with cirro-stratus clouds aloft and a murkiness below which promised more wind as the day wore on. The Seawanhaka Y. C. had this year initiated an opening cruise as one of the fixtures of the club in addition to those customary later in the season, and the success of the day's sailing will bring a larger fleet to the line next year. The Corinthian element was out in force, for if there is any such element to be found in our waters, it is most certainly to be looked for among the Seawanhaka and Atlantic roll of members. Many craft had come to off Stapleton the night before, and by the time the signal was hoisted to heave up, the following fleet had collected: *Eddie*, 53ft., flagship of Vice-Com. O. E. Cromwell, in charge; *Osprey*, 58ft., Mr. Thomas Lord; and the sloops *Regina*, 50ft., Mr. W. A. W. Stewart; *Schemer*, 39ft., Mr. C. S. Lee; *Olga*, 35ft., Mr. C. H. Leland; *Blanche*, 41ft., Mr. C. H. Grundy; *Chief*, 45ft., Mr. C. L. Perkins; *Caprice*, 40ft., Mr. R. R. Hamilton; *Julian* 31ft., Mr. Wm. May; *Madge*, 30ft., Mr. W. E. Iselin, and the smart looking cutter *Volante*, 45ft., Mr. F. B. Hitchcock. The sloop *Nettie*, Mr. Wm. Morgan, accompanied the fleet. With working topsails aloft, all hands canted to port and went off on the starboard tack a few strakes down, the smaller sloops with their rails awash. *Volante* astonished the unbelieving by showing grand weatherly qualities, for she screwed out to windward of the lot, and this in spite of the tide which was still running flood. Up to the Narrows the fleet kept pretty much a bunch, working out with a lot of other yachts, but when tacks were spit and the ruck of strangers left astern, the fleet soon scattered, and little remains to be told other than that *Olga* and *Caprice* had a lulling match all to themselves and every one was making the best of his way to the S. W. Spit, the mark to be rounded before running for New Dorp and a dinner. Though the wind was only a topsail breeze and the sea very moderate, in fact 5 ton weather; some of the sloops went through some lively antics and their decks were wet fore and aft, the spiteful spray being flung from forward with anything but scant allowance. To say that the sloop is a dry boat in a sea is about the toughest yarn that has been told about the shingle bottoms. The sea seemed too much for some, or else the attractive reputation of a New Dorp dinner was such that all hands did not see the object of rounding the Spit just then and in that kind of water, so the old Illinois hulk and a stray buoy were substituted by most of the fleet for a rounding mark, and with the freshening breeze dead aft, it was not long before they brought up at an anchor off Peteler's Hotel on the Staten Island beach near New Dorp. On the run down the wind, *Volante* and *Schemer* carried "spinakers," probably the first time in any club event in America. This sail is so effective, serving even to keep the jib rap full from the escape between the spinaker's luff and the mast, that it will not be long before every craft up to the times will have to tally away a spinaker among the other sails in her locker. What with spinakers and the modified cutter rig now being rapidly adopted, who will say there are not better things in store for the future? *Regina* is the latest convert to common sense, and comes out this year with no huge pot-bellied jib to raise the blisters on her amateur's hands, but has wisely adopted the snug cutter rig in its modified form, and now she hoists, sheets home, and furls with half the amount of labor and in less time than before, while her sailing during this cruise proved her to be the same tough customer as before. When the last big jib of the lubberly sloop rig, a veritable sailor's eyesore, disappears from our waters, what a relief it will be! The day's not very far off either. It took five years to drive this innovation through our worthy pilot's heads, but the yachtsmen promise to fall into line all the quicker. The fleet was joined at their anchorage by the three-hulled schooner *Nereid*, Mr. Anson Phelps Stokes. After some narrow escapes in landing and the discomfiture of the best efforts of New Dorp's French cook from Cork or Berlin, the Vice-Com. gave the word and all hands embarked for the run home, without observing any special sailing order. The schooner *Eddie* took matters leisurely, and under jib and mainsail had a little scrub race with *Nereid* of the three hulls. The latter was left astern, whereupon Mr. Stokes made more sail, and with gaff topsails and jib topsails barely succeeded in outrunning the Vice Commodore's tidy little schooner under half her lower sail only. This is hardly speaking well for *Nereid*, but with sheets checked or boom over the quarter she is certainly very slow, whatever may be her qualities in a strong blow when jammed on the wind. Her failure in running we attribute to her large amount of wetted surface and to the generation of two or even three bow waves and the difficulty of their clearance amidships. Though we cannot speak positively without the lines of *Nereid* before us, we judge her wetted surface to be about 1,100 ft., while that of a schooner of the same length would be only 700ft. Allowing additional length to the schooner of ordinary type, so as to bring her wetted surface equal to *Nereid's*, would call for a craft 60ft. on water line, and she would certainly carry more sail than *Nereid*. The latter is therefore poorly off for driving power in spite of her large stability in proportion to displacement or length. The fleet made harbor one by one during the twilight hours, the smaller yachts running up to Gowanus where they picked up their regular moorings, *Volante*, *Chief*, *Olga* and *Osprey* having previously cut loose from the fleet and returned home. Among the schooners at anchor off Stapleton were found the well known *Magic* recently returned from a Southern cruise, and the beautiful *Norna*, the latter looking majestic with her high sides and incomparable spars and rig. Many were the flattering encomiums bestowed upon her, and it did one's eyes good to see a ship shape flush deck and seagoing craft, in strong contrast to the lighter material laying about her fitted for fine weather only. *Norna* has to our mind the handsomest rig of any schooner in America, and there is about her as a whole something so strongly indicative of purpose in her design, that the handiwork of the skilled modeler and the educated eye are at once apparent. And so the first opening cruise of the Seawanhaka Y. C. came to a successful close after a fine day's sail and propitious augurics for the next events of the season.

YACHTING NEWS.

ATLANTIC YACHT CLUB.—This club sailed their opening cruise on Decoration Day, with a fair turnout of vessels. We believe it is due to the Atlantic Y. C. that this feature of opening cruises was first introduced in New York waters. With a fine S. E. wind, the small craft were sent away at 10:15 from their anchorage in Gowanus Bay, *Mab*, *Nomad*, *Alma* and *Pilot* filling away on the port tack under whole canvas. A quarter of an hour later a second gun from the schooner *Agnes*, with Com. Latham A. Fisk on board, sent off the rest of the squadron consisting of the schooners *Peerless* in the lead with *Triton* and *Agnes* following, and the sloops *Kaiser*, *Sadie*, *Genia*, *Winsome*, *Pirate*, *Imperia*, *Dolphin*, and *Orion* all in close order. *Lizzie L.*, the new sloop of Dr. J. C. Johnson, got under way soon after with her builder, John Mumm, on board and followed the fleet, doing well alongside of the smaller sloops and finding nothing worthy of herself short of *Orion* and *Sadie*. In this *Lizzie L.* rather surprised the knowing ones and gave the lie to her previous reputation. The schooners made an excellent match all day, *Peerless* having the best of it, though she could not shake off *Triton*, the latter hanging to her like a leech, until in crossing tacks below the Hospital Island. Here, to avoid collision, *Triton* bore away for *Peerless*, though on the starboard tack, and in so doing was struck by a flaw carrying her down to the coamings and washing away her lee waist-boat. The delay caused in picking the boat up gave *Agnes* second place among the two stickers. The S. W. Spit buoy was first turned by Mr. Maxwell's smart schooner (who by the way seems to be doing well with the lead on her keel and the lug to her foresail), *Agnes* followed round two minutes later and *Triton* at a little longer interval. *Sadie* stood over too far and *Orion* slipped first around the mark among the sloops. *Lizzie L.* also lost to *Winsome* by wanting too much room, but when once off the wind made good her loss by passing *Winsome* in spite of the liberal balloon jib topsail the latter set and which ripped the stick out of her. The same order was maintained into Gravesend Bay with the schooners, the sloops coming to with *Orion* in the lead, followed by *Sadie*, *Lizzie L.*, *Pirate*, *Winsome*, *Dolphin*, *Imperia*, and the little cat *Wind* which had done wonders all day in the heavy sea with Mr. Wm. Peet at the helm to luff her out. The *Genia* had carried away something and failed to fetch the weather mark. The smaller craft had already made port, *Alma* minus her topmast. "Charley Noble" was set to smoking, and after a hearty dig at the scouse kittle and dough pan, the fleet got underway again, homeward bound, the ancorage at Gowanus being made as best they could. The cruise was very successful and served its purpose in giving amateur crews a "shake down" into their respective billets for the season.

SOUTHWARK YACHT CLUB.—Last Monday, (May 26,) the annual regattas of both the Cooper's Point and Southwark Yacht Clubs were sailed, and a better day could not have been selected. A heavy breeze from northwest to north began to blow early in the morning, and the tide being ebb at five o'clock made a splendid course for the boats, with no rough seaway. The boats of the Southwark fleet are divided into three classes—first and second class double-enders and tuck-ups. They are all fifteen feet long, and the only difference between the first and second class double-enders is about three inches more beam. The tuckups are about the same size as first-class double-enders, but have square sterns. They all carry from 40 to 55 yards of sail.

At 10:10 o'clock the second-class double-enders got off as follows: *Emma*, *Morgan Hagan* and *Oliver* (the *Cutter* and *Estelle* capsized just previous to the signal being given).

After a lapse of ten minutes the signal was given for the first-class double-enders, and off went the *Mitchell*, *Lawrence*, *Maid*, *Brugam*, *Young*, and others, and as their light sails caught the full force of the lively nor'wester, they careened over to their camings, and with six men stretched out to windward, and the weight of the sail and spars to leeward, you would think these frail little structures would be torn apart; but they are tough and springy, being built of the best cedar, and all copper fastened.

At 10:30 the tuckups were in line, and before the echo of the signal given had died away, the *Ledyard*, *Campbell Boyle*, *Sparks*, *Chris. Klienz*, *Douglas*, *Powell*, *Lenoir*, and *Bard*, were all under way, quickly followed by the balance of the fleet.

The boat that was to accompany the regatta, and which contained the judges (the *Creedmoor Cutter*), had taken so much water by leakage, that it was with difficulty she could be moved, and before the tug had drawn her out into the deep water, the last of the fleet of tuck-ups was nearly two miles down the river, and some of the double-enders were not seen again by those on the *Cutter* until after they had rounded Chester buoy, and were on their return home. The *Cutter* leaked so much that she had to be beached at Billingsport, about 14 miles below the city, and her passengers were brought to Philadelphia in tugs.

Sparks carried away her throat halliard block, and stopped to repair; the *Campbell*, which led the fleet of tuckups to within four miles of the lower buoy, split her rudder, and was towed home. The *Morgan* upset when rounding Chester buoy, being leader of the second-class double-enders; she righted again, baled out, and came in third of her class. The *Lenoir* swamped; the *Forest* upset, and the *Mitchell*, after leading all the boats of her class, down and around Chester buoy, up to Greenwich Point, a short two miles from home, caught a heavy flaw of wind from the northwest; her crew stretched outboard to counteract it, and brought her up too suddenly, when she caught a "back full" and capsized to windward, thus losing the race. The *Lawrence*, Captain Swallow Martin, one of our most skillful sailers of small boats, caught the same flaw but squared away, and received no damage. So did the *Maid*, Captain Isaac Sharp, the treasurer of the club. These last boats reached the home buoy in the order named, and won first and second prizes. The *Lawrence's* prize being the champion flag and handsome mantel clock, and the *Maid's* prize a silver castor. The *Emma* won first prize for second-class double enders, and the *Oliver* second prize. The *Ledyard* won first prize for tuckups, and the *Boyle* second prize. The prizes were all of the same character. The time was about the best ever made—a trifle over four hours over a course of over thirty miles. C. C.

COOPER'S POINT YACHT CLUB.—The Cooper's Point regatta, sailed May 26, was a great success. The following boats entered: *Cohill*, *Barr*, *Feeny*, *Holland*, *Gnany*, *Kramer*, *Keenan*, *Schuck* and *Noreross* of the Cooper's Point fleet, and the *Ashton*, *Pierce* and *Annie*, second-class boats of the South Camden fleet. These last did not contend for the champion flag of the fleet, only for the money prizes. They started 20 minutes ahead of the others (the time allowance of their class). The *Annie* capsized before she had gone two miles; the *Pierce* did not return to the home buoy; and the *Ashton* sailed over the entire course, upwards of 35 miles, in the unprecedented time of 4 hours and 1 minute.

The larger boats of the fleet got away in the following order: *Feeny*, *Holland*, *Barr* (these two foulcd, but soon separated), *Cohill Gnany*, *Noreross*, *Kramer*, (capsized) and *Schuck*, and proceeded down the river before a sparkling northwest breeze. The *Holland*, which has a smaller mast and sail than last year, and is otherwise in much better trim, gradually drew ahead of the *Feeny*, and maintained the lead all the way to Chester buoy. The *Cohill*, under a double reefed sail, followed, then came the *Gnany*, *Noreross*, *Schuck* and *Barr*. Along Tinicum the *Noreross* passed the *Cohill*, and rounded Chester buoy about fifty yards ahead. These two boats held their way up the main channel against the ebb tide, knowing that in a half hour it would change to flood, and they would then have the full advantage of it, whilst the others took the shore along Tinicum. The *Cohill* shook out her reef at Crab Point, and gradually overhauled and passed the *Noreross*, and at the mouth of the Schuylkill, at lower end of League Island, was not more than half a mile behind the *Holland*, and at least a quarter of a mile to windward. Harry Funk, her captain, handled her most beautifully, steering for

the Ironsides buoy almost in the wind's eye, so as to make Swash Channel inside the Horseshoe bar, which she accomplished, thus gaining a full half mile to windward of the *Holland*, owing to the latter's inability to work so close to the wind. The *Holland*, to keep off the bar and gain the advantage of the flood tide, steered toward Gloucester. At the mouth of the back channel, Funk shook up his boat out of the wind, and ordered another pull on the throat halliards, so as to get his sails well up, and enable him to look close to windward, which would bring him out at Greenwich Point, not only ahead of the *Holland*, but about three-quarters of a mile to windward. It was an unfortunate move; the first pull at the halliards caused them to creak, and the next moment they parted four feet below the block; down came the sail with a rush, and the *Cohill's* chance of winning the race was done for, she lay dead as a log upon the water, and before the damage could be repaired drifted a mile to leeward.

The *Holland* made a back stretch from Gloucester, and proceeded up the river, passing the home buoy first, and winning the champion flag. When within about half a minute's sail from the home buoy, the *Schuck* capsized, and the *Granny* came in second, followed by the *Burr* and *Norcross*.

This was the best regatta ever sailed by the Cooper's Point fleet, and the time was the quickest on record. C. C.

JERSEY CITY YACHT CLUB.—The 21st annual opening of the Jersey City Yacht Club, was held May 30, at their club house, Jersey City. At 10 o'clock the fleet, numbering 23 yachts, were drawn up in line and inspected by Commodore Nugent and staff. At 10:30, the signal gun was fired from the flagship *Linda*, Vice-Com. Ball, when all weighed anchors and started for the Narrows, to round the buoy of Coney Island Point and return to club house. The wind being south east they had a beat to windward with a short and a long leg. *Psyche*, Captain Miller, led the van until near the Narrows when *Knight Templar*, Captain Donshea, took the lead and maintained it on the return to the club house. The members and friends partook of an old-fashioned clam bake, which was enjoyed very much thanks to the committee, Messrs. Green, Smith and Forsyth. G.

DORCHESTER YACHT CLUB.—This club opened the season with their first regatta, May 30. Wind blowing stiff from S. W. by W. Course from judge's boat off Thompson's Island to Fog Whistle off the Graves, thence to bell buoy, Point Allerton's buoy, pa s between George's and Rainsford Islands, Leaving Long Island on the starboard hand, Moon and Thompsons Islands on the port, and home to the judge's boat; distance 22 miles. Summary of the race:

FIRST CLASS.

	Sailing Time.	Corrected Time.
	H. M. S.	H. M. S.
Adrienne, J Pfaff	2 55 48	2 36 18
Vif, E Harding	3 01 52	2 39 50
Anonyma, W Sonier	3 02 45	2 46 25
Wivern, P Ives	3 00 05	2 46 58

SECOND CLASS.

Syren, L H Keith	2 44 59	2 22 57
Enterprise, F O Peabody	2 49 52	2 27 45
Saxon G F Clark	3 03 58	2 33 16
Esperance, Goddard	2 59 46	2 34 24

THIRD CLASS.

Waif, King & Clarke	3 09 26	2 37 15
Ethel, C H Gibson	3 15 01	2 43 49
Echo, ——	3 24 26	2 49 00
Sunbeam, W S Nickerson	3 26 05	2 54 53
Louie, A L Jackson	4 28 23	3 47 45

Prizes went to *Adrienne*, *Syren* *Waif*. Judges, Messrs. Davenport, Glover, Damrell and Barnard.

BOSTON MODEL YACHT CLUB.—First regatta of the year was held on the Boston Common, May 30. Best 3 in 5 heats. Limited to models from 18 to 36 in. Referee, Ed. F. Richardson. Won by *Starry Flag*, Mr. Chas. O. Barton, defeating *Flying Cloud*, schooner, and sloops *Sea Gull* and *Union*.

SOUTH BOSTON YACHT CLUB.—The union regatta sailed May 30, brought a large fleet to the line in spite of the heavy S. W. wind blowing. Course, from the judge's boat to Cow Pasture buoy No. 6, thence to buoy No. 7 off Fort Independence, and after rounding No. 6 buoy, Lower Middle, return to judge's boat. *Fearless* had the stick taken out of her, *Veronica* carried away her bowsprit, *Posy* snapped her boom off short while leading in her class, *Chiquita* lost her topmast, and all the third-class keels came to grief. Summary of the race:

FIRST-CLASS KEELS.

	Actual Time.	Corrected Time.
	H. M. S.	H. M. S.
Gael, W McCormick	1 32 20	1 01 55
Annie, George Martin	1 37 40	1 08 38
Clara	Withdrawn.	
Sunbeam	Withdrawn.	

SECOND-CLASS CENTREBOARDS.

Thistle, W H Liechfield	1 50 18	0 52 43
Flyaway, W H	1 23 00	0 55 47
Alite, Walters & Chapman	1 41 50	1 05 31
Judith, H. Pigeon	1 52 15	1 52 15
Eugenia, C West	Withdrawn.	
Posy, H McKee	Disabled.	

SECOND-CLASS KEELS.

Unknown, J G Chambers	1 32 22	1 32 29
Fearless, ——	Disabled.	
Veronica, D Chamberlain	Disabled.	
Quimper, ——	Disabled.	

THIRD-CLASS CENTREBOARDS.

Fancy, Patrick Grant	1 45 59	1 07 11
Sheila, Chas A Merrill	2 03 10	1 20 44
Wild Fire, Com Keith	Withdrawn.	

No starters among the first-class centre boards. First prizes went to the following yachts in their respective classes: *Gael*, *Thistle*, *Fancy*; second prizes to *Annie*, *Flyaway*, *Sheila*. No prizes given to the remaining classes. Judges, Messrs. J. M. Charnock, L. S. Pond, William Morris, William Reid, C. T. Haley, Thomas Christian, James Regan. Regatta committee, Messrs. Fred G. Cooley, James Charnock, Frank Hanscom, G. F. Kenny, S Chamberlain, J. E. Chandler, Charles Griffin.

SOUTHERN YACHT CLUB.—The second annual regatta of this club was sailed May 26, at New Lake End, New Orleans, and seems to have met with a hearty popular reception. The wind was fresh from S.S.E. at the rate of 18 miles, dropping to a comfortable 10 miles before the finish. Nineteen entries. *Maggie*, of the third class, upset, and the "cross bones" catamaran *Unknown* lost her rudder before the start. *Susie S.*, former *Bella* of New York, was of course the favorite, in spite of the presence of such cracks among the sand bag fraternity as *W. R. Brown*, now *Lady Emma*, and *Pluck and Luck*, all imported from New York waters. Start was effected from an anchor at 3h. 4m. P. M., and all hands wore short around and were off with a free wind under lower sail, *La Belle* only carrying a gaff topsail. *Susie S.* took the lead and rounded the first mark with lots of water to spare. *Olivia* was troubled with her rudder and had to come into the wind to repair damages, causing her to drop to the rear. *Linnos* withdrew after carrying away her jibtack about the same time. *Zoe* lost a man overboard, and after picking him up, made for home. A couple of boards brought the fleet to the next mark, from which they came to the start again with the wind free, *Sussie S.* still holding her lead. This triangular course had to be sailed over three times, distance 15 miles. During the second round *Puck* carried away throat halliards and gave up. At the finish of the second round *Susie S.* had a mile of water to herself, *Cydnus* second, then *Pluck and Luck* and *Lady Emma*, the New York favorites being all well to the fore. Among the cabin yachts the sailing was not very interesting owing to meagre entries, *No Name* having things pretty much to herself. We append the summary:

CABIN SLOOPS.

Yacht.	Owner.	Length.	Actual Time.
		FT. IN.	H. M. S.
No Name	Brewster	35 8	2 53 43
La Bella	McCutcheon	32 4	2 55 45½
Zoe	O'Brien	30 0	.. .. ..

FIRST CLASS.

Susie S	Brewster	27 2	2 29 34
Lady Emma	Israel	27 2½	2 36 45
Cydnus	Harris	26 10½	2 40 02½
Pluck and Luck	Israel	24 8½	2 40 35
Linnas	Harechide	27 10	.. .. ..

SECOND CLASS.

Xiphias	Howard	21 11	3 17 44
Puck	Mitchell	21 11	.. .. ..

THIRD CLASS.

Juniata	Israel	19 11	3 20 53½
Gypsey	Maginnis	19 11	3 21 47
Mary A	Maginnis	19 11	3 21 24
Maggie	Brewster	19 11	.. .. ..

FOURTH CLASS.

Olivia	Israel	17 11	3 24 19½
Clarrie F	Finney	17 11	3 25 15
Brenda	Del Bondis	17 11	3 35 18½
Zephine	Valette	.. ..	.. .. ..

No Name wins in the cabin class, *Susie S.* in first class open boats, *Xiphias* in the second, *Juniuta* in the third, and *Olivia* in the fourth.

The "open to all" races of the same club were sailed two days later, May 28, with like success, but resulted in a bad and somewhat unaccountable defeat of the imported favorite, *Susie S.* She had to strike colors to the *Lady Emma*, the former *W. R. Brown*. Our Southern exchanges make a mistake in calling the *Brown* a Southern yacht, for she was built in New York waters, and it will be a long while yet, we think, before any New Orleans built boat will show the Northern cracks the way over the course. The boats were this day sailed by professional crews and Cearney, formerly sailing master of the erstwhile Mobile Y. C. had the tiller of the *Lady*, while Mr. Alex. Brewster, well-known as one of the best sailers in New Orleans or the South, tooled the *Susie S.* So it may be accepted that the best speed was got out of both the craft. The wind was steady, and blew 12 miles from E. by N., sea smooth, so that it was the *Brown's* weather and Cearney into the bargain that brought the *Lady* out with such a handsome lead. Sixteen entries came to the line, and at 2h. 4m. P. M. they were sent away over the triangular course on the lake, three times over; distance, 15 miles. *Lady Emma* took the lead from the start, and *Susie S.* got the better of *Pluck and Luck* by the time the second mark was reached. Among the cabins *La Belle* turned the tables of the previous race, and led *No Name* a short distance over the whole course. On the third round *Lady Emma* took a bad knock down, and *Cydnus* spilled her ballast to windward. Otherwise, nothing worth noticing occurred. The yachts finished as under:

CABIN CLASS.

Yacht.	Owner.	Length.	Actual Time.
		FT. IN.	H. M. S.
La Belle	McCutchen	32 4	2 48 4½
No Name	Brewster	35 8	2 52 43½

FIRST CLASS.

Lady Emma	Israel	27 2½	2 23 8
Susie S	Alex. Brewster	27 2	2 31 36½
Pluck and Luck	Israel	24 8½	2 36 40
Cydnus	Harris	26 10½	2 34 40

SECOND CLASS.

Xiphias	Clemens	21 11	2 50 47
Puck	Mitchell	21 11	2 51 28

THIRD CLASS.

Juniata	Israel	19 11	2 53 26
Gipsy	Maginnis	19 11	3 11 ⅝
Mary A	Maginnis	19 11	3 12 31½
Maggie	Brewster	19 11	3 12 50½

FOURTH CLASS.

Claire F	Finney	17 11	3 8 6
Minnie	Comiss	17 11	3 18 59½
Olivia	Israel	17 11	3 18 11½
Brenda	Del Bondis	17 11	3 28 49

Time allowance, four seconds per foot per mile. Prizes, therefore, go to *La Belle*, *Lady Emma*, *Xiphias*, *Juniata* and *Claire F.*

ATLANTIC YACHT CLUB.—Sailing directions have been issued for the annual regatta, June 7. Schooners will be classed 75ft. and over on water line, and under 75ft. Cabin sloops, 45 feet and over, 35 to 45ft., and under 35ft. One class for open sloops and one for cat-boats. Start will be be flying, first whistle from steamer *Americus* to prepare, second whistle three minutes later will send off classes A, B and C. Third whistle for classes D and E, and a fourth whistle for classes F and G. Club signals to be carried at the peak, and numbers on the mainsails. Judges, Messrs. Ed. Arnold, Thomas J. Northall and George W. McNulty. Courses, for classes A, B and C from Bay Ridge around stakeboat at buoy 8½ on S. W. Spit, thence around Sandy Hook lightship, rounding by the eastward and southward, thence home, leaving Romer beacon on starboard hand; for class D, same course, but round stakeboat in Gedney Channel instead of the lightship; for class E, F and G, around buoy 8½ and home. Pass to westward of Lafayette and to eastward of buoys 11, 13 and 15 on West Bank, both going and returning; round stakeboat at S. W. Spit by the westward and southward. Finishing line will be designated by white and red lights on the mark boats. No limit to time of race. Club rules in force. Rule XVII. as regards schooners only is suspended. One prize to each class. The "Livingston Memorial Prize" to be awarded to first sloop of class D in at finish, regardless of time allowance, to be held on the conditions prescribed. Prize for class G is presented by Mr. Charles Pryer. Regatta Committee, Messrs. J. L. Marcellus, George A. Weber and C. T. Lippitt.

PORTLAND YACHT CLUB.—The opening cruise of the P. Y. C. was sailed May 29, 30, 31 and June 1. In obedience to signal from the Commodore aboard the *Sparkle*, the fleet got under way at 4 P. M. Thursday, May 29, stood down the harbor and hauled to the westward, after rounding the point of Great Moshier's Island, leaving Crab Island ledge on the port hand. They came to an anchor off Soule's wharf, South Freeport, at 7 P. M., Friday; the *Petrel* joined for the day and all hands hove up at 9:15 bound for New Meadows River, with *Casco* and *Gussy* in company. The Three Islands were reached at 1 P. M., and the yachts lay pitching at long scopes, as the wind had risen to a fresh blow. Bath was visited by many from the fleet. Saturday the wind was still fresh from the S. and the air very cold. The yachts got away early, the *Clarence* having joined, and it was a beat out by way of Flag and Ragged Island. Potts' Harbor was made at 1 P. M. During the day, *Minnie*, *Gussie*, *Marie*, *Nellie*, *Rambler*, *Twilight*, *Willie and Undine* reported to the Commodore, swelling the fleet to very respectable numbers. Sunday, the last day of the cruise, the fleet got under way at 10:50 with a light air from the W., when a new anchorage was made in Jewell's Island Cove by 12:30 P. M. A start was again made in the afternoon and the yachts had to beat against a S. W. breeze through White Head, the leaders laying to off the Breakwater till the rest came up. They then sailed up the harbor in fine style, and brought to at their regular moorings after a very enjoyable and well attended cruise of four days.

HUDSON RIVER YACHT CLUB.—This club will sail its eighth annual regatta, Monday, June 9. The steamer *M. Finn* and barge *Republic* will accompany the yachts and an entertainment will be given on board. Steamer will leave foot of West 10th st. at 9 A. M., and touch at 34th st. at 9:30, at 57th st. at 10, and at 79th st., North River, at 11 A. M. Tickets on board, 50c.

—We call attention to the sloop-yacht *Lorelei*, advertised for sale in our yachting columns. She is a handy little vessel, and in excellent condition. The advantage of our advertising columns for the purchase and sale of yachts of all classes is self evident. This paper is read every week in the year by every yachtsmen in the country and has among them a larger circulation than all other papers combined. A word to the wise, etc.

FIXTURES.

June 6—Prospect Park, Staten Island 2d vs Manhattan 2d.
June 7—Baltimore, Baltimore vs Chestnut Hill.
June 7—Haverford, Dorian vs Young America.
June 7—Nicetown, Germantown 2d vs Oxford.
June 7—Ardmore, Belmont vs Merion.
June 7—Chestnut Hill, Young America 2d vs Philadelphia 2d.
June 12—Prospect Park, Manhattan 2d vs St. George 2d.

MONTREAL VS. OTTAWA.—This match was played on May 27 and 28 at Montreal, and resulted in favor of the home club by 7 wickets. During the afternoon of the second day's play, Her Royal Highness the Princess Louise and His Excellency the Governor-General drove on to the ground and staid for a considerable time, evincing great interest in the game. Cricket is very popular in the Dominion, there being upwards of forty clubs, besides a large number of school organizations, all in a very flourishing condition. On this occasion neither party turned out its full strength, and we miss the name of that good cricketer, the Rev. Mr. Phillipps, on the side of Ottawa. The batting of both clubs was the feature of the game. For the home eleven, J. W. Gordon, well known to New York cricketers, scored an excellent 35; Gough, 31 and (not out) 20; Hare, 18 and dashing (not out) 39; and Galt, 26. For the visitors, Brodie contributed 24 and 15; Dr. Powell, 8 and 25, Baker, 0 and 22; Brophy, (not out) 14 and 3; and Smith, 11 and 1. The following are the totals:

	1st In.	2d In.	Total.
Montreal	132	67 (3 w'k'ts)	199
Ottawa	96	94	190

PENINSULAR CRICKET CLUB, of Detroit, Mich., played a very enjoyable club match on Decoration Day. Sides were selected by Messrs. Calvert and Bamford, and thirty-one members took part in the game. Care was taken that the strength of the players was equally divided, as the scores were to count in this season's average. The grounds of this club, which are said to be the best in this country, are situated in Recreation Park, where eighteen acres are employed by cricketers and ball-players. It will be remembered that a very strong eleven of this alive club visited the East in July last, and after a week of good cricketing returned home victorious, having beaten the St. Georges and Manhattan clubs of New York and the Germantown of Philadelphia. On two occasions have Western teams visited their brother cricketers in the East, and it is time that one of our crark clubs should return the compliment and "Go West." A very delightful and quite inexpensive tour, occupying about a week's time, can be made through Canada ending at Detroit, where, from what we know of the jolly Western boys, a good time would be in store for the excursionists. We trust to be able to record a trip of this kind before the end of the season.

BROOKLYN ARCHERY CLUB.—The Brooklyn Archery Club held their first regular field day on their grounds at Prospect Park, Brooklyn, May 30. Some fine scores were made at all the ranges, considering that for the first time the members attempted long range shooting. The distances shot were 30, 40, 50, 60, 80 and 100 yards; 30 arrows each at each distance. In the afternoon E. I. Horsman, Esq., appeared on the grounds accompanied by H. C. Carver, Esq., of Chicago, Cor.-Sec'y. of the National Archery Association. Mr. Carver displayed his skill at the 80 and 100 yard ranges. Hundreds of people were drawn thither by the appearance of the bright targets, and applauded vociferously as an arrow entered the gold. Taken altogether it was a brilliant day for the members of the B. A. C. They are about joining the National Association, and should they take part in the tournament to be held at Chicago in August the Western clubs will have to look to their laurels. Score—Target, 48 in.; range, 40 yds.; 30 arrows per man:

	Hits.	Score.		Hits.	Score.
Mr Hoyt	25	105	Mr Blake	21	159
Mr Miller	17	81	Mr Shed	16	77
Mr Dowling	9	43	Mr Wemple	14	74
Total	229		Total	810	

THE NEW YORK CONTINENTAL FLYING CLUB.—This club flew their carrier pigeons May 28 from Huntingdon, Pa., 208 miles air line from N. Y., and were liberated by Mr. K. M. King, Ag't. Adams Ex. Co., at 9 A. M. The first birds arrived in the following order: Three of L. Waefelaer's at 2:53; five of O. Donner's at 2:15; one of J. Vanapstal's at 3:20; two of O. Donner's at 3:05; Mr. Waefelaer had sixteen of his birds at Hasson's at 6. Mr. Waefelaer had sixteen of his birds at home at 3:05; Mr. Donner five at 3:15; Mr. Vanapstal ten at 3:23. On the 6th of June the same birds will fly for the Inter-State race from Cresson, Pa., 250 miles air line.

L. WAEFELAER, Pres't.

New Publications.

THE INDUSTRIAL NEWS AND INVENTOR'S GUIDE.—We have received the initial number of a new monthly periodical, whose title as above partly explains its intended mission. It is edited by Gen. Chas. B. Norton, Vice-President of the "American Industrial Exhibit Company," of which it is really the organ. The object of this organization as set forth in its prospectus, is to serve the special interests of inventors and manufacturers, by securing to the former the advantage of capital for the introduction of inventions, and to the latter the earliest opportunity of examining improvements in machinery, agricultural implements, fire-arms, etc., etc. The Company's headquarters are at 733 Broadway, where there is an exhibition room for models, a reading room, library and lecture room, salesroom and agency. There is no doubt of the necessity for a bureau of this sort, or of its successful operation and financial success in the hands of its present management. It has been endorsed in advance and encouraged by Prof. S. F. Baird and other like authorities, and an earnest of its future usefulness was shown by the fact that 200 models were received within 30 days. If all newly patented articles could be placed on sale here as soon as they are offered to the public to purchase, the headquarters would constantly be thronged by curious searchers after something that may not at present fully satisfy their requirements.

The periodical in question is a handsome illustrated quarto in illuminated cover, and contains full page engravings of the Exhibition Buildings at the coming shows at Sydney and Melbourne, Australia, in 1879 and 1880. There are also diagrams of Edison's inventions; and, what is of special interest to some of our readers, a spiked sheep collar, to protect the sheep from dogs, wolves, and other ravenous beasts which invariably seize their prey by the neck; and diagrams of Boughton's new explosive target ball.

WILD LIFE IN A SOUTHERN COUNTY. Boston: Roberts Brothers, 1879. Price $1.

The Southern County is one of those in Merry Old England, where he who seeks nature in her own unrestrained sway may find her very near the borders of long established civilization. The author of "Wild Life" is the same charming writer who has already discoursed of the ways of the Old Gamekeeper, and having already written our high appreciation of the former book, we may now add that the volume before us is marked by the same sympathetic insight into the lore of the hedge-rows and meadows, the same power of keen and minute observation and out-of-the-way learning. This is just the book to read of a summer's afternoon; it is written in a restful way. One mission it cannot fail of accomplishing—that of teaching us to keep our eyes and ears open to the teachings of the fields and woods.

FISH CULTURE AND FISH CATCHING. By Hon. Robert B. Roosevelt and Seth Green.

This is a book by no means pretentious, although the publisher is credited with saying that it contains all there is to be said upon the subject. We acquit the authors jointly and severally of having committed themselves to any such sentiment. Statements and instructions contained in the book are given concisely and intelligibly. It certainly covers a great deal of ground not hitherto treated of by earlier American works on Fish Culture, and so far as the book does go, it will be found useful to all persons interested in this topic. It may be obtained of Geo. H. Meyers, No. 76 Chambers street, New York.

THE NATIVE TRIBES OF SOUTH AUSTRALIA, By George Taplin. E. S. Wigg & Son, Publishers, Adelaide, 1879.

This is an octavo volume of 300 pages, illustrated with portraits and character sketches, and is very valuable as the only work which preserves in a collected form the few accounts which have been written respecting the native tribes of South Australia, their character, customs, language, etc.

A NEW BOOK ON ANGLING.—J. B. Lippincott & Co., will soon issue "Camping on the Lycoming," by Dr. Thad. S. de Graff. The author is already known to our readers as a contributor to the FOREST AND STREAM, and we may anticipate from his pen a pleasing contribution to the literature of angling.

HOW TO GROW HANDSOME.—By D. H. Jacques, New York: S. R. Wells & Co., 1879. This is a new edition of Dr. Jacques' book published some years since. It discusses the laws of physical and mental hygiene, and while containing nothing absolutely new, yet insists upon some old truths but seldom remembered.

THE ADELAIDE DIRECTORY for South Australia, with a Map of the Colony. J. Williams, Publisher, Adelaide, 1879.

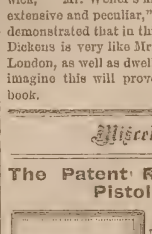
This Directory affords an immense amount of statistical information. It is a volume of 600 pages octavo.

DICKENS' DICTIONARY OF LONDON, 1879; AN UNCONVENTIONAL HANDBOOK. by Charles Dickens. New York: Macmillan & Co., 23 Bond street. Price 35 cents.

This is a most compact and yet complete guide to the great London world. Mr. Charles Dickens, the son of the late Charles Dickens, has adopted as the key to his book the saying in "Pickwick," "Mr. Weller's knowledge of London was extensive and peculiar," and has very thoroughly demonstrated that in this particular Mr. Charles Dickens is very like Mr. Weller. For visitors to London, as well as dwellers there too, we should imagine this will prove an invaluable handbook.

Miscellaneous.

The Patent Rubber Pocket Pistol Case.



ADVANTAGES:
It affords a thorough protection to the pistol against dust from perspiration, and prevents the profrusion of the weapon through the garments.

THE CARVER TARGET BALL.

DEAR SIR: GREENVILLE, Pa., May 26, 1879.

We take pleasure in notifying all admirers of Target Ball Shooting that we have just introduced a COMPOSITION TARGET BALL for trap shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days, and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. order must accompany all orders. Organized clubs are invited to send for Sample Box (25 balls) and Circular free.

J. H. WAUGH, Inventor.

PRICE LIST—Per thousand, $12. A Discount of 20 per cent. on 5,000 lots. No charge for packages. Address

CARVER TARGET BALL CO., Greenville, Mercer Co., Pa.

"St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior in quality, to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2½, 2¾, and 2⅞ inches. Longer shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of $1.15 for No. 12; $1.30 for No. 10.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME, AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

FROM C. F. WILLIS, PUTMAN, FLA.:
I enclose target, five successive shots at 140 yards, made with a Stevens' 32 caliber, 18 inch, New Model Pocket Rifle. A silver half-dollar would cover the first four shots, and the fifth is but one inch from the centre. All but the last shot would have hit an alligator in the eye.
Witnesses—Messrs. A. W. Maury, A. Thurber and Thomas Capwell, all riflemen.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful and salable styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents | L. LUM SMITH, Patentee & M'f'r's. 717 Sansom Street, for U. S. & Canada.

Apply to | PHILADELHIA, Pa.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE GENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

TRADE— "BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

GOODSELL HOUSE.

M. JENNINGS, - - Manager.

BROOKFIELD CENTRE, CONN.

Brookfield Centre is situated on the Housatonic Railroad, three hours ride from New York city and about an hour from Bridgeport, Conn. Its location is on high ground, healthy and picturesque, the neighborhood abounding in pleasant drives. The Housatonic River flows near it, where good bass and other fishing can be had. The hotel accommodates about thirty guests, and is pleasantly arranged. The bar, billiard room and dancing room are separate from the hotel building. Brookfield Centre has an Episcopal and Presbyterian church; services every Sabbath.

Through cars from Grand Central Depot, New York, via N. Y. & N. H. Railroad; or take Bridgeport boat from the East River.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handing. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange

4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL.

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

ADRIFT IN A SOUTH-EASTER.

BY CAPTAIN JOSEPH W. COLLINS OF THE SCHOONER "MARION."

IN the winter of 1872, if I remember correctly, Willoughby Goodwin and his two companions, three of the crew of the schooner *David M. Milton*, of Gloucester, went adrift in a south-east gale in a dory on the western bank. With great difficulty they kept the boat from swamping, for the seas frequently made a clean breach over her. Goodwin made a drag (pronounced "drug" by fishermen) of a halibut, by slinging him by the head and tail. This he threw overboard, and having secured it by a line to the bow of the dory, it materially assisted them to keep her head to the sea and wind. One man kept the oars out to hold her steady, while the two others bailed out the water that was constantly coming into her. The following morning, the wind having moderated, they kept her off before the sea and wind. Each took a spell at the oars to remove the chill and to warm the almost frozen blood in their veins. Fortunately they made and got aboard of the *Varuna*, Captain Williams, just before the wind struck in a heavy nor'west squall. On the *Milton's* return home their loss was published in the *Cape Ann Advertiser*, and as they arrived a few days later they had the singular experience of read their own obituary. The following lines I composed at sea while running for the Grand Bank, in the gale of January 26. I claim no merit for them, other than that they are facts, and for dialect are pecularly correct. The lines are as near word for word, just as the story was told to me by Goodwin, as the versification would allow:

"Well, Cap., that was the toughest scrape
That ever happened me,
Since first I left my childhood's home
To sail upon the sea.

"You know 'twas in the winter time;
On western bank we lay,
With Callahan in the *Hilton:*
I'll ne'er *forget* the day.

"'Twas smurry in the morning,
But by the dawning light
We all went out to haul our gear,
And then returned all right.

"'Bait up, and 'set again, boys,'
The skipper then did say;
'There's halibut here, and we must try
To haul again to-day.'

"When we went out the last time,
T'want hardly fit to go,
With wind southeast, and breezing up,
And every sign of snow.

"Our trawl was dead to leeward,
And I told the skipper so:
I thought our chances rather slim
If it came on to blow.

"The skipper said, 'Go, three of you,
And if worst comes to worst,
I'll pay a buoy down astern,
So you shall not be lost.'

When we got done our hauling,
The snow was falling thick;
'Twas dark and blowing near a gale
I tell you we felt sick.

But we out oars, and pulled, Cap,
And we'd have reached her too;
But, no! just as we saw the light,
We broke our oar in two.

"We then let go an anchor,
And tried to ride it out;
The buoy line soon parted
(You know they are not stout).

The only chance we had for life
Was heading wind and sea;
For if she lay side to it,
Capsized she soon would be.

"So I rigged a drug of a halibut,
And threw him in the sea.
My mates,—one held her with the oars,
The other kept her free.

"Scared, Cap.? I 'spect we was
The leastest bit afraid;
While that 'southeaster' lasted,
There wa'nt a great deal said.

"Did the seas break in our dory?
They swept her fore and aft;
By bailing with our sou-westers,
We saved our little craft.

"We rode it out till dawning;
But, 'twas a hard, hard fight
For life, in that small dory,
That wild and stormy night.

"Then hungry, wet and freezing,
When day dispelled the night,
We were alone upon the sea,
With not a sail in sight.

"There was less wind that morning,
We took a spell about,
And pulled away to leeward,
Keeping a sharp lookout.

"Sail ho! sail ho!! at anchor!!!
The joyful sound rings out;
We all join in the chorus,
With a glad and joyful shout.

"With hearty will we pulled away,
And soon on the deck we stand,
Of the staunch old boat *Varuna*,
With Williams in command.

"Our lives were saved by a hair's breadth;
For as true as I tell the tale,
We'd barely reached the vessel's deck,
When it blew a nor'west gale.

"I have heard of the courage of soldiers—
I 'spect they are brave as a class,—
If they need more pluck than trawlers
I rather think I'll pass."

At sea, on board the Marion, January 26, 1879.

For Forest and Stream and Rod and Gun.

The Megalloway and Diamond Rivers.

V

THIS is the way it happened: Years ago I had caught black bass and muskalonge in the Red Cedar, had hunted deer in the bottoms of the Wapsipmicon, and had shot chickens, ducks and geese from the Cedars to the Shell-Rock in Iowa. I had not been idle after I had returned East and "settled down"—let the ghosts of numerous partridges, squirrels and trout testify. Yes; I had "gone down to the sea in ships," and, with cod-line in hand, drawn from its briny residence the frisky cod and ponderous halibut; scores of lobsters, too, had yielded to me their maiden blush. I thought I had good reason to believe that I was well up in sport; but I wasn't. "The cream hadn't riz."

Last winter found me one of a number who met at head-quarters, and around the comfortable fire spent many a pleasant evening in relating our different experiences in the woods and on the waters. The central figures of the group were the Doctor and O., two vets., who had made annual pilgrimages to the lakes and rivers of Maine and northern New Hampshire for the last twenty-five years; who, in fact, were among the first sportsmen to cast their flies upon the Rangeleys. Mine hosts—Abbott of Upton, and Flint of Wentworth's Location—will vouch for the truth of my assertion. I was an interested and attentive listener to their reminiscences. Before the snow had disappeared I was the happy possessor of a fly-rod, a well-stocked fly-book, and all the other appurtenances. I studied Walton, Hallock, and Norris, for the purpose of learning how to cast; I was an earnest student of literature relating to *Salmo fontinalis*, and drank in with avidity many hints of the way "how to do it," which fell from the lips of the worthy Doctor, who never mistrusted that I was absorbing his fish lore with as much unction as the late three and four-pounders of Parmechene Lake absorbed his delusive flies.

Last September G., another novice in fly fishing, and myself were the recipients of a kind invitation from the Doctor to accompany him and O. on a trip up the Magalloway. We accepted, and one beautiful September morning found us duly armed and equipped for a fortnight's sojourn in the woods of Maine and New Hampshire. Ten o'clock at night we were seated round a roaring fire at "Bailey's," in Colebrook, in old Coos County, N. H., making our plans for the morrow. A good night's rest, and after a solid breakfast in the early morn we were off for Flint's, on the Magalloway, forty miles distant. A beautiful day again, and a splendid drive over a good road through shifting scene of hill, mountain and meadow; a dinner, that was keenly relished, at "Bragg's," of Errol, where, in the rapids below the bridge that spans the Androscoggin at this place, the Doctor used in by-gone days to take trout by the score, "and beauties, too, Webb!" But no more will the angler lure the spotted monarchs from these rapids. Some years ago a fellow was prosecuted and punished for illegal fishing. He vowed vengeance, and swore he would get even with those who prosecuted him. He did, not only with them, but with all their fish-line-al descendants, in this way: He procured some live pickerel, and placed them in the river above the falls that barred their progress to lakes and streams above, where, up to that time, trout were abundant and unmolested, save by the angler. They multiplied, and have taken possession of the Megalloway up to Escohas Falls, have invaded and almost depleted Umbagog Lake of trout. We shudder when we realize that the Upper Lakes are at the mercy of any malicious scamp who may, through revenge or "cussidness," introduce pickerel into their waters. If the Maine Fish Commissioners would stock the Umbagog with black bass they would in a few years afford good sport, and destroy, to a great extent, the pickerel which now infest it—at least good judges think so. As we walked slowly back to the hotel, the Doctor appeared to be lost in reverie. I did not disturb his meditations, but could hear once in a-while the ejaculation, "Alas, the depravity of man!"

We left Bragg's at two P. M., and after a few hours' rough riding were landed at Flint's. Here we found our guides—Peter Bennet, George Flint and Win—whom we had engaged beforehand, discharged our team, and chartered a more primitive turn-out, and, with the addition of one more to our party who was to meet us at that point, we started for Clark's, the last farm on the river. From there to Fred Flint's we footed it, while our luggage went round by buckboard. Fred is a model landlord, and his wife a model landlordess. That supper was one of the events that stand as ten-mile stones in my pilgrimage toward the end. After supper we collected on the porch, took out our pipes, and spent the evening in preparing for the morning's start up-river; unpacked our kit, took out our rods and "strung um," gave guides our tramping-boots to "water-proof," fished out our "old close," and bid good-bye to store-clothes for a season.

M., our last (but not least) adjunct, and who was fated to be my "pard," gave me valuable hints as to which end of the rod I should attach my reel, and directed my attention to noises, which he informed me were occasioned by trout leaping the Escobas Falls, which are only half a mile from Fred's hotel. I forgive him freely.

Before the stars had dimmed we were up, and, after doing justice to a tempting breakfast, we were ready for the start—O. and Peter leading, Doctor, G. and George following, while M. and I, with Win and the tent and provisions, took and held our position in the rear. At noon we reached the Narrows, where a few trout were taken by O. Here the river suddenly contracts to less than half its average width, and rushes swiftly through a rocky channel, giving the oarsman a good chance to try his muscle. A short spurt and the Narrows were behind us, and we hauled up at an old camping-ground, where hot coffee and hard-tack were the chief items on our bill of fare.

After a short rest we were again on our way up the still river. The scenery up the river is of the sombre type; the forest, which comes down to the water's edge, is mainly spruce and fir, and its dark foliage and absence of life (for I think we did not hear the note of a bird all day) tends to make it a little monotonous. But let us not be too critical. Its redeeming feature is its crookedness. It has been said, "that doubtless the Lord could have created a better berry than the strawberry; but, doubtless, He never did." So, doubtless, He might have created a more crooked river; but, doubtless, He never did. Prominent objects would leave their original positions and appear in our front, to our right, to our left, in fact everywhere when least expected. Parker's Hill waltzed around us three times while we were going the same number of miles. In reply to my queries: "What hill's this? What hill's that? What's the name of this mountain? and what's the name of that?" I received the same answer—"Parker's." "Quite a number of hills round here named after Mr. Parker?" quoth I. "No; the river is a little crooked just here, and we see Parker's Hill from different points of view," said M. To my mind those Parker Hill are the chief feature in the river scenery. Although not strictly criminal, I consider a trip up the Megalloway a very crooked transaction.

At Melatuck's Pond, a few miles above the Narrows, M. tried to induce the trout; but no, "it wan't the right kind of a day."

The Meadows were reached and passed, the "big rips" were encountered, and with pushing and pulling we were soon safely above them. A short distance above them we passed the forks of the Megalloway, and at five o'clock we ran our boat into "Spaff's" Landing, and were at the end of our voyage.

It was an unusually quick trip; thirty miles with heavily-loaded boats up a swift river. We were tired and hungry. The tent was soon up and the camp-fire started, boughs cut, blankets spread, and then our supper. There was no call for "bitters" to stimulate the appetite, but we fell to with a will upon the flapjacks and ham that the guides were cooking "just to a turn." Then our pipes. Then the Doctor, O. and M. were missing. G. and I were alone by the camp-fire, talking over the events of the day, for it was a new river to us. Finally we joined our comrades in the tent. Soon all was quiet, save occasionally the screech of an owl or the

melodious snore of the—one of the party (by that I mean the party did not snore in concert). Up, not early, but early enough to catch the breath of the morning, tempered with the aroma of spruce and fir that surrounded us; a breakfast that tickled the palate and satisfied the stomach, and then for sport.

M. was my companion. Evidently he was not used to my style of casting, for his line frequently got a-foul of mine in mid-air, and Win was occupied most of the time in disentangling M.'s line from mine. However, we got some fine trout. Modesty forbids that I should tell the number I captured, but 'twas royal sport. The morning's fishing finished, we made for camp, where we rested during the middle of the day, smoking, reading and snoozing, in fact "lying off."

We were well rested and ready for fun in the afternoon, and were off in different directions to try our luck; and although we did not deplete the stream, we did not return empty-handed. I noticed that M. had got the hang of my style of casting, and we did not foul our lines so often as in the morning. Evening, with its camp-fire, pipes, stories and jokes, was welcomed; and then five weary but contented mortals took a last squint at the stars and turned in.

After a week spent with rods and guns, we reluctantly struck camp, and Saturday night found us on the river-bank nearly opposite Beaver Creek. Here we spent the Sabbath and rested. Here M. and I varied the pleasure of trout fishing by a night spent on Black Brook deer hunting; found plenty of signs, but got no buck. However, it was sport, and not devoid of excitement.

The following day found us camped under the shadow of Dustin Mountain on the swift Diamond, one of the tributaries of the Megalloway. This stream is famed for its trout fishing. It is a beautiful stream, clear as a crystal, flowing over a bed of pebbles and sand. It rises up near the sources of the Connecticut in the northern part of the State, and along its banks is some of the best land for farming to be found in New Hampshire. Here we found an abundance of fish (although the stream was low, and fish were not as plenty as usual), and our table was abundantly supplied with trout, ducks and partridges, that became victims for our sport and sustenance. Here M. left us. His "pard," after a short season of mourning, took up with another fellow, and the rest of the party remained for the week and found what we were in search of—sport, health and happiness.

As for me, I had learned how to cast without my partner's line becoming entangled with mine; I had caught my deluded victim with a fly; I had added one to my accomplishments; in fact, the cream had "riz," and fly fishing was the cream of all fishing.

We left our camping-ground among the mountains, forest and streams, with regret, resolving that if we were alive we should be back in '79 to renew our youth and our acquaintance with Nature as we found it up the Megalloway.

There was a little adventure awaiting us at North Stratford, where we were to take the cars for home. We were met by a sheriff, who held a warrant for our arrest for illegal fishing. G. and I took it coolly enough, in fact supposed it was all regular, and a little surprise held in store for us by the Doctor and O., who must, of course, be posted in all things relating to the trip; but no, it was a surprise to them. The Doctor, a pillar of church and state, and withal a firm believer in a strict enforcement of the fish and game laws, was dumbfounded. O. was at his wit's end for some way in which to dispose of a box full of "silent witnesses," which he had carefully packed in moss to carry home as trophies of our prowess. We rose to explain. The sheriff eyed us with suspicion. He of course must discharge his duties, and we were strangers. Oh! if we were only defaulting cashiers, notorious burglars, or Congressmen even, he would know us; but we were only honest fishermen, and the fates seemed to be against us. Luckily the Doctor had been one of the committee appointed by the Governor the summer before to revise the fish and game laws of the state, and knew that the open season for trout had been extended from October 1 till the 15th, and during which time we had fished. The revised laws had not at that time been published, and the party who had complained of us was not aware of the fact of the change in the law. We waxed wroth. We had no desire to spend the Sabbath in Colebrook—not but what Colebrook is a fine town and possesses many attractions to the tourist, and all that sort of thing—but we wanted to go home. Our wives were no doubt anxiously looking for us. Perhaps the children were crying for us. We were homesick. I overheard the Doctor whistling "Home, Sweet Home," and G. was humming, "I Can't Stay in the Wilderness," while O. was addressing the sheriff and the devil alternately. The sheriff at length, on the strength of the Doctor's statement and our assurance that we would come back like little lambs if it was found that we were wrong, let us go on our way rejoicing.

We propose inviting a legal gentleman to go with us on our next trip, for his pleasure and our protection.

G. and I consider ourselves fly-fishermen, for have we not been duly and officially warranted as such? WEBB.

For Forest and Stream and Rod and Gun.

CHETOPA.

"CHETOPA!" shouted the conductor, and I awoke with a start. Seizing my numerous packages I bundled out of the car and found I had arrived at the Mecca of my journey, at three o'clock in the morning, Nov. 3, 1877. I had been sitting bolt upright nearly all night in an emigrant car crowded with Indians and half-breeds en-route to the "Nation" and emigrants bound for Texas, and was driven nearly to distraction by the shrill wailings of innumerable infants refusing to be comforted. Near the end of my journey, however, I had dropped asleep, lulled by the steady monotonous snoring of the weary passengers, sleeping in every conceivable attitude of discomfort. Ever and anon the brakeman, fiend of the emigrant train, filled the already red-hot stove with fuel, sending out blasts of heat as from the realms of Tartarus. The change from such a temperature to the cool prairie breeze was delightful. The morning was very dark, and in the southern horizon I discovered a lurid glare from the prairie fires, far down in the "Nation." I found an omnibus waiting, and myself the only passenger. I was driven rapidly to the National Hotel, and was soon in bed and fast asleep. Three hours later I awoke, and looking out of my window obtained my first view of Chetopa. To the North, West and South open rolling prairie. East of the town the Neosho River, well wooded along its banks. After breakfast I unpacked my traps and started for an all-day tramp. Crossed the Neosho and wandered down the east bank, now and then leaving the river to visit the prairie sloughs to get a shot at the ducks congregated therein. Returned at night weighed down with a mixed bag of ducks, teal, mallard, blue bills, etc., and well fagged. The next day I made arrangements for a horse warranted to stand fire and rode out west from the town. Soon marked down a mallard in a little slough, and keeping low in the saddle I rode within shooting distance. The bird rose, and immediately after firing I also rose (from the saddle) and upon my return found myself astride the animal's neck. I immediately made another aerial ascent, this time landing upon that part of the quadruped immediately behind the saddle usually occupied by circus riders. This little performance was repeated several times during the day, and although I bagged a fair number of birds, the greater part of the time was spent in private exhibitions of equestrian skill and in reasoning with the horse. Several days were spent in excursions south from Chetopa with C., a noted shot of Chetopa, who furnished a horse, light wagon and well trained dogs. Reaching the grounds at about 11 A. M., the dogs were sent out, and until three o'clock the grouse generally lie well in the soft, curly prairie grass. After that hour they betake themselves to the cornfields to feed, where it is impossible to shoot with any degree of satisfaction, the dogs being out of sight most of the time. We found the birds very wild on cold, sunless days, rising before the dogs several gunshots off. The balance of the afternoon was spent in picking up a mixed bag of ducks and quail. On one of our excursions while riding along, we marked down a large bunch of mallard in a little slough surrounded by small trees and brush. Leaving the horse tied to a bush and the dogs at down charge, we carefully crept onward and were soon concealed in the brush within easy range of the birds. There they floated serenely upon the water, the rich green necks of the drakes glistening in the sunlight. A slight movement disturbed them, and as they rose a confused mass of wings and bodies we poured four barrels into them in quick succession. When the smoke cleared away not a victim was to be seen. C. stood rooted to the spot watching them as they passed from our view.

"Tho' lost to sight to memory dear."

I shall never forget the mingled expression of horror and disgust depicted on C.'s countenance as he took me by the arm and hurried me from the scene. We clambered into the wagon, and, pale and trembling, drove with all possible speed from the spot, C. in the meantime firing off volley after volley of the choicest Kansas swear words. On the morning of the 12th, Col. H., an English gentleman spending a few weeks in Chetopa shooting, and B., a Chetopian, in one wagon, and C. and myself in another, started for a three days' trip down into the Nation. To an Eastern man, accustomed to shooting in tangled brush or cooting off the rugged New England coast, a change to the breezy Western prairies is delightful. Unconfined space in every direction. The far distant waves of the prairie assume at times a beautiful tint, and seemingly meet the azure sky above. The air is clear and exhilarating. We drove merrily along, stopping now and then to beat over likely looking ground. During the afternoon the Colonel distinguished himself by letting drive both barrels at a brace of mallards that rose suddenly from a little slough, missing them entirely, and knocking over a diminutive teal that was following them some distance in the rear. This feat was hailed with delight by B., great rivalry existing between the worthy pair and C. and myself.

Night overtook us near Little Cabin Creek, and our camp was made in the timber upon its banks. A mixed stew of duck, grouse and squirrels was concocted. At the "witching hour of night, when church-yards yawn and graves give up their dead," I awoke and discovered the Colonel sitting by the fire and devouring the remains of the above mentioned stew, and in order to save a portion of it I joined him in his repast.

The next morning dawned bright and beautiful, and after breakfast we drove leisurely along over the prairie, occasionally picking up a duck or grouse, and toward noon bouncing a deer from the long grass, but to far off to shoot. That night we camped on a little run near the farm of a Cherokee, who furnished us with corn for our horses. While supper was being prepared the Colonel and I started a covey of quail near camp, and in less than an hour we secured several brace. While we were eating supper, one of the dogs, an ancient pointer, stole away from the fire, and in a short time I heard him flush a bird, which I knew at once by its twitter to be a woodcock. Although quite dusk, I flushed him again, and by a quick snap-shot bagged him. I was told that the bird was a rarity in that locality.

Our sport of the following day partook of the character of that of the previous days, and at 6 P. M. we arrived at Chetopa, our expedition ended, and at 11 took the sleeper bound East, after bidding farewell to many kind friends made during my stay. MERLIN.

Fish Culture.

—The annual recurrence of the Passaic River, N. J., fish epidemics is of sufficient importance to demand official investigation by the authorities. The shores of the river near Paterson and those of Dundee Lake are strewn with decaying fish. It is surmised that the water is poisoned by the dye-stuffs used in the Paterson silk mills.

DISEASE AMONG SCOTCH SALMON.—We regret to learn through our contemporary, the London *Nature*, that the disease which broke out last year among the Solway salmon has reappeared this season in the Solway and in the Tweed as well.

Mr. Sterling, of the Edinburgh Anatomical Museum, who has examined into the subject, finds this trouble to be caused by a branching fungus (*Saprolegnia ferax*), which first attacks the scaleless portions of the fish, but soon spreads over the whole body. So far, we are happy to say, disease has not appeared north of the Tweed.

Sir Robert Christison has recommended the appointment of a Royal Commission to examine this subject, and advises the careful watching of all trout and salmon streams, whether known to be affected or not.

UNITED STATES FISH COMMISSION.—The summer headquarters of the U. S. Fish Commission will this year be fixed at Provincetown, Mass., the well-known fishing port on the extremity of Cape Cod. The work will be organized about the middle of July. The leading feature of the summer's work will be the investigation of the natural history of the cod, mackerel, halibut, herring, and the other principal food-fishes, as well as the history and statistics of the coast fisheries. A new feature of the work will be a thorough reconnoisance of the coast by experienced specialists, who will visit every seaboard town for the purpose of gathering accurate information regarding the fisheries. Investigations of the temperature of the ocean at various stations from Maine to Texas is now being carried on, with the co-operation of the Signal Office and Light-house Boards. Vessels of the St. Lawrence mackerel fleet, the Grand Bank cod fleet, and the Greenland halibut fleet, are to carry representatives of the Commission.

THE RANGE OF THE SHAD.—The man who said that the shad was made with the refuse bones after all other fishes had been provided for must have had a fish-bone in his throat at the time. Few will follow him in reflecting upon the excellencies of this fish; we cannot in this world have everything in perfection—all sweet and no sour, all fish and no bones. There is reason to believe that the shad will speedily increase and multiply in many waters where now they are unknown. The success of shad culture in the Ouachita River, La., to which we adverted recently, has fired the Southern heart—or, at least, that particular part of the Southern heart represented by the New Orleans *Times*—to foresee the glorious future when the Pearl, the Tchefuncta (To pronounce this correctly you must sneeze), the Natalbany, the Tangipahoa, the Amity and the Bogue Faliah, with the other pure and sweet rivers of the Pelican State, shall teem with the toothsome *Alosa*, and the gladsome sound of the fish-horn shall be heard in the streets of every city, town and hamlet in the land. There is nothing visionary about this; no good reason exists why shad should not be as cheap in Louisiana a few years from now as they are to-day on the wharves of Wechawken, where the North River fisherman lands his nets. The success of the Ouachita experiment gives abundant earnest of what further prosecution of the work will accomplish. The only thing necessary is a moderate degree of intelligent activity on the part of the Louisiana and Arkansas officials. By the way, some of the most wideawake men down there are the State Fish Commissioners.

NOTES FROM THE FISH COMMISSION.—Mr. B. B. Redding, under date of San Francisco, Cal., May 24, writes to Prof. Spencer F. Baird:

From 50 to 120 shad are now being brought to the market every day. They are becoming so numerous that they are regularly reported in the market reports, the market price for the past week being 75 cents per pound.

Under date of May 30:

Salmon were never more plenty in the Sacramento River than now. It is not infrequent that as many as 200 are taken in one haul of a single seine. Salmon weighing from 20 to 35 pounds are now selling in this market for 25 cents apiece. The annual hatching of two millions and turning them into the river is producing a legitimate result. We are beating the sea lions, the canning establishments and the fishermen. Yours, etc., B. B. REDDING.

A QUESTION FOR TROUT BREEDERS.—The bad effects of overcrowding hatching-troughs with young trout fry have long ago been noted by experienced fishculturists. The water being necessarily breathed over again and again, becomes vitiated, disease is almost inevitable, and when it does come the foulness of the water affords a fatal medium for the rapid spread of the epidemic. Commenting upon the recent mortality of the Wisconsin trout fry, Mr. A. Palmer, of Boscobel, a fishculturist of large experience, after commending the skill and carefulness of Mr. Sam'l Welcher, says:

Do not Seth Green and others, who have been accustomed to hatching tens of millions of whitefish and shad eggs, overdo it when they attempt the same with trout? Will the latter stand the crowding? I can hatch, in a trough two feet wide and twelve feet long (this is as long as a trough ever should be, as the life-giving properties of the water will be taken out against the end is reached), twenty to thirty thousand healthy trout fry that I would not give an insurance company the tenth part of one per cent. to insure me the raising of ninety per cent. Now, so far as private breeders are concerned, there are few that have water to raise half that number to eating size, and they can never be made a public fish, or fish for the public. If more are wanted, put in more troughs, if you have the water. I have been selling eggs for over ten years, and don't know of a single instance where my directions in hatching and feeding the fry have been followed, but a reasonable degree of success has attended the venture. Would like to know through FOREST AND STREAM if any trout breeder has succeeded in hatching with the Brackett trays or Holton box a healthy lot of fry—say, of which he raised fifty per cent?

THE CURE OF POISON OAK—*Editor Forest and Stream:* Take caustic potash ten grains, pure water one ounce; mix, apply with sponge or rag, and rub until it smarts considerably; then wash off. If one or more spots of it appear afterward, retouch them. If the skin gets very dry after its use any simple ointment or oil will aid you. The caustic potash comes in white sticks, and is simply the purest form of potash. The water should be pure; impurities might form combinations with the potash and render it inert, or partially so. The application leaves no scar or blemish after a day or so, and is very slightly painful, not more so than salt and water would be. Have suffered severely myself, and had my children in same condition several times from taking eggs and nests while collecting from a mass of the vines of bush, as it happens to grow, and never have failed to cure.

Richmond, Va., May 27, 1879. RUSSELL ROBINSON.

Natural History.

A LIST OF BIRDS TAKEN IN SOUTHERN WYOMING.

By S. W. Williston.

[With Supplementary Notes by the Natural History Editor.]

(Continued.)

[48. *Tyrannus verticalis*, Arkansas Flycatcher.—Seen several times on Rock Creek, where no doubt it bred, as it certainly did on Foot Creek, twenty-five miles further to the southwest. On the latter stream young just from the nest were taken.—G. B. G.]

49. *Sayornis sayus*, Says Flycatcher.—April 24; very commonly heard and seen. While nesting they are quite fearless, not leaving the eggs or young till closely pressed. I have several times caught the parent bird sitting upon her eggs in the crevices of the chalky cliffs of Kansas. A pair took up their abode nearly over the door of a saloon at Medicine Bow, near Como. When I saw them in the last week of June, the female, as she sat in full view, might have almost been touched by a tall man, while her mate was keeping very vigilant guard upon the hitching post in front, driving away the swallows when they approached too closely. That they were left unmolested by the numerous frequenters of the saloon was remarkable.

50. *Contopus borealis*, Olive-Sided Flycatcher.—A single female was shot from the topmost branch of a solitary dead pine in the early part of June.

[51. *Contopus virens richardsonii*, Short-Legged Pewee. Very abundant on the Medicine Bow River wherever large timber was to be found.—G. B. G.]

52. *Chordeiles popetue henryi*, Night Hawk. May 31; afterward common.

[53. *Selasphorus platycercus*, Broad-Tailed Hummer. Quite abundant in the Medicine Bow Mountains.—G. B. G.]

54. *Ceryle alcyon*, King Fisher.—May 1, and occasionally afterward on Rock Creek.

55. *Coccygus americanus*, Yellow-Billed Cuckoo.—Frequently heard, but none taken.

[56. *Picus pubescens gairdneri*.—Western Downy Woodpecker.—Common in the Medicine Bow Mountains in August.—G. B. G.]

[57. *Sphyrapicus varius nuchalis*, Nuchal Woodpecker.—Rather abundant among the large timber on the Medicine Bow River.—G. B. G.]

58. *Melanerpes erythrocephalus*, Red-Headed Woodpecker.—May 26. A dozen individuals seen during the next month. In July of last year, while encamped near a solitary dead tree on the Smoky Hill River in Western Kansas, I watched for many hours a female (the male had unfortunately been killed), with her four nearly full-grown young, and her sallies after occasional passing locusts. Her sight was wonderful, and her aim as straight as an arrow. She followed her prey oftentimes for a hundred yards or more, and never failed to secure the insect at the first attempt. Returning, she would alight on a branch, distant from her young, and then would call them to her to receive their food. She must thus have caught hundreds daily. Occasionally, the young birds would also endeavor to procure the insects for themselves, but their attempts were often amusing and sometimes failures. Nor would they dare to venture far without being driven back, or compelled to seek the ground for safety by the pugnacious Arkansas fly-catcher, which seemed especially on the watch for them, though never molesting the old bird.

[59. *Asyndesmus torquatus*, Lewis' Woodpecker.—This curious and remarkable looking species was abundant in the mountains near Como, and both adults and newly fledged young were secured.—G. B. G.]

60. *Colaptes mexicanus*, Red-Shafted Woodpecker.—May 5. Not common in vicinity of Como, owing probably to the scarcity of timber. [Very abundant in the mountains.]

61. *Otus vulgaris wilsonianus*, Long-Eared Owl.—In sage brush near lake, May 5. Common afterward on Rock Creek. Nest May 31, two eggs, fresh; June 8, five eggs, fresh; June 10, four eggs, slightly incubated. The parent bird would seldom leave the nest till almost touched.

62. *Speotyto cunicularia hypogæa*, Burrowing Owl.—Not common in the vicinity of Como. [But rather abundant a few miles south of the town of Medicine Bow.]

63. *Circus hudsonius*, Marsh Harrier.—Common.

[64. *Falco mexicanus* var. *polyagrus*, American Lanner Falcon.—This species was abundant throughout the plain and mountain region about Como. It was seen daily pursuing the blackbirds about the station, and, at Medicine Bow, one of these birds had almost depopulated the only dove-cote in the town. On a secure ledge of a beetling cliff, that rose just behind our camp on the Wagon Hound River in the Medicine Bow Mountains, a pair of birds had reared their young, and at night the family would collect there, saluting each other with the shrillest and most discordant screams. They paid not the slightest attention to our presence, and we left them unmolested until the day before our departure, when a pair of them were added to our collection.—G. B. G.]

65. *Falco sparverus*, Sparrow Hawk.—Four specimens seen or taken. I have twice observed this bird preying on *Sturnella magna*.

66. *Buteo swainsoni*, Swainson's Buzzard.—Rather common. Nests observed in low trees, rudely built, but six or eight feet from the ground. A female with three fresh eggs was taken May 10th; when previously observed on the 16th, there was but one egg.

67. *Archibuteo ferrugineus*, California Squirrel Hawk.—One or two were closely seen, and a specimen said to have been taken in the vicinity. This hawk is quite common on the plains, reaching not much further east than Fort Hays, Kansas. Their nests were observed both in trees and upon the low chalk cliffs. I have frequently observed in their nests partly eaten racers (*Bascanion flaviventris*) and rabbits, of which their food seemed chiefly to consist.

[68. *Archibuteo lagopus sancti-johannis*, Rough-Legged Hawk.—Not common in the region, only one pair having been observed. These were seen on the Medicine Bow River.—G. B. G.]

69. *Aquila chrysætos*, Golden Eagle.—Common during the winter, but not often seen in the summer months. One that had been caught in a trap in April was chained near the station, where he would feed ravenously, but no one dared to approach within his bounds. [Abundant in summer in the high mountains, where they bred.—G. B. G.]

70. *Zenaedura carolinensis*, Carolina Dove.—May 25. Common.

[71. *Canace obscura*, Dusky Grouse.—Extremely abundant in the mountains, and often following the wooded watercourses down to the lower lands. Late in August young of all sizes were seen or taken, showing, as already remarked by the writer in another place, either that this species is irregular in its time of nesting, or that it sometimes rears two broods. In September this species is extremely delicate eating. During this and the preceding month they feed almost wholly on a small species of red whortleberry, which grows in great abundance among the pine forests high up on the range, and this food imparts a delicious flavor to their flesh. Some further remarks on this species will be found on page 141, Vol. XI., of this journal.—G. B. G.]

72. *Centrocercus urophasianus*, Sage Cock.—Common at all times. Nest, May 20th, with ten nearly hatched eggs. The nests are poorly built, consisting of a few twigs and feathers, in rather open brush, or where it is short. The males, except during the mating season in April, seem to prefer higher ground, where they may be seen in flocks wholly by themselves.

73. *Ægialitis vociferus*, Killdeer Plover.—Common.

74. *Ægialitis montanus*, Mountain Plover.—The very characteristic cry of this bird was heard May 3, but none were seen till two weeks later, when they became tolerably common. I know of no birds that employ more varied artifices or display more intense solicitude to withdraw one's attention from their nests than these. Their eager, restless flutterings, continued for a long distance, would be amusing did not one sympathize with that parental instinct so necessary for the young birds' protection in these barren, open prairies. At all events, they are often successful in misleading one, unless he observes the immediate spot whence they start.

(To be continued.)

SOME NEW FACTS ON SKUNKS.

Pembina, D. T., May 15, 1879.

Editor Forest and Stream:

This is a lovely May morning, a mild south wind after a blow from the north. The air is balmy and pure. Man breathes easy and feels happy, while our feathered songsters in the bush are singing their Maker's praises, and the sweet humming mosquito lies low in the shade, tuning up his pipes and filing his bill for an active summer's campaign, while tyrant man, dreading the insignificant mite, prepares to meet the coming foe by wire netting on windows and doors, and raking his chips together for morning and evening smudges.

The Forest and Stream comes to me regularly, and is perused with a great deal of pleasure, as I glean many grains of useful and amusing information from it. I said amusing, for many of the articles are so to an old frontiersman and voyageur like myself. I have read the correspondence on the the skunk question.

I flattered myself that I knew considerable, if not more, of that odoriferous little cuss, but it seems I had more to learn, and putting what I did know and what those other fellows know together it would make a considerable sized book.

My first introduction to the animal was when I was a schoolboy in Ohio.

I had played truant from school—from which you can see I was not one of the kind to die young—one afternoon, and with my Scotch terrier was rambling through the woods, when I saw what I took for a domestic cat that had thrown off civilization. I hissed on the dog, and he being of a breed that never says die, went in for it like a hoosier boy for a watermellon. First blood for the skunk. Water in the face was what warmed up the dog. After a roll or two in the sand he called time and went in for the second round. A bite on the nose, red blood this time, then a draw off for more sneezing and rolling. Round third—Colley (the dog) a little more cautious, sparring around and engineering for a sure hold. With a bound, a grab on the back and a shake there was a dead "chicock." With a long pole I examined it, and my nose knows it was a skunk.

Now for the sequel of this story to further illustrate that I was not one of the good boys we read of in Sunday-school books. As evening drew near I struck a bee-line for home, and as I neared it I began to think of an explanation for the odor on colly. After consultation with myself I whipped the little fellow and sent him home. Then in due time I followed. Arriving there I found the women after the poor dog with broomsticks and other weapons usual in women's warfare, going for the "stinking brute." I naturally, and as innocent as the boy that stole the molasses, joined in the hue and cry, and for days my poor little pet was banished the house, but I do believe the little fellow understood the matter and forgave me my seeming cruelty.

That was the first and last skunk I ever saw until I struck these western plains. Since that they are as familiar to me as our domestic animals. I have killed hundreds of them. Never was bitten by one, but have been perfumed all the same, and have often eaten them, and it can't be proved by me that they are the best of fodder. The fat is nice, sweet and wholesome. The lean has a wild onion taste, needing no other seasoning, and is very palatable to our half-breeds and Indians, who relish it as the darkey does fruit from the hen roost or opossum. They dress it by turning the hair off in a hot blaze, then roast it on a stick before the camp fire. The scorched hair on the skin and the garlic of the lean makes it just delicious, and the half-breed or Indian will make way with a skunk as quick as the Indian did with the woodcock.

In voyaging over the plains everywhere you will see the ravages of the skunk in search of wild onions. They no doubt now and then capture a prairie squirrel and suck the eggs of prairie chickens and other birds, but I think they like the onion best in its season. Every day in voyaging we would kill more or less of them, either with clubs, stones or dogs. Very few dogs will tackle them. I have seen both men and dogs bitten by them, but never knew a case of hydrophobia. It is said that the bite of men and dogs while angry produce it or something similar, and, if so, under the same circumstances, the bite of the skunk might do it, but it would be one in a thousand.

You are aware that they hybernate in this climate. I have known as many as twenty taken in one nest, hence must have originated the expression of "stinks like a skunk's nest," all of which is imaginary, as a skunk's nest does not stink, for, unlike the mouse, they never defile it.

They either burrow in the ground or make a grass nest in some swamp. From five to twenty will hybernate together. On pleasant days in the winter they come out for a promenade or in search of mice or some kind of grub.

When an Indian discovers a nest he prospects carefully until he finds a tail. Then by that he draws out the varmint, and with a light knock on the head he finishes it, and then proceeds with the rest in the same way until the last one is disposed of. It is a known fact that the skunk when lifted by the tail cannot throw his cologne. In what manner it acts on his *syringe* I can't say. Whether the wag of the tail works the piston or opens and shuts the nozzle, I will leave to scientists to determine, but I know when he is held up by the tail he is as harmless as a Chinaman without his stink pots. The Polecat, unlike the domestic cat, has not nine lives. The least knock on the head kills him. I have killed them with small gravel stones. Old Judge.

The Birds of Central New York.—We are informed that copies of this excellent list may be had from Mr. Frank R. Rathbun, of Auburn, N. Y., at fifty cents each.

A Tame Gull.—Mr. C. A. Richmond, of Taunton, Mass., has been kind enough to send us the following account, clipped from a local paper, of a great black-backed gull, which he has owned for some years. The extract says:

One of the natural curiosities of the village (Scotland) is a black-backed gull, in the possession of Mr. Richmond. Though he is the most sociable of his genus, still, at times, he is exceedingly angry, and even savage. One peculiar trait is the responsibility he assumes in guarding his master's premises. His services in that direction are fully equal to those of the watch-dog; in fact, the job rests between them, inasmuch as 'Mr. Gull' prescribes the remedy, while Shot carries it into effect. He is nearly thirty years old, and altogether an interesting bird.

This gull, our correspondent tells us, he obtained on Cape Cod last summer. We do not wonder that Mr. Richmond takes pride in this unique pet. He says of him:

The gull is now white, except his back and upper side of wings, which are of a dark slate color. He is a very lively fellow, I can tell you, and no stranger can come near the house, night or day, but what he knows it. As soon as he sees them he will begin calling to them. I have to keep him in a yard by himself, and do not let him out unless I am around to look after him, as he is very fond of poultry, and has already eaten more chicks than his neck is worth; but still I keep him, as he is a great curiosity here. He is not at all delicate about what he eats. He will swallow at one time three small perch, about six inches long, and then he may not take anything more for a week. He is fond of eggs, apples, and any kind of fish except salt cod. When he gets a piece of that he takes it to his tank of water and lets it soak before he swallows it. The eggs he will catch in his bill the same as a dog would a piece of meat that was thrown at him. I think that he is a little over twenty years old, as I got him of a man that had kept him nearly that length of time. This man wing-tipped him when he was a young bird, and had used him as a 'coy' gull ever since; said he had killed a great many gulls over him. He shot them for the feathers. The bird, being old and wise, all kinds of gulls will 'coy' equally well to him. They all have confidence in him.

Antlers Wanted.—*Editor Forest and Stream:* Dr. Johann Fischer, of this city, is not only our first surgeon and operator, but, like Nimrod, a "mighty hunter." He has a fine collection of antlers, from most parts of this hemisphere, but nothing from America. He is willing to incur any reasonable expense in procuring American specimens. He desires that the skull of the animal, or at least a portion of the same, be preserved. Other efforts having failed, I venture to try to gratify his wish through you. As there are always sailing vessels loading petroleum for this port, packages so sent can come directly and cheaply. A. W. Thayer,

Trieste, April 26, 1879. U. S. Consul.

By applying to J. Wallace, 17 North William street, New York, Dr. Fischer will be able to obtain skulls and horns of most of our North American herbivores; among them those of the moose, elk, Virginia and mule deer, Rocky Mountain sheep or big-horn, caribou, and others.

Odd—*Editor Forest and Stream:* Having shot a curious bird this week, I thought I would send you a description of it. It has puzzled the people about here for some time. The first I heard of it was on meeting an acquaintance one morning, about the middle of April. He asked if it was time for whippoorwills to be here. I said no. He then said he had just heard one. As it was about eight o'clock in the forenoon, I told him it must be a mistake, for I had never heard one in the daytime; but on leaving him and going perhaps 100 yards, I heard the cry of a whippoorwill repeated three times, sharp and clear, followed almost instantly by

the song of a robin. I tried to find the cause of it then, but the bird was gone when I reached the place where I had heard it. In a few days I heard the bird again, and by creeping up carefully I got within fifteen yards, and lay watching it nearly five minutes. First it would sing like a robin a few seconds, then stopping, would instantly whippoorwill three times. It went through this performance several times, and then I shot it. It proved to be a female robin, rather small and light-colored, with more white feathers than is common with robins. The notes were perfect imitations of the whippoorwill and robin. Now, what was it? A freak of nature? or how do you explain it? I have preserved the skin.

Lakeville, Mass., April 27, 1879. E. F. STAPLES.

YOUNG FOXES.—A litter of foxes, numbering twelve, were dug out of a den, I am sorry to say, within a mile and a half of my house. This is one of three litters that I know of, and I was anxious that they should not be disturbed, looking forward to next winter. I took particular pains to impress upon the man who was with me that it would take him at least a week to dig them out; but unfortunately the den happened to be near his house, and one morning he saw ten young foxes near the mouth of the hole, and the thought of fifty cents bounty on each was too great a temptation. I told him, after I heard of it, that I hoped the old fox would catch every chicken he raised during the next two years. I have no doubt that these foxes were all of one litter, although I did not see them. The young foxes which Schaeffer, of Boston, had, came from Greenfield, in this State, which looks as though the N. H. foxes were trying to keep a good supply on hand. C. M. S.

Dunbarton, N. H., May 16, 1879.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING MAY 31.—One star-nosed mole, *Condylura cristata*; two water snakes, *Tropidontus leberis*; one alligator, *Alligator mississippiensis*; two ring doves, *Surtur risorcris*, and one nonpariel, *Cyanospiza ciris*, all presented. Seven white-footed mice, *Hesperomyi leucopus* born in the garden. Two laughing jackasses, *Dacels gigantea*; four Swainson's Lorikeet, *Tricoglossus novæ-nollandiæ*; two yellow collared parrakeets, *Platycercus semi-torquatus*, and one grey parrot. *Psittacus erythacus*, all purchased.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 7.—One red squirrel, *Sciurius hudsonius*, presented by Mr. H. W. Putnam, N. Y. city; one gray squirrel, *Sciurius carolinensis*, presented by Mr. J. W. Tucker, N. Y. city; two white mice, *Mus musculus*, presented by Master Herman Kusterer, N. Y. city; one ring dove, *Turtur risorius*, presented by Mr. E. L. Greer, N. Y. city; one red-tailed hawk, *Buteo borealis*, presented by Mr. John Akhurst, Brooklyn; one mocking bird, *Mimus polyglottus*, presented by Master Arthur Burns, N. Y. city; two cygnets, *Cygnus olor*, bred in the Menagerie; one military macaw, *Ara militaris*, purchased.

W. A. CONKLIN, Director.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO JUNE 1, 1879.—Two Bonaparte's gulls, *Chroicocephalus philadelphia*; one coot, *Fulica americana*; one wood duck, *Aix sponsa*; two Florida gallinules, *Gallinula galeata*; two crowned pigeons, *Goura coronata*; one *Chelonura temminckii*, one *Coronella doliata*—all presented; three Canada geese, *Bernicla canadensis*; two passenger pigeons, *Ectopistes migratoria*—all hatched in the Garden; one Bactrian camel, *Camelus bactrianus*; one pony, *Equus caballus*—all born in the Garden; two lions, *Felis leo*; two pumas, *Felis concolor*; two spotted hyænas, *Hyæna crocuta*; one ocelot, *Felis pardalis*—all deposited; one white-throated capuchin, *Cebus hypoleucus*, received in exchange; two Nicobar pigeons, *Calcenus nicobaria*; two European jays, *Garrulus glandarius*; two Pennants parrakeets, *Platycercus pennanti*; one ring-necked parrakeet, *Palæornis torquatus*; four love-bird parrakeets, *Agapornis pullaria*; four white Java sparrows, *Padda oryzivara*, var. *alba*; four Paradise Whydah birds, *Vidua paradisea*; two cut-throat finches, *Amadina fasciata*; four common wax bills, *Estrelda cinerea*; seven yellow birds, *Chrysomitris tristis*; one cow bird, *Molothrus pecoris*; four pine finches, *Chrysomitris pinus*—all purchased.

FRANK J. THOMPSON, Superintendent.

The Kennel.

WHAT I KNOW ABOUT BENCH SHOWS.

PROVIDENCE, R. I., May 26, 1879.

EDITOR FOREST AND STREAM:

Being a great lover of dogs, I have taken great pains in breeding them, and to do so intelligently, have spent considerable time and money in visiting the different dog shows within my reach, paying from eight to twenty dollars entry fees on a number of occasions, besides my expenses—and I am a poor man, too. My object was to learn, if possible, which was the best breed of dogs to devote the most time and attention to. I find I am as much in the dark as when I began.

My first experience was at Springfield, at a show given by the Rod and Gun Club, in 1876, when I was lucky enough to get third with a black dog called Jim and first in the retrieving spaniel class, but received no notice in the cocker spaniel class, although I exhibited what was admitted to be the handsomest specimen of the class, and one that I have never seen equaled since, being beaten by a dog with a top-knot and curly coat. A black bitch was awarded first in the English setter class. The judges were Dr. Wm. Jarvis and Messrs. Luther Adams and Theodore Morford. So much for the judgment there.

My next attempt was at the great International or Centennial Show at Philadelphia, in which one of our late Boston judges worked so hard to win the Scott gun with a dog named Guy Mannering. But as that show was not recognized as regular, I will pass on to the next one I attended, which was at Providence, R. I., in 1877. Here I won first in the setter class with my black bitch Smut, and also won second in the cocker spaniel class. This was a one-judge show, Mr. Wm. M. Tileston being the one chosen as judge.

My next appearance was at Boston, in 1878, at the show of the Mass. Kennel Club, it being their first show. Here I got a V. H. C. with my black bitch Smut. This was also a one-judge show, John Davidson, Esq., being the one chosen in this case; and I will here say that he is, in my opinion, the best "all-round" judge of a dog that I ever met with, and I am not alone in that opinion. It was here also that I learned that a black dog had better remain at home, no matter how handsome or intelligent.

At Baltimore, in 1878, I got a V. H. C. with a black and white bitch called Meg, which I exhibited for Mr. Samuel Scranton of Providence, and won second in the retrieving spaniel class, being beaten by an Irish water spaniel that had no business in the class. Said spaniel was entered by a Mr. Whitman, who claimed that the dog lacked but a sixteenth part to make him pure Irish, and winning only one month before at Boston as an Irish water spaniel. I also won first in the cocker class with a bitch named Fanchon, owned by Mr. E. W. Davis, of Providence. I also won first with this bitch at Boston the month before, the judges being Mr. John Davidson, and Dr. Twaddell for the non-sporting dogs, the same as at Boston; and in regard to Baltimore, I cannot speak too highly of the reception there given to all exhibitors, every member of the club, from the president down, doing all in their power to make the occasion pleasant. "Long live the Baltimore Kennel Club!" say I, although it was there I first met the full force of the Western "ring," who seemed determined to have every prize "go West," regardless of fairness or merit.

It was there also that I saw one of the Western gentlemen sell a dog which he represented as thoroughly broken, but which turned out to be sadly in want of breaking, and afterward cost the purchaser in the neighborhood of a hundred dollars for that purpose. It was there, I think, that the "war whoop" was first raised against that tried and true old veteran, John Davidson, and it will require a different lot of signatures to make me believe him in the wrong; for I sincerely believe that it would be a credit and honor to the different exhibitions if the judges selected combined the practical experience with strict integrity and fairness that he does.

My next appearance was at the second annual show of the Westminster Kennel Club, at which I won first in the retrieving spaniel class, second with a pointer, Rake II., which I exhibited for Mr. J. W. Coffin. I also exhibited for Mr. Geo. Miller a setter dog that had arrived from England two days before the show. The dog had hardly entered the ring on the appointed day, when the judge, Mr. Lort, ordered him out, assigning as a reason that he was "a bit coarse." Then said Mr. Lort, "You Americans have a bad way of crossing your dogs here." When I told him that the dog had landed from England but eight days since he had, and that he had taken a prize there under his judging, and that the owner was there with the papers to prove it, he was dumbfounded. It was only one case of the English judge's judgment of our method of breeding.

This was a three-judge show, Mr. Davidson being allowed to judge the Gordon dogs and spaniels, and Dr. Twaddell the non-sporting dogs. The dogs were well cared for at this show, however, as they always are at any exhibition superintended by Mr. Charles Lincoln.

My next trip was a two days' visit to the third annual show of the Westminster Club, in which I made no entry, but was well pleased with the show, and also to meet some old friends of mine. The judgment was fair, and I think, with a few exceptions, well received.

My last experience was at the second annual show of the Massachusetts Kennel Club at Boston, and I almost feel as though it would be my last appearance at any show; for when a bitch, handsome in every part, thoroughly broken, and intelligent in every movement, is led into the ring only to be ordered out again, for the only apparent reason that its color was black, it seems to me that the "color line" is getting to be too strongly drawn to be consistent with fairness or encouraging in any degree to patient and careful training, whose results are apparent to every eye, except those blinded, like some feminine ones, by fashion. The old saying that you might as well be "out of the world as out of fashion," seems to be exemplified when a black dog or bitch is led into the ring, though the rule seems to vary, according to taste, or rather to the wishes of the clubs or individuals it is thought proper to "toady." to

If some kennel clubs exhibit a dog of a peculiar kind, he is the standard that year; but if an outsider shows one, every way as good, he will be, according to the "unbiased (?) opinion" of the judges, a little throaty, his hair a little too curly, or he will be a little out at elbow, etc. No matter how good an eye you may have for a dog, if you can't see the fault the "unbiased (?) judge" can; so take him out.

Mr. Samuel Scranton exhibited a bitch at this show, and a handsomer one, or one nearer perfection of its kind I never saw. Teeth are bad, was the opinion of the judges. Take her out, the command. She was twelve years old.

One of the rules (No. 4) at this exhibition was this: "No dog shall be qualified to compete or entitled to receive a prize who is suffering from mange;" but in the show they allowed a dog to win in class 50 who had the mange, and had had his tail sheared to help his looks. This dog was protested against, and no notice was taken by the club of the protest, nor did one of the members give me a civil answer to a straightforward question.

I won first in the retrieving spaniel class here; but I must say that the judges displayed no more practical knowledge of dogs than children, judging the dogs almost entirely from the book, and with one or two exceptions the dogs judged from the book were the only ones judged at all. The judges were Mr. Chas. H. Raymond, Dr. Wm. Jarvis and Major J. M. Taylor.

You will notice that I had exhibited under the judging of Dr. Jarvis before, when he thought a black dog as good as any, and I thought him a very clever little man.

I saw some of the best dogs at this exhibition that I ever saw exhibited, and that I never was so poorly used at any show that I ever attended. I did not get a civil answer to any question I asked from members of the club, except from Mr. Copeland. THOMAS M. ALDRICH,

OUR LONDON LETTER.

LONDON, May, 1879.

EDITOR FOREST AND STREAM:

You may have heard this story before, though you couldn't have known that the principal actor in the little drama was a forbear of mine. A doughty Highland chieftain he was, and lived and flourished some two hundred years ago. Moral, religious and virtuous, as I have no doubt he was, the herds and flocks of his lowland neighbors, grazing in the broad, green fields of their rich owners, were too great a temptation for the chieftain's nerves, and he used to amuse himself, Zulu fashion, on moonlight nights, by descending from his mountains with his faithful clan and driving home hundreds of the enemies' kine. But the Laird o' Kilthingumie was too many for him one night, for he beat back the cateran and took the Highland chieftain prisoner. By way of securing pleasant dreams to his guest, the Laird, before sending him to bed, pointed out to him a very large oak tree that grew on his lawn.

"Do ye see that tree!" asked the Laird.

"Och, yes," said the chieftain, "to be surely she sees him."

"Well," continued his host, "you'll hang there to-morrow morning."

"And hang very well, to be surely," said my ancestor, defiantly.

But the Laird had a wife, and between them they had a daughter, whose oval cavity couldn't have been made any bigger without shifting her ears back. She was known all over the country as Mickle-mou'd Meg.

"Noo, here's a chance," said the canny goodwife; "our Meg will ne'er get a man. Spare this Hielan' chieftain's life and mak' him marry Meg."

Then the Laird put on his nightcap, tied the strings, and having gone to bed, slept the sleep of the just, and in the morning, before leaving his cell, the chieftain was duly apprised of the ultimatum.

"To be surely," said the chief, "to be surely, she'll marry the bit lassie."

But when Meg was presented to him, and great rejoicings were being made, my worthy forbear suddenly put a damper on the whole proceedings by observing staunchly:

"Och, no, no—no, to be surely! She couldn't stomach that; *she'll have the tree!*"

And so, sir, the timely arrival early this morning of FOREST AND STREAM saved your humble servant from a similar fate. I stood upon the scaffold high. I don't know what brought me there, but I suppose I deserved the elevation, and I've always had an ambition to rise in the world. However, there, close beside me, stood the trusty Marwood, and I tried to prolong my life by entering into a conversation with him.

"Don't be in a hurry, James," I said, quite friendly like; "you've a long day before you."

"There's a short 'un afore thee," said James; "but heave roond, if thee means prayin'. I'll give thee until I coonts twenty"

"James! James!" I cried, "couldn't you give me a drop of something?"

"A drop!" said James, "I'll give thee six foot o' that, lad." And he proceeded to pull the cap over my face.

"Oh! hang the cap!" I cried. "I shan't be able to breathe. Hie! hie!"

The bolt seemed stiff, and required two thundering kicks to set me free. And the noise awoke me. It was the postman's knock.

I was greatly pleased to learn you had so good a show at New York, and that the exhibitors were in a great measure satisfied. Philadelphia, too, I see was good; but, Philadelphia, if I were a Yankee I would be ashamed of you. What! You have judging in private! You adopt our rotten old conservative Brummagen system! You treated your exhibitors with indignity and your judges as rogues! And worse than all, you trample on the liberty of the press! And then your Philadelphian papers boast about America being a free country, and all that. Yes, Phil., America is a free country, and though a foreigner, I admire her institutions; but you ain't in it, Phil., leastways your dog show isn't.

The idea of parading the prize dogs is a good one. I believe it was first adopted at Keighley Yorks, Eng., in 1873. It gives people who come to see the animals an ocular education of what a good dog should really be; that isn't readily forgotten.

What is that Girondin disinfectant? Who is Girondin? Can't you tell me? We sadly want a good, cheap disinfectant in this country. I have tried nearly all, and all have some fault.

Also, could you give me the points of a Chesapeake Bay dog in some future number?

You had no bull-dogs, I see—I mean good ones. I suppose we are getting fastidious, for they are far from numerous in England.

Glad you have come to your senses regarding Skyes and Yorkies. I should think they were different, indeed.

You say a white and black dog ought to have won in Charlies. We don't like them, but I do like a tri-color.

Newfoundlands, I suppose, wouldn't have been of much account. Although the Yankees beat all the world in Newfoundlands, we beat the Yankees.

By the way, a new terrier—the waterside—is rapidly becoming fashionable here in this country. He weighs nearly forty pounds, is something like an Irish, but much bigger, of course, and handsomer, and the ears are like those of a fox-terrier. The hair is pin-wire, and they'll simply kill the devil on four legs. It is fun, I can tell you, being the judge in a ring of say twenty. "Walk them round," you say; then they all pair and "are," and if they can't, they swear; but they are gentle and loving to the human race. I was the first to describe them, I believe, in an article in the last "Live Stock Journal Almanack."

By the time this reaches you the great International Hanover Show will be a thing of the past; so, too, will be the Alexandre Palace Bull-dog Show, a short account of which I will send you in my next. One feature, by the way, of the Hanover show is this: they have a class for canine literature and pictures of famous dogs. It does not strike me that the literature class can do good; but if artists are encouraged to paint the dogs of the day (the champion dogs), these will certainly be found of very great service in a generation or two.

I am trying to bring a new favorite to the front. I mean the Yack Indian or Esquimaux dog. I've seen a good many of these in my time—as, like the bad penny, I've been mostly everywhere—but I have seldom met with a nicer specimen than he who will figure in the *Live Stock Journal* in a week or two. The artist has succeeded wonderfully in catching both coat and color as well as shape.

The show season will soon be with us now in earnest. The buds are appearing on the trees, and the Dandie Dinmont Terrier Club are showing signs of excitement and meditating meetings. The Irish Terrier Club, yet in its infancy, will no doubt prove a Hercules and a caution to snakes; but Skyes are still dormant.

Mr. Lort has been very ill, but you will be glad to hear he is once more on the boards.

The weather still continues very cold and wet, with now and then snow, hail or sleet, which makes me think you have been playing some game with the Gulf Stream.

May you flourish. GORDON STABLES, M. D. R. N.

HANOVER INTERNATIONAL DOG SHOW.—A full report of this show will reach us this week, but too late for the current issue. We therefore print some extracts from the *Fanciers Gazette* correspondent's letter regarding the arrangements, etc. It will be remembered that the Messrs. Von Lengerke, of this city, have sent over some native setters to compete:

To begin with, all the English dogs under Mr. Douglas arrived safely at half-past nine on Monday night; they were delayed by a fog at sea, but seem none the worse for their journey. Every effort has been made by the managing committee to ensure the dogs' comfort. Mr. Douglas and his charges were met at Bremerhaven by the British Consul in Hanover, and strict orders were given not to allow more than twenty dogs in each van. Transport carts belonging to some of the regiments quartered in the town met the dogs at the station, and all the English owners and attendants we have seen are loud in their expressions of satisfaction at the treatment they have received. Among our fellow countrymen who are already on the spot, or who are expected shortly, are: The Rev. J. Cumming Macdona, Mr. and Mrs. W. W. Thomson, Mr. and Mrs. Humphries, Messrs. Hugh Dalziel, Colin Ross, L. Clement, Hallam, Alfred George, Burnell and Vero Shaw.

The arrangements for the benching are unique, for the dogs are not quartered in any building, but on covered benches all over the ground. Each large dog has a space four feet and a half wide allowed him, and is separated from his neighbor by substantial wooden partitions. A large quantity of straw, water and sawdust is available for the use of the keepers—upon the present occasion soldiers selected from regiments in the town. The advantage of this is obvious, as the discipline is excellent, and in event of any *contretemps* occurring, will help to preserve order. In the Bella Vista Park, where the show is held, are really some very pretty pleasure-grounds, something on the Cremorne or Belle Vue style, and the lakes in it are to be called into requisition in case of fire. Two engines, filled and supplied with hose and all the necessary apparatus, are ready for use at a moment's notice.

Altogether, the show promises to be a grand success, but until later on it is impossible to speak definitely on this subject. All classes of the community seem to be working together to promote its welfare, and a list of the donors of the special cups show the interest in dogs taken by the highest in the land. Among the names appear those of His Majesty the Emperor of Germany, Prince Mecklenburg-Schwerin, Prince Charles of Prussia, Prince Albert of Prussia, Prince George of Prussia, Prince Alexander of Prussia, Prince Albert Solms, whilst Messrs. Spratt, Barr and Clarke also give prizes, that of the first-named being 1,000 marks in money.

The general committee is a small one, but works tremendously hard. It consists of General Count Waldersee (President), Prince Albert Salms, Mons. V. Marais, and Herr Emil Meyer, the secretary. All these gentlemen show that they are determined to flinch at nothing in the shape of hard work to make a success of the affair; and, unlike some committees we could mention at home, set the example by exerting themselves to their utmost. Messrs. Spratt & Co. undertake the feeding, and have every convenience at their disposal; so the dogs are sure to be well looked after.

COCKER SPANIELS IN BUFFALO.

EDITOR FOREST AND STREAM:

Will you please publish this, my last, in explanation to Mr. Harrington, as I find I have raised a tempest in a tea-pot, where none was intended. I am simply a "Heathen Chinee," childlike, but a lover of the spaniel in any breed, more particularly the cocker. I will begin with letter No. 1. If "E. B. J." can find anything in my letter either unjust or casting reflection on Mr. Harrington or his dogs I am willing to publicly apologize to Mr. H.; but I spoke the truth as I heard it, and nothing more.

I am an entire stranger in Buffalo, but on seeing Mr. H.'s letter I asked Mr. J. C. Smith, agent of the American Express Company, to show me around, also reading Mr. H.'s letter to him. We went, and the result of our visit I published.

Letter No. 2 from "C. B." is very candid. I would like his acquaintance, for he speaks just what he thinks.

Letter No. 3, J. B Harrington, looks very much like an advertising medium.

With respect to Mr. Neill, he may be as dishonorable as your correspondent paints him. He is comparatively a stranger to me; I never either sold or bought a dog from him. If he is what Mr. H. says I am glad to hear it. I was introduced to him when he produced what he called the King Charles spaniel, and further said Mr. H. wanted to purchase one, and told me he had thirty-five, hence my thinking him the largest dog man East.

With respect to Mr. Lincoln, he is a personal friend, also Mr. Nash, and whose Rake is the sire of my Daisy—last litter seven; none for sale. Mr. H. can at his leisure find me if he wishes; but no slurs.

I will now refer to "Honest Steve," as Mr. H. calls him, a worthy name, I have no doubt. The mutual friend is Mr. Smith, whose character is above reproach.

Mr. Batley's letter contains too much mud, and, for fear I might get some on my clothes, I will stop, for you know he that touches pitch will be defiled. JOHN HAMMON, *Clifton*.

COCKERS AT NEW YORK AND BOSTON.—Our correspondent, "Goshawk," in his excellent review of the judging at the late New York, Philadelphia and Boston dog shows last week, was in error in saying that no New York cockers went to Boston. Gip, owned by D. P. Bosworth, of this city, winner of second prize in bitch class at New York show, was sent to Boston and was there awarded first prize in a mixed dog and bitch class.

DOGS VS. TELEGRAPHING.—Our Buffalo, N. Y., correspondent who is sadly annoyed by unfortunate owners of dogs, requests us to relieve the pressure by by publishing the following card, which we cheerfully print:

Mr. J. B. Harrington begs to hereby acknowledge the compliments tendered him by numerous correspondents, but is compelled to respectfully decline all offers for the use of his "cockers" for stud purposes.

—The Rev. J. Cumming Macdona arrived in this city by the new steamer *Arizona*, of the Williams & Guion Line, on Monday of this week. Mr. Macdona brings a number of fine dogs with him, some of them being prize-winners at the late International Dog Show at Hanover. Among the dogs are three St. Bernards. The first, Marco, is by Pasha out of Minka. The next, Braunfels, was bred by Prince Solms, and is the dam of Bertha, the dog given by Mr. Macdona to the Princess Louise, and taken by her to Canada. The other is Bernie, by Thor out of Gypsey Lass. Then there is a very fine Irish setter, Rover II., two years old, by champion Rover out of Nina. The English setters are Ranger Rival, fifteen months old, by champion Ranger out of Moll, sister to Cora; and Dash III. (Decimal), by Dash II. (Llewellin's, late Brewis') out of Duchess, by Pilkington's Dash out of Queenie. Mr. Macdona has also brought with him a very fine pointer, Croxteth, by Lowo's Young Bang out of Macdona's Jane:

Croxteth, through his ancesters, Sam, Hamlet, and Drake, combines the best blood of Lord Sefton's, Mr. Whitehouse's and Sir Richard Garth's strains, and is half-brother to Sir Thomas Lennard's wonderful pointers, Priam and Scamp, winners of first and second prizes at the Field Trial Derby, 1878, and is also grandson of champion Bang, winner of ten field trials, and never beaten at a dog show; thus combining good looks with good work in the field. Through his ancestors, Cornwall Legh's Mars, Newton's Ranger, and Garth's Mite, he inherits the grand strain of blood that culminated in Mr. Garth's extraordinary pointer Drake, who, with Mr. Macdona's wonderful setter Ranger, ranks among pointers as Ranger does among setters, as the fastest and greatest champion field trial winner of this century. Croxteth won fourth in the Field Trial Derby, 1879, out of 120 entries, and won second prize at the International Dog Show at Hanover, May, 1879.

Mr. Macdona starts for Texas to-morrow, to look at some large tracts of land he has in that State.

—Read the advertisement of "Diseases of the Dog," by Silver Strain, which can be found in another column.

NAMES CLAIMED.—Dr. R. I. Hampton, of Rome, Ga., claims the name Kate Claxton for his white-with-liver-ears Guy–Flash puppy (⅞ Laverack), whelped Jan. 10, 1879, and bred by Charles H. Raymond, Esq., Fox Farm, N. J.

—Mr. J. Otis Fellows, of Hornellsville, N. Y., claims the name Little Buttercup for his liver and white cocker gyp, whelped Feb. 3, 1879, by P. P. Winn's Jack out of Mr. Fellows' Fannie.

—Mr. Leonard Ryan, of Medora, Ill., claims the name of Mollie Plunkett for his red Irish setter bitch pup by Champion Elcho out of Bridget Plunkett. Purchased of E. J. Robbins, of Wethersfield, Conn.

—Mr. G. B. Inches, of Boston, claims the name of Polo for his fox terrier dog by Paulo out of Maudie; whelped March, 1879.

—Mr. W. W. Wicker, of East Saginaw, Mich., claims the name of Honest John for his black, white and tan setter pup, whelped Jan. 11, by Douglass out of Ailse.

—The imported red Irish setter Dash, winner of 1st prize at New York, and 2d at Boston, in 1878, owned by Messrs Lincoln and Hellyar of Warren, Mass., is dead.

—Messrs Lincoln and Hellyar's pointer bitch Gypsey whelped on May 29th eight puppies, sired by Snapshot

—Dr. Nevin's Moll whelped, on 27th inst., nine pups by Toledo Kennel Club's Grouse—four dogs and five bitches, all healthy and strong.

—The imported pointer bitch, Miranda III., whelped, at the kennels of J. W. Coffin, Esq., near Providence, R. I., on the 1st inst., nine puppies, sired by Mr. Coffin's Rake II. Two have since died, leaving five dogs and two bitches living. One is white, two are lemon and white and four liver and white.

ATLANTIC YACHT CLUB.

A MOST propitious day was Saturday, June 7, when the fourteenth annual regatta of the Atlantic Yacht Club brought to the line a list of starters seldom equaled in New York waters for noted qualities and for close classification as well. This being the first formal meet among the fliers after their winter alterations for better or for worse, it was a hard matter to say what the upshot of the day might turn out to be before the judges gave the gun from their steamer *Cyclops*. No wonder that in the result the knowing ones even were somewhat nonplussed, for when *Regina* passed the line a winner by long odds from such jammers as *Undine* and *Sadie*, and when *Peerless*, after being led out to the lightship by the Commodore's craft, with *Triton* not far in her wake, fetched the finish with such a lead of the other two-stickers that an exclamation of surprise went up from all hands congregated about the mark-boats off Bay Ridge, it might truly have been surmised that wonderful sailing must have been done in bucking wind and tide on the long beat home. To be sure some allowance must be made for the so-called unexpected results, and it is just possible that there may be a somewhat modified appearance to affairs at the next meet of the cracks. For so early in the season, with some of them scarcely a fortnight off the ways, owners and skippers may not have got the hang of their craft, nor can it be presumed that the latter were all in their best form. But after making all due allowances one way and the other, the fact still remains that *Regina* proved herself such a tough customer and such a high pointer in a slashing breeze and smooth sea that under like circumstances her colors may be counted upon as the most troublesome to place astern among all the best sloops we can muster. She stood up to her sail better than ever before, and doused her topsail only for a few minutes all day. In this her wholesome thirteen tons of lead were talking in a way not to be mistaken, and when it came to hardening in—her new headrig, staysail and jib having taken the place of the big baggy jib of the orthodox sloop—told to such advantage that *Sadie* and *Undine*, neither of them a slouch under the circumstances, must have opened their eyes in wonder at the handsome style in which the Keyport crack outpointed them on each and every leg. There were other sloops in company and close aboard, whose crews will bear testimony to *Regina's* performances, for they were so close to her on the first board inshore after turning the lightship that there was no chance for a slant in favor of one or the other, but all had the same wind, and *Regina* screwed out on the weather of the lot and out-footed them in a way which leaves no shadow of a doubt that she must be counted about the best in the fleet for the kind of work she had to do on that memorable day. Had the wind been on the beach instead of from the prairies and a bobble made sailing more troublesome to all, we think *Undine* might have given a better account of herself in comparison; but that remains to be seen. *Peerless* owed her lift to windward to three things besides a lucky slant of free wind off the Hook. First, her owner, Mr. Maxwell, had the wheel, and it is acknowledged that he is a walking Bay Pilot and Cyclopedia of tides, eddies and the shortest way home; second, the double-sheeted boom foresail with a lug tailed on set as flat as a board; and third, a tidy little chunk of lead on her keel held her up to business and made her forereach like a steamboat in the short work along the beach outside. Sloops of class D, 35 to 45ft., had some fine sport as the list of entries was excellent; but unfortunately for a fair test, the fleet split tacks, got adrift from one another, and flukes in the way of puffs and a veering wind did much to modify the value of the tally at the end of the day's sail, for the first became the last and the last first; still on the whole no fault can be found, for the prizes went to the Rear-Commodore's handsome sloop with *Schemer* a good second on time allowance. Among the smaller classes the rather limited entries seemed to detract from the interests of their racing, especially as it was just their day considering the very smooth sea.

The *Columbia* steamer went over the course with a large party of members and guests on board, and the *Cyclops* took out the judges, Messrs. Ed. Arnold, Thos. J. Northall and Geo. M. McNulty, and the regatta committee, Messrs. J. L. Marcellus and Geo. A. Weber. All yachts had their burgees at half mast out of respect to Mr. C. T. Lippitt, of the regatta committee, deceased. The wind was blowing fresh, rather more than a topsail breeze, from N.N.W., and the tide about high water. There was not enough sea on to disturb a cockle, and if ever sloops had a day of their own, this was the one. The racing fleet hove up from the common club anchorage at Gowanus, and ran down to the line, where they stood off and on, waiting for the signal. Like last year, the first signal, or whistle, was unobserved by the yachts, and it was not until the third whistle that the schooners and Class B sloops made for the line, followed rapidly by the rest. The simultaneous lowering of a flag on the judges' boat would obviate making a foul start; for if the ear fail to catch the whistle, the eye will certainly see the bare pole. Only *Lizzie L.* and *Schemer* saved themselves from being handicapped, as they lead across the line inside of the ten minutes allowed. The time of the others was reckoned from the expiration of the ten minutes. The start was effected as under; time allowance according to club scale:

SCHOONERS—CLASS B.

Name.	Owner.	Mean Length. FT. IN.	Actual Time. H. M. S.
Peerless	J R Maxwell	70 2½	11 14 25
Agnes	Com L A Fish	57 5½	11 10 00

OPEN SLOOPS—CLASS F.			
Pilot	R S Church	24 6¾	11 39 45
Corinne	W W Beebe	23 1¾	11 32 10
CAT-BOATS—CLASS G.			
Wind	Wm Peet	22 4	11 25 00
Alcyone	G D Mackay	20 7	‡11 27 10

Schemer went away with working topsail set over a reefed mainsail, but shook out the latter before reaching the Narrows, the sloops generally with small club topsails over whole lower sail, and the schooners with light duds and big maintopmast staysails into the bargain. Off Bay Ridge the wind was brought well aft, and balloon jibs were in order all around, booming out poles coming into requisition soon

afterward. Among the smaller ones *Nimbus* made the start under lower sail only, *Pilot* with a reef down in both mainsail and jib. They made more sail when booms were squared away to port off the forts. The *Wind* ran down between the marks, jib over and made a second cross, thereby handicapping herself with nearly 5m. Fortunately her competitor, *Alcyone*, was worse off by 2m. Down the wind the big ones drew out ahead, the Commodore's schooner doing remarkably well, and *Undine* at her old tricks ahead of the sloops. Barring an occasional blanketing and a sharp luff, endangering booming out poles, nothing noteworthy occurred till the Spit Buoy was jibed around, as follows:

	H.	M.	S.		H.	M.	S.
Agnes	12	26	30	Regina	12	35	38
Peerless	12	27	40	Sadie	12	35	10
Triton	12	29	25	Winsome	12	36	45
Undine	12	29	50	Pirate	12	39	40
Lizzie L	12	31	12	Genia	12	40	57
Dolphin	12	34	49	Kaiser	12	44	20
Schemer	12	35	00	Nimbus	12	44	30

The rest were not timed. The schooners and large sloops ran up along the Hook with a beam wind, bound out for the lightship, while class D trimmed in for the Gedney Channel stake-boat, and classes E, F and G commenced the real work of the tedious beat home against a strong ebb. *Lizzie L.* made a neat round of the Gedney stake at 1h. 6m. 14s., followed by *Schemer* at 1h. 9m. 46s. The former doused topsail, and with boom hard in made a long board to the W.S.W., and a few short ones along the Hook, till she could look up inside, and after crossing the ebb coming out the main ship channel, stood far in to the W. and kept cheating the tide by short boards as much as possible. Then recrossing the channel, "the Doctor's boat" worked the Coney Island beach and Gravesend Bay to the best advantage. She was followed by *Schemer* and *Winsome;* these two, however, getting the wind sufficiently from the N. to hug buoys 11, 14 and 15, and then lay their course up the Narrows for home. By this little slant in their favor they gained much on *Pirate, Kaiser* and the *Lizzie*, as *Pirate* until near the close had a long lead in her class, having worked the north shore with effect all the way from the Romer. *Genia* seemed to do poorly on the wind, for she was left to leeward pretty roundly. The finish of this and the smaller classes will be found below, *Winsome's* size telling in her favor over *Schemer* on the long turn to windward and landing her ahead of all allowances, and winning two prizes handsomely for her owner off as fine a fleet of sloops as ever sailed together.

In the meantime the big ones had been having a fair run of it out to "the ship." The latter was luffed around as under, *Undine* doing the right thing cutting in between the mark, and *Triton* hardening in for home on the schooner's weather a few seconds ahead:

	H.	M.	S.		H.	M.	S.
Agnes	1	51	09	Dolphine	1	51	20
Peerless	1	55	14	Regina	1	52	10
Undine	1	42	48	Sadie	1	53	47
Triton	1	43	08				

The wind having backed more to the W. all hands stood in for the shore well to the southward. It was now that windjamming was at a premium. *Peerless* showed the most of this among the schooners, and under working topsails chiseled out a big lot during the short work up the coast. Off the Hook she found a favorable slant which served to give her even more to spare. *Triton* went away to the northward in search of luck, but found only the ebb of the main channel and no more wind than inshore. It was, however, the only move she could make under the circumstances with any hope of bettering herself. *Agnes* lacked the tonnage, and so *Peerless* had things her own way doing the slack water in Raritan Bay and at times apparently lee-bowing the last of the ebb, finishing in grand style after a well-sailed race, her owner still at the wheel, with a lead of 18m. of *Agnes*, and the more remarkable amount of nearly 45m. of *Triton*. No wonder Mr. Maxwell hoisted a pennant at the main about as long as the far-famed sea-serpent of mythical seas. The sloops took a lesson from the schooners and went in for the shore after hauling around the outer mark. Here it was that *Regina* astonished her company, *Undine* in the lead with *Orion* and *Dolphin* under her lee, and *Sadie* a short distance astern. Mr. Stuart's craft looked right up in the wind and planted herself fairly to the northward of all the rest more and more, so much so that she made up for *Undine's* lead, as when the two crossed tacks near shore—*Undine* with the right of way, but *Regina* with no sea room to go about—the former poked her bowsprit over the white sloop's quarter, fouled her topping lift, and wore *Regina* short round on her heel, finally getting clear with trifling damage to either. It was not long, however, before *Regina* had made good the amount lost, and in fair work screwed out to windward of the Boston pet once again. From that time on it was *Regina's* day, and she gradually put more water between herself and rival, chiefly through outpointing her. *Undine* may not have been quite herself in her new suit of sails, nor did she stand up quite as well. We believe she has received more hoist, and if that is the case it has been overdone—for brisk winds, at all events. But then *Undine* certainly did not do poorly, judging by the manner she held *Sadie*, and we cannot ascribe *Regina's* victory to anything else than her new *quasi* cutter rig; for with it she can lay higher than under the baggy jib of the Bourbon fancy. No doubt, this day's match will cause a precipitate shedding of the clumsy jibs and the adoption of what we have all along counselled with as much force as the want of just such victories as *Regina's* to point to in support of a sailor's rig would allow. *Nimbus*, a deep, powerful sloop, had made a splendid race, coming home in such fast time that the judges at first thought she had failed to make the course, a false report to that effect having got abroad.

Alcyone	11 20 30	5 03 40	5 43 10	5 43 45

The prize for schooners goes to *Peerless*. *Regina* wins in her class, and *Winsome* takes club prize with time allowance, as well as the Livingston Memorial for first sloop in her class, irrespective of allowances. *Nimbus* takes prize in Class E, having beaten *Alma* by the long lift of 1h. 5m. 25s. over a 25-mile course! *Pilot* wins from *Corinne* in open sloops, and *Wind* from *Alcyone* in the cats.

HUDSON RIVER YACHT CLUB.—The eighth annual regatta of this club was sailed Monday, June 9, over a course from the club house, foot of 70th st., North River, to Spuyten Duyvil Creek and return for fourth class yachts, and to Yonkers and return for the rest. Time allowance 2m. to the foot. Length measured over all. Wind moderate from S. S. W., tide, last of the flood. The races brought out a fine list of entries and were attended by a big fleet of "outsiders" and a large concourse of spectators. It was a run up with jibs boomed out to port, the wind being at times lost under the lee of the Palisades, and one stretch home with everything nipped in hard. Tides and eddies, flaws and slants, were worked in a most creditable manner by some of the craft whose skippers have been born and bred about the lower reaches of the Hudson. The start was effected a little after meridian. The mark at Yonkers was rounded in the following order.

	H.	M.	S.		H.	M.	S.
Annie G	1	59	45	Irene	1	53	38
Mechanic	1	54	33	Deane	1	56	02

Annie G. wins from first class, beating *Mechanic* 12m. 39s. allowance applied. *Irene* had a walk over. *Geo. B. Deane* wins from third-class, beating *Annie L.* 11m. 34s. *Joe Egan* wins from fourth class, beating *Gussie* 12s., and *Maria* wins among the cats, beating *Prospect* 32m. 2s.

NEWPORT YACHT CLUB.—The following are the officers for the year: Commodore, S. F. Pratt, of Boston; Vice-Commodore, J. V Mott, of New York; Treasurer, Lieutenant Commander E. M. Steadman, U. S. Navy; Secretary, W. V. Olyphant, of Brooklyn, N. Y.; Measurer, Richard Youmans, of Newport. The club was organized June 15, 1876; their club-house is located at the head of Long Wharf. The fleet is composed of three schooners, twelve sloops, twenty-eight cats and three steamers. The commodore has brought out a new invention in the shape of a flexible rudder, and bowsprit hinged to the boom instead of being fastened to the deck. When hoisted the jib requires no sheets, the foot being laced to the bowsprit and the head being hoisted as usual. This makes it virtually one sail with the mainsail, and it is claimed the boat can lie closer than with the usual jib, besides being handier. By unlocking the hinge the bowsprit can be swung aft alongside of the boom, the jib furled to it, and the rig reduced to that of a cat-boat. The club rules call very sensibly for fixed ballast, and Herreshoff's time-tables are in use. Club burgee red pointed, with white perpendicular stripe; Commodore's pennant, red swallow-tail, with three white stripes, and Vice-Commodore with two white stripes.

WEST BRIGHTON YACHT CLUB—Organized this season—Officers for the year: Commodore, J. H. Dilks; Vice-Commodore, F. Stoddard; Secretary, L. Sykes; Treasurer, T. White. Location, West Brighton, North Shore, Staten Island. Annual regatta fixed for June 28.

SCHUYLKILL YACHT CLUB.—Organized this year in Philadelphia. Officers: Commodore, J. Gibbons; Vice-Commodore, R. Sutton; Measurer, A. King; Secretary, T. J. Gallagher; Treasurer, E. Harley.

BAY OF QUINTE YACHT CLUB.—The Mayor of Belleville gives a silver pitcher and Mr. A. G. Cole, of Ottawa, a large club ensign for the summer regatta on June 13, while the Commodore will give a silver cup, and the Treasurer a compass for the first and second yachts in the fall regatta. *Katie Gray*, last year's champion, will sail under precisely the same rig which last season proved so successful. *Kathleen* has a new cedar spar, which has been set forward 9in., and the unwieldy jib reduced, as she had too much canvas before. She seems to work well under the new rig. *Gracie* will have an entire new outfit. *Sylvia's* hull has been planed as smooth as a bottle, and a stouter topmast has replaced that which carried away in the last fall regatta. She is the only keel in the fleet, and her speed will be tried against that of the centreboarders in all kinds of weather. *Surprise*, of Trenton, has received a new deck and cabin, and a new cedar spar, while her quarters have been raised. Cuthbert has now on the ways a new 10-tonner for a gentleman in Kingston. The same builder lately turned out a small steamer for parties in New Brunswick. She was christened *Maggie Mohle*, and is, like all Cuthbert's craft, of beautiful model. Mr. Atkins, of Picton, has built a 10-ton yacht, which he calls *Judge Jellett*, and which will sail in the June regatta. The third-class fleet is in a mixed condition. *Wideawake*, a very smart little craft, which was built in Trenton by Cuthbert last year, and sailed under a cat rig, was purchased by parties here, and has been overhauled and rigged as a sloop, with cedar spar and a good spread of light canvas. She sails very fast, and promises to show a clean pair of heels to all in her class. *Mabel* has also been fitted out, and so has *Amorette*, but *Minnie A.*, a smart little boat, is under seizure, and *Atlas Craig* has not yet had her canvas bent. *Iris*, a 5-tonner, owned by Mr. G. P. Reid, has been added to the club fleet. The first class of the fleet has suffered a severe loss in the sale of *Madcap*, of 16 tons, to Mr. A. R. Boswell, Commodore of the Royal Canadian Yacht Club, Toronto, for which city she has made sail. The departure leaves *Dauntless* the only representative of the first class at this port. She will be hauled out and put into trim at an early date.

The Bay of Quinte Rowing Club is full of life and energy, and will inaugurate its season very early by holding a series of races over a two-mile course for the club prizes, emblematical of the championship in singles and pairs.

PORT TACK.

QUAKER CITY YACHT CLUB.—Fixtures for the year: Annual spring regatta, June 12; Chester regatta, June 16; review and harbor cruise, June 29; Corinthian regatta, July 4; review and harbor cruise, July 13; same, Aug. 3; annual cruise, Aug. 16 to 30; fall regatta, Sept. 22; closing cruise and review, Sept. 28. The opening review and harbor cruise was held May 30, from Philadelphia to Chester and return. Club rules will be strictly enforced on all occasions.

C. S. S.

The squadron cruising on the fixtures of this club is a gratifying evidence of the progress of that sort of yachting which will gradually give to yacht design a new aspect and develop a healthy model.

SWEEPSTAKES ON THE DELAWARE—*Philadelphia, June 4.*—*Editor Forest and Stream:* Last Monday (June 2) there was a sweepstakes regatta between tuckups of the Philadelphia and Southwark yacht clubs, from the Kensington Water Works pier up river to Delaware Buoy (12 miles) and return. This is the favorite course of the Philadelphia club, as they know every bar and eddy in the river. The boats of the Philadelphia club participating were: *McCully, Schuyler, Cranford, Flick, Hildebrandt, Moore, Diston, Jones, Allen, Bickley* and *Martin*. Those of the Southwark club were: *Campbell, Douglas, Boyle, Powell* and *Mitchell* (double-ender). Breeze blowing from the northwest, which hauled around about southwest, and the boats got away in good style at 10:15, *Crawford* on the lead, which position she maintained to the upper buoy. On the return *Mitchell* gradually drew up and passed her, but owing to some "outsiders" that bothered the latter somewhat, *Cranford* resumed her old position, and passed the home stakeboat a short distance ahead, closely followed by *Boyle*, second; *Mitchell* third. Time—2:30, 2:35, 2:36. Each boat had contributed five dollars as entrance fee, which was divided as follows: *Crawford*, $50; *Boyle*, $20; *Mitchell*, $10.

C. C.

BOSTON MUNICIPAL REGATTA.—The city authorities of Boston have appropriated $800 for prizes at the forthcoming regatta, July 4, and our friends in Boston are complaining of the niggardly amount. Just come to New York and try to get fifty cents out of our Aldermen for any such purpose, and you will ever after think your city very liberal, after all.

GONE SOUTH.—The steamer *Elenore A. Kent*, of New York, has been sold to parties in Charleston, S. C., through Mr. Samuel Holmes, steamship broker, of this city. The *Kent* will go South immediately.

NEREUS YACHT CLUB.—This club held its spring regatta on May 30. Course, from Capt. Decker's, 115th street, East River, to buoy off City Island and return. Wind, S.E. and strong; tide, first of flood. *Estelle*, 16ft. 1in., owned and sailed by C. P. Rosemon, went over the course in 3h. 29m. 30s., winning two prizes, and beating *Fearless*, 16ft. 8in., sailed by T. L Miller, 7m. 25s. *Queen Mab*, 15ft. 3in., came in third, and only 10s. behind *Fearless*. *Nereus*, a new skip-jack, 14ft. 8in., carried away gaff parrell, and put into Fort Schuyler. L. P. Decker acted as judge.

CAPT. TOM.

SHARPIES.—Mr. Thos. Clapham's new sharpie, with his innovations in the way of fore-foot and bilge-keels in place of centreboard, is said to be doing very well, working fully up to expectations.

THE CANOE REGATTA.—The large number of entries made for the canoe regatta, sailed Saturday, June 7, in accord with rules already published in these columns, over a course off Staten Island, leads us to believe that there is a bright future for the sport within the next few years. All the interest needs is thorough organization, with enterprising and capable officers, and a little sacrifice of individual preferences for the common good. There was a strong wind blowing during the race, and quite a sea on for such little fellows as the 14ft. *Heralds, Shadows, Rob Roys* and *Nautilus*. The paddling race was started at 3 P. M. by the judges on board the steam yacht *Elvie*. Course, three-quarters of a mile to a stake and return. Entries—*Star*, Tuckerman; *Elise*, Fred. Hussey, Passaic Club; *Argo*, Wm. T. Fitch, Jersey Club; *Bubble*, Chas. E. Chase, Jersey Club; *Rosalind*, W. M. Cooke; *Lena*, Sutherland D. Smith, New York Club; *Dolly Varden*, J. Habberton, New York Club. Double-bladed paddles were in favor. The *Star* took the lead and won by 100 yards in 10 minutes, *Elise* second and *Argo* third. The sailing race was started at 3:30 P. M., in heats of three. Entries:

1. Dot.....C Bowyer Vaux (Resolute Club).
2. Bess.....C S Norton (Commodore N Y Club).
3. Elfin.....Dr E B Bronson (N Y Club).
4. Louise.....A C Constantine.
5. Elsie.....Fred Hussey (Passaic Club).
6. Titania.....Judge P Smith (N Y Club).
7. Jersey Blue.....A Roosevelt (N Y Club).
8. Star.....L P D'Orcuelelx.
9. Clochette.....W Whitlock (N Y Club).
10. Dolly Varden.....J Habberton (N Y Club).

Psyche, Dr. H. G. Piffard, capsized and withdrew, owing to wet sails. Wind, N.W. Course, from club house of the Staten Island Rowing Club to and around Robbins Reef buoy; sail over twice; distance, 6 miles. *Dot* and *Elfin* led buoy; sail over twice; distance, 6 miles. *Dot* and *Elfin* led off, followed by *Bess*, in the first heat, with *Louise* close after them. The buoy was rounded as follows: *Elfin, Dot, Louise, Titania, Star* and *Clochette*. *Elsie, Jersey Blue* and *Bess* failed to turn as required, and were ruled out; and *Dolly Varden* drifted away to leeward, and the others finally gave up the attempt to beat to windward. This left the race to *Elfin, Louise* and *Clochette*, who completed the final round in 59m. 30s., 1h. 9m., and 1h. 30m. 30s. respectively. Suitable prizes were awarded to the winners, and a dinner finished up the day. Judges: Messrs. Wm. Krobs, M. Roosevelt Schuyler and Major Henry Gaines.

CHARLESTON (S. C.) ROWING.—The annual rowing races came off May 5, under the auspices of the three rowing clubs of this city—the Palmettos, Carolina Independents and Electrics. The Regatta Association is either broken up or the members are all fast asleep, and the boating men very wisely took matters into their own hands. The day and water were all that could be wished. A few minutes after 8 o'clock Mr.

James L. Fraser, starting judge, aligned the four-oared shells for the first race, two miles straight away. The crews entered for this race were: Palmettos, paper shell *Mamie*—Bow, K. S. Tupper, 130lbs.; 2, P. L. Bissell, 133lbs.; 3, H. Dotterer, 140lbs.; stroke, H. Nott Parker, 145lbs.; position, St. Andrew's shore. Centre, Electrics, cedar shell *Nora*—Bow, H. G. Leach, 140lbs.; 2, Geo. C. Wharton, 148lbs.; 3, J. H. Frieberg, 150lbs.; stroke, M. J. Mahoney, 140lbs. City shore, Carolinas, cedar shell *Maggie M*—J. E. Inglesby, 140lbs.; 2, W. M. Ogelvie, 140lbs.; 3, Charley F. Hard, 158lbs.; stroke, H. F. Miler, 141lbs. A beautiful start was had, and for a few yards the three boats kept well together, but the Electrics soon quickened to a 40 stroke, rushing *Nora* ahead. This position was kept for nearly the first mile, when the Electrics eased off a stroke or two, and the Palmettos, who had hugged the St. Andrew's shore up to this time, began to crawl toward the city shore, and closed up the gap between the Electrics and themselves. The Carolinas were several lengths behind the Palmettos, and were now virtually out of the race, although they kept up to Miler's steady stroke gamely, and ran up to 38 and 40 on the finish. The victorious Electrics crossed the line about seven lengths ahead; the Carolinas ran into a boat almost on the finish. Gig race—Positions and crews as follows: Electrics, *Ella Lee*—Bow, J. B. Kenney, 121lbs.; 2, W. F. McGarey, 130lbs.; 3, Leroy Butterfield, 135 lbs.; stroke, W. E. Duffres, 146lbs.; St. Andrew's shore. Palmettos, *Emmie*—Bow, John Bennett, 110lbs.; 2, C. C. West, 125lbs.; 3, O. H. Bissell, 130lbs.; stroke, W. M. Shackelford, 120lbs.; centre. Carolinas, *Azile*—Bow, G. Stuck, 130lbs; 2, F. G. Fraser, 130lbs.; 3, C. M. Trott, 145 lbs.; stroke, B. S. Inglesby, 148lbs.; city shore. The start was a good one, but only a few strokes had been pulled when *Ella Lee's* rudder broke, and she dropped out of the race. Just off West Point Mills the bow oar of the Palmettos snapped off like a pistol shot. The three remaining oars gamely kept up the race, and pulled to the finish. The Carolinas kept up a splendid fast stroke to the end, and won the race about fifteen to twenty lengths ahead. English challenge cup race—Same distance and course as the first shell race. A few minutes after ten the start was made, the Palmettos on the St. Andrew's shore, the Electrics on the city shore. The Electrics started off with a "lightning" stroke of 42, and they did not pull below this stroke at any time during the entire two miles, and in several spurts ran up to 46. The Palmettos started with a 32 stroke, but seeing the Electrics widening the gap between them so rapidly, they quickened up to 36-38, and soon regained some of their lost ground. The race was a fearful pull from the word Go, but the Electrics kept the lead the whole time, and with a splendid spurt of 48 rushed across the line, winners by about twelve lengths. It is to be hoped that the Regatta Association will revive sufficiently to get up one or two races during the summer, either on the Ashley or on the Cove at Sullivan's Island. The crew from Augusta disappointed many by not putting in an appearance.

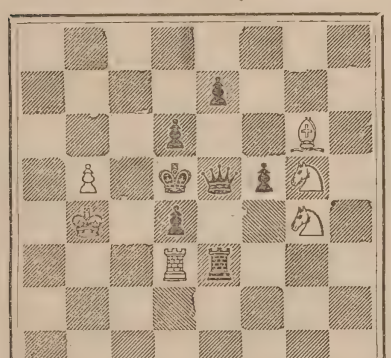
Y.

The Game of Chess.

MANHATTAN CHESS CLUB, CAFE LOGELING, NO. 49 BOWERY

Problem No. 55.

Motto: Killarney.



White to play and give mate in two moves.

SOLUTIONS TO PROBLEMS—NO. 48.

1—P-Q R4 1—Any
2—Mates

Game No. 116.—VIENNA OPENING.

We unaccountably neglected to state that the Russian chess magazine—*Schachmantz Listok*, of St. Petersburg, Russia—and the Italian chess magazine—*Nuova Rivista*—had been resuscitated upon the advent of the new year. These chess magazines are conducted with unusual ability, especially in their game and problem departments. We suggest to M. Tchigorine the advisedness of adding the Latin alphabet in the problem department. The subjoined game is taken from the last number at hand:

White. M. Tchigorine.	Black. E. Schmidt.	White. M. Tchigorine.	Black. E. Schmidt.
1—P-K4	1—P-K4	14—Kt-K R4	14—B-K Kt5
2—Kt-Q B3	2—Kt-Q B3	15—Q-K	15—Kt-K R4
3—P-B B4	3—B-Q Kt5	16—P-K R3	16—C-K3
4—Kt-K B3	4—P-Q3	17—K-R2	17—P-K R3
5—B-Q B4	5—Kt-K B3	18—B-K3	18—Q-Q2
6—Q Q	6—Q Q	19—P-K Kt3 (a)	19—P-Q R3
7—Kt-Q3	7—Kt-Q R4	20—Q-K2	20—Kt-K B3
8—B-Kt3	8—Kt tks B	21—R tks Kt ! (b)	21—P tks R
9—R P tks B	9—K R-K	22—B tks P	22—Q-Q2
10—P tks K P	10—Q P tks K P	23—Q-K B3 (c)	23—K-R2
11—B-Kt5	11—R tks Kt	24—Q-R5	24—R-K R
12—P tks B	12—Q-Q3	25—P-K Kt4	25—Q R-K Kt (d)
13—K-R	13—Q-K 3?	26—Q-B8	

NOTES.

(*a*) Guarding K B4, as indicated in the text; it is the best move.

(*b*) Again the best move; the game is now forced.

(*c*) If 23—Q-R5, then 23—B tks R P; 24—P-Kt4, 24—B tks P; 25—R-K Kt.

(*d*) If instead of the move in the text, K-Kt be played, the attack wins nevertheless, as will be seen by the following analysis: 25— ——, 25—K-Kt; 26—P-Kt5, 26—R-R3 (if 26—Q-K7, then 27—R-K Kt); 27—P tks B P, 27—K.R; 28—R-K Kt, 28—Q-Q (if 28—B tks K P, then 29—R-K Kt5, and mates in four moves); 29—B-Kt7†, 29—K-Kt; 30—Q tks Kt†, 30—K tks Q; 31—R-Kt5, and wins.—*Schachmantz Listok.*

CURSORY JOTTINGS.

—The problem tourneys of the Detroit *Free Press* are invariably a success. Its fourth tourney closed with 119 problems, entered by composers in this and other countries. Sixteen sets have already been published. Mr. George Carpenter is the umpire.

—The score in the pending match of Delmar vs. Loyd, according to our latest advices, stands: Delmar, 2; Loyd, 0, and one draw. We hope to find time to glance over the first game in this match, and append a few remarks in time for our next issue.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

P. C, P., Brooklyn, N. Y.—The gun is unknown to us.

R. D.—Kay's chips may be procured of A. B. Kay & Co, Newark, N. J.

P. G., Erie, Pa.—See advertisement of carrier pigeons in another column.

C. P., Utica.—Bond's iron sectional boat, W. E. Bond, Cleveland, Ohio, for sportsmen's use.

J. J. B., Petrolia, Canada.—Leadville, Colorado, is in latitude 39 deg. 15 min.; longitude, 106 deg. 10 min.

E. J. P., Washington, D. C.—We have examined the Pope bicycles and think they will give you satisfaction.

Log, Baltimore.—For description of common log and patent log see issue Aug. 1, '78. Patent log is best for cruising.

W. W., New York.—The young salmon is called the smolt, not smalt. The English book probably contained a misprint.

H. M., Boston.—*Enterprise* is cutter rigged, but her hull approximates more to the Eastern sloop than to the English cutter.

T. S. S., Hartford, Conn.—For rubber mattress to carry into the woods write to Hodgman & Co., Maiden Lane, New York.

R. G. F., New York.—For rigging, blocks, lamp oil and stores go to Whitlock, Slover & Co.; for binnacle, to Merrill's Son's, 179 Water st.

J. P. W., Jr., Lyndon, Kan.—Miss Juliet Corson has not published a sportsman's cook book. She has written a book on cookery, however.

E. L., Quakertown, Pa.—Excellent shooting in Kankakee region, Indiana. You can use Express bullet in Winchester rifle, model of 1873.

L., New York.—For tame pigeons apply to Knapp & Van Nostrand, Washington Market. Wild pigeons are very scarce just now, hereabouts.

C. R., El Paso, Ill.—Dogs frequently act as you describe. Your bitch will probably not be in season again for six months. You are right as to the period.

J. R., Bowery, New York.—The game bill has not been signed by the Governor. For information of its passage consult our columns when the time comes.

SKIPPER.—We will illustrate a spinnaker and its gear if opportunity offers, though it can be understood from what has already been published in our columns.

C. D. L., New York.—The "Revised List of Birds of Central New York" may be obtained of Mr. Frank R. Rathbun, P. O. Box 357, Auburn, N. Y. Price 50c.

J. T. N., Union Springs.—William Greener, the celebrated English gunmaker, died in 1868, or about that year. His son, W. W. Greener, is the present manufacturer.

S. C. B., Painsville, O.—There are so many other things in base ball playing besides the simple score of runs and outs that we cannot decide the merits of the two players by the data furnished.

T. J. S., Frankfort, Ky.—Where could I procure a pair of thoroughbred bloodhounds? Ans. Only by importing them from England. Dr. Gordon Stables, Twyford, Berks, Eng., could get them for you.

H. W., Shelbyville, Ind.—Your party will find good sport in Arkansas, near Charleston, Mo. November will be a right time. If you have no correspondents there write to the postmaster. The people are hospitable.

ROYAL CANADIAN.—Slinging ballast by straps is one of the foolish humbugs to be classed with elastic fastenings, slack shrouds and bellied sails. Stow it right on the skin, jack-knife authority to the contrary notwithstanding.

S. H. J., Phila.—A 15ft. boat, oak, hardwood finish and brass trimmings, finest quality, copper fastened, will cost complete $95 delivered at Phila. steamer. Freight about $4 additional. See our advertisers for best builders.

J. A., Lafayette, Ind.—For information regarding Texas sheep call send to A. S. Barnes & Co., New York, for "A Thousand Miles Through Texas on Horseback." Also address *Bulletin* Wool Grower's Association, 11 Pemberton Sq., Boston, Mass.

J. P. P., Boston.—1. Difficult to get a lurcher in this country. 2. Greener's hammerless guns, new models, are excellent arms. 3. Buckshot can be used in choke-bores. 4. The Berdan range finder is of no practical use in hunting.

G. H. W., Red Bank, N. J.—Black bass fishing at Clayton, N. Y., excellent. You will find good accommodations at hotel or farmhouse for your family there. Your 8 oz. split bamboo rod will answer for fly fishing. The season is from May 20 to Jan. 1.

S. R. B., Kinsman, O.—In class shooting the contestants who tie on the highest score shoot off for first prize, and those who tie on the next highest score shoot off for second, etc. When a man in the shoot off loses the first prize, it is of course has no chance for the second.

FAN, Cincinnati.—Can you tell me of something to prevent sunburn? I don't mind the browning, but the burning I can't stand. Ans. To prevent sunburn stay in the shade, of course. To relieve the burning apply glycerine or vaseline, which you can procure at any drug store.

J. H. B., Lock Haven, Pa.—My black and tan for some weeks has not had the use of one of his hind legs. Flesh on hip sunken in and leg drawn up. What is the cause and cure, if any? Ans. Probably paralysis. Could not prescribe without seeing the dog. Take him to a physician.

F. B., S. Norwalk, Conn.—What is the best method of stunting the growth of a small black-and-tan terrier? Would it be attended with any risk of its life? Ans. It is said that giving small doses of gin will produce this effect, but we do not believe in any such measures. It is best to breed them small by selection.

C. W. T. and L. K. L., Jr., Camden, N. J.—A pistol shooting match in which one of the pistols is leaded as badly as the one you describe we should judge hardly a fair test of skill. A marksman should examine his weapons before he uses them; if he is so careless as to use unfit tools he deserves to lose the match.

A. B. D., New York.—Please tell me the cause of the toes of canary birds becoming enlarged and apparently sore looking, as though covered with heavy scales? Ans. Wash the bird's claws with warm water and then apply sweet oil. Trim the toenails close, not so close as to make them bleed, examine the perch and see that it is not rough.

R. S., Portland.—We have few yacht sailers in this country, barring about a dozen skippers, and racing as well as cruising are in their meerest infancy. The best sailing element is to be found among a certain small class of amateurs. The spinnaker is permitted, so far, only by the Seawanhaka Y. C., but its adoption will become general very soon.

J. D. T., Read's Landing, Minn.—To make a rubber cement: ½lb. bi-sulphate carbon, 3 handfuls gutta percha; dissolve in bottle, shake frequently; after two weeks strain through a cloth; then cork tightly. Dry your boots, smear on cement, allow it to evaporate until it becomes light colored in spots; then warm and bring edges together. Allow the boots to stand awhile.

J. D. N., Toronto.—Iron ballast cast to fit limbers will cost about 2c. per pound, lead 3½c., or according to market. Stability and room will be gained by putting as much ballast on keel as possible, but then the hull becomes more expensive owing to special strength necessary. A five tonner now building has 4½ tons lead on her keel, and only 1,200 pounds inside in shape of a lead keelson.

INQUIRER, Franklin, N. Y.—Here is an unfailing remedy for your dyspepsia: Knead you abdomen as you would knead a batch of bread dough, and pound very lightly with your fists or palms of hands until you are tired. This will, if persevered in regularly every day, promote digestion, and ultimately cure you. For a warm, dry climate with mineral springs go to Colorado or to Virginia.

G. N. J., Newbern.—The fairest system of taking length for time allowance is to add to length on water line one-third the overhang at bow and stern. Some clubs add one-half the overhang. This should depend upon the value presumed to be obtained from the partial immersion of the overhang in sailing. Try 4s. per foot per mile, or 1m. 20s. per foot for a course 10 miles windward and back.

A. T. C., Hayesville, O.—For your fish pond fed by natural springs of pure water we should advise trout, black bass, or carp. So much, however, depends upon conditions which you do not state that we cannot advise particularly. Better consult your State Fish Commissioners, J. C. Fisher, Coshocton; L. A. Harris, Cincinnati, and R. Cummings Toledo, they can tell you. Trout fry cost about $3 per thousand.

W. W. Stamford, Conn.—I have a setter pup two months old. Under her stomach, about midway between her front and hind legs, is a small swelling about the size of a cherry. It is very soft and seems like a rupture. Is there any cure, and will it do any harm if it remains? Ans. It is umbilical hernia. A tight bandage may reduce it; if not, an operation must be performed. See back numbers of this paper.

C. W. E., Boston.—1. What is the pedigree of Pryor's Belle Gordon setter bitch? 2. Is Colburn's Dash a pure Gordon? What is his pedigree? Ans. 1. Belle by Belmont's Robin out of Flash, by Pete out of Maud. Robin, by Royal out of Racket. 2. Dash is Gordon, Irish and English, being by Putman's Dan (Irish) out of Valentine's bitch (Gordon). She by Talcott's Sport (English) out of Talcott's Nelly (Gordon).

J. H. P., Scranton, Pa.—Will you please give me the points of a beagle? The people in this part of the state are laboring under the impression that beagles have crooked legs like the dachshunde. Ans. The people are wrong. The beagle is a diminutive foxhound with proportionately larger head and ears. For points see "Points for Judging Dogs" compiled from "Stonehenge," and for sale at this office; price 50 cents.

J. C. McC., Sec. Walton Fields Fishing Club, Pittsburg, Pa.—You will find excellent fishing at Put in-Bay and Point-au-Pelee Islands in Lake Erie. You may correspond with Walter Grubb, or Dr. McCormick, Kelley's Island, for that point which is much resorted to by Cincinnati, Pittsburg and Cleveland anglers. For the others write to Robert McCormick, Kingsville, Ontario, Canada; which is the nearest point to the South Side Dock, Point-au-Pelee.

G. H., Pittsburg, Pa.—We published the game close seasons of all the States last December. The Pennsylvania dates for opening and closing of close season are as follows: Black bass, Jan. 1 to June 1; salmon and trout, Aug. 1 to April 1; lake trout, Oct. 1 to Jan. 1; squirrels, Sept. 1 to Jan. 1; deer, Dec. 1 to Oct. 1; wild fowl, May 15 to Sept. 1; pinnated grouse and wild turkey, Jan. 1 to Oct. 15; ruffed grouse, Jan. 1 to Oct. 1; woodcock, Jan. 1 to July 4; rail and reed birds, Dec. 1 to Oct. 15. Cut this out.

WESTCHESTER.—Dimensions depend upon the type of boat you want. As a cat boat a length of 22ft. should have 9ft. beam and 2ft. 3in. depth. Will be best as a centreboard cat-rigged boat for your purposes. Depth for a keel would average 12in. For yawl rig see issue of March 13. Take a look at the *Muriel*, foot of Eagle st., Greenpoint, as a sample cutter. English yawl differs from San Francisco yawl in having larger mainsail, a cutter's headsail and small, square-headed jog mizzen in place of jib-headed Bermuda mizzen.

W. C., Seaton, Quebec.—Miss Corson has published a cook book, but nothing expressly adapted to sportsmen's needs. Your guides can prepare dishes which, flavored with a wood's appetite, will surpass any of the recipes in the books. The supply of flour you take with you will depend altogether upon what other provisions you secure. You may safely count on eating about four times as much food in the woods as you usually eat at home. For a Canadian fishing excursion take about fifteen pounds per week of flour per man.

BLACK BASS, Pittsburgh, Pa.—For black bass fishing in the St. Lawrence you may go to The Thousand Islands. Alexandria Bay is headquarters for fishermen, hotels and farmhouses. Clayton, N. Y., and Brockville, Canada, are other points. Also, the fishing villages along the New York shore of Lake Erie, Cape Vincent, Sackett's Harbor, Henderson, etc. Hotels from $5 per week to $3 per day; boats and boatmen $2 to $5 per day. Ask your railroad agent for shortest route from Pittsburgh. Write to Alden Stephens, at Henderson; Mr. Tylor, same address, or Crossman and Thousand Islands Hotels at Alexandria Bay.

J. O. F., Hornellsville, N. Y.—I send you to-day a muskrat's head with deformed teeth for your cabinet of curiosities. It was killed here about two weeks ago by Mr. Anthony. The fur was prime, but the rat did not weigh more than a pound. Ans. Such instances of abnormal growth of teeth are not at all unusual among the rodents. Their teeth are constantly growing laterally and constant attrition by gnawing is necessary to keep them of proper length. When in any way a tooth is so misplaced that its edge cannot be worn off by this gnawing it grows out of bounds, curls upward and oftentimes re-enters the head from without. Starvation is of necessity induced, and the rat you send us was wasting away with hunger.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

"." Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 12, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 13.—Illinois State Sportsmen's Convention, at Peoria, Ill. Trotting: Pittsburgh, Pa.; Lyons, N. Y.; Cedar Rapids, Ia.; Jackson, Miss.; Prospect Park.

Saturday, June 14.—Schuylkill Navy Annual Regatta. Ravenswood and New York Lacrosse Clubs, Prospect Park, Brooklyn.

Monday, June 16.—Hanlon-Elliott Rowing Match on the Tyne for the Championship of England. Hope Rowing Club Regatta, New Orleans, La. Louisville, Ky., Shooting Tournament.

Tuesday, June 17.—Pennsylvania State Sportsmen's Association, at Huntingdon, Pa. Hope Rowing Club, as above. Louisville Tournament, as above.

Wednesday, June 18.—Shooting Matches at Huntingdon, Pa. Louisville Tournament, as above. Upper Hudson Rowing Association Regatta.

Thursday, June 19.—Louisville Tournament, as above. Upper Hudson Rowing Association Regatta.

PERSONAL.—Mr. A. B. Lamberton, Prest. N. Y. State Association for the Prot. of Game, is at the Fulton Chain of Lakes, Adirondacks, with a party.

Gen. R. U. Sherman and son, of Utica, H. H. Thompson, of Erie R. R., Messrs. H. J. Cookinham, L. B. Root, C. E. Thorn, H. Lee Babcock, Mr. Roby, of Boston, P. S. Huntley, Mr. Rochewell, of Buffalo, the artist, and some others, are at Bisby Lake, in the Adirondacks.

Hubert R. Ives of Montreal, joined Mr. Hallock at Prescott last week, and ran the rapids of the St. Lawrence with him on Mr. Allan Gilmour's yacht.

Her Royal Highness, Princess Louise, and His Excellency, the Marquis of Lorne, made a three days excursion last week on the St. Lawrence river in the elegant steam yacht belonging to Allan Gilmour, Esq., of Ottawa, Canada, the same having been courteously tendered for their use.

—We extend our sincerest sympathy to Mr. T. C. Banks, the Business Manager of this journal, in the loss of his daughter, Miss Anna Thomson, aged nineteen years, who died at Brookfield Centre, Conn., June 11, after a long and painful illness. The funeral services will be held at the residence, 453 Lafayette Avenue, Brooklyn; notice of time in Friday morning papers.

THE NEW YORK GAME BILL.—At last accounts the new bill had not been signed by the Governor. The old law is consequently still in force.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

INTESTINAL PARASITES OF TROUT.

SOME time since we published an account of some parasites found in the bodies of brook trout taken from a stream in Cumberland County, Pa., with some general remarks on these parasites and their effect on the health of the fish which harbored them. Since that notice was printed we have received from Mr. D. W. Seiler, of Harrisburgh, Pa., two of the fish from the above mentioned stream, and have examined them with some care and great interest.

This subject—the history of the internal parasites of animals—is one about which very little is as yet known. While some hundreds of intestinal worms have been described, it is still true that the work has as yet been only begun; for it is almost certain that nearly every species of the higher animals has one or more of these parasites which is peculiar to itself, which can come to maturity only in the body of this species. It even seems true that some of these parasites owe their continued existence solely, as an eminent authority has said, to the "peculiar relations existing between man and his brute dependents." Thus, two of the most common tapeworms (*Tænia*) which afflict man, and which pass their young state in the flesh of cattle and hogs respectively, appear to be capable of reaching mature development only in the human body.

By far the greater part of these internal parasites belong to the class of animals known as worms, and though constituting several distinct orders, are grouped by naturalists under the general name Helminths. These parasites, however, are much lower in the systematic scale than the free worms, which are often comparatively highly organized, having gills, locomotive organs, a complex circulation, red blood, a head, a mouth and eyes. The parasitic worms, on the other hand, have no red blood, no special organs for breathing, and usually no locomotive organs. Many of them lack special sense organs, and are even destitute of head and intestines.

As has been said, these animals are extremely numerous, and although additions to our knowledge of them are being constantly made, we are at present very imperfectly acquainted with them and their habits. From the nature of the subject, however, it may be inferred that the life histories of the different species in their main essentials bear a very close resemblance to one another. They probably all pass through a series of changes somewhat like this: The eggs in sexual joints, or whatever other form they may take, pass from the animal harboring the adult, and, either in food or drink, are taken into the stomachs of the species in which the larvæ are nourished. In the stomach the eggs hatch, and the larvæ, piercing the walls of this organ, either remain embedded in the surrounding tissues, or are taken up by the blood and carried into other parts of the system, where they take up their abode. Having penetrated into the flesh, they remain there enclosed in small bladder-like cysts. When the flesh of the creature which contains these cysts is eaten by the animal in which the worm is to attain maturity, the larvæ rapidly change their form, and, attaching themselves, by means of the hooks with which in most cases the head is armed, to the walls of the stomach, they remain there, feeding on what their host eats. As they grow older they increase in size, and before long begin to cast off the sexual joints, each of which may contain more than a thousand eggs. Each egg under favorable conditions may go through this same series of changes. As the life of the parasite may endure for many years, and as the joints are thrown off at frequent intervals, it can readily be conceived that one of these worms may produce several millions of eggs. These remarks apply principally to the *Cestodes*, or tapeworms. The *Nematodes*, or round worms, to which belong the *Trichina* and others less well-known, have a somewhat different history.

Our examination of the fish above referred to showed that they harbored no less than three different kinds of intestinal parasites. In the alimentary canal of one of the fish were found—still alive, though the fish was somewhat decomposed—fifteen larvæ, apparently of a dipterous insect; the stomach and intestine of each of the fish contained a tapeworm, that in the largest, which was about five inches long, being about eighteen inches in length, and in the smaller about half that size. In addition to these specimens, the fish were found to be absolutely swarming with small filiform worms, apparently *Nematodes* (analogous to the pin-worm of the human race), which were at the time of the receipt of the fish in a very lively condition, moving about in and over the fish at quite a rapid rate.

From these facts, and from what has been previously published on the subject, it will be seen that Cestode and Nematode worms are commonly found in the *Salmonidæ*, and we have before referred to the worm *Dibothrium cordiceps*, which is so abundant in the flesh of the trout of the Yellowstone Lake and the upper portion of that river. We have frequently seen soldiers and teamsters eat the trout afflicted with the last-mentioned parasite, though for our own part we have always, while in the Yellowstone region, preferred to eschew trout. It is worth while, therefore, for fishermen to see that their fish are carefully cleaned and thoroughly cooked before being brought to the table. These intestinal worms have cost many valuable lives, and too great care cannot be exercised in looking out for them.

It is by no means certain that any disagreeable results would follow the eating of the mature worms in these fish, but the idea of indulging in such a diet is not a pleasant one. Then, too, it is not impossible that the mature sexual joints of the tapeworm might hatch in the human stomach, and if they should pass through its walls and, as hydatids, take up their abode in the flesh, serious inconvenience, if not death, might ensue.

It is a difficult matter to suggest any remedy for these parasites in fish. In the case above referred to the feeding of the trout on slaughter-house refuse may be the cause of the trouble. It evidently depends on the food upon which the animal affected with the parasite feeds. M. Lespes fed the eggs of *Echinorhynchus claviceps*, an intestinal parasite, to a snail, and they hatched in its intestines, the free embryoes being quite lively and active, and being furnished with two pairs of hooks for boring. These embryoes presented considerable resemblance to those of the tapeworm, but they failed to undergo any further transformation in the snail.

Leuckart fed the eggs of *Echinorhynchus proteus*, which he took from a trout, to a small crustacean (*Gammarus pulex*). In a short time these eggs hatched, and the embryoes soon made their way through the intestine into the general cavity of the body, and some of them even into the limbs. In about three weeks they grew larger and advanced in development, the granular mass in the interior of their bodies showing traces of a proboscis, muscles and other organs, the whole becoming gradually more and more like its grandparent. This organism gradually filled up the interior of the body of the embryo, and at length the latter cast its skin. In order, however, that this *Echinorhynchus* should become sexually mature, it is necessary that the crustacean which harbors it should be swallowed by a fish, in the stomach of which latter the parasite becomes sexually mature in about a week. A species of this genus is known to infest the hog.

It has been remarked that as fish eat fish the affliction may be indefinitely propagated. This may or may not be so, for we do not know whether the embryoes do or do not pass their larval state in the fish. Certain it is, that the fish affected with these worms will continue to spread the parasites by casting off the eggs, which will be eaten by various animals, which the fish in turn will eat. Every animal afflicted with one of these parasites helps in this way to spread the disease. It must not be forgotten in considering this subject that many of the parasites go through three stages, during at least two of which they inhabit different animals.

We are strongly opposed to feeding fish on the larvæ of the flesh fly, more commonly known as meat maggots. It is customary among some trout breeders, we know, to do this, and also to feed their fish on tainted meat. It is altogether probable that such a diet will act injuriously on the fish's general health, and thus, even if detrimental to them in no other way, will render them more susceptible to the attacks of various parasites.

We would recommend our readers to avoid eating fish from localities where these parasites are known to abound and would further advise an examination of all fish soon after their capture. The present subject offers a wide and but little explored field to the investigator; and it is to be hoped that, before long, we shall have more—and more definite—information to present to our readers.

A LITTLE FORBEARANCE, IF YOU PLEASE.—The business of furnishing correct answers to the questions put to us by our numerous correspondents we have always regarded as one of the most important of our editorial duties. Certainly it is one which requires great care and considerable labor, and the amount of time spent in preparing each week's series of answers would, we are sure, surprise all our readers. Besides the numerous questions received by letter and answered through these columns, all sorts of articles are sent to us by mail and express, and these we are required to identify, comment on, and sometimes return to their owners. The man who has shot a bird which is new to him sends it on to be named; he would also like to have us take it to a reliable taxidermist, have it mounted (pay the bill we presume), and return to him. Some one else having obtained a small mammal, with which he is unacquainted, forwards it asking what it is. He may live a thousand miles away, but, no matter what the weather is, he sends his specimen without taking the trouble to preserve it in any way. Now, in winter, this does not make so much difference, but when the warm days of May and June are at hand it is expecting rather too much of the editors to assume that they are willing to handle and have about the office such reeking masses of putrescence as these specimens soon become. It is but very little trouble to put small specimens into a bottle of alcohol, and large ones can be skinned, and the skins with the skulls sent to us. We are glad to be of assistance to our readers in any way, and take great pains to make our answers clear, correct and concise, but we must crave a little indulgence in the matter of which we have spoken.

THE AGILE TORSO OF THE BOWERY.—It is exceedingly difficult to conceive of human voluntary locomotion without thinking of it as effected by legs or arms. A living torso of flesh and blood would appear to be about as helpless as the famous marble Torso of Hercules. But a man—or part of a man—*sans* arms and *sans* legs can propel himself, and pretty lively too, when an emergency demands it. Such an emergency occurred the other night in New York, when the New American Museum in the Bowery was burned. It was eleven o'clock; and the Mormon Giant, the Bearded Lady, the Living Skeleton, the Man-Fish, the Ghouls and Demons and Imps of the Infernal Regions down in the cellar, the Chain Lightning Calculator, and all the other innumerable

and indescribable celebrities had stolen away under cover of the darkness of the night to their respective abodes,—only the Educated Pig, the Wax Figures and the Monkeys were left; and the Armless and Legless Man had been put to bed in one of the upper rooms. When the fire broke out the Armless and Legless Man broke out too. He wriggled and rolled and squirmed out of bed, seized his money in his mouth and wriggled and rolled and squirmed to the door, where he found only smoke and flames. Then he wriggled and rolled and squirmed, in a kind of mad go-as-you-please style ("Fear added wings.") back to the window and dumped himself out. Fortune, in shape of a spike, interposed to break his tumble, caught the Armless and Legless Man by his shirt and held him suspended in mid-air, head downwards, until the firemen could rescue him. What a theme for the horrors school of sensationalists this would make!—the struggle of that human wreck amid the flames of the burning Museum, with all the artistic accessories, or, in technical showmen's parlance, side shows, of the grinning ghouls in the cellar, the affrighted monkeys, and the ghastly wax figures. The Armless and Legless Man had a close call.

THE HARMLESS RAIN OF LEAD.—Some curious calculations have been made from recent war statistics, showing how far the most perfect weapons of modern warfare fall short of effecting their work. Thus it has been shown from the Franco-Prussian war records that at Spicheren the German riflemen hit only one Frenchman for every 279 shots, while at Woerth 146 of 147 bullets went wide of their mark. In the late Russian campaigns the statistics show sixty-six rounds fired for one man demolished. At Ginghilova, in South Africa, the other day, 5,000 Englishmen, who were equipped with Martini-Henrys, guns, rockets and Gatlings, for an hour and a half hurled a continuous volley into the Zulus at from 30 to 600 yards range and killed only 1,000 of them, or one Zulu to seven and one-half hours' steady work by one Englishman with his rifle. There is some encouragement for men who occasionally make unaccountables.

N. Y. STATE SPORTSMEN'S CONVENTION.—The delay attending the positive appointing of the time for the annual meeting of the New York State Association for the Protection of Fish and Game at Rochester having been at last overcome by the positive assurance that wild pigeons can now be obtained in abundance, we are informed that the Convention will be held the last week of the present month. We understand that the preparations have been ample, and the lists of prizes exceed in number and value those of any previous meeting.

That the coming convention will be an interesting one, there can be no doubt, and the strife for the 1880 appointment, judging from reports, will be a stormy one.

BALLOON ASCENSIONS AT CONEY ISLAND.—To the multitudinous attractions of Manhattan Beach this summer will be added the two huge balloons of Prof. Samuel A. King. Prof. King proposes to attempt to cross the Atlantic Ocean some time in 1880 or 1881, and preparatory to that undertaking will make an extended series of aerial observations of ocean wind currents, etc., at the Island this season. The balloons will be moored near the Manhattan Beach Hotel and ascensions made daily and nightly. The bands will play a medley of "A Life on the Ocean Wave" and "Up in a Balloon, Boys," and the average amphibious human biped who lives on Coney sea and land may now add flying to his other accomplishments. Well, it will be life indeed to travel by steam, by legs, by flippers and by wings, all in one short afternoon. And then for the clams!

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.—The twenty-eighth annual meeting of the American Association for the Advancement of Science will be held at Saratoga, N. Y., beginning August 27. The Permanent Subsection of Chemistry will be under the chairmanship of Prof. Ira Remsen, of Baltimore; that of Microscopy will be presided over by Prof. E.W. Morley, of Hudson, O. During the week there will be meetings of the American Anthropological Association and the Entomological Club of the Association. The headquarters of the local committee will be at the United States Hotel. The corresponding secretaries are Lt. Commander A. R. McNair and Prof. L. S. Packard, P. O. Box 1,071, Saratoga, N. Y.

A MONUMENT FOR MAD ANTHONY.—The sixteenth of next July will be the anniversary of the storming of Stony Point by the little company of Revolutionary volunteers under the command of Anthony Wayne. The capture of the fortress that July night was a memorable achievement of bravery and of signal importance to the cause of the Colonies. Wayne's name is indissolubly linked with the bold bluffs of Stony Point. The Wayne Monument Association will celebrate the coming anniversary in an appropriate manner at the Government Grounds, Stony Point, with sham battles, military displays, addresses, etc. Wayne deserves a monument; he was a brave man and a good soldier.

THE HERO OF THE "NAUTILUS."—Many a doughty Crusader returned from the wars against the Infidels only to die from a stab in the back in a village brawl. The noble Don Quixote de la Mancha himself performed feats incredible, yet was worsted by antagonists most ignoble. And now here is William Albert Andrews, who crossed the raging main from America to Europe in the tiny twenty-foot boat *Nautilus*, brought up before a London magistrate, charged with having stabbed another man with a pen-knife, and sentenced to four months' hard labor. Was it for this that the winds and the waves and the whales spared William Albert Andrews?

THE LONG ISLAND RAILROAD.—Visitors to the South Side of Long Island will be pleased to know that the express trains running over the central route are provided with new cars. The "smoker" is a model of elegance and comfort; cane seats—suggestive of coolness, and wash-hand stands—suggestive of cleanliness, adorn it. The drawing-room cars have been renovated and re-decorated, and are now as luxurious as the most fastidious could desire.

GAME PROTECTION.

THE MIGRATORY QUAIL.—The migratory quail from Messina arrived at this port per steamship *Zeal* last Sunday, and have been shipped to their respective destinations. The importation was highly successful: of the 3,000 odd birds only about 100 were lost on the voyage. The feathered immigrants go to Canada, Maine, New Hampshire, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania and Maryland. We shall be pleased to publish next week from the various clubs to which they are assigned reports of their arrival and condition. Gunners are cautioned to respect the rights of the strangers and to grant them the fullest immunity, that they may increase and multiply in the land before learning the fatal character of American shot-guns.

MAINE—*Bath, May* 30.—The Sagadahoc County Association for the protection of game and fish is constantly increasing in numbers and interest, and it is fondly hoped that it will not only afford us some sport, but be a power for good in this region. G. E. N.

MASSACHUSETTS.—At a meeting of the Middlesex Sportsman's Club, June 3, the following officers were elected for the ensuing year: Ira Taylor, President; J. S. Sawyer and J. G. Harris, Vice-Presidents; W. S. Arnaud, Treasurer; E. S. Tobey, Jr., Secretary; A. W. Gore and W. H. Harrison, Executive Committee. We propose to occupy grounds near the Union Market Hotel, Watertown, belonging to the Fitchburg Railroad, for the purpose of glass ball practice. O. K.

NEW HAMPSHIRE—*Nashua, May* 30.—At the annual meeting of the Fish and Game Club the following named gentlemen were elected: President, Dr. E. Spalding; Vice-President, Virgil C. Gillman; Executive Committee, Gruey, Shottuck and King; Attorney, E. E. Parker; Clerk and Treasurer, Geo. H. Wilkins. WEBB.

NEW YORK—*Editor Forest and Stream:* A desire long felt by sportsmen in this vicinity for some active association, having for its object the propagation and protection of game and fish and the enforcement of the game laws, is at last realized. At meetings held May 3 and 9, the Au Sable Game and Fish Protective Society was organized, and the following officers chosen for the ensuing year: Hon. George Chahoon, President; John B. Chase, Vice-President; W. J. Gillespie, Secretary; Geo. L. Gray, Treasurer; R. L. Trumbull, Esq., Counsel; E. A. Richardson, W. F. Jones, M. P. Flanders, C. T. Richardson and T. A. Quirk, Executive Committee. The society propose to vigorously prosecute all infractions of the game laws, and to appropriate all moneys recovered to the stocking of ponds and streams in this vicinity. I hope soon to be able to report this society in thorough working order.

W. J. GILLESPIE, Sec'y.

Au Sable Forks, N. Y., May 25, 1879.

The Rifle.

—Col. Wingate is contemplating issuing a recommendation that the State arm model be changed to a .45 cal. weapon, with a chamber fitted for the U. S. Ammunition.

—J. M. T. Partello, of Washington, has sent a letter to Major Fulton intimating his readiness to shoot a match with the ex-champion, and the ex-champion is doing a deal of thinking over it and has been looking over back files of the FOREST AND STREAM to find out Partellos weak range, but finds only strings upon strings of bull's eyes at every range.

—The N. R. A. has some very stringent rules intended to secure safety on the range at Creedmoor, but from the manshooting record of last week it would appear that the rules are very loosely regarded. The always dangerous "empty rifle" has begun to go off, and one 22d Regt. man lies at rest with two bullet holes in him.

MASSACHUSETTS—*Mammoth Rifle Gallery, Boston, June* 7.—The regular monthly prize shoot for June has begun, Mr. George Lamb leading with a good 38. The standing of the several competitors to date is as follows, only the best scores being given; 150 feet, rounds 8, possible 40:

Geo Lamb	5 4 5 5 5 5 4 5—38	M O Johnson	5 5 5 4 4 4 4 5—36
F Hollis	5 5 4 4 5 4 5 5—37	Geo Estes	5 5 5 4 4 4 4—36
G J Seabury	5 5 4 4 5 5 4 5—37	L A Walton	4 4 4 4 5 5 5—35
Geo W Barry	5 4 4 4 4 5 5 5—36	T H Carr	5 4 4 4 4 4 5 5—35
E Whittier	5 4 4 4 4 5 5 5—36	E L Crowell	5 5 5 4 4 3 4 5—35
Henry Lowell	5 5 4 4 4 4 5 5—36	D A Jones	3 5 5 5 4 4 4 5—35
G McKinzie	5 5 4 4 4 4 5 5—36		

The meet of the Massachusetts Rifle Association on the 7th inst. was well attended, but a cold day compelled a hurry to leave the ground. The frequent changes of light and shade were very annoying to the marksmen. Several of the members of the association are practicing with the ordinary government or Springfield rifle in order to perfect themselves in the use of that firearm. Messrs. J. B. Parker, L. L. Hubbard, J. B. Osborn and H. Tyler took the Springfield, and, considering the weather, it will be seen by their scores that they are acquiring considerable proficiency in this line. The following are the best scores made:

J B Parker	4	4	4	5	5	5	4	4	4	5	4	3	4	3	4—62
C R Girling	4	4	4	4	4	4	5	4	4	4	4	5	4	4	3 4—61
A Babbidge	5	4	4	4	4	4	4	4	4	4	4	4	4	4	4 4—61
E F Brooks	4	4	4	4	3	4	4	5	5	5	4	4	4	3	4 4—61
G J Seabury	4	5	4	4	4	3	5	5	3	4	3	5	5	5	4 4—60
R Page	5	4	4	3	4	4	4	4	4	5	4	4	3	3	4—59
E Whittier	3	3	4	3	4	5	4	3	4	4	4	4	4	4	5—58
L L Hubbard	4	4	4	4	4	4	4	5	3	2	4	4	3	4	4—57
J B Osborn	3	5	4	4	4	5	4	4	3	4	4	4	3	4	3—57
H Tyler	3	4	4	4	3	4	4	4	3	4	4	4	3	4	4—55
F Walters	4	3	3	4	4	3	3	4	4	3	3	4	3	4	3—51

Medford.—The spring meeting of the Medford Amateur Rifle Association will be held Wednesday and Thursday, June 11 and 12, at Bellevue Range, Medford. There are two competitions on the programme for the two days' sport, a short range match at 200, and a subscription team match at 400 yards. The former to be known as the "Maynard Rifle" match, the first prize being a Maynard short-range rifle. Is open to all comers; rounds, seven; rifle, any within the rules; re-entrees permitted. The winners of prizes are to be decided by the aggregate of the three best scores, counted as one continuous score. The prizes, of which there are seventeen, are valued at $166.50. The "subscription team" match is open to teams of five from any organized rifle association. Each association may send one or more teams, but no individual shall shoot on more than one. The rounds are ten, "cartons" to count six. First prize, one-half total of the entrance fees; second, one-fourth.

CONNECTICUT—*Collinsville, June* 4.—Regular practice meeting of the Canton Rod and Gun Club; 200 yards, off-hand, 3-lb. pull:

O B Hull	96	44	Bidwell	88	41
Moore	95	41	Laubenstein	83	40
Lewis	83	41			

GREENER'S WEST SIDE RIFLE TEAM.—Weekly score; 200-yard target reduced to 85 yards; possible 50:

E Holzmann	48	Geo Roesner	43
J C Craig	46	L Vogel	43
J Roesner	45	G Greener	42
C Welker	45	J Reitweisner	42
J A Reitweisner	44	A Dory	42

—The Directors of the Bay View Rifle Association, Buffalo, have reorganized with Major-Gen. William F. Rogers as President; Lieut-Col. E. A. Rockwood, Vice-President, and Capt. Henry S. Mulligan and Lieut-Col. E. B. Jewett Executive and Statistical Officers respectively of the Spring meet-which is to be held on Tuesday, the 17th inst.

—The New York Rifle Club and the team of the Geo. H. Thomas Post Rifle Club, of Chicago, will enjoy a telegraphic match on Saturday evening next.

NEW JERSEY—*Newark, June* 4.—The following is the score of the Newark Amateur Rifle Club to-day:

W P McLeod	5	5	5	5	5	5	5	5	5	5—50
J F Hill	5	5	5	5	5	5	4	4	4	5—48
N Hesse Jr	4	4	4	5	5	4	5	5	5	5—46
J Bayer	4	5	5	5	5	4	4	5	5	4—46
G L Freche	5	4	5	5	4	4	4	4	5	5—45
T Felsburg	5	3	3	4	4	3	5	4	4	3—38

Brinton Range, June 7.—Sharps match for military rifles; won by F. H. Holton. W. A. Mulford, Jr., leading all competitors, but having previously won a rifle, scored one competition for final prize; 10 shots, 200 yards; the following are the best scores:

W A Mulford, Jr	4	4	4	5	4	5	4	4	4	4—42
F H Holton	4	5	5	4	4	3	5	4	4	4—42
J L Paulding	4	4	5	3	4	4	5	4	4	4—40
Lt L H Greve	5	3	5	4	4	3	4	4	4	4—40
Corp J R Washington	4	4	4	4	3	3	4	4	4	5—39
Capt T W Griffith	4	3	4	3	4	5	4	4	4	4—39
Capt W P Wood	4	4	3	5	3	4	4	4	4	4—39
J L Miller	3	4	4	4	5	4	4	4	3	4—39
Capt G M Townsend	4	4	4	4	2	5	4	4	4	4—39
Col G E P Howard	4	4	4	4	4	4	4	4	3	3—38
A Niemand	4	4	3	4	4	4	3	5	5	2—38

Same day; association match; fifth competition; 200 yards, off-hand:

A Hubbell	5	5	5	4	5	4	4	4	5	5—46
F H Holton	5	5	4	5	5	5	5	4	4	4—46
E M Squier	5	5	4	4	5	4	5	5	4	4—45
D F Davids	4	4	4	4	4	5	4	5	5	5—44
Homer Fisher	4	4	4	4	4	4	5	5	5	5—44
M L Gilbert	4	5	5	4	4	5	4	5	4	4—44
J W Todd	4	4	4	4	5	5	5	4	4	5—44
J W Martin	4	4	4	4	4	5	5	5	5	4—44
J L Miller	4	3	3	4	4	4	5	4	4	5—41
B A Vail	4	4	4	4	4	3	4	4	4	4—39
W A Mulford, Jr	4	2	4	3	5	5	4	3	5	3—38
R E Smith	4	3	4	2	4	3	3	4	4	4—35

Columbia Rifle Range, West End, June 6.—Remington match:

G L Morse, Bal	4	4	4	4	5	4	5	5	5	4—44
S T G Dudley, S S	4	4	5	4	4	4	4	4	4	4—41
J L Paulding, Spr M	4	5	5	3	3	4	5	4	4	4—39
L H Greve, S M	4	5	4	4	4	4	4	4	4	4—37
R M Seymour, Bal	3	5	4	5	4	4	4	3	4	4—36
W E Church, S S	0	4	4	4	4	4	4	4	3	4—35
W Haddenhorst, Spr	3	3	5	3	2	4	4	3	3	3—34
Capt G G Symes, Spr	0	3	4	3	3	3	4	4	3	3—32
N Hatch, S S	3	3	3	3	3	3	4	4	4	3—31
A Anderson, R M	0	0	3	3	4	2	4	3	4	4—28

Same day; Advertising Co. match:

J L Paulding, Spr	5	3	4	5	3	4	4	3	4	3—38
G L Morse, Bal	3	3	4	5	4	5	4	4	3	3—38
S T G Dudley, S S	4	4	4	4	3	4	4	4	4	4—39
A Anderson, R M	3	3	3	4	3	3	0	3	0	3—25

Same range, June 9; Sharps match:

F H Holton, Bal	5	5	5	5	5	5	4	5	5	5—50
L H Greve, S M	3	5	5	4	5	5	5	5	5	5—47
H Fisher, S S	4	5	5	5	5	5	5	5	5	5—49
S T G Dudley, S S	5	5	5	5	5	5	5	5	5	5—49
G L Morse, S S	5	5	5	5	5	5	4	5	5	4—48

Dr. Dudley made two 49's exactly alike. Lt. Greve shot with a military rifle, and the allowance of five points brought him in second.

Same day; Advertising Co.'s team match; 500 yards:

Amateur Rifle Club, N. Y.

H Fisher	5	5	5	5	5	4	4	5	5	5—48

Corp Washington	28—138	Capt T W Griffith	33—136

Co. F, Ninth N. J.

PENNSYLVANIA.—The Philadelphia Rifle Team paid a visit on Saturday last to the range of the Westchester Rifle Club, and enjoyed a match at 200 yards. The scores stood on the Massachusetts target, 11 and 12 counting five at Creedmoor, 7, 8, 9 and 10 counting four, 3, 4, 5 and 6 counting three. Shuster and Taylor fired on wrong targets and secured misses. The closeness of the result made all eager for another match, which will come off in a few days. Score:

Westchester Team.

VIRGINIA—*Richmond.*—Last week the Richmond Rifle Club of which Mr. Charles P. Stokes is President, opened their new range, and christened it the "Fernmoor Rifle Range." The ceremonies were conducted in a modest and unassuming manner, but at the same time were characterized by the usual fun and frolic incident to such occasions. Richmond's Amateur Band furnished the music, and the invited guests of the club partook of an open-air banquet. There was a trial shooting match, to test the stands, barriers and butts, developing some splendid scores. The distance was 200 yards. Several of the guests made some good shots, while others failed to hit the target even. The new range is located on the farm of Mr. Otho Owens, due north of the city, but within its limits in a beautiful grove, and is admirably adapted to the purposes of the club. There will be regular rifle practice at the range in the future.

LOUISIANA—*New Orleans.*—The third contest for the Mobile Trophy on June 1 brought three teams to the butts, and again the Louisiana Field Artillery were victors. Two more victories will give them final ownership in the trophy. The day was a miserable one. The rain came down steadily all the morning, and for the better part of the afternoon. The wind was gusty and the air full of misty rain, so that it was hardly possible to make good scores, especially at the 500-yards range. The scores stood as follows, with military rifles, seven shots per distance:

Louisiana Field Artillery.

	200 yds.	500 yds.	Tl.		200 yds.	500 yds.	Tl.
Bercegeay	30	29	59	Gschwind	29	20	49
Thompson	30	26	56	Meyronne	28	17	45

ILLINOIS—*Chicago.*—A few members of the George H. Thomas Rifle Club held their regular shoot on their own range on the 31st ult., with score as follows:

Tyrrell	5	4	4	4	4	5	4	4	4	5—43
Hobb	4	4	5	4	4	4	4	4	5	5—43
Dowry	5	4	4	4	5	4	5	4	5	3—43
Freeman	4	3	4	4	5	5	5	4	4	4—42

The Range Committee is now making arrangements for a tournament on the 4th and 5th of July, the particulars of which I hope to write you next week. LU.

NEVADA.—A correspondent at Gold Hill, Nevada proposes to the troop of his State: "Let each and all the companies in Nevada pick their best men and organize a team of twenty men, to be known as the Nevada team, and, the California companies doing likewise, appoint a place—say, in the Western foothill of the Sierras, near Rocklin, Colfax, or any desirable location—and shoot for a prize, or several prizes, or say a medal, to be owned by the winning team or to be shot for annually, as they may see fit to decide upon. This would have a tendency to increase the interest in shooting matters on the coast, and also give Nevada a chance to show her 'blood.'" We have as yet had no opportunity to compete with any teams, except our own from our respective companies. Upon the other hand, California has proved herself no slouch; but allow me to remark, if this inter-State match should take place, to use a turf phrase, 'we will show them a clean pair of heels.' I ask that both Nevada and California companies take this matter under consideration, and I sincerely hope to see a match arranged this coming autumn. We are not far from each other, and the expenses for travel would be slight. I hope to hear through your columns from others here and in California upon this matter. Give it vent; keep the ball rolling, and I am in hopes, if it is agitated, that we will yet make it stick. Branch out, boys, and show what you are made of! BELL.

THE OFF-HAND RECORD AT 200 YARDS.—*Editor Forest and Stream:* To answer the query in your issue of June 5, as to the comparative merit of the score of Mr. C. P. Stokes, of Richmond (and to anticipate the answer to other queries which may arise), I send you copies of some of the best scores recorded by the Massachusetts Rifle Association. They are all match scores at 200 yards, off-hand, Creedmoor rules:

J A Lowell, Walnut Hill,	Feb 22, '79	4	4	5	5	5	5	5	5	5	5—48
E B Souther,	" Oct 26, '78	5	4	5	5	4	5	5	5	5	5—48
J A Lowell,	" Sep 28, '78	5	5	4	5	4	5	5	5	5	5—48
H S Harris,	" Mar 1, '79	5	5	5	5	4	5	5	5	4	5—48
L L Hubbard,	" July 27, '79	5	5	5	5	5	5	5	4	4	5—48

We have not the "Massachusetts" record of the above, but the "Creedmoor" count is better in every instance than Mr. Stokes'. We have, however, a record of 100 Massachusetts, as follows:

J H Frost, Spy Pond, Jan 22, '76.....11 12 10 11 10 11 10 12 10 12—109

Of 15 shot records, the following are the two best. Mr. Osgood's score was shot on the "Massachusetts" target, and counted 163:

E T Osgood, Spy Pond, Feb 26, '77.....5 5 5 4 4 5 5 5 5 5 5 4 5 5—72
W H Jackson, Walnut Hill, May 31, '79.5 5 5 5 5 5 5 4 5 4 5 5 4 5 5—72

SECRETARY.

N. R. A. SPRING MEETING.

THE seventh annual spring meeting met a stormy reception from the elements. The morning of the 3d opened in a strong rain storm, and the riflemen who went down by the early morning trains did so more in hope than certainty of making decent scores. The programme was not much to boast of, yet there were matches enough provided, and opportunities for plenty of sport and glory, if not for substantial recompense. There was no excuse for the small attendance. Rain should not deter any but the most doughy of marksmen, and the fact that there may or may not be a prize worth shooting for should not enter the mind of any but a "professional" rifleman—a *rara avis* which does not exist to our knowledge. Prizes "in kind" have been called for, and the managers had met this demand in a measure by a most miscellaneous collection of odds and ends. Champagne and shoes were mixed up with smoking tobacco and archery bows, while furniture and carpets were to be had for the winning.

Capt. Chas. F. Robbins made an excellent executive officer, and only regretted that he did not have a full field of entries to manage, while Ed. W. Price, in the department of figures, got out the scores with wonderful celerity. The directors were conspicuously absent. Major Jones, the Secretary, was at his post, and President Stanton, General Shaler, Major Fulton and Capt. Story paid flying visits to the range during the two days of the meeting. So slim was the attendance of directors that the Directors' Match went over without a shot, to the discredit of the Board, and the hope they made should score against them when the next election day comes round.

At no time during the two days was the weather even fair for range work. While the short-range contests were on, the wind blew in gusts, and at the long ranges the wind came quartering from the rear, and at times was "fish-tally."

The first match was at 200 yards; any rifle; open to all comers. Boston had sent down four of her best men—Jackson, Sumner, Gerrish and Brown—but the victory went to a Yonkers shot, with but 31 in the possible 35, the scores standing:

C A Peake	5 4 4 5 4 4 5—31	F H Holton	5 4 5 4 4 4 4—30
W M Farrow	4 4 5 5 5 4—31	J S Sumner	5 4 5 4 4 4 4—30
A J Howlett	4 4 4 5 4 5—30	A H Wickham	4 4 4 5 4 5 3—29
J W Todd	4 5 4 4 4 4 5—30	F J Donaldson	3 4 4 4 4 4 5—28

J. L. Paulding, E. T. Davis, A. McInnis and A. Hicks, 28 each; T. W. Leavitt, G. L. Morse, J. L. Price, A. H. Cobb, W. H. Dunlap, E. E. Lewis, J. W. Mangam, M. M. Maltby, W. H. Dunlap, E. E. Lewis, J. W. Mangam, M. M. Maltby, 27 each; H. Fisher and N. O'Donnell, 26 each; A. G. Hellwig, 25.

THE FOREST AND STREAM AND ROD AND GUN had offered a subscription to the highest as well as the lowest full scores. Peake with 31 and J. A. Hatry with 20 being the lucky pair.

A team match at 200 yards, any rifle, for squads of four men, was entered into by five teams, with very close work, as follows:

Empire Team.

W M Farrow	4 4 5 4 4 4 5—30	J W Todd	4 4 4 4 4 4 4—28
F H Holton	4 4 4 5 4 5 4—30	M M Maltby	4 3 4 5 4 3 4—27
Total			115

New York Team.

A J Howlett	5 4 5 4 4 4 4—30	W H Dunlap	4 4 4 5 4 3 4—28
J W Mangam	4 3 5 4 4 4 4—28	N O'Donnell	4 3 5 4 3 4 4—27
Total			113

Finishing Team.

A H Wickham	5 4 4 4 5 5 3—30	A Hicks	4 5 5 4 4 5 3—28
E E Lewis	4 4 5 4 4 4 3—28	C Hance	4 3 4 4 3 4 3—25
Total			111

N. R. A. Team.

J S Sumner	29	W H Jackson	28
H Fisher	29	A H Cobb	25—111

Engineer Officers Team.

Capt A M Miller	30	Lieut J C Mallery	26
Lieut W L Fisk	28	Lieut Roessler	23—109

It was discovered that two members of the N. R. A. scrub team were not members of the N. R. A., and that score was thrown out.

The next match was a team one, and in it the Regulars showed that their profession of arms was not all a sham and a delusion. But three years ago, when the Regulars first showed themselves on the ranges, they were laughed at for the poor scores made; but it was in the guns, and officers and men alike of the army were not content to remain in the shade. Gradually they have crept to the front, and this match gave them a complete victory over such experts as the 7th men, whose practice is almost incessant.

The conditions of the match called for teams of five men from any troop or company, with any military rifle and standing position at 200 yards. The scores showed:

Co C, U S Engineers.

Kobrt	4	5	5	4	4	5	4—31
Sergt Von Lorhen	4	4	4	4	4	4	4—23
Solis	5	4	3	5	3	4	4—28
Frazer	4	3	4	5	3	3	3—25
Corp Kavanagh	3	0	3	4	3	4	4—21—183

Co A, U S Engineers.

Lieut Roessler	4	4	4	4	4	5	3—28
Sergt Gentner	4	3	3	3	5	5	4—27
Sergt Royston	4	4	4	3	4	4	3—26
Sergt Kelly	5	4	4	4	4	2	3—26
Sergt Renaud	4	2	3	4	4	2	4—23—130

Co B, U S Engineers.

A Krebs	4	4	4	4	4	4	4—28
W Tracy	5	3	5	5	3	3	4—28
Lieut W L Fisk	3	4	4	4	4	4	3—26
Capt C Barrett	4	3	4	4	3	4	3—25
A H Miller	3	4	2	3	3	3	4—23—130

Co H, Seventh Regiment.

J Le Boutillier	3	5	5	4	4	4	4—27
W Underwood	4	3	3	5	4	3	4—26
H S Titus	4	4	3	4	3	3	4—25
S H Benton	5	3	3	4	2	4	4—25
J L Price	3	4	4	4	4	3	3—24—127

Co. I, 7th Regiment, 127; Co. A, 14th Regiment, 124; Co. F, 9th New Jersey, 121; Co. H, 8th Regiment, 114.

The leading prize in this match was an embroidered flag, valued at $100, which is to be won three times before becoming the property of the organization. It was won in 1876 by Co. I, 7th, Regiment, N. G. S. N. Y.; in 1877 by Co. B, Engineer Battalion, U. S. A.; and in 1878 by Co. C, Engineer Battalion, U. S. A. Another winning will give the victory and the flag to the team of Co. C.

The next stated prize was at 300 yards, any rifle, but the bad weather made good scoring out of all probability. The figures stood:

W M Farrow	3	4	4	4	4	5	2	3	G L Morse	2 3 4 5 5 3 5—25
A J Howlett	4	4	3	4	4	4	4	4—27	A H Cobb	4 3 3 3 4 3 4 24
C A Peake	5	3	3	5	3	4	4	4—26	E T Davis	2 2 3 4 2 4 4—22

A. G. Hellwig, 22; J. W. Todd, J. W. Mangam, J. H. Holton, J. Johnson, W. H. Dunlap, W. H. Reed, Jr., 21 each; N. O'Donnell, 20.

The military team match at 500 yards gave another opportunity for the Regulars to show their superior skill, which they did in fine style, leaving a good margin between themselves and their crack militia competitors as follows, the Regulars and the Jerseymen using the Remington military arm:

U S Engineers.

Corp Kavanagh	3	4	5	5	4	5	4—29
Priv Frazer	2	4	5	5	3	5	4—28
Sergt Turner	0	4	5	4	5	3	4—25
Priv Solis	2	5	4	0	4	4	5—24—106

Officers U S Corps.

Lieut J C Mallery	4	4	5	5	4	5	3—30
Capt A M Miller	3	5	4	4	5	3	3—27
Lieut W L Fisk	3	4	4	2	5	2	2—22
Lieut S W Roessler	5	2	2	3	2	3	2—19— 98

Seventh Regiment.

J Le Boutillier	5	4	5	5	5	5	4—33
W Underwood	2	5	2	4	4	4	4—25
C H Eagle	2	3	5	0	3	4	4—21
J L Price	3	0	3	5	0	4	4—18— 97

Co I, Seventh Regiment.

E W Candee	5	5	4	2	5	4	4—29
C Le Boutillier	2	2	4	4	3	5	3—23
G D Merchant	0	5	4	4	3	4	3—23
J S Kious	0	2	2	4	2	3	4—17— 92

Co. A, 14th Regiment—Priv. Jas. Monroe, 26; Corp. J. Henwood, 24; Priv. J. Robertson, 23; Corp. J. Corry, 18; total, 91.

Eighth Regiment—Priv. W. H. Reed, Jr., 25; Priv. W. H. Cochrane, Jr., 24; Capt. Jas. H. Balston, 20; Priv. W. H. Dewar, 18; total, 87.

The team match at 500 yards for four men from any club, with any rifle, brought the Massachusetts and Empire rifle teams together. There was good shooting on both sides, and three perfect scores out of eight show that the men have full command of the range. The visitors coached each other in good style, and with only four points drop, won, the scores standing:

Massachusetts Rifle Association.		Empire Rifle Club.	
W H Jackson	5 5 5 5 5 5—35	W M Farrow	5 5 5 5 5 5—35
W G Rish	5 5 5 5 5 5—35	R Rathbone	5 4 5 5 5 5—34
J S Sumner	5 4 5 5 4 5—33	F H Holton	5 4 5 3 4 5—31
J F Brown	4 4 5 5 5 5—33—136	H Fisher	5 5 4 5 0 4 5—28—128

The meeting wound up with the Leech Cup match, with 21 entries and 19 completed scores, and while the early part of the day and match enjoyed steady, light and easy wind, the 1,000 yards score after luncheon was shot in a conglomerate of untoward conditions. The scores stood:

J S Sumner.

800	5	5	5	5	5	5	5	5	5	5	5—75
900	5	5	5	5	5	5	5	5	4	5	4—73

D A Leopold	54	45	48	147
W H Jackson	74	69	W	..
A D Hodgman	66	63	W	..

This gives a total of 1,650 for the first eight men, while Sumner takes the cup by the best score it has yet brought out, its previous winning scores being: In 1875 by Col. John Bodine, 205; in 1876 by Col. H. A. Gildersleeve, 204; in 1877 by Major H. S. Jewell, 213; in 1878 by Frank Hyde, 205.

During the meeting several subscription matches were fought. They did not receive the attention to which they were entitled from members, though in some cases good scores were made. The leading scores stood; 200 yards; open to all comers; position, standing; weapon, any military rifle:

L H Greve	30	W J Underwood	30
J L Paulding	30	J L Price	29

F. J. Rabbeth, W. M. Farrow, W. H. Jackson, 29 each; L. H. Greve, W. L. Fiske, W. H. Jackson, H. Fisher, J. L. Price, 28 each.

500 yards; open to all comers; position, any; weapon, any rifle: A. McInnes, 33; G. L. Morse, 32; T. J. Donaldson, 24; C. A. Peake, 21; J. W. Mangam, 20.

500 yards; open to all comers; position, any (as allowed 500 yards; open to all comers; position, any (as allowed in "any rifle" competitions); weapon, any military rifle: J. W. Mangam, 34; T. J. Rabbeth, 31; Sergt. Turner, 30; J. C. Mallery, A. M. Miller, F. J. Donaldson, 29 each; E. A. Leopold, C. Renaud, 27 each; J. L. Price, 26; W. J. Underwood, Jr., 25.

500 yards; open to all comers; position, standing (off-hand); weapon, any rifle: W. M. Farrow, 30; E. E. Lewis, 29; F. J. Donaldson, 24; N. O'Donnell, 23; C. A. Peake and A. Hicks, 22.

600 yards; open to all comers; position, any; weapon, any rifle:

W H Jackson	35	G L Morse	30
E A Perry	32	A McInness	29

800, 900 and 1,000 yards; open to all comers; position, any; weapon, any military rifle:

	800 yds.	900 yds.	1,000 yds.	Total.

THE RIFLE IN THE SOUTH.

A special effort is making to secure a liberal representation of riflemen at the great Southern shooting match to be held at Savannah, Ga., July 3 and 4, under the management of the German Volunteers. Every arrangement has been made to secure the best comfort of contestants, and there are promises of a great gathering of teams from the various States on the Gulf and coast. The German Volunteers is an organization of standing in Savannah, and in extending the invitation to the military and rifle teams of the States to meet in Savannah they give assurance that the contests will be conducted in strict accordance with the N. R. A. rules, and that everything will be done to make their visitors' stay pleasant and agreeable. Savannah, the "Forest City," is very attractive, even in July, and affords various sources of enjoyment. Its summer resorts—Tybee, Isle of Hope, Thunderbolt and other pleasant places offer a varied round of sight-seeing and pleasure.

The Schuetzen Park, where the contest takes place, is located three and a half miles from Savannah, with which it is connected by cars and is situated on a high bluff overlooking a broad river. Oaks furnish a delightful shelter and shade for the riflemen, and it is said to be the finest place of the kind in the Union. All awards will be payable in gold, and as a good many teams are expected to enter, the list of entries will be closed on the 26th of June—one week before the contest.

This tournament would prove an excellent opportunity for a few Northern teams to participate in a friendly match across the line. The "Atlantic Coast Line" steamers have first-class accommodation for reaching Savannah from New York, and the trip at that time of the year is a most delightful one. Boston should send a team, and in no way could a more genial spirit be engendered between Northern and Southern riflemen than in the appearance of a team from New York or Boston at Savannah to celebrate the National holiday there. The visit of the New Orleans riflemen to Creedmoor has never been returned, and this is an admirable opportunity for a complimentary payment of the debt. The following is a summary of the matches:

No. 1—Open to all military teams consisting of nine men. Entrance fee, one dollar each man. Rounds, five. 200 yards. The winning team to receive ninety per cent. of entrance fees.

No. 2—Open to all military teams consisting of seven men. Entrance fee, one dollar each man. Rounds, five. 200 yards. The winning team to receive ninety per cent. of entrance fees.

No. 3—Open to all military teams consisting of five men. Rounds, ten. Entrance fee, two dollars each man. 200 yards. The winning team to receive ninety per cent. of entrance fees.

The prizes of the above matches will be payable in gold. Contestants must be *bona fide* members of the organizations they represent, and also wear the uniform (or fatigue) of the same. Position, standing; shooting, off-hand. Weapon, any military rifle, open sight, minimum pull of trigger, six pounds. The Creedmoor targets to be used.

No. 4—Open to all military and rifle teams consisting of five men. Entrance fee, one dollar and fifty cents per man. Distance, 300 yards. Rounds, five. Position, standing. Weapon, any military rifle, open sight. Pull of trigger, six pounds. Contestants must be *bona fide* members of the organizations they represent. The winning team to receive ninety per cent. of all entrance fees.

No. 5—Open to all military and rifle teams consisting of three men. Entrance fee, five dollars each man. Rounds, five. Distance, 500 yards. Position, any, with head toward target. No artificial rest. Weapon, any rifle, without regard to sight or pull of trigger. Contestants must be *bona fide* members of the corps they represent. Teams to be dressed at will. The winning team to receive all entrance fees.

There will be other matches under various conditions, including cansolation prizes, a man-target and a bull's-eye target. The whole event promises to be the biggest affair of its kind ever held in the South, and already assurances of a number of teams have been received from five States.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

SHOT-GUN FIREWORKS.—Capt. Bogardus, the champion wing-shot, has been making arrangements to bring out a new idea in shot-gun use. He has patented a new pyrotechnic cartridge in which the shell above the powder is filled with a heavy wad, over which is placed a colored fire composition, similar to that used in Roman candles and other aerial fireworks. At an expense of a few cents the Captain promises to produce a piece of pyrotechny which will be as effectual as a Roman candle costing half a dollar or more. The cartridges are adapted for cylinder or choke-bore guns, and within two seconds of the firing into the air at a height of 200 feet the upper portion of the cartridge breaks into a shower of stars, chasers or fire as arranged. The Captain claims that on gala nights he can with the utmost safety keep the air full of brilliant blaze, and on the night of July 4 Coney Island is to be thus deluged with patriotic fire.

NEW JERSEY—*Bordentown, June* 9.—A new shooting club has just been organized here under the title of the "Cranmer Shooting Club," of Bordentown, N. J., with the following list of officers: Fred. G. Wiese, President; Capt. N. L. Cranmer, Vice-President; Dr. W. H. I. Hilliard, Treasurer; Edw. A. Taylor, Secretary. S.

PENNSYLVANIA—*Titusville, June* 4.—While standing on the corner of Spring and Martin streets one evening last week I heard the telegraph wires rattle above my head; when to the ground came a fine large woodcock, dead as a stone, the upper part of its head crushed in by the wire. Pheasants and woodcock plenty this spring. G. H. W.

INDIANA—*Fayettville, June* 1.—Chickens and quail frozen some, but fair breeding stock left yet. Wilson snipe not plenty for this spring; bags did not run larger than 20 to 35. On three different days bagged 23, 26 and 27, with a few golden plover. J. A.

DAKOTA—*Fort Berthold Indian Agency, Fort Bethold, May* 31.—Game round here quite plenty, but the Indians here have scarcely any ammunition to kill it with. Looking for your paper. J. E. McE.

CARRIER PIGEONS SHOT.—*Hoboken, May* 3.—*Editor Forest and Stream:* It is provoking that so many of our exhausted carrier pigeon's are always shot when they are near home after having flown several hundred miles without rest or food. A gentleman brought me yesterday the wings of two of my carriers marked with my name and address that a party shot near the Newark Bay while hunting for snipe. This is the fourth of my birds which has been shot since three weeks. One of these killed is not worth picking up, while if returned alive the sender is always liberally rewarded by the owner. Ls. WAEFELAER.

We have previously called attention to this abuse. The gentlemen who fly carrier pigeons certainly have some rights which gunners are bound to respect. The trouble is that many men who go out armed blaze away at every moving thing, no matter what it is. Such fellows have no business with a gun anyway. We suggest as a sensible move that the pigeon fliers have their birds protected by a special clause in the game law; make the penalty proportionate to the value of the birds and bring a few of these gunning rascals to justice. We shall be happy to aid in this work.

LOADING DITTMAR POWDER—*Montreal, May* 30.—In reply to your correspondent, "M. B.," of 7th inst., I will explain my method of loading with the Dittmar powder. Thus far I have used only the B brand of this powder, and am quite satisfied with the result. I had a loading-board made (after the manner described in a former number of your paper), capable of holding 50 shells. This I fill with Eley's brown paper shells No. 12, and for duck shooting in November, load with 4 drams (Dixon's measure), putting two of Eley's chemically prepared wads over the powder, pressed down firmly, $1\frac{1}{4}$oz. No. 6 chilled shot, and thin card wad over shot, with the shell turned down tight over the wad. I never use a paper shell but once, as I find the edges get so softened the first time that they will not turn down tight enough to confine the charge properly, and unless the Dittmar powder is tightly confined, it will not give the desired result. I use shells loaded both with No. 6 and No. 4 shot, using the former in the right barrel and the latter in the left. My gun is a Parker, 12-gauge, $7\frac{3}{4}$lbs., modified choke, and a very close, hard shooter, and I would not exchange it for any other make of gun I have seen of equal value. In September last, on wood duck and teal, I used $3\frac{1}{2}$ drams Dittmar and $1\frac{1}{8}$oz. No. 6 chilled shot, and for snipe and plover, 3 drams powder and 1oz. No. 10 shot. I do not pretend to be a crack shot or set myself up as an authority on shooting matters, but merely give my own experience in the use of the Dittmar powder. WOOD DUCK.

PARKER PENETRATION.—*Editor Forest and Stream:* Last week I had the pleasure of looking over some targets made by Capt. J. S. Dame with his new No. 10 Parker gun. He used the Falcon powder and Tatham's chilled shot. The targets were six in number, and were of three sizes, 24, 18 and 12 inches. Distance fired, 40 yards. No. 1 target, 24in. diameter, $1\frac{1}{4}$oz. No. 8 shot, received 289 pellets; No. 2 target, 24in. diameter, $1\frac{1}{4}$oz. No. 8 shot, received 326 pellets; No. 3 target, 24in. diameter, $1\frac{1}{4}$oz. No. 8 shot, received 317 pellets; No. 4 target, 18in. diameter, $1\frac{3}{8}$oz. No. 7 shot received 435 pellets; No. 6 target, 12in. diameter, $1\frac{1}{4}$oz. No. 8 shot, received 115 pellets. These targets were made in public and all in one day, and are not selected from a large number, but are all that were made. We think this is very good shooting—a little better than the average. W. A. G.

Dover, N. H., May 26, 1879.

PATTERN—*Allston, Mass., May* 20.—Your issue of April 10 contained a paragraph from Mr. J. T. Ward, of Cambridge, in regard to close-shooting 12-gauge guns. I have a 10-gauge gun made by Chas. H. Eutebrouk, 27 Dock Square, Boston, cost $150. The barrels are of fine Damascus, 30in. long, and the whole gun weighs $9\frac{1}{4}$lbs. Have made the following patterns at public trials, with $4\frac{1}{2}$ drams Laflin & Rand orange rifle powder F. G., using Leroy's patent wind-drop shot. I used by actual count 473 pellets of No. 8 shot, equal to $1\frac{1}{4}$ oz. inside of 30-in. circle at 40 yards distance: Left barrel—No. 1 target, 411 pellets; No. 2 target, 427 pellets. Right barrel—No. 3 target, 397 pellets; No. 4 target, 385 pellets; 209 pellets, or 1 oz. No. 6 shot, with 4 drams powder, left barrel 193, right barrel 185. Also used No. 1 shot, 75 pellets to the charge, with 5 drams powder, 49 pellets within 30-in. circle at 65 yards. On its first trial with $1\frac{1}{8}$ oz. of Leroy's No. 9 shot, Dixon's measure, and $4\frac{1}{2}$ drams dead-shot powder, F. G., my gun gave a pattern in a 30-in. circle at 40 yds. distance, of left barrel 519, right barrel 470. I have broken glass balls at 75 yds. with No. 9 shot, balls resting on stake. I should like to hear from some 10-gauge guns that can beat mine. W. H. HARRISON.

DANGER IN LOADING.—It has been said that there is no danger of shells exploding if placed on a block with a cavity under the cap. I do not agree with this, for I know there is danger without having the shell on anything. My brother, while loading Eley Bros'. brown shells No. 12, happened to use a No. 10 wad; it swelled the shell so he could not pull it out of the tube. He then tried to drive it out, holding the tube in one hand and hitting the rammer with the other hand. After hitting it a few times it exploded. It cut his hand badly, but as the tube was of German silver and very tough metal it did not fly to pieces. I stood beside him and I am positive that the cap did not touch anything. I think it was caused by the cap being in very tight and the anvil loose, and the powder (coarse grained) driving the anvil against the fulminate caused it to explode. O. F.

A DEER CHASE IN TEXAS.

FORT CLARK, Texas, April 25, 1879.

EDITOR FOREST AND STREAM:

We have, within a few miles of this post, a very varied assortment of game: Panther, wild cat, black bear, deer, antelope, two kinds of rabbits, wild turkey, geese, ducks, quail, plover and snipe; we find bass, perch, catfish, buffalo, and numerous others. We are frequently permitted to go out for a hunt for from six to eight days' duration, and hardly ever fail to come back loaded; but we more often go out for but one day.

Recently four of us left the post, mounted for a day's sport—our arms, the cavalry carbine. After having ridden about six miles we espied three deer grazing about a half mile distant. One of our party instantly dismounted, and crawled up within a hundred yards of a fine buck, which none of us had seen; rose slowly to get a good sight on him, and fired, missing the buck, who bounded off across the prairie. Tom returned crestfallen, and mounting his horse, rode on in silence. I, desiring to hunt alone, quit the party, striking off in the direction I had seen the buck running. I rode very leisurely about a mile, when, seeing four deer just disappearing over a low prairie ridge, I gave King the rein, and started after them. He, nothing loth, went into the sport with a vim, but knowing it might be a long race, and "a stern chase is always a long one," I kept him well in hand, when, rising the ridge and looking over, I saw my four deer jogging along quietly about five hundred yards away, and going toward a clump of chapparel. Waiting until they had got well into the brush, I gave King his head, and away we went at a good pace. Still saving my horse for a rush, we closed rapidly on the clump, and skirting it to the right so I could conveniently fire, I saw seven deer in my front, going over the ground with enormous leaps. They turned out for nothing, and as the country was now pretty level and covered with a short growth of laurel and cactus, it was a beautiful sight as they took their leaps, something to make a man's heart bound and his nerves thrill with pleasure. I believe my good horse fully appreciated the delight his rider experienced. I could feel him quiver and thrill at every bound, as with ears laid back and neck stretched out, and pulling at the bit lightly, he stretched out with long, sweeping galop, gradually but surely closing on the game. The herd had now increased to a dozen. I selected a large buck, and urging my horse for the first time, I gained rapidly until the buck began to lose ground, laboring heavily, even turning in his course to look at his pursuers for an instant. At these times his appearance was grand. These pauses gave me an advantage, and speaking to my horse, I urged him to fresh efforts. He answered with his best speed. Faster and faster we flew over the ground, everything else forgotten in the excitement of the chase and the exhilarating motion of a fast horse at full speed. All this time I could see that the buck was getting heavier at every leap, avoiding a bush now that before he could clear at a bound. My heart throbbed, my blood was pulsing through my veins like fire; all the brute instincts of man to slay aroused in me, I thought only of closing with the quarry. At last, and apparently with a view of showing fight, the buck turned once more, and with lowered head awaited me. On we came, my carbine in readiness over the left forearm, and, swerving rapidly to the right, passed the buck, giving him its contents as I went by. Dismounting from my panting and jaded horse, I turned him loose, and advanced cautiously, throwing a cartridge into the chamber of my piece. The buck was not quite dead, so I gave him a shot in the head to finish him. My comrades, hearing my shots, had ridden over, and now joined me; and packing our game, we returned to the post.

T. H. F.

—See Bogardus' advertisement.

PIGEON MATCHES.

SEND IN SCORES EARLY.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

NEW HAMPSHIRE—*Manchester.*—Memorial Day; scores of Manchester Shooting Club; 18 yards, Card's rotating trap:

O Greeley	1 0 0 1 0 0 1 0 0 1—4
F J Drake	1 0 1 1 1 0 1 0 0 1—6
W H Vickery	1 0 1 0 0 0 0 0 1 0—3
O Huse	0 0 0 0 1 0 1 1 0 1—4
E P Sherburne	0 0 0 0 1 0 0 0 0 1—2
C J Darrah	1 0 0 1 0 1 0 0 0 0—3
L Huntoon	1 0 1 0 0 1 0 0 1 1—5
C A Jackson	1 0 0 1 1 1 0 1 1 1—7
C L Harmon	0 0 1 1 1 0 0 1 1 0—5
Moses Wadleigh	1 0 1 1 1 0 0 0 0 0—4

Second match, 10 balls each: Greeley, 3; Drake, 5; Vickery, 4; Huse, 3; Sherburne, 4; Darrah, 6; Huntoon, 0; Jackson, 10; Harmon, 8; Wadleigh, 5; Tobey, 5:

Double balls.

Jackson	11 10 10 10 10—6	Darrah	10 11 00 10 10—5
Tobey	11 10 01 10 00—5	Harmon	10 10 11 10 10—6
Drake	11 11 11 10 11—9	Wheeler	01 01 10 10 10—5
Wadleigh	10 11 01 10 10—6		

Jackson and Harmon then chose sides of six men each, 10 balls per man; tied on 30 each, Jackson's side winning a second match with a score of 17 to 14 out of a possible 30:

MAINE—*Bath, June* 9.—Our association shot from a Card revolving trap, Bogardus rules, which you omitted to state, thereby doing us injustice, we think. From a stationary trap it wouldn't be much of a score. G. E. R.

NEW HAVEN GUN CLUB.—Matches at opening of new club grounds on West Chapel street. The appurtenances are all of the latest and most approved style, and the club is in a most promising condition. Scores:

First sweepstakes.

Jorey	1 1 1 1 1 1 1 1 1 1—10	Colvin	1 0 1 1 1 0 1 1 1 1—8
Folsom	1 1 1 1 0 1 1 1 1 1— 9		

Second.

Post	1 1 0 1 1 1 1 1 0 1—8		

NEW HAVEN VS. BEAUFORD.—The glass ball match between the New Haven Gun Club and Beauford Glass Ball Club came off on the latter's ground, June 7. The weather was fine. Major Stetson, captain of the N. H. G. C., and Dr. Quirk, captain of the Beauford G. B. Club, arranged and superintended the shooting. After the match the Beauford Club invited the visiting club to the Totoket House, where their guests were entertained in handsome shape:

Beauford.

S M Bryan	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 0 1—17

Mr. Robert Penn, of the N. H. Club, broke 44 out of 45 balls. The New Haven Club have shot seven matches, and have so far been successful in all. The club is soon to be formed into a joint stock club, and will add improvements to their new house and grounds before July 8, when a friendly invitation will be extended to all lovers of glass ball shooting to come. A return match with the Bradford Club will be shot on that day.

FOUNTAIN GUN CLUB—*Brooklyn Driving Park, Parkville, L. I., June* 4.—Monthly handicap shoot; prize, a gold badge; 1¼ oz. shot, 80 yards boundary, five ground traps:

Hass, 23 yds	1 1 1 1 1 1 1—7	Helmstedt, 23 yds	0 1 0 1 1 1 1—5
Williams, 25 yds	1 1 1 1 1 1 1—7	Carlin, 23 yds	1 0 1 1 1 0 1—5
Madison, 25 yds	1 1 1 1 1 1 1—7	Chappell, 25 yds	1 0 1 1 1 0 1—5
Conover, 23 yds	1 1 1 1 1 1 *—6	Bohling, 25 yds	0 1 0 1 1 1 1—5
Eddy, 25 yds	1 1 * 1 1 1 1—6	Sheridan, 21 yds	1 0 1 0 1 0 1—4
Brown, 21 yds	1 0 1 1 1 1 1—6	Skidmore, 23 yds	0 1 0 1 1 0 1—4
White, 23 yds	1 1 1 1 1 1 0—6	Lamkin, 21 yds	0 1 1 0 1 1 0—4
Kearney, 23 yds	1 1 1 0 1 1 1—6	Firschland, 23 yds	1 0 1 0 0 1 *—3
Slane, 23 yds	1 1 0 1 0 1 1—5	Howell, 21 yds	0 0 0 * 0 1 0—1
Cleaver, 21 yds	1 0 0 1 1 1 1—5	Livingston, 23 yds	0 0 0 0 1 * 0—1

Hass won shoot off with two out of three.

JERSEY CITY HEIGHTS GUN CLUB—*Marion, N. J., June* 4.—Third regular contest for a gun; three Bogardus traps and rules; 20 balls: Wm Hughes, 14; J J Toffey, 13; T H Hill, 13; A Heritage, 15; J Hedon, 18; Cannon, 12; J Van Gelder, 13; J B Burdett, 20.

June 7.—Ten-ball badge, three Bogardus traps and rules: P W Levering, 7; A Andrews, 6; J Cole, 8; C Leroy, 8; J Hedon, 5; J Van Gelden, 8; A Heritage, 9; Wm Hughes, 10; J B Burdett, 10. Ties on 10 won by Wm Hughes. P. W. LEVERING, Sec.

GEORGIA—*Rome, June* 3.—Cherokee Gun Club; weekly practice; Card's rotating trap, 18 yards rise, Bogardus rules:

First score.

W M Gammon..........1 0 1 1 0 0 1 1 1 0—6
R T Fouche..........1 1 1 1 0 1 1 1 0 0—7
C L Omberg..........1 0 0 0 1 0 0 0 1 0—3
Jos E Veal Jr..........0 1 0 1 0 1 0 0 0 1—4
R I Hampton..........0 0 0 1 1 0 0 0 1 1—4

Second score.

RAQUET.

SOUTH CAROLINA—*Charleston, June* 2.—The shooting match between a picked team of nine men from Augusta and nine men from the Charleston Sporting club, came off on Friday at the Cool Blow Range; rotary and Bogardus traps, feather-filled balls. The Augusta team was the favorite, as this sport is comparatively new with the Charleston men, who have been practicing only a few days. Ten shots from each trap; highest possible score for individual, 20; highest for team, 180:

Augusta.

E M Habersham..........0 0 1 0 1 0 1 0 0 1 1 0 1 0 1 1 1 0 1 1—11

Impromptu match between five men from each team; conditions, ten shots to each man, balls to be sprung from either trap without notice; possible 50:

Augusta.		Charleston.	
T C Dortic	8	Paul H Lyhah	9
W H Jones	5	S G Trenholm	10
— Zizirria	6	Errington Hume	6
B D Jones	4	J Ancrum Simons	5
A M Benson	3—26	— Bissell	4—34

GULF CITY GUN CLUB.—The second annual grand pigeon tournament of the Gulf City Gun Club will be held at Mobile, Alabama, June 26, 27 and 28. There will be five matches for purses of $300 each, class shooting, open to all amateurs, and the club handicap for championship badge; prizes in class shooting, 40, 30, 20 and 10 per cent. The secretary is Mr. R. P. Priester, Mobile, Ala.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	Striped Bass, *Roccus linneolus.*
Land-locked Salmon, *Salmo gloveri.*	White Perch, *Morone americana.*
Muskalonge, *Esox nobilior.*	Weakfish, *Cynoscion regalis.*
Pike or Pickerel, *Esox lucius.*	Bluefish, *Pomatomus saltatrix*
Yellow Perch, *Perca flavescenc,*	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Monticirrus nebulosus.*

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings bright hyaline.

Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark ginger; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setæ, mottled woodcock.

Black June, No. 10.—Body, peacokk's herl; feet and wings black.

Dark Stone, Nos. 8 *and* 9.—Body, dark brown; feet, yellow brown; wings, luteus.

Governor No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.

Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setæ, dark brown.

Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setæ, dark brown.

The St. Lawrence Hall at Montreal is once more in the hands of Henry Hogan, the prince of sportsmen. Gentlemen visiting Canadian salmon rivers will receive from him all needed information regarding outfits, rivers, etc.

—The Bay View House, on the Long Island Railroad, one and one-half miles from Good Ground, has facilities for summer enjoyment. Boating, bathing, fishing and shooting are the attractions.

—A further addition to the literature of Western railroad guide books is the pamphlet published by the St. Louis, Minneapolis and St. Paul Short Line, which contains matter of interest to the tourist-sportsman. The circular may be obtained of Mr. W. G. Telfer, Ticket Agent, Minneapolis, Minn.

MCBRIDE FLIES.—Miss Sara J. McBride, whose flies have long been popular among anglers, is about to close up her business, and offers stock on hand at prices which are below cost. This is a rare opportunity for procuring some excellent tackle at a merely nominal price. Miss McBride's address is Mumford, N. Y.

NOTES FROM THE EDITOR.—*Quebec, June* 8.—The rivers are all high, and no salmon are yet reported. Parties have been on some of the best rivers for 10 days past. There are an unusual number of sportsmen here from Europe and the United States, *en route* to the rivers, and many have already gone down. Russell's six cottages on the Marguerite are all occupied. I shall be on the Godbout by the 12th of June, which will be in ample season for the first run of fish. Sothern and Florence passed down two days ago. Allan Gilmour's yacht *Cruiser* has been doing her fifteen miles an hour from the start. She is a crack craft. All well on board. Weather here miserably cold, with hail and snow yesterday. While at Prescott the other day I heard of an 82-pound muskalonge having been taken at Brockville the day before with troll, which is the largest specimen of this species I have any record of. The weight is well worth noting. HALLOCK.

DIGGING FOR WORMS.—All Limestone County, Texas, is digging for worms—angle-worms! Every old shanty in the county has been overhauled, the floors pulled up, and great holes dug under them deep enough for wells. The rise in the worm market began about two weeks ago, when a darkey in Marlin imbibed too much whisky, and told the tavern loungers how he had been digging for worms. It seems that near Rock Dam are the ruins of a shanty, in which a certain bachelor named McKissick, who dwelt alone on the Brazos some fifteen years ago, was murdered one night. Since that time the hut has fallen into decay, and the spot shunned by the superstitious passer-by. The other day a darkey, who was going fishing, entered the crumbling, floorless building and began digging for earth-worms. He forthwith unearthed an iron pot, and uncovering it, found a heap of gold coin, $10 and $20 pieces—$8,000 in all. He didn't go fishing, but he did go off on a spree and tell everybody else all about it; and everybody has gone to digging worms.

TOUGH LUCK.—Little Rock, Minn., fisherman falls into water; crawls out; hangs clothes over fire to dry; clothes burn up; fisherman naked, three miles from home; woman comes along; fisherman plunges up to chin in water; woman lends petticoat; grand procession *a la* Robinson Crusoe.

CANADA—*Matapedia, June* 2.—My catch of salmon to-day numbers four; total weight, 49 lbs. The water in the river is falling rapidly, and sport begins to be fast and furious. The following gentlemen are here: Messrs. C. L. Tiffany, J. W. Little, H. J. Wilson, L. Winchester, E. Titus, E. Titus Jr., E. T. Roberts and R. S. Hall, from your city; Judge W. Strong, Washington, D. C., and Wm. Neyle Habersham, of Savannah. So far L. W. Winchester stands at the head, having killed the largest fish, 33 lbs., unless Judge Strong's fish (his first salmon, which I saw a few minutes ago headed down stream with the worthy dispenser of justice tugging at him with a determination which bespeaks capture if the tackle holds) should prove the 35-pounder that we have all been looking after. STANSTEAD.

NEW BRUNSWICK—*Bathurst, May* 29.—There is good fishing in Nepisiquit River or on Bay DeChaleur. J. H. W.

MAINE—*Birch Lodge, Molechunkamunk, via Andover, June* 1.—Fishing interfered with by high water. No large strings reported as yet, and not as many fishermen as usual. Gen. Butler and party had good success at Middle Dam last week. Fly fishing moderately good at Oquossoc Club waters and at the head of Molechunkamunk, near Whittier's Camp, at which place trolling has been quite successful. Mr. Hollingsworth, of Boston, took a seven-pound trout in this manner, and two gentlemen fishing the Richardson ponds, May 28, took two fish weighing 6½ and 5¾ pounds, and several smaller ones. Black flies just beginning to be troublesome. J.

Monson, June 7.—Trout fishing has opened splendidly. Never knew a time before when so many trout have been taken in the month of May as this year. I think fully 1,500 speckled trout have been taken from Bear and Doughty Ponds each; this last May also a large number from Hebron and Monson Ponds, several weighing 3½ pounds each. We think sportsmen will find here as good sport for them as can be found in the country. Several parties have visited these ponds for one day's sport, and brought home 50 to 75 each. Mr. J. C. Tripp, proprietor of the Chapin Hotel, is the right man for the sportsmen; always pleasant and ready to serve his guests. NED.

OQUOSSOC ANGLING ASSOCIATION.—*Camp Kennebago, Rangeley, Maine, June* 6.—The Association held its annual meeting at Camp Kennebago, Maine, on June 4 inst. and selected the following Trustees: John H. Kimball, of Bath, Me., President; Louis B. Reed, of N. Y., Vice-President; James A. Williamson, of Jersey City, Secretary and Treasurer; Geo. Shepard Page, of Stanley, N. J.; Rev. R. R. Booth, D. D., of N. Y.; Geo. P. Rowell, of N. Y.; Adon Smith, Jr., of N. Y.; Geo. A. Robbins, of N. N., and Royal C. Taft, of Providence, R. I.

MOVEMENTS OF THE FISHING FLEET.—The arrivals this week have been 83, as follows: 34 from Georges, with 13,600 pounds of halibut and 1,008,000 pounds codfish; 8 from the Banks, with 161,300 pounds halibut and 90,000 codfish; 15 inshore fishermen with 210,000 pounds codfish; 20 Southern mackerel catchers with 1,500 barrels mackerel; 5 squid catchers with very small catch, and one vessel with herring.—*Cape Ann Advertiser, June* 6.

NEW YORK—*Hornellsville, June* 9.—Messrs. Jilson, Kenedy and Davenport have just returned from Pine Creek, Pa., with a bushel of dressed brook trout. They were gone just one week. Distance from here, about forty miles—an easy day's drive. Stopped at Flynn's, who keeps a temperance hotel. Charges, for three men and two horses, one week, $7.25. Some of our politicians say that Flynn's charges were exorbitant, but I should say it was cheaper to stop with him than to stay at home. The $7.25 included dressing the fish and packing in ice. J. OTIS FELLOWS.

THE ADIRONDACKS—*June* 1.—A desired rain has cleared the air from its smoky condition, and the woods to-day are looking fresh and beautiful. Owing to the very high water, trolling for trout and taking them with a fly have been the poorest known for years. The usual rush of sportsmen is very limited. At Paul Smith's I find registered: Dr. Trudeau and family, of New York; Mr. Hollingsworth, of Boston; Superintendent Pilsbury, of Albany. At the Prospect House, Upper Saranac Lake: Dr. Dunton and Mr. Riddle, of Pennsylvania. At Bartlett's Sportsmen's Home: Col. T. J. Hoyt, of St. Louis, Mo.; Dr. Romeyn and family and Miss Sue Baber, of Keeseville, N. Y.; Dr. Tallmadge and Rev. Mr. Bull; J. M. Winants, of Bergen Point, N. J.; Messrs. Tilston and Mudge, Boston, Mass. Vice-President Wheeler was there two days, and, to the regret of all, was called home, owing to the death of his sister. At Corey's, the Messrs. Van Woert, of Brooklyn. Mr. W. H. Penfield is camping on Fourth Pond. Cronk has given up possession of the hotel on Big Tuppers, and Mr. McClure installed as proprietor. Cannot something be done to enforce the game laws? The Upper Lake is full of set-lines, and an abundance of trout taken therefrom. Col. Hoyt and Dr. Romeyn, as in years past, have this year also removed several of these lines. If the landlords would enforce the law instead of purchasing the trout taken, it would materially aid in checking the infamous destruction. Something must be done shortly, or trout will only be a thing of the past. The steamboat whistle will soon grate upon the ears of the true sportsman here, as the steamers commence their trips soon, to the entire disgust of all but a selfish few. The hotels in this region are all well kept. My next from other points, where I go soon. S. S. N.

NEW JERSEY—*Barnegat Inlet, May* 30.—Bluefish still very plenty, and excellent catches made past week. Among the amateurs enjoying the sport, F. A. Palmer and C. I. Bonnel, Newark, N. J., with a catch of 112 in two days; Daniel Shemm, H. S. Chauncy, M. E. Parker, 100 in two hours' fishing; Col. Edwin Post, N. Y., 70 sea bass in two hours to day. Some 40 sail out, and their catches in bluefish run from 30 to 96, as far as heard from. A few professional fishermen out, but report no biting. B.

PENNSYLVANIA—*Pottstown, June* 3.—Fishing for bass in the waters of the Schuylkill River became lawful June 1, and many anglers lined the banks of the stream all day on Monday. Some were very successful. The season is very promising, as we had no high freshets to destroy the spawning. The water is in splendid condition for cat-fishing now, and quite a number have been captured. J. W. E.

A POTOMAC BASS.—At Point of Rocks, Md., one day last week Mr. Thomas D. Bond caught what is said to be the largest bass ever taken out of the Potomac. It measured 22½ inches from tip to tip, weighing 5¾ pounds. A cast has been made of it at the Smithsonian.

FLORIDA—*Titusville, Brevard County, May* 17.—Fishing is very good here now in Indian River. Bass of thirty pounds are common. A young lady caught three off the wharf here in half an hour. Mr. Price caught one weighing 57lbs. I caught one when in a small schooner's yawl-boat, and he pulled so hard that he swung the boat around the anchor. He weighed 28lbs. Bait with pieces of mullet on a line about 100ft. long, thrown out to its full length in water about 4 or 5ft. deep. These are the sea bass or red bass, called red fish in the Gulf of Mexico (*Sciænops ocellatus*, of Linn. and Gill). The scales are very large and strong, and are made into beautiful imitations of flowers and grasses in a very ingenious manner by the ladies in this locality. It is necessary to scale the fish with a hatchet. Salmon trout, or spotted sea trout, are very numerous also here at this season, and bite to mullet bait readily. This is the spotted silver-sides of Scott (*Cynoscian carolinensis*—Cuv. *et* Val., Gill). Mr. G. W. Schuyler, the proprietor of the famous Dummitt's Grove, shot a sawfish (*Pristis antiquarum* Linn., Lath.) in Dummitt's Creek that measured 14½ft. in length, about a week ago. Dangerous fellows in a close encounter. Sheepshead (*Archasargus probatocephalus*—Wall, Gill) are very numerous just now also. Dummitt's Creek is full of them. On the marshes opposite Titusville, May 15, found black duck's (*Anus obscura*) brood a few days old. Shot some marbled godwits, brant bird or badger bird (*Limosa fedoa*), and black-necked stilt, or lawyer, humility (*Himantopus nigricollis*), with large eggs nearly ready to lay. Also shot a male little black-head, or little blue-bill raft duck (*Fulix affinis*) out of a flock of half a dozen. The coots (*Fulica americana*) have all gone north some time ago. AL. I. GATOR.

OHIO—*Wauseon, May* 29.—Went fishing to Ligonier River, 27th. Expenses: Railroad fare, $4; minnows, 50.; hotel, $4; catch, nothing. However, there is no doubt that the fishing for bass is good in the lakes near that place, if you find the right one. It is needless to remark that I failed to find the right one. They have a strict law on spearing out there, yet every fellow owns a spear. What for? H.

RUBBER FISHING RODS.—*Fishkill-on-the-Hudson, June* 3.—*Editor Forest and Stream:* My father, who is in the rubber business, made a rod of hard rubber four or five years ago. The clasticity, lightness and strength are all good points in hard rubber, but there is no limit to its warping and twisting. A rod of this kind used three hours in the sun would resemble a cork-screw on a large scale. I have a tip about the house now made of rubber, and the runners which were once in perfect line are now on all sides of it. Instruments of music, such as flutes, clarionets, etc., have been made from rubber, but the warping effectually prevented them becoming a success. A.

BLUEFISH.

THIS fish is now reported in abundance on the coast south of here, and affords great sport to anglers. Hallock's Sportsman's Gazetteer treats of him as follows:

BLUEFISH.—*Pomatomus saltatrix.*—Gill.

This fish is known as the bluefish in New York, New Jersey, and New England, except in Rhode Island, where it is recognized by the name of horse mackerel. On some parts of the New Jersey coast it is also called the horse mackerel. Form of body oblong, head rather large, snout round d, mouth large, armed with long sharp teeth; tail deeply forked; color brilliant steel blue and silver in the young fish, and deep greenish blue in the old fish; fins yellowish.

The blue fish is a pelagic or wandering fish, passing its winters in the South, and its summers in the North. In March and April they are found off the Carolina coast. About the twentieth of May they make their appearance off the coast of New Jersey. Barnegat is a favorite ground for them, where set nets have taken as many as six thousand in a single day. Very often vast schools are driven upon the beach by porpoises and other large feeders, where they have been gathered up by the cartload with pitchforks, baskets, etc. Other schools have chased the shiners, moss-bunkers, sardines and anchovies upon which they principally feed, close in shore, and have been jigged from the surface by the hundreds. The May fish range from two to twelve pounds in weight, are poor in flesh, and ravenous as sharks. In June they are found equally abundant off and in Fire Island Inlet, and in a few days thereafter are scattered off Montauk Point, the east end of Long Island, Shagwauna reef, and other reefs adjacent. By or near the twentieth of June, depending something upon the forwardness of the season, they have spread themselves over the reefs of New London and to the eastward, on to Block Island, and thence through Fisher's Island Sound. By the twentieth of August they are in plentiful supply all through, inside and outside of Vineyard Sound, Nantucket, etc. They have gained flesh, and become quite palatable. The size here described is seldom found to the westward of the Connecticut River. On the main of Long Island Sound it is quite interesting to see them drive the menhaden, or moss-bunkers in shoals, causing a "sleek" on the water as they spill their oil when they chop them up with their great sharp teeth.

Early in June a size of about three pounds weight make their appearance at the same points, though much fatter, and remain in the vicinity of the same grounds for perhaps a month. In July they spread out to the eastward, up Long Island Sound to Saybrook Bar and Faulkner's Island, and westerly to Stamford, and remain until October, though occasionally shifting ground for their food, which, in addition to the moss-bunkers, consists of a small species of "shiner" (anchovy). On some of the outer reefs they remain but one or two days at a time.

About the middle of July the small creeks and rivers, from Stamford eastward to the Connecticut River, abound in a size weighing about a quarter of a pound, which, in a month grow to half a pound, and these feed on a size still smaller, recently spawned, and scarcely an inch and a half in length. The surface of the Housatonic River, from the railroad bridge to the mouth of the river, is annually covered from bank to bank with countless numbers of this small fry, drifting with the tide as it ebbs and flows, while at the same time a size larger, say about a half pound in weight, is feeding upon them from beneath. About the first of September the small fry are sufficiently large to venture into the Sound, and then they swarm in the creeks and harbors, affording great sport to lads who catch them with a float line, with shrimp for bait. By the month of October both large and small fish are all well fattened.

The peculiarity of this fish is that, by about the middle of October the large size, that weigh from nine to fourteen pounds, are generally found from Nantucket to Watch Hill, around Block Island and outside of Montauk Point; while from Stamford eastward to New London, on the outer reefs, they are of a uniform size of about two and half pounds weight, and those in the harbors and creeks are a mixture of small fish just spawned, and a size that weighs from one-eighth to one and three-quarter pounds. Another singular feature is, that by or about the twentieth of October, or the first freezing weather, these fish, of all sizes, up to two and a half pounds, vacate the northern harbors and sounds; and so sudden has been their departure in many seasons that a change of tide has utterly emptied the waters of their teeming fish-life, with the exception of an occasional pensioner who has been bitten or disabled, and dare not run the gauntlet for southern climes. More singular still, the great mass of fish, except the newly spawned, take the coast within one or two miles of shore, part of them stopping, if the weather permits, at the inlets of Fire Island, Egg Harbor, Townsend's, Canarsie Bay, Cape May, and so on along shore, using up all the feed therein, and by the month of December they are found in the creeks and rivers of North and South Carolina, where they remain through the winter, to migrate the next season to northern waters.

But what becomes of the small, newly spawned fish that disappeared the previous fall? Have they been eaten up by the larger fish on their journey, or do they remain at the North? They are not seen in the South, nor do the larger fish spawn there.

Four generations of bluefish make their appearance in our waters at the same time. It is only about forty-five years since the bluefish were first seen in our waters. They now seem to be increasing year by year in size and numbers, individuals having been caught at times weighing between twenty and thirty pounds, whereas a twelve pound fish was regarded as something remarkable twenty years ago. Large shoals were also uncommon until within the past dozen years.

On the reefs they are generally trolled for, but will take the hook with live bait. In October near the close of the season, large catches are made off Montauk Point, and from Watch Hill eastward through the Vineyard Sound, that weigh from ten to fourteen pounds, and are fat as seals; so also in Canarsie Bay, in some years they have been taken from twelve to eighteen pounds in weight. But it is only in rare exceptionable cases that these great fish are taken west of Plum Gut.

The bluefish fraternizes with the weakfish, or squeteague, on inshore grounds, and are of large size, say from five to twelve pounds. Both of these fine fish are taken with the squid or jig in the surf at Montauk, Newport and elsewhere, and afford the most exciting sport—the angler, often standing waist deep in the breakers, throwing his squid to incredible distances by practice, and dragging the fish by main strength to *terra firma* when he has struck.

The best trolling is done from a sail boat with a six-knot breeze blowing. If motion is more rapid, fewer fish will be hooked, and a great number will tear out. If the boat moves slowly, the fish will discover that the bait is a deception and will refuse it. It is dirty work, and a suit of worn out clothing should be used for the purpose—and an old felt hat, brown flannel shirt, vest, thick cassimer pants, and a pair of stout brogans. To prevent the hands being lacerated by the friction of the line, rubber finger stalls or thick woolen mittens should be used. The first can be bought of dealers in rubber goods for one dollar per dozen. A well *laid* cotton line, which is not liable to kink, can be purchased at any twine store for fifty cents per pound.

For large fish, in spring and fall, use a line seven-sixteenths of an inch in circumference. For small lines choose cotton-braided ones, laid, as they are less apt to tangle than small ones, and are more pleasant to the fingers of the fisherman. If the fish are plenty, and in a biting humor, from forty to sixty feet will be ample; but if scarce and dainty, from eighty to one hundred and thirty feet will be required. Sometimes bluefish snap at the line between where it comes in contact with the water and the squid, and occasionally through the struggles of a fish to escape the lines are fouled, and one of the number is apt to pass into the mouth of the hooked fish. In either case the line is liable to be stranded, and unless knotted, may be parted by the next fish. If an expensive line is used, the fisherman will request the boatman to knot it. If knotted, the ends unravel, and an attractive bait is presented, which hungry fish are apt to seize. If a cheap line sustains an injury, it can be cheaply replaced by a new one.

It is amusing to inspect the various squids purchased by the uninitiated—spoons and spinners of all kinds, sizes and shapes, many of them ornamented with paint or feathers, metallic fishes of various forms and sizes, some with wide spreading tails to prevent the fish from being hooked, and a large proportion cast so as to represent scales. Bluefish will bite at a spoon or spinner, but to unhook the snappish customers is the rub; for if fingers come near their mouths, one or more are apt to suffer. The best device is a plain, round, white, bone squid for large fish, and for the first run, when even small fish are ravenous, use a round bone squid five and a half inches long, and two and a half inches in circumference at the thickest portion. For small or summer fish, favorite squids are four and a half inches long and one and a half in circumference at the thickest point. Dr. Kenworthy says:

"Hooks should be strong and reliable. For large fish, use first quality Virginia hooks, (made by Job Johnson, of Brooklyn,) measuring in width one and three-eighth inches at point; and for small or summer fish, a Chestertown hook seven-eighths wide at point.

"A difficulty to be encountered in using a bone squid is the tendency of the hook to slip—at one time leaving the bone in contact with the bend of the hook, and at another the shaft of the hook slipping entirely out of the squid. To render the hook immovable, attach a shoulder of solder to the shaft of the hook at a point where it comes in contact with end of squid. To prevent the hook from being moved out of the squid, use several tight-fitting white pine wedges at side of shaft of hook as well as a long and tightly-fitting plug where the line passes out of the base of squid. When wet the pine swells, and generally renders the hook immovable.

"Another and more perfect method is to take a piece of No. 12 iron wire, and bend it so as to form a loop to receive the line. The wire is passed through the squid and cut off three-quarters of an inch beyond the end of the same; tin the shaft of the hook as well as the wire, after which place them in position, and to prevent movement, bind the end of wire and shaft of hook together with fine copper or brass wire. Having some melted solder in a ladle, pour it into the end of the squid so as to fill the entire cavity; then apply solder to end of wire and shaft of hook, at end of bone, so as to make an angular shoulder about three-quarters of an inch in length—bone of angle in contact with bone. The solder is dressed down by a file, and a useful and reliable squid is the result. For a trifling charge any tinsmith will tinker the squids as described, and the bluefisher will find them more satisfactory than the squids as usually sold."

As a general rule, bluefish merely nip at the end of the squid, and as hooks are usually placed in relation to the end of the squid, the fish are hooked in the edge of the mouth and tear out. To obviate the superficial hooking and tearing out process, so arrange the hooks that the points clear the end of the squid from one and a quarter to one and a half inches. This arrangement generally hooks the fish deep.

Hooking bluefish requires no tact or piscatorial experience; all that is required is to allow the squid to trail behind the boat. When landed the best mode is to throw the fish into the boat. Through their flouncing and head-shaking the squid is generally released. This failing, the fisherman seizes the squid and elevates the hook and fish, and a few expert twists of the hand with the struggles of the fish sometimes suffice. This procedure failing, seize the fish by the back of the neck with the left hand, and if a large fish, hold his body between the knees, and with the right hand tightly grasping the squid, wrench the hook from the mouth.

One mistake made by novices is, in having too many fishing in the same boat. Three lines, one amidships and one on each quarter, can be successfully used, but two are preferable. Sometimes five and six fish from one boat, and the result is, that a fighting fish will entangle a portion of all the lines.

For successful bluefishing an experienced and industrious boatman is a *sine qua non*. The expert angler who can cast a fly or artificial minnow, and handle a nine ounce rod, may enjoy excellent sport among the bluefish, provided he uses a long shanked hook and gimp snoods. Numbers of these fish may be seen "breaking water" at any time on the banks and shoals; and by using a small boat, the rod-fisher may enjoy his sport *ad infinitum*. Within a year or so this has become a favorite method. With hook and line, gimp snood as already suggested, a nine feet one and three-quarter pounds striped bass casting-rod, a strong fine silk line, a heavy reel, and two revolving minnows, (the whole costing about $20,) the tackle is complete. The snood should be loaded sufficiently to keep it beneath the surface of the water. Another excellent lure is made by wrapping a dozen layers of cotton cloth around the leaded snood, and covering with an eel-skin.

Bluefish, we all know, must have a moving bait. Now wherever you have a swift tide, if you anchor your boat and let your lines out it answers the same purpose as if you were sailing, the water rushing by the line giving the same effect.

A great deal of sport is enjoyed in catching the summer bluefish, or snap mackerel, which fill all our bays and estuaries, using a natural bamboo rod with common cork float, and hook baited with shrimp. They are caught from bridges where the current draws swiftly through, and from wharves when the tide is running rapidly.

To some fishermen the surf fishing already referred to, is deemed the most exciting method, and it is certainly very enjoyable in hot mid-summer weather. An ordinary pair of overalls, or a bathing suit is essential to comfort and unrestrained movement. When a large fish has struck the squid, already thrown well out beyond the line of breakers, the fisherman heaves the line over his shoulder, and walks his prize up the beach to dry land by main strength, which is often taxed to the utmost. No exercise can be more healthy or less wearing.

The bluefish and striped bass are the game fish, *par excellence*, of the brine, just as the salmon and the black bass are of fresh water.

National Pastimes.

ARCHERY.

—Messrs. Peck & Snyder have complete sets of Jefferies' lawn tennis put up in handsome cases. This game deserves greater popularity than is now accorded to it.

ARCHERY ACCIDENT.—Already in archery must we begin to chronicle accidents. It would appear superfluous to caution archers against the careless use of their implements, just as it would appear unnecessary to warn gunners against shooting each other. But so long as men use firearms we may expect fatal accidents, and as archers are human it is probable that their sport will not be altogether bloodless. A drawn arrow should never be pointed in the direction of a human being. That he did not mean to shoot is very poor consolation to the grief-stricken Cadet Jordan, who shot out the eye of his friend at Annapolis last week. The report of that accident in the daily papers may well serve as a warning to archers everywhere:

A party of ladies and cadets were practicing at the targets. Cadet Jordan, of Maine, had bow and arrow in hand and was preparing to take aim. Cadet Winterhalter, of Michigan, stood before the target talking to a lady. Cadet Jordan told him to get out of the way. He answered playfully, "Here, shoot at me!" "Well," was the response, "I'll shoot over your head." He did not intend to shoot, but the arrow slipped from his hand and struck his friend in the right eye, piercing the ball and forcing it out. The poor fellow fell headlong to the ground, and the probability is that he will lose the sight of both eyes. His friend is heart-broken.

PEQUOSETTE ARCHERS.—The Pequosette Archers, of Watertown, Mass., number twenty-five archers, of whom two-thirds are ladies. In the first prize contest of the season the winners were as follows: Ladies—First prize, Mrs. Silsbee; second prize, Miss Alma Walker; third prize, Mrs. Gardner. Gentlemen—First prize, A. S. Brownell; second prize, N. Abbott; third prize, Joseph Shackford. The club is having a championship medal prepared, which will be competed for on successive Saturdays during the season.

LONG AND SHORT ARCHERY RANGE.—*Highland Park, Ill. —Editor Forest and Stream:* We read with much pleasure the letter of Mr. Will H. Thompson in your issue of the 8th of May, in which he referred to a recent communication by your correspondent "N. K. D." on long vs. short range archery practice. With great modesty Mr. Thompson says he does "not pretend to be an authority on archery," but while not making any pretensions, he certainly is "authority;" and he and his brother are probably the only personsin America generally recognized as such; and those who have seen Mr. Thompson shoot, as was once our pleasure, or know of the scores he has made and is now making, know that when he gives an opinion it is not simply theory, but the result of long use of the bow—of "intelligent practice." And yet, with less than a year's practice in archery, and never having made a creditable score at any range, we cannot quite agree with everything in Mr. Thompson's letter. He says: "Here are two propositions which will be doubted by few archers: First, practice at long range will improve one rapidly at short range. Second, practice at short range will injure one's shooting at long range." We are of the "few archers" who "doubt," without denying, the propositions. We have known a few gentlemen to shoot faithfully and well at the York Round without notably increasing their occasional scores at the short ranges. Our doubt, however, is chiefly in regard to the second proposition. We will suppose a person has practiced at 100 yards until he can make a certain score, X. He then devotes a month's practice to 60 or 40 yards. When he returns to the 100 yard range will he be able to make the score X? Perhaps not the first day. But he will be able to, with out question, much sooner than if he had not shot at short range. In a word, short range shooting will not have injured his long range shooting. Until recently we practiced at the short ranges, chiefly at 40 yards. In the second week of our long range practice we made at 100 yards, with 72 arrows, 30 hits, score 98. At 120 yards, with 35 arrows, 11 hits, score 41. Though these are only moderate scores, we contend we were not injured by the short range work. To show what long range shooting will do for one, Mr. Thompson gives a score—228—which he made at 40 yards, after he had been shooting for two months at the long ranges. Last season he made at 40 yards 236, when he shot, we understand, only the short ranges. We could cite cases to show how long range practice does not rapidly improve shooting at short range, and to show that short range shooting does not injure long range shooting. But, *cui bono!* A few cases do not prove anything. In a former letter we may have set too high the mark to be attained at the short ranges before attempting the long. But we still believe that a person will advance most rapidly by first doing good shooting at short range; and we think Mr. Thompson is himself an illustration. We would lay down these propositions: First, shooting at either range improves one at all ranges; second, a person must devote his time to those ranges at which he desires to become proficient. But it is from long range shooting that we derive the greatest pleasure. As Mr. Thompson beautifully says, "The freedom of movement, the strong draw, the great flight, the exhilaration and matchless joy of archery culminate in the long-range shooting." N. K. D.

DECORATION DAY ATHLETICS.

[These records were unavoidable crowded out from our last issue.]

NEW YORK ATHLETIC CLUB.—Mott Haven; open to all amateurs:

Seven-mile Walk—E E Merrill, Union A C, 65m 56⅗s.

Putting the Shot—H E Buermeyer, New York A C, 35ft 7in.
One Hundred Yards Run—Trial heats, winners of trial heats only in final heats; four heats. H H Lee, University of Pennsylvania.
Throwing the Hammer—W B Curtis, New York A C, 82ft 4in.
Four Hundred and Forty Yards Run—Edward Merritt, New York A C, 53 2-5s.
Running High Jump—W B Beers, New York A C, 5ft 6in.
One Mile Run—W J Duffy, Harlem A C, 4m 54 1-5s.
Throwing 56lbs Weight—W B Curtis, New York A C, 22ft 1½in.
One Mile Walk—Thomas McEwen Manhattan A C, 7m 21 1-5s.
Running Broad Jump.—W T Livingston, Harlem A C, 19ft 2½in.
Two Hundred and Twenty Yards Run—H H Lee.
Tug of War—Teams of four men; first pull won by New York A C against Empire City A C; second and third pulls won by the Scottish-American A C.
One Hundred and Twenty Yards Hurdle Race—Ten hurdles, each 3ft 6in high. J W Pryor, Columbia College B C.
Half-mile Run—L E Meyers, Manhattan A C, 2m 21s.
Pole Leaping—G McNichol, Manhattan A C, 8ft 6in. Mr. McNichol, in a trial not on the programme, leaped the height of 10ft, the best on record in this country.
Three-mile Walk—Thomas McEwen, Manhattan A C, 24m 9 2-5s.
Tug of War—Teams of six men, each man limited to 150lbs, each pull limited to fifteen minutes. New York A C won first pull against the Empire City A C. After which the Scottish-American pulled with the latter according to the rules of the club, and achieved a triumph.

BROOKLYN ATHLETIC CLUB.—Inaugural games on the new grounds:

One Hundred Yards Dash—First heat—H P Wilkinson, 12 3-8s. Second heat—J F Baker, 12 3-8s. Final heat—Wilkinson, 12 1-8s.
Running Broad Jump—H P Wilkinson, 14ft 6in.
One Mile Bicycle—F H Logan, 4m 10s.
One Mile Run—C German, 5m 26s.
Putting the Shot, 16lbs—C F Coperthwaite, 31ft 9in.
Two Hundred and Twenty Yards Hurdle Race—First heat, 10 hurdles, 2ft 6in high—G T Newbury, 35⅗s. Second heat—H Lansdell, 35s.
Tug of War—Light Weights—Team No 1, Capt W E Lanchantin; Team No 2, Capt J W Daniels. Won by Team No 2, 5m 13s.
Two Hundred and Twenty Yards Run—Club Challenge Badge—F H Bourne, 27 1-8s.
One Mile Walk—C H Mackrell, 8m 29⅗s.
Five-mile Run—W A Armstrong, 34m 35 3 8s.
Running High Jump—C B Hankins, 4ft 9in.
Tug of War—Heavy Weights—Team No 1, Capt J B Pitbladdo; Team No 2, Capt W C Weaver. Won by Team No 1, 8m 29 3 8s.
Lacrosse Match—Team No 1: F C DeGrove, Captain, defence; G Stevens, goal; J W Baker, point; L C Warner, cover point; J G Hudson, field; C H Mackrell, home (made two goals); Rev T R Slicer, field; L P V Bryner, field. Team No 2: Frank Logan, Captain, home; J W Daniels, home; William Lanchantin, field; S Gomez, field; Joseph Baker, defence, field; William Blair, point; William Baker, goal; James Taylor, field. First goal by Team No 2.

FOOT-BALL—*Ann Arbor, Mich., May* 31.—The foot-ball eleven of the University of Michigan played the eleven from Racine at White Stocking Park, Chicago, on the 30th of May. The result of the game was a victory for University of Michigan eleven by a score of one goal to zero. The Racine eleven were obliged to make six touches in their goal in the first inning and five in the second. Our eleven made no touches in our goal, but one in Racine. The goal was made by a catch. Our goal-keepers had nothing to do, the ball never going behind our half-backs. I here append a list of the two elevens: Racine—Rushers: Parker, Billings, Rogers, Tarbert, Cleveland, Roberts; Half-backs: Greene, Martin, Ormsby; Backs: Johnston, Fulforth. University Team—Rushers: De Jarr, Chase, Pond; right wing, Green, Hannan; left wing, Reed, De Puy; Half-backs: Edwards, Campbell, Barmore; Goal-keeper, Mitchell. Our arrangement was, as can be seen, different from theirs. Only two innings were played. Another goal was claimed by the University team, but was not given by the referee. There was good playing on both sides, considering that there was a wind blowing and the ground was new and very soft in parts. TIRO.

LACROSSE.—Boston has appropriated $300 to defray the expences of a Fourth of July game of lacrosse between her Union Club and the Montreal Lacrosse Club.....The married men of the Ravenswood and Brooklyn Clubs play the bachelors of of the same clubs at Prospect Park, next Saturday.....It is proposed to form a National Lacrosse Association in the United States similar to that of Canada.

WILLIAMSBURGH ATHLETIC CLUB.—The Williamsburgh Athletic Club will have a two hours' go-as-you-please race on their grounds, Bedford avenue and Rutledge street, Saturday, June 14, at 5:30 P. M.

UNIVERSITY OF MICHIGAN GAMES.—The fourth annual field day of the University of Michigan Athletic Association will be celebrated June 24th. The programme includes the usual contests.

—The Scottish-American Athletic Club's annual games will be held at the club grounds, Fifty-sixth street and Eighth avenue, July 4. Entries close June 26, with Wm. S. Connell, Sec'y, 329 W. Fifty-fourth street.

CRICKET.

FIXTURES.

June 12—Prospect Park, Manhattan (2d) vs St Georges (2d).
June 14—Baltimore, Young America vs Baltimore.
June 14—Ardmore, Merion vs Chestnut Hill.
June 14—Nicetown, Young America (2d) vs Germantown (2d).
June 14—Haverford, Oxford vs Dorian (2d).
June 14—Chestnut Hill, Philadelphia (2d) vs Chestnut Hill (2d).
June 14—West Philadelphia, Belmont (2d) vs Merion (2d).
June 19—Prospect Park, Columbia vs Manhattan (2d).

YOUNG AMERICA VS. GERMANTOWN.—The first match this season between these redoubtable clubs was played at Nicetown on the 30th and 31st ult., when the Young America won by 70 runs. This match was probably the best game that has ever been played between two of Philadelphia's rival clubs, both of which presented their best elevens:

	1st Inn'g.	2d Inn'g.	Total.
Young America	128	77	2 5
Germantown	58	57	135

LONGWOOD VS. BOSTON.—The first match of the season in the vicinity of the Hub was played at Longwood on Decoration Day. We are glad to see that the old Boston Club has reorganized, and with practice will turn out a strong eleven. The home club, however, on this occasion won an exciting victory by 11 runs. For Longwood, Bixby scored a good (not out) 22 and 8, his being the only double figures of the match. The totals were:

	1st Inn'g.	2d Inn'g.	Total.
Longwood	51	41	92
Boston	52	29	81

YOUNG AMERICA VS. ST. GEORGES.—Nine men out of every on that went to Hoboken on Wednesday, the 4th inst., to see the Young America gentlemen play the old St. Georges knew almost to a certainty in whose favor the game would result before a ball was bowled, for of late the youngsters have been teaching their paternal ancestors how to absorb the contents of hen fruit. Until recently this match has always been looked forward to by the cricketing fraternity as an event of the season, and both clubs were expected to present their full strength. On this occasion, however, the Philadelphians were short the services of Large and Baird and the New Yorkers those of Soutter and Richardson. Now, there is always a class of spectators at a New York cricket match who express dissatisfaction if they do not see the same men play who, five, ten or twenty years ago, were wont to wield the willow; and it was only the other day, when the St. Georges were losing their wickets rather fast, that we heard an old fellow ask "where was Bingham?" (Bingham was once a St. Georges player, who has been dead for many years.) It is absurd to play men whose record is only one fair score out of twenty matches, and when the eleven of the home team made its appearance, it was at once seen that a weeding process had been going on, and that the vacancies were wisely filled by young players. The change had at last been made, and although victory did not this time reward the new deviation, yet the move was a good one, which will surely tell in the future. It was apparent to all that the St. Georges' fielding had never been better, and at times it was really brilliant. The old cricket axiom of selecting an eleven had been carried out—"Much better play a good field than a bad field and uncertain bat." It was not only in the field that the new players excelled, for one of the substitutes, Mitchell, did excellently at the bat, and the junior member, Campbell, took five of the best wickets for 32 runs, and Conover could not have been surpassed in fielding. Want of space prevents us from speaking fully of Cross' splendid batting and wicket-keeping, and Moore's fine long-stopping. The game was begun about two o'clock on Wednesday and finished early on Thursday, the Young America winning by one inning and 48 runs.

STATEN ISLAND (2d) VS. MANHATTAN (2d).—These elevens met for the first time this season at Prospect Park, on the 6th inst., when the game resulted in a draw on account of rain. At the time when the stumps were drawn, however, the Islanders had the game in their hands; and had weather and time permitted, would have undoubtedly won a one-inning's victory. For the visitors, Satterthwaite contributed an excellent 54; Moore, 34; Forbes (not out), 20; Hole, 16, and Davidge 14. On the Manhattan side Hayward's 6 was top score. The totals were as follows:

	1st Inn'g.	2d Inn'g.	Total.
Staten Island	107	..	107
Manhattan	22 (7 wk's d'n)	..	22

COLUMBIA COLLEGE VS. ST. GEORGES (2d).—A closely contested match between these clevens was played on the 7th at Hoboken, the collegians winning by 8 runs.

	1st Inn'g.	2d Inn'g.	Total.
Columbia College	41	74	115
St Georges	54	53	107

MERION VS. BELMONT.—The former club won a victory over the Belmonts at Ardmore, on the 7th inst., by one inning and 31 runs.

	1st Inn'g.	2d Inn'g.	Total.
Merion	153	..	143
Belmont	58	54	112

YOUNG AMERICA VS. DORIAN.—On the 7th inst. the Young Americas met the home club on their grounds at Haverford, and beat them by 7 wickets. For the visitors R. Newhall scored 36; and for the Dorian Mason, 19 and 18.

	1st Inn'g.	2d Inn'g.	Total.
Young America	119	28(3 w't d'n)	147
Dorian	69	77	146

GERMANTOWN JRS. VS. BELMONT JRS.—At Nicetown, 4th inst., the latter eleven won by 8 wickets.

	1st Inn'g.	2d Inn'g.	Total.
Germantown	12	76	88
Belmont	25	63 (2 w't d'n)	89

GERMANTOWN (2d) VS. OXFORD.—On the ground of the former club, on the 7th inst., the Oxford met with defeat on the score of the first inning by 24 runs.

	1st Inn'g.	2d Inn'g.	Total.
Gemantown	54	38 (4 w't d'n)	92
Oxford	30	70	100

PHILADELPHIA'S HEADQUARTERS FOR CRICKETERS.—The American Cricketers' Association has secured a club-room at 903 Walnut st., for the accommodation of home cricketers and visiting teams; and as the location is a central one, out-of-town clubs will find it both a convenient and pleasant place to meet their brother cricketers. Philadelphians have always been noted for hospitality, and this new move of theirs is only another one in the right direction to popularize their favorite game.

NEWARK CRICKET CLUB.—The formal re-organization of this old New Jersey club took place on June 6th, when the following officers were elected for one year: President, J. D. Orton; Vice-President, F. Satterthwaite; Secretary, John Mills; Treasurer, D. A. Nichols; Directors, Messrs. Warner, Williams, Knight, Kerr and Borrie. The club has already a list of about fifty active members, which number will be trebled before the end of the season. It is the intention of the management to make it one of the leading clubs in this country, and many of Newark's most promiaent citizens will contribute to this end.

MANHATTAN VS. UNITED PATERSON.—On the 30th—Decoration day—the Brooklyn club visited the United Paterson on their new grounds at Ten House Lots, Totowa, near Paterson, N. J., and scored their first game and victory. This match is an annual affair, and is always played with manly earnestness by both parties. There is a large cricketing element in Paterson, which this season is divided between two clubs, each of whom has its own grounds. There is nothing like honest rivalry to bring out good cricket, and if both organizations will bear this in mind, they will build up two really first class clubs. The day was delightful, as all holidays should be, and several hundred spectators were on the ground when play was called at 12 M. The grounds of the United Club are beautifully situated, and although the wicket proved hard and rather lumpy, there was some excellent play shown on both sides. For the Brooklynites Scott scored an excellent 23 and 15; Brewster, 15 and 17; Hooper, 13 and 6; Jackson, 7 and 12, and Greig, 10 and 4. In the bowling Brewster excelled, taking 8 wickets for 32 runs, and Hosford captured 6 wickets for 24 runs. For the home team Romery assisted with a careful (not out) 17, and Bullock a good 10 and (not out) 8. Between the innings the home club entertained their guests in the good old-fashioned way to a good lunch. Annexed are the totals of the play:

	1st Inn'g.	2d Inn'g	Total.
Manhattan	92	88	180
United Paterson	42	31 (for 7 wks)	73

STATEN ISLAND FIRST ELEVEN VS. NEXT TWENTY-TWO.—Friday last was a gala day on the beautiful grounds of the Island Club. A large number of spectators turned out to see the match, in which thirty-three members took part. The day was a cricketer's own, and some good cricket was shown on both sides. For the first eleven Harvey batted well for 12, and for the twenty-two Lee contributed 11, and Irving and Manning 9 each. The majority won, as the totals will show:

	1st Inning.
Eleven	46
Twenty-two	70

COLUMBIA COLLEGE VS. STATEN ISLAND.—On Saturday, the 31st inst., a selected eleven of the Island Club received the eleven of Columbia College, New York, on their grounds at Camp Washington. Although the Collegians were badly beaten, yet their playing was remarkably good, especially their fielding, when it is remembered it was their maiden match, and that they had pitted against them several of the Staten Island's best men. It is no joke for a lot of gentlemen, without practice, to contend against a team that has been hard at work for a month or more; and the New Yorkers' plucky venture deserved a better fate. There were five or six good cricketers in the College eleven, and when their club gets underweigh it will be no walk-over to win a match of them. It is a great thing to be well captained, and we have to compliment Mr. Clark for the tact with which he handled his raw recruits. "Cricket is the gentleman's game," and we expect in the future to see our best players hail from colleges and schools. The game is certainly getting a good hold in several of our best known collegiate institutions, and when the Rip Van Winkles of Central Park awake to the fact that the game of cricket does not destroy and devastate, perhaps our college boys will be permitted to use that portion of the Park which was originally intended and laid out for a cricket ground. This matter requires a little looking into, and the Park Commissioners would undoubtedly listen to any reasonable request made them by the faculty of Columbia College. We can suggest no better way than the above for opening to our New York cricketers the grounds that they should be allowed to occupy, and which they would keep in order without expense to the city.

Play did not commence until the arrival of the one o'clock boat from the city. The match, however, was played out, the Island Club winning by one inning. Special mention should be made of the batting of F. Mitchell and the fielding of Outerbridge. We append the score of the first two innings:

STATEN ISLAND.		COLUMBIA COLLEGE.	
Stevens c Barns b Mitchell	8	Clarke c Outerbridge b Sprague	11
Houghton b Clarke	1	Campbell c Moore b Stevens	1
Kessler b D Mitchell	21	Morgan c Satterthwaite b Stevens	4
Sprague b Clarke	3	Mitchell c Outerbridge b Sprague	11
Dodge c Torrey b Clarke	14	Barnes b Sprague	5
Satterthwaite c Torrey b Clarke	16	D Mitchell b Stevens	0
Moore st Clarke b Mitchell	1	DeForest b Sprague	3
Davidge c Torrey b Clarke	11	Weaver b Sprague	2
Outerbridge b Clarke	4	Wilson b Stevens	0
Adams not out	10	Torrey not out	0
Thomas b Campbell	8	Rich c Adams b Sprague	0

OUR OFFICE BOY WHO WOULD A SAILOR BE.—*Editor Forest and Stream:* I thought I would like to be a sailor, so, Friday, May 30, found me on board the *Western Texas* once more, this time to work. I worked good enough until the next morning, and then quit and shipped over again, this time as a passenger. Sunday I saw flying-fish for the first time, and passed five steamships, one of which was our sister ship the *City of Dallas.* A boy with the nightmare the night before created quite a sensation, the passengers thinking some one had fallen overboard, until I cleared up the mystery. On Monday I saw a large shark, and also sighted Charleston harbor, and at midnight we were in Port Royal, where we lay till five A. M., and then left for Brunswick, where we arrived at five P. M. An hour later were on our way to Jacksonville, running very slow, as we did not want to be too early for the tide next morning. We got over the bar at the mouth of the St. Johns before I got up, and at eight A. M. were in Jacksonville. Had nice weather all the way down, excepting head winds. Went all over the city that day and the next, and found it very pretty. At four Thursday afternoon were on our way home, and at half-past seven were over the bar, with fifteen and a half feet of water. Arrived at Brunswick at half-past one the next morning, and after breakfast went to see what there was to be seen in the town, but did not find much, excepting some pigs with noses a yard long, and so thin you could read a newspaper through them. Left Brunswick about six P. M. and arrived at the last stopping-place before getting home, the elegant city, composed of a few grocery stores and bar-rooms and lots of darkies, called Port Royal at eight A. M., and left in about an hour. The men-of-war *Pawnee* and *New Hampshire* were lying in the harbor. Sunday morning found that during the night I had been telling some one to fasten a bow line to the top-gallant yard arm; stiff head breeze all the morning, but in the afternoon died down, and when off Frying-pan Shoals took my hat to die along with it. Passed the *Dallas* at half-past five P. M. Saw nothing Monday but a large school of porpoises. On Tuesday morning Mr. Risk, the first mate, told me that we would be in New York about five P. M. Passed Barnegat Inlet at half-past nine A. M., and at half-past five P. M. we were at the pier. All the passengers, numbering forty-two, drew up a paper, saying that, as some people had said that the *Western Texas* was not a good sea boat, they wanted to make it public that she was a very steady ship, and was a splendid sea boat, and that she was the best-officered ship they ever saw or heard of. They unanimously voted Captain Hines a "brick," and all the other officers in proportion. The ship has had bilge keelsons run along both of her sides to prevent her rolling, and it takes a heavy sea to make her roll. She is going to lie up a trip to have more state-rooms put on, so as to accommodate about seventy-five saloon passengers. Through the influence of this paper, the Mallory Line has become a well-deserved favorite with the traveling public. Mr. O'Rourke, manager of the City Press Association, and many other friends, having made the acquaintance of Captain Hines and enjoyed the hospitality of his ship, do not hesitate to express favorable opinions of the line and its management.

Home Again, June 10. THAT OFFICE BOY.

New Publications.

PRACTICAL BOAT SAILING. By Douglas Frazar, formerly Fourth Officer of the steamship *Atlantic*, Master of the bark *Maryland* and Commander of the yacht *Fenimore Cooper* in the Northern seas of China and Japan. Lee & Shepard, Boston. Price, $1.

Such of our readers who have followed the answers given to correspondents, inquiring for some practical book on boat sailing for beginners, may recollect the stereotyped answer we have hitherto been obliged to give: "There is no such book published, as we have no American yacht literature." English works of the kind had to be substituted; but English books are not always applicable to our wants, and they are generally expensive. Vanderdecken treats altogether of the cutter and sea-going seamanship, and we found it impossible to recommend any book in particular to the beginner or to the yachtsman of moderate resources. We are happy to say this want has now been met in a neat little volume from the pen of Gen. Douglas Frazar, a contributor to FOREST AND STREAM, and a writer fully competent, from long professional experience at sea and an intimate acquaintance with yachtsmanship, to produce a work which should bear the impress of authority and serve the aim of the author. Through the pages of "Practical Boat Sailing" he has placed within the means of every one a stock of useful, well-ordered information, which we know will be welcomed by our large circle of yachting readers and by sportsmen in general. Though the author, in his preface, disclaims any intention of teaching the more proficient, we are aware of the sad lack of even the most rudimentary knowledge of navigation and coasting by the majority of American amateur sailors, and we welcome, therefore, the chapters which give in the most concise form the salient features of this phase of the sport, and have no doubt but that this book will open up to the zealous entire y new chapters of fascination in the way of navigating their craft by chart from port to port, instead of making wild land-falls and asking a ploughboy ashore where on earth they have turned up. In the first chapter the question of type is touched upon sufficiently for the needs of the owner of a small boat or yacht, and the nomenclature of sails and rigging is entered upon. Useful knots, anchoring and the general management of ground tackle forms the subject of Chapter II.; the fittings and sailing on and off the wind, the helm, tacking, wearing, etc., are then discussed within the comprehension of the beginner. This concludes the first part of the book. In the latter half we find the Rule of the Road explained; lights and the Government regulations; how to avoid collision, and the official amenities of yachts in the way of salutes, etc. Regarding collisions, the author might have added the broad rule, which covers the whole ground—viz.: "Green to green, red to red; it's sure you're right—then go ahead." And: "Both lights dead ahead, port your helm and show your red." With these two formulæ in mind, no collision can take place. When you see a green light ahead, bring your green to bear upon it, and when you see the red, bring your red to bear upon it, and you are bound to go free, except in the case of meeting dead on, when "port helm" will steer you clear. Yachtsmen, especially the small fry, should learn to observe what the author has to say about colors. Nothing denotes the lubber more than a promiscuous lot of bandanas flying from all parts of his craft, like a Dutch excursion boat or a Fenian procession. The chapters on cross-bearings, charts, log and lead, ship's bells and the general hints, will be read to advantage by many older hands. The final cruise, illustrating what we dignify as "quarter-deck seamanship," will be interesting and instructive, and serve to give a little more professional ring to the sea parlance of amateurs, and the vocabulary of technical terms will facilitate matters to the inland tyro, who has to do his sailing on a lake, among the landsman's surroundings. In conclusion, we may say that this volume is welcomed all the more as a living sign of the times and unquestionably as a forerunner to that extensive literature of American yachting which we have so long looked for in vain, but which the coming years will, we trust, materially extend, until we have a really national library of modern yachting in America to which all may point with pride. The book under review is handsomely gotten up and amply illustrated; can be stowed in a coat pocket, and should be in the possession of every one abreast of the times.

THE RIFLE CLUB AND RANGE. By A. H. Weston. Harpers. Price, $1.

In this small work the compiler has endeavored to make plain to the understanding of the members and managers of rifle clubs throughout the country, the mode of procedure in the control of the range and the conduct of matches as followed at Creedmoor. Mr. Weston, who, for a half dozen years past, has filled the post of Assistant Secretary of the National Rifle Association, has had in that time as wide an experience as any one in America on the subject of which he treats, and he expresses his purpose and that of the book as an endeavor "to set forth in simple language, and as concisely as possible, plain facts and definite instructions for the organization of a rifle club or association; the establishment of an open-air rifle range; the duties of the different officers, committees, etc.; and the complete method of successfully conducting matches and managing the affairs of the organization."

He assumes in opening that in every town and village are to be found those who are desirous of engaging in the sport of rifle practice and who would be benefited by work before the butts. It is but poor sport to engage in solitary practice, and enthusiasm is soon spent at it. Organization and rivalry and joint action are necessary to the full enjoyment of the sport. The first steps toward forming a club are given with even over-particularity; a blank form of by-laws are shown.

In the chapter on the laying out of the range much valuable information is given. A map of Wimbledon Common shows the arrangement there resorted to in order to make the best use of the site, and the plans of Creedmoor, Brinton and Walnut Hill give the simpler disposition of several of the American ranges. The descriptions of the several styles of targets which have been or are now under trial are very full, and explanatory diagrams make it possible for any rifle club to adopt any of them and erect them from the drawings. The Creedmoor iron targets, stone targets, wooden targets, sheet iron targets, paper and canvas targets, are all spoken of and their merits or demerits pointed out. The Wimbledon sash target is shown by carefully made drawings. The target of Lieut. Col. Brunel is similarly shown. Sanford's and Jewell's, of Creedmoor, the revolving target, the barn door target in use at the West End Range, N. J., and what the writer calls the "possible" target, are all exemplified by diagrams. The Creedmoor wind dial gets a cut, too.

Having got the range in working order, the manner of conducting a meeting, from the issuing of the programme, through the various entry blanks, balance sheets, scoring tickets, assignment sheets, pool exhibits, down to the final prize certificate, are all shown. The instruction to scorer and marker are followed by the regulations of the N. R. A. as last adopted. The work closes with a very long, and yet very far from full list of the rifle clubs of the U. S., together with a small list of the foreign bodies. The rifle record as a *finale* does not give the best on record up to date, but contents with giving a few of the leading scores of the principal matches which have been fought at Creedmoor, in a shape convenient for ready reference.

THE RIGHT HAND RECORD AND READY REFERENCE.—H. P. Hubbard, the well-known advertising agent, of Hartford, Conn., has published a novel and most convenient handbook of newspapers and journals. For all advertisers Mr. Hubbard's book will prove invaluable.

THE NATIONAL GUARDSMAN.—This is a convenient pocket manual prepared by Fred'k. Phisterer, Captain of the Governor's Guard, Ohio National Guard, and published by the Governor's Guard. It supplies a want long felt by the members of the corps, and so far as a careful examination goes, we think well supplied by the author.

Miscellaneous.

New York Shooting Coat,

MADE OF VELVETEEN, CORDUROY, FUSTIAN AND CANVAS,

I have just imported a Corduroy of the dead grass color, specially adapted as regards weight, color and strength for all kinds of shooting. I will make to order: Coat, $13; Vest, $5; Pants, $7; Cap, $2.25; or Suit complete, $26. Sportsmen will find my Shooting Clothing to have more desirable points than any other goods of the kind in the market. Refer to many sportsmen who have worn them. Send for samples and rules for measurement.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d ST., NEW YORK, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.

MRS. W. H. KINSLEY, 153 West 22d Street, New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS. SAMUEL GERRY & CO.

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,

N. ORMS, 59 West 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.

NEW BOOK!
The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.72. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME, AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

TRENTON, N. J.

MR. CHAS. FOLSOM:

Dear Sir—I have owned and used with a great deal of satisfaction and pleasure the "Pocket Rifles" made by you. The first one I had was the smallest size—six or eight inch barrel, I think—and the one I now own and am using is the fifteen inch barrel. Both were 22-100 calibre.

But as showing the remarkable qualities of your little "Pocket Rifle," I used a common-sized cartridge, made by the U. M. C. Co., No. 1 Pistol, 22, and a target made by Creedmoor regulations, bull's-eye 8 inch, center 26, inner 46, no outers. At 100 yards, off-hand, I made 32 out of a possible 35; next, 91 out of a possible 105, and scored some of my own shots. Then I shot at 170 yards, and made 23 out of a possible 50. I think I can use this small rifle with the extra long 22 cartridge at 200 yards, and make a respectable score.

Yours truly, JOHN C. OWENS, Maj. and A. D. C.

Complete Sets of Jefferie's Tennis for $15, $20, $25, $30, $40 and $50.

Complete Archery Club Outfits, from $5 to $100.

The "MODERN RULES" OF LAWN TENNIS. Cloth, by mail, 25c.

The "MODERN ARCHER," by an Expert. Cloth, by mail, 25c.

In concluding an article on bow-shooting and bow and arrow making, in September *Scribner*, 1877, Mr. Maurice Thompson, of Crawfordsville, Ind., the gentlemanly and enthusiastic archer, who, by his writings, has placed archery foremost among the popular pastimes of America, says: "No home-made bows or target arrows can half way equal those beautiful weapons made by Philip Highfield, of London."

"The Highfield Lemonwood Bows are the best for general use."—See article on "Archery," New York *Herald*, May 12, 1879.

We have just published a 196-page Catalogue, containing 700 illustrations of sporting goods, etc. Price by mail, 10c.

Our New Seaside List of Archery, Tennis, etc., sent free.

Miscellaneous.

A GREAT INVENTION!

Imitation

STAINED GLASS.

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS

dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents L. LUM SMITH, Patentee
717 Sansom Street,
Apply to PHILADELPHIA, Pa. (Sole Agt. for U. S. & Canada.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. TRADE— "BEATS THE WORLD." —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers, 207 & 209 Water Street,

"THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.

Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* eaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on he wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

Long Island RAILROAD

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarrhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

GOODSELL HOUSE.

M. JENNINGS, - - Manager.

BROOKFIELD CENTRE, CONN.

Brookfield Centre is situated on the Housatonic Railroad, three hours ride from New York city and about an hour from Bridgeport, Conn. Its location is on high ground, healthy and picturesque, the neighborhood abounding in pleasant drives. The Housatonic River flows near it, where good bass and other fishing can be had. The hotel accommodates about thirty guests, and is pleasantly arranged. The bar, billiard room and dancing room are separate from the hotel building. Brookfield Centre has an Episcopal and Presbyterian church; services every Sabbath.

Through cars from Grand Central Depot, New York, via N. Y. & N. H. Railroad, or take Bridgeport boat from the East River.

FOR

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL.

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

FOREST AND STREAM
ROD AND GUN
THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the Year 1879, by the Forest & Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.]

Terms, Four Dollars a Year (ten Cents a Copy. 6 months, $2; 3 months, $1.)

NEW YORK, THURSDAY, JUNE 19 1879

Volume 12—No. 20. No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

A Chronicle of Canaan.

ONE summer evening, after a long stage-ride from the town of Keyser, on the Baltimore and Ohio Railroad, I found myself seated upon the high porch of an excellent brick hotel in the ancient town of Moorefield, County of Hardy, and State of West Virginia.

Notwithstanding the fact that this quaint little town has lazily dreamed away a hundred years and more upon the banks of the Cohongoruton (the Indian name for Potomac), it still bears unmistakable traces of primitive times and border habits.

Here we have just such hardy men as followed Daniel Morgan from this country into the wilds of Canada. They are to be seen in town any gala day, clad in homespun clothes and homemade shoes and hats. Many of them are living pictures of their Continental forefathers; even to the fringed hunting-shirt, the old-fashioned rifle and powder-horn.

The habits of the mountaineer class are similar to what they were a hundred years ago: they are half-hunter, half-farmer. The rifle and dog are their inseparable companions Honesty and simplicity are strongly cast upon their features.

The town-folks, however, are thoroughly modern. The ladies ape the latest city fashions; the gentlemen have entirely cut loose from the habits of their ancestors. The landed gentry who, without doubt, boast the finest farms in America, do not indulge in horse-racing, fox-chasing and cock-fighting to the same extent as did their ancestors; yet some of them keep hounds, and have an inherited fondness for sport. They point, with pride, to fields which have yielded large crops of corn for a hundred years, and to their herds of sleek cattle.

But it is not my intention to dwell upon the beauties or fertility of this wondrous valley. The scene of my story lies many miles toward the sinking sun.

After a few days' rest beneath the lazy shades of Moorefield, our little party, equipped for the exploration of Canaan, ceremoniously shook the dust from our feet and departed. To one unused to it there is much pleasure in starting out in such hunter-like style; accoutred with guns, blankets, axes and frying-pans.

Bright anticipations of camp life and adventure filled our eager minds. Our first day was without event. The sun had just disappeared behind the lofty mountains as we drew up on the banks of the North Fork. Our horses were unpacked and turned loose, and after indulging in the rare luxury of a camp-cooked supper, we prepared our resting-place for the night. Our surroundings were most inviting, and never shall I forget the delightful sensation I experienced as I sank down upon my first camp bed.

All nature was slowly sinking into repose and quiet. The squirrels scampered through the leaves, hastening to their lofty nests above our heads; the owl had begun his hideous chant, making the forest seem deserted by the dismal echoes that were wafted along its lofty arches. Slowly the departing twilight faded into darkness. All was silent. We slept the sleep of the weary.

Surely a camp bed must be one of nature's best restorers, for we awoke next morning entirely refreshed, and with an abundance of strength to undertake the ascent of the Alleghanies. After breaking camp we visited an old hunter by the name of Evans, hoping to obtain his service as guide. Unfortunately, he was "keeping store" while the proprietor was attending court. Evans claimed to be the first man to explore the intricate windings of the Blackwater, and said he had rescued several hunters from the laurel brakes of Canaan.

It was not long before we left behind us all trace of civilization, and taking the trail at Crow's Ridge, we were soon commencing the ascent of the highest mountain in the Alleghany range. The dwellers at the foot of the mountain are pleased to call this trail a "pike." Heaven forbid that I should ever travel another such, be it under never so pleasing a name. Several times my hair was on end, so to speak, to see one of the horses in danger of rolling some five hundred feet down the treacherous slate banks, and only regain the path after a deal of scrambling. When we reached the Star Rock we were compelled to dismount, and so steep was the path that we made but slow headway a-foot.

After two miles of climbing we reached an open spot, from the centre of which flowed a most inviting spring of delicious water. We turned loose our horses and let them browse, while we partook of a cold dinner. The prospect from our camp was grand beyond anything I had ever seen, and I felt amply repaid for all hardship. To the south, the Roaring Plains swept away into the sluggish clouds. Far away in the north we could discern the faint outlines of Rohrbach's Plains, a magnificent desert of rocks. Eastward, we had an uninterrupted view to the Blue Ridge, over a vast sea of mountain-tops. A member of our party, who had gazed upon all the grandeur of the Yosemite, said he remembered no scene which surpassed this one. Want of time pushed us on, and we were soon skirting along the top of the mountain—that point being about seven miles from its base on one side and six on the other. My pen fails me in painting the wild beauty of the scenery along our route.

The trees were so tall, and stood so closely together, that we seldom got a glimpse of the sun.

Here was a broad bed of deep-green moss, and there a luxuriant garden of ferns. Now sloshing through the mud, and again scrambling over a bed of rocks, frequently we could hear the roaring of some hidden stream as it dashed along its underground passage.

At the foot of the mountain we crossed Red Creek, an unpretentious little stream, though famous for its large trout. Its water is of a dark-red color, as, indeed, are most of the streams of this region. When dipped in the cup it has the appearance of brandy. The discoloring is probably caused by the laurel brakes, or, as an old hunter informed me, by the pine burrs dropping into it.

The sun was just disappearing as we ascended a steep little ridge which lay across our pathway. It was my fortune to reach the top first, and there at my feet lay the wonderful valley. Yes; we had reached our Mecca at last, and as our gladdened eyes swept away to the north over the vast wilderness, not even an exclamation escaped our lips. We gazed upon the scene in wonder and admiration. A short descent brought us to the level, and we plunged into the dark forest of Canaan. A superstitious shudder ran through me as I gazed about upon the gloomy scene. The giant trees loomed up through the soft twilight; the air was damp and chilly; all nature was wrapped in deathlike stillness. I thought of the Dismal Swamp, of the mysterious dells of the Kaatskills, and each stately tree was metamorphosed into a ghostlike shape, beckoning me to follow.

"Well, men, whar did you start from?" said Mr. Saul Cosner, the sole occupant of this wilderness, as we drew rein before his door. We gave him the desired information, and informed him of our purpose.

When we asked the old man if we might camp, and turn our horses out to graze, he grew as indignant as an ancient lord, and swore we were the first men who were too proud to accept his hospitality. We told him it was only fear of incommoding him.

"That's my consarn," said the appeased backwoodsman, and so we unpacked. After looking to our horses we proceeded to the cabin, and were ushered into the dining-room. The feast was spread upon a rustic table, and pine stumps served us for seats.

Cosner opened proceedings with a lordly wave of the hand, adding, by way of grace, "Just reach, men, and help yourselves." Whereupon the aforesaid reached and complied.

There was one ingenious and labor-saving custom that I have observed in no other place. The stove stood beside the table; beside the table stood Mrs. Cosner, baking huge buckwheat cakes. When a cake was browned to her liking she took it up in her fingers, patted it into shape, took one step toward the table, and tossed it gracefully into the plate which awaited its reception. This unique performance was kept up until we had satisfied our keen appetites on buckwheat cakes and venison, the former containing such an abundance of sand as insured digestion.

The numerous offspring stood gazing at the vanishing morsels with eager interest. Now and then one of them made known its hunger by a hearty squeal. Our hostess turned from the stove and gently raised him or her, as the case might be, on her foot, when everything was quiet again.

After supper we lit our pipes and spread our weary limbs on the soft turf. Old Cosner sat close by, now and then asking a question as to what was going on in the outer world, and occasionally putting in a reminiscence of his hunter life.

"My grandfather was twelve years a prisoner among the Indians," said the old man, "and they teached him all the huntin' they know'd. When he got back to the settlements he tuk me and trained me up to the same business, and I've been a huntin' ever since."

How many deer have you killed in your life?" asked Wallace, the inquiring member of our party.

"Well, you'r too hard fur me, man; but I've killed about seven hundred sence I moved here in Canaan: besides two hundred bears, and lots of painters"

Of the numerous bear and panther fights the old man recounted, I give but one as a sample:

"I wounded an old buck one day," said he, drawing himself up for a stunner, "and he got off from me. I shoved in another ball, and guess I was too hasty, fur the durned ramrod stuck fast. I couldn't get her out, so I jist counted on shootin' her at the buck, and away I went on his trail. Pretty soon I spied him hidin' in the brush, and I drawed up an' let him have it. The old gun cracked cl'ar as a whip, and down come the buck. Well, boys, I tuk her down to see if she was hurt, an' bless me if the rod wasn't stickin' in her yit."

"But I don't see how the ball got out," put in the incredulous Jack.

"Durned ef I ever could tell," said Coster; "but that gun was a powerful good one; an' what's more, she once fetched a bear, a painter and a deer without ever firin' off. This is how it was" (taking a long pull at his pipe): "I went to watch fur a white deer one night; folks said it was a witch, but I know'd I could fetch her. I hadn't been in the blind long afore I heerd sumthin' a rattlin' the leaves over my head. I looked up, and there was the biggest pair of fireballs I ever seed. I begun to think it was the deer as had climbed the tree, but afore I could do anything a little deer cum a clippin' into the lick. The next minit keswap come an old painter out the tree and lit on the deer's back. Jist then a big bear as was follering the deer cum up, an' at it they went to see who should git the best piece. Not carin' to take a hand in the scrimmage, I jist looked on, an' when they'd killed one another I steps out, skins the whole party, and tramps home with the load in my gun."

Our pipes had gone out during the narration of this story, so we concluded to turn in. Our room was decorated on one side with a half-dozen rifles, while the other side was more lavishly adorned with the family finery, being dresses of many colors and coats of many patches. Each of the two beds was furnished with two enormous ticks. Jack informed us that the top one was intended for a covering. I tried it, and, finding it better suited for the roof of a bear trap, I mounted on top. The rest followed my example, and we were soon reveling in dreams of bear-fights. While those imaginary combats are progressing, I will take occasion to give a brief description of Canaan.

The Valley of Canaan is about thirty-five miles long and nine miles in width—at least, these are the dimensions Cosner gives, though I very much doubt their accuracy. Its level is about five hundred feet higher than that of the Moorefield Valley, and it really appears as though it had once been a large lake, having its bed scooped out of a mountain-top. It runs nearly north and south, and is as nearly level as can be. Rocks are nowhere to be found within its limits. The soil is rich and loamy, producing the cereals in abundance when cultivated. I think I am safe in asserting that nowhere in the East can such a magnificent forest of timber be found as in Canaan. The trees are of remarkable size and of beautiful symmetry and proportion. Their huge trunks run a hundred feet and more before the symmetry is marred by knot or limb. A crooked tree is seldom met with. Walnut, cherry, oaks and pine are the chief varieties. There are many groves of the fir (*Abies balsamea*). These trees are high, and branchless until within a few feet of the top, which is crowned by a shapely cone of bluish foliage. The oil of the fir serves as a panacea for the mountain people, being used in all diseases, and regarded as invaluable.

The Blackwater is a small, sluggish stream that winds through the valley for fifteen miles, and then leaps over the rocks as the famous "Falls of the Blackwater." Its banks are surmounted by impenetrable laurel brakes.

A short distance from Cosner's cabin a strong spring of icy-cold water bursts from under a little bank and flows over a flat sandstone rock. This rock would make a fine study for Professor Marsh. Upon it are many impressions of animal footprints. We could plainly make out deer, bear, wolf and elk tracks; then there were prints of Indian moccasins, and of bare feet. Several strange-looking tracks we could not make out; they resembled the print of an elephant's foot, and were probably left by some ancient mastodon which was accustomed to take its morning draught from the spring.

The land in Canaan is being rapidly bought up by a stock company. Settlers will soon flow in, the mighty forest will crumble before the advancing step of man, and this luxuriant wilderness will be transformed into a fertile valley. The deer and the bear will be dispaced by the domestic animals. Instead of the startling crack of the rifle we will hear the sonorous blast of the dinner-horn, summoning the farmer from his toil. Blessed be Canaan, the land of promise! But I, for one, will look back with fond recollection upon the days when I hooked the speckled trout from her dark waters and tracked the fleeing deer.

We were up next morning by break of day, and repeated our manœuvres among the buckwheat cakes. After breakfast Cosner took us to explore the river. Along its banks we found an abundance of bear and deer sign. In the evening we returned to the cabin literally loaded down with trout. The trout of the Blackwater are not large, but they are to be caught by the thousand, and their meat is extremely sweet and palatable. Several days were passed pleasantly at fishing and exploring. During that time we managed to pick up much of the lore of venery from the old hunter. He informed us that he had seen two large elk in Canaan during his residence there. I was afterward shown a large antler, picked up in the valley by a gentleman of Moorefield. It

was undoubtedly from the head of a large elk. There are yet living men in this country who remember the time when it was a common sight to look upon an elk bounding through these same forests.

Bidding a short adieu to Canaan, we turned westward, and, after a long day's ride through the mountains, we arrived at the Dry Fork of Cheat River and went into camp. This river is teeming with bass, salmon, and some smaller varieties of fish. Our camp life was uneventful, and, after a short stay, we once more turned our steps in the direction of Canaan. We camped there over night, and early next morning moved off to the plains which lie contiguous. Let not the reader imagine I mean a prairie. Very far from it. Here lies a broad, level plain, many miles in width, and resting upon the top of a huge mountain, one of the largest of the Alleghany range. It is almost level, free from trees, and its surface dotted with rocks. Nothing higher than brush obstructs the view, but the eye can scarcely find a spot which is not covered with a rich growth of the whortleberry bush. Save this, everything looks wild, desolate and barren—a fit home for the panther, the bear and the venomous rattlesnake. Upon the eastern side of the plain huge boulders stand tottering on the brink of a frightful precipice, looking as if they required but a slight push to send them over. But here at least is one fair spot: a stream of inviting water trickles down over the mossy rocks, runs through a gently sloping piece of ground, and then takes its mad leap over the precipice. Along its banks there is a rich growth of grass. Here will we make our camp. The horses unpacked and tethered in the tall grass, we turn in earnest to the work of camp-making. There is old Jack, with sleeves rolled up, cutting forks and cross-pieces for the hut. Bill and Wallace are gathering in wood and moss. Tom has the frying-pan on the fire, and is busy with preparations for supper. With the aid of blankets and poles a comfortable hut is soon erected, having the front open, and covered with a serviceable roof. While we are putting on the finishing touches Tom announces supper.

"Talk about hotel fare," says old Wallace, as he closes his teeth on the plump breast of a young grouse, just hot from the spit; "why, I'd sooner live here, with a good appetite and plenty to satisfy it, than to luxuriate at Delmonico's on entrées and champagne."

"Don't mention this meal, boys," chimes in Tom, between two bites of fat bacon; "just wait until to-morrow, and then if you don't turn up your noses at anything short of broiled venison and wild turkey, why, I'll promise to treat you to my last drop of the rosy."

After we had yarned until the fire began to disappear in the ashes, and our pipes had died out, a general move was made for bed. The horses were examined, the guns covered up, and three of us crawled into the little hut and spread our weary limbs on the soft bed of leaves and moss. No couch of down could have been more acceptable; and as for pillows, why, our saddles served the purpose admirably. Wallace was left on the outside to keep up the fire and look out for the horses.

About midnight Jack went on guard, and we were all aroused by his crawling over us to get out. We were wide enough awake to hear Wallace admonishing him to keep a sharp lookout, as he thought he had heard the screech of a panther. Just at this instant a terrifying noise startled us into a sitting posture. At first it came soft and low, like the cry of a cat, and then followed a blood-curdling shriek, as though it came from the throat of some tormented demon.

"What the d—l's that?" said Bill, his hair fairly standing up and his body contracting into the smallest possible space.

"I wonder if it could be Indians?" hoarsely whispered Jack.

We all crouched up near the entrance of the hut and breathlessly awaited a repetition of the horrifying noise. We listened for five minutes—for ten—a half-hour. No sound came to us. Our fears vanished with the cause, and one by one we dropped back to our old places and dozed off.

"Come out o' that!" shouted the last picket, as daylight appeared; "it's time you were off."

Tom, Wallace and Bill were soon off in search of game, leaving Jack to cook the breakfast. Our hunters struck off toward the north. In that direction the ground was slightly undulating and thickly covered with brush. When fairly away from camp they formed what hunters call a "breast," separating and moving forward along parallel lines. The line was preserved by signals, so there was no danger of shooting the wrong game. The ground was rough, and great caution had to be exercised. Just about sun-up a sharp whistle gave warning that game was afoot, and a second later bang! bang! went a gun.

"So much for that," growled Tom, "Ten to one it was a ——;" but before the sentence was out the brush ahead of him cracked, parted, and out jumped an old buck. As Tom raised his gun the deer made a short turn into the brush again. Too late. But no, there he is again. Two jumps will give a fair shot. A click—a flash—a crack, and all is over. Yes, there lies a sleek old buck making his last struggles. An unearthly yell broke from Tom's lungs as he rushed up and plunged his long hunting-knife into the throat of the dying deer. Wallace was dispatched to camp for a horse, leaving the other two hunters to skin the deer. Upon reaching camp, Wallace found the fire nearly out, but no signs of Bill. On looking into the hut, however, he found the idler fast asleep, with a pipe in one hand and a suspicious-looking flask in the other. This was too much for even the stoical hunter, and, creeping softly up, he took Bill by the feet and whisked him out into the bright sunlight. The movement had the desired effect, and William was soon busy among the pans. It was not long before our game was lodged in camp, and, after cutting and hanging it up in the brush, we breakfasted.

The hunter only experiences half his pleasure while engaged in pursuing his game; the other half he finds in those delightful hours spent around the camp-fire. Here he relates and listens to, with eager interest, the events of the day. It was while thus comparing notes we were struck with the curious fact that many of the game paths we had crossed led in one direction. As soon as dinner was over Bill and Jack started out to discover the cause. Late in the afternoon they returned, reporting that the paths led to a lick, plentifully used by deer; and they also claimed to have found a bear wallow.

The night being bright, these two worthies determined to watch the lick. Tom and Wallace remonstrated in vain against this unsportsmanlike proceeding; so they were left behind as guardians of the camp.

Not long after the watchers left camp the moon rose clear and bright. Tom and Wallace piled more wood onto the fire, lit their exorcising pipes and spread out for a good talk. It was not long before they were startled to their feet. That horrible scream again. Nearer and nearer it came, until our hunters reached for their guns and made ready for a shot.

"By the beard of the prophet, we are besieged!" muttered Tom; "and what's worse, you may look out for every wolf and panther on the plains. I knew that fresh meat would bring 'em. Heavens! what's that?"

"Only the horses stampeded," said Wallace, as he dived into the hut and brought forth a huge pistol; "and if we ain't quick they'll break their necks over the rocks."

In five minutes more the horses were safely lodged in camp; and now to await the denouement. All was silent for a minute, and then came a low, cat-like cry.

"Keep still!" cried Tom, "I caught a glimpse of them."

Yes, sure enough, there was a genuine panther, and all our fancy had pictured him. Now and then we could see his long, dusky form flit across some little opening in the brush.

"Now's the chance, Tom; aim at those two glaring balls of fire."

The whisper was followed by a loud report that went rolling over the plain. The horses gave a snort, and all was again silent.

About midnight the watchers returned, claiming to have killed a deer, which they couldn't find. Of course the claim was only laughed at; and, to be on even terms, we claimed the death of a panther. We were not disturbed again that night, except by a drenching rain, and from this our little hut gave us fair protection.

Soon after daylight we were aroused by a yell from Jack, who announced that all our meat had vanished. We found no trace of the panther; but not far away we discovered the remains of the larder. Thus deprived of our venison, we put our last piece of bacon before the coals. While breakfast was preparing, Jack went to the licks. The evidence of the night's watch was laid before us in the shape of a small deer, which Jack said he had found but a short distance from where he had shot at it.

Several days were passed in successful hunting. Our larder was filled with more meat than we could possibly use, so we determined to quit deer and seek distinction in the death of a bear. Several had already been seen, and we knew there were plenty of them to be found west of our camp. The appointed time arrived, and we were early in the saddle. After traveling a few miles, the ground became so rough that we dismounted and fastened our horses. A "breast" was formed, and we moved slowly and cautiously forward. Nearly the whole day had gone by without bringing success. It was just approaching sun-down; the smoke from our camp-fire could no longer be seen. The sharp report of a gun at last broke the monotonous spell. Tom and Jack hastily pushed forward over an open bed of rocks which lay in front of them. As they neared the brush at the opposite side, they were brought to a sudden halt by a strange noise. In another instant the bushes parted and a large black bear came lunging toward them, a bloody froth running from his huge mouth. Too much startled to shoot, our hunters stood transfixed, while the bear checked up with an angry growl. In another second old Wallace came bounding out of the brush directly in the bear's rear. As he glanced at the situation, a wild yell broke from his throat, and the bear advanced. The spell was broken. Tom and Jack raised their rifles. Bang! bang! and over rolls Bruin. In an instant he was up again, and came growling and pitching toward the hunters. Our guns unloaded, the first thought was to flee from the enraged beast. Before the thought could be put in execution, we heard the welcome ring of Bill's old rifle. Bruin wavered. Dropping our guns to the ground, we drew forth our pistols and boldly rushed to close quarters. Bang! bang! bang! the shots followed in quick succession. The struggle was short; but never shall I forget those moments of wild excitement, or the triumphant shout which went up as poor Bruin, riddled with bullets, rolled over to rise no more. With the exception of one or two rakes the bear gave us with his paws, our party came off uninjured.

The excitement over, we were unpleasantly reminded that night was fast approaching. No time was to be lost, or we would be lost also. Bill and Wallace were left to skin the bear and cut off a steak, while Tom and Jack started after the horses. The horses found, Tom moved toward camp and Jack started back to meet the other hunters. It was now nearly dark. Hunters, in common with dogs, seem to have an unerring instinct which guides then toward home. They rarely need the compass, but travel over the wildest plain, or through the densest forest, as though guided by some unseen hand. It was with this hunter-like confidence that Tom pushed forward, scarcely knowing whether he was pursuing the right course, but feeling confident as to his ultimate success. Finally his horse came to a halt. Tom leaned forward and peered out into the darkness ahead. Yes, the horse was right. There was the dizzy precipice, and there the dark outline of the huge boulders. In doubt at least as to which way to turn, Tom was about to dismount when the clouds broke away, the moon dispelled the darkness, and there stood the little hut but a short distance away. To reach it was but the work of a moment. A gun was discharged for a signal to the returning hunters. In five minutes more a bright fire shed its lurid glare far over the plain, and Tom was busy in preparing for supper.

Soon everything had been put in order for the night, and all our party were seated around the fire. Our bread ran short that night, and we began to talk of breaking camp. But I suspect there were other and stronger reasons. Old Wallace was continually suggesting that our supply of spirits was almost exhausted, and that we ran great danger from the rattlesnakes. It is but justice to say, however, that he was very liberal in his notions about the few drops that were left, always maintaining that we should drink it all at once, for it would "taste just as good now as at any other time." And then there was a yearning for sweethearts, and a longing for the clean garments of civilization. We determined to take our departure on the morrow.

The day broke clear and bright. Everything was bustle in camp—cleaning guns, packing, scrubbing pans, and a dozen other things occupied our time.

In the midst of this preparation we were treated to the sight of two fine deer passing through our camp-ground, almost within gun-shot. Not even this temptation long delayed our work. By ten o'clock everything was in readiness. The horses stood packed and ready to be mounted. We drew up around the ruins of our little hut, which now presented a forlorn appearance, and solemnly buried the hatchet. A little banner was raised over the hut, and, as it unfurled to the breeze, a loud shout went up from the departing hunters. As we descended from the plains, a short halt was made, that we might take a farewell glance at our camp. There stood the little hut, with its banner fluttering in the soft breeze; the smoke from the dying camp-fire slowly ascended into obscurity. We turned our eyes from the spot where so many happy moments had been passed, and slowly wended our way down the rugged slope.

For Forest and Stream and Rod and Gun.

PRIMITIVE PENNSYLVANIA.

CLARION RIVER rises in the interior of the State of Pennsylvania, and runs in a westerly direction through a rough mountainous region, and connects with the Alleghany waters 60 or 70 miles above Pittsburgh. The P. and E. R. R. now passes over the head branches of this stream. The exports here are lumber, coal, tan bark, etc. Clarion River was first named Toby's Creek, and subsequently known as Stump Creek, and finally became Clarion River. This river valley is neither more nor less than a continuous succession of gorges from the mouth up to 70 or 80 miles, and was sparsely settled some more than sixty years ago, by a class of men whose occupations were somewhat different from most of pioneer settlers; men who had pushed their way into these isolated regions, moving their families and household goods in canoes (dug-outs) propelled by setting poles. Here was a generation born and raised of men who were noted for their gigantic size and muscular strength, and also for honesty and integrity. They were ever ready to help a friend and equally ready to fight an enemy. Farming here was not to be thought of, the steep mountain sides reaching down to the water's edge leaving no river bottoms except some small patches which were few and far between. These small flats were nearly on a level with high water mark and contained from one-half to two acres each. These were called rubbing bottoms from the fact that elk and deer had used the places for rubbing and scraping since time immemorial. These flats were destitute of timber except small saplings which were girdled and killed as fast as they grew up, which accounted for the absence of large timber. These patches were mostly appropriated by the early settlers for building sites, raising potatoes, garden vegetables, etc., it being about all the land that could be used for such purposes. Their means of support, besides hunting, were supplied by their semi-annual trips down the river with small rafts of white pine logs, which they would cut on the mountain brink and slide into the river, and when securely rafted run into the Alleghany, thence to Pittsburgh where they found a ready market. These trips were made at the fall and spring floods. A Stump Creek raft consisted of 75 or 80 pine logs securely fastened together and loaded with a few thousand shingles more or less, a few bear skins and venison saddles, two large canoes attached and four men, presumed to be joint owners in the whole stock. All these Stump Creek fleets would arrive at Pittsburgh nearly at the same time, where the rafts and loading were exchanged for bacon, buckwheat flour, coffee and various other articles for family use. Here the canoes were brought into requisition. Each two being coupled together side by side and fastened by cross ties, thus fitting out a craft capable of carrying four or five thousand pounds weight, and with three or four men-power attached would make good headway against any current, thus transporting their commodities back to their inland homes. The work of propelling these loaded crafts against the current was somewhat slow and laborious, and it required ten or fifteen days to complete the journey back into the interior. But they had no freight bills nor hotel expenses to pay, as they invariably boarded themselves and camped on shore nights. These freight canoes were carved out of the best quality of white pine trees, and were from fifty to sixty feet in length, while those that were used for light weight were of smaller dimensions, made light and thin, and showed much artistic skill in style and finish. They were evidently the most efficient craft that could be used in those inland waters. They were generally propelled by setting poles, and a skilled canoeman would take in two or three hundred pounds weight and make four or five miles an hour against a strong current.

There was another class of men who frequented those primitive hunting grounds. They could not properly be called sporting men; they usually hunted large game and did not seem to have any permanent abiding place, but were generally at home when night came whether in cabin or camp They were thoroughbred hunters, and invariably carried a Lancaster rifle, which in those days was claimed to be a very perfect rifle. And here let me confess a lingering partiality for the old Lancaster rifle.

I recollect one man who had his residence here whose habits and calling seemed to have been different from most of those backwoods settlers. He was an educated German by the name of Wynecoop, whose family consisted of his wife and two small boys, aged eleven and thirteen years. Mr. Wynecoop was a man of large intellect, and was possessed of considerable historic knowledge and rare conversational powers. This man had pushed his way into the heart of the wilderness and located on a small tributary five miles distant from the river. His cabin door was open to every stray hunter, and many rich sirloins and choice bear steaks found the way to his table.

Mr. W. was not a hunter, either in theory or practice, and it was often a source of much wonder and speculation in the mind of the writer what the motive or inducements were that caused this man to isolate himself and family in the heart of those solitary wilds. The two boys, Sam and Joe, were special favorites among the hunters that usually congregated there. They had become experts in catching trout, and had caught some 'coons and hedgehogs, and were daily hearing discussions on the subject of hunting; and these young Nimrods were determined to hunt larger game. An opportunity was soon presented, not as good as they could wish, but they were bound to improve it. If I recollect aright this was in the month of October; the hunters generally returned on Saturday nights, and on Saturday morning Mr. W. and wife decided to visit the nearest neighbor, who lived at the mouth of the creek five miles distant. As a matter of course the trip was made in a canoe. The boys left at home immediately set about preparing for a hunt; but lo and behold! the father had for once taken the rifle and nothing remained but an old musket, which in those days was called Queen's arm, and had a powerful large bore. This had been thrown aside as useless, having a poor lock and generally missing fire. They rigged it up during the day, substituting a new flint and loading with a heavy charge of powder, and not having buckshot they put in a handful of small rifle bullets which the hunters had left. Thus armed they started out determined to watch a deer-lick, that being the best they could do under the circumstances.

Arrived at the lick, Sam carrying the gun, they concealed themselves behind an old blind, and waited some time, confidently expecting a deer; but instead of deer there came a large panther, and stopped not more than twelve rods distant from the boys. Sam said afterwards that he knew it was a painter, but "he had got a dead rest and he was bound to onhich on 'em." Sam did unhitch, the panther fell and rolled over, and so did Sam. The gun was so heavily charged that the recoil sent Sam tumbling down the hill, and Joe said "it 'peared like Sam didn't know nothing much till he got 'im sittin' up and he sort o' come tew; and then they went up to the lick and the painter just lay thar deader nor a stuck pig." They succeeded in dragging the panther home, where they arrived about dark, at which time Mr. W. and wife had returned with two or three of the hunters. The skin was taken off by torch-light; the body was found to be literally riddled and the skin showed some ten or twelve bullet holes. The next morning one of the hunters took this same old gun and filled the pan with powder, and after snapping nineteen times, the twentieth time the powder burnt. Sam and Joe, if living now, are old men, and perhaps may be relating some of their exploits to their grand-children. ANTLER.

Fish Culture.

SALMON IN THE HUDSON.—The Troy *Times* of the 10th inst., reports the capture of a 11¼ lbs. salmon in the Hudson River, at Bath-on-the-Hudson, a few miles above Albany. It will be remembered that salmon were caught in the lower part of the river two or three years ago; but we have not before heard of their appearance in the vicinity mentioned. Does the man who reported this to be a salmon know a salmon when he sees it? If the information is authentic it is encouraging to Seth Green.

SALMON IN WEST VIRGINIA.—The following welcome intelligence comes to the United States Fish Commission from West Virginia:

ROMNEY, HAMPSHIRE CO., W. VA., June 12, 1879.

PROF. SPENCER F. BAIRD, *U. S. Commissioner of Fish and Fisheries:*

There are now within five miles of this place three schools of salmon: one estimated at about 500, one at about 2,000, and the other represented to be "a large number." They have been seen by various persons, and a few have been caught. The largest I have seen of those caught was about ten or eleven inches long, and a California salmon. The school of 500, from description of one caught, I take to be Schoodic. I also hear of salmon being caught in other tributaries of the Potomac in this county.

Respectfully, yours truly, C. S. WHITE.

NEW HAMPSHIRE.—*Editor Forest and Stream:* Permit me to announce the capture of the first salmon of the season at the hatching house at Plymouth, N. H., on Friday, 13th inst. It was a female, estimated at about 10lbs., and was safely transferred to the storage ponds. Several fish of about this size have been seen in the fishway at Lawrence, Mass., which we assume to be from the plant of 1875; and one larger one, estimated at 20lbs., probably from the plant of 1873. We are very busy now distributing our land-locked salmon fry, and when we get them all planted I will send you a full report of our success in distribution. Let me add to the much-varied discussion of the habits of trout in taking the fly, the fact that I took one by the tail in Sandwich Ponds last week, and within five minutes of the occurrence my companion, Mr. M., of Boston, took another hooked in precisely the same manner—just back of the ventral fin. The fish were not biting freely, and we had many rises without striking one, and they were, I think, playing with the flies, and trying to drown them by the blow of the tail.

SAMUEL WEBBER.

Office of Fish Commissioners, Manchester, N. H., June 14.

Natural History.

A LIST OF BIRDS TAKEN IN SOUTHERN WYOMING.

BY S. W. WILLISTON.

[With Supplementary Notes by the Natural History Editor.]

(*Concluded.*)

75. *Recurvirostra americana*, Avocet.—First seen April 22. Several pairs were seen later about the smaller ponds, where they undoubtedly breed. May 17, a female was taken with a perfectly formed egg in the oviduct. Like the spotted sandpiper, they readily swim and dive when wounded.

76. *Steganopus wilsoni*, Wilson's Phalarope.—May 6. Rather common on the marsh, where they undoubtedly breed. A female taken, June 9, with a perfect egg in the oviduct. Eight or ten pairs were taken during June, and the males differed, upon dissection, *invariably* from the females in lacking the ashy crown, in having the cervical stripes but faintly tinted with cinnamon, and the scapulars and interscapulars with dark centres, lightening up at the edges. The females were all of the typical plumage. The confiding manner and graceful, pleasing beauty of these birds, both when sitting so lightly upon the water or skimming smoothly through the air, strikes the observer most forcibly. I know of no other bird the destruction of which will cause deeper regret even to the enthusiastic ornithologist. Very unlike the next species, they prefer the quiet, unrippled pools, and never venture out on turbulent water.

77. *Lobipes hyperboreus*, Northern Phalarope.—Two flocks, of perhaps seventy-five each, made their appearance upon the lake May 18, and remained about ten days. Their manner of flight in compact flocks, and their appearance upon the water, is very like the foregoing; but they prefer the larger lakes and deeper water, sailing with exceeding beauty away out on the turbulent waves, far beyond gun-shot range. Their flight is very swift. One end of Lake Como reaches to within a few rods of the railroad. While passing one day I observed what proved to be the wing of a phalarope fastened to the telegraph wire. Examining the ground I found three dead phalaropes, one of them with a wing smoothly severed from its body, and scarcely a drop of blood upon its delicate plumage.

78. *Gallinago wilsoni*, Snipe.—One bird taken at dusk May 5, and another about two weeks later. I think they make their appearance but rarely there.

79. *Macrorhamphus griseus scolopaceus*, Red-Breasted Snipe.—Two taken May 5. Afterward common for three weeks or more.

80. *Tringa minutilla*, Least Sandpiper.—A single specimen taken May 2.

[81. *Tringa bairdii*, Baird's Sandpiper.—Rather common on the lake early in September in scattering flocks.—G. B. G.]

82. *Calidris arenarea*, Sanderling.—One taken with Wilson's snipe May 5.*

83. *Totanus semipalmatus*, Willet.—First taken May 2. Rather common for about two weeks.

84. *T. melanoleucus*, Greater Telltale.—One specimen secured May 2.

85. *T. flavipes*, Lesser Telltale.—One specimen taken May 5.

86. *Tringoides macularius*, Spotted Sandpiper.—May 2. Not common till about the 15th near the shores of the lake and creek.

87. *Actiturus bartramens*, Upland Snipe.—One specimen May 5.

88. *Numenius longirostris*, Long-Billed Curlew.—Not seen till the first week in June, but afterward several flocks upon the upland. I have found this bird difficult to approach upon the plains, but scarcely so when feeding in the smaller streams.

89. *Ardea herodias*, Blue Crane.—One specimen.

90. *Botaurus minor*, Stake Driver.

91. *Porzana carolina*, Carolina Rail.—Common.

92. *Fulica americana*, Coot.—April 22, a single one seen. Afterward very abundant, a few apparently staying all summer.

93. *Branta canadensis*, Canada Goose.—Nest was found in the marsh May 2, built up securely with reeds and sticks about eighteen inches above the water. Eggs, seven, fresh.

94. *Anas boschas*, Mallard.—Abundant. Nest with ten fresh eggs in a tuft of grass in the marsh, May 11. Another nest with the same number of nearly hatched eggs, June 25.

95. *Dafila acuta*, Pintail.—A single male that had been killed nearly three weeks previously and thrown into the snow, was found upon my arrival, but none were seen afterward. [Very abundant, however, on the lake about September 1, and for two weeks thereafter.—G. B. G.]

96. *Chaulelasmus streperus*, Gadwall.—May 4. A nest with eight fresh eggs was taken with the female, June 16. The nest was built among wire grass, near a small brook. It was neatly made of grass, and warmly lined with feathers. In sweeping insects for two weeks previous, I had daily brushed the grass immediately about her without disturbing her or discovering the nest. Finally, when about to step on the bird, she flew. She had evidently laid her full complement of eggs, as none were added in nearly a week.

97. *Querquedula carolinensis*, Green-Winged Teal.—Through the earlier part of May this duck was the most abundant of all. A very few remain during the summer. [Numerous in September.]

98. *Q. discors*, Blue-Winged Teal.—First seen April 24. A few afterward during May and June, but not at all common. [Very abundant late in August.]

99. *Q. cyanoptera*, Cinnamon-Breasted Teal.—This beautiful duck was very abundant. Almost, if not quite, the last to arrive, not an individual was seen, although looked for eagerly, till May 5, when a male was shot. Two more were taken during the following weeks, but by the first week in June they were there by thousands. Their nests are concealed among the thick marsh grass with the utmost care.

100. *Spatula clypeata*, Shoveller.—Rather common on the lake. The first specimen was taken May 1. A nest with seven eggs was taken near inland pond. The nest consisted of a few stems and leaves of the sage brush and feathers, and was placed on a high bank among sage brush. The female on leaving had covered the eggs with twigs and leaves of sage, so that the nest was only observable from the few feathers scattered over it.

101. *Fuligula affinis*, Lesser Scaup.—Rather common, and remaining through the summer.

102. *F. ferina americana*, Redhead.—May 3. Not uncommon. A female of this species was caught in rather a singular manner. A companion while hunting raised his gun to shoot at a pair flying over his head. His last cartridge missed fire, and in his disappointment at losing the shot, he yelled loudly, whereupon the female, apparently bewildered, dropped into the water and was easily caught by the retriever.

[103. *Bucephala (?) clangula*, Golden Eye.—A single female was taken on the lake September 20. Unfortunately, the skin was not preserved. It did not differ apparently from the ordinary bird of the East, but it is possible that it may have been *B. islandica*.—M. G.]

104. *Mergus merganser*, Goosander.—Not seen till June, confining themselves wholly to the creek for a week or two, probably for the reason that the "Siredons" of the lake had not yet made their appearance and the largest of its other inhabitants were small amphipod crustacea (*Gammarus*).

[105. *Mergus serrator*, Red-Breasted Merganser. This species was abundant on Rock Creek throughout September.—M. G.]

106. *Larus delawarensis*, Ring-Billed Gull. Common in early spring to middle of June.

107. *L. philadelphia*, Bonaparte's Gull. A dozen specimens seen May 2 to 17. The rosy tint of the breast was usually so faint that its detection depended mostly upon the imagination.

108. *Hydrochelidon nigra*, Short-Tailed Tern. One specimen taken on the marsh May 20.

109. *Podiceps auritus californicus*, Eared Grebe. No bird is so characteristic of the lake, and none so common as this. A single individual was seen May 4, and in a week there were thousands covering the lake for acres. I do not remember ever seeing one leave the water. They began to lay their eggs about the 2d or 3d of June. One can hardly speak of their nests, for they have none. Out in the water, sometimes where four feet in depth, a few reeds are broken down to float upon the surface, thus forming a sort of a raft upon which the eggs are laid, almost invariably five in number. In more than a score of such precarious nests hardly one of the eggs was dry, but lying more or less in the water. I never saw a female upon the eggs, nor, indeed, could I understand how they were ever deposited upon so frail structures. I was told that the year previously the agent had, in a few hours one afternoon, gathered sixty dozen fresh eggs, which were used for food!

MIGRATION OF BIRDS.

NOTES ON ARRIVAL, PRESENCE AND DEPARTURE OF (MOSTLY) WATER BIRDS AT AND NEAR CLARK'S ISLAND, PLYMOUTH, MASS., FROM MAY 1 TO DEC. 26, 1852.

BY F. C. BROWNE.

(*Continued from page* 185.)

Sept. 10.—The least terns left very early; all gone by Sept. 1, I think.

Sept. 11.—Obtained one Hudsonian curlew (*N. Hudsonicus*); rare here.

One of the islanders shot a wader, which looked strange to him, and brought it to me. I soon identified it as the long-legged sandpiper of Aud. (now stilt sandpiper, *Micropalama himantopus*), the first I ever saw. Mr. W. says "he has shot individuals occasionally; not so much of late years."*

Sept. 17.—Turnstone still here. First red-backed sandpiper (*T. alpina*) seen.

Sept. 30.—Full arrival red-back sandpiper

Oct. 1.—Jaegers seen. Early? Probably *S. parasiticus*, but not identified.

Oct. 3.—Surprised to see a large number of swallows—the white-bellied (*T. bicolor*)—this morning. Is not such a flight very unusual so late as October?

Oct. 4.—Saw a few Bonaparte's sandpiper. Sanderling still abundant, and by good management large numbers can be obtained. I brought to bag 47 at a single raking shot. Observed graybacks (*T. canutus*) last week, and two pectoral S. (*T. maculata*) to day; very late. Yellow-legs (*T. melanoleucus*) still about. No golden plover (*C. virginianus*) seen for a week past, and piping plover (*Æ. meloda*) been gone several weeks. Ring plover (*Æ. semipalmata*) still in considerable numbers.

Oct. 5.—Velvet and surf ducks passing South in a constant succession of flocks; saw at least 1,000 go by the Gurnet Nose in two hours. Seen no long-tails (*H. glacialis*) yet. The fowl have not yet begun to stop on the feeding-grounds ("muscle-bed" in the channel). Mr. W. says these first comers are old birds, and never stop to feed here. Mergansers reported to-day. Dusky ducks about in small flocks; feed near the island. G. shot an *adult* red-throated loon (*C. septentrionalis*) last week; seldom obtained. Black-back gull (*L. marinus*) arrived from N.

Oct. 6.—Saw a diver in immature plumage; size *intermediate*, between *glacialis* and *septentrionalis*. Mr. W. says the variety is well known to him, and he does not consider the *young* very rare, but never saw the *adult*. Says the gunners know it as the "grayback loon." It seems as if this must be *arcticus*, although not allowed by any authorities as a Massachusetts-coast bird.

Oct. 8.—Five or six hundred *T. bicolor* still hovering over and darting about the island, and skimming the smooth water between us and Saquish. First flock brant.

Oct. 13.—Change of weather and northerly winds, causing the swallows to leave us.

Oct. 16.—A single wild pigeon visited the island.

Oct. 19.—Observed one black guillemot (*U. grylle*), immature plumage; rare here

Oct. 24.—A flock of golden plover alighted on the island. Very late. Mr. W. says there is almost every year a small flight of black breasts (*Sq. helvetica*) as late as this. Snow-bird (*J. hyemalis*) and pine finch (*Chrysomitris pinus*) arrived from N.

Nov. 1.—Occasional flocks of geese. No troop fowl (*F. marila*) or whistlers (*B. clangula*) seen yet, though due.

Nov. 10.—Both *marila* and *clangula* observed since last

* This example calls for more than a passing notice. It appears to have been the *first* of the species obtained on the New England coast. It lay unnoticed in my cabinet for more than twenty years, I being misled as to the character of its presence by the experience of Mr. W. as above given (he having been born on the Island and shot and fished in its vicinity for fifty years), and I being so situated as not to be able to keep posted in ornithological matters. In a review of Dr. Brewer's List in Jan., 1877, number *Nuttall Bulletin*, by H. A. Purdie (foot-note p. 17), this instance is recorded, which record is apparently overlooked by Dr. Brewer in writing the New England History of the species, under date of Oct. 3, 1817, published in Proc. Boston Soc. N. H., vol. xix; as he there states that "without doubt the first specimen known to have been taken in any of the N. E. States" was shot in Swampscot in 1857 or 1853.

entry. The bay gull of the gunners (Kittiwake, *L. tridactylus*) arrives, also the shore lark (*E. alpestris*).

Nov. 20.—Main flight of geese; saw about twenty flocks. Brant getting quite scarce. Sheldrakes still abundant; long-tailed ducks ditto.

Nov. 22.—Shot a barred owl (*Syrnium nebulosum*) on the Island. No other seen.

Dec. 1.—A very large flock of red-poll linnet (*Aegiothus linaria*) stopped a short time on the Island.

Dec. 10.—Several red-back sandpiper seen to-day on Saquish, and a few sanderling, but the beaches are about deserted, except by the shore lark, which is abundant everywhere. Robins and meadow larks still here.

Dec. 12.—B. reports foolish guillemot (*L. troile*) outside, and I hear of cider ducks off the next point to the southward. A single pintail duck seen; late. Whistlers and dusky ducks abundant, not very wild.

Dec. 15.—Obtained a pair of neat little spirit ducks, "Dippers" the gunners call them, some say "Doppers" (*B. albeola*). They are not at all plenty here; frequent the creeks.

Dec. 23.—Meadow larks and golden-wing woodpeckers still linger.

Dec. 25.—Saw several flocks long-tailed duck and one flock velvet duck. Many whistlers and a vast number of dusky ducks, 800 to 1,000, all in one flock. It was quite exciting to sail up to them and see and hear them rise. They would "jump," generally, at about 200 yards. Red-throated loons not observed lately; what I think is the *Black-throated* seen occasionally, and the great loon has been very scarce all the season.

Dec. 26.—The terns all gone, and the small gulls mostly. Obtained in a sheltered cove of the Island a single specimen of the sea dove (*Mergulus alle*) the foolish guillemot in miniature, an occasional winter visitor from the extreme north. The sailors call it "Pineknot," from its apparent *toughness* in regard to the weather, perhaps. With him my journal closes for the year.

A COMPLIMENT TO DR. COUES.—We take great pleasure in calling attention to the deservedly high compliment paid to Dr. Coues by a number of the most eminent British biologists on the bibliography which accompanied his latest work—"The Birds of the Colorado Valley." The compliment referred to takes the form of a memorial addressed to Dr. Coues, referring in high terms to the value and importance of the work which he has undertaken, and finally begging him to visit Europe for the purpose of consulting the various libraries, which contain works not accessible in this country, and offering him, should he visit England, every assistance in the power of the signers. Among the numerous signatures attached to this paper are those of Darwin, Wallace, Huxley, Flower, Parker, Mivart, Gunther, Sclater, Newton, Salvin, Sharpe, Dresser, Garrod, Gould, Harting, Tegetmeier, and many other names scarcely less well known.

DISCOVERY OF MALE EELS.—We are glad to state that finally what we believe to be genuine male eels have been discovered. In the January number of this journal it was announced by Prof. Packard that he had discovered male eels. A number of the supposed males were afterward again examined, by Prof. Packard and Dr. C. S. Minot, who were then led to conclude that the so-called male eels were immature females, and the mistake was corrected by Prof. Packard in the February *Naturalist*. A large number of living eels were then examined by Messrs. Packard, Kingsley, Pierce and Minot without success, until at Prof. Packard's request Mr. Kingsley spent a few days at Wood's Holl, at the laboratory of the U. S. Fish Commission, in the last of February, examining living eels supplied by Mr. Vinal N. Edwards, by favor of Prof. Baird, U. S. Fish Commissioner. One hundred and ninety-three eels were there examined, and of these, three were found by Mr. Kingsley to be, in his opinion, males. His observations made on these living individuals, which were speared in a pond through the ice, are as follows: "On February 18, 19 and 20, I examined one hundred and ninety-three eels, at Woods Holl, and found three males, the testes of which agreed closely with Syrski's figures as reproduced in the U. S. Fish Commission Report for 1873-4 and 1874-5, p. 719. Although I made careful examination I could find no external characters to separate the sexes. The three males were each about seventeen inches long, while the females examined varied from about twelve inches to nearly three feet. This average length of males agrees closely with Syrski's (430 mm: in length.) The principal criticisms I would make of his figures, or rather points of difference that I found, are that his enlarged figure showing the lobulation of the testis has the lobes far more crowded than they were in the specimens I examined. His drawing of the histological structure was greatly larger than what I supposed to be the same. His cells measure, according to the explanation, about 1-440 of an inch on their major axis, while I saw nothing that could have been over 1-4000 of an inch. The structure of the testis was similar to that which I have seen in the testes of the cod, perch, smelt, cat, deer, rooster, monkey, dog and man. On teasing it out under a Tolles one-fifth, I saw what I am confident were spermatozoa, although I could not distinguish the tails. The heads were oval and from one-half to one-third the size of those of the smelt, or about 1-20000 of an inch in length; they had an independent motion, changing their position on the slide without reference to any current in the water in which the tissue was placed, and this motion was wholly different in its character from the vibrations of the Brownian movement." Prof. Packard examined independently of and in company with Mr. Kingsley, preparations made by himself, and found scattered through the tissues, nucleated and nucleolated testis cells, of the same appearance as those of the animals above named, which were kindly obtained by Prof. Pierce. Moreover, Prof. Packard found two mother-cells, containing several immature nucleated spermatozoa. So that after the examination of about five hundred female eels and three males, we are glad to be able to affirm the entire accuracy of Syrski's observations and figures, he being the first observer, so far as we are aware, who has discovered the male sex of the Italian eel. Which species of eel it was that Syrski examined is not stated. In making these investigations we have to acknowledge the aid of Prof. John Pierce, of Providence, in the use of a fine series of mounted histological specimens and lenses of high powers. He has worked jointly with us and is of our opinion as to the sex of the three males. Dr. Minot examined one of the three males, preserved in alcohol, and found as Freud and Brock had done previously, a follicular structure, the follicles being filled with small spherical cells, which Dr. Minot considered to be probably immature spermatozoa, although the developement could not be traced.—*A. S. Packard, Jr., and J. S. Kingsley, in American Naturalist.*

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING JUNE 14, 1879.—One pair Javan chevrotains, *Tragulus javanicus*; one opossum and thirteen young, *Didelphys virginiana*; one barn owl, *Strix flammea americana*; one pair cheetahs, *Felis jubata*; one Bornean sun-bear, *Helarctos eurysplius*; one Chacma baboon, *Cynocephalus porcarius*; two electrical eels, *Gymnotus electricus*; all purchased. One English blackbird, *Merula turdus*; one Angora goat, *Capra hircus*; one sandhill crane, *Grus canadensis*; one raccoon, *Procyon lotor*; one ring-necked snake, *Diadophis punctatus*; one pair Angora rabbits; one hog nosed snake, *Heterodon platyrhinos*; seven horned toads, *Phrynosoma cornuta*; two black snakes, *Bascanion constrictor*; three woodchucks, *Arctomys monax*; two ring doves, *Turtur risorius*; all presented. One pair of twin Virginia deer, *Cervus virginianus*, born in Garden.

The Kennel.

HANOVER DOG SHOW.

THE Hanover International Dog Show occurred in that city on May 21 and four following days. At least a thousand dogs were exhibited, and the English papers unite in saying that the display was an excellent one. We condense from the London *Field* some of the more interesting particulars regarding the show:

The arrangements were admirable. To begin with: the whole of the place was surrounded by the canvas netting used by German sportsmen for boar-hunting, so that no dog, if he got loose, could possibly have got out and been lost. The covered pens and benches were arranged along each avenue, and where there were trees in full foliage the grateful shade was truly welcome, for the heat was simply terrific; but the dachshunde, bull terriers, toys, etc., which were shown near the main entrance in a somewhat bare avenue, must have suffered somewhat, the sun shining with overpowering persistency on their pens nearly every day. Canvas screens, which could be dropped over the pens, were, however, provided, and thus the evil, as far as could be done, was reduced to a minimum. The attendants were soldiers, each one of whom had allotted to him a certain number of benches or pens, and we can personally testify to the excellent manner in which these men performed their duties; for even at night, when the show had been cleared of visitors for hours, we saw them on two or three occasions with lamps, going from dog to dog, carefully inspecting their charges, to see if they were comfortable or required anything; in short, greater care and attention we have never witnessed.

Of course, it being the first venture, some of the working details lacked those finishing touches which experience alone can suggest; but the committee of management are so anxious to learn, and accepted hints so readily and gratefully, that we have no doubt that their next show will be in every way second to none.

Now we will point out the chief mistakes in the working details. Firstly, in connection with the judging, there were no award boards or telegraph boards; and as the foreign judges did not care to let the public know their awards until the said awards had been submitted to the committee, it was rather a difficult thing to ascertain the winners, especially as the judging was carried on simultaneously in several rings.

Indeed, up to this very moment, we are in the dark as regards the winners in several of the classes, and we had therefore an immense amount of labor in collecting information. This, it appears, is owing to the fact that although the dogs were placed by the judges, the committee had reserved to themselves the actual awarding of the prizes. Thus, if the dog and the bitch class of a certain breed failed to muster either a sufficient number of entries or quality, only one first prize was eventually given for the two classes, although, perhaps, originally the judges had placed a first in each class, as directed. Thus, a long consultation had to take place after the judging (which judging, by the way, lasted two days) between the committee and the judges, and the members of the English press were formally invited to attend said meeting, when, for the first time, we were enabled to ascertain absolutely which dogs were winners in some of the classes.

The fact of the matter was, the show was under somewhat military rules and government, officers being appointed to every department, and whenever spoken to they replied, rightly enough, that their orders were to act as they did, and of course declined to budge an inch or to give contrary orders to their men; so the judging was decidedly slow. As for the rings, quite a sensible feature was introduced by the fact that they were either boarded up all round or inclosed with boarhound canvas netting, so that the escape of any dogs was a perfect impossibility as long as the gates were kept closed, and this was well attended to. The benches were placed along the avenues in the park, and each dog was by himself, except those hounds which were used to each other. A squad of young soldiers had been told off to attend to the cleaning and exercising of the dogs; and, when we say that we have never seen dogs better attended to, we hope to have said something which may prove to the credit of those whom it may concern. The show was patronized on the first day by Prince Albrecht of Prussia and the Grand Duke of Mecklenburg, and the Emperor himself had expressed the wish of visiting the exhibition on the second day, but a telegram was eventually received, stating that he would not be able to come.

The rings were, unfortunately, very wide apart, so that pursuit of knowledge was carried on under great difficulties. Near the pavilion, in two rings adjoining each other, some of the German judges and Mr. Dalziel officiated; while at the other side of the gardens three rings fenced off by canvas, were reserved respectively for French, German, and English sporting dogs. In consequence thereof, we had fully our share of exercise in going from one ring to another. Messrs Spratt had undertaken the feeding of the dogs, and this was attended to in admirable style by a special staff of soldiers, who, wheeling along a large tub mounted on wheels, ladled out of it a full ration for each dog as they came to him. At night sentries were posted at all the entrances, and, altogether, the material arrangements of the show were as perfect as could be.

There were about a score of special prizes offered—by the Emperor of Germany, the King of Holland, several princes and private gentlemen, and commercial firms, amongst the latter Spratts Patent, who gave a £40 prize, etc. The most charming weather prevailed almost throughout. Indeed, barring two or three slight showers, the weather was splendid, and rather hotter than many of the dogs liked, we will warrant. The attendance on Thursday, the second day (a sort of half or whole holiday in Hanover) was enormous, the gardens being filled to overflowing, and all the tables and seats round the bars were fully occupied by pleasure seekers. We may, by the by, state that during our stay we did not see a single drunken man anywhere, either in the gardens or in the streets. A new feature, and one to which we have already drawn attention in years past, was introduced on Saturday, by parading all the winning dogs before Prince Albrecht of Prussia, who had come down purposely, and who awarded there and then, his cup (a superb one) to Sooty, the well-known pug. This sort of parade was greatly relished by everybody; and we repeat it, were the winners at all shows to be brought out at a certain time, together, in the order in which they had been placed, the visitors would be enabled, at a glance, to master the chief points in the breeds; and where the judging had been deficient, the mistakes would be far more patent than they now are, since the winning dogs would be shown, side by side, in their assumed order of merit.

At Bella Vista there were also several inclosed exercise grounds, with grass, water, etc., for the dogs, and a trifling fee was to be charged for their use; but, by mistake, the fee, 6d., was charged on each dog, and this came expensive on those owners who had several dogs in the show. Next year this will be remedied, Prince Solms told us, and then these exercise grounds will prove a real boon.

What we have also advocated for a long time was acted upon during the judging, viz., loosening the probable winners, in sporting dogs, after the weeding had taken place, so as to see their style of going. Of course this could only be done on grass, and in an inclosed ring, both of which points were secured for the three sporting dog rings at Hanover. We commend, once more, the notion to all whom it may concern.

On the whole, then, for a first attempt, the Hanover dog show was a most magnificent success. We are heartily pleased that it was so, and we trust that its future shows will rise to such a pinnacle of fame that their splendor will rival, if not eclipse, all the leading shows of the day. Indeed, but the committee are in such thorough earnest about their work, that we should not wonder in the least if our prophecy should come true—an end to be devoutly wished for—and, therefore, here is success to the Hanover dog show!

The following is a list of the winners in the setter and pointer classes:

GERMAN POINTERS.—1st, Hesse (Hector); 2d, Bierman (Bravo) Bitches: 2d, Kommallein (Muca).

ENGLISH POINTERS.—Large—Dogs: 1st and special cup, R. Price (Wagg); 2d and extra cup, G. de L. Macdona (Croxteth); equal 3d, U. Marais and L. Maas (Lord). Bitches: Cup, G. de L. Macdona (Dido); 2d, E. Goldmann (Juno). Small—Dogs: 1st and cup, Baron von Alvensleben (Bray); 2d, J. H. Whitehouse (Wray); equal 3d, Prince Albert Solms (Naso II.) and J. Platt (Carlo). Bitches: 1st, Baron Von Alvensleben (Lady); 2d, E. Meyer (Silk); equal 3d, J. H. Whitehouse (Morna and Sally), and Prince Albert Solms (Zorasta, Firefly, and Sidney II.).

SETTERS.—English—Dogs: 1st and cup, J. O. Mocdona (Ranger Rab); equal 2d, Freiherr Max (Prince II.), Count Haidenburgh (Rock II.), O. Borneman (Lord), and U. Marais (Drake); equal 3d, G. Cartmel (Royal Blue) and G. de L. Macdona (Ranger III.) Bitches: 1st, Prince Alexanders; 2d and cup, Prince Albert Solms (Queen and Zanka); 3d, U. Marais (Perle).—Gordon: Dogs: 1st, J. Richardson (Duke); 2d, U. Marais (Jock); 3d, O. Hartmann (Bounce). Bitches: 1st, R. Alston (Countess); 2d, M. Kat (Lady).—Irish: Dogs: 1st, Freiherr Max (Don); 2d, Prince Albert Solms (Rover); 3d, J. Richardson (Pam). Bitches: 1s, G. de L. Macdona (Pamela); 2d, Prince Albert Solms (Flirt).

LETTER FROM "GOSHAWK."

RICHMOND, Va., June 16, 1879.

EDITOR FOREST AND STREAM:

In reply to the editorial of Mr. Pentz in the *Turf, Field and Farm*, of June 13, responsive to "Goshawk," I feel called upon to say that I did write that piece, and while regretting the necessity for it, felt, and still feel, that it was provoked by his reiterated charges of hired ignorance and corruption on the part of the New York judges in both his own paper and writing as "Gothamite" in the Chicago *Field*. That he is "Gothamite" he has not denied. He has ingeniously evaded a statement on that head. I therefore reiterate the charge that he is "Gothamite." If he used another hand to write the "Gothamite" letters, which he does not even assert, his was the head that conned them. He truly says we were utter strangers, and I cannot recall even the "infinitesimally small" courtesy which he showed me when he presented Mr. Bruce's card of introduction at the judging ring in New York. I know that my every predisposition was toward him by reason of regard for Mr. Bruce; and if by reason of my friendship with Mr. Bruce he was "lenient" in calling me hired and ignorant, and publishing that the integrity of the judges was questioned, I must say, "spare me from my friends," especially when his charges never appeared elsewhere than in his columns and in the "Gothamite" letters. Mr. Pentz's memory must be short when he says, "We do not propose in this column ever to attack private character." Since I have been a subscriber to the *Turf*, L. H. Smith of Strathroy, W. M. Tileston, John Davidson and others are witnesses I would call on that point. When he yields to the demands of the *Pinafore* chorus for "exemplary damages," I think a good plea in the nature of a plea of set-off would arise upon the charge of hired ignorance and corruption first made by him.

In my whole life I never was more "struck flat aback" than by the criticisms of his paper, the only one in which I had the slightest acquaintance; and it now seems that he had other reasons than those now known to me for being kindly—to wit, friendship for my relative, Capt. Cropper. Surely, I would never have suspected it from his manner of criticism, begun, continued, and not ended when I was tempted to reply. I never blamed Mr. Pentz for writing to the *Field* as well as for the *Turf*. I complained of the manner of his writing and of an effort to create an impression that different journals with different correspondents had the same condemnatory views, when, in fact, it was all the doings of one man. The publication of what appeared in the *Turf* and *Field* at the time of the Westminster show was simply that it might

be compared with the subsequent results and publications in *Turf* and *Field* when the Philadelphia and Boston shows came off.

I wrote to Mr. Bruce, complaining of Mr. Pentz's use of private information, and he replied that Mr. P. would write and explain it. Not hearing from Mr. P., I wrote him a letter personally, desiring to give him every opportunity. This is the only line I ever wrote him. If it contains a threat, or anything like it, I cannot see it, and have no respect for folks who threaten. It was written a month before the "Goshawk" letter was written, and never was answered.

Regretting extremely the necessity for the "Goshawk" letter and this, and acting in this, as in that, purely on the defensive; regretting, above all, that a friend of my friends should have inaugurated the controversy,

I am, respectfully, JNO. S. WISE.

THE LATE BOSTON DOG SHOW.

BOSTON, June 14, 1879.

EDITOR FOREST AND STREAM:

It is a charming thing after having finished several weeks of hard work as member of the Exhibition Committee of a Kennel Club, and in spite of, when all is over and done for, finding that the club is some hundreds of dollars out of pocket, feeling that perhaps the time, money and trouble was not entirely wasted, to take up one's favorite weekly after breakfast and to come across an article such as that signed by Thomas M. Aldrich in your issue of the 12th inst.

The charges made against, and the abuse heaped on, the club in that effusion may be condensed into two classes: first, against the club and the members thereof, and second, against the judges. With regard to the charges of incivility on the part of members of the club, if Mr. A. is the individual I think him to be—and I do not think it possible that two full-grown men should have behaved in such a childish way—I would most respectfully suggest to him that, if he wishes to receive civil and courteous treatment from an organization of gentlemen, he had much better avoid going to the office occupied by them; or, to be exact, standing in the door-way and proclaiming in a loud voice that they constitute a "ring," and that there is no chance of any fairness being shown except to dogs of a certain strain; and, in short, in every way making himself as disagreeable and obnoxious to the Superintendent, Judges, members, etc., as he possibly can. I remember the language used perfectly, as it was the first time in my life that I had ever been accused of being in any way connected with underhand or dishonorable dealing, and I had been congratulating myself on having restrained my natural instincts at the time, thinking that when the man had recovered from his bad temper he would regret the exhibition that he made of himself. His cause of complaint (like Mr. A.'s) was that his dog had been sent out of the judging ring, which he took as a personal insult to himself. After having vented his bad temper and disappointment in insulting language about the club and judges, he got very angry because he was told that he could not take his dogs away until the show was over. Except that he was full grown, it was exactly like the little boy who joins with others to play soldier, but when he finds that he cannot be captain, gets mad and says that he "won't play." The idea of every disappointed owner being allowed to take his dogs home as soon as the judging is over is so absurd that it need only be referred to. Now with regard to the insult. Anybody that knows anything about bench shows knows that in judging large classes the first step is to "weed them out;" that is to say, the judges look over the class as a whole, and order off those who evidently stand no chance at all in competition. Unfortunately, Mr. A.'s dogs, or dogs Mr. A. was interested in, came under this category. That is to say, the judges thought so; Mr. A. did not, *hinc illæ lachrymæ*. It was simply a case of Mr. A.'s opinion versus the judges, and I think nobody can blame the club for giving the preference to the gentlemen who had done them the honor of acting in that arduous and thankless capacity.

I am aware that by noticing this whine of an unsuccessful exhibitor I am giving it more prominence than it deserves, and had Mr. A. confined his abuse to the club it would have been met with the silent contempt which it merits; but I cannot allow such an attack on the gentlemen to whom we owe so much to pass without protest. If Mr. A had the honor of knowing Messrs. Raymond, Jarvis and Taylor, or had he had the advantage of associating with men of the same stamp, he would have hesitated for a long time before signing an article accusing them of toadyism and bias. I could tell him of a gentleman who, not only endeavored to "breed intelligently," but succeeds in so doing, whose expenditures in this way are to Mr. A.'s boasted eights and twenties as dollars to mills, who in some points of opinion differs with the judges of our last show, and who in some respects was undoubtedly disappointed, but who would as soon think of charging his clergyman of petty larceny as of saying that the decisions given were the result of unfairness or favoritism.

With regard to the charge that a dog, having the mange, was allowed to win in class 50, in spite of protest, I can only say that (to my knowledge) no such protest ever came before the committee. If a protest was made in the proper manner the case must have been investigated by the able and conscientious veterinary surgeon, whose services we were fortunate enough to secure. An appeal against his decision would have come before the committee.

There was a protest made against a bitch in class 34 (foxterriers), and the surgeon sustained it. This was appealed against, and I examined the case myself, and had no doubt but what she was mangey. The owner or exhibitor felt so badly, and was so reasonable about the matter, that in order to give him every possible chance consistent with fairness, it was decided to leave the matter to Dr. Stickney, who was kind enough, at great personal inconvenience (he being engaged in court in a case of supposed hydrophobia), to go to see the dog; but through the stupidity of the attendants he did not see her. Meantime she had been allowed to go to the judging ring, it being understood that had she won, and Dr. S. pronounce her mangey, she should be thrown out. As she was not placed, I did not trouble the Doctor to make a second visit. That we made no mistakes, I should be the last one to claim, as, on looking back, I can see several; and my wonder that we did not make more (considering that every member of the committee was at the time actively engaged in professional or commercial pursuits) is only equaled by my gratitude to the exhibitors and public for their forbearance and leniency. But I can assure Mr. A. that whatever mistakes may have been made, there was no underhand dealing or favoritism in the Second Annual Bench Show of the Massachusetts Kennel Club.

There is only one way that Mr. A. can be sure of his dogs taking the position which he thinks they deserve in a bench show. Let him add to his eights and twenties, hire a hall, give the prizes and do the judging himself, and the thing will be done; but as long as he exhibits in open competition, he will be liable to find gentlemen acting as judges who will have opinions of their own, and who may be even so insulting as to refuse to change them to suit his convenience.

To any one whom it may concern, you can give the name and address of your occasional correspondent, MIC MAC.

THE LLEWELLIN MEDAL—*Editor Forest and Stream:* In the reports of our late bench show, we find that no mention has been made as to the awarding of the silver collar donated by Mr. G. T. Teasdale Buckell, of South Ormsby Hall, Alford, England, as a special prize to be competed for by certain field trial winners, and to be known as the "Llewellin Medal." By the courtesy of Mr. Buckell this prize was offered for the first time at the Massachusetts Kennel Club's bench show. We understand that other prizes of similar character will be offered by Mr. Buckell at coming shows. The honor of winning the first of the series belongs to the Harvard Kennel Club, of Cambridge, Mass., Dash III. being the winner. JOHN FOTTLER, JR.,

Boston, June 16, 1879. Sec'y Exhibition Com.

WHAT IS A CHAMPION?—It is not often that a judge is called upon to decide a question of dog law, such as the one below, which occurred in a case tried in Wales, a report of which we take from our contemporary, the *Country:*

This was a claim for a balance of £8, due for the value of a diamond ring. Plaintiff, Mr. Frederick Hy. Worsley Benison, of Wrington Houses, Chepstow, saw in the *Bazaar* an advertisement offering for sale two mastiff puppies, by champion Nero, out of champion Princess, for £10, application to be made by letter to Sayer, 20 Duke street, Cardiff. Plaintiff came to Cardiff and saw the dogs at Mr. Allen's, Duke street, Sayer being a clerk to Mr. Allen. On the faith that the puppies were the offspring of champion dogs, plaintiff offered to give a diamond ring of the value of £10 for them, and this was accepted by Mr. Allen and Mr. Sayer, and the puppies, which were very thin, as was alleged from improper feeding, were sent to the plaintiff's house that night. Plaintiff then wrote for the pedigree of the puppies. There was no doubt that champion Nero was a champion dog, but champion Princess had not taken a champion prize. For plaintiff Mr. Tom Llewellyn Brewer, Danygraig, Newport, and magistrate for the county of Monmouth, was called, and stated that the rules of the Kennel Club were that before a dog could be shown in the champion class it must have won three first prizes, except at Birmingham, where the winner of one first prize was allowed to be shown in the champion class. Champion Princess had won three first prizes; had been highly commended at other shows, but had not won a champion prize, and was not, therefore, a champion dog. Plaintiff, it appeared, had written to defendant to know at what place champion Princess had carried off the cup, when it was explained that she had taken three first prizes, and that entitled her to be called champion. Ultimately the plaintiff sold the puppies for £2, not being of the value, not only from not being "champion" dogs, but also for not turning out so fine as was expected. The action was now brought to recover the balance, £3, between the price the puppies were sold, and the value of the ring. It was admitted that champion Princess had not taken a champion prize, but was in a position to be shown in the champion class. His honor gave judgment for plaintiff for £7 and costs.

In referring to the case our contemporary thinks the defendant was hardly treated and comments upon the decision as follows:

What constitutes a champion is a moot point; a large majority of exhibitors, among whom we include ourselves, holding that, according to present rules and established practice, a dog qualified to compete in a champion class is entitled to the name of champion, and this qualification, we gather from the report, Princess was proved to possess. Mr. Tom Llewellyn's evidence showed that he confounded two totally distinct things—the rules of the Kennel Club, and regulations governing individual shows. The Kennel Club have issued no edict respecting champion dogs nor defined the term, and their practice in dealing with champion classes has varied considerably. We feel sure the judge must have been led astray by Mr. Tom Llewellyn's worse than worthless, because misleading, evidence, or the judgment would have been otherwise. Of course in giving this opinion we are solely guided by the above report of the case from our contemporary the *South Wales Daily News*. The real grievance of the plaintiff, however, seems to have been that the pups did not turn out so fine as he expected them to do.

—Mr. E. M. Kellum, of Vincennes, Ind., claims the name Nellie Glen for his Gordon bitch out of Border Lilly by Duke of Glen. Bought of J. E. Fisher, Brooklyn, N. Y., and whelped February 19, 1879.

—Mr. E. H. Gillman's Orphinas whelped, May 12, 9 puppies—6 black and white, 3 lemon and white—sired by L. F. Whitman's Rattler (Rob Roy–Pickles).

—Mr. W. Tallman's (of Providence) bitch Bonibel (Rink–Mollie) whelped, May 15, 3 dogs and 3 bitches, by Dan (Leicester–Peeress). Four lemon and white and two black and white.

—Mr. Ed. A. Sproner's orange-white bitch Zoe whelped on May 25 a fine litter of ten puppies, by Champion Lord.

YACHTING SHOES.—From personal trial we can recommend the new style of yachting shoes which Messrs. Peck & Snyder, of this city, have introduced. They are made of canvas siding, leather heels and trimmings, and leather soles shod with corrugated rubber, both to keep the feet dry and to prevent slipping on wet decks.

LITERATURE FOR YACHTSMEN.—Attention is called to the card of Lee & Shepard in our yachting advertisements. The book on boat sailing which they have published was reviewed in our last issue. Yachtsmen will often find interesting matter among our book reviews, in the latter part of the paper.

Yachting and Boating.

YACHTING NEWS.

LAKE GEORGE CANOE REGATTA.—The Jersey City Canoe Club has been invited by the Lake George Regatta Association to arrange for a sailing and paddling regatta at Caldwell, at the headwaters of the lake, on July 16 and 17. There is to be no entrance fee, and canoes and their owners will be transported free from New York to the lake and return. A canoe camp will be established for the race days at Caldwell. A number of entries have been made. Entries for the canoe races may be made with Chas. E. Chase, Commodore J. C. C. C., who will furnish information upon request. Besides the canoe races, there is to be a single-scull shell race, double-scull shell race, pair-oared shell race and a four-oared shell race, open to all amateurs. In addition, there will be an inter-collegiate race for eight and four-oared shells, open to undergraduates only. C.

JERSEY CITY CANOE CLUB.—The Jersey City Canoe Club will hold its first general regatta, August 28, off the Idle Hour, a pleasant summer resort on New York Bay, about five minutes' walk from the Pamrepo Station, on the Central R. R. of N. J. The course will be definitely fixed according to the wind on the day of the race. It will be free from reefs, strong tides and lumpy water, such as annoyed the canoeists who participated in the general regatta off Staten Island on the 7th of June. The Jersey City Club invites all other canoeists to enter their canoes and come in and enjoy the fun. There will be a paddling race over a mile and a half one-turn course. The sailing course will be about five miles in length; the sailing regulations substantially those governing the Staten Island regatta. The same gentlemen will be requested to act as judges. Entries may be made with either Wm. Y. Fitch, 752 Broad street, Newark, N. J.; Robert D. Wynkoop, 258 Washington street, Jersey City, N. J., or Cas. E. Chase, 287 Broadway, New York. The entrance fee of $2 admits one canoe to either or both races. The prizes will be:

Sailing Race—1st, a gold badge and a whip; 2d, a silver badge.

Paddling Race—1st, a jointed paddle (presented by Thos. M. Lyon, builder of canvas canoes); 2d, a silver badge.

Canoes may be easily transported to the Idle Hour, where they and their captains will be provided with excellent accommodations. C.

REGINA–VIXEN.—These two sloops sail a match, June 24, for the Bennett Challenge Cup now held by *Vixen*.

BALTIMORE YACHT CLUB.—The annual regatta of this club was sailed June 2. Entries, first class, *Milroy* and *Collier;* second class, *Nat. C. Robinson* and *J. H Adams;* third class, *Adeline, Dreadnaught, Dauntless, Schwirm, Nathalie, Parrott.* All yachts were of the sailing machine type, and consequently, upon the appearance of a mild squall, the whole of the first class incontinently capsized, and *Dauntless* lost her stick. Of the rest, the *Robinson* was worked home with a lead in the second class and *Adeline* in the third. This race, like a great many others of the same kind, is pitiable evidence of the worthlessness of our small craft for any service whatever. Sand-bag machines should be abolished.

SALEM YACHT CLUB.—The first annual regatta of this club was sailed June 10. Breeze fresh from E. Three classes. Courses, 8, 8 and 5 miles respectively. No restriction as to sails; fixed ballast and Herreshoff's time-tables. Prizes, a pennant to winner in each class. The result is appended:

FIRST CLASS.

Name,	Owner.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Mignon, c b	I W Dodge	1 52 45	1 27 31

Judges: Messrs. C. W. Richardson, C. A. Benjamin and E. A. Millett. Regatta Committee: Messrs. Snow, Rich, John Newcomb, W. T. Servey, F. A. Gardner and J. C. Remon.

SEAWANHAKA YACHT CLUB.—The Corinthian matches sailed under the auspices of this club are set down for June 21. Classification and rule of measurement will be found in our issue of May 15. Open to yachts of recognized yacht clubs. Rules of the S. Y. C. will be in force. Five prizes are offered, one in each class in which two or more yachts

start; also individual prizes to each member of the winning crews. Entries close to-day at three o'clock, at the secretary's office, Chas. H. Grundy, 28 Pine street. One man allowed for every 5ft. on deck and one for any additional fractional part of 5ft., not including owner. Sailing master, pilot, cook and steward may be carried, but are not allowed to assist in working or managing the yacht. Owners must steer as far as possible. Winners must have their lines taken off and deposited with the club, according to the rules recently adopted. Sails: Schooners restricted to headsails, foresail, mainsail, working gaff-topsails and spinnaker; sloops to headsails, mainsail, working gaff-topsail and spinnaker. No two headsails of same name shall be carried at same time. Balloon jibs not allowed. A working gaff-topsail is a jib-headed topsail that does not extend above the truck nor beyond the gaff end. Private signals to be carried at the peak. Start at 11 A. M. off Fort Wadsworth, S. I. First whistle from club steamer with lowering of flag to prepare. Ten minutes later a second signal of same character for the start. Ten minutes allowed to cross line, at the expiration of which their will be one blast of the whistle. Time will be taken from that instant for all yachts having failed to cross the line within the period of ten minutes. A short blast will denote the time of each yacht as she crosses the line. Course for all but fourth class from line between club steamer and Fort Wadsworth to and around buoy No. 10 on the S. W. spit, keeping it on port hand, thence to and around Sandy Hook Lightship, keeping it on starboard hand and return over same course. Keep to the eastward of buoys Nos. 9, 11, 13 on West bank and outside of buoy No. 5½ off Sandy Hook going and returning. Pass between club steamer and Fort Wadsworth for the finish. Fourth class will turn Gedney's Channel whistling buoy, keeping it on starboard hand, instead of Lightship. Regatta Committee, Messrs. M. Roosevelt Schuyler, James H. Elliot, C. Wyllis Betts, Henry De F. Wecks and Louis P. Bayard.

Provincetown (Mass.) Yacht Club.—Officers for the year: Commodore, G. Herbert Holmes, Vice-Com., J. A. West; Sec. and Treas., J. Hersey Dyer; Regatta Committee, A. L. Putnam, R. Ellington, James A. Small, J. A. West and N. P. West.

Empire Yacht Club.—The third annual regatta of this club was sailed over the usual course, club house at Harlem to the gangway buoy and return, June 11. The event brought out 22 entries, of whom fourteen came to the line, including two catamarans. The wind was light and variable from the southward and westward, and the tide flood, giving the fleet a nip and tuck to clear Ward's Island and then a single stretch to the mark, with booms well off occasionally. They were sent away in five classes a little after meridian, the smallest first. *Cora D.* got away smartly, and of the third class *Lanthier* failed to weather the Island, losing much by her leewardly position at the start. In the second class *Martha M.* got a long lead, the rest of them having to make a hitch to clear the Island, and were much bothered with the flood pouring up the Harlem. The catamarans were sent away flying, Geo. Roahr's *Minnie and Bella* with a start of 2m. over *Tarantella*. Among the cabin sloops the *Beecher* got the best of the start. When off the Brothers the breeze piped up to a wholesail wind and a fine run was made to the Gangway, which was rounded in rapid succession as follows:

	H.	M.	S.		H.	M.	S.
Martha M.	2	41	00	Chester A Arthur	2	42	09
Minnie and Bella	2	41	00	Peter O'Brien	2	42	10
Mary Gibson	2	41	09	H W Beecher	2	43	20
Sophia Emma	2	41	10	Cora D	2	44	30
Mary	2	41	30	J N Lanther	2	49	40
Corinne K	2	41	55	James Tregarthen	2	50	40
Tarantella	2	42	00				

It should be noticed that the catamarans had overhauled the cabin sloops, having been started a quarter of an hour later. The *forte* of these crossbones is, however, not so much in running as with a stiff beam wind. Their lead was doubled in the work home. Had they had *their* wind, the catamarans would have shown much more to spare at the end of the reckoning than they did. After rounding, all hands stood over to the Long Island shore on the first leg home, excepting *Peter O'Brien*, who went to the northward in search of smooth water, a move soon followed by *Mary*. Upon the approach of a squall and some lively lightning in the Northwest most craft tied down a reef or let go by the run, the *O'Brien*, however, being well handled and safely brought through with nothing worse than broken seas swashing her decks fore and aft. *Minnie and Bella* snugged down quickly and hauled around Throgg's Point with a long lead, with *Tarantella* in her wake. When the squall had passed the wind was killed and the remainder of the race degenerated into a drift with the incoming tide. The race was finished as under:

FIRST CLASS, CABIN YACHTS.

Name.	Owner.	Length.		Actual Time.			Corrected Time.		
		Ft.	In.	H.	M.	S.	H.	M.	S.
H W Beecher	Vice Com O'Brien	31	..	5	07	52	4	55	22

CATAMARANS.

Tarantella	Fred Hughes	33	..	4	31	26	4	31	25
Minnie and Bella	Geo Roahr	30	..	4	41	09	4	39	39

Sophia, Emma and *Mary Gibson* fouled near the finish, but no protest being lodged, it was allowed to pass. The *Beecher* wins in first class, *Martha M.* in second, *Mary Gibson* in third, *O'Brien* in fourth, and the invincible *Tarantella* chalks on her log-board still another victory among the "crossbones."

Brooklyn Yacht Club.—Owing to lack of entries the annual regatta of this club has been indefinitely postponed. Efforts are now being made to elect a suitable Commodore and collect a fleet for a mid-summer cruise.

Montreal Yacht Club.—The opening cruise of this club was sailed, June 7, from Montreal to Longue Pointe, Commodore Brewster in charge. A fleet of eleven yachts answered to the starting gun, and cruised together to the Pointe, where an excellent dinner was served. Toward evening, the signal to return home was hoisted, and after a very pleasant sail, all hands picked up their customary moorings off the club house at Longueuil. The following yachts took part in the cruise: *Maud*, Commodore Brewster; *Iona*, Vice-Commodore; *Ville Marie*, A. A. Tracy; *Water Witch*, D. Lewis, Jr.; *Wanderer*, G. M. Glassford; *Dauntless*, D. Easter; *Neva*, G. E. Roy; *Minnie*, F. Brush; *Zephyr*, Lesperance; *Eurydice*, J. E. Whitney; *Hattie*, G. Pell.

Quincy Yacht Club.—First club championship race was sailed off Quincy Great Hill, June 9, with the following result; courses, 8, 7½ and 6 miles; two prizes to each class; wind fresh from E.:

FIRST CLASS.

Judges, Messrs. Joshua Binney, Samuel Bass and H. A. Keith. Next regatta July 4, as in our table of fixtures.

The Elephant.—Though the elephant is not a very spry animal, it is known that he is pretty good on the trot. It is only proper, therefore, that the new sloop of Mr. John G. Prague, euphoniously named the *Elephant*, should exhibit the speed of her prototype, and this she certainly does. "Phil" Ellsworth, as is well known, can chip out a flyer with his eyes shut, and to any dimensions required. Mr. Prague gave him the figures and he gave Mr. Prague the boat, and a very handsome, easy model she is in consequence is. About 29ft. keel, 33ft. water-line, including immersed part of counter, and 35ft. over all, with something like 12ft. 6in. beam and 4ft. 9in. hold, it may be imagined that she is a roomy craft below as well as stiff in a breeze, for she carries over six tons of the stuff that talks, and draws nearly 4ft. of water aft without her board. The fore-foot is cut away, as in all of Ellsworth's successful models, and the centreboard has therefore been placed well forward out of the way. By cutting away very fine forward, and giving that long, easy entrance, as the modeler of the *Comet* knows so well how. Mr. Prague has got a sloop which combines roominess with standing height and more to spare under a low house, great power, ample weight and fair draught of water, as well as a remarkably easy boat in a seaway compared to anything of her type. She sports a big rig, as follows: Mast, deck to hounds, 38ft., with 44ft. masthead; topmast, 18ft. 9in.; boom, 35ft.; gaff, 20ft. 6in.; bowsprit, stay to knight-heads, 15ft. One peculiarity the *Elephant* indulges in is to "swallow her young;" in other words, she can stow a 12ft. yawl below with the greatest of ease. And that she sails fast was tested by her performance during the recent Atlantic Y. C. regatta, when she outsailed everything of her class with ease, and held her own with yachts over 40ft., giving some of them a very sound beating over the whole course, though having to keep under their lee, as she had not entered for the race. The interior decorations of this sloop are especially tasteful and pleasing, and are due to her owner as well as the introduction of oil stoves in place of the dirty galley stoves in common use. These oil stoves do not smell, give no trouble, and we know that a rousing big dinner can be cooked on them in a very short time. It takes about 2¼m. to boil water from the time the match is applied. The *Elephant* contains two elements we have always fought for—depth and big displacement—and her success will do much toward abolishing the skimming-dish type of sloop which has so long ruled opinion in metropolitan waters.

Leads Them All.—Among all the daily and weekly journals, Forest and Stream is the only one which had a correct report of the recent Atlantic Y. C. regatta; did not cheat the gallant little *Nimbus* out of a well-earned victory, and had an account of the beat up along the Jersey shore.

Detroit Yacht Club.—*Detroit, June 13.—Editor Forest and Stream:* At a meeting of the Detroit Yacht Club, June 9, the following arrangements were made for our club regatta which is to be held July 4, on Lake St. Clair: The course to be sailed by first and second class yachts is to be a triangular one of 18 miles, and for third class 12 miles, 6 miles to a stake boat and return. The race to be sailed inside of six hours. The club offers the following prizes: For first class yachts a challenge flag valued at $25, and $25 in gold to constitute one prize; for second class yachts, the first prize is $25 in gold, second prize, a pair of marine glasses valued at $15; for third class yachts, first prize $15 in gold, second prize a silver cup valued at $10. Entrance fees to be $5 in the first class, $3 in the second class and $2 in the third class. If we have favorable weather we anticipate some good sport, as there are several new boats out, some of which are expected to beat our older craft. Our club attended a complimentary dinner a short time since, given by T. W. Ironmonger, at his hotel at Grosse Point. There were about thirty of us in attendance, and our host gave us an elegant spread to which all did ample justice. But little was said at the table, but, as the old saying goes, the proof of the pudding is in the eating. The club have tendered a vote of thanks to Mr. Ironmonger, and long may he live say all of us. Ed. H. Williams, Sec'ty.

Southern Yacht Club—*New Orleans, June 11—Editor Forest and Stream:* The Challenge Cup race for 1878 was sailed to-dayon Lake Ponchartrain, over the regular triangular course of the Southern Yacht Club. Distance fifteen miles, with the entries as shown by the table given below. The race had been postponed from Monday, the 9th inst., for want of wind, the rules of the club requiring a five-knot breeze. The wind sprung up from S.E. about 2:30 P. M., when the first gun to get ready was fired. The start was made at 3:12 P. M. for the north buoy with studded sheets, with a steady breeze of 12 miles an hour, decreasing to 10 miles at the finish. The race was devoid of incident, and attracted only about two thousand persons to the place. The cup is valued at $1,000, and was presented to the club by Mr. Charles T. Howard. The Challenge Cup of 1879 will be sailed for on the second Monday in September, when the crack yachts will again come together. The summary is added:

Name.	Sailed by.	Length. Ft.	In.	Actual Time. H.	M.	S.	Corrected Time. H.	M.	S.
Albertine	Alex Brewster	27	02½	2	37	48	2	37	48
Lady Emma	J F Kendall	27	02	2	42	12	2	42	12
Cydnus	Edwin Harris	27	00	2	46	03	2	45	50
Pluck and Luck	Jos McNeil	25	01	2	53	15	2	51	38½
Limnas	J B McConnell	27	6½	2	58	29	2	58	85

Pelican.

Racing for $2,000 is something like it, and Northern clubs may learn a lesson from their enterprising Southern friends, who have established one large, strong and healthy club of over 400 members, owning a finer club-house than anything we have in Northern waters, besides having in their fleet the fastest among the open jib and mainsails afloat. Such a club becomes a power in the community, and the yachtsmen of New Orleans have shown wisdom in steering clear of that cliqueism and petty vanity which has cut the clubs in the North into scores of little one-legged affairs, most of them not equal to the publishing of a tiny club pamphlet nor the offering of other than tinsel jewelry to be sailed for by the one or two yachts and the half-dozen mud-scows that compose the fleet. This time the South has led the way; now let our small clubs concentrate into one of which the metropolis may be proud. Boston and Philadelphia take note likewise.

From our special correspondent in the South we learn that the protest entered by *Puck*, of the second class open boats, against the cabin sloop *No Name*, alleging that the latter "blanketed" her wilfully in order to favor *Xiphias*, has been allowed, and the prize therefore goes to *Puck*. This decision gives general satisfaction. The *Susie S.* has had her name changed to *Albertine*, and a match for $2,000 against $1,000 is now pending with *Lady Emma*, Mr. Israel.

Coming Matches.—Full reports of the Jersey City Yacht Club, New York Yacht Club, and Seawanhaka Corinthian Races will appear next week.

Royal Canadian Yacht Club.—This club, with its headquarters at Toronto, is rapidly growing in membership and yachts. A new club-house on an island in the harbor is in contemplation. The Commodore of the club is Mr. A. R. Boswell. The fleet is composed of the *Oriole*, schooner, 90 tons, Vice-Commodore Campbell; *Alarm*, yawl, 40 tons, H. J. Grasitt; *Rivet*, cutter, 17 tons, iron, R. Elmsley; *Coquette*, sloop, 15 tons, J. Stuart; *Madeleine*, yawl, 6 tons, G. Gillespie, and a number of others. The yawl rig is coming into favor in the club, and honest keel boats are given the preference over sailing machines. The fixtures of the club will soon be made public; they will include the great match for the time-honored trophy of the Prince of Wales.

East Boston Yacht Club.—The annual regatta of this club was sailed June 14. Wind stiff from S. W. Course for first and second class, from flag-boat off Long Island Wharf, out Broad Sound, leaving Whistling Buoy, Shag Rocks and Boston Light on Starboard hand, and up Ship Channel to start. For third class to Buoy 6, thence to 7, leaving them on port hand, around Spectacle Island to the Sculpin Ledge Buoy, leaving it on port hand, and back to start. *Sunbeam* led off and was overhauled by *Lottie* of her class. Both *Lillie* and *Hector* made the Whistling Buoy before any of the rest, *Lillie* having the best of it. In the third class *Mabel* went away from the rest, but *Elsie* collared her near Buoy 6. The match finished as under:

FIRST CLASS SLOOPS.

Name.	Owner.	Sailing Time. H.	M.	S.	Cor. Time. H.	M.	S.
Lillie	C F Loring & Co	2	19	53	1	56	04
Hector	J H Stone	2	27	52	2	27	52

SECOND CLASS SLOOPS.

Sunbeam	W S Nickerson	2	43	26	2	08	10
Lottie	F W Webster	2	33	50	2	08	43
Clara	F Lincoln	2	36	58	2	09	52

THIRD CLASS SLOOPS.

Elsie	G & F Kimball	..	57	48	..	59	43
Mabel	P G Randall	1	04	57	1	04	57
Frank	J E Stewart	1	01	54	1	03	24

All were keels in first and second class except *Lillie*. *Hector* being new, was not in good form, and perhaps a little more experience with her trim and more stretch to her canvas she will give a better account of herself. *Lillie* takes prize in first-class and *Sunbeam* in second on time allowance. *Elsie* wins in third class. Judges, Messrs. Ed. Lincoln, P. W. Golliff, C. F. Doherty, R. Hinchliffe and F. Clements.

Boston City Regatta.—In the city regatta, July 4, sharpies and catamarans will be barred. Nothing could better show up the flagrant unfairness of length measurement than the acknowledged impossibility of sailing different types upon length alone.

Beverly Yacht Club.—The 45th regatta of the club was sailed off Nahant, June 14. Wind strong from W.S.W. In the first class, *Fanchon*, Mr. Arthur Burgess, won from *Muriel*, *Oneone*, *Fairy* and *Volante* in the order named. In second class, *Hoiden*, Mr. S. W. Burgess, beat the *Fancy*, *Peri*, *Josie* and *Mona*, and in third class, *Psyche*, R. D. Sears, won from *Gladys*, *Blue Bell* and *Mirage*, all finishing in close order. The racing proved very interesting and successful, as there was a slashing wind and many fast craft among the entries. Judges, Messrs. Sam. Hammond, J. G. Minot and A. Johnson. First and second prizes, a spy-glass and medal, were awarded in each class. *Fancy* wins on time allowance in second class. Account of this match from our special correspondent next week.

Quaker City Yacht Club.—The fourth annual spring regatta of this club was sailed Thursday, June 12, from Camden to Chester buoy and return, distance 32 miles. The start was made from Market st., Camden, so as to prevent grounding on the bar above, as was often the case when the start was made opposite Knight's Point. Entries as follows: First class, cabin sloops of between 30 and 38 feet length, *Columbia*, *Comet*, *Clara*, *G. W. Fairman* (formerly *Phantom*), *Minerva*, *Selene*, *P. Lane, Jr.*, (formerly *William Tell*) and *White Wing*, of Chester. Second class, cabin sloops under 30 feet. *Lillie*, *Chris. Gallagher*, *M. H. Thomas*, *Stella* and *Quay*. Third class, open yachts between 20 and 30 feet, *Adelphi*, *Bianca*, *Camden*, *Eddie*, *Post* and *Sappho*. The prizes were as follows: First class—First prize, champion flag; second prize, cabin lamps; third prize, water cooler; fourth prize, clock. Second class—First prize, champion flag; second prize, clock; third prize, three cuspidores. Third class—First prize, champion flag; second prize, anchor; third prize, signal lamp. Also, the George W. Barron challenge

cup, to the yacht making the quickest time over the course. At the second gun from the steamer *Reybold*, all classes got away together. *Adelphi* and *Lillie* got the strength of a stiff sou'wester off the eastern shore of Smith's Island, the latter with Godfrey Krouse—"Philadelphia's Cranfield"—at the wheel. *Minerva* was not far astern, followed by the crack *Clara*, *Lane*, *Sappho*, *Comet*, *Gallagher* in the order named, and the balance of the fleet in a bunch. At Greenwich Point the yachts found it a nose-ender, and the work began. *Adelphi* still in the lead, worked the strength of the ebb down midchannel with skipper Geo. T. Campbell giving the word. *Lillie*, *Clara* and *Minerva* followed her tactics, while *Lane*, *Sappho*, *Comet* and *Gallagher* put in their boards more to the westward. Abreast of League Island *Lane* went by *Minerva*, but overrunning on a leg toward the Island lost her advantage. *Adelphi*, "heroine of Smoky Hollow," hauled around the buoy in fine style, having fetched the mark ahead of all the larger cabin craft, and Krouse immediately piled on the linen as he went flying for home before the southwest breeze, hugging the Jersey shore all the way up for slack water. Time of rounding Chester buoy:

	H.	M.		H.	M.
Adelphi	12	58	Camden	1	19
Lillie	1	03	Lane	1	21
Clara	1	05	Fairman	1	25
Eddie	1	06½	Post	1	25½
Minerva	1	07	Stella	1	26
Comet	1	10	Selene	1	26½
Bianca	1	10	Gallagher	1	27½
Sappho	1	16	M H Thomas	1	31½

Bianca and *Lillie* ran the Tinicum beach, the rest followed Krouse, who had obtained a long lead. *Lillie* then attempted to cross the ebb, but lost much by the manœuver, as the wind fell light and left her in the race of the tide. The run up was devoid of further incident. The flood gave all hands a lift in the failing breeze, and finally a fine race was finished as under:

	H.	M.		H.	M.
Adelphi	4	13	Gallagher	4	51¾
Eddie	4	27	Selene	4	52
Bianca	4	29½	Fairman	4	52½
Clara	4	32	Post	4	53
Minerva	4	32¾	Lane	4	54
Comet	4	41	Stella	4	54½
Sappho	4	43¾	Thomas	5	02
Lillie	4	45¾	Quay	5	12

The time of start was 10h. 31m. Judges, Messrs. Chas. B. Adams, Beverly (N. J.) Y. C.; Chas. Cohill, Commodore Cooper's Point Y. C., and Geo. F. Keyser. C. C.

VINDEX VINDICATED.

New York, June 5, 1879.

Editor Forest and Stream:

In your issue of 29th ult., "Bobstay," referring to my craft the *Vindex*, says that she caused much amusement to the spectators by leaving the harbor of Oyster Bay, Sept. 16, 1876, under storm canvas. It strikes me forcibly that the laugh is on the other side. Out of a whole fleet of yachts bound to New York she was the only one that dared to get under way. I can't say what the velocity of the wind at the Signal Office was, but I know that it blew hard enough to smash all the sheet blocks in tacking, besides tearing the clew from the storm jib—a mere rag—endangering the bowsprit—an 11½in. stick—by its slatting. I would further say that the bowsprit was not run into the sea as stated, and that I have never carried away a bowsprit on the vessel, although I have cruised in her the whole length of our coast and rounded Hatteras in the winter season. The San Francisco yachts, as I understand the matter, are of the ordinary type of American centreboard vessel, with great beam but small canvas, which, in the smooth waters of a bay, undoubtedly can do well. They would fail miserably if called on to do any real work.

Many of your correspondents write about the English cutter, giving their experience of them, when it is evident from what they say that they have never put foot on board one of them! There are at the present moment in this country the following cutters: *Muriel*, *Saxon*—ex *Kitten*—and a small one built by Piepgrass this spring. The rest are modifications, and would be repudiated by English yachtsmen. The nearest approach to the real thing among the rest is the *Volante*. Yet, with so few to judge from, these gentlemen make wholesale deductions as to the performances of this type of boat. My friend "Podgers" is so sure of the seaworthiness of the broad shoal type that he, in one of your back issues, draws a very pretty picture of the defeat he—on paper—proposes to give to the cutter. I will say in reply that the *Volante* is just the length he mentions, and I shall be most happy, with her owner's consent, to let him try the experiment on her. I only reserve the right to pick the weather. Mr. Clapham, with his model sharpie, had better join the party.

"Open Sea" takes exception to my "poetry," but he really should not. Old hands like myself can't imagine a Smedley 30ft. boat going dead to windward six miles an hour against a three-mile tide, total nine miles; that a fishing smack only 55ft. water line can beat *America* in a blow; nor that she can go 12 knots—or miles—through a chop sea, close hauled—*vide* issue of 29th ult.; nor that a vessel is without butts, etc., when she has a break in the deck.

The Gloucester fishermen, the N. Y. pilots, the English Channel pilots, have, I presume, some experience in small vessels at sea. Have "Podgers" and the other gentlemen who favor the shoal boat for hard work, ever seen anything but a deep keel vessel employed by these men? Robert Center.

THE NEREID.

New York, June 7, 1879.

Editor Forest and Stream:

Has not most too much been said against that quaint embodiment of naval construction, the *Nereid?* From the moment she touched the water to the present time she has been the bone of contention and the butt of ridicule. First of all, the New York Yacht Club, in a most unsportsman-like way, contested her admission to the club races under the shadow of their definition of a yacht, as it was claimed she could not accompany the club upon its cruise from inability to meet the winds and waves of the raging Long Island Sound, but in truth because it was feared that her small displacement would, by time allowance if not by speed, place all the cups at her disposal. All this trouble was taken before the vessel had ever been tried, and the exact reverse of the fears then entertained have became manifest through experience. Up to the present time every report of a race or cruise must have its fling at this long-suffering craft; and I ask again, is it not going a little too far, so far indeed as to lose sight of the generous and liberal spirit of her owner, in thus putting in practice a most original idea, and trying at a great expense a novel experiment? Had the *Nereid* proved a great success in the way of speed, as her first cousin the Catamaran has done, no praise would have been too great to bestow upon this novel vessel and her enterprising owner; as it is, however, the reverse seems to be the case, and in condemning the faults of the craft many too often condemn her owner, when praise alone should be due to a gentleman who so fearlessly enters into an experiment attended with so great expense. I may say in conclusion that I heartily wish we had many like him who would as fearlessly grapple with as many more unsolved problems of naval architecture. Seawanhaka.

Our recent reference to the *Nereid* and her sailing should not be construed into a reflection upon her enterprising owner, Mr. Anson Phelps Stokes. No one appreciates more than ourselves the value of experiment in new directions, and with our correspondent we are prepared to acknowledge the debt the community owes to one who "so fearlessly enters into an experiment attended with so great expense." The charge of belittling any honest efforts looking to improvement in the qualities of yachts cannot be laid at our doors, for we must most emphatically wash our hands of the insipid drivel which has and still may appear in contemporaries from the pens of incompetent persons. While ready to acknowledge the very creditable independence of thought and action which produced such a novel type of vessel as the *Nereid*, we cannot refrain from pointing out the fact that had more prominence been given to the Stream Line theory in her design, some slight changes in construction would have produced more satisfactory results. In the remarks to which "Seawanhaka" takes exception, we merely attempted to account for the seeming paradox of a slow Catamaran, and we now add that any person ridiculing the efforts of Mr. Stokes and others, or superciliously turning up his nose at something new and possibly much beyond his comprehension, has, in our eyes, no standing, and ten to one will be found an ignoramus. Costly experiments like those of Mr. Stokes, if undertaken with reasonable prospects of success, and if founded upon the sound precepts of naval science, should receive the hearty support of all interested in the development of naval architecture; and whether finally successful or not, their originators will always receive from fair minded and logical persons that praise and recognition which is their due.

A CHARMING CANOE ROUTE.

Louisville, Ky., May 15, 1879.

Editor Forest and Stream:

The time has come when canoemen begin to consider their summer cruises, and this leads me to suggest to such as can enjoy from two to four weeks with the paddle that no more delightful trip can be taken in America than that of the James River. The starting point should be Covington, Virginia, in the heart of the Alleghanies, not over twenty-four hours from New York, and easy of access from Cincinnati as well. Covington is on the Chesapeake and Ohio Railway, at the navigable head of Jackson's River, a narrow, sparkling, rushing stream, which in the first thirty miles of its course below Covington descends over three hundred feet, and all the way to Buchanan carries the canoeist in rapid water through the glories of unsurpassed mountain scenery. From Buchanan to Lynchburg the course is varied between the long and beautiful reaches of slack water improvement, occasional short canal connections, and—if one has a mind for short carries now and then—exhilarating rushes down the rapids which invariably succeed the great dams. Thence to Richmond the river broadens, but is uniformly swift and enjoyable throughout. The entire course is broken by rapids, cascades and falls, lively enough to test the best nerve and skill, yet there is not a yard of it where the canoe need be carried, save around the dams. Scenic beauties and grandeur are never absent from the eye. The massive peaks and swells of the Alleghanies; Clifton Forge's wonderful arch; the gap below Craig's Creek, equal to that of the Delaware, but a deal more picturesque; the unique fountain at the "Rat Hole;" the rounded hills below Buchanan; the Natural Bridge, reached in a two-mile tramp from Gilmore's Mill; the glorious pass of five miles down Balcony Falls through the Blue Ridge; the cultivated diversities between Lynchburg and Richmond;—these are but a few salient points in a succession of nature's glories that mark my cruise of 1877 with pleasant memories which I would that others may enjoy. The trip from Covington to Richmond may be made in two weeks easily, and three weeks will compass a very leisurely cruise over all the water from the heart of the mountains to the sea. I cannot over-commend this beautiful river and its hospitable people to the cruisers of the coming summer, and stand ready to answer by post any queries seeking more definite information. A. H. Siegfried.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

Frankfort, Ky.—The reputation of the gunmaker is excellent.

E. N., New Platz, N. Y.—Woodcock open season in New York begins Aug. 1.

C. C., Philadelphia.—Cannot find the *Field* you referred to; files not complete.

H. F. R., Newport.—See our yachting fixtures, the most complete published.

C. E. T. Akron, O.—The specimen which you send is the Bear Bug (*Belostoma grandis*)

F. E. P.—Address of builder of "folding boats" will be found in our advertising columns.

Quaker City.—All the clubs on the Delaware still allow shifting ballast, except in cabin yachts.

G. W. R., Catawissa, Pa.—We shall be pleased to receive and publish your scores. Must be in early.

J. W. M., Rochester, N. Y.—We do not think the dog had rabies. It was much more likely to have been poison.

R. L., Flatbush, L. I.—What is the close season for woodcock in Rutland Co., Vermont? Ans. From March 1 to Aug. 1.

H. D. M., University Place, City.—For works of American history or travel apply to C. L. Woodward, 78 Nassau st., New York.

Corinthian.—You will find your questions covered by our view of "Practical Boat Sailing" in last number. Read the paper.

Keel, N. Y.—Time allowance of New York Y. C. is based upon size, only correct measurement in use. Length measurement is sheer nonsense.

G. H. K.—Will make inquiries about the Colvin canvas boat. The parties may have gone out of business. Possibly you will find what you need among our advertisements.

F. M., Portland.—Can't do everything at once. For yacht builder of good reputation consult advertisers. The man who advertises his business is always the best one to go to.

W. F. G., Charleston, Kanawha Co., W. Va.—Your specimen is a tree toad, *Hyla versicolor*, but how he reached his prsent size before death we are at a loss to conjecture. Perhaps he was trying to make a bull of himself.

W. S.—1. No. 6 English shot contains 268 pellets, No. 7 American shot, 291 pellets. 2. If your measure does not correspond to the scales, test each and see which is wrong. 3. Eugene G. Blackford, Fulton Market, N. Y., deals in frogs' legs.

E. H. H., Stamford.—Do not know where you can get a working boat in your neighborhood. In New York inquire at boat-houses along Harlem River for best bargain, or go to Geo. Roahr, foot 135th st., Harlem, who may put you on the track.

L. F. P., Brooklyn, N. Y.—1. You can buy canvas hunting suits cheaper than you can buy the canvas and make the suits yourself. Go to any of the dealers advertised in our columns. 2. Probably the birds are upland plover, though you should send some description.

W. B. D.—I have a gun, of which the left barrel misses fire. Am using U. M. C. cartridges. Have sent the gun to be repaired, but works no better. Shall I use other cartridges? Ans. The fault is in the gun. The U. M. C. cartridges are used by hundreds and thousands with greatest satisfaction.

C. W., Minnesota Junction, Wis.—The breech-loader is usurping the place formerly occupied by the muzzle-loader, and that fact alone is sufficient, we should think, to prove its superiority. The muzzle-loader and the breech-loader are each good enough in themselves. The accuracy is in the marksman as much as in the arm.

H. B. K., City.—To prepare skeleton leaves and mosses, make a preparation of chloride of lime, 4ozs.; carbonate of soda, 7ozs.; water, 3 pints; dissolve; filter through filtering paper into glass bottle. Now add three-fourths water; put in the leaves. Leave them until they whiten and then put them into clear water to remove the alkaline salts. Then lay them in soft paper to absorb moisture.

K., Pittsburgh, Pa.—Will you please recommend some work or works on ornithology, not too scientific, but accurate and thorough. The book is for the use of my children, but should be something more than the average "child's book" on kindred subjects. Ans. For American ornithology we would recommend Dr. Coues' "Birds of the North West" and his "Birds of the Colorado Valley" now publishing.

Col. J. A. B., Arcate, Cal.—The newspapers report the capture in a seine, at Coddington's Cove, of a tarpum measuring six feet and one-half in length, and weighing 125 pounds. What is a tarpum? Ans. The scientific name of the tarpum is *Megalops atlanticus*, Gill. It has very large silvery scales, plays on surface of water, very active; generally taken with harpoon; has been known to take the hook.

J. N. A., Pennsylvania.—1. The guns are made by Whitney Arms Co., and are generally esteemed good weapons. For general game, from woodchucks to deer, use a 12. 2. We have had no late information regarding the Susquehanna fish-dams. 3. The Tennessee season is a month earlier than that of New York. 4. Tennessee has her quota of snakes, but they are not numerous enough to be annoying. 5. The game of that State comprises deer, wild fowl, quail, wild turkeys, etc.

H., Huntingdon, Tenn.—1.—Where are the wild pigeons nesting this season? 2. Where do catbirds go in winter? 3. Where do snowbirds raise their young? 4. Did buffalo ever abound in the Eastern States? Ans. 1. There is a roost in Michigan, we believe. 2. Southern States, Mexico, Cuba, etc. 3. What do you mean by snowbirds? *Junco hyemalis* breeds in Maine, New Hampshire and in the mountains south to Pa. and perhaps Georgia, while *Plectrophanes nivalis* rears its young in the extreme North, Alaska, Cumberland Gulf and northern part of British possessions generally.

H. W. F., Rutherford.—My Gordon setter bitch has whelped eight puppies—three dogs and five bitches. Are there any particular points to consider in selecting a brace from the litter? There are two or three black, white and tan, the rest black and tan. They are three weeks old. Ans. It is rather difficult to select puppies at that age. We should choose from those without white, and probably the largest and strongest. As they grow older the probable shape of head, legs and body can be determined, and a choice made accordingly.

L. L. H., Huntingdon, Tenn.—There is a kind of blowing horn, which has in the neck a tongue, and is made pointed, to go inside the mouth while blowing instead of against the lips. I have heard such called harp horns, and have frequently seen toy horns of this kind. While out on a camp hunt last fall I met with a sportsman who had a large horn of this kind, which he stated that he had been using for several years, and that it had never been out of order. It was an excellent sportsman's horn, easily blown, and could be heard as far as the ordinary blowing horn, and required much less strain in blowing. Where can I find one? Ans. New York dealers have nothing of the kind in their stock. We do not know where you will find one.

W. N. C., Galveston, Tex.—In a glass ball match, 15 balls, A scores 15 and takes first, B scores 13 and takes second; C and D tie on 11 shoot off, and C wins third. Does D then have any claim to fourth, or should it go to winner of ties of 9? No rules adopted before the match? Ans. The difficulty here is in the negligence of contestants to agree upon form of match before shooting it. If class shooting, D has no claim to fourth; if not class shooting he has such a claim. As class shooting is usually understood to be the method where nothing to the contrary is agreed upon beforehand, we should decide that the referee was correct in awarding fourth prize to ties of 9. If D thinks he was used unfairly he will possibly profit by experience, and when he shoots again have the rules and mode definitely st d beforehand.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 19, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

THE YACHTING SEASON.—Having made the most ample arrangements for obtaining special correspondence and news of all yacht races and cruises, readers of a nautical turn of mind will find more original matter in our yachting columns than in all other sources combined. We flatter ourselves that we have won our race in this respect and have left all competitors away down to leeward.

OLD PENNSYLVANIA DAYS.—"Antler's" sketch of early pioneer life in Pennsylvania half a century and more ago will be read with interest by the generation which has forgotten the use of the canoe-paddle, save as among its sports, and which has discarded the old flintlock which snapped nineteen times and was "onhitched" the twentieth time.

OUT OF THE CURRENT.—Those who seek for the curious and the antiquated need not go back for it a half century. There are numerous eddies in the advance of the day, out of the way reaches, where the life of to-day is that of a hundred years ago and of a hundred years hence. Into just such a place did our correspondent drift when he came among the good, hearty, rugged, old-fashioned people of Canaan.

LOOK TO YOUR DOGS.—The Mayor of New York has just appointed the fifteen dog catchers of the season and one of the partizan daily papers has been trying to make a political issue of it. Whatever may be the party views of the gentry thus honored with the official appointment it seems very certain that no dog's politics will save him. Canines of every shade of political belief, black, tan, yellow, mottled and spotted will be ignominiously yanked in together, and, despite their party howlings on the back stoop through the nigh's of the last campaign, all will be quenched together in the fateful cage of the East River. Meanwhile it behooves every man, woman and child who possesses a valued dog to see that its poll tax is paid and the collar on. The dog catchers for the most part do their work in a satisfactory way, but once in a while their greed prompts them to egregious violations of the commands laid down in Leviticus XIX : 11. It will therefore be wise to keep diligent watch over the dogs which are worthy of life. And when a dog-catcher does become a dog-thief it is the duty of the dog's owner to punish him for it, so that his thieving propensities may be promptly squelched before others suffer.

☞ FOREST AND STREAM will be sent for six months for $2; for three months for $1. To clubs of five or more, $3 per year.

THE CONDITION OF YACHTING.

THE public has been blinded by the splendor of the victories of *America* in 1851, and *Sapho*, *Magic* and *Columbia* in more recent years. The impression has got abroad that because we could outsail our trans-Atlantic cousins we were superior to them on every point, and had nothing to learn from Englishmen concerning a yacht. Exactly the reverse, however, happens to be the case, and it is a maudlin, sickly kind of patriotism that dictates to hide and gloss over our shortcomings, instead of exposing boldly to the light wherein we lack, with the hope that, knowing ourselves and seeing ourselves as others do, we might learn to profit from those who, in everything pertaining to the noble sport of yachting, have forgotten more than we as a class ever knew. It has been the earnest endeavor of FOREST AND STREAM to cater to no small national prejudice, but to point out why and where Americans fail as yachtsmen, and what course we should steer to attain the desired haven of perfection. That among our smaller craft not the faintest trace of real seamanship and yachtsmanship should exist; that in their matches the despicable sand-bag shifters still carry all before them in New York and other waters; that an intellectual sport should be reduced to the level of mere athletics,—is something which would make any but the most tenacious despair of ever seeing things righted, and the money, efforts and time now sunk in sailing machines turned into legitimate channels, in which yachting becomes not a mere gamble among jockeys, but an ennobling pastime, leading to better health, greater coolness, quicker wits, sharper eye, and a vastly increased range of knowledge, as well as candor and manliness in character.

That the leaven is working we are sure; that what we have written has not been lost entirely we feel confident. In a recent issue of the *N. Y. Times* an able editoral sums up the case we have been arguing for many months, and the *Times*, like ourselves, winds up with an appeal for the formation of a Yacht Racing Association as the best and quickest means by which order, system and progress can be brought out of chaos. Rule out shifting ballast and live ballast, sail under uniform rules from Halifax and Portland down to New Orleans and Galveston, and yachts will soon assume an abler model than at present, and yachtsmanship be better understood, as skippers learn to dive *con amore* into the charming realms of a sailor's life.

HANLAN.

THE result of the Hanlan-Elliott match was a foregone conclusion. Even the English betting men, generally slow to acknowledge the strength of a stranger, had given the victory to Hanlan long before the contest opened. To any one who has followed the wonderful career of the Toronto oarsman from the first time he stepped into a shell, his brilliant subsequent record as the fastest and most finished sculler the world has ever produced, is a matter of no great surprise. There are those who have sought persistently to decry Hanlan and to hold up as his superior our own pet of Union Springs, though even such as were disposed to put their sheckels on Courtney never failed to acknowledge that the long, powerful swing, ample chest and stay, as well as the style of the Canadian, could not be matched by any one save perhaps the Owasco sculler. But that even then they underrated the man was plainly shown by the result at Lachine, where Hanlan merely toyed with Courtney, letting him pull up occasionally, and invariably getting away from him again at his will. Had Hanlan pulled his best in that race, he could have bailed out his boat and saluted the crowd just as well as he has twice done on the Tyne. The readiness with which he vanquished Elliott only goes to prove still more what to us was an old story—that Hanlan is without an equal in a shell at home or abroad. The actual champion of America and England, he may as well be hailed as the fastest oarsman in the world; for pulling Tricket for the championship of the world must be regarded merely as a matter of form; there can be no question as to the issue of a match between the Toronto lad and the hostler of Australia. Concerning the race with Elliott little is to be said. It was rowed Monday, June 16, over the Tyne course, for the championship of England, $1,000 a side and the London *Sportsman* cup. After several foul starts both scullers got away together at 12:15 P. M. At the fourth stroke Hanlan takes the lead, rows a winning race as he pleases, occasionally quickens his stroke as high as 42, but dropping soon again to a steady swing of 32 to 34, he finally crosses the line in 21m. 1s.—55 seconds faster than the Elliott-Higgins match, winning by eleven lengths, which he might have made twenty just as well as not. In this race Hanlan, besides adding greatly to his own world-wide fame, has again proved that the care and zealous watchfulness bestowed upon him by Col. Shaw, and the aid extended by the Hanlan Club of Toronto have fallen upon shoulders most worthy, for he has never "gone back" on the club, nor has the club ever "gone back" upon their favorite.

It will be a long time ere the world sees another sculler the equal of Hanlan.

THE MUCKLETONIANS.—The Muckletonian Club, of Winchester, Kentucky, is an association of gentlemen cunning in the use of rod and gun. It was established upon the banks of the Kentucky River years ago and the friendship which binds the members together has grown strong with the seasons. What the title Muckletonian imports we must confess we know not, and we are content to accept the dictum of the Club that this name is one of the Eleusinian mysteries, past finding out. But its signification must be a happy one, for the Muckletonians are a jolly set, and know how to get a great deal of sensible enjoyment out of the world. There are seventeen of them, representing the professions and the different business interests of Clark County. Twice each year they go forth, leaving dull care behind them, and seek pleasure and recreation among the wilds. Last fall a party consisting of R. N. Winn, J. D. Gay, D. A. Gay, J. J. Eubank, J. D. Simpson, A. H. Sympson, G. R. Snyder, R. J. Snyder, B. P. Goff, T. F. Phillips, S. G. Jackson, J. L Wheeler, M. G. Taylor and Leeland Hathaway of the club; Dr. James Sympson, Rodney Haggard, W. D. Gay and James S. Winn, invited guests, and Robt. Brown, cook, and Thomas Brown, waiter, went to the Rocky Mountains, inspected the mining towns, explored the parks, wondered at the vastness of the country, amazed the veteran guides by their daring feats of horsemanship, bagged game and fish, and returned full of enthusiasm, health and happiness. One of their number has embodied their experiences in a brightly written little pamphlet descriptive of the trip, which makes an excellent memento for the members, and their sisters and their cousins and their aunts. This year the Muckletonians propose a fishing and hunting excursion through Michigan and Minnesota. We hope to hear from them.

PHENOMENAL FLORIDA.—Florida, it is sometimes complained, has an itching palm. But we do not blame her for this; a taste for the gold and silver and nickels of the strangers within the gates is a most praiseworthy taste in a State which has no gold nor silver nor lead mines of her own. What we do blame Florida for, however, is that abnormal craving for notoriety which she is constantly displaying in novel and unpleasant ways. So capricious is the State in the manifestations of this desire for the public gaze that it is exceedingly difficult for the inhabitant of that land to enjoy that feeling of security so necessary to a peaceful reclining beneath one's own vine and fig-tree. It is not so long ago that we chronicled a great descending of Florida rain and uprising of Florida water (no surreptitious puff of a toilet article intended), overflowing of lands, drowning of beasts, and general panoramic display of Noachian landscape. Later the boiling spring suddenly gushed up off the Florida coast; then an upheaval of the land, *Parturient montes*, and all the other approved premonitory symptoms of a Floridian volcano. Now that the eyes of the world have been turned to the spouting of Vesuvius, the emulous peninsula has ceased her competitive rumblings, and betakes herself to a new *role* As will be seen in a letter elsewhere, vast portions of the State are drying up. A long drought has visited the land; streams have disappeared; the watery fastnesses of reptiles and wild beasts are giving forth their parching inhabitants; the fish are dying in the shallow, heated channels, and general woe has fallen upon the brute creation. Such a succession of calamities would seem to rob life in phenominal Florida of its charms.

THE FOREST AND STREAM AS A STAKEHOLDER.—When we published ourselves as the stakeholders in a recent pigeon-shooting challenge, we did so conceiving that to be the intent of our correspondent's communication. To state that we did not seek to unwarrantably assume such a position would be entirely superfluous. Readers of FOREST AND STREAM know its character too well to make any such disclaimer of wrong intent necessary. More than this. So far from desiring or assuming to be the stakeholders in any match whatsoever, we have always held ourselves aloof from such office. It has been, is and will be our aim to encourage generous rivalry in sport, for the sake of the sport itself rather than any mercenary gains accruing from it to the participants; generous competition of skill rather than strife for personal aggrandizement.

IMPORTATION OF GAME BIRDS.

WE publish herewith several reports from gentlemen who have received and set at liberty the migratory quail recently imported from Messina. The hardy little fellows have aroused much enthusiasm among all who have noted their excellent condition after such a long confinement on ship-board, and the quail promise to become favorite birds with American sportsmen. The Brooklyn Gun Club exerted themselves to secure a large number, and have distributed them with a generosity demanding recognition. Of the 300 and more birds consigned to the club, they presented 100 to the Blooming Park Association; 100 were sent to Smithtown, L. I.; 40 to the Watertown Sportsmen's Club, of Seneca County, N. Y.; 41 to Theo. Morford, Newton, N. J.; 15 to James Bryce, Farmingdale, N. J., and 10 to George Creed, Jamaica, L. I. If the Long Island birds come back next spring, the club proposes to renew the importations next year on an extensive scale. Our correspondents unite in giving Mr. H. P. Tobey, of Boston, deserved credit for his courtesy in taking charge of the orders and materially facilitating the undertaking.

Our columns have already contained from time to time nearly all the available information concerning the habits and appearance of these birds. Nevertheless, we shall publish an article upon the subject next week, accompanying it with a cut.

ROCKLAND, Me., June 14, 1879.

EDITOR FOREST AND STREAM:

The migratory quail arrived here all right with the exception of two dead ones in the cage and seven more short, making only nine short out of 125. We let them out in squads of ten to fifteen in a place and they flew as strong as if they were just caught. Our thanks are due H. P. Tobey, Esq., of Boston, for all his trouble in the importation of the quail.

JAMES WIGHT.

CLAREMONT, N. H., June 13, 1879.

EDITOR FOREST AND STREAM:

The migratory quail arrived here in good condition. Those purchased by Mr. John Gould and friends, of Mt. Lebanon, N. H., were given their freedom Wednesday afternoon. They were only two short, I believe. Those of Col. R. Jarvis and your correspondent were turned into the fields this A. M., early. We were only three short of the full number. The birds seemed lively, and two of them exhibited for our benefit their speed of wing; the others walked quietly away into the grass and brakes. Should be pleased to hear of other birds imported through your paper. MONT CLARE.

BOSTON, June 16, 1879.

EDITOR FOREST AND STREAM:

The 200 migratory quail consigned to me, at Wareham, Mass., reached that place in blooming condition, there being 197 healthy birds, two lame ones, and one only missing. Some were a little short of crest feathers, owing, apparently, to the attentions of their neighbors, but as a whole, they were in excellent health and spirits. They were so tame as to eat from the hand. They were released in different places, in lots of about twenty-five each, under the directions given in your paper of week before last. In most cases the birds, soon after the door was opened, ran out, fed on the grain, flopped their wings, dusted themselves, basked in the sun, made love, and were left in a state, apparently, of high contentment with their new surroundings. Touching their habits, I would say that the few which flew away went straight as a bullet, with exactly the flight of our American quail. After they had settled, I walked them up, and found they did not run at all, but lay perfectly quiet until I was close upon them, when they were up and off with a celerity and vigor that was refreshing. They certainly emit a strong game scent, as our bird dogs confessed to it at once. My observations satisfy me that they possess in full measure the excellent game qualities of our own quail, and that they will furnish abundant amusement if we shall be so fortunate as to succeed in their introduction, for which the prospect is promising. HORACE P. TOBEY.

BROOKLYN, N. Y., June 13, 1879.

EDITOR FOREST AND STREAM:

Through the kindness of Mr. Horace P. Tobey, of Boston, I imported 100 migratory quail. They arrived in good condition—not a dead one in the crate. I forwarded the birds by Westcott and Adams Express Companies to the Lehigh Valley Game Protective Society, of Pennsylvania, and received notice from the Assistant Secretary, Chas. H. Bitting, Esq., that the birds arrived in excellent condition, and were set at liberty. ARNOLD STUB, M. D.

ALLENTOWN, June 12, 1879.

EDITOR FOREST AND STREAM:

News in this part of the country is very scarce. We will have plenty of game by next fall, especially "Bob Whites." We received, on the 10th of this month, as a donation to our Game and Fish Protective Association, 100 migratory quail from Dr. Arnold Stub, of Brooklyn, who is also a member of our association. We were all very well pleased with our gift, and immediately let them fly (June 11). Although the birds were caged since the 16th day of May, yet when we opened the cage, they flew with great rapidity. When we let them fly we first put some hemp, etc., in front of the cage, and then opened the cage. To our great surprise, they did not run nor fly out, but simply walked out, looked around to behold their new home, picked among the bushes, and then flew away about 100 feet. We have very good ground for such birds. C. H. BITTING.

MCKEESPORT, Pa., June 16, 1879.

EDITOR FOREST AND STREAM:

The case of migratory quail for the McKeesport Sportsman's Association came to hand on 12th inst., in fine condition, and were turned loose on the grounds of the association the following morning. There was but one dead one in the cage on its arrival. We had ninety-seven live birds, showing a loss of but three out of the hundred. We divided them into five lots on an area of about 1,500 acres. But two lots took flight upon opening the cage, and settled down just like our "Bob White," after flying about 100 yards. We will report to you during the summer for the information of your readers any notes we make of their nesting, etc. Please tender our thanks through your columns to Mr. Horace P. Tobey for his services. We have come to the conclusion that "Bob White" also migrates to some extent. During the month of April the writer scoured the country with dogs and could not find a single one within ten miles, but since mating season there are at least a dozen pairs with young on our grounds. Woodcock very plenty.

H. HOLDANE,
Sec'y McKeesport Sportsman's Assoc'n.

TOWANDA, Pa., June 16, 1879.

EDITOR FOREST AND STREAM:

The migratory quail ordered by, and consigned to, the Rod and Gun Club of this place, arrived in excellent condition Wednesday the 11th inst., and have been distributed in this vicinity in from two to six pair lots. The writer of this had the privilege of letting loose quite a number of them, and it was surprising to see in what fine strong condition they all were in. In each case a place was selected conveniently near water and cover in meadow grounds. The number to be let out were put in a low pasteboard box (plentifully perforated with holes to admit light and air) and set down on some freshly ploughed dry earth, and then withdrawing a few rods, with a cord attached to an end of the box, previously cut and fixed so as to be easily drawn as a slide, after waiting a few minutes to allow the birds to quiet down, the cord was cautiously drawn, and in every instance they walked quietly out and commenced dusting, which they seemed to enjoy immensely, and then rising together or in pairs going away into cover. In one or two instances before leaving the dusting bed they gave the strongest possible evidence that they were aware that the nesting season was at hand. The result of the experiment thus far has been highly satisfactory, and as we have placed them on property where the owners will look kindly on these "little strangers in a strange land," we have every reason to expect gratifying results if they only fill the migratory part of the bill. JOT.

WAYNESBURGH, Greene Co., Pa., June 15, 1879.

EDITOR FOREST AND STREAM:

We ordered last March, through Mr. H. P. Tobey of Boston, 100 migratory quail, and on Wednesday last they came to hand. They were all in first-class condition and as bright and lively as we could wish, with the exception of one cock with a broken leg. They were released the next day in suitable places within a few miles from town, and in accordance with the instructions published in FOREST AND STREAM. The farmers on whose premises they were placed will co-operate with us in protecting them as far as possible from hawks, owls, pot-hunters, etc. If they do well we expect to order a greater number next year. The sportsmen of our neighboring town of Washington also received their birds in good condition. BYRON CRAGHOFT.

The Rifle.

FRANK H. LORD, PISTOL SHOT.

WHILE we have had rifle experts, and almost the very perfection of skill with the small bore at the extreme ranges, another class of small arms has been left to an almost entire neglect. For pistol-firing we are referred back to the days and feats of Capt. Travers and other by-gone champions. The wordy advocates of off-hand shooting would find it in its entirety in pistol-shooting, which is off-hand or nothing. In France the art of pistol-firing has not fallen into such neglect, but in this country, while pistols by the thousand are daily carried, it is only at rare intervals that one is met who has even the most common-place ability in the handling of the weapon.

The practice of pistol-shooting possesses some advantages over rifle-shooting, in that it is more nearly a test of personal ability—it is more readily conducted, and the fact that one is a good pistol shot may often prevent a rencontre with evil-disposed persons. The really good pistol shots of the city and country may be reckoned on the fingers; but pre-eminent among them is Mr. Frank H. Lord, a gentleman of this city, whose feats with the pistol are in some respects almost beyond credence. Shooting only for his own pleasure, and never appearing in open matches or in other places than the privacy of the shooting gallery, it is not at all strange that little should be known of his skill outside of the small group who almost every evening admire his combined skill and nerve.

Mr. Lord's records are unimpeached, and the larger part of them have been made in the ordinary routine gallery practice. He is what may be termed a natural shot, and this keen eye sight, with general and specific training in his pastime, has brought him very near perfection. Mr. Lord is still a young man, and as far back as 1857 began a system of general physical training under Prof. John Wood. This continued until 1867, and such was the young amateur's proficiency, that in 1866 he was presented with the "Hanlon Badge" by the celebrated Hanlon Brothers for excellence as a finished gymnast. He began the practice of pistol firing about this time, under the guidance of Mr. Jas. S. Conlin, and to-day the bulk of his shooting is done in Conlin's Gallery.

Mr. Lord makes a yearly trip to Paris to spend time, benefit his health, and enjoy a bout with the famous pistol shots of the French capital. For ten seasons past he has been chosen by the English-speaking residents of Paris as their champion, and a well-chosen representative has he proven. On one occasion he performed, among other feats of accurate marksmanship, the following: A cap of an ordinary musket was placed upon the neck of a champagne bottle, and Mr. Lord, standing at 36 feet, or 12 paces, with an ordinary duelling pistol picked off the cap without scratching the glass. The same feat was repeated, but with the pistol transferred from the right to the left hand. Two more caps were picked off with right and left hand firing respectively, but in these instances the pistol was held in a reverse position, with the line of sight below instead of above the line of fire. The next shot was a fancy one, Mr Lord standing with back to the object fired at, leaning far forward, and then with pistol pointed back between his legs, picking off the cap as before. The last of the six shots was made sitting in a chair, again with back to target and leaning back until the target could be seen by the head and eyes bent back. These shots were delivered consecutively, and gave the Parisians such an idea of his skill that none cared to try conclusions with him. It was Mr. Lord's delight to step into a shooting gallery, and, when he had found a good weapon, astonish the keeper and spectators by his seeming inability to miss an object or mark fired at. The shooting of plaster eggs placed on bottle-necks is a favorite pastime there. Generally the cost of the shot far exceeds the cost of the broken plaster spheroids; but Mr. Lord of course reversed this, and the astonished *maitre d'armes* found his brittle ware swept away about as fast as they could be set up.

In shooting at the word of command, as in duelling, where the seconds cry out, "Are you ready?" Ans., "Ready;" "Fire!—one—two—three," the shooter being required to shoot between the words "Fire" and "three," Mr. Lord is equally expert. With a duelling pistol, at 12 paces, Mr. Lord struck down six ¾-inch bullets hung up by threads. Such an adversary on the Field of Honor would satisfy the chivalric yearnings of about any mortal. At the word "one" Mr. Lord fired ten consecutive shots into a 1½-inch circle, same distance.

Where nerve as well as exact holding are required Mr. Lord is equally proficient. It is a favorite feat to suspend his watch—a fine imported piece, costing $250—and put shot after shot through the loop at 36 feet distance, a match or wooden tooth pick laid across the opening of the golden loop is cut cleanly through, and though the watch has been under fire scores and hundreds of times, it still ticks on toward the day which may come when a bullet, a fraction of an inch out of the way, may send the works of the watch in a shower of wheels and pinions.

On a recent date, as showing his ability for long range firing with the pistol, he struck two caps out of three shots at a distance of 60 feet. As the ordinary musket cap is about ¼th of an inch across, the mere seeing of the mark was somewhat of a feat, but to see and hit as well was something entirely beyond the common. Yet it was done at a certain hour previously agreed upon before a large number of marksmen, including many members of the N. Y. and Zettler Rifle clubs. With a Stevens 12 inch barrel pistol, distance 135 feet, Mr. Lord picked off a couple of ¾ inch bullets, using right and left hand in turn. Three consecutive ¾ inch bullets fell at 45 feet before shots from a large-sized Smith & Wesson revolver, Russian model, heavy trigger pull, and with this and a Stevens pistol at 75 feet, Mr. Lord is at any time good for three bullets out of 6 shots fired, while a shot an inch out would be looked upon as a very wild shot. To give some notion of his

ability Mr. Lord struck off a target at 36 feet, or 12 paces, firing 10 shots with a Stevens pistol, with 10 inch length of barrel. It makes a record of 49 in a possible 50, Creedmoor rule, and the difficulty of catching an open sight at a flat mark as compared with the round must be known to appreciate the target which we publish in its full size, showing exactly the point struck by each shot. A trade dollar would have been winged or punctured by the whole 10 shots.

MASSACHUSETTS—*Walnut Hill, June* 11.—The eighth competition in the long-range match, at 800, 900 and 1,000 yards at Walnut Hill to-day, with the favorable weather, induced a fairly large attendance of spectators, including more than the usual complement of ladies; and the result of the close attention of the riflemen to their work is shown in splendid shooting, an average of 201 10-11 having been secured by the eleven contestants who completed their scores at the three ranges. Mr. Nichols, running short of ammunition, was compelled to withdraw on his fourteenth round at 1,000 yards. Capt. Jackson again heads the list for the day's work with a fine 215. The weather conditions were capital at the beginning of the sport, the light being good and the wind blowing gently from the northeast, changing, as the match progressed, to a "5 o'clock," where it continued till the close of the competitions. During the afternoon members of Co. D, First Regiment (Roxbury City Guards), visited the range, and did good work at 200 yards, the scores of the four leading competitors being as follows, ten rounds per man, military rifles:

P J Andrews	40	F H Carter	37
L Eddy	36	F C Brownell	35

The long range scores stood:

W H Jackson.

800	5	5	5	5	5	4	5	5	3	5	5	5	5	5—72

Walnut Hill, June 14.—A fairly large number of spectators gathered to-day, and a good many riflemen took part in the three regular competitions of the day. The weather was favorable to the sport, a good light prevailing most of the day, and the wind hanging pretty steadily to one quarter, marking from "seven to nine o'clock" throughout the shooting.

In the Winchester rifle match, at 200 yards, there were 23 entries, and Capt. Jackson again took first place under the rules, the scores being:

W H Jackson	5	5	4	5	4	4	5	5	4	5	5	4	4	5	4—69
C U Meigga	5	4	5	4	4	5	4	4	5	5	5	4	4	5	5—68
E F Richardson	5	5	4	4	5	5	5	5	5	4	5	4	4	4	4—68
A B Brown	4	5	4	4	4	4	5	5	4	4	5	5	5	4	5—67
E B Soutter	4	4	4	5	4	4	5	5	4	4	5	5	4	4	4—65
J N Fryer	4	4	5	4	5	4	4	4	5	5	4	5	4	4	4—65
W Charles	3	4	5	5	5	5	3	4	3	4	4	4	4	5	5—65
R Davis	4	4	4	4	4	5	4	4	4	4	4	3	5	4	4—64
J B Parker	5	3	4	4	4	4	4	5	4	4	5	3	4	5	4—62
H Tyler	3	4	4	4	4	5	4	5	4	4	3	5	3	4	4—60

The 500-yard off-hand match had 16 entries, and bids fair to prove one of the most popular matches yet had by the Massachusetts Association. It is open only to members of that body, and is to be shot on four Saturdays, yesterday's competition counting as the first. The conditions are: rounds, seven, off-hand firing; entry fee, 50 cents, re-entries permitted and 75 entries required. The first prize is the bronze medal of the National Rifle Association, won by the Massachusetts team at Creedmoor last fall, and there are three cash prizes. The match is to be decided by the three best scores, whenever made; in case of a tie, the three scores to be reckoned as a continuous score. The result of the first day is as follows:

W Charles	4	5	4	5	5	4	5—32	J O Mattoon	5	5	5	4	4	3	3—28
E F Richardson	5	5	5	4	4	5	3—31	H L Lee	5	2	4	4	4	4	4—27

MASSACHUSETTS—*Haverhill, June* 14.—There was a fair attendance at Riverside Park to witness the shoot of the Mt. Washington Rifle Club this afternoon. The scores at 200 yards stood:

Willey	5	5	4	4	4	4	3	3	4	4	—40
Pilsbury	5	3	3	2	4	3	5	3	4	4	—36
Kimball	3	3	4	4	3	3	4	4	5	4	—37
Foss	4	4	4	4	3	5	2	2	4	4	—36

THE MEDFORD SPRING MEETING.—The spring meeting of the Medford Amateur Rifle Association was opened on the 11th, at Bellevue Range, Medford, under favorable auspices. The weather was favorable, and a large number of spectators, with many ladies, were present. The targets were opened early for bull's-eye practice, and most of the marksmen availed themselves of the privilege thus afforded them for bettering their chances in the regular competition assigned for the day. That they improved the opportunity will be seen by perusal of the scores, which show most excellent results. There were 130 entries in the Maynard rifle match, seven rounds at 200 yards, and open to all comers. The prizes, of which there are seventeen, are valued at $106.50. Following is the result of the first day's competition. Leading scores:

H K Richardson	5	5	4	5	4	5	5—33	L W Farrar	4	4	4	5	5	4	5—31
J B Osborn	4	5	4	5	4	5	5—32	F E Garden	4	5	5	4	4	4	4—31
N W Arnold	5	4	5	4	4	5	5—32	J R Teele	5	4	5	5	4	3	5—31
E Whittier	4	4	5	5	5	4	5—32	A Babbidge	4	4	4	4	5	4	4—30
C H Russell	4	5	5	4	5	5	4—32	R Sawyer	4	4	5	5	4	4	5—30
W Charles	5	5	5	4	5	4	4—32								

The second and closing day of the meeting brought a very large attendance of spectators and riflemen to Bellevue, delegations being present from Boston, Abington and other places. The weather conditions were not as favorable as could be desired, an easterly wind bringing with it a fog, which caused the smoke to hang about the firing points. Notwithstanding this there was some excellent shooting done, Messrs. Jackson and Osborn each scoring 34 out of a possible 35 in the Maynard rifle match. This competition was called at 9 o'clock and had 166 entries. Following is the result of the closing day's shooting, the best scores being given:

J B Osborn	5	5	5	5	4	5	5—34	E Whittier	4	5	5	4	4	5	5—32
W H Jackson	5	5	5	5	5	4	5—34	R Sawyer	5	4	4	5	5	4	4—32
N W Arnold	4	5	5	4	5	5	5—33	J Eastman	5	4	4	5	4	4	5—31
H Withington	5	4	5	5	4	5	5—33	H Tyler	5	5	4	3	5	5	4—31
W Charles	5	5	5	5	4	4	5—33	W E Gemller	4	5	4	5	5	4	4—31
A Babbidge	5	5	4	5	4	5	5—33	W Gerry	4	5	5	4	4	4	5—31
E W Law	5	5	5	4	5	5	3—32	J B Tule	5	4	4	4	4	5	4—30
C H Russell	4	5	4	4	5	5	5—32	J B Parker	3	6	4	4	4	5	5—28
H K Richardson	5	4	4	5	4	5	5—32								

The conditions required an aggregate of three scores, counted as one continuous score, and the winners were, in the possible 105:

J B Osborn	34	33	32	99
W Charles	33	33	33	99
N W Arnold	33	33	32	98
W H Jackson	34	32	32	98
H K Richardson	33	32	32	97
E Whittier	32	32	32	96
C H Russell	32	32	31	95
A Babbidge	33	31	30	94
E W Law	32	31	31	95
H Withington	32	31	30	94
H S Barris	31	31	31	93
H H D Ossling	31	31	31	93
N Sawyer	32	31	30	93
W Gerry	31	31	30	92
J H Eames	31	31	29	91
J R Tule	31	30	29	91
H Tyler	31	30	29	91

There being, contrary to expectation, no entries in the 400-yard subscription team match, it was withdrawn.

Mammoth Rifle Gallery, Boston, June 14.—The shooting this last week was the finest shooting at fifty yards that has ever occurred in the gallery. Mr. C. Edwards, on Friday, succeeded in getting eleven consecutive bull's-eyes, making a clean score of eight consecutive bull's-eyes, and starting a new score with three more, on his twelfth shot getting a one o'clock nipper. It was the second time a clean score has been made. The first was in April last by Frank Hollis. Mr. Edwards takes the $20 offered by the management, who are still ready to pay the same amount to any one making a clean score of eight consecutive bull's-eyes. Mr. Edwards is a member of the Massachusetts Rifle Association. The monthly score stands; 150 feet, rounds 8, possible 40:

C Edwards	5	5	5	5	5	5	5—40	H Tyler	5	5	5	4	4	4	5—36
Frank Hollis	5	5	5	4	5	5	5—39	M O Johnson	5	5	5	4	4	4	5—36
Geo Lamb	5	4	5	5	5	4	5—38	D F Whitten	5	4	5	5	4	4	4—36
G J Seabury	5	5	4	4	5	5	4—37	Geo Estes	5	5	5	5	4	4	4—36
D Shurtevan	4	4	4	4	5	5	5—36	L A Wallon	4	4	4	4	5	5	5—36
Geo W Barry	5	4	4	4	4	5	5—36	J R Scott	5	4	4	4	4	5	5—36
E Whittier	5	5	4	4	4	5	5—36	W H Restarick	4	4	4	4	4	5	5—35
H W Arnold	5	5	4	4	4	5	5—36	T H Carr	5	5	4	4	4	4	5—35
Henry Lowell	5	5	4	4	4	4	5—36	A S Lord	5	4	4	4	5	5	5—35
G McKinzie	5	5	4	4	4	4	5—36	C E Lewis	5	5	5	4	4	3	4—35

G. E. R.

—The Raymond Sporting Club, of Boston, have made arrangements for the use of Bellevue Range every Friday, and on June 13 made some fine scores, both glass ball shooting and rifle practice. There was also a large attendance.

—The Medford Association have completed arrangements for a regular weekly competition, as follows: 200 yards, 10 rounds, any rifle, all comers. This is to be a classified match, and a Sharps mid-range rifle is to be shot for by all classes, closing when 25 per cent. of the whole amount paid in for entries shall equal the cost of the rifle. The man in such class having the three highest scores standing a winner of the rifle in his class, and the winner in each class then to shoot one score, 10 rounds, and the individual making the highest score from the average of his winning scores shall become the owner of the rifle. In addition, 40 per cent. of the entire entry fees received in each class shall be distributed into prizes, as follows: First prize, 15 per cent.; second, 12 per cent.; third, 8 per cent.; fourth, 5 per cent.

CONNECTICUT—*Collinsville, June* 11.—Regular weekly practice meeting of Canton Rod and Gun Club; 200 yards, off-hand, 3lbs. pull:

	Mass.	Creed.		Mass.	Creed.
Hull	105	45	Lewis	81	37
Bidwell	92	43	Case	75	37
Lauenstein	92	40	Phater	75	37
Andrews	85	42			

Mr. Hull's score—10, 10, 11, 11, 12, 10, 10, 12, 12, 10—is excellent in the particular that he could have made only two points more without raising the Creedmoor count.

ZETTLER VS. SEPPENFELDT—*Guttenburg, N. J.*—Match between Zettler Team No. 2, and Seppenfeldt Rifle Team; 200 yards:

Zettler's.		Seppenfeldt's.	
Oehle	203	Garrison	151
Moore	195	Adams	177
Broadway	189	Rein	154
Ward	174	Keller	191
Dutil	150	Greenberg	173
Fassold	165	Horman	169
Brown	185	Jaehne	199
Sherman	164	Seppenfeldt	170
Zimmerman	194	Anderson	161
Beatse	178—1799	Keenan	163—1729

J. A. S., Sec.

Gecener's West Side Rifle Team.—Score for the week ending June 15; 200-yard target reduced to 85 feet; possible 50:

L Vogel	46	J Roesner	44
G Greener	45	J Rossener	44
A Dorr	45	C Welker	43
G Roesner	45	E Holzmann	43
J Reitwelsner	44	J A Reitwelsner	43

J. C. C.

Brinton, June 13.—Second contest, association long-range match; scores:

A Niemand.															
800	5	5	5	5	5	5	5	5	5	5	5	4	5	—74	
900	5	5	4	5	0	5	5	5	3	5	5	5	5	5—69

Columbia Range, West End, June 16.—Two matches were shot. The first was for the *Turf, Field and Farm* Gold Challenge Badge—200 yards, 10 shots, standing with elbow clear of body. Major Henry Fulton and Capt. J. L. Paulding, who used military rifles, were allowed three points by those using other rifles. The following were the best scores:

Capt J L Paulding	3	4	4	4	4	4	4	4	4—42		
R M Seymour	4	4	3	3	3	4	4	3	3	4—35	
Major Henry Fulton	4	3	3	4	3	3	4	3	3	3—34	
E Ackerman	3	4	3	4	3	3	4	3	3	3—33	
W E Church	3	0	3	4	3	3	4	4	3	4—31	

The second match was a competition for a Ballard rifle, 200 yards, 10 shots. The best scores were:

Capt J L Paulding	4	4	5	5	3	3	3	4	3	4—41	
R M Seymour	3	3	3	4	3	4	4	3	4	4—35	
A Ackerman	4	3	3	3	3	3	4	4	3	3—33	
W E Church	4	2	3	4	3	3	2	3	4	3—32	

PENNSYLVANIA—*Winchester, June* 7.—The first of a series of matches between the Pennsylvania Rifle Club, of Philadelphia, and the Westchester Rifle Club, took place at the range of the latter team to-day. The weather was excellent. The match was won by the Westchester Club by two points. Distances, 100 and 200 yards, Massachusetts rules and target observed; ten shots allowed at each range. The remarkable skill of Ingram at the 200-yards range (six successive centres), and Dr. Cardwell at the 100 yards (scoring 111), created the wildest enthusiasm on the part of their friends. Appended is the score:

Westchester Club.	100 yds.	200 yds.	Tl.	Pennsylvania Club.	100 yds.	200 yds.	Tl.
Taylor	101	86	187	M Price	109	91	200
Kimball	103	93	196	Hexamer	95	72	167
Cardwell	111	82	193	J Cox	110	88	198
Ingram	104	72	176	Shuster	89	78	167
Worth	97	77	174	Ballinger	106	78	184
Haines	100	93	193	McOwen	97	85	182
Fitzsimmons	104	71	175	G Fox	104	83	160
Total	819	679	1498	Total	821	675	1496

WASHINGTON, D. C., *Benning's Range.*—On Saturday, the 7th, an all-comers' match was shot at 500 and 600 yards under the auspices of the Columbia Rifle Association. A badge of gold, in the form of a mid-range target, was the prize offered, and, despite the efforts of the Columbiads, it was captured by a representative of the Montgomery County Club of Maryland. The day was propitious; the thermometer stood at 70 deg. in the shade. The light, although sunny, was not a blinding glare, and a brisk breeze, blowing toward the marksmen, was reasonably steady. Mr. Partello struck a four on the edge of the bull on his sixth shot, spoiling his chance for a clean score, and dropping behind Dr. Scott, who had the satisfaction of seeing the white after every shot. Moving back to the 600-yards firing point, the contest seemed narrowed to Dr. Scott, Mr. Partello and Mr. Lauritzen, these two having 49 each to the Doctor's 50. The Doctor's fifth shot at this range was a 6 o'clock "nipper." Mr. Partello kept on pounding the very centre of the bull's-eye, tying the plucky Doctor shot for shot in the midst of intense excitement, while all the others fell out of the race. On his ninth shot the Columbian champion broke, and although his last shot was a superb bull's-eye, he retired, beaten by one point. Dr. Scott is comparatively a new man, but has made steady progress and shown admirable nerve and judgment, both at off-hand and at mid and long ranges. The shot-for-shot score is as follows:

Dr S I Scott	500	5	5	5	5	5	5	5	5	5	5—50	99
	600	5	5	5	5	4	5	5	5	5	5—49	
J M T Partello	500	5	5	5	5	5	4	5	5	5	5—49	98
	600	5	5	5	5	5	5	5	5	4	5—49	
A A Adee	500	4	5	5	5	5	5	5	5	5	4—47	95
	600	5	5	4	5	5	5	4	4	4	5—47	
C H Laird	500	5	4	5	3	5	5	5	5	5	5—47	92
	600	5	5	4	3	5	5	3	4	5	5—45	
Prof Wm Harkness	500	5	5	4	5	5	5	5	5	5	5—47	91
	600	4	4	5	5	5	5	4	3	5	4—44	
Col J O P Burnside	500	5	5	5	4	4	5	5	5	5	5—48	91
	600	3	5	4	3	5	5	5	4	4	5—43	
P J Lauritzen	500	5	5	4	5	5	5	5	5	5	5—49	89
	600	5	5	5	4	2	3	5	5	4	4—40	
Mr Foote	500	0	0	3	0	5	3	4	4	4	3—30	65
	600	5	4	0	2	4	3	0	3	4	0—25	

After the match some interesting practice was had at the extreme long ranges, a new experiment for the Columbiads. Dr. Scott succeeded admirably, falling only a few points behind Mr. Partello, who made 46 at 1,000 yards, and 48 at 1,100, out of ten shots at each stage.

WASHINGTON, D. C.—*June* 14.—The Columbia Rifle Association had a pleasant meet to-day, with excellent light and not too trying a wind. A tasteful gold badge, imitating a short-range target, was put up, in an all-comers' match at 200 and 300 yards, off-hand, but only twelve contestants entered, among them a fair sprinkling of artillerymen from the Arsenal barracks. At the first stage, Mr. J. B. Burnside headed the list with 44 points to his credit, while Dr. Scott, using his long-range Remington with battering charges, got nearly knocked out of time on the first few rounds, but rallied, and, after bringing up the cheerful white disc three times, retired with the score of 41. The military rifles came in last on the list. At 300 yards young Burnside gathered in a discouraging sequence of "mags." Col. Burnside's score promised well for a victory; but the Doctor braced himself up, and after a hard struggle came out the victor by an aggregate of 81. The Colonel tallied the same total, but fell behind the Marylander on the longer range, and so lost the prize. Dr. Scott joined the Columbia Association, however, at the close of the match, so as to keep the badges in the Capitoline family. The following are the leading scores:

	200 yards							300 yards.							Tl.
Dr S I Scott	4	3	4	3	5	4	4	4	4—41	4	2	4	5	5	4	4	4	4—40	—81
Col Burnside	4	5	4	4	4	3	5	4	5—43	3	5	5	4	3	5	4	3	5—38	—81
Jas E Bell	3	4	4	4	4	4	3	3	4—39	4	4	4	3	4	4	5	6	4	3—40	—79
J M T Partello	4	4	4	4	4	4	4	3	4—39	4	4	4	4	4	3	5	4	4	3—39	—78
D W Bruce	4	5	3	4	4	5	5	5	4—43	4	3	4	4	4	4	3	4	3	2—35	—78
J B Burnside	5	3	4	5	4	4	4	5	4—44	4	3	3	3	3	4	4	3	3	3—34	—78
P J Lauritzen	3	5	4	4	4	5	4	5	2—40	4	4	2	4	3	4	4	3	3	4—35	—75
Corp Hatton	4	3	3	3	4	4	3	2	5—37	3	3	4	2	4	4	0	2	4	4—30	—67
Lieut Taylor	5	3	4	3	3	5	4	4	3—36	3	3	4	3	2	4	3	4	2	2—30	—66

The two last received, besides, 5 points allowance for military rifles and pull.

LOUISIANA.—*New Orleans, June* 8.—The third competition for the new Lilienthal cup, individual shooting, took place to-day at Frogmoor. There was a large attendance of riflemen present. The weather in the beginning was not over propitious, for, although the atmosphere was remarkably clear, the wind was puffy, and the fixing of wind gauges was consequently a delicate operation. Later, however, the breeze grew steady, blowing toward the marksmen, and offering no obstruction to line firing. Circumstances being favorable, the scores made were, the most of them, excellent, and the leading one the best that has yet been made in contests for this cup. Captain Wm. Arms lead the entries at both distances, making 22 out of 25 at the 200 yards range, and 20 out of 25 at the 300 yards. The match is fired under military rules, with military rifles, distance 200 and 500 yards, five shots at each range, with two sighting shots. Three innings entitle the winner to possession of the prize. First contest won by Bercegeay, score 41; second contest won by Weiss, score 39:

	200 yards.				Tl.	500 yards.				Tl.
Wm Arms	5	4	5	4	4—22	4	5	3	4	4—20—42
E Bercegeay	4	4	4	4	3—19	3	5	4	4	3—19—38

J Whetstone	120	124	244	J Weston	120	117	237

WISCONSIN—*Milwaukee, June* 13.—The Milwaukee Rifle Club had their usual practice to-day at the National Home Range. The weather was reasonably propitious for good scores, but the smoke from the Bay View Rolling Mills and the Minerva Furnace Company's Works so filled the Menominee Valley, where the range is situated, that at times it was impossible to discern anything but a dim outline of the bull's-eye. The following were the highest scores, the distance 900 yards, any rifle, any position:

Johnston	5	4	5	5	5	5	5	4	5	4	4	5	4	3	—68		
Bangs	4	5	4	4	5	4	4	4	5	5	3	5	5	5	—67		
Welles	4	5	3	3	5	5	5	5	3	5	4	5	4	5	—66		
Drake	4	5	3	4	5	5	2	5	4	5	4	3	5	4	4	—64	
Berry	5	4	3	3	5	4	5	5	5	4	5	4	3	4	4	—63	

THE BEST SCORE.—*Richmond, Va., June* 6—*Editor Forest and Stream:* I write you for information on the subject of Mr. J. B. Osborn's score, in the match between the Massachusetts and Abington teams. You have it:

9	11	9	10	11	11	6	10	6	11—94)	
6	5	6	9	11	10	10	11	3	11—82	Massachusetts count.
8	9	11	9	10	5	10	11	10	11—94)	

According to the targets used by us the Creedmoor count of these three scores would have been 42, 39, 42, while you have it 48, 46, 48. We take it, of course, that the Creedmoor count is reduced from the scores made on the Massachusetts target. If he shot sixty shots, thirty on the Massachusetts and thirty on the Creedmoor, then no explanation is necessary. If I am not much mistaken a Mr. Pyson, who was at one time a member of Mr. Jackson's club, made in 15 shots, 162 Mass., 72 Creedmoor. I make this reference to Mr. Jackson's score, having seen from the New York papers of June 2 that it was the largest score ever recorded, and we are anxious to know the facts. Be kind enough to publish, as soon as you get the information, whether the score of C. P. Stokes (Mass. target), of 48 in ten shots, 109 Massachusetts, has ever been beaten or equalled. HANDIOAP.

Mr. Osborn's score was made upon a ring target, one inch rings, and not on a Massachusetts target, therefore 12, 11, 10, 9 is in the bull's-eye, and the 48, 46, 48 is correct. A Mr. Osgood, formerly of the Massachusetts Club, made the score of 162 Mass., 72 Creedmoor, but he shot from a building, and the range (Spy Pond) was thirty yards short, and he cleaned his rifle after every shot. Capt. Jackson shot out of doors, full 200 yards, and did not clean, using his Sharps mid-range rifle. Therefore the Captain has the largest score, off-hand, 200 yards, on record.

—A Denver paper speaking of Capt. Jackson's claim to the best score at fifteen shots, off-hand, says the claim is a mistaken one, and says that C. Gove, of Denver, at the Olympic Park Range in that city, in April last, made 73 in the possible 75.

AMERICAN RIFLES IN AFRICA.—There is room for rifle clubs as well as Zulus in South Africa, and the last mail brings account of the doings of the Bloemfontein Rifle Club in Orange Free State, on Monday, April 14. The Orange Free State challenge trophy was competed for at 800, 900 and 1,000 yds. The trophy was a massive affair of silver, and consisted of a bowl-form cup, richly chased with Greek scrolls, the bowl being embellished with the shield, flags, and arms of the Orange Free state, which are splendidly executed. It stands on a silver pedestal, adorned with four lion masks in medallions and four paneled shields for winners' names to be engraved on. At each end of the pedestal there are projections, supporting on the right a finely modeled statue of an officer, and on the left a private soldier. The weight of the trophy is 127 ounces, and the cost, including carriage, £150. It will remain the property of the Association, but the champion shot, if he gives adequate security and vouches for the safety of this beautiful specimen of art, will, possibly, be permitted to decorate his sideboard with it, so long as he remains the A 1 shot. The medals to be presented to the winners are mounted with bars, having a buckle and blue ribbon attached. On the plain side the winners' names are to be engraved; on the obverse are three riflemen in relief. The whole have been manufactured by the Goldsmith Alliance, Cornhill, London; and their design and workmanship reflect great credit on that well-known company. R. E. Rushby, the President of the Association, was the winner at the first contest, and used in it an American Remington long-range rifle. W. B. Gradwell was second with a Rigby, and C. Voight third with another Remington.

AMATEUR AND PROFESSIONAL.—*Editor Forest and Stream:* Have read with much interest the discussion relating to the handicaping of professional riflemen and what constitutes a professional, which is a subject very pertinent to the true interests of rifle shooting, and which the National Rifle Association has brought before riflemen for consideration. Fully believing handicapping necessary, but undecided as to where an amateur steps in and the professional out, which has drawn opinions from some and a proposition from "Handicap" in your last issue that the highest score in any previous match be taken as a basis. Should there then exist a line between the profesional amateur, should it not rather be erased in a thorough system of equalization of scores according to previous merit? The professional who may have in the beginning of his shooting carreer labored under adverse circumstances, but by perseverence and a strict attention to temperance in all its forms, have attained his present perfection cannot but feel aggrieved at being laid aside at the beginning of what ought to be his usefulness. What is the encouragement to the beginner if as soon as he has made himself a name he be put on the shelf? Taking 47 as the highest which one has made in match shooting, and 43 that of another, the difference between the two is rather great, for the rifleman who has made 47 has done about all there is to do, or about all that is expected of him, as the next point comes harder than three before; experienced shots understand this. While the one who has made 42, three or four points are quite within reach. The handicap should not be more than half of this, and none to those who have made as high as 47, or rather between those riflemen who have made from 47 to 50. This ratio is more particularly applicable to 200 yard off-hand shooting. I really hope some definite result may be obtained in handicaping and that all riflemen may meet on as near equal terms as possible.

Coxsackie, N. Y. AMATEUR.

For Forest and Stream and Rod and Gun

SIGHTING, "PULL-OFF" AND RECOIL.

AMONG the many perplexing problems offered in long-range rifle shooting, not the least misunderstood is the variation shown in the results attained by different marksmen, of equal steadiness and merit, firing with the same gun and the same charges. It not infrequently happens that, after a rifleman has adjusted rear sight and wind gauge accurately for his use, and has made several shots, striking not merely the bull's eye, but almost the same spot on the distant target, a comrade, taking the same gun, and firing under the same conditions of wind, temperature and charges, will make a succession of centres, inners, or even providing outers, all grouped in some particular spot more or less distant from the bull's eye. The most obvious explanation and the one usually offered and accepted, is that the "pull-off" of one man differs from that of another, and that, although introducing an aberration into the act of firing, this aberration is a nearly constant factor for each marksman. The explanation, however, leaves much to be desired in point of conclusiveness. It may, and probably does, account for many eccentricities in the course of the bullet as it leaves the muzzle of a novice's gun, but the trained rifleman needs a more convincing reason. Leaving out of sight the peculiarities of aim and pull-off of those who involuntarily, and pardonably perhaps, shut their eyes at the instant of discharge, and whose statements as to the accuracy of their holding may be regarded with some leniency of doubt; and confining the investigation to the more numerous class of adepts who habitually keep the foresight and the bull's eye coincidently in view up to the instant when the perfectly visible flash and smoke from the muzzle of their guns relieve eye and muscle of the strain undergone,—we find that such marksmen are amply cognizant of any variation arising from a defective pull-off, and can for the most part announce the fact, and even the extent, of the divergence of the bullet from the intended line of sight.

It may be conjectured, and even asserted with some degree of probability, that the movement of the rifle itself under the influence of the explosive shock, is a more potential element in determining such variations than is generally believed. If a gun or rifle were reduced to its simplest element, denuded of lock and stock, and left a mere cylinder of metal, closed at one end and resting loosely on a plane surface, and to be discharged by some unmechanical contrivance, the electric spark for instance, it will be readily seen that the conditions of recoil would be set at their simplest factors of uniformity. Centre of gravity and axial line of bore being coincident, the primary recoil, taking place to a minute but easily calculable extent while the projectile is still passing through the brief space from breech to muzzle, would simply lie in the backward prolongation of the line of the bullet's flight, and, but for outward causes, would exert no deflecting influence on the initial path of the shot. But, in point of fact, a rifle is a highly complex structure. Its centre of gravity lies considerably below the axis of the bore, while the recoil of mainspring and hammer causes the mechanical shock which precedes the explosion of the powder charge, to exert its percussive effect in a direction nearly always at an appreciable angle to the line of fire. If it were possible to suspend a rifle in the air, like Mohammed's coffin, touching no support, and to pull the triger by some self-acting device of clock work set in the stock, the bullet's path would not absolutely follow the axial line of the bore as sighted, but would be a resultant of the two forces of recoil and percussion, modified by the position of the centre of gravity.

That the path of the bullet is perceptibly deflected by the change wrought at the instant of discharge and while it is still journeying the length of the barrel, is made clear by the now familiar investigation of the so-called anomaly of the downward "drop" of the muzzles of small arms, conducted in January, 1876, by Major J. P. Farley of the Ordnance Department. It is known, and demonstrated by those experiments, that an increase in the charge of small arms fired from the shoulder causes a greater downward deflection of the bullet's course at the shorter ranges; that this apparently contradictory result is brought about by the primary movement of the gun while the bullet is yet coursing through the barrel; and that this "muzzle drop" always takes place with charges heavy enough to produce a smart recoil.

If, therefore, different positions, or physical peculiarities of riflemen, intervene to modify, in however slight a degree, the first movement of the rifle at the instant of discharge, so that the primary recoil does not take place along the line it would follow if suspended in the air, the result will be to deflect the bullet from the path it would theoretically follow. And such differences of position or physical conditions, while reasonably constant in the case of each individual, may naturally be supposed to vary in the case of different individuals sufficiently to account for the changes in the path of the bullet from the same gun when in the hands of different marksmen.

Taking the extreme cases of two men, one of whom fires in the toe-rest position, while the other adopts that made famous through the advocacy of Fulton and Gildersleeve, it is easy to see that in the former method of holding the "drop" anomaly is almost entirely counteracted by the firm support given to the muzzle of the rifle, while in the latter, or "Fulton's position," the barrel is supported midway on a more yielding rest, and the primary downward tendency of the muzzle has freer play. That there is such an instantaneous downward aberration at the outset can be easily tested and witnessed to by any one who tries the Fulton position resting the head on the butt of the rifle without an intervening cushion, for the smart upward shock on the hard bones of the skull just behind the ear is perfectly perceptible and not readily forgotten. As a matter of fact the toe-rest position needs less elevation of rear-sight than the other, and, if the sight is not correspondingly changed, the shot strikes higher.

Where two men adopt what appears to be an identical position, there may still be personal peculiarities sufficient to account for a higher or lower flight of the bullet, all other things being equal. For instance, take the now favorite position adopted by Partello, Hyde and others, with more or less modification, where the barrel rests on the crotch formed by clasping the right knee around the left ankle, while the butt rests in the hollow of the armpit, and the gun is steadied at the butt or in front of the breech by the firmly clasped left hand. One marksman may be fleshier than another, to the extent even of the barrel resting on the right thigh instead of on the crotch formed by the crossed shin bones, and thus give a more yielding support to the barrel, to the result of shooting lower. Another may take up the direct recoil more firmly than the average, and so cause a perceptible variance. In the Fulton position, one marksman may confine the butt more tightly beneath the head, or with a less elastic cushion than another with corresponding change of angle in the bullet's path. These considerations would seem to be sufficient to account for variations in elevation between marksmen adopting the same position and using the same rifle and cartridges, without invoking the vague and uncertain explanation of the "pull-off."

The lateral deviations remain to be accounted for, and are apparently more puzzling and less explicable. The writer, using the crossed knee and arm-pit rest, and shooting the same gun with a brother marksmen in a dead calm at 1,000 yards, has put three or four bullets to the left of and below the bull's eye, almost in the same spot, not six inches apart, while his comrade, shooting alternately with him has made the like number of "carton" bull's eyes. Then, changing elevation and wind gauge to suit his holding, and pursuing the experiment, he has in turn made three or four "carton" shots, while his companion grouped his bullets to the right of and above the bull's eye,—made "two o'clock mags" in short. This variance would seem most readily explicable, in the light of the considerations advanced above, by assuming that, through some physicial cause, the butt of the gun describes, at the instant of discharge, a path different for each individual, and not due to the jerk of the right hand in pulling the trigger. The experiments of Major Farley show conclusively that the muzzle of the gun moves backward as well as downward at the moment of the explosion, describing a small, but definite and constant arc. Unless the rifle stock rests against a rock or post, this backward motion must occur and affect to a greater or less extent the position of the whole rifle. If the recoil be mainly taken up with the lfet hand, the left arm most probably describes a short arc of a circle having the left elbow for its centre. If the recoil be received in the arm-pit, a small arc is still described, the collar bone and shoulder blade turning as levers on a fulcrum. A moment's consideration shows that this arc is curved toward the left. The stouter and more unyielding the frame of the marksman, the smaller the resultant arc. In the instance described above, the writer is a much heavier man than his companion, the lateral arc of recoil toward the left is smaller, and the consequent minute deflection of the path of the bullet in the opposite direction, that is, to the right, is less. Whatever the cause of the lateral deflection, it is, however, practically constant for the same individual.

Another influential cause of lateral variation in the course of the projectile may be found in the spirit level, especially at very long ranges. The friction with which the confined bubble of air moves to and fro in the bulb, although almost a vanishing quantity, is still calculable, and, as is well known, varies greatly in "lively" or "slow" bulbs. It is probable that, if the bubble be at rest in one end of the bulb, the right end for example, and then be brought gradually to the centre, the position of the rifle may not be precisely the same as when the bubble is at rest in the other, or left, extremity and in like manner brought to the centre. At the extreme ranges, 1,000, 1,100, and 1,200 yards, with the rear sight on the heel of the butt as now so generally used, the peep aperture is raised some three or four inches above the axial line of point-blank fire, and an infinitesimal difference of level in the rifle may swerve the butt of the barrel to the right or left a distance equal to half a point or a point of wind gauge, especially if the spirit level be not quickly sensitive, although the line of sight and holding may be perfect. This reasoning may perhaps satisfactorily account for the provoking "nine o'clock" and "three o'clock" centres which are so apt to creep into a promising score at long ranges, even in a dead calm. In such cases, to counteract them by a change in the wind gauge is often fatal, giving at the next shot a centre in the opposite direction. Unless a marksman is confident of possessing a perfect spirit level, the most discreet course at extreme ranges would seem to be to bring the bubble to rest always at the same extremity of the bulb, and then slowly back to the centre, without permitting it to zig-zag to and fro when it gets there, and thus make the conditions of levelling and sighting as nearly constant as possible for each successive shot. The fact that different marksmen fall into distinct habitudes of manipulating their levels and bringing their rifles to a rest, may not infrequently account for lateral variations in shooting with the same gun in different hands.

Another pregnant cause of slight variations of shooting may exist in the uniformity, or want of uniformity, with which the eye regards the foresight and the target through the minute aperture of the peep-disc. It is, of course reasonable to suppose that every good and careful rifleman makes it a conscientious point to bring the axis of vision into the axial centre of the peep aperture. If, through inattention or fatigue, he is content with merely seeing the foresight and the target through the aperture near the eye, it may happen that the line of vision comes close to, or almost touches, the edge of the rear aperture. In such cases it is not improbable that the optical phenomenon of diffraction may come into play to distort the aim perceptibly in addition to the divergence caused by departing from the axis of the aperture. Although small, the aperture is measurable, and a deflection of half its actual diameter in sighting may easily equal a point of elevation, or half a point of windage, without invoking the aberration of diffraction to increase the error. However, no source of error is more easily eliminated than this by proper care and attention.

The moral to be drawn from this somewhat extended review of the physical problems of holding and sighting is, simply, that the best results are only to be attained by the marksman who makes it a careful study to bring all the conditions attending sighting, levelling and recoil into as absolute uniformity during a succession of shots as the fallibility of human eye and muscle will permit.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

New York State Convention.—An abundance of birds having been secured for the Rochester Convention the date has been fixed for July 7.

For an Example.—A man in Iowa, according to the report of the State against Hardle, 47 Iowa, 647, pointed a revolver at a lady, thinking it empty. It was loaded, went off, and the lady died of fright. When brought to court the prisoner's counsel requested the court to charge the jury that he was not blameable if his act was what any man of ordinary prudence and caution might have done. The court declined, observing: "No jury would be warranted in finding that men of ordinary prudence so conduct themselves. Human life is not to be sported with by the use of firearms, even though the person using them may have good reason to believe that the weapon used is not loaded, or that being loaded, it will do no injury. When persons engage in such reckless sport they should be held liable for the consequences of their acts." The sentence was one year in the penitentiary.

Florida—*Titusville, Brevard Co., June* 2.—Just returned from a professional visit to Lake Harney. Finished the final location of R. R. from this place to the lake. The road is half built, and its completion will be pushed this summer, so visitors can rely on steam transit for themselves and boats from the upper St. John's to Indian River, by December 1. Saw plenty of deer and quail. Tracks of bears, 'coons and wildcats numerous. Two wild turkeys seen by the party. A few "stilts, humilities or lawyers" (*Himantopus nigricollis*), were seen on the shores of the lake. In the Pine Bowers noticed quite a number of Carolina doves, *Zenaiduca carolinensis*, and ground doves, *Chamacpelia passerina*. Sand hill cranes, *Grus canadensis*, were very numerous but wary. Their loud calls were heard almost constantly throughout the sparse pine woods, but we could not succeed in shooting any with our shot-guns. With a rifle they could be easily brought to bag. Herons, owls, eagles and ospreys numerous. Deer hunters' old camps were numerous throughout the country the R. R. traverses. One hunter last winter killed 26 deer along the line in six weeks.
Al. I. Gator.

Monatee, June 9.—The drought from which the peninsular portion of this State is suffering is seriously injuring the fruit and other crops. It is thought the oranges will entirely fail. Many old orange trees are dying, young and vigorous ones must follow suit if rain does not fall within a few days. Reports from the interior of this county (Manatee) state that streams never before known to be without running water are dry, and that cattle, deer, bear and wolves in great numbers are gathered about the lakes, which contain the only water left upon the face of the country. The Myakka Lakes, which are usually eight to ten or twelve feet deep are abandoned by the alligators for want of water enough to cover their scaly backs, and the herons wade in the deep places. The mighty black bass that fill these lakes and affluent streams during the wet season are crowded in great schools in the deep holes and can be killed with sticks. An ambition to make a big bag of game could be easily gratified at these last watering places for the famishing game, but it could be done only to gratify such an ambition, as the weather is too hot to save any meat.
W. S. Warner.

Arkansas—*Clinton, June* 6.—No shooting at present, except squirrels. There are plenty of breeding turkeys left over. This is the best turkey country on record, and prospects good. Deer in moderate quantity. The old does and their fawns are frequently seen in the woods. Have heard of no bears. The prospect for next fall's quail shooting is uncommonly good. The hard winter left plenty of breeding families. In a recent trip through "Oil Trough Bottom," extending from Jacksonport westward some fifteen miles, I saw hundreds—enough, should no young be raised, to make what at the East would be called good shooting. And the same is true of all sections where small grain is freely raised.
Yell.

One-armed Men to the Front—*Editor Forest and Stream:* I have corresponded with you a long time, but you did not know that I have only a left arm and that I am also deaf. About ten years ago I was working in Titusville, and had part of a torpedo for an oil well burst in my hands, which paralyzed the nerves of hearing. I have heard nothing since, but I can see and feel anything. I can feel a pin drop on the bare floor ten feet away from me, and in the woods I always get the first sight at any moving object. About five years ago, while at work at my trade in a machine shop here, I was caught in a belt and whirled around a shaft (that was only two feet from the wall) about 500 times. It tore my right arm off at the elbow and broke my leg so the bone stuck out six inches. Few men have ever taken such a ride and lived to tell about it. Friends said to get a hand-organ; but with my young brother I started a general repairing shop, and have paid since $1,000 for tools and bought a house for $800. I can do as fine work as ever, can handle a shot-gun with any in the field, and I have yet to see the man who can beat me with a .22 cal. rifle or pistol. John Tenney, also a one-armed man here, is a fine shot, and is always first at our trap shoots.
J. Otis Fellows.

EXPERIENCE WITH DITTMAR POWDER.

Editor Forest and Stream:

Warren, Warren Co., Pa., May 9, 1879.

I used Dittmar powder last summer and fall. I liked its cleanliness, though I got an impression that it rusted the gun barrel more than black powder unless immediately cleaned. It is pleasant to have little recoil and so you can see your bird fall or fly and get a good second shot. In the fall I loaded with 3½ drams, two pink-edge wads on powder pressed down as I press black powder, and cardboard wad on 1¼ oz. shot. This load in 12 bore 9¼ pound Greener gun had a recoil equal to black powder, and the report unusually loud for Dittmar powder. Some time in the winter a friend and myself were shooting at glass balls with black powder. I happened to have two shells of the Dittmar loaded as above, probably two months before. They astonished me and damaged my gun. I believe if it had not been extra strong it would have been ruined. The report was like that of a rifle, and the recoil like the kick of a mule. My friend shot first. He was whirled half way round and complained of his ears ringing and head aching. I then tried it and was served the same way. It was more like a stroke of lightning than the recoil of a gun. The gun would not open. The top lever was stuck fast. Finally we pressed the gun against a tree and the lever worked. But the gun was loosened and rattles since that.

Now a light load may possibly be safe. That load, 3½ drs., is not large, but I don't shoot any more such if I know it! The powder was letter C, bought last summer at Binghamton headquarters, and was no doubt a genuine article. From this I conclude that Dittmar powder is very uncertain and correspondingly unsafe.
Penn.

Commenting on this statement of facts, Carl Dittmar says:

I think the powder must have been purchased before the 5th of November last year, from which time I made the new and slower kind. Of this kind, which is marked as tested with heavy loads, there has not been a single complaint yet. The powder referred to in "Penn's" letter was of the kind Capt. Bogardus recommended and has used in all his exhibitions. I myself should not like to use it in heavy charges, but I think it is impossible that 3½ drs. could do any harm. I think there must have been an accidental overcharge, the measure being wrong, or something of the kind. If he will send me a sample in a glass bottle I will test it in the government pressure gauge and give honestly the result; if it is too quick for safety I will admit the fact. The powder now made is all tested by the pressure gauge. A case of overloading cannot happen with the new powder, and I do not give any extra instruction, the powder will work no matter how it is loaded.

BORE AND SIZE OF SHOT.

Enfield, N. C., May, 1879.

Editor Forest and Stream:

The fact that these things have been mooted between men whose lives and fortunes have been devoted to the production of approximate perfection is sufficient to make me modest in my opinions, but you doubtless have observed that most of a shooting man's knowledge, having been gained by experiences which were often attended by misfortune, comes to him in quite a forcible manner, and he remembers them as a burnt child does the fire. And it is, therefore, on account of the firmness of conviction that I make the few following remarks. I shall not attempt to sustain them by any very scientific arguments. That they are facts easily proven by any one is sufficient. Until you called attention to the fact it did not strike me that I had made observation, not almost the opinion of most shooting men. One is very much convinced, and quickly forgets that but a very short time ago he believed differently. Therefore I did not seek to make plain what may to some have seemed obvious. Our object was simply to account for the difference of opinion in a very plain way. I mean the difference of opinion between the Forest and Stream and the questioner, Mr. McInturff, the variance being chiefly in size of shot to be used on certain game. It seemed clear to me that the two parties were using widely different arms, viz., one bored straight and the other reduced at the muzzle. It was a general opinion for many years that length gave special value to a shot-gun, and indeed the rifle did not escape pet names on account of the three or four extra feet on the muzzle. Public opinion demanded these kinds in length. Why did they? Nearly all the rifles were coarsely sighted and of slow twist, suited to round balls and short range. Why was a long rifle of this kind more accurate than a short one of the same kind? The line of sight was longer, and that is about the whole reason.

In the shot-gun length had the same popular demand. It was believed to have better shooting qualities in pattern and penetration. The balance of the gun was not cared much about, as wing shooting was not much in vogue. I believe that better patterns were generally obtained from long bores, though I do not believe that the penetration was equal to the bores of medium length, the charges being equal. Take as an instance a 14 B., 30-inch cylinder bore, and charge with 2¾ drs. F powder and 1¼ ozs. shot. The pattern will be excellent, and the killing power fair, if the shot are large enough to compensate for the slow flight. Same gun with 2¾ to 3 drs. powder and same charge shot, the pattern will always be diminished and penetration increased. Now, take 14 cylinder bore, 34-inch gun, and it will give as good pattern with 2¾ drs. powder and 1¼ ozs. shot as did the 30-inch bore with 2¾ drs. powder and 1¾ ozs. shot. It is clearly seen by a mind at all mechanical that there is no hocus-pocus about this; there must be some rational reason. Does it not seem quite plain that friction is the thing in this matter? Else, why this analogy between the short barrels with a slow charge of powder, and the longer barrels with a quicker charge?

Friction is always increased with an increase of the powder charge, because the "upset" of the shot charge is increased, by which means the pellets are cut by friction, and leave the gun more or less wildly in proportion to their velocity. To prove that this is so let us get rid of that bad effect of the upset, which is mostly resultant from the wedging and jamming of the shot between the shot and powder wads, by an experiment with buck shot. Take as an instance a No. 10, 30 or 32 inch cylinder bore; put in 3½ or 4 drs. powder and two good felt wads, and then select such buck shot as it will exactly chamber; drop down a layer—four if it chambers four—then shove down a thin cardboard wad, then put in another layer, and so on until four layers and four wads have been used. The same ends may be accomplished by putting in fine sawdust between each layer, sufficient only to make each succeeding layer have a level floor on which to rest. A few of the coarsest experiments with this charge will convince any one that this is as good a killing charge at 60 yards as the ordinary way of pouring the shot in loose will give at 40 yards. In the instance of the loose shot there will be no uniformity of force in the flight of the individual shot, more than half of the charge having but little penetration, while in the instance of the layered shot, their flight will be almost perfectly uniform in force, have greater force, and the pattern will be as greatly improved. These shot have not only traveled in a straight line through the barrel, but leave the gun in a spherical form, and subsequently travel faster and straighter for obvious reasons. If a single shot much too small for the bore be placed on a powder wad, and have fine sawdust firmly packed around it, and then a wad on same, it can be relied on to be almost as accurate at a short distance as though it fitted the smooth bore. This, therefore, seems conclusive—that the highest excellence attainable by the straight or cylinder bore is to be arrived at by lessened friction and shot, which leaves the bore in spherical form. First of all there must be force. Therefore, the length of barrel must be sufficient for the consumption of a proper charge of powder (just what length that is in the various sizes seems best determined by the makers, who have time and means of testing beyond that of most mere sportsmen), a highly polished and lubricated bore, and shot of sufficient hardness to remain uncut in passing out. There then remains only two reasons why these shot, at the distance of their extreme flight, have at all diverged from a straight line; or, in other words, make a pattern larger than the gun wad. They are, first, that infallible tendency of imperfect bodies, which have no compensating rotation, to diverge, and the movement more or less (laterally) of the shot in passing through the bore, so that their flight was never begun in line with the bore. It seems to have been a fair recognition of this last fact which suggested choking, as the *ricochet* on the incline at the muzzle would have a tendency to correct, for a certain distance at least, many of these shot which would have been wild flyers.

In accounting for the difference of opinion as to size of shot best suited to turkey shooting, it was not my intention to convey the idea that No. 4 or 5 was large enough. I do not think so, no matter what their velocity, but wanted to show that there was greater power by reason of increase in powder charge in choke-bore than cylinder bore, and therefore smaller shot were admissible. In small game like quail the shot may be much smaller than with the cylinder, but in case of birds which have such powers of resistance as turkeys, we never had power enough in any shot which gave enough pellets to the ounce to offer any chances. It seems fortunate, however, that the choke-bore shows its finest shooting with all the larger sizes of drop shot. Four to 4½ drs. powder, 1 1-3d ozs. single B shot, from a 10-bore, 30 or 32-inch choke, 9-lb. gun, should strike a turkey with 7 to 12 shot at fifty yards and go clean through. This will drop any turkey at once. This is better shooting than can be expected from any cylinder of that size unless a wire cartridge be used when there arises the objection of misplaced pattern.
E. L. H.

PIGEON MATCHES.

Send in Scores Early.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

New Jersey State Association.—As there seems to be a probability of there being plenty of wild pigeons soon, the committee on the State tournament are hurrying matters, and the tournament will come off as soon as the birds arrive, which will be the latter part of this month or early in July. The committee have been somewhat embarrassed in the selection of grounds, but have finally settled upon West Side Driving Park, Marion, N. J., as the most convenient and accessible. Due notice of the days determined upon will be given.

A Novel Match.—A shooting match for the one-armed championship of the United States and a purse of $500 will take place at West Side Driving Park, Marion, New Jersey, July 9, between W. S. Canon, of Newark, N. J., and L. H. Boughton, of Cassville, Wisconsin. Mr. Canon is a member of the Jersey City Heights Gun Club; physically of fine figure, pleasant address, and a favorite among his club members; about 5ft. 11in. in height, and weighs 175 lbs.; is an excellent shot. Mr. Boughton is a gentlemen of culture, being the teacher in the place of his residence; is of fine form and physique, standing over six feet in his stockings, and has attained some celebrity at the West as a wing shooter. As the contestants are both gentlemen amateurs, the match will be conducted honestly, and bids fair to be one of the most interesting, as it will be the most novel, of the season. The conditions are: 30 birds, 30 yards rise, 5 traps, 80 yards boundary, both barrels: otherwise American rules.

New Hampshire—*Ashland, June* 7.—Ashland Gun Club; weekly contest; 15 ball match, miss and out, Bogardus trap and rules:

L A Ham	0	2d—1 0
J G Morrison	1 0	2d—1 1 1 1 1 1 0
E P Warner	1 0	2d—1 1 0

Mather	0 0 0 0 0 1 0 0 0 1 0 1 1 0 1—5

Egglestone lost sixth on position.
Hammerless.

MISSIE ROD AND GUN CLUB.—A lively contest for the beautiful gold, Maj. George Arey badge, took place at Springfield, L. I., June 12. Michael Englert, who had won the badge twice on former matches, and if successful this time would have become the owner of the same by winning it three times, did all he possibly could to capture the splendid medal, but Mr. James T. Davis, who is always willing and ready to do honor when he honor is due, thought best not to let him win it again, and succeeded in winning it himself. Gus Williams, the world renowned comedian, acted as scorer:

Wm Steers	1	1	1	1	0	1	1	1	0	1	—	8
M Englert	1	1	1	1	1	1	1	1	0	1	—	8
James Davis	0	1	1	1	1	1	1	1	1	1	—	8
John Voskamp	1	1	1	1	1	0	1	1	1	0	—	8

Shoot off—miss and out.

Steers	1	1	1	1	1	1	1	1	1	1	0	—11
Davis	1	1	1	1	1	1	1	1	1	1	2	—12

Voskamp missed his first and Englert his second.

Several contests at double birds took place afterward, and after a well supplied meal by Mrs. Lohr, the parties went home, each with a good load of birds to carry.

NEW JERSEY—*Newark, June* 14.—Weekly sweepstakes of the Newark City Gun Club at ten of Kay's sunshine for glass balls, first sweep, 21 yards rise: W R Hobart broke 7, G Decker 9, R A Kay 10, H Montgomery 7, A B Kay 9, Cander 9, J S Dustou 7, J Decker 8, F I Glaze 10, J Kinsey 8. Second sweep, 25 yards rise: Duston 10, A B Kay 10, R A Kay 10, Decker 10, J Decker 9, Kinsey 9, F I Glaze 9, Cander 9, W R Hobart 7, Monte 7. All except two used Kay's chips.

SEC. W. C. G. C.

CRANMER SHOOTING CLUB—*Bordentown, N. J., June* 9.—Second shoot; Card's rotary trap; 21 yards rise:

Dr W H Hilliard	1	0	1	1	0	0	1	1	1	1	1	1	1	1	3	—13
F G Wiese	0	1	1	0	0	1	0	1	1	0	1	1	1	1	1	—11
J Reeves	0	1	0	1	1	1	0	0	1	0	1	1	1	1	0	—10
M Maitland	0	0	0	0	0	1	0	1	1	1	1	1	0	0	1	—8
R Wright	1	0	1	0	0	1	0	1	0	1	0	1	1	1	0	—7
E Taylor	0	0	1	0	0	1	1	0	1	0	0	1	0	1	0	—7

PENNSYLVANIA—*Catawissa, June* 10.—The second practice match at glass balls of the Catawissa Fish and Game Protective Club; Card's rotary trap, 18 yards rise, ten balls each:

H B Aldrich	0	1	1	1	1	1	1	1	1	—9	
A A Kirk	1	1	0	0	1	1	0	1	0	—6	
L P Kreish	0	0	1	1	1	1	0	1	1	—7	
T P Cherrington	1	1	1	1	1	1	1	1	1	—9	
Wm Grange	0	1	1	1	1	0	0	0	1	—6	
A Stadler	1	0	0	1	1	1	0	1	1	—7	
T E Harder	0	1	1	1	1	1	0	0	0	—5	
A Thomas	1	0	1	0	1	1	1	1	1	—8	
G W Hinsinger	0	1	0	1	1	0	1	0	0	—4	
A H Sharpless	1	1	1	1	0	1	0	1	0	—7	

SEC.

THE PITTSBURGH TOURNAMENT—*Pittsburgh, June* 13.—The shooting tournament, held by Messrs. J. P. O'Neil & Co. at the Exposition Grounds (the distinguishing features of which are that it lasts a month instead of a day, that three trials are allowed each contestant, that no entrance fees are charged, and that the balls are thrown from the mole's revolving trap in any way one wants, and in a great many ways one can't want, which same would not be at all right but for the fact that birds, which glass balls should imitate, have the same disagreeable tendency), is going off with that good order and quality which is peculiar to, and attendant upon, a congregation of sons of guns, and is creating a deal of interest among sportsmen in this vicinity. There are delegations coming from several neighboring towns to compete in the several matches. In the off-hand rifle shooting contest, Creedmoor target and regulations, the best scores made thus far are 100 and 102 out of a possible 125. In the glass ball shooting with a rifle, *à la* Carver, 76 out of 100. Parenthetically, it may be said that the opinion seems to be gaining ground that this style of shooting more of a trick, easily acquired, than an art gained by long experience. In the shot-gun shooting at glass balls the best scores are 77 and 84 out of 100. Professional shots are excluded from this match, but a short tournament for professional wing shots is being thought of. Will send full reports of these matches at their close.

A.

—A glass ball shooting tournament will be held at Williams' Grove, Cumberland County, Pa., June 23. Excursion tickets will be sold from principal stations on Pennsylvania and Northern Central Railroads, and from all stations on Cumberland Valley Railroad. Committee—F. A. Marshall, Chambersburg, Pa.; D. A. Ulrich, Shepherdstown, Pa.; D. K. Hudson, Chambersburg, Pa.; G. D. Keller, Carlisle, Pa.; Geo. Duke, Shippensburg, Pa.; Geo. H. Keller, Hummelstown, Pa.; James B. Rea, Newville, Pa.

EXCHANGE GUN CLUB—*Titusville, Pa., June* 7.—Card trap and Boughton explosive target balls. These balls work to a charm, and are in every way equal to birds. First meeting of club:

J J McCrum	1	1	1	1	1	0	1	0	1	—8	
C V Boughton	1	0	1	1	1	1	1	1	1	—9	
H H Boughton, Jr	1	1	1	1	1	1	1	1	1	—10	
C H Barton	1	1	1	1	1	1	1	1	1	—9	
L L Scattock	0	1	1	1	1	1	1	1	1	—9	

This club will meet every Saturday from this on. Better scores may be looked for with these balls than heretofore with glass.

Youngstown, June 14.—Semi-monthly contest of the Buckeye Ball-Breakers for the championship of the club; Bogardus rules; Card's rotary trap, full spring; 21 yards rise, 15 balls each:

Miller	1	0	0	0	1	0	0	1	0	0	1	1	1	1	0	—7
Head	1	1	1	1	1	0	1	1	0	1	0	0	1	1	1	—10
Quinlan	1	1	1	1	1	1	0	1	1	1	1	1	1	1	0	—11

T. W. M.

WASHINGTON, D. C., *June* 9.—Matches shot Saturday afternoon, June 7. Mr. Mills shot with a very fine 12-gauge gun, weighing 8¾ lbs., built by John A. Nichols, of Syracuse, N. Y. Handicapped to 26 yards, his excellent score is interesting as demonstrating the ability of the 12-gauge gun to cope with the heavy 10-gauge at the trap:

First match.

Mills, 26 yds	1	1	1	1	—5	Lynch, 21 yds	0	1	1	1	—3					
Simons, 21 yds	1	0	1	1	—4	Daw, 21 yds	1	1	0	1	—4					
Sherwood, 26 yds	0	1	0	w												

Second match.

Mills, 26 yds	1	1	1	1	—5	Simons, 21 yds	1	1	1	0	—4					
William, 26 yds	1	1	1	1	—5	Dowling, 21 yds	1	1	1	0	—4					
Daw, 21 yds	0	1	1	1	—4											

Mills and Williams divided.

Third match—Purse of $4.

Simons, 21 yds	1	1	1	1	—5	Daw, 21 yds	0	1	1	1	—4					
Mills, 26 yds	1	1	0	1	—4	Williams, 26 yds	1	1	0	1	—4					

Simons takes prize.

Fourth match.

Mills, 26 yds	1	1	1	1	—4	Daw, 21 yds	1	1	1	1	—4					
Wimsatt, 21 yds	1	1	0	—3		Dowling, 21 yds	1	1	0	1	—3					

Mills and Daw divided; scarcity of birds prevented ties being shot off.

M. F. JONES.

CHEROKEE GUN CLUB—*Rome, Ga., June* 10.—Glass balls:

First score.

C L Omberg	0	1	1	1	0	1	1	1	0	—6	
R I Hampton	1	0	1	0	0	1	0	1	1	—5	
Joe Veal	0	1	0	0	0	0	0	1	0	—2	
A Omberg	1	0	0	0	0	1	1	0	0	—3	
Sam Veal	1	0	0	0	1	1	1	0	1	—5

Tie.

C L Omberg	0	0	1	—1	H Harris	0	1	1	—2		
R I Hampton	1	1	1	—3							

Third score.

H Harris	1	0	0	0	1—2	Joe Veal	1	1	0	0	1—3
C L Omberg	0	1	1	1	—4	A Omberg	0	0	0	0	—0

OHIO—*Cincinnati, May* 30.—Score of glass ball match shot by the Buckeye Club of Cincinnati on the above date for the Hamilton County Agricultural Society medal. This medal, and a number of other prizes put up at the county fair last September, were won by the Buckeye Club, they beating all competitors, including the Wyoming and Lockland clubs. The team put it up with the understanding that the winner became the owner; 13 yards rise; Bates & Baum traps, with screen:

J A Whetstone	1	0	1	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	—23
J Ferris	1	1	1	1	0	1	0	0	1	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	—20

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	Striped Bass, *Roccus linnæatus.*
Land-locked Salmon, *Salmo gloveri.*	White; erch, *Morone americana.*
Muskalonge, *Esox nobilior.*	Weakfish, *Cynoscion regalis.*
Pike or Pickerel, *Esox lucius.*	Bluefish, *Pomatomus saltatrix*
Yellow Perch, *Perca flavescens,*	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings bright hyaline.

Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark ginger; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setæ, mottled woodcock.

Black June, No. 10.—Body, peacock's herl; feet and wings black.

Dark Stone, Nos. 8 *and* 9.—Body, dark brown; feet, yellow brown; wings, luteus.

Governor No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.

Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setæ, dark brown.

Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setæ, dark brown.

Raven, No. 11.—Body, feet and wing, black.

Wren Fly, No. 9.—Body, clay yellow; feet, made from the scapulary feathers of the English wren or quail; wings and setæ, mottled widgeon.

FISH IN MARKET—RETAIL PRICES.—Bass, 15 to 20 cents; bluefish, 8; salmon, 20; mackerel, 15; shad, 8; Spanish mackerel, 18; green turtle, 15; halibut, 18; haddock, 6; kingfish, 12; codfish, 6; blackfish, 10; flounders, 8; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 18; brook trout, Canada, 40; soft crabs, per doz., $1.50; frogs, 35.

ONTARIO—*Bracebridge, June* 11.—Am here with a party of four *en route* to Baysville and Trading Lake; will report catch

G. H CRANE.

MOVEMENTS OF THE THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 95, 4 from Western Bank with 150,000 lbs. codfish and 10,000 lbs. halibut, 5 from Grand Bank with 100,000 lbs. halibut, 48 from Georges with 1,600,000 lbs. codfish and 67,000 lbs. halibut, 24 from Inshore fishing trips with 385,000 lbs. codfish, 2 from unsuccessful squiding voyages, and 12 from off shore mackereling trips with light fares.—*Cape Ann Advertiser, June* 13.

NEW YORK—*Newark, June* 10.—Week before last a friend and the writer caught, in two days' fishing, 600 trout at Osceola, near Redfield, this State. Weather was cold and bright. Could not then get a rise on Salmon River. Had to go to the mountain brooks. Trout small in size. Accommodations and attention from S. Williams, the landlord, all that could be asked for—good rooms, good living, horses and wagon to take us to the head of the streams, fish taken care of, packed in ice, luncheon put up, bait dug, etc. Charges, $1 per day. With warmer weather larger trout will be taken in the river.

C. H. P.

ADIRONDACKS—*Keene Valley, June* 11.—The trout are biting lively, and I have hooked several large strings during the past week. In Company with "Parker," than whom no better sportsman and genial fellow lives, I took 24 speckled beauties from the rapids in Lower Ausable Pond yesterday, averaging one pound each. I send you exact dimensions of largest, cut out of birch-bark; have had fresh brook trout at every meal, and am not satisfied yet. This section is a perfect paradise for anglers; no flies as yet, and plenty of trout for devotees of the rod. WILLIAM L. HOWARD.

NEW JERSEY—*Forked River, June* 14.—Blue fishing has not been better at this place for several years past. Our yachts, the *Vapor*, with a party of gentlemen from Allentown to-day came in with 55 fish, and the *Haze*, Capt. Theo. Predmore, with Mr. Baker and son, of Newark, 69 fish, some of which would weigh 7 or 8 pounds apiece. This is now the nearest point to the fishing grounds, as parties coming to this place avoid a long ride to the water, as at Barnegat and other points on the bay.

C. A. S.

WEST VIRGINIA—*Meadow River Forest, Greenbriar Co., June* 9.—Fished to-day in Young's Creek. Two lines caught 140 mountain brook trout. Largest eight weighed one pound each. Our altitude is 2,500 ft. above the sea. We are fifteen miles from Sewell Station, on the Chesapeake and Ohio R. R. Cost of reaching this place from Point Pleasant, W. Va., mouth of Great Kanawha, $7. We are ten miles from mouth of Meadow River, in Greenbriar Co. The trout have nearly all left Meadow River and gone up the small streams. We are on spurs of Big Sewell Mountain. Bait used to-day was the red angle-worm. We lost about thirty trout by bad fishing.

H. A. G.

WEST VIRGINIA—*Berkeley Springs, June* 16.—Black bass fishing on the Potomac good, especially with fly. E. Gray Pendleton and myself, on Wednesday last, caught with fly 43 bass. Unfortunately, Mr. P. broke his rod on his fifth fish, leaving me to catch 38 out of the 43, which was done with a 7-oz. split bamboo rod. These fish were taken in four hours. But for Mr. P.'s mishap I am confident we could have taken 75 in the same time—just a little ahead of Mr. Bond. George Hovermale, of this county (Morgan), caught last fall, at Dam No. 6, a bass weighing 6½ pounds, and a great many have been taken weighing 5¾ and 5½. I myself have caught several of this weight.

TIP.

BLUE-FISHING.—Dr. Morton Robinson, of Newark, New Jersey, contributes the following interesting facts:

Forty-five years ago our home was on Point Judith, two miles north of the light-house, on what is now known as the Pelig Anthony farm, now, as in olden times, a great resort for striped bass fishermen. Unlike the present day, at that time, there were few but native fishermen. It is true that there were several who living along the shores principally fished for a livelihood, sold their fish to the smacks or found a local market, but the principal part of the fishing was done by the farmers and men of other pursuits for their own consumption, mostly living within a short distance of the locality. When there was a good surf for bass fishing, it would be a rare thing not to see several lovers of the sport on the rocks fishing for those splendid fish. For a man to capture three or four 40 to 60 pound bass of a morning would hardly be deemed worthy of mention, but the catching of a "horse-mackerel" (bluefish) in 1835 by a professional fisherman by the name of William Williams was regarded a rare event. For more than twenty years the oldest fishermen could not remember seeing one, and it was only the old frequenter of the shores who could give it a name. In the beginning of this century and so long as the country had been known before, these bluefish, "horse-mackerel" as they were called in that locality, were very abundant, and at about this time pressed the shores in such numbers as to be taken with hayforks by wading a short distance in the surf of the beach. From some cause unknown, in 1812, these fish suddenly left our seas. Various have been the conjectures as to their leaving. Some, full of speculation, have ascribed it to the war which broke out in that year, others to instinctive premonition of the great September gale, which visited the coast with furious winds and buried the ordinary boundaries of the sea twenty feet deep, I think in 1815; however it may be, from 1812 to 1815 if there were any taken they were only stragglers, and from the latter date to 1835 diligent inquiry among those who fished along the coast failed to develop an instance of one being taken. After the one caught by Williams, during the summer, a boat from Newport, bating for mackerel, took one, and there may have been a few others taken by bass fishermen; but they were not in considerable numbers until 1840 to 1841, when they began to show in schools, and in 1844 and 1845 their numbers were beyond computation. The fish taken by Williams would weigh about 3 lbs., and those first taken were generally near the same weight. If the reports of the men of the former century be true, in the latter advent of these fish they have never attained the size they formerly possessed. The size of 40 lbs. had been reached in olden times; but since their second coming 25¼ lbs., is the largest known to us, taken in 1844 by James Oatley, while fishing with an eelskin squid ("bob") for large bass at the Bog-rock opposite Anthony's. On the following day, in the same place, there was one taken that weighed 24¾ lbs. With a considerable field of knowledge your correspondent has never seen or heard of another that reached 20 lbs., though 18 lbs. are quite common. The manner of catching these fish in the olden time did not materially differ from the present. No doubt the tackle was more crude—the sheepshank bone, elder with the pith punched out, and the eelskin had to serve as squid, where now we have block tin, ivory and pearl,—the domestic spun linen for line, where now we have more delicate fibres, created by machinery.

BLUE-BACK TROUT.—It is believed that the great size of the Rangeley Lake trout of Maine is due to their diet being composed chiefly of so-called blue-back trout. These blue-backs have been repeatedly described in the columns of FOREST AND STREAM, and a full history of them will be found in Hallock's "Sportman's Gazetteer." While the Rangeley trout are the genuine *Salvelinus fontinalis*, the blue-backs are adjudged a distinct variety. As very little is ever written, the following information given in the Hallowell (Me.) *Register* of April 26th ultimo, will be valued:

Blue-backs are a species of trout, and named by naturalists *Salmo oquassa*, after Oquossoc or Rangeley Lake, and bear the general semblance of a regular built, *bona fide*, "brook trout," except that they have a crochet tail. Their backs are of a very dark blue color, therefore their name, "blue-backs." They grow to the maximum length of ten inches and weight of six ounces. They inhabit the deepest waters of the lakes, and are consequently never seen except during about two weeks in October of each year, when they run into the streams in countless myriads to spawn. Then is the time when the natives of Rangeley and surrounding towns really enjoy fishing, if their method of capturing these fish may be called fishing.

Let us take a look at the various methods employed in the wholesale slaugher of this beautiful and peculiar fish. Just below the old mill dam on the Rangeley stream, we find several persons with rod and line, casting into the big pool, and hauling out a blue-back at every cast. We at once concluded that they must have a very taking bait; but upon examination are surprised to find attached to each line a grapnel composed of three fish hooks, and that the water is literally packed with fish, so that every time this grapnel is thrown among them a fish is sure to be hooked. One gentleman, a summer resident of this locality, caught in this way, as many as 2,000 of these in ten days of last season. Farther down the stream, at the foot of the pool, where a wall of rocks has been piled up to form a temporary dam, are several more persons. Some are armed with a gaff, or what they call a "jig," which consists of a fish-hook lashed to the end of a small pole. With this implement it is nothing rare for one person to take 300 blue-backs in one hour. Others, who wish to take the fish without lacerating them, use a dip-net which they place close to the bottom, and when the fish run over dip them up.

Still farther down, where the water is shallow, we find the stream divided off into several sections by stone walls with

an opening or outlet at the lower end, in which is placed a long, large bag-shaped net, the mouth held open by a hoop. These sections are called "runs." When the net is in proper position two or three persons start at the upper end of the run and wade down stream, thrashing the water with sticks as they go, driving the fish before them toward the net, and at the proper moment the net is lifted from the water. The result is from two fish to half a bushel. There is a deal of fun in this method of fishing, especially in the evening, which is the usual time for practicing it. As the bottom of the stream is very rocky, and the rocks very slippery, and it being necessary to advance toward the net rather rapidly, one cannot pick his footing; consequently many slips and falls are experienced, each unfortunate, of course, being greeted with a laugh as he plunges wildly to regain his footing, and generally ends by sprawling at full length in the water; and having once more gained the perpendicular, he is fully prepared for blue-backing, as, having got completely wet, he is regardless of tumbles, and thoroughly enjoys himself.

The amount of blue backs caught and carried away from this spring alone is almost beyond calculation. The spawn is crushed and dislocated from the spawning beds by this method of driving the fish into nets, and it is probable that a very small percentage mature. It is a fact that these fish run into the streams in much smaller numbers than in former years, and the probability is that the waters are rapidly being depleted of this valuable trout food. I am, by my experience of the past summer, convinced that it is an error to suppose that the blue-backs will not take bait or fly. I caught several in July and August while bottom-fishing, in from forty to fifty feet of water, in the Mooseluckmaguntic Lake, and while they were on the spawning beds they would bite at the bare hook of my gaff. I have no doubt but that a person with a small hook baited with worm, with a fine line, could catch plenty of them from the deep waters during the summer months. AL. BULLEN.

—We have received from George Stinson & Co., Art Publishers, Portland, Maine, a proof copy of the magnificent steel engraving, "La Madonna," after the celebrated painting by J. Sant; also a proof copy of a fine work of high art, representing "Italy"—the land of art and music. This engraving is after a painting by the renowned artist, Mr. R. H. Pelham. In our opinion, these fine works of high art belong in the front rank. The plates were engraved in London for Messrs. Stinson & Co., by Mr. F. Bromley and C. Tompkins, two of the foremost engravers in the world, at an expense of two thousand pounds sterling, or ten thousand dollars. This house publishes all descriptions of fine pictures. Those who wish to beautify their homes at moderate expense should send for their Art Catalogue.—[*Adv.*

Rational Pastimes.

CONEY ISLAND RACES.—A new era in racing will be inaugurated, as far as Long Island is concerned, next week, when a number of prominent New York gentlemen take hold of Prospect Park for the purpose of giving what promises to be one of the most successful race meetings ever held in this country. With the large delegation certain to go from New York, and an immense Brooklyn constituency, success seems assured. The races commence on Saturday, the 21st, with sixteen events. Tuesday, the 24th, is the second day, with the same number, and Thursday, the 26th, the last day, with five races. There will be a steeple-chase each day. The names of the stewards are as follows: Henry C. Babcock, August Belmont, Jr., Robert Center, F. G. Griswold, John G. Heckscher, James R. Keene, J. G. K. Lawrence, Pierre Lorillard, Jr., Carroll Livingston, Belmont Purdy, James V. Parker, A. Wright Sanford, Gen. E. S. Sanford, F. August Schermerhorn, W. R. Travers, W. K. Vanderbilt.

"HOW TO TRAIN IN ARCHERY."—Although full of hints even for the beginner this little book, written by Maurice and Will H. Thompson, is in reality intended more as a guide for the advanced archer, being a study of what is known as the "York Round," excellence in which denotes the finished bowman. The York Round is really long range shooting, representing a certain number of arrows at each of the greater distances of 60, 80 and 100 yards. Of course there is a radical difference between shooting at a target at point blank range and at one placed at one of the above distances, and the methods to be used are so different as regards elevation, etc., that the inexperienced archer would find himself somewhat at sea without an instructor or guide. The little book now published by Mr. E. I. Horsman, the well known manufacturer of archery goods, and written by such authorities as the Messrs. Thompson, supplies this want and is a boon to those who desire to become expert bowmen or bowwomen. The book is of convenient size and is very handsomely printed and bound. [Published by E. I. Horsman, New York. Price 50 cents.

SPLIT BAMBOO BOWS ARE PATENTED—*Editor Forest and Stream:* Will you kindly notify dealers in archery, through your valuable paper, that our Split Bamboo Bow *is patented*, and that all infringements will be prosecuted and our patent protected to the full extent of the law. We have always advertised this bow as being patented, but notwithstanding, we hear from all directions that cheap imitations and infringements on our patent are being made and sold.

Yours respectfully, CONROY, BISSETT & MALLESON.
New York, June 16, 1879. —[*Adv.*

THE ASTLEY BELT.—The fourth contest for the Astley Belt is now in progress at London. The four contestants are: John Ennis, of Chicago, Ill.; "Blower" Brown, of Turnham Green; R. Harding, of Blackwell, and E. P. Weston, of New York.

ST. LAWRENCE UNIVERSITY FIELD SPORTS—*Canton, St. Lawrence Co., N. Y.*—Third annual field day of St. Lawrence University, Friday, May 30:

Standing High Jump—J V Witherber, '80, 4ft 8in
Throwing Base-ball—L C Sawyer, '81, 237ft 8in.
Running Broad Jump—Wm Fitzgibbons, '82, 18ft 3in.
Throwing Hammer, 16½lbs—D Lamphear, '80, 63ft 9in.
Mile Run—G D Judson, '80, 5m 45s.

Half Mile Run—L C Rich, '82, 2m 19s.
Tug of War Between Departments—Won by Theologues.
Hour's Race, go-as-you-please—L C Rich, '82, 6 miles 246 rods.
L. C. RICH, Sec'y.

CRICKET.

FIXTURES.

June 19—Prospect Park, Columbia vs Manhattan (2d).
June 20—West Philadelphia, Young Am rica vs Belmont.
June 21—Nicetown, Philadelphia vs Germantown.
June 21—Ardmore, Philadelphia (2d) vs Merion (2d).
June 16—Staten Island, Newark vs Staten Island (2d).
June 25—Ardmore, Dorian vs Merion.
June 26—Hoboken, Manhattan vs St Georges.

MANHATTAN (2D) VS. ST. GEORGES (2D).—Although the St. Georges took a strong eleven to Prospect Park on the 12th, the Manhattan boys defeated them in a one inning game. The St. Georges have played five matches this season, all of which they have lost; for, besides by a mere handful of young players, there seems to be no interest taken by the members of this old organization in the welfare of their club. This is to be the more regretted, as the club's list shows many thorough and excellent cricketers. For the victors, Hayward contributed 12; and for the St. Georges, young Giles a well-played 13. The following are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Manhattan	63	..	63
St Georges	40	..	40

BELMONT (2D) VS. MERION (2D).—This match was played on the 14th on the Belmont Grounds at West Philadelphia, and resulted in a victory for the home club by one inning and 61 runs. Annexed are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Belmont	144	..	144
Merion	35	48	83

GIRARD VS. ST. TIMOTHY.—These young clubs met at Oakdale Park, Philadelphia, on the 14th, when in a one inning game "the young Stephens" secured a victory by a score of 92 to 50 for the Sts.

YOUNG AMERICA (2d) VS. GERMANTOWN (2d).—In an interesting two-innings game between these second elevens, played at Nicetown on the 14th, the visitors won by 88 runs. For the Young Americas, Gowen, 0 and a hard hit 50; Murphy, 5 and a good 40; Pease, 23 and 12; Clark, 14 and 4, and Brown, 9 and 10. For the home club, Capiti, 14 and 25; and H. Thurman, 0 and 18:

	1st Inn'g.	2d Inn'g.	Total.
Young America	74	137	211
Germantown	46	77	123

LIMBS OF THE LAW AT CRICKET.—A rather novel match was played last week at Philadelphia, between the students of two celebrated law offices. The following are the totals, and names of the sides:

	1st Inn'g.	2d Inn'g.	Total.
Richard L Ashurst's office	51	25	146
John B Townsend's office	46	34	80

MANHATTAN VS. PATERSON.—One of the best matches of the season that has been played in the vicinity of New York came off on the picturesque grounds of the Paterson Club, at Haledon, on the 16th. Plenty of good cricket was shown in this game by both elevens, the Manhattans particularly covering themselves with glory. The Patersonians have a good wicket, and have built a nice little house in which to entertain visiting clubs, and an eleven, which with practice will prove a strong one. For the New Yorkers, Hooper contributed in fine style 70 (not out; Brewster, an excellent 22; Jenkins, 15; Love, 15, and Greig, 10. For the Jerseyites, Finnegan did finely with 26 and 15. The day was a delightful one for out-door sports, and the large number of spectators present added greatly to the interest of the game. The totals are as follows:

	1st Inn'g.	2d Inn'g.	Total.
Manhattan	169	..	169
Paterson	41	43	84

PENNINSULARS VS. CHATHAM.—On the 12th inst. the Peninsulars of Detroit, Mich., met the Chatham Club, at Chatham, Ont., and were defeated in a full played game by 30 runs. The Canadian club has lost several of its best players, such as Whelm, Eberts, Wells, etc., and in extending a challenge to to the Detroit club, stipulated that Dale, Francis, White and Littlejohn should be barred, as these are probably the best men in the Peninsular team, it is not to be wondered that the Chathams were victorious. For the home club, Little scored 17 and 12; Bell, 0 and 16; Syers, 5 and 11, and Atkinson, 10 and 8. For the visitors, Irving asserted with 12 and 15; Hinchman, 2 and 13; and Lane 1 and 10. Annexed are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Chatham	66	84	140
Peninsular	47	63	110

—A well known guide and keeper of a boat house at Niagara Falls went over the falls the other day and disappeared in the rapids. He was drunk at the time. His boat was caught in the rapids above Goat Island, as he was returning from Port Day, and hurried along over the abyss. Walker lay in the bottom of the boat, too drunk to help himself. The water was only a few inches in depth, and he might have jumped out and clung to the rocks until aid reached him. He made no attempt to save himself. The boat was broken in two before it went over the falls, and he was thrown headlong over the rapids. Hundreds of people saw the accident, but could do nothing to save him. Men who get drunk have no business to go out above the falls. Men who go out above the falls have no business to get drunk.

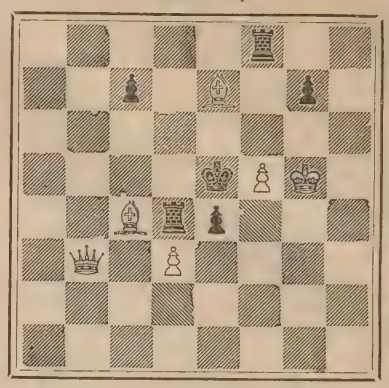
—See adv, Riverside House, Forked River, N. J.

The Game of Chess.

MANHATTAN CHESS CLUB, CAFE LOGELING, NO. 49 BOWERY

Problem No. 56.

Motto: Killarney.



White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 52.

[Add a White P at Q3 and a Black P at Q3.]

1—B-B6	1—P-
2—P-Q4	2—Any
3—R mates	

Game No. 117.—AUSTRALIAN CHESS.

Of this game the Adelaide *Observer* says: "Brevity and Brilliancy.—The following lively little odds game was played by members of the Adelaide Chess Club:"

REMOVE WHITE'S QUEEN ROOK.

White. H. Charlick.	Black. T. S. Adey.	White. H. Charlick.	Black. T. S. Adey.
1—P-K4	1—P-Q Kt	13—P-K B4	13—P-Kt3
2—P-Q4	2—B-Kt2	14—P tks P	14—B tks B (c)
3—B-Q3	3—P-K3 (a)	15—Q-R3 † (d)	15—Q-B4 †
4—Kt-Q B3	4—Kt-K B3	16—K-B2 (e)	16—Kt-Kt5
5—K Kt-K2	5—P-B4	17—Kt-Kt3	17—Kt tks R (f)
6—P-K3	6—P tks P	18—Q tks Kt	18—B-B5 (g)
7—B tks P	7—B-B4	19—K-R	19—B-K3 (h)
8—Castles	8—B tks B	20—Q-B6	20—K-Kt (i)
9—Kt tks B	9—B-R3 !	21—Kt-K B5	21—P tks Kt
10—Q Kt-Kt5 (b)	10—P-K4 ?	22—Kt-K3 (j)	22—Q-R B †
11—Q-Kt6 †	11—K-B !	White mates in two moves.	
12—K Kt-B5	12—Q-B2		

NOTES.

(*a*) P-K B4, as shown in the Sidney match between Fisher and Smith would lead to some interesting lines of play.

(*b*) Beginning a vehement attack.

(*c*) Black could also play Q-B4 †, and thus take K P with Q.

(*d*) White now goes in for some desperate play, only excusable against a Rook player.

(*e*) K-R at once were better.

(*f*) Here is Black's weakness; Q tks Kt would win off-hand.

(*g*) Not bad; for if K Kt tks B, Black exchanges Q's.

(*h*) Instead of trying to save the B, Black should play Kt-B3.

(*i*) If R-Kt, White could draw by Q-Q8 †, K Kt-B5 †, Q-B6, etc.

(*j*) If Black makes the proper reply, K-B, White must be content to draw by a perpetual check as follows:

22— ——	22—K-B	25—Q-B6 !	25—K-B
23—Q tks R †	23—K-Q2	26—Q-R8 † and wins	
24—Kt-Q6	24—Kt-B3 !		

CURSORY JOTTINGS.

—Owing to the miscarriage of the April number of the *American Chess Journal*, we were unable to announce the result of its problem tourney until this week. The five prize problems, winners, etc., will be found below. Our guess as to the first prize winner was, it will be seen, a good one. The prize winners, with the exception of Mr. Mohle, are comparatively unknown as problemists:

First Prize Problem, by Mr. C. Mohle—A masterpiece:
White—K on Q Kt7, Q on Q Kt8, Kt on K5, B on K R.
Black—K on K B5, P on K R6.
White to play and mate in four moves.

Second Prize Problem, by Mr. H. D. Morwood—A fine problem in an attractive form:
White—R on Q R3, Q on Q7, K on K Kt8, P on K R4.
Black—K on K5, P on K R4.
White to play and mate in three moves.

Third Prize Problem, by Amanda Brace, of Wolcottville, Conn.—A beautiful two'er that would undoubtedly have stood second but for the number of pieces employed in its construction, as the rules of the tourney required 1-30 of a problem's difficulty to be deducted for each piece. This is, we believe the first problem tourney prize won by a lady:
White—Q on Q R, Kts on Q Kt7 and Q8; Ps on Q B3, Q2, K2 and K B3; R on R4, K on K Kt5.
Black—Kts on Q Kt6 and Q2, P's on Q B5 and K Kt3, K on Q7.
White to play and mate in two moves.

Fourth Prize Problem, by J. C. Ninde—A brilliant two'er, and one that would rank high in any past, present or future tourney:
White—B on Q3, K on R, R on K3, Kt on K4, P's on K6 and K B3, Q on K K6.
Black—P's on Q3 and K B3, K on K4.
White to play and mate in two moves.

Fifth Prize Problem, by J. M. Hughes—A fair two'er; we solved it in half a minute:
White—P's on Q Kt5, Q B2, Q4 and K B5; R's on Q B4 and K4, K on Q2, Q on K2.
Black—Kts on Q B2 and K3, K on Q4.
White to play and mate in two moves.

—Preliminaries have been satisfactorily arranged in the Delmar vs. Loyd match, and play began May 7. The stake is merely nominal—$100, which is in the hands of the stakeholder, Mr. C. A. Gelberg, Esq. The umpires are L. H. Hellwitz, Esq., President of the Manhattan C. C., and the President of the Elizabeth (N. J.) C. C. The games are to be played on Wednesdays and Saturdays at the Cafe Logeling, 49 Bowery, and Elizabeth, N. J., alternately. The first five games to decide.

—The grand tourney held lately at St. Petersburg, Russia, resulted in the first prize falling to Tchigorin, and the second to Messrs. Schiffers and Soloitzoff. The other entries were Alapin, Aschain, Liaselle, Nesling, Petroffsky and Evon Schmidt. The grand tourney in progress at Moscow will probably result in the prizes falling to Zoloftszoff, Evon Schmidt and Helwigg.

—A chess circle numbering over forty members has been formed Bologna. The President is Marquis Revedin.

New Publications.

LLOYD'S YACHT REGISTER. Lloyd's Register of British and Foreign Shipping, 2 White Lion Court, Cornhill, London:

Through the kindness of James D. Leary, 73 William St., Lloyd's surveyor for New York, we are in receipt of the second annual Yacht Register issued by the Lloyds of London. The Register for 1879 has been much enlarged, containing all the supplementary lists issued during the year. It is somewhat noteworthy that when an American wants to find out something about his own yacht he has to turn to British authority for information. If some of our contemporaries who charge themselves with the care of American shipping interests would cease their silly onslaughts upon Lloyds, and would attempt to substitute for the shameful and characterless humbugs which flourish here in America as American Lloyds, something more entitled to confidence and something not to be bought with a five-dollar note, they would attain the end they seek much sooner than by barking away at the British Lloyds—something which reminds one very much of the spiteful little cur barking up against the big and shaggy-coated Newfoundland who only wags his tail in recognition. The number of subscribers to the Yacht Register in America have increased, but still are not up to what the value of the book can claim. When we remember that it contains full tables of scantlings and fastenings for the construction of yachts of wood, iron and composites, how and when to inspect the work of building, size of spars, anchors and chains for everything from fifteen tons up, besides dimensions and particulars of an endless number of yachts, British and American,—it is simply a wonder that the Register has not yet found its way into every building yard and aboard of every yacht in the country. But we are not yet a reading nation, and hence the comparatively slow sale of one of the most valuable yachting volumes ever published. Concerning the attempt of Lloyd's to include American yachts in the Register, the record is necessarily incomplete, owing to the difficulty of gathering such statistics as yet, as well as owing to the lethargy exhibited by most owners in such matters, an *esprit de corps* among our yachtemen being only in process of formation, while in England all pull together for the common good. The Register shows many remarkable phases of yachting in Great Britain, to which we will refer at some other time; the great size of some of the steamers as as well as the several yachts often owned by the same person exhibiting the strong hold the sport has got. The number being built under Lloyd's inspection has rapidly increased, and now a yacht is hardly considered up to the highest grade unless built under inspection of the regular surveyors of the company. Moreover, builders do not complain of any interference with their business by this plan; on the contrary, the reputable firms feel that no "scamp" work can be palmed off upon unsuspecting owners, and their offers thereby underbid by irresponsible parties. The custom of constructing under survey has been found a protection to builder and owner alike. We sigh for the day when yacht building in America will have advanced to such a state of development as to permit survey with one eye closed even. As it is, an inspection of the scantling, fastening, and, above all, rig and fittings of most yachts on this side of the Atlantic, would drive a Lloyds man accustomed to English work to rapid suicide. The "get up" of the Yacht Register is all that can be desired, and in its neat binding and gilt edges should be a welcome addition to all yachts' libraries. As a book of reference we find it invaluable. Among the American yachts we find the Eastern clubs the best represented, they evidently having answered the call of Lloyds more readily than the less alert organization in New York and neighborhood. But the list does us no particular credit, and it remains to be seen whether yachtsmen propose to have us properly represented in the future issues or not. Such a work is of an international character, and as long as we are not able to supplant it with something American, let us give to the Register what aid and sympathy we can. We believe copies can be obtained from Mr. J. D. Leary, 73 William St., New York, who will also furnish price on application.

INSTINCT OR REASON?—A small English terrier belonging to a friend has been taught to ring for the servant. To test if the dog knew *why* it rang the bell, he was told to do so, while the girl was in the room. The little fellow looked up in the most intelligent manner at the person giving the order, (his master or mistress, I forget which,) then at the servant, and refused to obey, although the order was repeated more than once. The servant left the room, and in a few minutes the dog rang the bell immediately on being told to do so. I give the following as told by my wife, now dead, who personally witnessed the transaction on various occasions. At her sister's house in Kent, a donkey which when not employed by the children, grazed in the field with some cows, was in the regular habit of acting as follows:—At the hour for the cows to come home to be milked the donkey lifted the latch of the field gate, opened and held back the gate, (which would otherwise have swung close again,) till all all the cows passed out, then allowed the gate to shut, and went home with the cows. Of course no one taught the donkey to do this, but the quadruped gave the biped a practical lesson.

CURE BY ABSORPTION.

"SAPANULE."

The Great External Lotion and Fluid Absorbent. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath.

"SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sprains, Sores, Piles, Boils, Chilblains Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving it smooth and soft. Soreness or Inflammation of feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d St., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:
A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.
HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:
For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.
MRS. W. H. KINSLEY, 138 West 22d Street, New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.
GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,
JOHN BEATTIE, Providence, R. I.

MESSRS. SAMUEL GERRY & CO.:
GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,
N. ORMS, 59 West 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS

PRICE $1.50. Sent post-paid on receipt of price.

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.72. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

TRADE— **"BEATS THE WORLD."** —MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

Long Island RAILROAD

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,
apr24 3mos Sour Lake, Texas.

GOODSELL HOUSE.

M. JENNINGS, - - Manager.

BROOKFIELD CENTRE, CONN.

Brookfield Centre is situated on the Housatonic Railroad, three hours ride from New York city and about an hour from Bridgeport, Conn. Its location is on high ground, healthy and picturesque, the neighborhood abounding in pleasant drives. The Housatonic River flows near it, where good bass and other fishing can be had. The hotel accommodates about thirty guests, and is pleasantly arranged. The bar, billiard room and dancing room are separate from the hotel building. Brookfield Centre has an Episcopal and Presbyterian church; services every Sabbath.

Through cars from Grand Central Depot, New York, via N. Y. & N. H. Railroad, or take Bridgeport boat from the East River.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The DelawareShell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.
3d. The Paper is Superior.
4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER
OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL.
STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

68 Huron street,
GREENPOINT, BROOKLYN, L. I.

Ships and yachts of all classes built in best manner and of best materials. Plans and specifications at reasonable rates. Repairs, Docking and Spars.

CUTTER YACHTS A SPECIALTY.

Refers by permission to Henry Steers, Esq., shipbuilder.

THE PATENT
NONPAREIL YACHT

Has all the good qualities of a Sharpie, with none of her faults. Is a very fast boat either under sail or steam. Draws but a few inches of water. Does not pound or spank, and is a splendid sea boat.

Finely finished cabin yachts, 40ft. over all, built and outfitted, ready for cruising, $600 and upwards. All sizes at equally low rates. Also light draught **Steam Yachts,** and full working drawings for Sharpies at short notice.

Specimen yachts always on hand.

THOMAS CLAPHAM, Roslyn, L. I., N. Y.

THE COMING BOAT.

The light draught "sharpie-built" boat is precisely the thing for shooting, fishing and pleasure sailing, and for speed, safety and comfort is not excelled.

Send for circular. D. O. TWITCHELL, 16 Archer street, New Haven, Conn. jan30

J. J. DRISCOLL
YACHT BUILDER,
Cor. Franklin and Clay streets, Greenpoint, L. I.

Yachts and boats of all descriptions constantly on hand and built to order at lowest market rates.

Alterations and repairs promptly attended to.

Prices and specifications furnished.

SEND FOR CIRCULAR.
The Ames Sporting Cannon,
Made by the
AMES MANUFACTURING COMPANY,
CHICOPEE, MASS.

This gun is a small BRONZE BREECH-LOADING CANNON, adapted to the use of Campaign Clubs, Celebrations, Yachting, Signal and Sporting Purposes generally. je12 3t

FOREST AND STREAM
& ROD AND GUN
THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the Year 1879, by the Forest & Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.]

Terms, Four Dollars a Year
Ten Cents a Copy.
6 months, $2; 3 months, $1.

NEW YORK, THURSDAY, JUNE 26, 1879.

Volume 12—No. 21.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

The One-Stringed Harp.*

By John T. Pickett.

"Loud rush the torrent floods
The Western wilds among,
And free in green Columbia's woods
The hunter's bow is strung."

THANKS, O gentle Hemans! for this stirring pen-picture of the native American archer! And with its rythm there comes a rush of classic memories—Ulysses, Pandarus, Cambyses, Philoctetes, Commodus, Robin Hood, Roger Ascham, Bishops Latimer and Heber, and, though yet unknown to prose and song, the brave and handsome Ke-tem-seh, chief of the Pe-nah-te-kah, or Honey-eating Comanches.

It is many a lustrum since my star led me to spend some lotus-eating months with the Pe-nah-te-kah Comanches, but whether as volunteer or captive, it matters not; and it was then that I first revelled in the delight and dirt of savage life. And whence comes it that civilized man develops, on slight provocation, a strong disposition to return to his primordial condition of savagery? For there is a charm unspeakable in escaping the restraints of society. And just here I am tempted to relate the sadly romantic story of "Bison" McLean, a graduate of the U. S. Military Academy, who became chief of a band of wild Mohave Indians, and who presented himself on one occasion, "all painted and plumed in savage array," before one of his old classmates, who was in charge of an U. S. exploring party, and whom he magnanimously forbore to capture or slay. Suffice it to say that just as Lieut. Ives, U. S. Engineers, and party had settled themselves comfortably in camp one fine evening, some twenty years ago, on the brink of a cañon of the Colorado, they were startled by the sudden appearance in their midst of a band of the ugliest and most h stile-looking savages they had yet encountered, all with arrow nocked on bow-string. Ives put a good face on the *contretemps*, welcomed his unbidden guests and offered them the coffee of comfort and the pipe of peace. They seated themselves, and with many "hows" and "ughs," partook freely of the refreshments, and were smoking in solemn silence, when suddenly thus their grim chief spoke: "Why, Ives, old fellow, you don't seem to know me!" Tableau. The "Bison" was finally slain by his adoptive brethren. And has not General Cadmus Wilcox made the strange story "serve to point a moral and adorn a tale?"

The *dactylomonochordo*, or, as our little Greeks have it, the "bow-arrow-stick!" Where is the country-bred, interesting small boy who has not tried his skill as an archer upon the cheerful cock-sparrow and festive tom-tit, or upon the infant progeny of duck or hen? Such, at least, is my recollection of youthful days in beautiful blue-grass Kentucky. But shade of Apollo! such archery! Later, I obtained some glimpses of the art by visiting an academy where a number of Choctaw and Chickasaw youths were instructed in the three R's; yet it was not until after the lapse of many years that I acquired a knowledge of the true principles of archery from Ke-tem-seh and his braves. The Comanches are, as all know, mounted Indians, and therefore use short bows, and, like unto Parthians, Persians, Tartars, etc., fighting and hunting on horseback, they have lost the use of the much longer bow. These Bedouins of the plains were not slow in availing themselves of the services of that noble animal *equus caballus*, and one of their bows—the longest they use, and which I retain after the lapse of a quarter of a century—is of only four and one-half feet, made of *bois d'arc*, and of a pull of about sixty pounds, which sufficed to drive their 25-inch arrows through man or beast.

In after years I was a visitor at the grounds of the Royal Scottish Archers, Hope Park, Edinburgh; of the Royal Toxophilite Society, Regent's Park, London; and spent a day at Chantilly, where the French archers most do congregate; but it was not until after reading Mr. Maurice Thompson's seductive article in *Scribner's* for July, 1877, that I became inspired with the desire of making a real long-bow archer of myself, and I have suffered ever since from a genuine attack of *toxomania*. True it is, many years had passed away since my earlier essays, and with those years I had grown old and broken in strength, and, in fact, was looking about for some suitable out-of-door exercise when Mr. Thompson solved the difficulty. Implicitly following his instructions, I find myself greatly improved in health and strength, for no middle-aged man of, say 55, could take ever so few pulls at a good, stout long-bow without feeling himself refreshed, exhilarated and benefited thereby. There is nothing equal to it, unless it be the sawing of wood; but in this latter exercise the element or sentiment of poetry is wholly wanting.

To most persons, a bow is simply a crooked stick with a string to it, while an arrow is a straight stick with a feather at one end. Each and every Yahoo thinks he knows how to shoot with these "sticks," and so he could, after a fashion; but I never yet encountered a wholly uninstructed person who knew instinctively (natural weapon of man, though it be) how to hold the bow, nock an arrow or draw the cord.

Foremost among my many archery correspondents is the venerable Peter Muir, of Edinburgh, who subscribes himself "the oldest living archer in Britain." And well he may, he has "twanged the yew" for sixty years, besides having been, until recent retirement from business, a manufacturer of archery implements for a full half century, and having conducted that ancient establishment, "Archers' Hall," Edinburgh, during that long period. I have one of his admirable yew bows, though for all practical purposes, give me the self lancewood or the lemonwood.

It is a common error with athletic new beginners to feel ambitious of handling very strong bows. This is a great mistake, and liable to produce unpleasant results. Attend, O, ingenuous youth and steady "buffer!" to these words of wisdom from that Nestor of archers, Father Muir. Quoth he: "A bow above 70 pounds strength is beyond the power of any living man to use with steadiness or skill. To wrestle with a piece of inflexible timber is not archery. To enjoy the practice, a man must have a weapon he can command—not the weapon command him. This is a truth patent to all practical archers, and which I have verified abundantly in sixty years' experience." He then proceeds to give illustrations, and cites the sad case of one gentleman who persisted in using, or trying to use, an 80-pound bow, until he injured his spine and lost his eyesight! Further, he says that "when a young man, I made bows 80, 90 and 100 pounds strong for a Mr John Gregory, but he could not even string them—and a noble strong man he was" He adds: "I would advise you to limit the power of your bows to 56 or 58 pounds, which you would find abundantly strong for all practical purposes of archery." Of course, he is speaking of the bow as adapted to target shooting, and in the British Islands it is used for no other purpose. When the bow was a military weapon 80 or 90 pounds was not unusual, and it was dangerous to expose yourself to the English shafts within 400 yards, if they had the windward of you. But they were practicing constantly and until the muscles of the arms were preternaturally developed, and their skill became simply marvelous. My Comanche friends used bows of from 40 to perhaps 70 pounds, but they did not appear to attach much importance to long-range shots, nor do any mounted American archers. There is a well-authenticated case in Texas of the killing of a white man at the distance of 225 yards by a Karonkaway Indian, with his little bow and arrow. These, however, were not mounted savages—were cannibals, and are long extinct, at least as a tribal organization.

The redoubtable Captain John Smith in his Voyages and Discoveries in Virginia, says (discarding his quaint spelling): "There is yet in Virginia no place discovered to be so savage in which they have not a religion, deer, and bow and arrows." And in speaking of their archery he informs us that "when they come to the place of exercise every man doth his best to show his dexterity, for by their excelling in those qualities they get their wives. Forty yards will they shoot level, or very near the mark, and 120 is their best at random. * * * For fishing, hunting and wars they use much their bow and arrows. Their arrows are made some of straight young sprigs which they head with bone some two or three inches long. These they use to shoot at squirrels on trees. Another sort of arrows they use made of reeds. These are pieced with wood, headed with splinters of crystal or some sharp stone, the spurs of a turkey or the bill of some bird. For his knife he hath the splinters of a reed to cut his feathers in form. With this knife also, he will joint a deer or any beast, shape his shoes, buskins, mantles, etc. To make the notch of his arrow he hath the tooth of a beaver set in a stick, wherewith he grateth it by degrees. His arrow head he quickly maketh with a little bone, which he ever weareth at his bracert (arm guard) of any splint of a stone or glass, in the form of a heart, and these they glue to the end of their arrows. With the sinews of deer and the tops of deer's horns boiled to a jelly, they make a glue that will not dissolve in cold water."

This most illustrious of all the John Smiths favors posterity with the following account of the Susquehanna Indians, whom he first encountered near the head of Chesapeake Bay: "Five of their chief *Werowances* (petty kings) came aboard us and crossed the bay in their barge. The picture of the greatest of them is signified in the map. The calf of whose leg was three-quarters of of a yard about, and all the rest of his limbs so answerable to that proportion that he seemed the goodliest man we ever beheld. His hair, the one side was long, the other shorn close, with a ridge over his crown like a cock's comb. His arrows were five quarters long, headed with the splinters of a white crystal like stone, in form of a heart, an inch broad, and an inch and a half or more long. Those he wore in a wolf's skin at his back for his quiver, his bow in the one hand and his club in the other, as is described."

Now, nothing could be more interesting to the toxophilite and ethnologist than the foregoing graphic extracts from our brave old filibuster. Hereabout lived the *Monacans*, who bore, it is to be presumed, a general resemblance to their neighbors, although Captain Smith does not describe their aspect minutely. But, in my archery excursions in the immediate vicinity of this beautiful Capital City, I have picked up scores of those "splinters of a white crystal like stone," quartz arrow-heads, or "Indian darts," as the natives, white and colored, call them. These Monacans were constantly at war with Powhatan, and but little is known of their history. They have left no monumental remains, but their stone implements afford an imperishable record of their having been and passed away! The neighboring shores of the Anacostia and the beautiful little island of Analostan seem to have been their favorite habitat; for my juvenile band of bowmen and I have collected nearly one thousand of these palcological specimens in our roving excursions, spear and arrow heads, punches scrapers, knives, and an occasional stone hatchet—all of quartz chert, porphyry, slate, jasper, etc., etc., with bare three flints. Many specimens are perfect, but as regards far the greater number, the plough, the hoe, and the iron-shod heel of the horse have done their work. In prosecuting these interesting and simple researches I have stood, literally, within the shadow of the mighty dome of our Capitol

When the fire in the West fades low,

and saluted the bronze squaw upon its summit whilst she looked benignantly down upon my not irreverent gathering up of the relics of those who are long since gone to the Happy Hunting Grounds prepared for all of her race.

Many of our still-existing Indians use the arrows so faithfully described by our truly veracious old chronicler, Captain Smith. I have in my possession numbers of those "reed arrows, pieced with wood, headed with splinters of crystal or some sharp stone." It is a favorite style of missile with the Pai-Utes and other tribes of the Western wilds; and it is a curious fact that although these arrows are usually nearly or quite three feet in length they are discharged from bows of only 4½ feet. Any toxophilite will readily understand why the Indians "foot" their arrows in that manner. Smith says also: "Their arrows are made some of straight young sprigs," and to this day the Comanches and others prefer those "young sprigs," dog wood shoots or "suckers," to any other material for their shafts; and it is a further curious fact that the ancient Britons used the same shafts, namely, the shoots of the cornel tree, *i. e., cornus;* in plain English, dogwood.

I would advise all who may be interested in our real native American archery to visit the admirable Ethnological Museum of the "Smithsonian," where they will find an almost endless variety of Indian bows and arrows and the accompanying gear. Shall we not find an enthusiastic votary of toxophily who will imitate Hansard and give us an illustrated "Native American Book of Archery?" We have no end of admirable works on everything "in the Heavens above, and in the earth beneath, and in the waters under the earth;" multitudes of "Indian books," etc., etc., but what is wanting is "A Monograph on the Missile Weapons of the North American Savages," for it seems to me that this special branch of ethnology has been sadly neglected.

Old Roger Ascham delighted in subscribing himself "Scholæ and Toxophilite," and he has been called the father of English prose, for his "Toxophilus" was written rather with a view toward crystallizing the crudities of the English language and giving it a style, than alone from mere love of the long bow. And so my venerable Scottish friend, Mr. Muir, may claim to be "Poet and Toxophilite," as witness his pleasing little verses:

IN PRAISE OF ARCHERY.

Hail happy sport, naught else on earth
Could make our hearts to glow
With half so much of joy and mirth,
As the pastime of the bow.
It is a sport for gallant men,
For hearts well used to freedom:
A laggard ne'er our joys could ken,
A slave our path ne'er tread on.

Chorus—Then join with me ye merry men,
We'll toast the bow and quiver,
And may our lives, like our bright targe,
Be brilliant rounds for ever.

To please our aim no victim bleeds,
No eye e'er droops in sadness:
Humane are all an archer's deeds,
And all he learns is gladness.
It lengthens life, it strengthens limb,
It adds to beauty's glow:
Disease flies off on rapid wing
From him who twangs the bow.

Chorus—Then join with me, etc., etc.

* *Dactylomonochordo*, a formidable-looking compound Greek word, means simply a "one-stringed harp," otherwise an archer's bow, which was probably the origin of the harp. The title signifies literally a "one-stringed finger-harp," and the critical may say that it would be more appropriate to a paper on the Jew's-harp. And, by the way, why *Je u's*-harp? I have been informed it was originally *jaw's*-harp, In either case, fancy King David playing on that instrument!

Mr. Muir expresses some contrition at having, when a boy, "once, at a single shot, strung two sparrows on his little arrow. *En! trajecit uno ictu sagitta duos.* Such a feat would not grieve the heart of Young America; and I do not know whether it may be the outcropping of that "primordial savagery" of human nature in general, but certain it is I never present bow and arrow to the engaging small boy but that he proceedeth straightway to try his skill on some living object—be it cow, cat, pig or chicken. But it has afforded me food for deep reflection—the fact that he will not shoot at a dog!

As to the killing of lawful game with the bow I am in entire sympathy with Mr. Maurice Thompson, and look back with pensive regret at the time wasted in knocking over duck and plover, not to mention grouse, turkies, royal-pheasants, etc., with so prosaic and unclassical an implement as a double-barreled breach-loading gun! In short, I oftentimes feel the Indian cropping out in me, and am strangely tempted to seize my half dozen bows, with a few hundred arrows, and cut out for the wild wood. But again, may not my fondness for the classic weapon be assignable, as in many other cases, simply to a "returning heredity" and deducible from our Norman and mediæval English ancestry?

I have performed no feats with the long bow; have not, like Acestes, "shot my arrows in the sun," nor have we any game hereabout. But I have flighted my arrows across the Potomac River at a certain point where it is not as wide as at some other points.

We have "whipped the Britishers" at baseball, yachting, rowing and rifle shooting, but they still bear the palm at archery. Will not some of our *jeunesse dorée* who may be addicting themselves to the long bow enter the lists and contend for the prizes to be shot for on English soil the coming season? And, ladies, your fair English cousins have greatly the advantage of you in this matter of archery; for, depend upon it, nothing so "adds to beauty's glow" as active out-of-doors exercise, and there is no exercise so suitable to your sex and costume as "the twanging of the yew."

I find in the Congressional Library a little volume entitled "The Archer's Manual as Practiced by the United Bowmen of Philadelphia." The date of its publication is 1830—half a century ago. The only other American book on the subject is Mr. Maurice Thompson's charming "Witchery of Archery." But there is a copious English literature, and the bibliography of archery at large will be found in the London "Notes and Queries" of last year.

I have procured excellent archery implements from the several dealers in New York, and can particularly recommend the well known old importing house of C. F. A. Hinrichs, 29 to 33 Park Place. His French and Belgian back-bows are unequaled. The finest bow I have ever seen is of Spanish yew, made by Thomas Aldred, 126 Oxford street, London.

Although not fully agreeing with old Statius, wherein he says *Pudor est nescire sagittas*, yet I cheerfully contribute what may be in my power toward the encouragement of the manly, graceful, healthful, classic exercise of archery.

Washington, D. C., May, 1879.

For Forest and Stream and Rod and Gun.

ALCOHOL IN CAMP.

By Theron G. Strong.

IT is not my intention to deliver a temperance lecture through these columns. Inclination does not prompt, nor does the occasion demand it; and while my convictions are most decided that total abstinence is one of the surest paths to health and prosperity, it is not my purpose at present to enforce these views by appeal or argument. But the question which I desire to ask and briefly consider is as to the utility of alcoholic beverages in camp as a part of the sportsman's outfit.

Considerable personal experience and observation, supplemented by not a little research into the recorded experience of others, convinces me that the use of alcoholic stimulants in camp, or during the day's sport with rod or gun, serves no good purpose, but works a positive injury. It cannot be denied that the use of spirituous liquors in camp is extremely common, and that the impression among sporting men is very general that they are a panacea for all the ills that the sporting man in camp is heir to. And, while I do not expect that anything I may say will tend to alter the habits of confirmed drinkers, who, in camp or out of it, find the use of alcoholic beverages a necessity, it is because their use is so common, and the impression that they are beneficial so general, that I desire to address that other audience, composed of the young disciples of Nimrod and good old Izaak Walton, who have just begun to handle the rifle and shotgun and cast the fly, and who will be the instructors of the sportsmen of the future. Nor do I intend to enforce my views by an explanation of the action of alcohol on the system as tending to a destruction of the tissues and enfeebling muscular force. That alcoholic stimulant acts upon the fatigued sportsman precisely as the whip on a tired horse—spurring him into activity only to leave him more tired than before—is too well known to admit of discussion. And it is also capable of demonstration that placing the total abstainer, refreshed by a draught of warm tea, alongside of the man who relies on his whisky or rum to produce warmth, with the thermometer below zero, with no cover but a blanket, and the blazing fire at their feet, which will be a few smouldering embers before morning, the chances will be very decided that, when morning arrives, the former will wake quite comfortable and active, while the latter, if not frozen to death, will wake numb and cold, and in no sense fitted for the duties of the day.

The larger range of my personal experience and observation has been confined to a part of Canada known as the Muskoka District, and the outlying country beyond, to which no name has yet been given, because it is still unsurveyed and unclaimed, except by the Government of the Dominion. The guides in that locality are, for the most part, lumbermen or trappers in winter and the spring, who, inhabiting rude log shanties, have, in other portions of the year, reclaimed a few acres, which by careful tilling yields, with their other earnings, a scanty subsistance. The rigor of the climate in winter, and the terrible privations and hardships which these hardy pioneers undergo, no one can imagine who has not personally experienced them. With the thermometer often indicating in winter forty degrees below zero, sleeping frequently during the trapping season without even the shelter of a tent, with only a blanket as a covering, it would seem that if there were any virtue in alcohol, either as a preventive against cold or as an aid to exertion, these were the men who would have discovered it; and any one who has seen them on hot summer days shoulder the immense burdens which they cheerfully carry over the long portages, or has witnessed the vigorous stroke of the paddle with which they drive the canoe over the waters, would unhesitatingly say that if alcohol made heat less oppressive, or rendered one less impervious to the sun's rays, or lightened toil, or sweetened rest, these men, keen of eye, quick in thought, vigorous in action, would have discovered it. On the contrary, travel where you will in that country, and ask these men if they would take it as a gift, and they would tell you that it would serve them no good purpose and prove as useless as a poison. And yet I venture to say that many of them never heard a temperance lecture! Nor is it characteristic of these men alone that alcohol is discarded, nor is it confined to this locality. In the Adirondacks and in the Maine woods wherever you find men who are compelled to undergo great privations and suffer exposure to inclement weather you will find the same adherence to total abstinence principles, and if you visit the forest wilds this summer or autumn, put the question to your guide and to other guides you may meet, and if they are the kind of men who make a camping experience a delight on which memory loves to linger when winter has come with its wild winds whistling as you sit by your open fire dreaming of the glorious days of autumn, making you long for their return, you will receive the reply that they are not aided by alcohol.

If there were no other argument at all, the unanimous verdict of honest and hardy backwoodsmen, guides and trappers, those whose experience is worth something, and who know where of they speak, would of itself be sufficient to convince any one that there must be no substantial good in alcoholic stimulant as a part of the camp supplies. But after all, this is hearsay evidence, and how can I say that the city-bred sportsman, a kind of exotic from the hot-house of the city, does not need alcoholic stimulant to preserve vitality and lend strength. If personal experience goes for anything, my own has been such that for several years I have not taken and never shall again take any alcoholic beverage into camp. I am willing to compare experiences in heat, cold, fatigue, inclement weather and rough and toilsome journeys, with any other lover of gun and rod whose experiences are confined to a month annually, and I have never found a single instance in which I felt the least want of any alcoholic stimulant, or in which it would have been desirable. Nor does the conclusion that alcoholic beverages, so far from meeting the requirements of camp, are positively injurious, rest alone on mere oral testimony or personal experience, which, after all, may prove exceptional cases, but the recorded testimony of high medical authority, and the experience of distinguished soldiers and travellers, who have led large bodies of men through the most trying climates and terrible privations, is entirely uncontradicted as to the positive disadvantages of alcohol in camp, and the positive advantages of its absence.

In "Parker on Hygiene" (2d edition, p. 246), the author in speaking of the use of alcoholic stimulants to ward off cold says: "There is a singular unanimity on this point. All observers condemn the use of spirits as a preventive against cold." He refers in support of this statement to the Arctic travellers, Sir John Richardson, Mr. Goodsir in Sir John Franklin's first voyage, Dr. King, Captain Kennedy (in the last search for Franklin when the whole crew were teetotallers), Dr. Kane, Dr. Hayes, surgeon of the Kane expedition, who says he will not only not use spirits, but will take no man accustomed to use them. The author also refers to the well known fact that the Hudson Bay Company excluded spirituous liquors entirely from their rations. As to their use in tropical climates the author says: "With regard to service and exercise in the tropics we have the strong testimony of Ranald Martin that warm tea is the best beverage, and this will be corroborated, I believe, by every one who has made long marches or hunting excursions in India, and has carefully observed what kind of diet best suited him."

When wet and cold the use of spirits might be supposed to be beneficial, but no testimony can be more convincing on this point than that of Inspector General Sir John Hall, K. C. B., who, in his "Medical History of the War in the Crimea" (Vol. 1, p. 504), says: "My own opinion is, that neither spirits, wine, nor malt liquor is necessary for health. The healthiest army I ever served with had not a single drop of any of them. And although it was exposed to all the hardships of Kaffir warfare at the Cape of Good Hope, in wet and inclement weather, without tents or shelter of any kind, the sick-list seldom exceeded one per cent.; and this continued, not only throughout the whole of the active operations in the field during the campaign, but after the men were collected in standing camps at its termination and; this favorable state of things continued until the termination of the war. But immediately the men were again quartered in towns and fixed posts, where they had a free access to spirits—an inferior species of brandy sold there, technically called 'Cape smoke'—numerous complaints made their appearance among them."

Captain Huyshe, in mentioning this subject in his account of the Red River Expedition ("Blackwood's Magazine," Jan., 1871, p. 64), says: "No spirits were allowed throughout the journey to Fort Garry, but all ranks had daily a large ration of tea. This was one of the very few military expeditions ever undertaken by English troops where intoxicating liquor formed no part of the daily ration. It was an experiment, based upon the practice common in Canada, where the lumbermen who spend the whole winter in the backwoods, employed upon the hardest labor, and exposed to a freezing temperature, are allowed no spirits, but have an unlimited quantity of tea. * * * Never have the soldiers of any nation been called upon to perform more unceasingly hard work, and it may be confidently asserted, without dread of contradiction, that no men have ever been more cheerful or better behaved in every respect." In another account of the same expedition, contained in the "Journal of the United Service Institution" (Vol. XV., p. 74), the author, under the title, "Rations and Clothing," says: "This scale had been framed, after much careful consideration, upon the allowance granted the North American lumbermen, who perform the hardest possible labor during the extreme cold of a Canadian winter; so, although it was an unheard-of thing in our army to send off an expedition into a wilderness for five months without any spirits, still, as the backwoodsman was able to do hard work without spirits, it was rightly thought that the British soldier could do the same. The men were allowed a large daily ration of tea, one oz. per man, practically as much as they could drink. And as I am now on this subject of 'Bohea' versus 'Grog,' I may as well state that the experiment was most successful. The men of no previous expedition have ever been called upon to perform harder or more continuous labor for over four months, and I think it may be confidently asserted that no troops have at any time acquitted themselves with greater credit. * * * In the Red River Expedition there was no sickness and no crime."

It would not be difficult to produce many more witnesses to the same fact, but one more will be sufficiently convincing, namely, Sir Garnet Wolseley, the hero of the Ashantee War, who has just superseded Lord Chelmsford in the command of the British forces at the Cape. In his "Soldier's Pocket Book" (Third ed., p. 188), he says: "Give your men as little spirits as possible; in most countries tea and coffee are much more sustaining and more portable. * * * The old superstition that 'grog' is a good thing for men before, during, or after a march, has been proved by the scientific men of all nations to be a fallacy, and is only still maintained by men who mistake the craving arising solely from habit for the prompting of Nature herself. It is the commonest thing to see men when traveling at home taking brandy to keep them warm. It is an ascertained fact that alcohol of any sort reduces, instead of increases, the temperature of the body. The use of spirits in cold weather has been well tested during the various polar expeditions, the medical officers of which all condemn it as a preventive against cold.

"No men require greater endurance than the trappers of British North America, and none do a greater amount of hard physical work than the voyageurs and lumbermen there, none of whom drink spirits when in the woods, tea being their constant beverage. * * * Our experience in the Indian mutiny also carries out this theory. For months in some places our men were cut off entirely from all liquors, and they were healthier than when subsequently it was issued to them as a ration. By increasing the allowance of tea, and abolishing that of rum, you diminish the supplies to be carried, to a great extent, while you add to the health and efficiency of your men; their discipline will improve as their moral tone is raised, engendering a manly cheerfulness that spirit-drinking armies know nothing of."

Well, with this testimony before us, what is the beverage that possesses the qualities desired? The testimony of those just referred to, as well as the experience of all who have camped much in tropical, temperate, or Arctic climates, as well as the verdict of the pioneer, places tea in the front rank of beverages for use in camp. It is astonishing what quantities are consumed, an ordinary allowance being one oz. each person a day, and by no means steeped to such strength as is ordinarily found at our tea-tables in the city. It is simply a wholesome beverage, mildly stimulating and warming, which seems to meet in a more marked degree than anything else all the conditions required, and you will find that the trapper or backwoodsman would hesitate long before starting on a lumbering, trapping, or camping expedition without a good supply.

I do not know that it is possible to give any startling instances in which tea has proved a remarkable remedy for real, anticipated, or threatened disorders; but the fact that in the camping experience of the most noted explorers and soldiers, liquor being discarded and tea used, sickness of any kind has been comparatively unknown, would seem to be sufficiently conclusive as to its beneficial qualities. It is not my intention, however, to become the advocate of tea or any other beverage, but simply to demonstrate that alcoholic beverages should find no place among the camping equipment of the genuine sportsman; not resting the conclusion at all on moral grounds, nor their obvious tendency to demoralization and disease, but simply on the fact that they serve no useful purpose.

Fish Culture.

REPORT OF THE FISH COMMISSIONERS OF NEW HAMPSHIRE, IN JUNE SESSION, 1879.

THE general results of the work of the New Hampshire Fish Commissioners during the past year has been attended with general success. As in every other State fish culture is yet in great measure experimental in many of its branches; but each year marks progress in methods and accomplishment.

The new fishway at Amoskeag Falls has been constructed with great skill and is believed to be a model of strength and adaptability. The material employed is granite, and the length of passage is over one hundred and forty feet to a fall of only seven feet, thus giving a descent of only one foot in twenty. Salmon are known to have passed up since its completion.

The Commissioners were disappointed in their efforts to secure full-grown salmon at the Plymouth hatchery for the purpose of obtaining spawn. This was due to the destruction of the pound-nets by the freshets in August and September, when the female salmon came up the stream. This will be remedied, and other provisions have been made which warrent the hope of success with the salmon of the next run.

In his letter to the Massachusetts Commissioners detailing the work of the past year at Lawrence Falls, the hatching house at that point being owned by the two States in common, Supt. A. N. Powers reported the thorough testing of the water and the demonstration of its perfect healthfulness and adaptation to the salmon. The tanks at the Falls have a capacity of 600,000 salmon eggs. The California salmon-fry turned into the river in 1878 were very numerous up to July of that year and had then grown to the length of about three inches. Of the Atlantic salmon planting of 1876 the river was full about the middle of August. It was almost impossible to fish without hooking them, one man actually hauled up three at one cast of the hook. From Prof. Spencer F. Baird 367,500 California salmon eggs were received and 300,000 of the fry planted in the Pemigewasset River and other tributaries of the Merrimack.

Thirty thousand brook trout have been hatched, and are partially planted in the neighborhoods of Plymouth and Manchester.

The distribution of land-locked salmon since the last report

has been 20,000; blue-backed trout, 4,000; black bass, about 275; California salmon, 360,000.

The experience of the last two years, the Commissioners think, has demonstrated that New Hampshire's fish cultural work demands the appointment of a board, as the three present Commissioners have found abundant labor for their hands. They petition the Legislature to extend the protection of salmon to the first of July, 1882, or for five years from the time of the first appearance of full-grown salmon. This is in accord with the views of the convention of the New England Fish Culturists in Boston, last February, and appears to us to be a most wise and desirable provision, if satisfactory results are expected to accrue from former efforts in this direction.

The present summer will probably determine the habits of the California salmon. Mr. Powers thinks that they went down to salt water last year when one year old. The Atlantic salmon of former plantings are also due this year.

Efforts to secure California mountain trout and Michigan grayling have as yet proved unsuccessful, but the attempt will not be abandoned in the future. There has been some feeling against the introduction of so many foreign fish into New Hampshire waters, but the black bass culture has proved only a partial success and their rapid increase in the Merrimack and Connecticut may be apprehended as a detriment to the culture of salmon and shad in those streams. Commissioners Webber, Hayes and Powers extend a cordial invitation to visitors to inspect the hatching-house, and they close their report with the correct list of State Commissioners, published in the FOREST AND STREAM last April.

THAT HUDSON SALMON,—Concerning the alleged capture of a salmon in the Hudson reported by us last week an Albany correspondent writes to clear up any doubts of its being a true salmon:

In your issue of the 19th inst. you ask if the man who caught the salmon near here knew what it was? As the same was on exhibition on the stand of Mr. Thomas, a prominent fish dealer here, and viewed by many who knew what they were looking, at brother Seth may rejoice for the good he has done, as there is now no doubt that we have the genuine article this time. In hopes they may multiply and give us a chance in a few years to enjoy some sport in the capture of this lordly fish I am, with hearty congratulations to Mr. Green, thankfully yours, DEXTER.

PENNSYLVANIA—*Erie, June* 18.—The Northwestern Pennsylvania Game and Fish Association deposited ten thousand land-locked salmon in the Bay to-day. I will keep you posted on their progress. SNIPE.

GRAYLING IN OHIO.—A Toledo gentleman, Mr. J. W. Oswald, has just deposited in Cold Creek at Castalia, near Sandusky, twenty-eight fine specimens of the Michigan grayling, ranging from six to eight inches in length. They were brought from the Au Sable River by Mr. Oswald in cans, such as are used for transferring fry from point to point. Cold Creek is a clear, rapid stream formed by three large springs which discharge about one hundred and fifty gallons of water per minute, and as it is from thirty to forty feet in width and two and a half miles long before it discharges into the warm and muddy waters of Sandusky Bay, it not only furnishes an admirable place to test the transplanting of the grayling, but is so guarded as to prevent any possibility of their escape. Great interest is felt here in the experiment.
Toledo, June 21, 1879. J. B. B.

WISCONSIN—*Madison, June* 18.—Dr. H. R. Hoy, of Racine, one of the original Fish Commission, has resigned his position. The Governor has accepted his resignation, but has not yet appointed a successor. Dr. Hoy was noted for the deep interest he evinced in the work. ROVER.

—Forty thousand young California salmon were planted in Green Lake, June 19. Experiments have demonstrated that they thrive in inland waters.

Natural History.

THE ARMADILLO IN TEXAS.

FORT SHAW, M. T., May 27, 1879.

EDITOR FOREST AND STREAM:

In the number of FOREST AND STREAM for May 15, I notice a letter from Major H. W. Merrill in regard to the occurrence of the armadillo in Texas, in which it is stated that the specimen referred to is probably the first one taken within the limits of the United States. During a residence of about three years on the lower Rio Grande, at Fort Brown, I found this curious animal quite abundant, though not very often seen, owing to its retiring and partially nocturnal habits. They were sometimes killed by the soldiers while in camp and on scouts, and living specimens were not infrequently offered for sale by Mexicans. Exactly how far its range extended into Texas I am unable to say, but probably Atascosa County is very near its northern limit.

J. C. MERRILL, Ass't Surg., U. S. A.

FORT BROWN, Texas, May 24, 1879.

EDITOR FOREST AND STREAM:

The article clipped from the San Antonio *Express* and published in your paper of May 15, surprised me very much. The cachicamo, or armadillo, is certainly not a curiosity in Western Texas. It is to be found in every canebrake on the Rio Grande, and last winter, while hunting on the Arroyo Colorado—thirty miles back from the Rio Grande—we frequently met with it in the woods. It often interfered with our coon hunting, as the dogs would get off on the track of an armadillo, and valuable time would be lost. The flesh of the young animal is considered by some as fit to eat, but there is a strong, musky odor that is almost impossible to disguise. They are offered for sale in our streets at two bits apiece.

HIDALGO.

ALBINISM.

ST. JOSEPH, MO., January 18, 1879.

EDITOR FOREST AND STREAM:

I have been somewhat interested in the discussion which has been carried on through your columns of late upon the subject of albinism, and the communication of "Mic Mac" in your issue of the 2d inst., with your editorial comments, have suggested to me the idea of submitting my views upon the phenomena described.

It seems to me to be a solecism to use the phrase "partial albinism," as the phenomena you have described under that designation are clearly referible to the well-understood operation of natural laws. The theory of natural selection presupposes the existence of certain laws which, in their anticipated operation, would produce from time to time just such effects. These vagaries, which wear such an appearance of being the product of chance, are the effect of laws as well established as those which decree the uniform coloration of each species. Of course, I know that there is much to be said against the theory of natural selection and the evolution hypothesis in general, and I have no desire to provoke a discussion of the subject. But I will assume the truth of the theory, and by so doing, I think I can offer a solution of the problem of the frequent variation from the specific type which no other mode of reasoning can afford. Besides, I think the general acceptance of the theory by scientific men warrants its employment.

The whole theory has been well epitomized by Mr. Mivart as follows: "Every kind of animal and plant tends to increase in numbers by geometrical progression; every kind of animal and plant transmits a general likeness, with individual differences, to its offspring; every individual may present minute variations of any kind in any direction; past time has been practically infinite; every individual has to endure a severe struggle for existence, owing to the tendency to geometrical increase of all kinds of animals and plants, while the total animal and vegetable population—man and his agency excepted—remains stationary."

The most prominent factors in the process of evolution are: First, heredity, or the tendency of the offspring to assume the general form of the parent; second, indefinite variation, or the tendency of the offspring to exhibit individual differences from the parent; and third, the intense struggle for existence, which serves to extinguish all unfavorable variations by the destruction of the affected individual. The last two factors are what we have most to do with in this investigation.

I have seen many of the phenomena which your correspondent terms partial albinoes, and like him, I have observed it most in birds. There is no bird probably whose safety depends so much on its color as the quail, and yet I have observed this tendency to variation oftener in the quail than in any other species. I have found them, or seen specimens, varying from snow-white by almost regular gradations into their true color, but never once did I observe the unmistakable albino mark of want of pigment in the iris.

Now, the struggle for existence is so intense in all conditions of life which are not brought within the disturbing influence of man's control, that all animal life wears the hue best suited to the conditions surrounding it, whether its color be chiefly valuable to it in its hiding from its enemies, in concealing it from its prey, or in furnishing it with sexual charms. This perpetual struggle serves to repress any variation from the safest hue—most notably in the instance of the quail, whose principal safeguard is the concealment afforded by its protective resemblance to the objects among which it has its habitat. The slightest freak of nature which would change its color, even in the most inconsiderable degree, would, to that extent, diminish its power of concealment, and so serve to point it out to its enemies, the hawks and foxes. It is, therefore, highly improbable that any unfortunate individual marked with an unfavorable variation in color would live through a cycle of seasons, and succeed in propagating offspring. If, however, it should do so, some of its offspring or descendants would most probably exhibit the same peculiarity, either to the same extent or in a somewhat modified degree. Mr. Darwin earnestly argues that the development by natural selection is only the result of the minutest variations; and it is probably true that no sudden and marked changes are beneficial in the struggle for life, although Professor Huxley expresses the belief that Nature "does make considerable jumps in the way of variation now and then, and these saltations give rise to some of the gaps which appear to exist in the series of known forms." Mr. Darwin does not say that these freaks do not occur, but argues that they cannot, in the nature of things, be favorable to the individual, and accordingly, are not likely to be the starting-points of new species.

The explanation I would offer for the frequent recurrence of these "partial albinoes" is that they are perfectly healthy and normal specimens, exhibiting a greater variation from the parent type than ordinarily occurs, and which being, in all likelihood, unfavorable ones, will be speedily repressed by exposing the individual to dangers or privations which those of his fellows who have the true color of his species escape. This is well illustrated in domesticated animals, which, being protected by the hand of man from their enemies and supplied with food, vary in color indefinitely. In other words, the principle of heredity in the struggle for existence overcomes the tendency to variation, and preserves uniformity of color in each species, while the removal of the necessity of struggling for life enables the tendency to vary to overcome the tendency to strict inheritance. Pigeons furnish the best examples of this, as their origin can be most directly traced to the parent stock, which was as fixed in its coloration as any species now remaining wild. While, therefore, the pigeon had to depend entirely upon its own resources for food and protection, the severe requirements of the struggle for existence preserved a complete fixity in its coloration, and destroyed all departures from the uniform dress of the species; but as soon as the necessity for entering into the struggle for life was removed by the protecting hand of man, the law of uniform coloration was abrogated, and domesticated species ran into an endless variety of colors. As the theory I have advanced, as above stated, is that these partial albinoes are simply individuals varying more than usual from the specific type, and that such variations will doom them to an early death from danger or privation, it would be interesting to know if any of your readers have ever observed a specimen ranging far from the specific type which had reached the age of a year or more in its wild state.

The term albino is still a mystery to science, but I believe the best established theory is that it is a disease. It occurs pretty generally throughout all animal life, but not with anything like the frequency of the phenomena which I think you have misnamed partial albinism.

M.

Our correspondent's letter is interesting and ingenious, but, to our mind, unsatisfactory as an explanation of the phenomenon to which it refers. It would be difficult, we think, at the present day, to find many students of science who do not accept the Evolution hypothesis, and with it Natural selection, as accounting for most of the changes that have occurred in animal life in the past and of those which we see going on about us to-day. But if the white feathers which occur so frequently in birds of normally dark plumage are to be explained by the inherent tendency to variation which exists in all animals, why is it that this variation is so frequently in one direction? Why do we not hear of birds, say quail, being killed which have the plumage partly red, blue or green? We never see such cases. Abnormally colored birds are usually more or less white, or pale by the mixture of white with their normal colors. More rarely we find them black, or dark by the washing of the plumage with some shade of brown or black; a state which we term melanism. The variation is almost always in one or the other of these directions.

At present when so little is known of the phenomena to which this communication refers, it is perhaps hardly worth while to discuss the question as to whether the phrase "partial albinism" is or is not strictly correct. We have used it simply as a convenient term to characterize the partial whiteness which is so frequently seen in the lower mammals and birds, and as the same term has been used by leading ornithologists in the same connection it seems well enough for the present to continue to employ it.

"THE FISHER AND THE 'BLACK CAT.'"

WESTON, Vt., May 10, 1879.

EDITOR FOREST AND STREAM:

I wish to say a few words, mainly corroborative of points made by "Penobscot" in his interesting paper in a recent issue. I have trapped the fisher and the black cat the past thirty years, and always supposed them to be one and the same animal. I always made it a point to question experienced fur buyers—whom I supposed knew their business—and was so informed. With me, they occur in pairs, so that if a solitary one is trapped, its mate is almost invariably taken directly after in the same trap or one in the vicinity. The female is about a third smaller than the male, and always—at the same season—in better color. I never caught a female in the proper season off color, but some males were almost wholly as gray as an old, faded coon or woodchuck. All the tracks I have seen were like those of the mink—in pairs, as "Penobscot" says. What is most remarkable is the small size of those taken in this section compared with those of Maine and Canada. Until of late I was not aware that the species attained a weight of forty, or even thirty, pounds, though buyers told me that the same species in places above named were much the largest. I have never taken one weighing more than ten pounds. I agree with "Penobscot" that they are not plenty, but account for it on different grounds, namely, its fondness for the flesh of the porcupine, whose quills often prove fatal to it. I have several times found the quills buried in their bodies, besides quantities of flesh, hair and quills in the stomach and excrements, and from this gained a point in baiting them: let other trappers try it. They are an agile, muscular animal, jumping from tree to tree like a squirrel, clearing a distance of forty feet in a descending leap, never failing a secure grip.

CORPORAL LOT WARFIELD.

THAT DUCK.—We have received from Mr. G. M. Fairchild, Jr., a printed slip from the Quebec *Chronicle* containing a description of a duck shot near the town of Winnipeg, by Mr. J. P. Neilson's son. The description would scarcely agree with any known species of North American duck, for the coloring is very curious; but we learn from Dr. Coues, who has seen a colored drawing of the head, that the specimen is merely a partially albinotic wood duck (*Aix sponsa*).

CATALOGUE OF THE BIRDS OF THE LESSER ANTILLES.—Mr. Geo. N. Lawrence, whose valuable papers on the birds of the various islands of the Lesser Antilles, visited by Mr. Ober, have been noticed from time to time as they appeared in the columns of FOREST AND STREAM, has published in the proceedings of the U. S. Natl. Museum a final catalogue of the species found, with a table showing their distribution and those found in the United States. The whole number of birds noted is 128 of which 37 were found in Barbuda, 42 in Antigua, 45 in Guadeloupe, 57 in Dominica, 39 in Martinique, 53 in St. Vincent and 54 in Grenada. Of the 128 species found in these islands by Mr. Ober 53 occur in the United States.

The separate catalogues, of which the present one is a condensation, were published in the Proceedings of the United States National Museum, Volume I, Washington, and occupy pp. 46-69; 185-198; 232-242; 265-378; 349-360; 449-462.

THE FISHES OF ESSEX COUNTY, MASS.—Professor Goode and Mr. Bean have done good service not only to ichthyologists, but to the general public as well, in publishing, in the Essex *Bulletin*, their catalogue of the Fishes of Essex County, which includes besides those of Massachusetts Bay and the contiguous deep waters. The list, which includes 183 species, is certainly a most interesting paper, and cannot fail to be of great service to students of ichthyology. It has been brought down and completed to March 1, 1879 and includes the discoveries and additions to our fauna made by the U. S. Fish Commission up to that date. The authors in their prefatory note pay a high compliment to the zeal and energy of the Gloucester fishermen through whose efforts many of the specimens in the National Museum have been procured. Too much credit cannot be given to men who amid the hardships and constant work of a fishing voyage still remember the interests of science. The notes on, and synonomy of the various species mentioned in this list are quite full, the latter at least sufficiently so to guide the student to the works where fuller details may be obtained. At the end of the paper are given tabular lists showing the faunal relations of the species enumerated, and a very full index is appended. The catalogue is certainly a very valuable contribution to our knowledge.

THE YELLOW-BREASTED RAIL—*New York, May* 5.—A few days ago, while on the Hackensack Meadows, looking for snipe, my dog pointed what I at first took to be a mouse, but turned out to be a rail. It seemed unwilling to rise, until the dog moved almost on top of it, and then went off like a lazy

September bird. I shot it, thinking it a rare thing to see a rail in the spring, and on picking it up, found it to be a different bird from our *sora*. Referring to your valuable work, the "Gazetteer," it turned out to be the yellow-breasted rail, *Porzana noveboracensis*, a species different from any I had before seen. The description answered exactly to the bird, and was most accurate. Would like to hear if it is not unusual to find rail in the spring. W. HOLBERTON.

Rather unusual, in our experience, to see rail quite so early as this date. A little later they may be found in considerable numbers.

THE DARK GYR FALCON.—Mr. H. G. Vennor, of Montreal, has now in his collection of *Raptores* no fewer than four specimens of the dark form of the *Falco jer-falco* var. *labradora*, Aud. All of these birds were shot close to Montreal, and were brought into the market for sale. Among these four specimens are two in the adult plumage, the only specimens in this stage of plumage extant, so far, at least, as at present known. One of these birds Mr. Vennor sent in the flesh to Boston for examination by the Nuttall Ornithological Club, where it was beautifully preserved and mounted. The other three were sent during last winter to Dr. Baird, of the Smithsonian, Washington, and were submitted to Mr. Robert Ridgway for study and comparison. The specimens have now all been returned to Montreal.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING JUNE 21, 1879.—Two red-crested cardinals, *Paroaria cucullata*; fourteen fence lizards, *Sceloporus undulatus*; two screech owls, *Scops asio*; two short eared owls, *Brachyotus palustris*; eight golden-winged woodpeckers, *Colaptes auratus*; and one brown snake, *Storeria dekayi*, all presented. Two mule deer (twins), *Cervus macrotis*; one fallow deer, *Dama vulgaris*; and one American elk, *Cervus canadensis*; all born in garden. Seven mandarin ducks, *Aix galericulata*; one rose-crested cockatoo, *Cacatua moluccensis*; three banded rattlesnakes, *Crotalus horridus*; and one wildcat, *Felis rufus*, all purchased.

The Kennel.

THE DANDIE DINMONT TERRIER.

IT is stated that no dog has been the cause of so much controversy in England as to what was the correct type than the popular little Dandie Dinmont terrier, and it was not until a club was formed with this title that the "points"

"GRIP."

by which he was to be judged were finally determined upon and the matter set at rest. Yet a dog of this breed and possessing the true characters once seen should never be forgotten or confused with any other variety, for in coat, head and legs they are almost unique. The Dandie must be regarded as a dog possessing more than usual interest from the fact that he has been immortalized, even if not created, by Sir Walter Scott in Guy Mannering, although there is reason to believe that he has changed vastly since the days of the great Wizard of the North. In fact, the rage for pets is likely to affect many of the heretofore useful breeds of terriers by causing them to be bred smaller and finer. Although a class for Dandies has been made at most of our shows but very few pure or fine specimens have been exhibited. The description of the "points" which we append and which are those printed in "Stonehenge" as having been adopted by the Dandie Dinmont Club, of England, are so full that no further description is necessary. "Stonehenge" hints, by the way, that the Dandie has borrowed his crooked forelegs from the dachshund, an aspersion which we remember was indignantly denied at the time by a well-known English breeder. The portrait we print, and which is copied from our English contemporary *The Country*, is that of Mr. Wardlaw Reed's Grip, a dog which is represented as combining in a high degree all the good qualities of the strain. The following are the points:

1. Head	10	8. Coat	15
2. Eyes	5	9. Color	5
3. Ears	5	10. Size and weight	10
4. Neck	5	11. General appearance	10
5. Body	20		
6. Tail	5	Total	100
7. Legs and feet	10		

1. *Head* (v. 10).—Strongly made and large, not out of proportion to the dogs size, the muscles showing extraordinary developement, more especially the maxillary. Skull broad between the ears, getting gradually less toward the eyes, and measuring about the same from the inner corner of the eye to the back of the skull as it does from ear to ear. The forehead well domed. The head is *covered* with very soft, silky hair, which should not be confined to a mere topknot; and the lighter in color and more silky it is the better. The cheeks, starting from the ears proportionately with the skull, have a gradual taper toward the muzzle, which is deep and strongly made, and measures about three inches in length, or in proportion to skull as three is to five. The muzzle is covered with hair of a little darker shade than the topknot, and of the same texture as the feather of the fore legs. The top of the muzzle is generally bare for about an inch from the black part of the nose, the bareness coming to a point toward the eye, and being about one inch broad at the nose. The nose and inside of the mouth black or dark colored. The teeth very strong, especially the canine, which, are of extraordinary size for such a small dog. The canines fit well into each other, so as to give the greatest available holding and puuishing power, and the teeth are level in front, the upper ones very slightly overlapping the under ones. [Many of the finest specimens have a "swine mouth," which is very objectionable; but it is not so great an objection as the protrusion of the under jaw.]

2. *Eyes* (v. 5).—Set wide apart, large, full, round, bright, expressive of great determination, intelligence and dignity; set low and prominent in front of the head; color, a rich, dark hazel.

3. *Ears* (v. 5).—Large and pendulous, set well back, wide apart and low on the skull, hanging close to the cheek, with a very slight projection at the base; broad at the junction of the head and tapering almost to a point, the fore part of the ear tapering very little—the taper being mostly on the back part—the fore part of the ear coming almost straight down from its junction with the head to the tip. They are covered with a soft, straight brown hair (in some cases almost black), and have a thin feather of light hair starting about two inches from the tip, and of nearly the same color and texture as the topknot, which gives the ear the appearance of a *distinct point*. The animal is often one or two years old before the feather is shown. The cartilage and skin of the ear should not be thick, but rather thin. Length of ear, from three to four inches.

4. *Neck* (v. 5).—Very muscular, well developed and strong, showing great power of resistence, being well set into the shoulders.

5. *Body* (v. 20).—Long, strong and flexible; ribs well sprung and round, chest well developed and let well down between the fore legs; the back rather low at the shoulder, having a slight downward curve and a corresponding arch over the loins, with a very slight, gradual droop from top of loins to root of tail; both sides of backbone well supplied with muscle.

6. *Tail* (v. 5).—Rather short, say from eight inches to ten inches, and covered on the upper side with wiry hair of darker color than that of the body, the hair on the under side being lighter in color and not so wiry, with a nice feather about two inches long, getting shorter as it nears the tip; rather thick at the root, getting thicker for about four inches, then tapering off to a point. It should not be twisted or curled in any way, but should come up with a regular curve like a scimitar, the tip, when excited, being in a perpendicular line with the root of the tail. It should neither be set on too high nor too low. When not excited it is carried gayly, and a little above the level of the body.

7. *Legs and Feet* (v. 10).—The forelegs short, with immense muscular developement and bone, set wide apart, the chest coming well down between them. The feet well formed *and not flat*, with very strong brown or dark-colored claws. Bandy legs and flat feet are objectionable, but may be avoided—the bandy legs by the use of splints when first noticed, and the flat feet by exercise and a dry bed and floor to kennel. The hair on the forelegs and feet of a blue dog should be tan, varying, according to the body color, from a rich tan to a pale fawn; of a mustard dog they are of a darker shade than its head, which is a creamy white. In both colors there is a nice feather about two inches long, rather lighter in color than the hair on the fore part of the leg. The hind legs are a little longer than the fore ones, and are set rather wide apart, but not spread out in an unnatural manner, while the feet are much smaller; the thighs are well developed and the hair of the same color and texture as the fore ones, but having no feather nor dew claws; the whole claws should be dark; but the claws of all vary in shade according to the color of dog's body.

8. *Coat* (v. 5).—This is a very important point; the hair should be about two inches long, that from scull to root of tail a mixture of hardish and soft hair, which gives a sort of crisp feel to the hand; the hard should not be wiry. The coat is what is termed pily or penciled. The hair on the under part of the body is lighter in color and softer than that on the top. The skin on the belly accords with the color of dog.

9. *Color* (v. 5.).—The color is pepper or mustard. The pepper color ranges from a dark, bluish black to a light, silvery gray—the intermediate shades being preferred—the body color coming well down the shoulders and hips, gradually merging into the leg color. The mustards vary from a reddish-brown to a pale fawn, the head being of a creamy white, the legs and feet of a shade darker than the head. The claws are dark, as in other colors. [Nearly all Dandie Dinmont terriers have some white on the chest, and some have also white claws.]

Size and Weight (v. 10).—The height should be from eight inches to eleven inches at the top of shoulder. Length from top of shoulder to root of tail should not be more than twice the dog's height, but, preferably, one or two inches less. Weight, from fourteen pounds to twenty-four pounds; the best weight, as near eighteen pounds as possible. These weights are for dogs in good working order.

ROCHESTER DOG SHOW.

WE have received from Mr. Chas. Lincoln, too late to print in full in this issue, the prize list to beoffered at a dog show to be held under the patronage of the State Sportsmen's Association during the convention of that body to be held at Rochester, July 8, 9, 10 and 11. The show will be under the management of Mr. Lincoln, and will be held in the buildings at the Driving Park, near where the shooting takes place. The prizes offered are $10 for first and $5 for second for English, Irish and Gordon setters and pointers, dogs, and the same for bitches. Also for water, cocker and other spaniels. For puppies in the various classes, $5 each. For fox hounds, beagles, foxterriers, greyhounds and collies, dogs or bitches, $10 and $5. In the various non-sporting classes the prizes are, for first, $5; for second, silver medal. Entries will close July 6. Prize lists and blanks can be had on application to Mr. Chas. Lincoln, 34 Reynolds Arcade, Rochester, N. Y.

SETTER AND FOXHOUND—*Springfield, Mass., May* 30.—My old friend Ethan Allin told me of an odd incident. While hunting last fall with a friend of his, who had a young setter, they came suddenly upon a fox. The dog went for him, and between the party they bagged him. Now comes retribution that the story writers tell us so much about. The next day they took along the old foxhound, in case they should come across another one. The setter pointed a quail, which was flushed and shot, falling upon a pond with the ice just thin enough to let the dog in. After a long time spent in fruitless endeavors to make the dog retrieve, the old hound showed himself, and at once plunged in and broke his way to the bird and brought it out and laid it at his master's feet. "And," said Allin, "the old hound walked over to the setter and said, or seemed to say, 'If you want me to let your birds alone, don't meddle with my foxes.'" H.

BEAGLES.—Mr. G. W. Pownall, of Christiana, Pa., advertises in another column some beagle puppies for sale. Mr. Pownall's stock have been prize winners wherever exhibited, and are very well bred.

—A. G. Weed, Jr., of Stamford, Conn., claims the name Victoria for his bitch puppy by Van Derwerken's Shot out of Gillespie's Countess.

—Dr. E. J. Forster, of Boston, claims the name Zuzoo for a black and white setter bitch puppy, whelped Dec. 16, 1878, sired by Adams' Champion Drake and out of owner's Daisy.

—Mr. C. Denison, of Hartford, writes that his red Irish bitch Miriah whelped, June 15, 8 puppies—6 dogs and 2 bitches—by imported Creedmore.

—The St. Bernard bitch Brenner, by imported Monk, out of imported Hedwig III., owned by Mr. LeRoy Z. Collins, of Lancaster, Mass., whelped on the 16th inst., eight puppies sired by Alp, by the Princess of wales' Champion Chang, out of Mr. Macdona's Martyr.

—Mr. S. D. Schenck has had the misfortune to lose, by distemper, his Gordon setter bitch Brenda, winner of first prize in the class for bitch puppies over six months at the last New York dog show. Brenda was by Grouse out of Lou and was a most promising puppy.

—See advertisement of Cocker Spaniel bitch Feather for sale.

Yachting and Boating.

NEW YORK YACHT CLUB.

ANNUAL REGATTA, JUNE 19.

IT seems to be a peculiarity inseparable from all sailing clubs in New York waters, excepting the Seawanhaka Y. C., that on racing days all chronometers drop astern by about two hours, and that yachtsmen are especially averse to turning out of snug bunks and "show a leg." If a regatta committee of sufficient stamina to shove off and start the matches on time is ever found, it will deserve to be perpetuated for all time to come among Mrs. Jarley's notable wax works. Especially neglectful in this respect is the New York Yacht Club, and the *nonchalant* manner in which the racing fleet began to assemble, two hours behind time, was a little trying to those acquainted with the prompt and energetic ways in vogue among the great clubs of England. And so it was that a race advertised for a seasonable hour did not come off until after meridian. Another point may be made for the benefit of regatta committees. The custom of picking out some half-winded little tub, of no horse-power at all, to act as judges' boat, may be well enough should the race result, as most of ours unfortunately do, in a tedious drift—and it also has the sanction of custom; but the time has come when the customs of the Elysian Fields need to be abandoned and a little more vim and snap put into the operations of a club, which once held the pre-eminent position of leading all others

in America by a long stretch, but which now, through a too conservative policy, is in danger of being outsailed by some of the younger and more wide-awake institutions. Barring these little *laches*, the recent match of the N. Y. Y. C went off swimmingly, though a trifle more breeze might have added to the interest of the affair and affected some of the results we have to chronicle. But perhaps the breeze thought it best to keep in tune with the temper of the club, and so blew mildly and sleepily all day long, but never gave out entirely.

The entries, though meagre, brought to the line a very interesting lot of goers. In the keel schooners, Mr. Phœnix's fine seagoing ship and the Vice-Commodore's big one had a most interesting match, and though *Rambler* landed the prize, had it not been for the short rig of *Intrepid*, and the want of balloon canvas, the day would have told a different story. Mr. A. Carey Smith had the conning of *Intrepid*, and the way she was worked shows that this gentleman is as good at the wheel as at designing able, easy vessels for sea service. To windward, *Intrepid* outsailed *Rambler* pretty roundly; it was only on the run home, after casing off at the Spit buoy, that the Vice's big one got away with her—a little more than enough to cover her time to the Poillon-built schooner. But then *Rambler* was, in the stereotyped phrase, "a cloud of canvas," while *Intrepid* appeared in exceedingly modest duds, with nothing in the way of balloons but a moderate-sized main topmast staysail, besides being generally under rigged. Among the large centreboards, *Tidal Wave* was the only entry, so she hauled down her racing colors and went over the course "for fun." In the second class, *Estelle* and *Peerless* had a brush, *Nereid* being out of the race from the first, having had to make a board to clear Fort Wadsworth on the way out. It soon became evident, however, that *Estelle*, though nearly fifty per cent. larger, was no match at all in mild weather—at least for *Peerless*; for, ere the first mark had been fetched, Mr. Maxwell had planted his schooner well to windward, and with a good lead over his opponent. The question of superiority between these two schooners in ordinary weather must be considered as settled in favor of *Peerless* by a big margin. What *Estelle* may do in a lop and lanyarder remains to be seen, though even then we question much whether she can save her time on the crack of Gowanus. *Vision* among the big sloops had a walk-over, and until the new iron *Mischief* makes New York waters from Wilmington with Mr. Busk's colors at the peak there will be nothing for *Vision* to race worthy of the name, as the prospects of *Gracie* as a racing vessel likely to put in an appearance are slim, since her owner has transferred his affections to the bigger *Dauntless*. *Regina* and *Vixen* had a terribly close match of it, and had the former not been frightened out of her honest rig into that of the sloop, we rather think her owner could have counted one more cup in her plate locker. As it was, *Vixen*, always smart in smooth water, gained her laurels by the small margin of 21s., and had it not been for *Regina's* failing to point as she did in the Atlantic match when rigged with staysail and jib, *Vixen* could never have won. *Regina* also held on to a balloon jib topsail much too long on the wind while trying to fetch the weather mark. But for this the result would have been reversed. Under any circumstances, rough water excepted, these flyers are so evenly matched that it is a toss between the two; but if *Regina* returns to her double headrig we should pick her as winner every time. Never before did sloops do such pointing and traveling too as *Regina* on the memorable June 7, and why after such evidence she should again be seen afflicted with a big bag of a countrified jib is difficult to understand, unless jack-knife and slush-pot authority has held sway abaft the mast instead of forward. In the keel sloops, *Volante* simply did wonders; the rest of her class were nowhere, and moreover, down to the Spit this smart and able little cutter led many of her big sisters such a merry dance to windward, that *Peerless*, *Vision* and other notables had to take water at their best business. In seaworthiness, roominess, comfort, safety, handiness and appearances *Volante* is as much superior to the average paint-bedaubed, uncouth sloop as a piccolo to the rude horn of a savage. Give her a few feet more length to fine out her lines and she is more than a match for the whole lot of frying pans, while as it is she has all the speed any reasonable being can ask for in a safe yacht fit for all-round work. With this much in the way of review, the account of the racing will be better appreciated.

This regatta was open to yachts of the club only. Course, the usual club course, from Stapleton, around Buoy No. 10 on southwest Spit, then around Lightship and home by same course, keeping to the east of Buoys 11, 13 and 15 on the West Bank and outside of Buoy off Sandy Hook, leaving Buoy 10 to port and turn the Lightship to starboard. One prize in each class, and time allowance as under. The starters were:

KEEL SCHOONERS.

Name.	Owner.	Cubic Ft.	Allowances.

KEEL SLOOPS.			
Psyche	Mr E M Brown	1,932	Allows
Glance	Mr E H Ferris	1,611	4.16
Volante	Mr Hitchcock	1,453	6 16

As a matter of course nearly all hands got below the line at the start, and had the usual difficulty working up into position against the ebb. This accomplished, they bore down for the line with booms to starboard and the wind from the N. and E., the start being a flying one. *Vixen* carried an extra puff across, getting a good sendoff as she went over in the lead with a club aloft and balloon jib topsail drawing finely. *Rambler* followed with a huge maintopmast staysail, and *Regina* shaved through on her weather, with the big jib set in place of her wind jamming get-up. *Estelle* crossed next with balloon jib reaching abaft the foremast, followed by the cutter *Volante* with the well-known figure of Mr. Robert Centre at the wheel, and the old-time *Psyche* in her wake under somewhat scant looking dimity of a cut that smacked of by-gone years. *Peerless* and *Nereid* were to leeward, near the Staten Island shore, and got away soon after in company with *Vision*. *Glance* took her cue from *Psyche*, and went away in her wake. *Glance* has been altered to a keel and her mast has been shifted aft, so as to make room for a full cutter rig, barring the sliding bowsprit; but here, too, the hero of the marlinspike had his way, and she came to the line with forestay "come up" and a huge jib in consonance with the true Bourbonism that holds sway among all old barnacles. *Glance* did not sail a great distance, when, for some reason unknown, she gave up, but she was a beaten craft at the time. *Volante* being too much of a good thing for her. *Intrepid* brought up the rear of the starters, though *Tidal Wave* followed across the line, and her time was taken as a matter of curiosity. As the fleet went through the Narrows, the wind kept hauling, and stiffened up a bit, until outside it was struck S.E. This necessitated a board to the N.E., off Coney Island Point, and from there a long leg to Buoy No. 10 on the Spit, wind having hauled well to the southward. *Tidal Wave* gave one of the keel sloops a bad blanketing, something the big schooner's skipper should avoid in future. *Intrepid* here winded on *Estelle* in most unmistakable manner, showing that the race is not always to the boards. On the stretch down *Regina* did not point, and carried a balloon jib topsail, which she took in finally, when it was long before apparent that the sail had no business set. It was here that *Regina* lost her race to *Vixen*. The schooner *Nettie* worked down with the fleet, and showed some pretty fair sailing, though *Rambler* went by after taking the wind out of her sails. The wind did not hold, and the sloops began to walk up, but the way in which *Rambler* led them down to Buoy No. 10 was worthy of note. Away off to the northward *Wanderer*, Mr. Stillman, was made out—a grand sight, with her square topsail sheeted home, as she bore down to watch the fray. *Vision*, for some reason, was not doing well, for she sagged to leeward—she, too, had shifted from double head rig to jib—but having a walk-over (the *Coming* not starting), she was probably taking things leisurely. Kites were hauled upon reaching the mark, as it was a close haul out to the ship. The mark was rounded as under:

	H. M. S.		H. M. S.
Rambler	12 32 10	Peerless	12 44 34
Vixen	12 33 05	Estelle	12 45 26
Regina	12 34 40	Vision	12 46 18
Intrepid	12 38 38	Volante	12 47 00
Tidal Wave	12 43 05	Psyche	12 49 42

Rambler stood in for the Jersey sands, while *Vixen*, rail awash, and *Regina* standing up better, hauled up smartly and got everything flat. When the former went about, she just weathered the rival crack. *Estelle* had hitherto hung on pretty well to *Peerless*, though the latter had the best of the position, and, with *Vision*, were well to leeward of the buoy as they were timed. *Volante*, on the contrary, had held such a wind that she luffed short round, and was really a long bit ahead of the above named, though her time was taken later. In the work up along the Hook, *Peerless* walked through *Vision's* lee. When the black buoy off the Hook was left under the lee it became a long and short leg for the ship. The sea was quite smooth, and the breeze lightened up somewhat. The sloops were shaving the wind to their utmost, jib topsails having been taken in for the purpose. Off Rockaway shoals they came about, excepting *Rambler*, who stood on too long, coming down to the Ship with room to spare. With another short board, the mark was hauled around as follows:

	H. M. S.		H. M. S.
Vixen	2 19 53	Intrepid	2 47 48
Regina	2 22 30	Volante	2 48 44
Peerless	2 26 13	Rambler	2 50 27
Vision	2 29 37	Psyche	2 53 22
Tidal Wave	2 40 21		

With the race in hand, *Vixen* was not slow in getting balloon jib topsail set and boomed out, and with board triced up was off for home before *Regina* hauled into the wind for the round. The latter was well handled, setting light sails to leeward before getting away, with the wind over the port quarter. The schooners showed smart work in making sail, and *Intrepid* called forth much praise at the easy way in which she parted the water and rose and fell to the long swell without breaking a bucket full. The little sloop *Elephant* went around with the rest, having put in some good work to windward on the way up. *Volante* rounded the mark with no more fuss or ado than if bound on a fishing trip, everything aboard that little cutter runs like clockwork.

The flood had made and a speedy run home was the consequence. *Estelle* failed to fetch the lightship, but made for home through the Swash, *Peerless* badly outrunning her in spite of having to round the Spit Buoy again. Of course the latter ran for the beach outside the Hook, and sure enough got a nice little streak, as Mr. Maxwell always does in that latitude. The Spit was jibed around by *Vixen* with 2m. 30s. between her and *Regina*. A large portion of this the latter made up during the very close and exciting final run for the finish; partly this was due to *Regina's* taking the wind out of her leader, though better things were expected of *Vixen* down the wind. Finishing at buoy 15 outside the Narrows is a most excellent plan, for it saves the tedious work for big vessels inside the Narrows, where an easterly wind always fails and thereby allows the laggards to draw up and often save their time owing to the van being checked in the doldrums. With jibs half hoisted and balloons boomed out the two crack sloops drew nearer to the finish amid the most intense interest. They finally bowled across the line, *Vixen* winner by 21s. on time allowance, and *Regina* winning "flat." So the prize goes to *Vixen*, but the question of the best flyer among the couple still remains "as you were." Regatta Committees should instruct or request accompanying steamers, the club steamer at all events, to await the "time" signal from the judges' boat before setting up their yelling and piping to the confusion of the judges and time-keepers. Among the big ones, *Rambler*, with all her kites flying, got away from *Intrepid* on the run up and made a first prize for Vice-Com. Thomas.

Little remains to be said concerning the rest of the fleet: they came up to the finish one by one as the table below will show. Good able craft are evidently becoming popular if one is to judge by the remarks of the crowd as *Volante* fetched in home: "Pretty little ship," "Fills the bill," "That's the boat for me," and the likes, indicating that public taste is improving and that the seagoing yacht has prospects of more general adoption, while seamanship is beginning to be appreciated at its true value. The *Nereid*, though virtually out of the race, bravely kept at it, rounded the lightship and made the whole course with a "never say die" that others might take a lesson from.

Prizes go to *Rambler*, *Peerless*, *Vision*, *Vixen* on time, and *Volante*.

SAN FRANCISCO YACHT CLUB.—A race took place on May 31 over the S. F. Y. C. course, between the sloop *Lively* and a new sloop called the *Faun* for a $100 prize. This was the closest race ever held in the bay, and one of the slowest also, the wind falling light. The club rule as to time limit of five hours was suspended. The *Lively* was 5h. 43m. 40s. and the *Faun* 5h. 44m. 47s. As the *Lively* is 5in. longer than the *Faun*, she had to allow her 18s. allowance, and thus beats her 48⅞s., the closest race over the course ever made. The whole fleet accompanied the competing yachts. The *Faun* owners have since challenged the *Lively* to a race for $500. The *Lively* offers to put up $50 if the *Faun* will buy a $100 prize to be sailed for by any boat in the bay under 25ft. water line, but will not sail for money. Both the yachts are small ones, the *Lively* being the smallest in the club fleet. The famous *Consuelo*, winner of the Ashbury Cup, three annual prize flags, and numerous other prizes, has issued a challenge to sail any yacht or pilot boat in the bay over the club course for $1,000. It has had the effect of stopping a good deal of "blowing" among other people who thought they had faster boats, but as yet no takers have come forward. The S. F. Y. C. fleet left San Francisco on June 7, under Commodore Harrison, for a cruise up the bay to Martinez for a couple of days. The annual cruise to Napa Creek comes off on July 3, extending to the 7th. All the club yachts and a number of invited yachting clubs will participate. Several new yachts are being built in San Francisco, of which we shall have a description shortly. The annual regatta of the club comes off August 2. The members are puzzled what to do with the catamaran *Zarefa* in their race. They can't classify her satisfactorily. The Model Yacht Branch of the S. F. Y. C. holds its first annual regatta off the club house, at Saucelito, on July 19. The models are 44in. on water line for first class and 22in. for second class. A number of competitors are announced. Prizes will be $100 for first and $50 for second class.

SEAWANHAKA YACHT CLUB.

CORINTHIAN MATCHES, JUNE 21.

IT is always a pleasure to record the sailing races of a club possessing life and imbued with a spirit of progress, such as characterizes all the undertakings of the S. Y. C. As might have been expected, the Corinthian matches of June 21 not only formed the chief event of the year in the club's history, but were unsurpassed in the interest they created among the yachting fraternity. Though we had been troubled with nothing better than off shore winds and smooth water so far, the ruling powers seemed to recognize the fact that the Corinthians of this club are the best heavy weather tars we have, and so sent them a fresh breeze from seaward and rolled in a nice easy swell, enough for the smaller classes, but hardly up to the needs of such a sloop as *Vision*, with her 20ft. beam to mash what she did not rise to. The promptness of the regatta committee was most commendable, for the gun was fired at the hour named, yachts or no yachts; and so it came to pass that most of the racers found themselves heavily handicapped by a late start, for which they only had their own shiftlessness to blame. Possibly they have learned a lesson, and will be on hand when wanted the next time they sail under S. Y. C. auspices. We may here say that the committee, composed of Messrs. M. Roosevelt Schuyler, Jas. H. Elliot, C. Wyllys Betts and Louis P. Bayard, understood their duties thoroughly and caused the club steamer to be handled in a most satisfactory manner, and moreover, to one of the committee, Mr. Elliot, was assigned the duty of remaining at the finish to time the smaller classes, should they return sooner than the club steamer, a precaution which should be followed generally, or wrong times and protests are sure to crop up. The manner in which all the yachts were handled was so near perfection that professional crews could have done no better, and we doubt very much if in America a finer body of yacht sailers could be gathered from any class than that which manned the racers on this day. But one thing occurred to mar the sport—the fact that *Vixen*, while hunting *Regina* very close on the run home, lost a man overboard, and had to come by the wind and pick him up. Of course, this delay gave the race to *Regina* by more than a quarter of an hour, but as they rounded the S. W. Spit within 47s. of each other, the question of superiority between the two, left open in the New York regatta two days before, has not yet been settled. Two such even races in good breezes, point to the fact that there is little to choose between these cracks in fairly smooth water, as long as Mr. Stewart clings to his single jib. *Vision* very wisely set up her forestay again, and the manner in which she sailed all day certainly left nothing to be desired. It remains to be seen whether *Regina* will follow the good example of *Vision*, or be content with losing to *Vixen* by a few seconds every time, unless helped along by a fluke or accident. As the latter received 1m. 16s. allowance from *Regina*, she was ahead of her time at the Spit, with about half a minute to spare, and, moreover, would have stolen *Regina's* wind all the way to the finish. But for losing the man overboard, the race would undoubtedly have gone to *Vixen*. The *Vision* proved a much better ship to windward than on June 19, when she was hampered with the baggy jib, and Mr. A. Carey Smith, who no doubt had a voice in the matter, handled the big craft in connection with the rest of her crew in a most creditable style, giving the *Peerless* schooner a lively rub of it most of the time until sheets were eased, when of course the bigger schooner left her, but reached the line with only moderate water to spare, having outsailed *Vision* "flat," but losing to her "on time" had they been

entered in the same class. The conditions of the match appeared in our last number, and it will suffice to say that the entries were open to yachts of all recognized clubs, rules of the S. Y. C. in force, time based on area, amateur crews and spinnakers for balloons allowed only. Course, the usual one from Fort Wadsworth around the S. W. Spit Buoy 8½, thence to Lightship and return home by same course. Two to start or no prize. Prizes, schooners only one starter, no prize; sloops, $200, $150, $85 and $65 for the four classes. The following yachts with their crews started:

Peerless—Captain J. Roger Maxwell; mate, J. H. Simon; crew, W. Stub, R. Schenck, E. R. Maxwell, N. D. Lawton, M. Wrigley, R. C. Field, H. L. Washburn, W. H. H. Beebe, H. Earl, S. Mann, M. Timpson.

Kate—George F. Randolph, captain; Wm. T. Lee, mate; A. P. Bliven, C. H. Bliven, Frank Andrews, B. S. Osbon, F. P. Lockett, George H. Hale, R. H. Bavott, Edward Bavott, L. F. Newman.

Vision—J. J. Alexandre, captain; O. E. Cromwell, mate; A. Carey Smith, C. G. Peters, Geo. L. Rivers, T. A. Bronson, E. M. Cook, D. S. Stone, M. White, C. H. Leland, G. Foster, W. S. Wood, Mr. Meserole.

Regina—W. A. W. Stewart, captain; J. F. Tams, mate; Howard Mitchell, F. De P. Foster, W. Foulke, Jr., E. Roosevelt, A Roosevelt, David Crocker, J. W. Beekman, J. V. Oddie.

Vixen—F. C. Lawrence, Jr., captain; Herman Livingston, mate; E. P. Livingston, Grenville Kane, H. Coe, Samuel Sands, John Lawrence, Elliott Roosevelt, H. T. Hadden, Charles Denning, David Palon.

Schemer—C. S. Lee, captain; A. Bryan Alley, mate; W. S. Alley, W. Simonds, A. Simonds, R. C. Cornell, A. P. Montant, S. Van Wyck, T. L. Blood.

Wave—John C. Barron, captain; T. D. Hoxsey, mate; B. Nicoll, Charles King, H. Sprague, Rufus King, William King, L. H. d'Oremieulx.

Blanche—Charles H. Grundy, captain; F. L. Scott, mate; T. H. Pratt, C. G. Diedrichsen, C. L. Perkins.

H. W. Beecher—R. M. Weed, captain; M. M. Weed, mate; M. Silva, James Weeks, Vanness Noxon, L. Conover, M. Bunker.

Midge—W. E. Iselin, captain; G. C. Barnette, mate; J. Halsey Haight, Charles H. Cruncy, E. A. Willard, Benjamin Tuzo.

Julian—Dr. May, Fredrick May, Gouverneur Morris and others.

Peerless went over the course but without flying her fighting flag. The usual fleet of steamers and "outsiders" were of course bound to see what they could see, but no blanketing by them occurred. The wind blew moderately from the east, gained more southing as the day wore on and came out fresh, raising a moderate swell and white capping the sea outside of Sandy Hook. The tide was about high water, and a strong ebb made fast time probable. At 11:25 the second whistle from the club steamer sent them off, only *Schemer*, *Beecher*, *Kate*, *Vision* and *Wave* got away inside of the ten minutes grace, the time of all others being counted from its expiration. *Regina* and *Vixen* went over close together, the former a little to windward but under the lee of Fort Wadsworth too much for her good, as *Vixen* outfooted her at once. It was a matter of short boards with most of them down along the West Bank. *Vixen* tacked to the S. W. but was met by *Regina* with the right of way, and so was forced around under the latter's lee. In the meantime *Schemer* put in some marvellous work, screwing right out to windward of the lot in very fast style. *Midge* and *Julian* were the worst laggards, not fetching the line until handicapped with 10 and 15 minutes respectively. Had either of them kept a bright lookout for the signal and made the line in due season what a nice little piece of time could have been gained from the rival a mile up the bay and having to work down against the last of the flood along the Stapleton bight. All hands carried lower sail and working topsails, as it was a sample of tight squeezing in smooth water down to the first mark. *Vixen* and *Regina* stood over to Norton's on Coney Island Point looking for the best ebb, the former getting from under the latter, and finally upon going about crossing *Regina's* bow with her length to spare. Mr. Stewart stood on further, getting a fine tide in his favor, and when next the two sloops met he weathered on *Vixen*, and with everything pinned in hard laid for a long leg to the Spit Buoy. *Vixen*, in place of following her rival, stood too far in toward the Coney Island beach, and when she came around for the buoy *Regina* had a long lead of her. On this stretch the wind freshened, *Vixen* getting the first streaks and making up much of the distance lost, while poor *Regina* was sailing bolt upright in a regular calm of a few minutes' duration. *Vision* held an excellent wind all the way down, and the manner in which she sailed alongside of *Peerless* was quite enough to convince us that she had lost nothing by shifting to the double head rig. *Schemer* and *Orion*—the latter not in the race—had cut out well to windward, holding the larger craft likewise. *Vision* took in jib-topsail, rounded the S. W. Spit first, and after a short board inshore commenced to lay up for the buoy off the Hook. *Schemer* made a short round, *Regina* had a lead on *Vixen* of nearly half a mile, but the latter made good something by a little slant, putting her well to windward. Time of passing buoy, 8½:

	H.	M.	S.		H.	M.	S.
Vision	12	47	51	Vixen	12	54	54
Schemer	12	49	43	Midge	1	16	32
Regina	12	51	58	Beech	1	21	28
Kate	12	52	15	Julian	1	56	40
Wave	12	54	11				

Among the smaller classes, *Julian* held a poor wind for some reason, for upon other occasions we have seen her do better. *Midge* was handled with great skill, and pluckily held on to topsail, pitching nose under occasionally. She seemed an able little craft. It was a pinch along the Hook, and no sooner had the tongue of sand been opened than topsails began to come down all around, for here a rouser was met and the ocean swell felt. *Pirate* carried away her topmast and ran for shelter, while *Orion* parted topsail sheet and followed suit. The little beauty, *Volante*, was the only one who stuck to a jib header, and what is more, carried it with ease. As she rose to the seas and gracefully parted everything at the bow without taking green water aboard, she was the admiration of all within binocular distance. The big ones drew away from the rest and left a long gap between. *Kate* did well, better than was expected in the sea, for she went to the front of all except the two largest. The course for the lightship could just about be made, and after a rapid sail was luffed around as under:

	H.	M.	S.		H.	M.	S.
Vision	1	49	20	Schemer	2	00	15
Peerless	1	51	10	Vixen	2	03	22
Kate	1	56	24	Wave	2	06	24
Regina	1	59	15	H W Beecher	2	13	48

Blanche not timed. That the little *Beecher* should have got away with so large a boat as *Blanche*, and made the lightship in fair order and good time, speaks well for her crew, especially when the type of boat they had under them is considered. Now, if her owner will change her name, this little craft may become a favorite. The run home was plain work. *Vision* fouled topsail sheet, and let it hang in brails the rest of the way. *Julian* and *Midge* went around the Gedney Channel Buoy instead of the ship. The former's weather rigging gave out, and she ran home under jib. *Beecher* snapped her topmast off short in jibing, all standing around the S. W. Spit. Possibly backstays were not promptly attended to, and *Kate* tacked around, the rest jibing. Time at the buoy:

	H.	M.	S.		H.	M.	S.
Midge	2	38	33	Regina	3	18	08
Vision	2	51	35	Vixen	3	08	55
Kate	3	02	59				

As the last two sloops jibed over, they boomed out spinnakers for the run home. It was nip and tuck with them at this point. *Vixen* snapped her boom while rigging out, the butt end striking Mr. Herman Livingston in the breast and knocking him overboard. As he rose to the surface, he sung out, "I am all right—go on!" But Mr. Lawrence brought his sloop by and tacked, picking up his man in a very clever manner. *Vixen* then kept on under easy sail, and went to leeward of the club steamer as a sign of accident. *Regina* had matters her own way after this mishap. *Vision* actually outran *Peerless*, and crossed the finish first with a round sum to her credit. *Peerless* followed close upon her heels. *Blanche* and *Julian* not timed; the rest as follows:

SCHOONERS.

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Peerless	11 35 00	3 49 08	4 14 08	

FIRST CLASS SLOOPS.

Vision	11 32 08	3 48 21	4 16 13	4 07 19
Kate	11 31 09	4 02 53	4 31 44	4 13 28

SECOND CLASS SLOOPS.

Regina	11 35 00	4 10 56	4 35 56	4 13 24
Vixen	11 35 00	4 29 31	4 54 31	4 30 43

THIRD CLASS SLOOPS.

Wave	11 28 48	4 20 39	4 46 53	4 18 16
Schemer	11 27 08	4 17 27	4 50 19	4 19 54
Beecher	11 23 01	4 37 24	5 09 23	4 33 47
Blanche	11 35 00	Not timed.		

FOURTH CLASS SLOOPS.

Midge	11 35 00	4 19 45	4 44 45	4 44 45
Julian	11 35 00	Not timed.		

Prizes go to *Vision*, *Regina*, *Wave* and *Midge*, *Wave* having put in a good day's work, and rather astonished some of *Schemer's* faithful. *Schemer* as well as *Vixen* lost considerably while beating out by holding the ebb along Coney Island too long and making too much eastings, for they had to come for the Spit Buoy with sheets lifted. *Vision* was bothered during the race by the presence of *Peerless*, and as the latter was not in the match, we fail to understand why Mr. Maxwell did not mind the hail he received from the sloop, as he certainly could afford to give way to her. The *Beecher* was sailed for all she was worth, and more, too, or she never could have made the time she did in water decidedly rough for her tonnage; but, as we before said, the Corinthians all proved themselves the best of seamen.

YACHTING NEWS.

BAY OF QUINTE YACHT CLUB.—*Editor Forest and Stream:* A union regatta, being the first summer regatta of the Bay of Quinte Yacht Club, and the first of a series for the single and double-scull championship of the Bay of Quinte Rowing Club, was held on Big Bayou, the 15th inst. The day was almost too fine for the yacht race, the wind being light and variable during the first hour. Still, the course was sailed in fast time. The course was a triangle of nine miles, three times around for 10-ton and twice around for 5-ton yachts, or 27 miles for the former and 18 for the latter. The number of entries was smaller than was expected, but these comprised the cream of the fleet, *Kathleen* alone of our famous 10-tonners being absent from the starting-point. With a light wind at about northwest, the beautiful sloops glided away, carrying gaff and jib topsail in addition to their working canvas in the following order:

Name.	Time. H. M. S.	Name.	Time. H. M. S.
Katie Gray	2 43 56	Sylvia	2 46 40
Surprise	2 45 15	Gracie	2 51 18

After running about two miles the wind died out completely, leaving all becalmed for upward of an hour, during which time the 5-tonners had also run down among them. *Sylvia*, a keel sloop, carried her way the furthest, and got the lead, but on a breeze springing up from the southwest the centreboards dropped her. *Katie Gray* taking the lead, followed by *Surprise*, with *Gracie* third. A quick run was made to the north shore buoy, after rounding which it was a beat back to the starting-point. There *Katie* went away from her followers, *Surprise* and *Gracie* getting some bad knockdowns in the sharp breeze which sprung up, which compelled them to doff light canvas, while *Katie* and *Sylvia* hung on to their gaff topsails, carrying them through the whole race. At the starting buoy *Gracie* had a lead on time of *Katie* of 1m. 38s., the latter having lost, owing to the calm before referred to, at least 6m. of the long lead with which she started. From this out the race admits of little description. *Katie Gray* kept steadily outsailing the others, and finally the home line was crossed in the following order:

Name.	Finish. H. M. S.	Elapsed Time. H. M. S.
Katie Gray	7 23 30	4 38 54
Surprise	7 23 35	4 47 20
Gracie	7 41 10	4 49 22
Sylvia	Not timed.	

The first prize, consisting of a silver pitcher, presented by Alex. Robertson (Mayor), $35 in cash and the first run of a series for a champion flag, was thus won by the *Katie Gray*, beating *Surprise* 8m. 46s., while the latter takes second prize of $20, getting the best of *Gracie*, which takes third prize of $10, by 2m. 22s. These are all cabin sloops of 10 tons each, and as no shifting ballast is allowed in this class, the time made was remarkable under the circumstances. The first and second were built by Cuthbert and the third by R. M. Roy, a local amateur. The *Sylvia* did not find the weather heavy enough for her, but sailed a good race, and will do better so soon as her proper trim is discovered, she being new late last season. *Gracie* is also new, having sailed her first race last autumn under old canvas. She had a new suit for this race, but it was not properly adjusted, and with some alterations her speed will be materially improved.

The third class race had three starters, namely, the *Wideawake*, *Mabel* and *Iris*, the latter of Picton. After a very sharply contested race *Wideawake* won by 1m. 18s., *Iris* holding her a close race throughout. *Mabel*, while looking like winner of second money, was struck by a heavy puff and had the misfortune to have her masthead snap just above the crosstrees. The winner was built by Cuthbert, and is one of the most beautiful models ever seen.

The double sculling races had three starters, namely, Messrs. Barber and Bird, E. G. and A. Ponton, and Sutherland and Blair. The two former pairs fouled very soon after starting, and the first named couple retired with a broken oar. Sutherland and Blair went off with a long lead and won as they pleased, which they would probably have done in any event.

For the single scull prize there were three starters—Sutherland, Barber and Blair. Sutherland outrowed the others easily, winning by 1m., Blair second. The races were rowed over a two-mile course—one mile with a turn. Sutherland has been matched against Joseph Tisdale, the present champion of the club, to row over the same distance on Friday next, Tisdale conceding a start of one minute.

Cuthbert is building, and has well advanced, a 10-ton yacht to beat the *Katie Gray*—if possible. This new craft is intended for a gentleman in Kingston who has for a number of years pluckily tried to snatch the laurels from the Belleville fleet with yachts turned out by Kingston builders. The success which rewarded his efforts was one fourth prize, won in the fall regatta here last year. PORT TACK.

Belleville, Ont., June 14, 1879.

OTHER RACES.—Reports of other races are necessarily laid over till next week.

THE QUESTION OF TYPE.

EDITOR FOREST AND STREAM:

ROSLYN, L. I., June 20, 1879.

With pleasure I accept Mr. Robert Center's invitation to test my "model sharpie" against *Volante* and, being in an accommodating humor, will agree to his modest condition that he shall "pick the weather," provided he sails *Volante* with one amateur to assist, and nobody else aboard, I doing the same with my boat.

I have great respect for Mr. Center's nautical knowledge, and it will give me pleasure to show him, practically, how much handier a light draught boat can be in heavy weather than one of diving proclivities. His long and no doubt well-used experience has probably satisfied him as to the relative speed of the two types.

THOMAS CLAPHAM.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salvelinus fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	Striped Bass, *Roccus lineatus.*
Land-locked Salmon, *Salmo gloveri.*	White Perch, *Morone americana.*
Muskalonge, *Esox nobilior.*	Weakfish, *Cynoscion regalis.*
Pike or Pickerel, *Esox lucius.*	Bluefish, *Pomatomus saltatrix*
Yellow Perch, *Perca flavescens.*	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setæ, same as wings.

Lightning Bug, No. 10.—Body of equal parts of dark brown and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of light yellow and green, ringed alternately; feet, red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern or brown hen; setæ, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Fetid Green, No. 10.—Body, feet and wings, a pale green.

VOUDOO FISH.—Fish sometimes forms an ingredient in the wierd Voudoo charms of the Louisiana negroes. The mixture of a recent Voudoo, discovered upon a New Orleans house doorstep the other day, was wild enough to put a spell upon almost any dwelling. It was an earthen bowl of rice and milk, four lighted candles stuck into it and surrounded by a calf's head. The hag whose diabolical fancy had suggested that is witch enough to ride on a broomstick.

ONTARIO—*Belleville, June* 20.—Messrs. A. Leulmage and E. W. Leary, of Belleville, Ont., had some fine trout fishing in Squire's Creek, Rawdon, lately. In five hours they caught upwards of 200, ranging from 3 pounds to as many ounces—the nicest lot of trout ever taken out of the creek within the knowledge of your correspondent.

MASSACHUSETTS—*New Bedford, June* 18.—Mr. Chas. S. Randall took a party in his yacht *Pointer* down the bay this week taking seven bass, the largest weighing 3¾ pounds. Another amateur took 23 bass in Seaconet River last Saturday, averaging 5½ pounds each. CONCHA.

ADIRONDACKS—*St. Regis Lake, June* 18.—The fishing this season has been remarkable here, surpassing anything we have had for years. For a few weeks the catch of speckled trout has been enormous. On the 16th Mr. Justice S. Hotchkiss and his friend, Dr. H. Bronson, both of New Haven, Conn., caught in St. Regis Lake two speckled trout aggregating 9¾ pounds, one weighing 5¼ pounds and the other 4½ pounds, also two or three weighing over 1 pound each, and several from ¼ to 1 pound each. To-day they caught in the same lake twenty-two, one weighing over 3 pounds and the whole aggregating 24 pounds. The first of the month Supt. Pilsbury, Supt. of Public Works, Clark and his assistant, Mr. James Shanahan, spent a few days with us. They also had splendid success with the speckled beauties, Mr. Pilsbury catching one in front of the house weighing over 4 pounds. The two large ones caught by Mr. Hotchkiss and his friend are now at Mr. Bell's, the Taxidermist corner of Broadway and Worth street. All the fish spoken of were caught with a fly. A. A. SMITH.

BUNKER FISHING.—*Shelter Island, June* 14.—But few fish have been taken the last week, when compared with the catch from May 26 to the 31st. During those five days it is estimated that 40,000,000 of fish were caught and carried into the factories at Rhode Island, Shelter Island and Napeague. This past week but few fish were observed coming around Montauk. We have learned that at the Peconic Works they have had but 500,000, and at the Hawkins Factory (Shelter Island), 732,600 fish caught from June 7 to the 14th. It is evident that the fish have had their last spring run off Long Island, and have gone East, followed by scores of bunker-hunting steamers, eager to take their prey. We hear that the fleet of Eastern fishermen will return again in the fall to Long Island waters, to show our men how to take menhaden; but the Long Islanders are ready to try their skill against their foreign rivals. MoL.

WISCONSIN—*Milwaukee, June* 19.—The fishing in favorite angling portions of the State has been excellent and is proving better. The summer incursion of sportsmen has set in. B.

Milwaukee, June 20.—Thomas Jackson, of Vernon, Waukesha Co., Wis., captured a twenty-nine inch eel in Fox River last week. A party consisting of Capt. J. B. Reynolds, Dr. La Count and Harry Rollman took 300 speckled trout from the streams in the vicinity of Oconto during the early part of the week. They report the fish unusually voracious. Dr. E. A. Calkins, editor Milwaukee *Sunday Telegraph*, with Rev. F. C. Haddock and Ed. Bronson, have returned from a trip to Farmington Lake, where E. A. C.'s sombre countenance was made glad by a fine catch of pickerel and bass. Their intention was to persuade the whitefish in the Wolf River to leave their native element, but the musquito bit better than the fish, and the boys emigrated to a less sociable region.

THE ANGLE-WORM.

EDITOR FOREST AND STREAM:

To New Englanders especially angle worm digging is no novelty. Every man remembers how it is done, and always lingers long over his cigar with the thoughts of this squirmer and what it has brought to bag. The worm has not lost its merits yet, as I tested very satisfactorily during the last week in May. Several years ago the guide who now turns up the sod was puzzled by me from repeated questions on the habits of this worm. Since then I have had the pleasure of answering my own inquiries by research in Boston libraries.

These worms or animals are classed under the head of *Annilida*. Savigny describes upward of twenty species. M. Morran, in his treatise on the natural history and anatomy of this worm (*Lumbricus terristris*), appears to be doubtful with regard to the number of species described by Savigny and others, regarding it as little importance, and inclines to the opinion that they are merely varieties. The body is composed of numerous circular membranous rings. Their color is reddish or bluish. The worm has the power of secreting a mucus which forms a protecting sheath to the body, facilitating its progress through the earth. It is eyeless and unprovided with tentacles, and breathes by means of sacs opening externally by minute pores. The mouth consists of two lips, the upper one elongated. Œsophagus ends at about one-half inch in a dilated bag or reservoir, succeeded by a muscular stomach. The intestines are constricted at each segment of the body. The nervous system consists of a double row of ganglions, approximating. It has been doubted whether the animals are avaporous or vivaparous. The ova, or germ of life, is contained in a cavity near the anus. It is not fully decided whether they emerge from the parent before the egg membrane is broken. They creep by means of muscular contractions and dilatations, assisted by bristle-like processes. They penetrate the earth by the anterior part, which acts as an awl.

The angle worm is considered a nocturnal animal, and, to relieve the tender-hearted, I will add that they possess the power to reproduce their parts after mutilation. They are harmless to vegetation, and are of great benefit to farmers, loosening dry, clammy and moist places, rendering the land permeable to air and water, also add depth to the soil. In a peaty locality they have been known to add three and one-half inches in fifteen years. They seek deep soil in dry weather, being very sensitive to heat. It is considered by Darwin, Wedwood and others that old pasture land receives principally its virtue and luminousness of soil from these worms.

It was by the aid of these worms I landed several trout in Lake Winnipisocogee, weighing from three to six pounds each. A six-pound lake trout is large, as affirmed by "Hallock's Sportsman's Gazetteer." These trout are classified under lake trout, red trout or lake salmon, not togue, as I have been informed, togue inhabiting larger bodies of water, and are less gamy and palatable, and have been known to tip the balance at 42 pounds. My sport during the week was divided between still fishing and trolling with the minnow. This method of trolling was new to the natives, and I was amused to observe them with mouths ajar while attaching the minnow to a six-foot leader. The sport of taking the beauties in this way continues several months. When fishing in this lake you may be assured there are large fish educated to the point of the hook. It is fished much in the ordinary way of bobbing with dead bait, both summer and winter, yet there are enough left to annoy the rustics and call forth stories of what they lost and saw with caudal fins breaking the water which would surprise the man who wrote the original fish story.

Boston, June 4, 1879. H. F. L.

LAKE NAGOWICKA.

MILWAUKEE, Wis., June 20, 1879.

EDITOR FOREST AND STREAM:

The other day, as I sat at my desk, came a polite note of invitation from a member of the "1879 Bass and Pickerel Catchers" to join them in a trip to Lake Nagowicka, a beautiful sheet of water, lying about half a mile from the little village of Delafield, a point nearly two and one-half miles from Nashotoh, a station on the La Crosse division of the C M. St. P. R. R.

The invitation was not to be hesitated over; so I hastily vamoosed for my rooms, where I gathered together a twelve-foot bass rod, reel, lines, hooks, and a couple of trolling spoons, and started for the depot in time to meet the club just emerging from the waiting-room to board the 1:25 train for Nashotoh. A motley crowd truly. Hardly two were dressed alike, and among "dead grass corduroy" and the rougher canvas shooting suits, could be distinguished the broadcloth and diagonal of the new members of the club, who had never been out in the open lake in a good, lively "blow." First in the van came Ald. Thos. Brown, of some sporting fame. He meant business. A three-joint bamboo rod and a huge fishing basket would incline one who was not well acquainted with T. B. to think that but few of the finny tribe would be left in Lake Nagowicka after his final cast had been made. Lawyers Elliott and Kendrick, Avery Ingersoll (Ticket Agent of the railway above mentioned), Ike Lederer, and many other lovers of the piscatorial art were assembled.

At 2:20 P. M., after an hour's pleasant ride through some of the prettiest country in the State, we pulled up at the little depot of Nashotoh, where a 'bus was in readiness to convey us to the village of Delafield, the nearest point to the lake. The short though bracing ride gave our little party good appetites, and when we drew up in front of the little Nagowicka House, kept by Audley, the sound of "Refreshments ready!" was most welcome, but not nearly as much so as was the bountiful repast spread by mine host, consisting of the "best of what was," as one of the party put it. By the time this was finished, a few of the more enthusiastic took their tackle and proceeded to the lake. Arriving at the shore, a boat and boatman were soon found, and three or four unwound their trolling-lines. Business was fairly good, and a couple of hours sufficed to pack away some twenty black bass, varying from two to four pounds.

The next morning dawned bright and clear, and after an early breakfast, our party of ten appeared with their tackle, and choosing their boats and boatmen, set out. Each boat carried two, besides the oarsman, and although the ladies and one or two of the gentlemen confined themselves to still-fishing, the majority used the spoons. The boatmen thoroughly understood their business, and quickly the little squadron scattered itself over the lake, each guide choosing, in his opinion, the best fishing ground. About 5 A. M. the "critters" began to notice our glistening spoons, gaily decked with scarlet and gray, blue and yellow feathers, and the sport began to grow interesting. Your correspondent got his first call while momentarily suspending operations to light a cigar with matches that would persist in going out before fairly lighted. Holding the line loosely twisted around my fingers, I suddenly felt a jerk that pulled me half into the water. I quickly recovered my equilibrium, however, and hauled in a hundred feet of line with a magnificent four-pound bass on my "Duplex." They came "quick" for the next two hours following, and then dropped off, and we feeling our appetites considerably sharpened, made for the shore and the breakfast table, where we had the pleasure of testing the "eatability" of some of our captures. Following breakfast, all hands set off, some to walk, some to talk, and others to drive around the lake which afforded such excellent sport earlier in the day. I happened to be one of the latter party, and well was I repaid for my decision. The land on the north side of the water rises gently to a considerable height, along which runs the driveway. A good team, an even, well-kept road, and a pretty bit of scenery is a pleasant line, and when the bit of scenery consists of Lake Nagowicka an artist could not fail to be impressed.

Nestling down among the maples, just then in their brightest green, the shimmering softness rendered the more attractive by contrast with the darker-foliaged pines and elms and its pebbly shores, it was indeed a sight worthy of the best sentiment, true appreciation of the beauties of nature. The writer has visited and fished in the Californian lakes, whose beauty is world wide—Tulare and others—but they had not more real beauty than this gem among the Wisconsin hills, with its one solitary island, emerald studding the bosom of the waters. A long ride into the adjacent country, among the wheat lands and stock farms, ended at the hotel steps. After dinner and a stroll through the grounds, our party again tried their luck, and met with much the same success which characterized the morning's attempts. I ended the day's sport by the capture of as fine a specimen of the *Esox lucius* as is often seen. The scale marked twelve pounds when the fish was placed on the hook.

With this fitting ending of a good day's sport, we "pulled for the shore," and again turned in, preparatory to an early start the next morning, when we decamped for the depot in time to catch the eight o'clock train for Milwaukee, arriving at our home at 9 A. M., all agreeing that the past day had been pleasantly spent.

In my next letter I shall give considerable space to a description of the "Camping-out Club," whose outfit is the most complete yet devised. They hail from Washington, Chicago and New York, and go into camp at Waukesha about June 1 each year. L'ECLAIRE.

FLORIDA BIRDS.—We have recieved from Mr. W. P. Neild, Pinellas, Florida, some samples of stuffed Florida birds which are both very beautiful and very skillfully prepared. Mr. Neild enjoys great facilities for securing and preparing Florida birds.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ We cannot attempt to give specific directions where to go for game and fish. Correspondents must keep themselves posted by consulting our news columns.

G. W., Elmira.—We cannot recommend the gun.

B. R, Buffalo, N. Y.—For deer shooting in the bush get a Winchester.

H. C., Hawthorne.—For ferrets write to Chas. Reiche & Bro., Chatham st., New York.

J. L. W., North Manchester.—The new game bill of New York having been signed by the Governor has now become a law.

N. W. J., Kintnersville, Pa.—Better trapping in Coos County, Me., than about the Rangeley Lakes, which are in Franklin and Oxford counties.

D. B., New York.—Set a trap for the weasel; bait it with a young chicken and shut the others up where the varmint cannot get at them.

S. A. M., Milford, N. J.—You will find good trapping in Northern Michigan, in the Maine or New Hampshire wildernesses, or in Northern Vermont.

J. T. D., Philadelphia.—Please inform me what is the P. R. R. charge for dogs from here to Chicago? Ans. Apply to your local agent of the Penn. R. R.

Q. E. D., Long Branch, N. J.—Your questions are sensible. They deserve answers. Why do you not sign your name? See line at head of this column.

N. P. L., Dunellen, N. J.—Meadow larks are insectivorous; it is against law and common sense to kill them.

J. N. E., Northumberland, Pa.—If by "joining the association" you mean the Pennsylvania State Sportsmen's Association write for particulars to Mr. B. F. Dorrance, Wilkes-Barre.

T. M., South Norwalk, N. J.—For Connecticut birds consult Samuels' "Ornithology and Oology of New England." We shall not publish our usual list of works on taxidermy for six months to come.

W. P. N., Pinellas, Fla.—Florida "sea beans" polished and set in a score of different ways are sold in the booths on New York streets. They are beautiful, common, cheap, and have lost their novelty.

POINTER, Boston.—Unless the teat becomes very much enlarged, we should do nothing to it until after she had whelped, as the suckling of the puppies may harm it. Bathing it in warm vinegar will help it.

B. R, Black Rock.—Will you please inform me in your next issue what constitutes the full pedigree of a dog—how many generations? Ans. A perfect pedigree for two other generations on both sides should be sufficient.

S. N., City.—We are not responsible for the misleading information given by clerks who are sometimes more sapient than profitable. For good trout fishing go to Eldred, Sullivan County, N. Y. Write beforehand to Bradley, at that point.

H. F. P, A., New York.—Where can I have a good photograph taken of my setter dog, ordinary size, and at what price? Ans. J. U. Stead, 6th ave., just above 23d st., this city. Do not know price. Do not know the breed of dogs you mention.

G. F. G., Amesbury, Mass.—The red-breasted sandpiper (*Canutus*) is otherwise called the knot, grayback and robin snipe. It is a different bird from the red-breasted snipe (*Grisseus*), which is otherwise known as gray snipe, brownback and dowitcher.

L. P. C., Richmond, Va.—For three prizes, to go to first, second and third highest scores, A, B and C score 42 each; D, E and F 38 each G, H and I 35 each. How shall they be awarded? Ans. Let A, B and C try again for first, D, E and F for second and G, H and I for third.

J. A. G. J., Oakland, Cal.—My dog has swallowed six rubber balls and is now very sick, vomiting twice a day. He has thrown up one. Ans. If the balls have not been in the dog's interior too long you might try a vigorous emetic. We fear, however, that the dog has swallowed his last ball, played his last rubber, so to speak.

G. and L., Madison, Ind.—A bitch two years old, strong and healthy, was sent last spring to one of the most celebrated dogs in the country in due time she whelped one pup. Was that a litter? The owner declares that it is. Ans. It was. The smallness of the litter was more likely to have been due to the bitch than to the dog.

M. C. G., Boston.—My setter puppy has just recovered from distemper, all but a slight discharge from nose and badly inflamed eyes, which require frequent daily washings to remove the matter. Have used carbolic soap for the eyes, but don't think it works well. What would you advise for a wash? Ans. Nothing but tepid water.

M. W., Boston.—Glass ball shooting, Card trap, Bogardus' rules. Man steps up to shoot, but the trap is pulled before he calls pull; the referee instantly calls "hold, a balk" before the shooter has made any motion. After that, and before the ball reaches the ground, the shooter fires at it. The referee orders another ball. Is that right. Ans. Yes.

H. E. S., Sparta, Mich.—1. The size of gun calibres is usually expressed in hundredths, thus, .12, .20. 2. You can procure waterproof duck garments of any of the dealers in sportsmen's goods who advertise elsewhere. If our readers would consult the advertising pages of this paper, they would learn a great deal themselves and relieve us of some needless trouble.

SCALES, Niantic, Conn.—The Connecticut close seasons for fishes are as follows: Black bass, May 31 to July 1 (may be taken at any time in Conn. and Farmington rivers); salmon, none taken under 9 lbs.; shad, June 25 to March 15; trout, July 1 to April 15. Men who capture fish in close season are law breakers whether they call themselves sportsmen or pot hunters.

JACK, St. John, N. B.—I have a cocker, about one year old, which indulges in a most disgusting practice whenever the opportunity offers—viz., that of rolling in and over the worst kind of filth she may find in streets or cover. Ans. It is a practice to which some dogs are addicted, and is probably caused by an itching of the skin. If the dog is washed frequently with soap—say, Spratt's dog soap—he may not do it.

J. V. H., Paterson, N. J.—My dog has a dry, hacking cough, but no discharge from the nostrils; is worse in the morning, and when running, and after being wet, shows it more than at other times, and has apparently lost his nose. Ans. Give him the following: Friars' balsam, 15 drops; syrup of poppies, 1 dram; diluted sulphuric acid, 5 drops; mucilage, ½ oz.; water, ½ oz. Mix and give two or three times.

W., New Haven, Conn.—The Connecticut Lakes region of New Hampshire is largely owned by two New York gentlemen, who do not object to lawful hunting and fishing on the 10,000 acres of their domain, provided sportsmen exercise ordinary caution in regard to fires, do not peel bark for camps, etc. Messrs. Norton and Chester, at Second Lake, act as guides, and are well informed in the geography and game of the region.

X. W. X., Boston.—1. I have an Irish setter pup, six months old, whose appetite and general health seems good; but he continues very poor. What can I give him to fatten him? Though from good stock—Elcho-Nell II. (Pranker-Farrel's Nell)—the tail curls somewhat. What can I do to make it stand straight as it should? Ans. 1. If you suspect worms, give areca nut; the puppy may be growing fast, which would account for his being thin. 2. Do nothing until the puppy is a year old, as it may grow straight.

G. A. W., Dover, N. H.—I have a white and lemon setter about three years old which seems generally to be in good health and appetite, but is troubled quite often with hot ears. They feel, to the touch, as if in a high fever, especially the inside of the ear close to the head. The hair of the dog is in good condition, but that on his ears is dry, lustreless and has a rough, coarse appearance. Ans. If your dog has been in the water much it would account for the condition of the ears. Try "Cosmoline," a small quantity rubbed on the inside and outside of the ears daily for a week.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 26, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 27.—Harvard-Yale Boat Race. Tournament of Gulf City Gun Club, at Mobile, Ala.

Saturday, June 28.—Detroit River Navy Annual Regatta. Plainfield (N. J.) Athletic Club Summer Meeting. Tournament at Williams Grove, Pa. Mobile Tournament as above.

ALCOHOL IN CAMP.—Campers and excursionists will find much valuable information and suggestion in the article upon this subject in another column. It is not a temperance lecture. It is a sound bit of logic. We commend it to the attention of those who are fitting out.

THE LITERATURE OF ARCHERY.—The archer has abundant field for investigation into the literature of his favorite sport. When the world's greatest masterpieces of epic poetry were written the bow and arrow was the weapon of gods and men. As the hunting and war implements of early races the arrow-head possesses much fascination for the student of ethnology. What occupation archery clubs may find for themselves in connection with the ancient use of their arms is hinted at in the article we publish upon our first page to-day, contributed by a well-known counsellor of Washington, who has employed his leisure and the hours of ill-health in practice of the sport of the bow and arrow.

THE ASTLEY BELT AND AMERICAN POOL ROOMS.—Weston has turned up again as the winner of the Astley belt competition. His score in that contest in London last week was 550 miles, the largest record yet made for 142 hours. He has already announced his intention of bringing the belt back to America. We shall not be pleased to see it return. These long distance pedestrian competitions are organized and governed in the interests of the pool rooms and book makers. They in no wise partake of the character of legitimate sport, but on the contrary are detrimental to the standing of pedestrianism as a recreation, and demoralize the community in which they are held. Inasmuch as an Englishman originated the Astley belt hippodromes it is a pity that they and their surroundings cannot be confined to England.

LACROSES.—The clubs organized themselves the other day into a National Association for the protection of their game against professionalism. It is to be hoped that the rules confining the sport to amateurs will be rigidly enforced. Nothing is more directly prejudicial to a game than to have it fall into the hands of mercenary players.

SPORTSMEN'S PALACE CARS.

THE brilliant hunting scenes of the glorious days of the Round Table, when king and queen, ladies fair and noble knights, retainers and esquires, with richly caprisoned steeds, hounds in leash and falcons on wrist, went forth with bugles winding merrily, to chase the red deer and slay the fierce boar in his forest fastnesses,—all this belongs to the age of chivalry and romance. We read of it now in the quaint old books, and our eyes see it through the glamour which attaches to those partly historical, partly mythical days when ladies had nothing else to do than to sing *chansons de geste*, and knights whiled away the hours making love to swan-maidens. That was the Golden Age of Hunting, and like every other Golden Age, it is the long ago time of fairy tale and legend.

What a genuine, novel pleasure it would be to awake one of those kingly huntsmen from his royal and dusty repose and, before he had fairly opened his eyes, to clothe him in a canvas shooting coat, put a split bamboo rod into one hand and a perfected breech-loader into the other, give him a ticket for one of the Pullman's Palace Car Company's new sportsmen's cars, "Davy Crocket" and "Izaak Walton," and start him out to shoot "prairie chicken," or to angle for trout. Bless his mediæval heart, he wouldn't know whether to shoot with the rod or to angle with the gun! And if he didn't manage to shoot every man in the car before he found out what the gun was for it would only be because he was a deal smarter than many a bungling wight born in this Nineteenth Century.

Is Merlin really sleeping yet in his Oak, imprisoned of the heartless Vivien

And lost to life and use and name and fame,

through all these centuries? Could he be awakened by the screech of the locomotive and come forth how would the Magician of the Round Table reconcile the chase of yesterday with the sporting party of to-day? A repetition of that locomotive screech would terrify his spirit more than ever did the thunders and earthquakes and the direful phenomena of the Siege Perilous, as the skill of the modern mechanic is more wonderful than the sorcery of the old necromancer. The Golden Age of hunting may have belonged to our ancestors. We surely have no reason to envy their enjoyment of it so long as we may now go forth in palace sportsmen's cars fitted up with every combined luxury of home and camp.

The number of men who set out each season to lapse for a brief period into the life of the forest dwellers is yearly increasing. Where scores went once, hundreds go now; where hundreds went before, thousands go to-day. Railroad and steamboat corporations have long ago learned to estimate the sporting travel over their lines at what it is worth. Our advertising columns show that. These lines have found it profitable to publish elaborate circulars solely for the purpose of setting forth their attractions to sportsmen. The officers of different roads vie with one another in showing courtesies to the individual sportsman and to parties of sportsmen. Railroad car companies now build cars designed for the sportsman's comfort and fitted up with especial reference to his needs.

This is a suggestive commentary upon the extent of the influence healthful sport and recreation is gaining in American life to-day.

AMERICAN CRICKET, PAST AND PRESENT.

IN England where cricket has been played in different progressive forms for full three centuries and a half, it has long been known as the "national game," and the only cause that can disturb its present popularity there is the fear that it may be overdone. It was not, however, until within late years that the game found favor throughout America. True, there were certain localities where cricket had its foothold, but even in these cities—Philadelphia excepted—the game had comparatively few supporters and it suffered many more "downs" than "ups." But now cricket has overcome popular prejudice and is firmly rooted in over one hundred cities and towns in America. It has gained favor in our principal colleges, and many of our best schools have wicket spitched on their playgrounds every afternoon in the season.

American players have at last given cricket a fillip and have clearly shown that it is a sport that can be played with a snap which was hitherto unknown. That cricket has been long in gaining public favor is not the fault of the game, but with the manner in which it has been played. "As the twig is bent," so it was with our early cricket. Introduced into New York about 1750, and played under the eaves of a once famous hostlery, it seems to have begun its existence in a corrupt atmosphere and to have been only a pretext for gambling and deep carousals. That even the players of that time did "lay abed until the clock struck ten" there seems to be no doubt, for it is noticeable that all matches were arranged to come off in the afternoons.

In 1778-9 and so on to 1780 matches were played at frequent intervals, but at the end of the war the British officers and the game seem to have walked off together arm-in-arm.

Although cricket had a short revival in 1799 yet it was not until the founding of the once famous St. Georges, of New York, in 1839, that the game again began to be regularly played in America. Following closely at the heels of the St. Georges, in 1841, came the Philadelphia Union and the Newark Club of New Jersey. Other clubs seem to have started about this time, for in 1844 there were the following well known organizations in the United States, the Syracuse, of Syracuse, N. Y.; Union Star, of Brooklyn; New York, of New York; Western and Queen City Clubs, of Cincinnati, and several other organizations scattered in spots across our broad continent. In the meanwhile cricket had been played more or less in Canada, having its fountain head at Toronto.

In 1853 the first of a series of United States vs. Canada matches was inaugurated. These well-remembered games were played alternately in the United States and Canada, the last contest taking place in 1860. In all seven interchanges were made, of which five were won by the United States and two by Canada. Toronto and Philadelphia now seem to be the most suitable cities at which this international match should be played, and as it is the turn of the United States eleven to visit Canada it behooves the cricketers of the Dominion to adjust their personal club difficulties, on the give-and-take principal, and resume a match which would be undoubtedly the most interesting annual event and tend greatly to popularize the game.

It was in about 1855 that the now famous Young America Club was formed, and in the same year the first match between native American elevens was played on the Camden Grounds between teams selected from the Philadelphia and Newark Clubs.

The season of 1857, '58 and '59 call for attention, as they were grand ones for cricket all over the country; it truly flourished everywhere, until the war put a stop to all sports, and the elevens were disbanded for more serious business.

The great events, however, in the history of American Cricket, have been the visits of English teams. It was in the autumn of 1859, that the celebrated player, George Parr, brought over the first All-England eleven, which played five matches in the following cities: Montreal, New York, Philadelphia, Hamilton and Rochester. All of these were won with ease by the foreigners, although contending against sides of twenty-two players. In 1868, Wilsher came with another splendid eleven of professional players, and England again defeated twenty-twos at Montreal, New York, Boston and Philadelphia, two games being played at the Quaker City. In 1872, twelve amateur players, Captained by Fitzgerald, Secretary of the Marylebone Club, appeared on our shores, and contended against sides of twenty-two players, at Montreal, Ottawa, Toronto, London, Hamilton, New York, Philadelphia and Boston; the English gentlemen winning at the first seven named cities, and having a draw, in a one day's match, at the latter place. This magnificent team included the famous player W. G. Grace, the greatest bat the world ever saw.

In the autumn of last year, an eleven of Australian players—fresh from a brilliant season's cricketing in England—passed across the Continent on their way home, and were induced to stop at six points, and try conclusions with American and Canadian teams. The first match was against eighteen players of New York, and was won by the visitors. The second event, versus eleven Philadelphians, resulted in a draw after an evenly and splendidly contested game. The twenty-two's of Toronto, Montreal, Detroit and San Francisco came next, and in turn were easily defeated by the Antipodes.

The flying visit of a portion of Lord Harris' team completes the list of inter-colonial games, and is fresh in the minds of our readers. Besides two tournaments, one held in Halifax, N. S., and one in Philadelphia, there have been a number of matches between American and English residents, which have generally been interesting and well played.

Before closing this brief retrospect of American cricket, it is but just to say that the game, as played here, was rescued from a bad rut into which it had fallen by a mere handful of young Philadelphia cricketers, and by their untiring efforts it has been fostered and cared for until its merit and excellence as the finest of all scientific out-door games have become known and duly appreciated. To-day cricket is rapidly gaining that ascendency which the most enthusiastic lovers of the game hardly anticipated for some time to come. In round numbers there are about one hundred and fifty well-known clubs in the United States and Canada, and every week new organizations are being added to the list.

Let, therefore, the patrons of this "noble game" guard its interests with jealous care. They should remember that, in its playing, time must be economized, and that the system of "revolving" is as detrimental to cricket as exchanging cards under the table would be to the game of whist.

The FOREST AND STREAM takes pleasure in announcing that it has secured for the management of its cricket column a gentleman whose skill as a practical player, wide acquaintance with cricketers throughout this country and in Canada, render him peculiarly fitted for the position, and whose valued contributions to cricket publications in the past have had an appreciable effect upon the conduct of the game in America. We propose to make this column a complete and intelligent record of the work of cricket clubs, and shall prove ourselves the most desirable organ of the gentlemen cricketers of America. We invite the co-operation of club secretaries everywhere, and shall be pleased to receive and publish reports of cricket meetings and matches. Secretaries are advised that to insure prompt and correct publication, scores should be prepared with care and sent to us as early as possible.

—THE FOREST AND STREAM will be found on file at the American Exchange and Reading Rooms, 449 Strand, London, England.

THE WORM ON THE HOOK.

VICTOR HUGO, with a fanciful antithesis sufficiently striking to satisfy the most ardent admirers of his style, heads a chapter, "The Apotheosis of the Worm." He means the Worm humanity. Moralists who would fittingly express the lowliness of the race have ever manifested a penchant for likening man to the debased, crawling creatures which live in the earth and come up in rain storms. The figure is a favorite one, because mankind can well afford to have its general self designated as a thing of humility. There is nothing otherwise invidious about the comparison; the suggestion is simply and only of retiring and conscious comparative worthlessness. In the scale of being, the earth worm is below the serpent; yet let men be likened to serpents, or let a man be called a snake, and the epithet is resented at once. The worm is infinitely below the brutes, yet no one ever thinks of calling a human brute a worm. Of the two, "brute" is the more offensive. But upon occasion men can declare, with great unction, that they are only poor, miserable, worthless worms.

The meaning of our common use of language is often very subtle. May it not be urged in behalf of this despised friend of our fishing days, that our thus referring to it as the embodiment of unobtrusiveness and harmlessness betokens a kindly feeling toward it? Cowper may be set down as sentimental and Miss Nancyish when he discards the friend who would needlessly set foot upon a worm; but even the boy or man who goes fishing, and without any qualms impales the squirming victim upon the hook, would not needlessly crush the helpless thing beneath his heel.

When we consider the worm as showing forth nature's wonderful adaptation of means to an end, we may view it in perhaps its highest office. The end here is, of course, a fish-hook. Worms were undoubtedly saved over from the flood on purpose to go fishing with. Who strung the first worm on the hook? Was it Noah? How long did men wonder what worms were made for, as we are now speculating (with trustful spirit of ultimately finding out) upon the musquito's creation? The first fish we ever caught was caught with an angle-worm, and we shall never forget how we put it on to the hook. But what must have been the emotions of the first naked fisherman, away back in the early gray of civilization's morning, who fitted the original worm upon a thorn, perhaps, and dropped it down to lure his morning meal. And was it pure accident, a happy hit? or had this primeval angler before seen a hapless worm devoured by a trout? Let us trust, however all this may have been, that like a true member of the angling fraternity, as he undoubtedly was, he at once wrote to his favorite weekly journal, detailing his experience for the benefit of others of the guild. Possibly a study of language, to ascertain when the earth-worm was first called "angle-worm," and an investigation into the prehistoric fish-hook, with especial reference to the adaptation of the hook to the bait, might throw some light upon this interesting archeologico-piscatorial speculation. In another column we publish some interesting facts about the life of the angle-worm. Who will enlighten us as to its piscatorial history? If such delving into the mold of the past seems to be an unworthy occupation, it is after all only another form of digging for worms, and we have all done that before now. And if it be farther urged that any knowledge likely to accrue from such an investigation would be ill-proportioned to the toil, we may only suggest in turn that scores of men are spending their lives in investigations not a whit more valuable to any mortal being; and more, when scientific acumen has been sufficiently sharpened in the pursuit of the original earth-angle-worm, it will be abundant time to undertake more momentous investigations.

Now that we have baited our archeological hook, who will bite? Remember that the early bird catches the worm.

SALMON FISHING IN CANADA.

RIVER GODBOUT, Lower St. Lawrence,
June 19th, 1879.

MR. EDITOR:

When I left the Grand Central Depot in New York on the second day of this month to accept the *thrice*-repeated invitation of that notable Canadian angler, Allan Gilmour, Esq., to fish his salmon river, I felt it a sacred obligation to meet the appointment. Like opportunities are afforded only to a favored few, and I knew that if I failed this time, mine would never come again. So I girded up my loins, as it were, and pressed forward to my immediate goal, which was my friend's sumptuous residence at Ottawa.

I chose the Hudson River, N. Y. Central, and Utica & Black River connection to Ogdensburgh as the route direct, besides affording the most grateful variations of change after one of the hottest days of our early summer. I anticipated the refreshing breeze and the glinting moonlight along the noble Hudson; the flashing lights from steamers upward bound to Albany; the shadowy sails of vessels under easy way; and the comforting rest of the luxurious sleeping coach; with oblivion of time, distance, and material things, until the morning call to breakfast among the breezy hills which rim the Adirondack chain of mountains. But a sudden fall of the barometer inaugurated a storm of rain at the very hour of starting which lasted forty-eight hours with you, and preceded a long spell of cool variable weather in higher latitudes which has made winter clothing indispensable ever since. Absence of rain after reaching Utica at dawn, rendered travelling tolerable, while intermittent gleams of sunshine through broken clouds beamed forth assurances of warmer and brighter days to come. At Lowville an appetizing breakfast of such good things as one rarely finds in juxtaposition at railroad eating houses added encouragement; and thus fortified we sped on our journey,—sparkling brooks enlivening the wayside, bursting buds and fresh-blown forest leaves emitting a pungent fragrance, and cloud-like mountains, blue in the distance, dividing with their shadowy outlines our passing interest in the more mundane, matter-of-fact spring work of the farmers in the fields around us. At intervals we passed the gateways of the Adirondack Wilderness, where patient teamsters with wagons and buckboards awaited in daily expectancy the vanguard of the army of anglers who annually visit the interior trout streams and lakes; and as my hasty glance took in the familiar scenes of long-ago experiences, I instinctively sighed for the days gone by. Then, with calm introversion, fondly contemplating the bundle of salmon rods in the angle of my seat, I silently repeated the trustful prayer; "*Spero meliora.*" I felt in my inner consciousness that the high art of salmon fishing so far transcended the mere catching of trout, that *Salmo fontinalis* (or *Savelinus fontinalis*, as they call him now,) was not entered for competition. My *ultima thule* on the St. Lawrence shore lay far beyond the scarred outline of Bald Mountain, which I could barely trace in the distance. So, with face turned northward, I tarried not till I reached Ogdensburgh and beheld the red cross of St. George floating beyond the fluvial boundary which divides the United States and Canada, and renders Custom House officials formidable and imposing.

To the honest tourist who has no purpose to evade the revenue laws, Customs officers need be no bugbear. They are sufficiently lenient for a conscientious performance of their duties. I have crossed into all the Provinces many times, and never yet had trunk examined. For several years I carried one of the large Goodyear rubber bags, which held all my "possibles" and portables. It laced up like a leathern mail bag, and being first rolled up in canvas, and then tied with rope, it looked like a most suspicious bale. Yet my bunch of fishing rods, or my gun, seemed always to constitute a sufficient passport, and I found the officers especially friendly to sportsmen, who inferentially are more likely to leave money where they go, than to take it away. Many innocent travellers, however, often subject themselves to annoyance through ignorance. They have an erroneous notion that all sorts of goods not intended for sale, but as presents, are not subject to duty. For their future guidance, I would say that any shooting or fishing implements, and any impedimenta whatever, not in actual use, are subject to a tax of 30 per cent. ad valorem, which it will be utterly useless to attempt to evade. They will inevitably be seized if the duty be not paid.

Prescott, a goodly town of several thousand souls, hobnobs with Ogdensburgh. A large ferryboat plies between the two places every hour. From Prescott to Ottawa is a run of fifty-four miles by railroad. A person leaving New York at 8:30 in the evening by the New York Central can reach Ottawa by 3 o'clock P. M. the next day, and the journey being so easy, I have often wondered why St. Lawrence river tourists do not more frequently turn aside to visit the Capital of the New Dominion, with its romantic scenery, its handsome purlieus, and its superb Parliament Buildings, instead of continuing direct to Montreal and Quebec. To my eye, this group of Government buildings is the most imposing in the Dominion, and rarely equalled in the States. Perched upon the verge of a lofty limestone cliff whose base is washed by the boiling overflow of the Chaudiere Falls, its clustering towers and aspiring dome overlook a great natural basin enclosed by circumvallant hills still clothed with forests. At its feet the vast mills are resonant with the hum of a thousand saws; piles of lumber cover an area of many acres; sinewy steam tugs with rafts in tow, and long strings of canal boats tailing out in line, plod and plash among the eddies and the leaping foam. All around, to the right and left, and rear, the well built city lies spread out, its contour of surface agreeably diversified by rounded hills and slashed by the channels of the Rideau river and canal, which are spanned by graceful bridges of iron. Up and down we discover the Ottawa.

Of the many elegant private residences of Ottawa, that of Allan Gilmour is perhaps the most pretentious. It is located on the cliff, under the very shadow of the Capitol. It has an aristocratic bearing of the Old-World order. Lofty walls of stone and gates of iron enclose its gardens, its conservatories, its court, its stables, and its servants' quarters. Magnolias, palms, bananas, and other tropical plants flourish under glass; heads of moose and caribou and various trophies of the chase adorn the halls; in the picture gallery is the finest private collection of paintings in Canada, many of them purchased by the proprietor at great expense during extended travels in Europe and Africa, and fully one-third illustrating wild life on the remote frontiers of the Dominion. There are 106 subjects in all. From a terrace on the crest of the cliff a flight of 115 steps descends to a rustic boat landing on the river beneath, where the already famous steam yacht *Cruiser* sometimes lies. This is the jaunty craft which has brought us to the Godbout, and now rides gracefully at her anchor at the mouth of that river. For the three days previous to our departure from Prescott she had been in loyal attendance upon Her Highness, the Princess Louise, who was engaged in doing the Thousand Islands in company with her consort, the Marquis of Lorne. Thus consecrated, as it were, we occupied where the royal party vacated; and having returned from Ottawa, and cast loose from the wharf at Prescott, we swung into the mighty tide, and were borne down stream at the rate of fifteen miles an hour toward the first rapid of the St. Lawrence.

Luxurious are the appointments of this beautiful vessel. She is replete with all that can minister to the wants or the comforts of the outer and inner man. She is more than a hotel palace car, for she has the promenade deck and the pure untainted air, which the other has not; and she is free as a bird, to float hither and yon at one's pleasure, while to leave the beaten track of the rail is to court danger, damage, and death! Scarcely less steady than the great mail steamers are in the tumbling rapids which constitute the chief charm of this river excursion, her lesser length and draught render the voyage safer, while the dip of the bow into the whitening foam, and the comparatively greater magnitude of the great waves intensify the exhilaration and increase the delight begotten of a fuller confidence. This vessel is eighty-five feet long, and measures eighty tons, carrying twelve tons of coal in her bunkers, and burning about one ton per day,—or wood, in lieu thereof, when required. My friend Allan Gilmour had considerately invited an old schoolmate of mine, Hubert A. Ives, Esq., proprietor of the Queen's Iron Foundry at Montreal, to join me at Prescott, and we three, with Messrs. Cunningham and Mannel, of Ottawa, made up the complement of passengers. We ran down to Cornwall in five hours, and tied up for the night, and starting early, reached Montreal the next morning, passing the celebrated Lachine Rapids at 20-mile-per-hour speed, steaming under the Victoria Bridge, and finding a berth below the Bonsecom Market. Thirty-six hours were passed delightfully in Montreal. I was most agreeably surprised to find Mine Host Hogan once more in charge of the St. Lawrence Hall, after a few years' absence and rest. He is a sportsman by instinct and education, and all members of the fraternity of sportsmen who become his guests will be kindly entertained and receive material aid and information regarding the best resorts for game and fish, and the best and cheapest way to reach them. I would advise those visiting Montreal to make his acquaintance. One of the principal modern lions of the city is the new Windsor Hotel, a massive ornate edifice of stone, in the aristocratic quarter, which will compare favorably with any hotel on the Continent. The stockholders who joined purses to erect so noble a structure deserve the fullest measure of remunerative return. At Montreal we exchanged Messrs. Ives and Cunningham for Robert Muir, Esq., of London, England, and proceeded to Quebec, stopping en route at Trois Rivieres on Sunday, and enjoying a most interesting ramble through the quaint streets and delightful suburbs of that ancient French town. We reached Quebec on the day of the inauguration of the new Dufferin Terrace by Her Royal Highness and His Excellency, the Governor General, the latter of whom I had the pleasure of personally meeting at the headquarters of my friend J. M. Gregory, Esq., the Naval Agent at Quebec. The Dufferin Terrace surmounts the crest of the heights whereon the ancient city stands. It is 1,400 feet long by 60 feet in width, and is claimed to be the finest promenade in the world. The outlook therefrom is transcendant in its scope and impressive beauty, as every visitor to Quebec who writes, has written and testified. In the evening there was a general illumination truly superb, not only of the impregnable heights which the Citadel crowns, but of the cliffs of Point Levis opposite; so that all the glory of every conceivable device, and angle of multiform and parti-colored lights was not only reflected in the water, but projected and refracted from either shore, thrice-multiplied and intensified. What locality of this whole hemisphere has such aptitude for a display of this kind? rows upon rows; tiers upon tiers; diagonal lines climbing to the apex of Cape Diamond; ladders of burning jets soaring to the highest elevations; torches of flame flashing on the esplanade; the rigging of the ships ablaze with lanterns; the Citadel flashing its fires 200 feet above the water level, and illuminated with a ghostly line projected from a calcium light from the cupola of the University a half mile distant? Magic never contrived so marvellous or enchanting a display. The like I never expect to witness again.

Here at Quebec we added to our party Mr. Farquharson Smith, of the Bank of British North America, which made up our full complement of five for the Godbout, and early on Tuesday morning, June 10th, started down the river. Of the continuation of our trip, more anon. Our yacht crosses over, hence to Metis, 35 miles distant over the river, to take Judge Henry of Ottawa to the Trinity River, which gives me opportunity to send dispatches.

HALLOCK.

ROD, GUN AND QUILL.—The average paper contributed by our correspondents to the FOREST AND STREAM is very far from being a mere recital of game killed, or fish caught. The reason is plain. Men who go forth into the woods and fields and along the rivers, with eye and ear open to the beauty and teaching of the natural world, are the ones who are prompted to commit themselves to writing. Men, in whose hands a gun is nothing more than the ax with which a butcher kills a calf, are not the persons who have much natural taste for ink. It is possible to make a so-called sporting expedition only an occasion of cool blooded slaughter, but happily such an expedition is rarely described in print by the participants. When a sketch of this character is written it is likely to be as spiritless as that which it describes.

GAME PROTECTION.

THE MIGRATORY QUAIL

We publish herewith a cut of the Migratory Quail, taken from Morris's "British Birds" and believed to be a very satisfactory figure of the new American game bird. This quail is between one-half and two-thirds the size of our *Ortyx virginianus;* of lighter color, rufous brown, suffused with fulvous; bill, slim, long and less arched; legs slender and nearly flesh color; wings larger proportionately than our quail. The female constructs her nest, a mere depression in the ground, in June and July, and lays from eight to fourteen eggs, whitcish-gray marked with large brown spots. They do not mate, the male being a polygamist and a desperate fighter in the early season. His call is a twice repeated whistle. Food: grain, herbs, hemp, poppy and turnip seeds; insects and insects' eggs and larvæ. When not migrating they become very plump, and properly prepared for the table are dilicious morsels. As would naturally be expected from its long migrations the bird is strong and rapid of wing and possesses in this respect every qualification for fully testing the skill of the sportsman. According to Mundie, the migratory quail which appear in England feed in the early morning and in the evening, and squat at mid-day, when they will not flush

COTURNIX COMMUNIS.

until a dog is quite upon them; and Bechstein, the careful German naturalist, says that in Germany in August and September the young birds if marked down may sometimes be caught with the hand as they squat flat upon the ground. As to the migratory habits of the quail our Malaga, Spain, correspondent wrote in April of last year:

Its winter home is in northern Africa, in the plains south of of the Atlas Mountains, whence it takes its departure in large bodies in the month of April, crossing over to Spain at points from Tarifa on the Atlantic coast to Cape St. Martin on the Mediterranean in the province of Alicante; and their flight occurs generally at night and near the time of the full moon. If the wind should be strong from either the west (Poniente) or from the east (Lavante) at such time they seek the narrower points between Africa and Europe, near Gibralter, to cross. They usually alight upon some hill or mountain, where they rest one day, when they again continue their journey *en masse* and in such a complete manner that the following day not one can be found. Their next resting place is on the northern slopes of the Sierra Morena Mountains, from whence they descend to the plains throughout Castile, Aragon and Estremadura, and scatter for breeding, and remain until the young birds are strong enough to bear the return journey to Africa in the months of September, October and November; but this is accomplished in smaller detatchments than during the entrance into Spain and in Africa, but not it numbers sufficient for sport out of of their regular season.

Correspondents may materially serve the gentlemen and clubs who have engaged in this enterprise by sending us notes of any observations of the birds, their appearance and habits. By thus keeping the readers of FOREST AND STREAM (and that means the great body of sportsmen everywhere) fully informed upon the subject, interest in the work will be maintained, and we shall before a great while possess positive data for determining the success or failure of the Migratory Quail importation.

IMPORTATION OF EUROPEAN PARTRIDGE.

EDITOR FOREST AND STREAM:

You ask for information respecting European partridges. "Have they been imported? When, where, how, and with what results?" I am not aware that any have been imported into Canada, but I know of their successful introduction into an island in the Baltic, where the climate is quite as severe, if not more so, and their prospects certainly far less favorable than they would be in any part of this province. In 1826 I went to St. Petersburgh in a new clipper brigantine named the *Brutus*, of which I was part owner, as supercargo. She drew too much water to pass the bar, consequently we lay in the Merchant's Mole, at Cronstadt—a splendid basin, capable of holding 1,000 sail of merchantmen. It joins the Man-of-war's Mole, where the Russian Baltic fleet winters. That was the year in which the Emperor Nicholas was crowned, and great preparations were made during our stay. But the ceremony was delayed on account of revolutionary rumors. A vast extent of forest and villages were burned between St. Petersburgh and Cronstadt, said to be the work of incendiaries; many vessels got on shore, and the steamers could not run on account of the density of the smoke. Mr. Booker, a worthy gentleman and a universal favorite, was British Consul at Cronstadt at that period, and he kindly invited me to be one of a large party to dine with him on Coronation Day. There was also to be a ball, illumination, fire-works, etc. We managed to get the vessel to sea, and, with a fair wind, I bid adieu to our hospitable consul, spite of his entreaties to remain. Business before pleasure, Mr. Booker! We had a fine run down the Gulf of Finland, but in passing the east end of the Island of Gothland, with the wind off the land, the captain shaved too close, and stuck her on a flat, sunken rock. The greater part of the cargo had to be landed to get her off, and I had to go to Wisby, the capital of the island, to settle matters and have the necessary documents drawn up.

Our Consul introduced me to the Governor, Baron Sederstrom, a general in the Swedish army, who fought at Waterloo and sported a wooden leg as his share of *loot* and glory. I received a great deal of kindness during my stay in Wisby from the worthy Baron, the Baroness, his amiable and handsome wife, his secretary and aid-de-camp, Lieut. Ruul, and other notables, who vied with each other in attention and hospitality. Lieut. Ruul finding I was a sportsman, proposed a day's partridge shooting, which I gladly assented to. The Baron kindly lent me a splendid Manton, with all necessary outfit and ammunition, sending one of his servants to carry the game. The Consul, Mr. Jackson, the secretary and myself were the sportsmen, and on the 1st of October we started after breakfast on foot, half an hour's walk bringing us to stubble and turnip fields. Friend Ruul had a well-trained dog, and in a couple of hours we had bagged some ten brace of as fine partridges as I ever saw. The coveys were numerous, each containing quite as many birds as the average I have seen in England or France.

These birds were imported from France four years previously, and their destruction strictly forbidden during that period, ours being the first known to be shot—and that for my special gratification. I considered it would be unfair to continue the sport, and we returned to the capital.

The whole island is a bed of limestone, and so utterly devoid of soil that I was astonished how crops could be raised. It is well timbered throughout, down to the water's edge, the roots of the trees striking in the crevices of the limestone. Only twenty couple of partridges were introduced, I believe, and they cannot have been poached, or otherwise destroyed, to have increased so rapidly in four years. The Baron having been the chief promoter of the introduction of the birds, was justly proud of his success.

Now, if partridges taken from sunny France can thrive and multiply in such an Island as Gothland, how much more likely are they to succeed on this continent! Let some of your sporting clubs take the matter up and import a few couple from both England and France, for which you have every facility in New York, and I have no doubt that the result will be less dangerous to the peace of mind of some of your worthy citizens than has been the importation of my little friend the sparrow. How little the impudent rogue dreams of his importance, and the war of words he has created!

Would it not be advisable in the event of European partridges being imported in the fall to have a suitable place secured to winter them, giving them their liberty the end of March or the first week in April, according to the state of the weather?

Should any American tourist visit the Baltic next summer I would strongly recommend a halt of a few days at Wisby. An antiquarian will not consider it a loss of either time or money, and will doubtless revel in exploring the ruins of fine old churches and castles, dating from the eleventh, twelfth and thirteenth centuries. I have a book published in Stockholm in 1823, containing eleven plates and a descriptive history of the ruins of Wisby, also a silver dollar in excellent preservation of the reign of the great Gustavus, having on one side what I presume to be a good likeness of his Majesty, which I found among the ruins of St. Clement's church, Wisby. I would part with both to some society or institution. It was on this island that I saw and heard that noble bird, the Cock of the Woods. PHILIP VIBERT.

Percé, District of Gaspé, April 20, 1879.

MIGRATORY QUAIL IN NEW JERSEY.—*Belvidere, New Jersey, June* 23 —*Editor Forest and Stream:* Cage of migratory quail arrived here June 9, eleven short, two blind and one lame. They were set free in flocks of ten and twenty in the manner suggested in your paper. I hear of them every day as remaining in the localities where placed, and everybody seems to be interested in them. While they were yet in the cage a gentleman who came to see them told me that one Henry O'Braniger, at Easton, Pa., winged one last fall when gunning, his dog having pointed it. He caught it and caged and kept it for two months, the supposition being that it was a cross between a meadow lark and a native quail. I have also heard to day that a large number of them were seen in the Great Meadows, near Danville, in this county, last fall. I shall inquire about this further. HENRY S. HARRIS.

MIGRATORY QUAIL IN NEW HAMPSHIRE—*Editor Forest and Stream:* I am happy to be able to report to you the satisfactory results in securing our migratory quail. The cage arrived here June 18, containing 96 birds—all in excellent condition. They seem to be doing well since they were let loose. I think our club (the West Lebanon Sporting Club) will send for more next winter. M. S. WOODMAN.

West Lebcnon, N. H., June 21, 1879.

NO WOODCOCK FOR THE FOURTH OF JULY.—The new game law makes the close season for woodcock throughout the State extend to August 1. There will therefore be no shooting on Long Island this Fourth as there has been hitherto.

NEW YORK.—*Clifton Springs, June* 7.—The "Ontario County Sportsman's Association," organized here June 3, Isaah Tiffany, President; Sherman Mosher, Vice-President; Henry Tiffany, Secretary; John E. Devereaux, Treasurer; J. W. Van Alien, Attorney. Our President is a veteran trout fisher, for many years a resident and prominent business man of Utica. Our Vice-President was formerly Chairman of Board of Supervisors of this county. Membership is large. We propose to break up fishing with nets in the outlet of the Canandaigua Lake, which is the best bass grounds in this part of the State. Pot-hunters and violators of the game laws will do well to keep out of this county. X.

LYCOMING SPORTSMEN'S CLUB.—The Lycoming Sportsmen's Club, of Williamsport, Pa., have elected the following officers for the year ensuing: President, H. S. Lucas; Vice-President, Harry Tallman; Secretary, J. W. P. Parsons; Treasurer, August Koch. The president and vice-president are *ex officio* members of the executive committee, and the following additional members were elected to serve on the committee: De La Green, J. J. Reardon, H. L. White, Edmund Koch and Charles Hagan.

THE MUSCONETCONG TROUT.

BLOOMSBURY, N. J., June 7, 1879.

EDITOR FOREST AND STREAM:

In your issue of May 1 there appeared an article in regard to the stocking of Musconetcong Creek, in New Jersey, signed "Augmenter." Your correspondent has certainly been misinformed. In the first place he states that "between the years of 1863 and 1872 the three proprietors of Troutdale Ponds," etc. Now, Dr. J. H. Slack purchased the place in 1867, and was the only proprietor until his death in 1874. A short time before he purchased the place about 100,000 trout fry, which had been hatched by Mr. Norris—the former owner of Troutdale—escaped from the hatching-house into the Musconetcong. In order to get some of them back, Dr. Slack paid from $10 to $20 per thousand the first year he owned the ponds, and bought 20,000. This is all that were taken from the creek, and for every trout taken from the creek he replaced at least a thousand. But of course it did no good, as the creek was filled with fish baskets, and the people were continually fishing with every kind of net, and destroyed all the young fish. Can this be called "unfair means?" Is it not fair to catch fish and sell them, and is it not fair to buy anything offered for sale, provided it has not been stolen? Has not every one a right to fish in waters that have not been stocked by the Fish Commissioners? But the Musconetcong has been stocked by the Commission with salmon and black bass, and there is a law prohibiting fishing for three years in any stream stocked by the State. It is now not quite two years since the fish were placed there, but the people of Bloomsbury, I am told—and indeed I have seen them—are continually fishing with nets, although it is illegal. Now, I think that if the people of that town were really troubled about the fishing in the Musconetcong, they would see to it that the law be enforced, and that the young fish placed there be protected. "Augmenter" has certainly hit on a novel way of catching fish. Allow me to congratulate him on it. I have never heard of such a thing, although I do "not live a great many miles from Bloomsbury." It is very kind in him to publish it, for if it is as successful as he implies, it will be well worth trying. This is the way in which the little fish in Troutdale Ponds were fed several years ago, and this is the only use I have ever seen the heads of animals put to. If this "telling" "Augmenter" speaks of is going on in the Musconetcong, it is the duty of your correspondent, as a law-abiding citizen, to have it stopped; for there is a law forbidding any one to fish there with any kind of a net. And it is to be hoped that he will attend to this matter at once. JUSTICE.

BLOOMSBURY, N. J., June 9, 1879.

EDITOR FOREST AND STREAM:

I saw an article in an issue of your paper headed "Telling for Trout," wherein your correspondent speaks of having seen a place where they are baited, and also of having seen a net hauled around them after they were "baited." Now, as a disciple of Walton, I will offer a premium to him if he will furnish the name of the parties, and I will guarantee to prosecute them to the full extent of the law. We have a law prohibiting the use of any nets in our inland waters, and it is greatly to be regretted that it is not fully enforced. "Augmenter" is sadly misinformed in regard to the stream, and also the ponds of which he writes. I could mention several expert anglers who visited the Musconetcong in the year 1867, including such names as the late Thaddeus Norris—the then proprietor of Troutdale Ponds. I will say that it was then regretted by all of us that such a stream had been allowed to become depleted by excessive fishing, not only by angling, but there was a fish basket at that time every few hundred yards for the whole length of the stream. Also, nets of all descriptions were used, and are to the present day, by day and by night, thus either catching all the trout, bass etc., or driving them from their spawning-grounds, and forcing them to seek some other abode. Mr. Norris purchased 100,000 trout eggs in the winter of 1866 and 1867 of Mr. Seth Green, and hatched them at Troutdale, and early in the following spring they all escaped to the stream. The place was purchased by the late Dr. Slack in the summer of '67, and the following spring he purchased of whoever offered them for sale 20,000 of the fry that had escaped from Mr. Norris. Thus the establishment purchased the eggs in the first instance, paid for hatching them, purchased 20,000 of their own fish that had escaped, at a good round price, thus benefiting at least some of the now croakers, and said nothing of the remaining 80,000 that peopled the stream, and which cost that institution (Troutdale) about $1,000 in ready money. If "Augmenter" and his friends will step out with a small proportion each of the above amount, and then exert themselves to destroy all illegal fishing, and protect the fish which have been planted in the streams and tributaries under the auspices of the Commissioners of Fisheries, there will be no occasion to call upon one single individual through your columns to restock some thirty miles or more of the Musconetcong at his

own expense, especially as many of the so-called sportsmen would take peculiar delight in fishing all the little fellows out the very next season. It is a fact that they have been known to go out with rod and creel, and after spending the day along some of the waters in the neighborhood, return home with two or three little fellows in their basket, each about three to four inches in length. Shame! Now, we would ask: Can any stream be restocked when the inhabitants allow all these things to pass unrebuked? What we desire is a more healthy public sentiment. Let it be known that no one can use a net in our waters with impunity. And it is the interest of every person to see the wholesome laws are made, and also that they be enforced. I would recommend that any man found with a trout in his basket less than six inches in length be fined severely. If something of this kind be not done there will be no trout left in our streams to breed, and they must become very scarce, to say the least. It is very gratifying to learn through "Augmenter" that there are some streams in our State which have been stocked by the Commissioners, where the proprietors of the brooks respect the law which prohibits fishing in such stream for three years, and will neither do so themselves nor allow others to. Cannot we induce some of them to emigrate to the valley of the Muscoot-cong? I should be happy to meet "Augmentor." He writes from Bloomsbury, so he probably knows who I am. If he will call we will talk the matter over, and possibly devise some means to increase the supply of our game fish. A. A. ANDERSON.

The Rifle.

BURLINGTON, VT., vs. SARATOGA, N. Y.—A very excellent long-range match was fought on the 12th inst. between teams of eight men from the Burlington Rifle Club, of Vermont, and the Saratoga Rifle Club, of Saratoga Springs, N. Y. The scoring on each side was, in the aggregate, remarkably fine, and that of the Burlington Club in particular shows a total which puts it in advance of anything shown in the Elcho Shield matches at Wimbledon. An average of 207 was secured, on a day which was in many respects unfavorable. With changing light and varying winds from one to five points between shots, a thunder shower, too, came down to bother the winners, causing a general derangement of elevation. The full score stood:

Burlington Rifle Club, of Burlington, Vt.

MASSACHUSETTS—*Boston June* 17th.—The weather was excellent at Walnut Hill for shooting, and good work was put in. The "subscription" match at 200 yards having 54 entries, of which the winning scores are given. The conditions called for seven rounds per man and the prizes were 70 per cent of the entrance money.

On the 18th the ninth renewed competition in the Spirit of the Times match, at 800, 900 and 1000 yards, took place. The day was seemingly a capital one for rifle shooting; just cool enough to satisfy the most fastidious marksman, a clear atmosphere, a good light and a wind which indicated 1 o'clock from the northeast at the beginning. Executive Officer Hubbard called the match promptly, and hardly had the gentlemen taken their positions upon the firing points when the wind suddenly backed to 12 o'clock, and came down the range strong and chilly from the north, blowing directly into the faces of the riflemen. Eight marksmen found the "bull" on their first shot. At 900 yards the light became better, and the atmosphere warmer, but the wind again changed five points, and windage was constantly watched. Elevations also had to be carefully looked after, as the sun shone brightly and the mirage was of the liveliest kind and the "bull" looked ragged. The men, however, were shooting in good form, and the white disc was shown very often. At the long distance, 1,000 yards, the wind again changed to 10 o'clock west, unsteady and hard to manage. Surprises were in order, and the "mag" and "blackbird," and even "unaccountables," were signalled. Mr. Gerrish finished with 218, the largest score made this season at Walnut Hill; Jackson followed with a 210, and Brown, with an "unaccountable" from a bursted shell, got 209. The scores stood:

William Gerrish.

MAMMOTH RIFLE GALLERY—*Boston, June* 21.—The regular monthly prize shoot is progressing finely, some excellent shooting being done this last week. Mr. D. F. Little was nearly successful in getting the extra prize of $20 for eight consecutive bull's-eyes, his third shot being a twelve o'clock nipper. This places Mr. Little second, as he outranks Mr. Hollis, who held that position last week. Many members of the Massachusetts Association have visited the gallery for practice. The scores show at 150 feet, 8 rounds, possible 40:

C Edwards	5	5	5—40
D F Little	5	5	5—39
Frank Hollis	5	5	5—39
U A Pollard	4	5	5—38
G J Seabury	5	5	4—38
Geo Lamb	5	4	5—38

C N Thomas	5	5	4—38
D Sturtevant	4	5	4—38
And'w Bosfall	5	4	5—37
G J Seabury	5	4	4—37

Medford, June 18.—Bellevue Range was largely attended to-day at the regular weekly shooting. The attendance was quite large, considering the amount of shooting that has been done at this favorite resort during the week. The wind gave no trouble, and the light proved satisfactory to the participants. The best scores are given in the following summary:

W Charles	5	4	5—47
H S Harris	4	5	5—46
C H Russell	5	4	4—44
H Withington	4	5	4—44
F Hollis	5	4	4—42
J Barker	4	5	5—42
G W Graves	4	4	4—41
J W Vinning	4	4	5—41

No shooting was done in the 500 yards match.

THE BROCKTON RIFLE CLUB have voted to have a grand opening of their new range on the Fourth, at 2 P. M. The secretary has been instructed to invite the State clubs to participate in the matches, which will be 800, 900 and 1,000 yds., long-range, and 200 yards, off-hand shooting. A supper will close the festivities of the day. The newly elected officers of the club are as follows: President, Dr. H. F. Borden; Vice-President, Albert Sweetser; Secretary and Treasurer, E. C. Fales; executive committee, Dr. Borden, A. Sweetser, E. C. Fales, W. B. Cross and George G. Snow.

CONNECTICUT—*Bridgeport, June* 13.—At the regular semi-monthly shoot of the Bridgeport Rifle Club, held at Sea Side Range to-day, the following scores were made: In the Silverware Match, 7 shots, at 200 yards, Harry Nichols, 31; Charles E. Beers, 31; D. E. Marsh, 31. In the Sharps Military Rifle Match, 10 shots, at 200 yards: R. S. Bassett, 44; Harry Nichols, 44; D. H. Marsh, 42. In the Military Subscription Match, 5 shots, at 200 yards: H. Nichols, 23; D. E. Marsh, 21; R. S. Bassett, 21. S. T. Nichols' Gold Badge was competed with 7 shots at 200 yards: D. E. Marsh, winner, 30. The Sharps Mid Range Match, 10 shots at 500 yards: conditions handicapped, long-range rifles gave mid-range rifles 3 points and military rifles 5 points; mid-range rifles gave military rifles 3 points: Orderly Sergeant Wallace Gunn, 52, long range; Quartermaster Sergeant Harry Nichols, 49, long range; Rodney S. Bassett, 46, mid-range. John Slatcher was officer of the day, and all present enjoyed themselves greatly. Many ladies were in attendance, and some of them did some good shooting. At the next regular meeting of the club, June 27, there will be a "ladies' match," for which some beautiful and costly prizes have been secured.

BROOKLYN vs. BOWERY.—The Seppenfeldts and South Brooklyn shots are fighting out the question of their relative superiority still, and met at the South Brooklyn Schuetzen Park on the 13th; 10 men per side for work and play at 100 yards. The shooting was at ring targets, the Seppenfeldts getting 1,948 and the South Brooklynites 1,888, in the possible 2,500. Seven members feom each club were out again on the 17th, and scored as follows:

Seppenfeldts Rifle Team.

Isaac Garrison	20	21	21	21	24—107
J W Adams	24	16	16	22	19— 97
Henry Taehne	20	25	24	17	23—109
A Keller	23	25	19	21	20—108
E Holtzmann	22	23	22	23	20—110
F A Gruenneberg	14	21	17	20	19— 91
John Keenan	20	23	17	18	18— 96—718

South Brooklyn Rifle Team.

W Roache	18	24	23	14	19— 98
J T Burns	16	14	18	20	18— 86
John Hazelton	20	19	24	14	21— 98
D Trotter	13	22	24	19	21— 99
W Naughton	23	17	15	18	21— 94
C John	17	16	25	20	24—102
Dr Weltz	23	24	19	15	21—102—676

New York, June 23.—Greener's West Side Rifle Team, weekly score; 200 yards target reduced; possible 50:

J A Reitweisner	46	G Greener	44
S R Campbell	46	J Roesner	44
E Holzmann	46	G Holzmann	44
L Vogel	46	H Reitweisner	43
J Reitweisner	45	G Roesner	43

J. C. C.

NEW JERSEY—*Columbia Range, West End, June* 20.—Remington Match; 11 entries; wind strong, eight o'clock:

	Actual Score.	Allowance.	Total.
J L Paulding	41	3	44
G L Morse	43	0	43
E L Field	40	3	43
Dr Dudley	43	0	43
Louis Quanchi	41	0	41
Cyrus A Peake	40	0	40

Same day, Ad. Sign Match:

Dr Dudley	43	0	43
C H Seymour	42	0	42
G L Morse	41	0	41
S L Paulding	39	3	42
Cyrus A Peake	40	0	40

June 24.—Sharps Rifle Match; weather very hot; bright sunlight; light breeze from seven o'clock; 12 entries:

Dr Dudley	5	5	5	5	5	5	5	5	5	5—50
R Rathbone	5	5	5	5	5	5	5	5	5	5—50
A G Hamilton	5	5	5	5	5	5	5	5	5	5—50
F H Holton	5	5	5	5	5	5	5	4	5	4—49

In shooting off tie Dr. Dudley again made a complete score.

BRINTON RANGE—*Tuesday, June* 17—Ballard Match.—The second of twelve competitions for a Ballard mid-range rifle, presented by Messrs. Schoverling, Daly & Gales, New York. Open to all comers, 200 yards standing, any breech-loading rifle, ten rounds without cleaning; the three best scores of any competitor, whenever made, to take the rifle; ties in aggregate to shoot off; 38 entries and re-entries; the following being the best scores:

A Niemand	5	4	4	4	4	5	5	5	4	5—45
A Hubbell	5	4	4	5	5	4	4	4	4	4—42
E M Squier	5	4	4	4	5	4	4	4	4	5—42
F H Jones	5	4	4	4	3	5	4	4	4	5—42
D F Davids	3	4	5	3	4	5	4	4	4	5—42
U A Peake	3	3	4	5	4	4	5	5	5	4—42
J W Todd	4	5	3	4	5	4	4	4	4	4—41
J F Hill	4	5	5	3	3	4	4	4	4	4—40
J Phillips	4	3	6	3	4	5	4	4	4	4—40
F Ringold	4	3	3	5	3	3	4	3	4	5—34
L Quinn	4	4	3	4	4	3	2	0	4	4—32

June 21.—Association match, seventh competition, 44 entries and re-entries, the following being the best scores;

F H Holton	5	4	5	5	4	4	4	4	4	5—44
M L Gilbert	4	4	4	4	4	5	4	4	5	5—43
J W Ringold	4	4	4	4	5	4	4	4	4	5—43
D F Davids	5	4	5	4	4	3	4	4	4	5—43

F S Harrison	4	4	0	3	4	3	4	4	3	4—33

WASHINGTON, D. C.—*June* 21.—The Columbias had another bad long-range day for their third June badge, open to all comers at 1,000, 1,100 and 1,200 yards, to-day. A choppy, fish-tail wind, with alternate sudden gusts and partial calms, blew from 5 o'clock to 9 o'clock, during the firing. The new member, Doctor S. I. Scott, late of the Montgomery County Club, bore out his recently acquired reputation and carried off his third badge in three weeks by the good score of 189, and doing much finer shooting than the day promised. Col. Burnside came next with 176, although he has done 19 points better in practice on a decent wind. Partello and Adee were unfortunate in their ammunition, the former's new powder shooting hard and wild, while the latter had many hang-fires on his last two distances. Mr. Laid's 60 at 1,200 yards, was, in view of the cork-screw wind, an admirable proof of good judgment. Mr. Lauritzen's bad luck disheartened him, and he withdrew from the contest and record early on the last stage. The following are the completed scores:

Dr. Scott.

1,000	5	2	5	5	4	5	4	5	4	3	5	5	3	4	5—67
1,100	5	4	5	4	5	4	4	5	5	5	4	3	4	5	5—67
1,200	3	4	4	0	4	4	5	5	5	0	5	3	5	5	5—55—189

J. O. P. Burnside.

1,000	5	0	3	5	5	4	5	5	5	5	5	5	4	3	4—64
1,100	3	5	4	6	2	5	4	5	3	5	2	3	4	5	5—58
1,200	3	5	4	2	4	4	2	3	3	4	4	5	3	4	5—54—176

C. H. Laird.

1,000	2	5	4	4	5	3	4	2	4	3	5	4	5	4	5—59
1,100	5	2	3	5	3	3	3	4	5	0	5	5	5	4	3—55
1,200	5	5	3	3	3	3	4	5	5	4	4	4	4	5	0—60—174

J. M. T. Partello.

1,000	0	4	5	3	4	3	4	2	4	4	2	5	5	4	5—54
1,100	2	3	4	3	5	5	3	3	4	5	4	5	4	5	4—57
1,200	4	4	4	3	5	2	2	5	5	3	4	5	4	3	3—56—159

W. Scott.

1,000	2	0	0	3	3	4	5	3	5	4	5	4	5	4	3—50
1,100	2	4	5	5	5	3	4	4	4	5	5	2	2	4	4—58
1,200	5	5	5	5	3	4	5	2	5	0	5	4	0	3	5—51—157

A. A. Adee.

1,000	4	4	4	4	2	3	5	4	5	5	3	3	5	5	0—60
1,100	3	5	5	3	0	3	2	0	3	5	4	3	3	5	4—53
1,200	0	0	2	0	3	3	3	4	4	3	5	5	0	4	4—37—140

The Adee badge will be shot for on the 4th of July, at 10 o'clock; distances, 1,000, 1,100 and 1,200 yards; open to all comers barring professional riflemen. With fair wind and weather a close contest and good scores may be expected.

THE SAVANNAH TOURNAMENT.—The secretary of the Savannah Volunteers, writing of the forthcoming contest there on July 4, says:

The contest will, by all appearance, be a success. Information about hotels, etc., is asked for daily, and from twelve to fifteen teams will enter. The Sharps Rifle Co. have made us a present of an officers' military rifle and the Remington Rifle Co. of a beautiful mid-range rifle. As the targets at the Schuetzen Park were not sufficient in number, improvements have been made, and we will have sixteen double frame targets at 200 yards, four at 300 yards, and other at 500 yards, and all will be connected by telephones with the shooting stand. The First Volunteer Regiment of Georgia will have their annual prize shooting on the 4th. The Republican Blues, a company of the regiment, and also the Clinch Rifles, of Augusta, Ga., will come down in a body, making the occasion a grand Southern shooting match. We will further, besides the rifles and team prizes, offer prizes for individual shooting, to which the business men of this city are donating liberally. It would be very gratifying to the committee to count a team or teams from the North among the visitors on this occasion; and allow me to say that nothing should be left undone to make their stay agreeable.

WISCONSIN—*Milwaukee.*—Eight of the members of the

Milwaukee Rifle Club met at their range on the 20th for practice at 900 and 1,000 yards. The score was as follows:

	900 yards.									Totals.	1,000 yards.									Totals.
Johnson	5	5	5	5	5	5	4	4	5	5—42	3	5	5	5	5	4	4	5	4	—45—93
Berry	4	5	2	3	5	5	3	5	4	4—40	4	5	5	5	4	4	3	4	4	4—42—82
Drake	4	5	4	4	3	5	3	4	4	3—39	5	5	4	5	5	3	4	5	5	5—46—85
Yale	3	1	5	5	4	5	4	2	3	0—34	5	5	4	4	3	5	4	3	0	0—33—67

The Milwaukee South Side Rifles picnicked at Greenfield Park, June 22, and some good scores were made.

On the 13th the scores stood, with 15 shots at each distance, as follows:

	900 yds.	1,000 yds.	Tl.		900 yds.	1,000 yds.	Tl.
Bangs	67	64	131	Drake	64	57	121
Johnson	68	57	125	Berry	63	49	112

SCHUETZEN NOTES.

—The Charleston Shooting Association have elected the following officers: A. Melchers, President; J. F. Meyer, H. W. Mollenbauer, W. Fischer, Vice-Presidents; D. Lilienthal, Shooting Master; C. F. Liebs, Treasurer; A. F. Melchers, Secretary; Jas. Simons, Counsel; Finance Committee, Herm. Klatte, F. Steiber and N. Bischoff.

—The officers of the Long Island Schuetzenbund are now as follows: Major Schulten, President; Capt. Uster, Secretary; Capt. Wiaschigel, Treasurer; Lieut. Mueller, Finance Secretary; Capt. Bott and Capt. Albrecht, Trustees.

—The Bridgeport Independent Shooting Club have organized for 1879 as follows: F. Drueke, President; F. Egge, Secretary; C. Becker, Treasurer; Geo. Quittmeyer, Shooting Master. During the summer season the practice shooting of this club will take place at Sea Side Range.

—The N. Y. Central Shooting Corps, Capt. C. F. Gennerich, recently held their opening shoot for 1879 at Jones Wood.

Target of Honor—25 rings; distance, 350 feet; 3 shots in succession each:

Aug Kluges	23	19	23—65	R Spitz	18	16	24—58
Fred Muller	14	21	23—62	Hy Kroger	17	17	24—58
W J Kree	19	22	20—61	H Hallings	23	13	21—57
John Wehje	23	17	20—60	John Enaser	16	18	21—55
Robert Fiedl	19	19	21—59				

Overhaugh Target—Ring Target—Distance, 350 feet; 10 shots in succession without leaving the stand. The gold medal, which Mr. Overhaugh gave for this occasion, must be won 3 times by one and the same shooter before becoming his property. In the possible 250 the scores of the leaders stood:

R Spitz	23	23	20	22	21	19	20	18	21	23—210
J F Zeller	23	17	25	16	19	25	22	14	20	23—2 4
Rob Fiedl	20	22	24	23	8	22	24	19	22	15—190
H Dreyer	19	15	22	14	19	15	18	22	23	21—198
Aug Kluges	19	17	16	23	16	21	23	18	23	22—198
H Helling	20	15	23	22	24	14	13	23	21	20—195
Ad Bauer	19	19	16	21	18	18	20	24	23	23—194
F Kessel	23	17	20	20	17	19	20	19	16	22—193
Chadeck	22	16	13	23	24	23	20	15	17	24—193
J Dux	19	17	18	20	18	20	20	18	17	23—190

Besides the above targets, they also fired at a regular ring target, and also man-target, and very good shooting was done by some of them.

—A strong team of twelve men, selected from the Manhattan Rifle Club, a newly-organized shooting association, and consisting of the best men of Zettler's, New York and Jersey Schuetzen Corps, are under way to Chicago to take part in the prize shooting of the North Western Schuetzenbund. These men will show their Western friends something, and let them know very plainly what the Eastern shots can do. The tournament offers seven different kinds of targets and bulls.

Union Target—25 ¾-inch rings, only for members; 3 shots, 50 prizes, valued at $500.

Stick Target—Bull's-eye of 9-inch diameter; nearest shot to the centre takes first prize; each 3 shots, 50 prizes, $400.

King Target—25 ¾ inch rings, for members only; only one ticket allowed. The one making the highest score to be King of this festival and receive the King medal; total prizes, $335.

The Team Shooting—Each squad consisting of 6 men; entrance fee for each team, $18; 10 shots per member. The shooter who makes the best score in each team receives a gold medal, and the entrance money will be divided among the teams.

Man Target—Open for all; 39 vertical lines, the inner line to count 20.

Peoples Target—Open to all; 25 ¾-inch rings; each ticket is divided in 3 series of 3 shots each, the series with the highest score only counting.

TRUTH STRANGER THAN FICTION.—*Editor Forest and Stream:* I have read sketch of Mr. F. H. Lord, and enter my protest against such reckless trifling with the credulity of your readers. If this thing continues, there will be some doubting Thomases, whose capacity for absorbing the marvelous is limited—whose credulity will snap under such repeated wrenchings, and the FOREST AND STREAM will cease to be a law and gospel unto them ever afterward. First, we have Partello's marvelous score of 224 out of 225 at the long ranges. That was a stretcher; but, of course, every one believed that, as it was duly sworn to. Next comes the forty-niner out of a possible fifty at 300 yards, off-hand, and in a snow storm. That gave us an awful wrench, but we tried to take it in, and perhaps would have succeeded if we had not soon afterward got another yank in the other direction by seeing another score of his—in a match—down among the thirties at 200 yards. Then, like truthful James, we asked ourselves, "Can such things be?" But we decided that they could, for had we not seen them with our own eyes printed in our trustworthy FOREST AND STREAM? After that we had a partial rest, interrupted occasionally only by the phenomenal catch of a lone fisherman, or the cart-load of game slaughtered before breakfast by some brace of youthful Nimrods. But now we are set all aback—dazed—stupefied, as it were, by the prodigious performances of Mr. Lord. You show us no mercy! Instead of giving us target, plaster eggs and bullet performances first—which are known to be quite among the possibilities—and thereby gradually expanding and increasing our capacity to take in the marvelous, you overwhelm us on the start with the tremendous feat of hitting six percussion caps in succession at twelve paces, and before we can recover, stun us again by the equally impossible watch performance. Now, in mercy's name, after giving us these statements, why do you exhibit such a target? You say it makes a record of 49 out of 50, Creedmoor rule. This would be true if the Creedmoor target at 200 yards had a 19 inch bull's-eye, which is the proportion your diagram bears to the distance shot. Your readers may also undertake to wrestle with the problem of the watch loop, and some of them go crazy figuring the dimensions of a watch capable of receiving "hundreds" of such shots through its loop without a scratch. I fancy such a watch would make a very fair-sized town clock. Now, all these statements are, no doubt, perfectly true, but there is a limit to poor, weak, human credulity, unless carefully nurtured. What I complain of is the abruptness with which they are put. We should have more of detail, and be led gradually up from the lesser to the greater; then there would be no such rude shocks as, I doubt not, many experienced in reading your sketch of Mr. Lord.

F. J. R.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States.

☞ NEW YORK LAW.—The open season for woodcock in New York State begins August 1, throughout the State.

CARIBOU SHOOTING IN GASPE.

GASPE BASIN, PROVINCE OF QUEBEC,
Canada, February 19, 1879.

EDITOR FOREST AND STREAM:

I have hunted three seasons in this part of the country, and have killed, to my own rifle, fifty caribou. I left here Oct. 28 in a canoe with a young man. It is two or three days' poling up the river to the barren hills, where the deer resort to feed. In the winter they never arrive earlier than Oct. 22, and stay till the snow goes off in the spring. The river was very low, so we were three days going up, arriving on a Friday. Saturday morning I started very early, but the moss with which the ground was covered was frozen, so I waited till the sun had softened it a little. At 10 o'clock we came to the head of a long, open valley; so telling my companion to hunt down as far as he liked, he went off in a great state of excitement, as I showed him some fresh tracks in the moss going down the valley. I took up to the west, over a large hill, the other side of which was cut up in small, round hills and deep gulches. When I arrived at the top I stopped, and made out something moving about half a mile away; so crossing a small hollow, I started down, taking my time, for I find that fast wa king cuts my wind, and it is impossible to hold a rifle steady when out of breath. I reached the place where I had seen the deer, and found the tracks of four big bucks. I followed them for about two hundred yards, when, just as I crawled up over a low ridge, I saw them all lying down about eighty yards off. I picked out the best looking head, and fired at him. He staggered to his feet, and then fell on his knees. The others got up, and stood looking about, not knowing where to run. I fired one ball into each of them; the first two fell, shot behind the shoulder, but the last one was standing almost stern to me, and the bullet struck him in the shoulder, breaking the bone. I lost sight of him in the thick spruce woods that surrounded the small flat where I found them. I followed him for a short distance, but without snow it is very little use following a deer with his foreleg or shoulder broken, so I returned to my dead deer, and found that I had secured two fine bucks and one small-sized one. I skinned the deer at once, and covered the meat with bushes, as it would have to stay until the winter, when we come for it with dogs and sleighs.

Cutting the shoulder-blade out of the smallest buck, and making a pack of his skin, I started down the hollow to meet my companion. The hollow was about three hundred yards wide, with a good many bunches of thick spruces scattered along it. On each side was a steep bank, about sixty yards in height, with thick woods on the level country above. I was walking fast, thinking my companion would get tired of waiting for me and wander away, when I heard the snort of a deer ahead of me. I threw off my pack, and saw two caribou trotting up the side of the hollow about a hundred yards off. I whistled, and they stopped. I fired at one, and he staggered about and stood with his head hanging down; the other one gave two or three jumps, and stood still, as they always will unless they wind you, and these had only heard me. I fired at him behind the shoulder, but being rather out of wind from carrying my pack, the ball struck him through the paunch, when he walked off a few yards, and lay down. I was just going up to see if he wanted any more shooting, when I saw five more about three hundred yards farther down the hollow, and nearly to the top of the ridge. The last one had a splendid head, so I fired at him, and saw him stagger at the first shot, but I fired twice more without hitting him, and he disappeared in the thick woods. I started up the hill after him, passing close to the first two I fired at, and as I came close, the one that was lying down jumped up and started as if nothing was the matter with him, so I took a running shot at him, and was lucky enough to break his hip, which sent him down the hill on his head. I would not stop for fear of losing the last one with the big horns. When I came to where I last saw him I found he had separated from the rest, and was bleeding very badly. I could track him well on the white moss, but after a quarter of a mile I came to a strip of burnt ground, and I could not recover his tracks, so I had to leave him. I returned to where I had fired at the two, and after a long hunt I found the one with the broken hip and a ball through his paunch. He had dragged himself into a small thicket and died, but the other one I could not find; so after skinning the one, I shouldered my pack, and started again to meet my companion. I found him where I had told him to wait for me, and in a very happy frame of mind, having killed two, a doe and a fawn; but being a novice, he could not butcher them, so I went with him and performed that necessary but disagreeable operation. Then we started on a four-mile walk to camp, well satisfied with our day's work, I having bagged four and wounded three, and my partner two, and I made up my mind that on Monday we would try and find some of the wounded ones.

Next morning (Sunday) I was surprised to find it had snowed nearly three inches. It was very soft, and a nice breeze blowing, and I am afraid I was strongly tempted to go out, but did not. Monday morning found to my disgust what little snow there was frozen hard, so stayed at camp. Tuesday, snow nearly all gone, and a soft day, so started out to look for the buck with the big head that I had lost Saturday. I came straight to him, he having been dead since Saturday. I skinned him with a good deal of trouble, as the deer was half frozen. Then I went to work to skin out the head, for I wanted to save it for stuffing. While I was doing this I told Scott to cut some bushes and cover the meat, as it would do to feed the dogs in the winter. While I was engaged in skinning the head, I heard a clashing noise, and looking up, to my astonishment saw two big bucks with their heads together, fighting, and four other deer looking on, not more than fifty yards from where I was. Scott saw them about the same time, so without a word being spoken, I took sight at one of the single deer with my rifle. I killed the one I fired at, and seeing the other deer were starting, I dropped one of the bucks and Scott the other. Skinning them and covering them up with bushes, Scott wanted to go to some small hills about a mile further. On arriving at the place, I crept to the top of the first little hill, and looking over, saw a fine buck feeding toward me. I took sight where the neck joins the shoulder, and fired, and he fell as dead as a stone. The snot started a fawn and two does out of a small thicket. Took a snap shot at the fawn, and dropped him with a bullet through both shoulders. The two does were now trotting up a small hill about one hundred and fifty yards from me. I fired at the larger one, broke her backbone, and she rolled over and over to the bottom of the hill. The other one stopped and looked back. I fired, and broke his foreleg high up, but lost him in the thick woods. After putting away the meat we started for camp, having made a good day—killed six and found another, making thirteen for two days' hunt.

Wednesday morning we made up our minds we would carry out some meat, and prepare to come home, so we started to our nearest store, about four miles off. We were going through some open spruce woods when I saw a fine buck walking toward us. I put up my rifle just as he saw us, and was too quick for him, and down he came on his knees, and rolled over, dead. I found another party of four, but, alas! for them it began to snow early in the afternoon, and never stopped for thirty-six hours. We spent the whole time smoking, sleeping and eating, and were heartily tired of it all, and when Saturday morning came we were utterly disgusted to find the snow so deep. We could not walk without rackets, and having none with us, we packed up our traps and started down the river, arriving home on the Monday.

After the 20th or 25 h of November the ice begins to block up the river so that we cannot get up in a canoe. Thus the deer get a rest till the ice is strong enough to go with dog sleighs, which is generally about Jan. 1. Owing to the soft weather this season, the river was very open, and all the old hunters refused to go when I wanted to start on the 6th of the month, but I persuaded Mr. B. Eden to go with me, and two other men. We had four days' hard work, sometimes on the ice, at other times cutting roads through the woods for the dogs and sleighs, but we arrived on Thursday.

Friday morning started very early, and pushed on to the open country, about three miles away. About 9 o'clock we struck the head of a large valley, a favorite spot for the deer in the winter. The head of the valley for about a mile is full of thick bunches of spruce, and below that the ground is very open—a scattered bush here and there, just sufficient for cover. I told my companions to go down well to leeward, and come out at the edge of the woods, while I would go and drive the deer for them. I gave them time to get to their different watching-places; then I started. I had not gone more than a few hundred yards when I saw an old doe and a fawn, not more than fifty yards off. I fired at the doe, and by the way she staggered off I knew she was done for. The fawn ran a few yards and then stopped. I could just see his shoulder through the trees, so thinking he might start, I fired quickly. He disappeared at once. I heard the thud of the ball as it struck him, but did not like to stop and look after him, for fear my companions would come up to me, hearing me shoot. I hurried on down the valley, and in a few minutes I caught sight of several deer, walking ahead of me directly toward my friends. I did not shoot, thinking I would wait my chance, when the other guns drove them back; but any sportsman can fancy my feelings when I saw the deer—about forty, I should think—moving slowly within less than a hundred yards of the edge of the woods. Just then I heard a sharp whistle from one of the watchers, which was answered by another, with a loud complaint that he was nearly frozen, and they were sure they would not see any deer if they stayed there all day. The deer, when they heard the voices, came toward me and scattered in all directions. I headed off a bunch of six. They stopped when they saw me in front of them. I fired and dropped one. The others seemed entirely stupefied with the voices on one side and me on the other. They did nothing but jump about and look at me until I killed them all.

By the time they were all cut up and put away in the snow it was time to start for camp, so each taking a skin and some hearts and tongues, we took our back tracks for home. I was keeping a sharp lookout, when I saw four deer cross our path about two hundred yards off. I threw off my pack and fired at the first one, but the bullet cut the snow just under his belly. They stopped at once, not knowing where the shot had come from. I fired again, and saw one of them was hard hit. Eden followed suit with a ball from his smooth-bore breech-loading gun, and dropped a fine buck at the first shot. I broke the foreleg of another, and the others disappeared. We ran up to the wounded, and found two dead and the track of the other, with his leg dragging in the snow. I took after him about a quarter of a mile through fine, open spruce woods. I saw a doe and a fawn walking along, going away from me. The doe was behind, so going down on my knees for a steady shot, as the stern of a deer is a small mark, I blazed away and struck her just between the hams, and she fell and never gave a kick. The fawn immediately turned round to see what the matter was, but I was ready for him, and gave him one behind the shoulder, which finished him. By the time I got them skinned it was getting dusk, so I left the one with the broken leg for the next day.

Saturday morning Stewart, Eden, Laws and myself started. It was very cold and a good breeze blowing. After about an hour's walk we came to a large strip of open spruces, with deer roads leading in every direction. I told my companions to separate about fifty yards apart, and walk through the woods just abreast of each other. We had hardly got into position when I saw four or five deer coming right toward us. I dropped one and Eden another, and then a drove of about twenty does and fawns ran right among us. I blazed into a big doe, and she stood nearly dead, when Laws ran up and fired both barrels of his muzzle-loader into her, and riddled her with buckshot. I went to put in another ear ridge as quickly as possible, when I found to my disgust that the cold had frozen the lock of my rifle, and it would not work, the deer all the time running about, wild with terror, fifteen yards ahead of us; but I could do nothing. In the meantime Eden had not been idle, killing one the first shot, two fawns the second, and a fine buck the third, when one of the empty shells got stuck in his gun, and before he could get it in order the drove had all cleared out. We bagged six, but I was not satisfied; for, barring accidents, we should have killed a dozen. After putting them away we all separated, each one going a round of his own. I saw nothing, but Eden was more fortunate, killing three more, making nine for that day.

On Monday, our third day's hunt, we secured nine more, myself seven and Eden two, making a total of twenty for me and ten for Eden. A large party of men with dog sleighs arrived on Tuesday, and we all went to work to haul out the meat, and started for home.

I use a long rifle, .44 calibre, the short cartridge, no raised sights; my bind sight is a fixture, and fired very low, so that it is necessary to take a coarse sight at a hundred yards. I find it far better for quick shooting, and you are never likely to over-shoot on deer at short range.

F. R. BEATTY.

—See Bogardus' advertisement.

PIGEON MATCHES.

SEND IN SCORES EARLY.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

NEW YORK STATE CONVENTION.

The convention of the New York State Association for the Protection Fish and Game will be held at Rochester, July 7 to 11, inclusive. The officers of the association are: President, A. B. Lamberton, Rochester; First Vice-President, A. L. Child, Seneca Falls; Recording Secretary, John R. Sage, Buffalo; Corresponding Secretary, Edmond Redmond, Rochester; Treasurer, W. J. Babcock, Rochester

Standing Committee—R. P. Flower, New York; R. V. Pierce, Buffalo; E. O. Page, Rochester; J. J. Flanagan, Utica; Greene Smith, Peterboro.

The delegates will meet on Monday evening, July 7, in the Audubon Club Rooms, Reynolds' Arcade, where their credentials will be received and the convention organized. Delegates are respectfully requested to wear their club badges during the convention. All the contest for prizes during the convention, except in the Press Shoot, are open to members of the association only, and will be conducted under the rules of the association. The programme of the following days is given herewith, with a list of prizes, donors and values:

TUESDAY, JULY 8.

Contest No. 1.—At 8:30 A. M. Single-trap shoot; ten single birds, glass shoot; entrance fee, $5. First prize, Vanity Fair prize; Wm. S. Kimball & Co., Rochester, $100; winner to elect what it shall be. Second prize, India scarf, Burke, Fitzsimons, Hone & Co., Rochester, $75. Third prize, a hunting coat, made to order of winner, Witherspoon & Griswold, Rochester, $50. Fourth prize, Bogardus trap and glass balls, A. H. Bogardus, Chicago, Ill., $15.

Contest No. 2.—At 2 P. M. Amateur shoot, ten single birds; open only to members who never won a prize at any previous convention; class shoot; entrance, $5. First prize, an extra fine Damascus double-barrel breech-loading shot-gun; W. H. Baker & Co., Syracuse, N. Y.; $225. Second prize, fine sporting boat and attachments, J. H. Rushton, Canton, N. Y., $60. Third prize, Osborn House prize, $50; winner to elect what it shall be. Fourth prize one case of ducking powder, J. Ratcliffe, Rochester, and one half dozen painted diving decoys, Diving Decoy Co., Rochester, N. Y.; $30.

WEDNESDAY, JULY 9.

Contest, No. 3.—At 8:30 A. M. Ten double rises; class shooting; entrance, $5. First prize, a fine Damascus steel double barrel breech-loading shot-gun; Parker Bros., Meriden, Conn.; $225. Second prize, an elegant easy chair, C. J. Hayden & Co., Rochester, $75. Third prize, a silk dress pattern, Donald Gordon, Rochester, $50. Fourth prize, Moore's ball target trap, Batavia Manufacturing Co., Batavia, Ill., $10; a pair of Good's oil-tanned moccasins, M. S. Hutchings, Dover, N. H., $5, and 2 0 long-range lime cartridge shells, $10, H. H. Schleber & Co., Rochester; $25.

Contest No 4—At 2 P. M. Fifteen single rises; class shooting; entrance, $5. First prize, a fine double-barrel breech-loading shot-gun, John A. Nichols, Syracuse; made to order of winner. Second prize, hotel prize, winner to elect what it shall be; $25 each presented by the Clinton Hotel, Waverly House and Brackett House; $75. Third prize, one case Dupont powder diamond grain No. 2, Dupont Powder Co., N. Y., J. O. Robson, Buffalo, agent; 2,0 0 paper shells for shot guns, and two dozen boxes of P. E. gun wads, Union Metallic Cartridge Co., Bridgeport, Conn; $60. Fourth prize, one case Hazard powder, Hazard Powder Co., N. Y., J. Palmer, agent, Rochester; $35.

THURSDAY, JULY 10.

Contest No. 5.—8.30 A. M. Single trap shoot, ten single rises; entrance, $5. First prize, an elegant imported marble clock and bronze ornaments, Tatham & Brothers, New York, $2 0. Second prize, hotel prize, winner to elect what it shall be; $25 each by the National Hotel, Whitcomb House and Driving Park Hotel; $75. Third prize, a Singer sewing machine, Geo. E. Bacon, agent, Syracuse, N. Y.; $50. Fourth prize, Card's last patent glass ball trap, Will H. Cruttenden, Cazenovia, N. Y., and 500 explosive target balls, Explosive Target Ball Company, Titusville, Pa., $25

Contest No 6.—At 2 P. M. Single trap shoot for Dr. R. V. Pierce's diamond badge, $150; 15 birds, 21 yards rise; entrance fee, $10. Second prize, 250 pounds tin-coated soft shot, Le Roy Shot and Lead Manufacturing Co., New York, $.5.

FRIDAY, JULY 11.

Contest No. 7.—At 8:30 A. M. Dean Richmond trophy; to be shot or by three members of a club belonging to the association, such members to be residents of the county in which the club is located; 20 single birds, 21 yards rise; entrance, $30; entrance money to go to the club making the highest score at this contest.

Contest No. 8—At 2 P. M. For the Livingston Sportsmen's Association Cup, James W. Wadsworth, Geneseo, N. Y.; to be shot for by two members of a club belonging to the association, such members to be residents of the county in which their club is located; 15 double rises each; entrance, $30; the entrance fees to belong to the club holding the cup. Second Prize—The club making the second highest score receives 250 lbs. tin coated soft shot, Le Roy Shot and Lead Manufacturing Co., New York.

PISTOL SHOOTING, TUESDAY, JULY 8, 9 A. M.

Ten shots, deliberate, any pistol, string measure, distance, 15 yards entrance $3. First prize, snakewood and hickory bow, J. Ratcliffe, Rochester, $10. Second prize, drinking cup, James Backus, Rochester, $7.50.

RIFLE SHOOTING, TUESDAY, JULY 8, 10 A. M.

Distance 100 yards, off-hand, string measure, telescope barred; entrance $5. First prize, fine sporting rifle, $35. Second prize, fine field glass, Bausch & Dansfield, Rochester, $10. Third prize, ten pounds Vanity Fair tobacco, Wm. S. Kimball & Co., Rochester, $.5.

FLY CASTING, WEDNESDAY, JULY 9, 10 A. M.

Contest No 1—Single-handed casting, open to all members; but Seth Green and Reuben Wood voluntarily announce that they will not enter the contests this year; entrance $5. First prize, an eight-strip split bamboo fly rod, in velvet case, made expressly for the occasion by Buckingham & Perrie, Utica, N. Y., $75. Second prize, a fly-book and assortment of flies, Miss Sara J. McBride, Mumford, N. Y., $30. Third prize, a lance wood rod, silver mounted, with extra tip, in velvet lined case, Fred. D. Divine, Utica, N. Y., $20.

SALMON FLY CASTING AT 12 M.

First prize, a California general rod silver mounted, ash, lancewood and split bamboo with extra tip, made for the occasion by J. B. McHarg & Co., Rome, N. Y., $50. Second prize, one No. 8 Orvis rod, one No. 1 Orvis reel, one No 1 Orvis landing net, two dozen trout flies, Charles F. Orvis, Manchester, Vt., $25.25. Third prize, one case (6) of Mann's perfect revolving and two of Mann's double trolling spoons, John H. Mann & Co, Syracuse, N. Y., $10. For best average in contests 1, 5 and 6, the "Forest and Stream and Rod and Gun Medal," Forest and Stream Publishing Company, New York, $50. And for the best average club score in contests 1, 3 and 5, 250 pounds tin-coated shot, Le Roy Shot and Lead Manufacturing Company, New York.

PRESS SHOOT.

At the conclusion of "Richmond Trophy" contest Friday, July 11, five single rises, open to writers employed on the newspaper press and representatives of sportsmen's papers: First prize, an unabridged copy of "Webster's Dictionary," new edition, E. E. Morris & Co., Rochester, N. Y. Second prize, a box of Golden Nugget cigars, M. J. Noobar, Mt. Morris, N. Y. Third prize, "Hallock's Sportsmen's Gazetteer" and "The Crack Shot," E. Darrow, Rochester. Fourth prize, five pounds Vanity Fair tobacco, Wm. S. Kimball & Co., Rochester; entrance complimentary.

MASSACHUSETTS—*Walnut Hill, Boston.*—Glass ball shooting is now a fixed sport at the Massachusetts Rifle Association Range. On Wednesday, the 18th, the glass ball shoot had 47 entries. The match is open to all-comers, Bogardus rules; 30 balls (10 single and 5 double from Bogardus trap, and 10 single from rotary trap); single rises, 18 yards; double rises, 15 yards; prizes, of which there are 13, valued at $165, to be awarded to the aggregates of three best scores. They stood after the shoot as follows:

	First.	Second.	Third.	Total.
J C Haskell	30	28	30	88
H W Eager	28	28	27	83
G M Stark	27	26	29	82
G Gross	26	27	24	77
H E Pierce	27	27	23	77
E F Small	20	24	24	68
J Nichols	20	22	24	66
E C Gore	20	23	23	66
R Schaeffer	23	20	22	65
G Lane	21	21	22	64
J S Sawyer	24	18	22	64
F H Raymond	20	20	21	61

On Saturday there was another competition, the leading scores being:

H Pierce { Singles.......1 1 1 1 1 0 1 0 0 1—7; Doubles.......1 1 1 1 1 1 1 0 1 0—9; Rotary........0 0 1 1 1 1 1 0 1 1—7—23 }
H Mortimer { Singles.......1 1 1 1 1 1 1 1 1 0—9; Doubles.......0 1 1 0 1 0 1 0 0 1—5; Rotary........0 1 1 1 1 1 1 0 1 1—8—22 }
F Henry { Singles.......0 1 0 0 I 1 1 0 1 0—5; Doubles.......1 0 1 1 0 1 1 1 0 1—7; Rotary........1 0 1 1 1 1 0 1 0 1—7—19 }

The last contest will take place on July 4.

MAINE—*Topsham, June* 19.—Riverside Club shoot; Card trap, 18 yards rise:

York..........0 0 0 0 1 0 1 0 1 0 0 0 0 0 1— 4
Hicks.........0 0 0 0 1 0 0 0 0 0 0 0 0 1 0— 2
C Goud........0 1 0 0 1 1 1 1 0 0 1 1 0 1 0— 8
Hall..........0 1 1 1 1 0 0 1 1 1 1 0 0 0 0— 8
Fisher........1 1 1 0 1 0 1 1 0 0 0 0 0 0 1— 7
Knight........0 1 0 1 0 0 1 1 1 0 1 0 0 1 1— 8
A Q Goud......1 1 1 1 0 0 1 0 1 0 0 1 0 0 1— 8
Strout........0 0 0 0 0 1 0 1 1 0 0 0 0 1 0— 4
G H Goud......1 0 1 1 1 1 0 1 0 1 0 1 1 1 1—11

Medford.—The second renewed competition in glass ball shooting took place on Friday, the 20th, by the Raymond Sportsman Club at their new range, Bellevue, Medford. The attendance was large, and many spectators availed themselves of the pleasure of witnessing this expert club finding the swift balls, which were thrown from a Bogardus trap, 18 yards rise for single and rotary, and 15 yards for doubles. The day proved a capital one for the sportsmen, although the wind gave a little trouble. Mr. R. Schaeffer carried off the honors of the day with 26 out of a possible 30. The leading scores stood:

First Class.

R Schaeffer { Singles.......1 1 1 1 1 1 1 1 1 1—10; Doubles.......1 0 1 0 1 0 1 0 1 0— 7; Rotary........1 1 1 1 1 1 1 0 1 1— 9—26 }
W Edwards { Singles.......1 1 1 1 1 1 1 1 1 0— 9; Doubles.......1 0 1 0 1 0 1 0 1 0— 5; Rotary........0 1 1 0 0 1 1 1 1 1— 8—22 }
W Witherell { Singles.......1 1 1 0 1 1 1 1 0 1— 8; Doubles.......1 1 0 0 0 0 1 1 1 1— 6; Rotary........1 1 1 0 1 0 1 1 1 1— 8—22 }
G Blanchard { Singles.......1 1 0 1 1 1 1 1 1 1— 9; Doubles.......0 0 1 1 1 1 0 0 0 1— 5; Rotary........1 0 1 0 0 0 1 0 1 1— 6—20 }
S P Jones { Singles.......1 0 1 1 1 1 1 1 1 1— 9; Doubles.......0 1 1 1 0 1 0 0 1 0— 5; Rotary........0 1 0 1 0 1 1 0 0 1— 5—19 }

Second Class.

	Singles.	Doubles.	Rotary.	Total.
D Kirkwood	10	3	8	21
J C Smith	6	6	9	21

Third Class.

J E Nason	6	2	2	10

THE LYNN TOURNAMENT.—The second day (18th) of the Grand Army Tournament and Bazar was devoted to glass ball shooting. The contest was open to any organized club in New England. Entries were made in teams of three, and some clubs presented two and three teams. Each man shot at 20 balls from Card's improved rotating trap, 18 yards rise, Bogardus rules; first prize, $50; second prize, $30; third prize, $15. In addition to the above an elegant gold medal was offered for the best individual score, and a beautiful silver and pearl-mounted revolver for the second best score. Mr. Mortimer, of the firm of Mortimer & Kirkwood, Boston, acted as scorer:

Worcester Sportsmen's Club, Mass.—First team.

G I Rugg..........1 1 1 1 1 0 1 1 1 1 1 1 0 1 1 0 1 1 1 1—17

C N Wales.........1 1 1 1 1 1 0 0 1 1 1 1 0 1 1 1 1 1 1 1—17—47

The Lynn Central Club having scored 49 took first money. The first and second teams of the Worcester Club and Mystic Club divided second and third money.

Ties on individual scores.

J G Howe..........0 0 1 1 1 w —3
J C Haskell.......1 1 1 0 1 1 1 1 0 1—8
J H Frost.........1 1 1 1 0 1 1 0 0 1—7

J. C. Haskell took medal, J. H. Frost the revolver.

The most interesting match of the day was between the two Lynn clubs for a handsome gold medal valued at $50. Each club had ten men and shot from the same trap and under the same rules as the match above. In this match C. J. Lander made the best score made during the day, breaking all of his 20 balls.

D. C. S.

NEW YORK GUN CLUB—*Bergen Point, N. J., June* 20.—Match between Dr. Zellner and Mr. Joseph Blake; 100 birds, 30 yards rise, 80 yards boundary; 5 traps, 5 yards apart; Hurlingham rules:

Dr Zellner....1 0 1 1 1 * 1 1 * 1 1 * 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 * 1 1 0 1 1 1 1 * 1 0 1 1 1 1 1 1 1—39.

J B Blake..1 1 1 1 1 * 0 0 1 1 * * 1 1 1 0 1 0 1 1 1 1 1 1 1 0 1 1 0 1 1 1 0 1 1 1 0 1 1 1 1 1 0 0 1 0 1 1 0 1 0—34.

Mr. A. B. Dexter and Dr. Zellner shot a ten bird match. Mr. Dexter won by six birds, killing nine straight and retiring. A double bird match at six pigeons followed, Dexter killing five and the Doctor four. On a wager to kill 25 out of 30 birds, at 30 yards rise, Mr. Dexter made the score of 29 out of 30, killing 29 straight.

June 21.—Regular club meeting; 5 traps 5 yards apart. In a sweepstake at 5 birds, $3 entrance, Mr. Jackson killed all, taking first money; Zellner, Reblin and Benjamin killing four, the shoot off giving Dr. Zellner second money. In another 5 bird sweep, same conditions, C. Manning killed all, capturing first money, Reblin and Dr. Zellner killing four each. Zellner on the tie again taking second money. Five members then entered a six double-bird sweep, $3 entrance, handicap rise from traps Nos. 2 and 4; ties shot off; miss and go out. H. Reblin won first money and Peter Cooper, Jr., second. A five bird sweep, $2 entrance, followed. Jackson and Dr. Zellner killing all. Reblin, P. Cooper, Jr., and C. Manning four each; W. Stone three, and Messrs. Benjamin and Warren two each. Jackson took first money and Manning second money. In a seven bird sweep H. Reblin at thirty yards killed six, capturing first money, W. Stone, Dr. Zellner and P. Cooper, Jr., killing five; the rest killed three and retired. The best score of the day was in a ten bird sweepstakes, $3 entrance, the result being as follows:

H Reblin	28 yards.	1	1	1	1	1	1	1	1	1	*	—9
Dr Zellner	30 "	1	1	1	1	1	1	1	1	1	0	—9
M Jackson	25 "	1	1	1	1	1	0	1	1	1	1	—9
D Benjamin	26 "	0	1	0	1	0	1	1	0	1	1	—6

Mr. Reblin took first money and Mr. Jackson second.

FOUNTAIN GUN CLUB—*Brooklyn, N. Y., June* 18.—Regular mid-monthly match for the A. F. Weaver gun; won by Chas. W. Wingert:

MISSISSIPPI—*Vicksburgh, June 17.*—Inclosed find scores of a match shot at glass balls, between Mr. Fred Myles, of St. Louis, using a rifle at ten yards rise, balls thrown from hand, and the Marooner Club of Vicksburgh, the latter using shot-guns, balls sprung from trap at 18 yards rise. The prize, a handsomely embossed silver water pitcher, was presented to the victor by Hon. Martin Marshall (acting by the request of the club) in a most felicitous speech, in which he said: "Could I speak as well as you shoot, words would never fail me." Mr. Myles replied in a happy vein, and, turning the compliment, said: "Could I shoot as well as you speak, silver pitchers would indeed be a superfluity with me."

Fred F Myles—1 1 1 0 1 1 1 1 1 0 1 1 1 1 1 1 0 1 0 1 1 1 1 1 0 1 1
0 1 1 1 1 1 1 1 0 1 1 1 1 0 0 1 0 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1 1 0 1 0 0
1 0 1 0 1 1 1 0 1 1 0 0 1 0 1 1 1 1 1 1 0 0 1 1 1 1 0 1 0 1 1 1 1 1 1—75

Geo H Dorsey..............1 0 1 0 1 1 0 1 0 1 1 0 1 1 1 1 1 1 1 0—14—74

The Marooners were beaten one ball, but none of them ever saw a ball thrown from a trap before.

—O'Rourke's guide to Coney Island contains in compact form about all that any one would wish to know of that famous seaside resort. It is convenient for the pocket, and will be useful to people who are apt to be dazed by the multiplicity of seaside attractions.

AUXILIARY RIFLE BARREL.—We would call the attention of our readers to the advertisement on another page of the Sheldon Auxiliary Rifle Barrel which promises to supply a want in this direction long felt.

FERGUSON'S LAMPS—*Editor Forest and Stream:* It is only a short time since I commenced advertising my patent camp, jack and boat lamps in your columns, yet the demand for them has increased to such an extent that I am at present unable to fill my orders, as I have not one left. I have now in the factory a lot which will be finished about the first of July, and which will be better than any I have yet turned out. I expect to be able to fill all orders promptly on or about the above-named date. A. FERGUSON.

65 *Fulton street, New York, June 23, 1879.*

National Pastimes.

BROOKLYN ARCHERY CLUB.

We publish the following Constitution of the Brooklyn Archery Club as a model for the adoption of the numerous archery associations now forming throughout the country. The officers of the Brooklyn club are: President, J. O. Blake; Vice-President, Theo. Vonder Lube; Secretary, D. F. Wemple, M. D; Treasurer, Wm. Miller; Captain, Jno. K. Hoyt. Directors: Maj. A. G. Constable, Maj. Jno. Y. Culyer, E. I. Horsman, S. E. French. The Constitution reads as follows:

NAME.—This organization shall be known as the Brooklyn Archery Club, located at Brooklyn, N. Y.

OBJECT.—The object of this organization shall be, to encourage physical culture, to organize and engage in Archery practice, and other sports and pastimes, and social refinement among its members.

OFFICERS.—The Officers of this Club shall consist of a President, Vice-President, Secretary, Treasurer, and Captain, together with four directors. The Officers shall, together with the Directors, form a Board of Managers, who shall have full power to arrange all games or pastimes, and transact all business of the Club, except as otherwise provided. Elections shall be annual.

PRESIDENT.—The President shall preside at all meetings, and shall enforce a due observance and respect of the Constitution and Laws of the National Archery Association of the United States, and shall have a casting vote whenever a tie shall occur, and shall audit all bills.

VICE-PRESIDENT.—In the absence of the President, the Vice-President shall preside, and shall have the same power as the President.

SECRETARY.—The Secretary shall keep a roll of the members, with the date of their election. He shall keep an accurate record of all meetings of the Club, issue all orders as directed by the Board of Managers, and notify members of their election or rejection.

TREASURER.—The Treasurer shall receive all moneys due the Club, giving his receipt for the same, paying all bills which have been audited and ordered paid by the Board of Managers, or by a vote of the Club, and which have also been signed by the President. He shall submit a report of the finances quarterly.

MEETINGS.—The regular meetings shall be monthly, and shall be held at such a place as shall be decided upon by the Club at any regular meeting, the same to take place upon the last Saturday of each month, from May until November 1st. The Annual Meeting or Field Day, shall take place on Decoration Day, May 30th. Special meetings shall be held at any time on call of the President. The President and Vice-President shall call Special Meetings on the written request of three members, and like notice to all the members of the Club. Five members shall constitute a quorum for the transaction of business.

MEMBERSHIP.—Any person of good moral character may become a member, by making application through any member of the Club, who will present his name at any meeting of the Club; such proposition to be accompanied by the admission fee, which will be returned in case of his rejection.

All propositions for membership, after being received by the Club, shall be referred to the Committee on Membership for investigation as to his qualification, who shall report at the next meeting or as soon thereafter as practicable, and two negative votes shall exclude the applicant from admission; nor shall such application again be presented to the Club until after the lapse of sixty days from the time of such rejection. Any person who from any cause whatever shall terminate his membership relinquishes all right and title to the property of the Club.

MANAGEMENT.—The Board of Managers shall have power to appropriate moneys to purchase all articles necessary to the Club, and shall have full charge of all its property.

The President of the Club shall be ex-officio chairman of the Board of Managers.

DUES.—To meet the necessary expenses of the Club, the admission fee shall be three dollars, and the monthly dues fifty cents, payable monthly in advance. A member being in arrears for dues one year, shall be suspended until all arrears or dues are paid, and all members being in arrears eighteen months shall be stricken from the roll.

CHARGES.—Charges may be preferred against a member of the Club for a violation of the Constitution and By-Laws, or conduct unbecoming a gentleman, or conduct detrimental to the interests of the Club, such charges to be preferred in writing, and a copy of the same to be sent to the accused or served on him either personally or by mail, who shall present his defence at the next regular meeting. Any member found guilty under such charges may be expelled by a two-thirds vote of the members present at the time of the regular meeting.

RULES OF GAMES.—The rules governing the Archery Team shall be those adopted by the National Archery Association.

ARCHERY TEAM.—The Team shall be selected from the members, under the direction of the Captain. The Team shall consist of as many members as the Club from time to time shall see fit to appoint.

AMENDMENTS.—Any alteration or amendment to this Constitution and By-Laws must be offered in writing, at a regular meeting, when each and every member must receive due notice.

ORDER OF BUSINESS.—1. Roll Call. 2. Reading of Minutes of last meeting. 3. Report of Committee on Membership. 4. Election of Members. 5. Propositions for Membership. 6. Report of Special Committees. 7. Unfinished Business. 8. New Business. 9. Adjournment.

ROBIN HOOD ARCHERY CLUB.—The Robin Hood Archery Club, of Nyack, N. Y., opened the season on Saturday, June 7, with a prize meeting and reception. The prizes consisted of two gold arrows, to be worn as a badge of honor by the lady and gentleman making the highest score in their respective teams. There were thirteen contestants—six ladies and seven gentlemen. Shooting was at four targets, ranges of 30, 40 and 50 yards, the ladies shooting at 30 yards with 25 arrows at each range, in relays of five arrows to an end. The prizes were won by fair scores. The meeting proved such a success that the club intend to repeat it on the Fourth of July, proximo, at which meeting the prizes will be, for the ladies a handsome quiver, and for the gentlemen an arrow. In the evening there will be a reception and a grand display of fireworks. RAMBLER.

BROOKLYN ARCHERY CLUB.—The Brooklyn Archery Club met on their pleasant grounds near the Trout Lake, Prospect Park, last Saturday afternoon. After some preliminary practice, sides were chosen and the following scores made:

	Hits.	Score.		Hits.	Score.
Mr Blake	24	113	Dr Wemple	13	43
Major	9	25	Mr Vanderow	8	20
Total		137	Total		63

The lady members were practicing at two butts on the left, and succeeded in running up some very creditable scores.

PEQUOSSETTE ARCHERS—*Watertown, Mass., June* 21.—Regular meet of the Pequossette Archers; 30 arrows each; ladies 30 yards, gentlemen 40 yards:

	Hits.	Value.		Hits.	Value.
Mrs Silsby	23	97	Mr Brownell	20	90
Mrs Shackford	8	30	Mr Dwight	21	89
Miss L Magee	9	25	Mr Sawyer	10	70

CRICKET.

FIXTURES.

June 27—Chestnut Hill, St Paul's School vs Chestnut Hill.
June 27—Nicetown, Darian vs Germantown.
June 28—Chestnut Hill, Young America vs Chestnut Hill.
June 28—Nicetown, Young America (2d) vs Wakefield.
June 28—West Philadelphia, Old Haverfordians vs Belmont.
July 1-2—Ottawa, Montreal vs Ottawa.
July 2—Nicetown, Baltimore vs Germantown.
July 3—Nicetown, Baltimore vs Young America.
July 4—Staten Island, Belmont vs Staten Island.
July 4—Syracuse, Belleville (Ont.) vs Onondagas.
July 4—Chestnut Hill, Baltimore vs Chestnut Hill.
July 4—Prospect Park, Paterson vs Manhattan.
July 5—Oswego, Belleville (Ont.) vs Oswego.
July 5—Staten Island, Staten Island (2d) vs Columbias, of Hoboken.

SCHOOL CRICKET.—The team of Dr. Coit's St. Paul's School of Concord, N. H., will visit Chestnut Hill, Pa., on the 27th, and play against the first eleven of the C. H. Club. The young cricketers at St. Paul's School are divided between two clubs—the "Old Hundred" and "Isthmian." In the spring matches the latter organization won two victories over the "Old Hundreds" after a period of defeats lasting for four years.

—A new club has been formed at Manhattanville, N. Y., where a good ground is to be selected.

—The second eleven of the Montreal Club have challenged the first eleven of the West End Club of Ottawa, which is captained this season by the Rev. T. D. Phillipps.

UPPER CANADA COLLEGE VS. LACROSS CLUB.—A match between these clubs was played on the College grounds at Toronto on the 14th, and after a very close and exciting contest the collegiates came off the winners, a wide ball giving them the victory immediately before the falling of their last wicket.

—A grand cricket tournament will be held at Syracuse on July 21, 22 and 23, when a valuable silver cup will be offered for competition. Full particulars will be given in our paper of July 3.

—A single wicket match between Messrs. Papineau and Bright, of Syracuse, N. Y., will be played at Danforth Park, the 27th inst. Mayor Neil, of Oswego, has been selected umpire.

MANHATTAN (2D) VS. COLUMBIA (OF HOBOKEN).—This game was played at Prospect Park, L. I., on the 19th inst, when the home team were the winners by 23 runs. For the Manhattans, Hulbert scored 19 and 0; Dollar, 13 and 14, and Ames 10 (not out) and 10. For the visitors, Spencer, 16 (not out) and 3; Fitzpatrick, 0 and 11, and Davis 10 and 8 (not out).

	1st Inn'g.	2d Inn'g.	Total.
Manhattan	72	59	131
Columbia	51	57	108

ORANGE CRICKET CLUB, OF ORANGE, N. J.—At a recent election of this organization the following officers were chosen for the season: President, Geo. Payne; Vice-President, Joseph Cooper; Treasurer, Walter Varndell; Secretary, Henry Bunce; Captain, William Wilkinson. The club grounds are situated at the corner of Central avenue and Centre street. Matches will be played with the Newark and Paterson clubs early in July.

NO MATCH.—The St. George's Club, of New York, has been obliged to notify the Merion Club, of Ardmore, that they are unable to keep their engagements on the 4th and 5th of July. It certainly seems a pity, now that new clubs are springing up in the vicinity of New York, that the glory of this once famous club should have been allowed to wane. It is evident that there is something unhealthy in Denmark.

YOUNG AMERICA VS. BELMONT.—These first class clubs met on the Belmont's grounds at West Philadelphia, on the 20th inst., and after a remarkably well contested game, the visitors were declared the winners by 17 runs, decided on the first inning. The batting of the Belmonts was excellent, Yarnall's batting being the feature of the game; but the fielding of his side was not up to the mark, as they should have disposed of the Young Americas for about 80 runs. The following is the full score:

OXFORD VS. ST. TIMOTHY.—A match between the first elevens of these clubs was played at Frankfort, Pa., on the 21st inst., the home club winning by 71 runs. Oxford, 107; St. Timothy, 36.

COLUMBIA COLLEGE VS. UNIVERSITY OF PENNSYLVANIA.—On June 16 the Germantown Cricket Grounds at Nicetown were the scene of the first match of this season between college elevens. The New York team has had but little practice as yet, the organization being only formed about two months since. On the other hand, the eleven of the University Club was doing goon work several years ago. It is matches of this character that make the game interesting and attractive, and although the New York collegiates were defeated by 82 runs, they played the game in fine cricket style, and deserve credit for their plucky venture. Subjoined is full score:

THE NEW GROUNDS of the Young America Club at Stenton, near Wayne Station, Germantown, will be opened to the public on the evening of July 4. The grounds will be brilliantly illuminated, and an attractive programme, consisting of music, atheletic sports, fireworks, etc., has been prepared. The celebration will be worthy of the club, its able managers and the occasion.

PHILADELPHIA VS. GERMANTOWN.—At Nicetown on the 21st inst., these clubs played an uninteresting game. The Philadelphia team was filled up with Merion Club men, and of course the revolving party made the largest total. Mr. Clay, an old Philadelphia Club stand by, made an excellent score, and the Merion bowler, Law, helped to rake down the Germantown's wickets. It would have been much better if the club, which is called "the father of Philadelphia cricket," had played and been beaten than stoop to the revolving business to win a game. Philadelphia, 1st inning, 150; Germantown, 1st inning, 86.

UNITED STATES LACROSSE AMATEUR ASSOCIATION.—A national convention of delegates from lacrosse clubs was held last Friday evening in room No. 111 Astor House. Thirty delegates were present, representing the following clubs: Philadelphia, Boston, Elmira, Ravenswood, L. I.; Westchester, New York University, Osceola, of Elmira; Brooklyn Athletic Club, Harvard, Bay Ridge and Bradford, Pa. A permanent organization was effected under the name of the "United States Lacrosse Amateur Association," having for its object the development of lacrosse and its protection from professionalism. The following officers were then elected: President, Herman Oelrichs, of the New York Lacrosse Club; Vice-Presidents, Harry Fox, of the Bradford; Rev. C. R. Slicer, of the Brooklyn, and Samuel McDonald, of the Boston Club; Secretary and Treasurer, J. R. Flannery of the Ravenswood (L. I.) Club; Trustees, R. Sturgis (Harvard), G. H. Hope (Bay Ridge), John A. Atwood (New York University), C. L. Snyder (Elmira), and Frank Cable (Osceola, Elmira).

TESTIMONIALS TO THE SHELTON AUXILIARY RIFLE BARREL.

THE Shelton Auxiliary Rifle Barrel, which was fully described and indorsed in the FOREST AND STREAM of August 18, 1878, has been received with expressions of Unanimous and Unreserved Satisfaction by the Fraternity of Sportsmen from Maine to Florida, and from Virginia to California. The particular points of merit claimed for the Shelton Auxiliary Barrel by its manufacturers are: Simplicity of Construction, precluding the possibility of its ever getting out of order; Ready Adjustment; Ease of Manipulation; Accuracy of Fire, and Power of Penetration. Its use has invariably given the most complete satisfaction. It can and does perform all that any other sporting rifle could do. It does not and cannot injure the gun. The weapon formed by the combination of the shotgun and the Shelton Auxiliary Rifle is the Most Effective and Satisfactory Sporting Arm in the World.

Below are published a few of the scores of testimonials, corroborative of the above, which are being constantly received by the Shelton Auxiliary Rifle Barrel Company, of New Haven, Conn. The letters are from gentlemen sportsmen, who have made thorough and exhaustive personal tests of the weapon, and who, after their experience, add unsolicited testimony to all the advantages claimed for it:

GENTLEMEN:—You are hereby authorized to use my name as to the merits of your Auxiliary Barrel. It is certainly all that you claim for it, and I have been agreeably disappointed.
T. J. HOUSTON.

AUSTIN, Texas.

GENTLEMEN:—I find I can do as good shooting with the Auxiliary as with any rifle, using the same cartridge.
B. R. BUFFHAM.

NEWPORT, Ky., May, 1879.

GENTLEMEN:—I consider it as near perfection as possible.
GEO. B. HODGE.

NASHVILLE, Tenn., May 15, 1879.

GENTLEMEN:—We fully indorse all that is claimed for the Auxiliary Rifle Barrel. We have tried them. PANCHOTT & FALL.

NORRISTOWN, Pa., May 16, 1879.

GENTLEMEN:—You are at liberty to use my name as you desire in the interests of the Auxiliary. D. M. YOST.

HARTFORD, Conn., May 13, 1879.

GENTLEMEN:—You can use all or any part of the letter I wrote in the *Courant* in praise of the Auxiliary Rifle Barrel.
T. SEDGWICK STEELE.

CHICAGO, May 14, 1879.

GENTLEMEN:—Cheerfully do I comply with the request that my name may be used with such testimonial as I have just now received.
REV. JAS. POWELL.

FREEPORT, Ill., May 17, 1879.

GENTLEMEN:—I am more than pleased with the rifle barrel. I have done some good shooting with the eight I have. I am perfectly willing for you to use my name.
J. H. STAVER.

FORT SISSETON, Dakota Ter., May 19, 1879.

GENTLEMEN:—You are at perfect liberty to add my name to the testimonial in favor of your invention.
CHAS. E. MCCHESNEY, M. D., U. S. A.

LAPEER, Mich., May 22, 1879.

GENTLEMEN:—It is with pleasure that I consent to the use of my name recommending your Auxiliary Rifle Barrel. I think it the most complete sporting gun made.
L. J. HADDRILL.

LAWRENCE, Kan., May 15, 1879.

GENTLEMEN:—After a repeated number of shots, both myself and friends agreed that for accuracy it much exceeded anything that we believed possible with an arm of this kind.
F. W. JAEDICKE.

MARYSVILLE, May 17, 1870.

GENTLEMEN:—In reply to your request, dated May 10, 1879, for privilege to use my name as regards the merits of Auxiliary Rifle Barrel, I would say that you are at liberty to do so.
J. N. ALDRICH,
Under Sheriff, Uba County, Cal.

GEORGETOWN, D. C., June 7, 1879.

GENTLEMEN:—Have one of your Auxiliary Rifle Barrels. It surprises me and every one that has seen it shoot. I can do better shooting with it than any rifle I have ever used. I do not know how to account for it, without I am more used to handling a shotgun.
GEO. J. ROSS.

NEGAUNEE, Mich., April 15, 1879.

GENTLEMEN:—I have tried the Auxiliary Rifle you forwarded me 4th inst., and must confess I am entirely satisfied with it. For sporting purposes it is certainly the best thing out. I will take pleasure in recommending your rifle.
T. J. HOUSTON,
Mayor of Negaunee, Mich.

SHENANDOAH, May 17, 1879.

GENTLEMEN:—I take great pleasure in adding to your already large list an unqualified testimonial as to the merits of the Auxiliary Rifle Barrel. It worked to perfection. I regard it as an indispensible attachment to any shotgun, and would not be without it. You are perfectly welcome to my signature to your circular testimonial.
CHAS. S. CHASE.

FREEPORT, Ill., May 13, 1879.

GENTLEMEN:—I could not put it too strong how well I am pleased with my rifle barrel. I have mine sighted to my Parker gun so well that I cut a blackbird in two at twenty yards. I hope to have some fine grouse shooting in Dakota Territory next fall—just out of shot range, as did Mr. Staver last. A number of our best hunters say they must have one.
JESSE BURCHARD,
of Burchard & Scott.

WILLIAMSPORT, Pa., Jan. 12, 1879.

GENTLEMEN:—I procured two of the barrels (44-100) from Messrs. Grubb, in Philadelphia—one for my brother and one for myself. We are very much pleased with them—in fact, I have no further use for any other rifle; and although I am no expert rifle shot, can shoot as accurately with it as I could with my other. Have repeatedly "drove the nail," off-hand, at 30 yards. Find the "drop" of ball is very little from 30 to 100 yards. While in the woods, have several times put a ball plumb in the centre of a tree or stump as far as 150 yards. Did not yet go on a deer hunt this season, but if I live another year, will kill some with it.
EDMUND J. KOCH.

COLUMBUS, O., April 2, 1879.

GENTLEMEN:—I have one of .44 cal. which I have now used a year, and while in Northern Michigan last fall, practically tested its true merits and found in it more than was actually claimed for it. As to penetration, it is all that is desired, being capable of drilling a bear through and through; is light to carry, easily handled, and as to accuracy, none need want better. I have competed several times with parties using rifles, and have carried off the "persimmons" every time. For the benefit of sportsmen, as to their pleasure, comfort and interest, I give my experience with what I consider one of the most novel and practical additions to a sportsman's outfit that can be found.
FRANK N. BEEBE.
Supreme Court of Ohio Law Library.

We have adopted the Shelton Gas Concentrator and Foul Protector.

1st. We find by experiment of the confinement of the gases in a cylinder, after the ball has left the muzzle, and overcome all friction, that the trajectory of the ball is flatter, and penetration greater, than other rifles using same ammunition, as the gases give additional force to the ball while being so confined.

2d. The Foul Protector, prevents the fouling of gun from end of rifle to muzzle of shot-gun saving the trouble of cleaning gun after target practice; but when in the field, and you are interchanging from shot to rifle, it is unnecessary. In ordering rifles with Foul Protector, state the length of your gun barrel—28, 30, 32, inches, or whatever it may be. The Foul Protector is sent free of charge with each barrel.

PRICE LIST.

Standard sizes, 20 inches long, .32, .38, .44 cal., including Rod, Brush Extractor, etc., all complete, $12; Government .45, 24 inches long, $14. Cartridges, 32 long, 1,000, $13; 38 extra long, 1,000, $25; 44 model 1878, 1,000, $20; 45 Government, 1,000, $35. All of the above shells can be reloaded.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d ST., NEW YORK, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.

MRS. W. H. KINSLEY, 158 West 22d Street, New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,

N. ORMS, 59 West 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 704 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 & d upward, but I will send a copy of "The Two Spies" by mail for $1.72 Orders for five copies and upward filled for $1.45 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

Apply to

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agent's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET,
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 914 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.
AMERICAN STANDARD--EAGLE BRAND.
CAPTAIN BOGARDUS ON TIN-COATED SHOT.
EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.
Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.
THE LEROY SHOT AND LEAD M'F'C CO., NEW YORK.

The DelawareShell.

PRICE AS LOW AS ANY OTHER SHELL.
ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder
THE CHAMPION POWDER
OF THE WORLD.
NO SMOKE--NO DIRT--LESS RECOIL.
STRONG AND SAFE.
SUPERIOR IN EVERY RESPECT TO BLACK POWDER
6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.
Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.
The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.
Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.
TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.
SEND FOR CIRCULARS AND PRICE LISTS.

Volume 12—No. 22.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

James Todd of Virginia.

"Arma virumque cano."

So sang the immortal Virgil, and a right good story he made up, too. But everybody can't be an Æneas, and all heroes are not of the same kind. Neither can all biographers hope to achieve such renown as that of the great Roman poet. Still, there are many men whose characters and exploits are quite as noble and instructive as those which are embellished by the genius of Homer, or Virgil; who, "Far from the madding crowd's ignoble strife," etc.

Of one of the latter class I propose to speak, and to narrate to the readers of FOREST AND STREAM a few incidents in his life, which I think will interest them, and "point a moral," as well as "adorn a tale." The name of my hero is James Todd, who, in his day, was recognized as the greatest hunter in Virginia. His appearance itself would have well justified one in believing it, had not his exploits been still more remarkable. Six feet two inches tall, straight as an arrow, without a superfluous ounce of flesh on him; with an eye, set far back in his head, that flashed fire even when not excited; a short-brim, sunbrowned felt hat on a well-shaped head; and his ever-present and ever-ready rifle in his hand, his deer-skin pouch, and a gracefully-shaped cow's horn hanging by his side, he stands now before my mind's eye as vividly as when I first saw him twenty five years ago, the most perfect specimen of the real mountain hunter that it has ever been my fortune to see, although I have traveled through the far West, and seen many of the border hunters, guides and trappers of more or less renown. In addition to his remarkable appearance, suggesting in every feature the hardy life which he had led from his childhood, his voice, gesture and bearing showed him at once to be a man of wonderful self-possession and coolness, and a moment's conversation would satisfy even the stranger that every word uttered by that man was as true as Gospel. There was an earnestness and carefulness in his language that carried conviction in every syllable, as he looked you, with a burning gaze, square in the eye. There was, too, a charm about his conversation that was simply enchanting, not only to lovers of sport, but to all classes of people—old and young, cultivated and ignorant. The first time I ever saw him (in the summer of 1856) he appeared, rifle in hand, upon the portico of the hotel at a little watering-place in the mountains of Virginia—which was about nine miles from his home—with a yearling buck strapped across his back. Soon his appearance attracted a crowd of the visitors around him, who plied him with numerous questions about the deer, which he answered with great precision and politeness, and then dexterously turned the conversation to the political and other questions of the day which were discussed by the more intelligent and cultivated people of the time. To the amazement of every one—save those present who knew him—he showed himself to be accurately informed in everything that was transpiring in the great world without, making the most Socratic and sententious criticisms upon public men and measures, and soon showed that he not only knew and had very fixed opinions about all that was happening at that time, but that the past history of our country, from the earliest colonial times down, was as familiar to him as was the trail of a deer. But all the while the conversation was going on he was not imparting what he knew alone; he was getting out of every man in the party everything that he knew, or thought, about the subjects under discussion, without appearing to be inquisitive about it, either; and before he left them there was hardly one man in the party out of whom Todd had not got the cream of all he knew on those points. His insight into the character, motives, objects, business and general affairs of every man with whom he had the slightest intercourse was almost like inspiration, and if it was anything worth knowing he never forgot it. While the conversation was going on to which I have referred, the dinner-gong sounded, but even that ordinarily attractive music failed to lessen the interest manifested in this strange man. But as there has to be an end of all things, the old man after a-while looked up toward the sun with the movement peculiar to people who reckon time solely by it, and with the remark, "Well, people, I must be a-going," strode into the hotel office, received the money for his venison, and as he passed the group, who were still lingering near the door, he gave them his parting salutation of, "Good-day, people!" wended his way leisurely up the path on the hill, which led to the blue mountain, on the other side of which, in the wildest of valleys, lay his peaceful hamlet, the sole habitation for many, many miles around.

I met him occasionally after that, before the beginning of the war, at the same place, and always on the same errand, *i. e.*, bringing venison to the Springs. His appearance was always hailed with delight by everybody, and he often had great difficulty in getting away from the visitors in time to get back to his house before night. In the early days of the war I saw a great deal of him, and many times during that trying period, and often since, did I partake of his generous hospitality. Humble, indeed, was it, but dispensed with the ease and welcome that made it truly royal! There in front of that cabin, in a vast wilderness, right under the towering peaks of the tallest giants of the Alleghanies, in the bright moonshine of many a soft June and October night, have I sat with this wonderful old man and listened to the most enchanting stories of his adventures with both rifle and rod (for the stream that flowed right by his door was "alive," and is yet, with trout), and all told with such genuine modesty that I was almost ashamed to ask him to talk about them; and yet I could not forbear to do so, like the child who wants to hear ghost stories from its nurse.

As illustrative of his marvellous quickness of perception and retentive memory of faces and circumstances, let me tell you the following anecdote. It was told to me not more than a month ago by a gentleman of my city, who is one of the ablest, if not the ablest, lawyer in our State, whose character and veracity are above suspicion:

When beginning the practice of his profession (some thirty-five years ago), as was common in those days he had to travel on horseback through the mountains in going from court-house to court-house west of ours. Upon one of these journeys, owing to high water on the usual route, he was obliged to cross the mountains by a bridle-path that led through the valley in which Todd lived. It was in the early spring, during the close season for deer, and while riding leisurely along the narrow path in one of the loneliest of hollows, a man suddenly stepped into the path about twenty paces ahead of him, going in the same direction that he was, with a young deer lashed to his back and rifle in hand. The hunter very soon perceived that some one was following him, and, turning half-round, he gave one glance at the horseman and as suddenly disappeared in the thick laurel that bounded the path on either side. Our young Lycurgus was a little nervous about the occurrence until he got out of the deep shadow of the valley into the settlements beyond, when the event passed completely out of his mind.

Fourteen years after that he was compelled from similar causes to take the same route. But having made a late start from Staunton, he knew he could not reach the settlements on the far side of the valley that day, but learning that our hero lived in the valley, and receiving careful directions to his house, he pushed across the mountains, and as the shades of night were just beginning to fall he rode up to the door of the house. Todd was instantly before him, and after saluting him, asked if he would keep him through the night. Raising his hand to his face as if shading his eyes, he peered eagerly into the traveler's face through the gloom of the twilight, and extending his hand in a moment, with a cheerful laugh he replied, "Well, man, bein' as you didn't tell on me about that deer that time, I guess you can stay, and welcome, too!" Neither man had seen the other except on those two occasions, and nothing more the first time than a glimpse, and scarcely more the second time passed between them; yet, after fourteen years, in the fading light of that spring evening, Todd knew the man who had kept his secret so well.

JACK.

For Forest and Stream and Rod and Gun.

RICE LAKE.

It is remarkable that man should seek to justify in the minds of his fellows eccentricities of thought or action; yet so it is, for vanity is strong, and I who am for a sportsman an humble and somewhat reticent individual, and modest withal, am still anxious to appear to those who know me, and to those who don't, as a fair-acting and reasonable creature.

My noticeable characteristic is a fondness for—I may call them—old battle fields, hunting-grounds once prolific in the highest degree, but now, through a long process of depletion, offering as a counter attraction to more virgin grounds only the memory of men and incidents and a moderate supply of game.

Every year, with one brother sportsman or more, in the bright and breezy, always healthy, month of September or October, I set out on the annual campaign for recreation and amusement. As may be easily imagined, I am somewhat careless as to the usually important item of "bag" in such expeditions. Not as young as, and perhaps less sacrificing than, when it was my wont to broil in an August swamp or freeze in the biting cold of a November morning, patiently and happily killing ducks with which to regale expectant friends and swell youthful complacency, I am still fond of rod and gun and activity, satisfied at times with more passive pleasure.

A favorite camping ground, and the subject of my sketch, is old Rice Lake, situated in the County of Northumberland, Province of Ontario, and twelve or fourteen miles to the north of this province-naming lake. Now the residents of Rice Lake district are many, and their utilitarian efforts have so bedwindled the old-time woods that the lake visitor, instead of the overshadowing forest that existed in our forefathers' time, finds the lake-border occupied by fast-improving farms, while to compensate him for the absence of the romantic wilderness are only the luxuries and ease that now attend the sportsman's perhaps questionable blessings.

Rice Lake is still pleasing to the eye, and, were natural picturesqueness its only attraction, might claim admirers. But the fishing and duck shooting are tolerably good even now. In July and August the knowing fishermen can have many an exciting struggle with black bass, and in June, September and early October maskinonge are caught in satisfactory numbers, a morning's trolling, if the weather be propitious, producing mayhap from three to seven fish, the average or total weight of which no man need, no fisherman would, scorn; while in September a paddle up one of the several creeks or through the Keene Marsh perchance will afford a half-dozen shots or more at teal or wood-duck, and an agreeable addition to the larder. In October, and until ice closes the Lake, wild-fowl are very numerous. It is not unusual to see during that time and in early spring flocks of ducks in the open, ranging from one-quarter to two miles in length, although greedy sportsmen (?), by night shooting and incessant scaring, seldom permit them to remain for many days together on their natural resting and feeding grounds.

It is according to the amount of work he does whether or not one fishes or shoots successfully at Rice Lake as elsewhere. Every man is his own luck. Some days in October or November one may kill from thirty to fifty ducks, and again for weeks may average no more than eight or ten, thanks to the aforementioned night-shooters.

My favorite months at Rice Lake are June, September and October, when, although the "bag" may not be so heavy as later in the season, the acquisition of it insures much greater pleasure to those of my mind. Why seek to bag a dozen maskinonge, thirty bass, or as many ducks, in one day? While acknowledging the satisfaction to be derived from presenting the goodly game to smiling acquaintances, I for one leave out of my gift all who are not very near akin by blood or spirit, the participation of these in the spoil being, indeed, essential to my own enjoyment. One hears of great slaughter of wild-fowl at St. Clair or Long Point, "Chacun à son goût"; for me the wind-moved rushes of these extensive marshes and the shooting lodge, however comfortable the latter, contrast but poorly with my favorite lake, its quiet canals intersecting the rice-fields, its bays, its points, and inviting shady inlets. Easy of access, and frequented by constant visitors from Maine, Quebec, New York and divers other districts, men whose lives lie for the most part far away from me and from each other, meet here in the genial free-masonry of sport—the eastern Bluenose, New Englander, Canuck and Western Yankee.

In this connection it may not be impertinent to attempt to justify the act of our patriotic Government by which our inland fisheries are, so to speak, protected. Foreigners are now charged a daily royalty for the privilege of fishing, and this tax is imposed, I have been led to understand, with a view of ameliorating a very evil practice of greedy fishermen, whose sense of propriety is extinguished by the preponderating ambition to swell the "bag"—that horrid bag! Now, as this act obviously fails of its intention, inasmuch as the greedy fisherman has to fill, under the existing arrangement, a maw deeper in proportion to his greater expenditure, and the desirable foreign sportsman is in some cases excluded from his loved haunts, the justification of our Government in the matter I take to be their want of education in what should be, as it was in the days of old Rome, the highly important subject of the people's recreation. How absurd it is that in our short life the pursuits of trade should not only overshadow, but annihilate, this consideration. Legislation can effect but little in the real advancement of a nation toward happiness, but, to put it mildly, its action should at least not be detrimental. But ignoring polity.

One of the features that time has greatly altered at Rice Lake is the population. The Indians there to-day are poor in numbers, physique and character, and to him who remembers the district as it was twenty years ago, their present degenerate condition is matter for speculation and regret. There was a distinctiveness attaching to them then that is in a great measure absent now, and while the early settler of that day has developed into the well-to-do farmer of this, the Indian, whose state was one of greater ease and enjoyment, has concurrently sunk in the scale of happiness.

Twenty years ago! How many incidents of that time assume in memory the abrupt features, vegetable and human, out of which a careful construction would suffice to fill page upon page with matter of the most general interest.

Conversation with the men who settled in Northumberland County then will expose many a breezy anecdote and reminiscence. The lonely limits of civilization that Bret Harte has so graphically pictured might well be rivaled by their artistic development. It may some day be my pleasant task to elaborate those that are best remembered and best authenticated.

There are many pools and trolling areas specially good at Rice Lake that I shall not now particularize, and many ambushes wherein the wild-fowler may burn powder, while the unknowing sportsman lacks the sight of a feather. There is also much to be written about the method of our campaigns and the brisk, healthy pleasures thereof.

WAYFARER.

Fish Culture.

NEW YORK FISH COMMISSION DINNER.—The New York Fish Commissioners were tendered a complimentary banquet at the Brighton Beach Hotel, Coney Island, last Friday evening. Among those present were Robert B. Roosevelt, President of the Commission; Professor Goode, of the United States Fish Commission; Eugene Blackford, J. S. T. Stranahan, Judge Reynolds, Lorin Palmer, George Shepherd Page, of the New York Piscicultural Association; Fred. Mather, Wm. M. Fliess, C. C. Waite, of the Windsor Hotel, and Amos Robbins. The table was decorated in the same ingenious and lavish manner that has marked previous dinners of the Commission; the bill of fare was fishy enough to delight the most enthusiastic of the guild, and the usually accepted connection between brains and fish was most amply demonstrated in the after-dinner speeches. Mr. Roosevelt made a congratulatory review of the work of the Commission. He said:

When we began the agitation of the subject of fish culture we were met with opposition and abuse. The fishermen on the river offered to eat the shad we raised, bones and all. I have only to say that they would be compelled to eat 43,000,000 shad, and Lord knows how many bones. Our first efforts have developed into a pursuit which has the support of the world. Now almost every State has its fish commission, and almost every State in the Union is doing good work for the benefit of the country. The power of production of fish in this country is unlimited. The fish before me is a salmon caught in Gravesend Bay. There has been another salmon in this vicinity. Here you have substantial evidence of the work of the United States Fish Commission. The Commission has brought the California salmon here, and placed him in such of our rivers as are not good for Kennebec salmon. When our Commission commenced its work little had been done in the way of fish culture. During the first year there were 600 lakes in this State which were exhausted, or if not exhausted greatly depleted. We have raised 5,000,000 shad a year; of salmon-trout we have hatched 8,579,000. In seven years 548,000 whitefish have been hatched; of trout, 3 670,000; of California salmon, 582; and we have even raised 55,000 sturgeon.

Professor Goode paid a high compliment to the work of the New York State Fish Commission, which has accomplished more than any three or four other commissions; and Mr. Page reviewed the labors of the New York Piscicultural Association. Mr. Blackford followed with expressions of gratulation at the increasing interest in fish culture.

SALMON IN THE SARANAC.—*Plattsburgh, N. Y., June* 23.—A salmon weighing five and one-half pounds was caught below the lower dam in the Saranac River at this place last Saturday. This is of especial interest, as it is the first salmon which has been taken here in at least forty years, although very abundant at that time. R. W. N.

Natural History.

For Forest and Stream and Rod and Gun

LARGE GAME ANIMALS OF LONG ISLAND.

THERE are abundant proofs to show that before Long Island was settled by the whites, large animals roamed in goodly numbers through its forest-covered hills and dales without any great molestation by the Indians; but now the deer alone are to be found, and they only exist in the wildest and most thinly settled districts.

The following, which is an extract from the earliest history of Long Island, entitled "A Brief Description of New York, formerly called New Amsterdam, by Daniel Denton, of Hempstead," published 1670, in London, shows to what extent game formerly abounded on this Island. After speaking of its various varieties of trees, it continues: "For wild beasts, there is deer, bear, wolves, foxes, raccoons, otters, musquashes (the Indian name for muskrats) and skunks. Wild fowl there is a great store of, as turkeys, heath hens, quails partridges, pigeons, cranes, geese of several sorts, brants, widgeons, teals and divers others." At what time, or where, the last wolf was killed I could find no mention; nor do I suppose there is any record of the same. That they were sources of trouble and annoyance to the early Dutch settlers, a state of things which finally brought their speedy extermination, the following extract from the "Annals of Newtown," will show. Speaking of Middleburg, a small settlement in that town, it says: "But the honest inhabitants had other ills to contend with in the wild animals that infested their forests; the wolves proved especially annoying, failing not in their nightly prowlings to prey upon the flocks and herds."

Finally they became so destructive to the farmers and such terror to the inhabitants, several of whom they attacked, that in 1693 the authorities offered a bounty of twenty shillings for every wolf-scalp, the Indians proving valuable agents for their destruction. Various devices were originated to destroy them; such as dead falls, wolf pits, spring-guns and the like, and undoubtedly so diligently and thoroughly did they hunt them that they were all annihilated in a few years.

Bears, probably being fewer in number, were extinct long before wolves became so.

In January, 1867, there was killed in the Smith street car stables at the commencement of the Coney Island road, Brooklyn, a young wild animal, afterward put on exhibition in a store corner of Myrtle Avenue and Fulton street, where it was pronounced by connoisseurs to be a genuine wild cat (*Lynx rufus*). It was purchased by Van Brunt Wyckoff, of Gowanus, and presented to the Long Island Historical Society. Whether this was an "old settler" or one escaped from some travelling menagerie, it was difficult to determine. There is also in the Society's valuable collection another, probably an old one, which was killed in the vicinity of Mastic, Suffolk County, about seventy years ago. Deer are still to be found in small numbers in the vicinity of Islip, Brookhaven and a few other places.

An old resident of Sag Harbor once informed me that it was not an uncommon occurrence when he was a lad to see them in the neighboring forests. They were very abundant on the Island as late as 1840, or before the Long Island Railroad was projected, as is evidenced from the accompaning extract from a "History of Long Island," by Nathaniel S. Prime: "The forests of Long Island, though long since cleared of wild cats, wolves and the like, with which they once abounded, are still occupied by vast numbers of deer, hundreds of which have been killed yearly without destroying the stock.

"But the Long Island Railroad, which now passes through the heart of their principal resort, may, by frightening these timid animals from their wonted lairs, expose them to the more frequent shot of the huntsman, and thus ere long the harmless race may be extirpated from their native forests, which must ever remain undiminished."

Sad as this may seem to the true sportsman and lover of nature, it will certainly happen, and even has already in a great measure taken place; for the narrow boundaries of their haunts and the growing population of the island augmenting the already numerous army of sportsmen and pot-hunters, will before many decades have passed, unless stringent laws are adopted for their preservation, entirely exterminate these beautiful game animals. If some wealthy sportsmen who are interested in the game of their native isle, would co-operate and form an organization such as the "Blooming Grove Park Association," buy some 6,000 or 8,000 acres in parts of the island where land is very cheap, and stock it with game, and especially the deer, they might have a refuge for these persecuted animals when they had long became extinct outside of these friendly boundaries, and thus restore the forests to their native primitiveness where

"The wild deer arched his neck from glades, and there,
Unhunted, sought his woods and wilderness again."

HARRY HUNTER.

A TALE OF GOOD SPARROWS.

BRINHAM, Texas, August 14, 1879.

EDITOR FOREST AND STREAM:

Your interesting issue of the 10th has an additional article on the sparrow question, entitled, "This is Evidence."

It is, but in my humble opinion, only *ex parte*, and, as I have been raised where sparrows abound, I will gladly give you my evidence—the truth, and the whole truth—if acceptable. Sparrows are omnivorous when they are at home, and accommodate their palate to the seasons as much as we bipeds. If some giant race were curious to know whether we mortals ever regaled ourselves with bivalves, and hit upon the month of July as the proper time for catching and dissecting specimens, a report like "This is Evidence" would undoubtedly be the result. But if they should select winter, and a fashionable restaurant as their field of exploration, the result might astonish them by the quantity and variety of styles, perhaps enough to make them conclude man lived hardly on anything else but oysters, pickles and crackers, and surely drank no water whatever. I simply suggest this to indicate that time and location have an important bearing on this case.

Sparrows, according to my own observation, feed their young broods principally on insects, and the quantities of caterpillars, worms, flies and bugs they destroy during breeding time is enormous. In my native country (Germany) they breed during the whole summer, and it is generally conceded that they raise more than two broods at an average. As this is also the time when insects of all kinds are most abundant and destructive, their services cannot be underrated, and are especially appreciated by nurserymen and vegetable gardeners, and by those who possess shade trees near their houses.

On the other hand, sparrows undoubtedly do destroy a good deal of small fruit, and are fond of grain of all descriptions. They cause considerable damage in vineyards. In cities, where the supply of insects is limited anyhow, they must of necessity be more granivorous, and here they congregate about grain warehouses and stables in large numbers, diversifying their time by occasional raids into neighboring gardens in quest of such dainties as fruit and berries.

Thus I am not surprised to see the statement, "This is Evidence," as the time and location was not calculated to show an average result. Fall and winter are the sparrows' grain seasons, and spring and summer their insect seasons; and with us it is considered that the balance is in favor of the sparrows, as the number of caterpillars and bugs they destroy in spring and summer would increase to an immense army before the fall sets in if remaining undiminished, and the ravages resulting therefrom would probably be considerably more than the damage done by the sparrows.

As far as the destroying the eggs of insects is concerned, I opine that this is more particularly the office of the titmouse and the sapsucker, who are better fitted by nature for such a pursuit.

Touching their temper, I would say they are quarrelsome, but mostly among themselves, and excepting owls and crows they do not interfere with other birds, as the location of their nests is usually such as to preclude the competition of other birds, saving the house-swallow, whose nest the sparrow sometimes forcibly appropriates. But even such cases are not numerous enough to give them any importance, or to constitute them a set trait in the sparrow's character. SILVA.

EDITOR FOREST AND STREAM:

In your paper some numbers back were several letters on above subject—one giving account of examination of craws of many specimens, and most of the letters claiming they never eat insects where other food could be found. Now, I am no friend of the noisy, dirty pests they have become in our city, but give my evidence in order to show that, probably from local habit, they do eat insects here. We have a grasshopper quite common during the summer, frequenting open places in fields, roads and streets, full two inches in length; of a dirty brown color, and, when at rest, unattractive looking, but having the under wings a rich black, bordered with a wide margin of bright yellow; very conspicuous when flying. The scientific name I am not posted enough to know (*Edipoda carolina*—Burm.?—ED.) but it cannot be mistaken for any other species we have. This hopper has a habit of every once in a while rising on wing three or four feet from the ground, and then remaining nearly at one place (precisely like a hawk when "hovering" on the look-out for dinner), for a moment or more, making a peculiar cracking noise at the same time, then alighting again near the place it started from, where generally there is a female to be found, if searched for. They are common in the heart of the city as well as country, and I have time and again, when watching this "hovering," seen a sparrow dart from a neighboring tree or house, and grab the hopper, sometimes missing it at first, but following it in its flight, and finally catching it. We are very much troubled in our houses with the small "croton bug," and also the large black roach. Their increase is enormous in our climate, and it requires constant war to keep them down. My kitchen opens on the back yard, without step. Under my hydrant there is a bucket of water always standing, with running water for the dogs. This bucket is the central bathing and watering place for the sparrows from, judging from their numbers, a very large circle around. Once a month, or more, I am in the habit of thoroughly blowing a full quantity of the commercial insect powder in all cracks and crevices of kitchen, basements, outhouses, etc., to catch the young brood of roaches and rout out the new settlers. The croton bugs easily give up, but the large black roach, with his heavy mail, dies hard, and though in the end surely dies, will run for an hour after being well dosed before doing so. A great many of these roaches run out the kitchen door into the yard, and the sparrows seeing them, at once go for them. There is always one or more around the bucket, and the first roach is the signal for them to get together, and they clean out the last one, even going into the kitchen after them. They grab one, fly to a neighboring shed or wall, beat it to death, and either fly off with it or eat it on the spot. This is a regular occurrence whenever I rout out the roaches. Now, can't we improve the breed so that they will go into the house and clean out the pests where they live. Their bravery is the only redeeming trait they now have, in my opinion. Trained as roach destroyers, the Southern States would take them by the car-load. Who wants to go into the business? "There's millions in it." RUSSELL ROBINSON.

Richmond, Va., May 27, 1879.

EDITOR FOREST AND STREAM:

The Elizabeth, N. J., *Journal* says of sparrows and ants:

"On Elizabeth Avenue this morning there was an interesting meeting. A whole colony of ants had come up through a crevice in the flags, just in front of G. M. Lea's house, and thickly covered a space eight or ten inches square; some had wings and others had not, and they kept coming up thicker and thicker as if there were a whole army of them under the flag. A family of sparrows found them and commenced to pick them up one by one, but so rapidly that in a few minutes time they had cleaned away the ants, and departed thoroughly satisfied, having had one good square meal at least."

Being a resident there I inquired into this, and found it to be true. Last week one of the long-waisted hornets was on the window of my dressing-room, and I hit it with a brush and threw it out of the window on the roof of the piazza. Seeing it move, I watched to see if it would recover. A sparrow took it in hand and tore off the abdomen and swallowed it. The head and wings I recovered. I suppose the abdomen was full of eggs. I have had robbins, cat birds, wrens and blue birds in the wisterias and clematis over my piazza, and in the bushes around my house, for twelve years. I have not seen a quarrel or unpleasantness between any of them. E.

AND A TALE OF BAD ONES.

The following extracts from a letter to the Boston *Transcript* from the pen of the genial Mrs. Partington (B. P. Shillaber) is really too good to be lost, and we make no apology for reproducing it in this connection. Boston has always been the stronghold of the pro-sparrow party, but, as we know, opinions are divided even there:

The truculent character of the sparrow has long been admitted, and wherever the tragical fate of "Cock Robin" has become known the one that wrought the event has been deprecated. Yet, with all the malevolence of feeling awakened by the melancholy circumstance, we cannot help according to the perpetrator the merit of truthfulness, which does not usually belong to deep-dyed villainy. At the coroner's inquest he was present, and when the question was asked, 'Who killed Cock Robin?" there was no shrinking on his part. At the first interrogatory the reply came—

"'I,' said the sparrow;
'With my bow and arrow,
I killed Cock Robin.'"

As he was not arrested upon this admission, and no question made as to motive, we feel disposed to give him the benefit of a doubt, and deem that the homicide may have been committed in self-defence. Perhaps the indifference manifested at the inquest arose from the fact that those composing it were all friends of the strawberry and cherry raisers, who hold the robin a thief and a robber, and nothing better than a catbird.

I have been watching for some time this truculent peculiarity, and others which distinguish the sparrow, and herein give the result of my observation.

A martin house, with three tenements, graces my plantation—a little miniature cottage, with a piazza in front of it—painted prettily, and altogether as neat a residence for a genteel bird-family as could well be desired. The first season of its erection the martins seemed to think so, for they took early possession of it and reared interesting families there. The sparrows, from a small beginning, soon became numerous, and two years ago, after the martins had taken possession, a couple of the sparrows, male and female, came down to contest the occupancy of the desirable premises with them. The black-coated tenants were not so easily ousted, however. The grave and stately head of the martin family took his stand before his door, and when the graybacks came, noisily and violently disputing possession, he stood to receive them as the Quaker did on shipboard when the vessel was attacked by the pirates: too conscientious to fight, he took position by the side, and, as the pirates tried to climb up, he rapped them

on the head with an iron belaying pin, saying, "The captain says, friend, thee must not come on board." The black coat and white vest stood the brunt, and, after a vigorous resistance, the sparrows were repulsed. But when the martins were gone the sparrows returned and took possession of all three of the tenements. Many a fight was waged with them, however, by contestants of their own tribe for possession of the house. They were a plucky pair, and held the fort the whole of the ensuing winter, with an eye, probably, to being on hand early enough in the spring to meet the martins, the previous tenants.

In the meantime a house made from an old salt box had been placed upon the sheltered side of a neighbor's house, and another, a gay affair, elevated upon a pole near by, offering first-class inducements for the returning families. But these were no sooner erected than the two sparrows put in a claim for them, and divided their time among all the houses so well that applicant sparrows were soon silenced, and the pair stood ready to receive the martins, for whose benefit the houses were raised.

Upon the coming of the martins and swallows they found their former habitations occupied and defended and the new houses barred against them, as the truculent sparrows flew from one to the other, and drove them away. They seemed all the while to be busily engaged in building their nests in each house, picking up bits of fabric and carrying it in with a very honest seeming, revealing to us, who knew all about them, the most wicked hypocrisy. The other birds, too could probably see through the pretence, for they lighted on the clothes lines and trellises, holding angry expostulations with the sparrows, and at last, by a spirited movement, secured one of the smaller houses, and went on their own lay.

A neighbor, having a tree in front of his house, put upon it a neat little birdhouse, when, in five minutes after he had taken his ladder away the pair from off my premises had possession of it, and commenced picking up fragments and carrying them in as if for building a nest. They would go through these motions until they saw a sparrow or a swallow flying towards one of the other houses, and then they would leave to drive away the intruder, or one would leave, the other remaining, according to the amount of danger.

With all this business on hand, with lots of fighting to maintain their supremacy, I fancied that the stock of sparrows must diminish for that season; but, by and by, there were signs of young life in one department of the large house, and I watched to see the brood appear. The first appearance was a pound bird, all legs and eyes, minus feathers, thrown out ignominiously to die, and this was succeeded by the ejectment of two more from the nest, seeming to imply that, to maintain their belligerent status, they had no time to attend to the rearing of a family, and so took this summary way to dispose of their young.

After this, with nothing to retard their operations, they quarrelled with other birds through the summer, sustaining their pretentions to occupancy of the several houses with astonishing energy, and the air, daily, was full of strife. Some desperate battles were fought, and on one occasion, where a determined cock-sparrow had hung round thinking to catch the other off his guard, the latter "went for him." The battle began on the threshold of the house on the tree, near my window, and from this the intruder was driven to a twig, the length of my cane from me, where they both held on, pecking each other furiously and tearing off feathers until, both nearly exhausted, they fell to the sidewalk with their bills locked together, when, with a great effort, the tenant sparrow swung the intruder round and round three times by the bill, leaving him with just strength to escape, and the victor, to weak too fly, passed through an opening in a neighboring fence to recover himself before rejoining his mate, who had quietly watched the battle from her station above.

They maintained this warfare until far into the last winter, and seemed to rule the entire roost of sparrowdom as they came down around the door to gather crumbs, with their eyes ever about them to detect any intention of a raid on either of their homes. If they discovered any such intention they would leave the choicest crumbs and take their position on guard until the others, satisfied, had left, when they would come down to a poor repast. This, at last, wrought them disaster, for hunger made them bold, caution diminished, and one day a cat, making a call at the house, turned her attention to the sparrows, and, pouncing upon them, made off with the female.

The bereaved biped was very disconsolate. He would sit by the hour at the entrance of one of his tenements, and sing a little low song, or, at times, louder as if he deemed his absent mate might hear it. We looked for Valentine's Day, when, the tradition says, the birds choose their mates, but the day wrought no change in him, and he appeared morose and moody as he saw the letter carriers and boys running round below him circulating their valentines. His only relief seemed to be when he could get into a row with some predatory bird who dared to look at the coveted precinct which he guarded. One day, as he sat in disconsolate widowerhood at the door of his street domicile, there came a small female bird, evidently, and sat down beside him. He merely glanced at the new comer, and kept on with his melancholy chirp, while she went into the house, uninterrupted, and came out again without attracting his attention. Then another came on the other side of him, as the widows visited Tony Weller upon the demise of Mrs. W., the mourner, making no violent demonstration in opposition, but keeping on with his song. At last they all flew away—probably going to lunch in an adjacent yard. The next day a busy pair of sparrows occupied the house with "intentions to build" plainly manifest, the tenants running in and out with small articles of furniture, such as sticks and straws as actively as possible. The day after this the old warring commenced, other contestants taking the field; but the widower had disappeared, either merged in the new concern or gone altogether. The same rivalry regarding the other houses was renewed by the new firm, enough to show that it is according to the "nature to," of the whole sparrow tribe, and the probability is that the chances of the martins finding a footing when they come are, like most doubtful things, very uncertain.

B. P. S.

Chelsea, April, 1879.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING JUNE 28, 1879.—Two woodchucks, *Arctomys monax*; two hog nosed snakes, *Heterodon platyrhinos*; fifteen garter snakes, *Eutænia sirtalis*; one water snake, *Tropidonotus sipedon*; one red-tailed buzzard, *Buteo borealis*; one broad-winged buzzard, *Buteo pennsylvanicus*; one black snake, *Bascanion constrictor*; two bluebirds, *Sialia sialis*; two alligators, *Alligator mississippiensis*; all presented. three barn owls, *Strix flammea americana*, purchased. Ten opossums, *Didelphys virginiana*, and two peccaries, *Dicotyles tajacu*, born in garden.

The Kennel.

ROCHESTER DOG SHOW.

EDITOR FOREST AND STREAM:

Sir—I inclose you a copy of the prize list for the bench show which is to be held during the New York State Sportsmen's Convention at Rochester, on the 8th, 9th, 10th and 11th of July. The show will be entirely under my charge, and as the time is so short, I hope intending exhibitors will make early application for prize lists and entry blanks. The show will be held in one of the beautiful buildings in the Driving Park, where the shoot takes place; plenty of ventilation and excellent opportunities granted for exercising the dogs will be given. Entries close July 7. Mr. A. B. Lamberton, President of the N. Y. Sportsmen's Association, has kindly consented to act as judge of the sporting classes.

PRIZE LIST.

First Grand International Bench Show of Dogs, under the patronage of the New York State Sportsmen's Convention.

English Setters—Dogs—1st, $10; 2d, $5. Bitches—1st, $10; 2d, $5. Puppy—1st, $5.

Red, or Red and White Setters—Dogs—1st, $10; 2d, $5. Bitches—1st, $10, 2d, $5. Puppy—1st, $5.

Gordon Setters—Dogs—1st, $10; 2d, $5. Bitches—1st, $10; 2d, $5. Puppy—1st, $5.

Pointers—Dogs—1st, $10; 2d, $5. Bitches—1st, $10; 2d, $5. Puppy, under 12 mos—1st, $5.

Water Spaniels—Dogs or Bitches—1st, $10; 2d, $5.

Cocker Spaniels—Dogs or Bitches—1st, $10; 2d, $5.

Spaniels, other than Cockers or Water Spaniels—Dogs or Bitches—1st, $10; 2d, $5.

Foxhounds—Dogs or Bitches—1st, $10; 2d, $5.

Beagles—Dogs or Bitches—1st, $10; 2d, $5.

Dachshunde—Dogs or Bitches—1st, $10; 2d, $5.

Fox Terriers—Dogs or Bitches—1st, $10; 2d, $5.

Greyhounds—Dogs or Bitches—1st, $10; 2d, $5.

NON-SPORTING.

Shepherd or Collies—Dogs or Bitches—1st, $10; 2d, $5.

Mastiffs—Dogs or Bitches—1st, $5; 2d, medal.

St. Bernards—Dogs or Bitches—1st, $5; 2d, medal.

Newfoundlands—Dogs or Bitches—1st, $5; 2d, silver medal.

Bull Dogs—Dogs or Bitches—1st, $5; 2d, silver medal.

CHAS. LINCOLN, Supt.

Office, 34 Arcade, Rochester, N. Y.

ENGLISH FIELD TRIAL WINNERS OF 1879.

MR. G. Thorpe Bartram, a well-known English sportsman and breeder, contributes to our English contemporary, *The Country*, the following interesting description of the winners at the Field Trials here in England during the present year:

I will begin with Darkie, he being the most successful at the Spring Trials of 1879, having won the double event—the Aged Stake and the Club Cup and Stake. I shall not be saying too much of him when I state he ran a really good setter. When he competed in the Derby of 1878 I said he was the best setter puppy of his year—that is, for natural qualities, only he was not old enough to run out his trials, and before he went far in the Stake he fell all to pieces. Age has now developed all the rare qualities he then gave evidence of. He has not now such an airy gollop as he then displayed, seeming somewhat chest-foundered, but this may be only temporary. He goes a fairish pace, carries his head high, quite on a level with his back, and when he begins hunting, much higher than this. When on point his position is very fine, and he is equally good when backing. He appears very cautious in getting up to game, but when he comes on point he has great confidence in his nose, standing as stiff as a rail. He is as staunch as a rock, both before and behind, and quarters his ground very fairly, is independent in his ranging, and displays no jealousy—still, keeps a sharp look-out on the dog he is working with, as seen by his backing the instant his opponent gets on point. He is obedient to his worker, and appears well broken to work to hand. He keeps on hunting, and never potters about on ground scent, and is just such a dog as any one going out to kill game would have a pleasure in using; and it is a pity this cannot be said of all field trial dogs. But rushing about all over a field, and getting points just any how or where, has been too much rewarded; but we are now coming to a healthier state of affairs in this particular. Darkie is not much to look at—has an old appearance for his age. He is a lathy dog, that would indicate requiring great attention to keep together. Rhyl is his sire and Dolly his dam. I should say he takes much of his style from his dam. He is not so fast as his grandsire Ranger, and does not work anything like him in style, so I should think he inherits much of his excellence through his dam, as Major Platt's Di is also out of Dolly, and she is a very beautiful worker, and stands on point very nearly to the position of Darkie; and thus it would appear to me that to Dolly we must attribute a large share of Darkie's good qualities as a field trial setter. I do not think I know a setter that carries his head up higher than does this dog; even when he becomes worn down to a steady pace he holds up his head, and this no doubt assists him very much in making out his game. If intended to run in the future at field trials, his owner will do wisely not to kill too much game to him.* He will, if taken care of, be a worthy representative, even in a big stake. In the Alt-aged Stake he met "foemen worthy of his steel," and I feel quite sure all were glad to see such a good dog work his way to the front. Meanness of appearance and want of more pace are his negative points.

Count Wind'em, the winner of the first prize in the Setter Stake at Chester, comes next in order. He is a fine slashing dog, with lots of bone and substance; he has plenty of length, is well let down at chest, has a nice straight coat, and a beautiful head; his ears are well set and are carried nicely back on neck, which adds so much to the quality he exhibits in his head; he has a long graceful neck, finely set on at shoulders, good wide hips and muscular thighs, and this, with a rich colored eye and a profusion of feather, made up in appearance an A 1 setter. I know some strangely ugly animals have shown us what they can do at their work in the field, but still I maintain it should be the object of breeders to combine the beautiful with the useful, as is the case in Count Wind'em in a marked degree. The way this dog ran through the stake at Chester establishes his claim to be a good dog in the field. He evidently was not in form at Debden, but the field had been so disturbed in which he had his final trial that the defects then exhibited (false pointing) must not have too much importance attached to them. He has a long sweeping stride, carries his head well to wind, but, I think, a little too low; when at work he carries it much in the same way as the pointer Garnet. He displays a rare range of nose, quarters his game thoroughly well, and is well broken; he exhibits a nice kindly temper, so valuable in any sporting dog. His position on point is pretty but peculiar—he crouches down, and then raises his head and tail well up. He roads out his game in a most painstaking way, but the many French birds at Debden seem to somewhat puzzle him to make them out. It has of late been a rare thing to see a setter take first prize on show bench and at field trials, but this has occurred before in Ginx's Baby, but then he was, in my opinion, never a patch on Count Wind'em. This dog is from first-rate blood, being by Count Dick—Phantom; he illustrates to advantage the size and substance that can be produced by an out cross with the Laverack, and still succeed in another generation in obtaining the quality inherent in them.

Ranger, the winner of the second setter prize at Chester, although eight years old, goes a great pace, and he has had honors enough conferred on him long ago to have allowed him to go to his final resting place a renowned dog, and it would be unfair at his age to treat him as if now in his prime, so I will but repeat what I said of him three years ago—it is equally true of him now as then: "He quarters his ground in a reckless fashion (the result of his early training), and this senseless way of beating ground will, if a fair trial is allowed, always militate against him; he has great pace and has a good nose, and of his good backing there can be no question, but that he is not able to make out when he points whether game is before him or not few will gainsay. Whenever he winds scent he drops like a stone, and when down remains there until ordered on, whether game is there or not; he lacks the capacity to discover his error, and this is what takes so much from the performances of Ranger."

Rover, the winner of the first prize in the setter Puppy Stake at Chester, is a strong built lemon and white dog. He goes in very fair form, only carries his tail low, and he has a teapot stern. He is very nicely broken, and a dog of fair appearance, but does not exhibit very much quality. He no doubt won his laurels fair enough, and the secret of his success was the excellent way Mr. T. Armstrong had put him through his drill. When down with Fan he showed how well he could do his work as one of a brace when he knew the dog he was down with. He is a dog of good blood, and will be an excellent dog to shoot to, but will not, I think, ever take a leading position at field trials

To finish up the winning setters I must now mention Countess Rose she having won the cup as the best setter puppy in Derby Stake. Her color is lemon and white, is ticked all over body; she is a fine strapping grown puppy, has a beautiful long clean cut head, with plenty of length of body, straight limbs, and is full of bone. She has a nice stern with the semblance of a "kink" in it, and carries it very gaily. She has a good deep chest and it well ribbed up, and if she is lucky she will, I think, figure in many a show bench prize list; she goes in pretty form, carrying her head well up, exhibits a capital nose; indeed, she found eight brace of birds in three trials without flushing a bird. She stands on point in a very pretty style, and is staunch on hunting, and she never potters about; still, she seems very obedient, and is for natural qualities the best setter puppy that I have seen this year, and I consider they came out in strong force. I should say, if Mr. Llewellan considers the best interests of his kennel, he will not part with Countess Rose. I am not alone in my high opinion of this setter's merits, as that excellent judge, Mr. E. Armstrong, said to me that he considered her the cleverest puppy at finding game he ever saw at her age, she being only just 10 months. The way she spotted out her birds was a pretty sight, and she went up to her point with all the assurance of a second season dog, but of course it could not be expected at her age that she was thoroughly broke; it is my opinion she could have run through the stake with the greatest ease, but her breaker was rewarded for his courage in running such a youngster by winning the cup. This is twice in five years that dogs from this kennel have taken the highest setter prize in the Field Trial Derby, and I shall be much mistaken if this bitch, if she has luck in finishing her breaking, does not turn out a really first-rate performer.

Of the other setters that showed good form I may mention Countess Kate. She is a very nice goer, and seemed to have a good nose. She is a nice-looking bitch, and will well repay further trouble being bestowed on her breaking. What I dislike in her—and this also applies to Silken, is that she seems to die away in pace, rather quicker than the amount of work done by her would justify. Silken is a small bitch, and appears to have an excellent nose. She has a somewhat cramped and snatchy stride, but perhaps as she gets more confidence she will extend herself a bit more. She carries her tail badly, which much detracts from her appearance, but will be, no doubt, a very useful setter.

Flirt is a lively bitch, goes in pretty form, and has nice style; she has, I think, the makings of a very good setter. That is, as far as one can judge from two short trials. I like her style next best to Countess Rose, but between her and Countess Kate there is not much difference.

Countess Nellie has some excellent qualities, but at present she is only quite a raw puppy.

I will begin the pointer division with Viscount Downe's Jill. She is a good sized pointer bitch, has not very much pace, is very steady, both before and behind. She works lashing her stern in the old-fashioned style, which some sportsmen think so much of, but I see no use in it. She has a great drawback in not keeping her tail steady when on point, and you require to know her, or else you would think she was uncertain of her game; but this is not the case, as, when she comes on point, she is about the most reliable of any of the dogs I have seen from this kennel. She is a safe bitch to enter, but I do not consider at all a brilliant performer. She has done exceedingly well, having two years ago won the Horseheath, a twenty-one dog stake. She is thoroughly broken, and, although not fast, by her systematic ranging covers a good deal of ground, and makes good use of all the game she crosses in her range.

*Here we have the remarkable advice that if a dog is to be entered at future field trials it is best not to kill too much game to him. Is not this a commentary on the usefulness of field trials?—ED.

Rapid, Mr. J. H. Whitehouse's pointer, the winner of the first pointer prize in the Horsheath Stake, is a very fast dog, has an excellent nose, goes in splendid style, travels as level as a die. He is a fine backer, and, taking him all round, he is in the first rank of field trial performers. He is now six years old, but works as well as ever he did. He has won a lot of prizes, and has only by bad luck missed many more. He is by champion Chang out of Romp, and his dam once beat the celebrated Devon Bang. He came up to his work this year fit and well.

Riot, the pointer dog that was a winner in the Horseheath Stake, is a good-looking animal. He has won some prizes on the show bench, but will never rank A 1 in this respect. He is a lively goer, carries himself in nice form, has a long reaching stride, a good position on point, and is a pretty backer. He ran a good dog, and was in one trial declared beaten before he was scarcely slipped, and in another was hardly beaten. He seems a very reliable dog, and has been broken to quarter in a most satisfactory way. What he wants is a bit more pace to increase his chance of finding game, as the dog that can do this quickest at field trials often in doing it covers a multitude of faults. Riot is another Old Drake pointer, and as such he will always be regarded as a good dog to breed from. As an evidence of what he can do in the stock-getting line, I may instance that excellent puppy Sall, the winner of the second in the Derby Stake, and after this proof of what he can do, there is little doubt but he will have his chances of adding to his fame in this direction greatly increased.

Garnet, another winner in this stake, is an excellent dog, but it appears that he has not been quite kept up to his backing, as his failing to do so alone put him out. He is a very good dog, except the deficiency above pointed out. He is a big strapping pointer, goes a capital pace, is under excellent command, and in his breeding combines the best blood of Mr. G. Pilkington's well-known kennel. Garnet should prove a most successful stud dog.

Luck of Eden Hall, the winner of the Derby stake, is a lemon and white dog, by Drake and Sall. He is a rough-looking animal, but very few of Drake's stock are much in appearance. He has no very great pace, but keeps on working in a persevering way. He has been very well trained and is remarkably steady on his game. His position on point is good, and, taking him altogether, he is a very good puppy; still, I do not see anything great in him. He is a useful pointer, and combining as he does such first-class field trial blood, and this with coming out the first puppy of 1879, will make him a valuable dog. In looking at this dog we cannot help wishing that more attention is not paid in breeding field trial pointers, to combine good looks with their other qualities. The contrast between his appearance and his kennel companion, Bow Bells, is a very striking illustration of what I mean.

Mr. Barclay Field's Sall, the runner up with Luck, is a bitch that shows a lot of quality. She is of medium size, white with liver ears, and ticked about the body. She is a stylish bitch at work, very staunch and steady, and well broken for her age, though perhaps a little bit nervous. She had to do a lot of work to get to her position—more so than the absolute winner—and she did it well. She had a good turn of speed, and not until she had done enough to knock up any puppy, did she give evidence of distress, so that she may be fairly said to be a good stayer. If she had only done the same work as Luck when she went down in the final tie, I fully believe she would have turned the tables on him. In this we had an example of the necessity of making dogs run out their byes. She carries her head like game-finding, has a nice even action, and is very tractable. She exhibits a fair nose and is careful in making out her game, and, taking her all in all, her owner has just reason to be proud of her.

Puss, the winner of the Puppy Stake at Chester, is a nice bitch, goes in a level easy style, has plenty of pace, and seems to be able to do any amount of running without knocking up. She has a very good nose, is thoroughly well broken, and remarkably steady on game, ranges well, and leaves no ground unbeaten. She is by Lord Sefton's Sam out of Major Starkie's Kori; but of Kori I know nothing, only that she is said to have a good local pedigree. Sam is too well known by his produce to require any comment of mine to make his worth better understood.

Mr. Lloyd's Price's Tick, the winner of third at Chester, is the pointer puppy of the year. She is a grand goer, has a regular racing style of gallop, and has the most pace of any pointer puppy I have seen this year. The easy way she gets over her ground shows the fine formation of her chest and limbs. She continues to hunt at a clipping pace as often as she is called upon, showing no signs of distress. She ran throughout these trials at a great disadvantage, being in season, but as it was, she would, if not drawn, have, I believe, won the Derby Stake with more in hand than luck. She is a good size, liver and white, ticked. Being entered in an aged stake, her pace and endurance were fully tested, and the more I saw of her at work the better I liked her. She combines some excellent blood, and is a rare bitch to breed from, being by the champion Drake and Nimble Ninepence. She goes very much like her father, and seems to have a better nose than her mother. In this bitch Mr. Price has some return for his first outlay in purchasing Drake.

Of the puppies not winners, I may say Keswick is far away the best, indeed, I like her next, if not equal to Puss and Tick, and she is by the celebrated prize winner Faust. Mr. Arkwright's Tinkle is a sweet-looking bitch, but rather deficient in pace, and this applies to most of Bang's get; it is quite remarkable how this dog stamps his descendants with his fine form, but their failing, is general want of pace. No one can wish to see a more stylish bitch than Bow Bells. She goes in beautiful form, and is very grand on point, but her lack of pace will always be her great drawback. She is a fine specimen of a pointer, and does Mr. S. Price's Bang the utmost credit.

BAD BREATH IN DOGS.—A correspondent writes for a remedy for offensive breath with dogs, and desires to know also how the same can be prevented, remarking that all the dogs in his kennel have such offensive breaths that it is almost impossible to go near them. There are two prevalent causes of bad breath in dogs. First, defective teeth, caused by feeding hot or improper food, or allowing the dog to have access to the swill tub, the sourness or fermentation of which is almost sure to produce tartar. The result of defective teeth is to cause diseases of the mouth and digestive organs. Teeth regularly decayed should be extracted. When there is a thick coating of tartar they should be scaled or the accumulation if very hard removed with a dentist's file, after which they should be brushed with soap and water or a little tincture of myrrh. Should the gums have become swollen and sore, the following gargle will be found beneficial: Alumn, 10 grains; tinct. myrrh, ½ dram; acetic acid, ½ dram; water, 6 ounces. A little to be used twice a day. A constant supply of large bones and care in not feeding warm messes will generally preserve the teeth.

Another cause of offensive breath is the presence of intestinal worms, the presence of which can be detected by other symptoms, and proper steps taken for their expulsion. And here we might mention that we believe freshly ground areca nut to be by far the best agent in this difficulty, for anything but very young puppies. For the latter santonine in one or two grain doses is probably the best. The frequent cause of failure in the use of either of these remedies is the fact that they are not given when the dog is fasting. He should be starved at least twelve hours before they are administered, and the aperient which follows should be sufficiently powerful.

FINE POINTER PUPPIES.—The Westminster Kennel Club's imported lemon and white pointer bitch Pallas, by General Prim out of Queen, whelped last week seven puppies, sired by Sensation. The W. K. C. now has on hand quite a large number of puppies, one the get of Sensation, including five black and white and one lemon and white out of Whiskey, four liver and whites out of Gertie, and three liver and whites out of Daisy I., all of which they are offering at very low prices. The Secretary of the Club is Mr. R. C. Cornell, who has succeeded Dr. W. S. Webb, and his address is 206 Broadway, this city.

—Mr. N. Elmore, of Granby, Conn., claims the name of Bunnie for his black and tan, with white throat and breast, beagle bitch pup, whelped March 25, 1878, by Webb's Ranger out of Lady.

—On Tuesday, June 17, Mr. E. Orgill's champion pointer bitch Rose whelped to Snapshot seven pups—three dogs and four bitches, and on Wednesday, June 18, champion Romp whelped to champion Rush nine pups—eight dogs and one bitch. All the whelps are white with lemon markings on head and ears.

—Mr. W. A. Galloway's Killarny (Grouse-Frisk) whelped on June 21, six puppies—four bitches and two dogs, sired by Post's Prince (Maj-Belle).

—Mr. L. F. Whitman, of Detroit, has purchased of J. Johnson, M. D., Millington, Ont., the orange belton bitch Fly, bred from imported stock.

—J. N. Dodge has sold to J. Percival, Bay City, M., a brace of beagles—Ryan and Ruff—whelped March 20, out of Dodge's Rosy, by the imported basket beagle Ringwood. Mr. Dodge's imported Rose whelped eight on the 16th inst., five bitches and three dogs—four lemon and white, two white, and two white, black and tan—by Leicester. This is the same breeding as J. E. Long's Coin.

—Mr. L. F. Whitman has sold one of the Pat-Rattler litter to S. D. Miller, of Detroit.

BOSTON YACHT CLUB.

FIRST ANNUAL UNION REGATTA, JUNE 21.

WE are progressing. The family system of yachting, which confines the prizes of clubs to the small number of yachts comprising individual clubs, seems gradually to be giving way to the more liberal and stronger programme, in which all recognized yachts are allowed to enter for prizes of large value offered free to all who choose to go to the expense in time and money necessary to bring their racers to the line with fighting colors at the peak. So-called "union regattas," more properly and euphoniously denominated "open matches," are becoming more and more popular every year, and we imagine it will not be long before this style of holding matches will displace the family plan, the natural outcome of yacht-racing in the infancy of the sport when localism still runs high. In other words, sailing races are gradually being lifted from a mere show in Bungtown to events which interest and affect in their importance whole sections of the coast line. The tendency is in the right direction, and the Boston Y. C. is to be congratulated upon being the first among the larger clubs to follow the excellent example set by the Seawanhaka Y. C. of New York. When mere club regattas will be regarded as purely local affairs, more or less "off color," yachting will have entered upon a period of its existence far more in consonance with its best interests than at present.

The Boston Y. C. Union Regatta, sailed June 21, was managed by a committee which knew its business, and the prizes were the finest offered in that neighborhood.

First class, for sloops and schooners of 38 feet and upward; second, for centreboard and keel sloops, and schooners 26 feet and upward to 38 feet; third, for centreboard and keel yachts measuring 26 feet and under 26 feet; and fourth, for centreboard and keels measuring 16 and less than 20 feet.

Prizes Offered: First class—schooners, first a solid silver cup, and second a Richie's compass; sloops, first a solid silver cup, second a telescope. Second Class—For centreboard and keel sloops and schooners: first solid silver cup, and second cabin lamp—in all six prizes. Third Class—silver cup to first, pitcher and goblets to second, and silver vase and phosphorescent clock to the third—in all eight prizes. Fourth Class—Traveling clock to first, barometer to second, silver cigar cup to third, and boatswain's whistle to fourth. Courses: First class 23 miles, second 16 miles, and third and fourth 9 miles. No sharpies or catamarans allowed; each yacht to carry a number furnished by the club. No restrictions on sails, but each yacht to carry a member of the club to which she belongs, and courses to be sailed over inside of six hours. Measurement on water line and one-third of the overhang. Regatta Committee, Messrs. Thomas Dean, Chairman; J. A. Mitchell, George S. Rice, S. Lawrence French, and Frank A. Drew, Secretary.

The second gun from the committee steamer *Sprite* sent away the big schooners and sloops with a light wind from S. W., which increased to a brisk one as the day wore on. The start was from a line between two flag-boats moored between the committee's boat and Thompson's Island. *Adrienne*, the new schooner by Lawley & Son, got the best of the start, with Mr. Little's *Brenda* close in her wake. This schooner has had her spars cut down to reasonable proportions, and we are informed she does much better in consequence. As it was, in the light wind which blew during the first half of the race, the *Brenda* did remarkably well alongside of the smaller craft. In the words of our correspondent, "*Brenda* performed very well indeed, but only took second prize, on account of a very light wind two-thirds of the time, and the *Adrienne* being a light weather boat, receiving from *Brenda* some 25m. time, it was impossible to reel it all off over such a short course (23 miles). As she gained 9m. in two miles and a half after it commenced to blow, it is plain who would have won in a breeze or over longer water."

In getting clear, *Nautilus* fouled her ground tackle, and could not slip away in time, but started, with the rest far ahead, off Spectacle Island. After rounding the Whistling Buoy outside, the wind fell flat, and all hands were left in the doldrums. When finally the breeze picked up there turned out to be plenty of it, and moreover the lee vessels suddenly came out plump to windward, and all former calculations went for naught. *Thistle*, after rounding the Hardings, carried away topmast backstay, and for want of spare gear or good seamanship, ran home under jib and mainsail only. *Elfin* snapped her topmast off short, and brought the wreck aloft home with her instead of clearing away. *Viking*, one of Lawlor's peculiar models, got a bad start, but picked up in her class, and landed a first for her plucky skipper, Mr. W. H. Gorman. Among the smaller yachts, *Eugenia* gave up after parting some gear, and *Muriel* turned turtle while jibing around Sculpin Ledge Buoy. *Thisbe* did well all day, and *Posy* lost her chances by generously going to the rescue of *Muriel's* drenched crew. The racing finished as under.

REGINA-VIXEN MATCH.

NEW YORK Y. C. COURSE—JUNE 24.

FOR the third time this spring the two crack sloops, *Regina*, Mr. W. A. W. Stewart, and *Vixen*, Mr. Frank Lawrence, both of New York, met June 24 to sail a match for the Bennett Challenge Cup for sloops. The cup was won by *Vixen* last year, and, as the result of the day proved, Mr. Lawrence needs to come to the line only once more to obtain permanent possession of the prize. In ordinary weather, bar accidents, we should say that *Vixen* has a "sure thing" of it, for there is probably no yacht in America equal to her in turning to windward or running with a quartering breeze in light weather, though in a rough-and-tumble, or with boom squared away, *Regina* would probably get away with her. It is unfortunate that in a match between vessels so nearly equal as these two, the race should have been virtually lost and won even before it was sailed, and that through some of the most short-sighted jockeying we have witnessed for a long time. Had Corinthians been at the wheel, at least some we know of, we question very much whether *Regina* would have committed one blunder she did, especially in view of the fact that owing to poor tooling aboard *Vixen*, the former might with a little discernment have handicapped her rival heavily at the start. As it was, matters turned out the other way and *Vixen* was picked out a winner by the knowing ones when she went across the line. The seamanship subsequently displayed aboard both sloops was fortunately such as to redeem the good name of their professional skippers, barring the fact that at the outset *Regina* was sailed too fine and had her boom fore and aft with as flat a mainsail as ever set, and a topsail which could not be sheeted home sufficiently to make it stand owing to its being cut without roach on the foot. *Regina* had besides, erroneously we think, shifted to a single jib, and, what is more, she went into a close match with her jib stay hanging in a bight. We are aware that authority from the oyster smack has a wonderful *penchant* for the smack's rig, but the intelligent yachtsman should not permit himself to be overridden by the antiquated hobbies of persons who have never seen anything else, and who only know what they have been brought up to twenty-five years ago. It is time that owners not only did the thinking, but also put their ideas into practice. The tug *Cyclops* went around the course with the judges and a few select guests on board, and all the arrangements were perfect in every way.

The wind was light, about S. at the start, but continued freshening until it reached whole sail strength. Tide, last of the flood. After towing *Regina* up to the line, both sloops stood off and on, manœuvering for a good position. They succeeded in this most lamentably, for *Vixen* went over to the Long Island shore, got out of the breeze and was somewhat at the mercy of the tide. When the third whistle, at 12:35, announced the expiration of the ten minutes allowed for crossing, *Vixen* was way off to the E. in light flaws and *Regina* might have made for the line with a handsome lead, but some one had frightened her into the old Bourbon idea of "sticking to your neighbor," and so after *Vixen* she went, and in trying for the latter's weather, got left astern, while *Vixen* slipped away, and hauled across the line at 12h. 35m. 47s., less than a minute after the last signal. *Regina* followed suit at 12h. 37m. 22s., handicapped to the extent of 2m. and 22s. against *Vixen's* 47s. Add to this the time of 43s. the latter takes from Mr. Stewart under the N. Y. Y. C. rules, and *Regina* commenced the race with a load of 2m 18s. to work off—not a nice prospect in the moderate weather in store. Both yachts had plain lower with club topsails for the turn down the Southwest Spit. A few boards took them out into the lower bay. Off Hoffman Island *Regina* sent her club on deck and set jib-header, the club not sitting as it ought, owing to bad cut. Both worked the West Bank, with *Vixen* getting away more and more. Mr. Stewart's sloop, with skipper Cooley at the spokes, was the first to stand over for Coney Island sand, with the hope of fetching more of the ebb, which had begun to run, a move soon followed by *Vixen*. After another board to the E., both laid a course for the buoy, *Vixen* dousing big topsail on the way down. The Spit was hauled around by the latter at 2h. 18m. and *Regina* at 2h. 23m. 18s. The Keyport beauty went into the wind for an extra swigg-off all round, preparatory to the pinch for the lightship outside. After weathering Buoy 5½ off the Hook, both set club topsails again, the wind being found sufficiently free. Rails were awash, and a rapid run was made to the outer mark, which was rounded in fine style by *Vixen* at 3h. 26m. 11s.; *Regina* at 3h. 30m. 55s. The former hoisted balloon jib topsail in stops while in stays, broke and sheeted aft almost simultaneously, lowered jib and went away home rejoicing without the loss of a second. *Regina* followed similar tactics, but held on to her jib, and seeming to gain on the leader, the latter again hoisted jib and rigged a peculiar "spreader" in the bunt of her balloon—a pole running from the stay to a rope span across from foot to leech near the clew. Once inside the Hook, *Vixen's* light canvas was handed and small jib topsails set, the wind having gone around again more to the S., but *Regina* stuck to her kites. The Buoy 10 on the Spit was jibed around by *Vixen* at 3h. 39m., and by *Regina* at 3h. 43m. 58s. With the wind dead aft, slight hopes were entertained for the narrower sloop, but the distance was too short to close the gap of over four minutes, though *Regina* did run up on her rival in a manner that plainly showed who was best with a cabin window gale; and had the course been a few miles longer, she would have made it a question of seconds instead of minutes. Booms to port, and balloon headsails whiskered wing and wing, both sloops ran home without further incident, the match finishing at Buoy 15, West Bank, as under:

Name.	Owner.	Cubic ft.	Builder.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Vixen	F C Lawrence	1818	Albertson Bro.	5 12 24	5 11 45
Regina	W A W Stewart	1875	Wm Force	5 15 08	5 15 08

The above times are taken from the expiration of the 10m. period allowed for the start. The real times, exhibiting the actual performances of the yachts, are as follows:

Name.	Start. H. M. S.	Finish. H. M. S.	Sailing Time. H. M. S.	Corrected Time. H. M. S.
Vixen	12 35 47	5 47 23	5 11 41	5 10 58
Regina	12 37 42	5 50 08	5 12 26	5 12 26

By official time *Vixen* takes the cup by 3m. 23s.; she outsails *Regina* by 1m. 28s., excluding handicaps.

YACHTING NEWS.

BEVERLY YACHT CLUB—*Editor Forest and Stream:* The forty-fourth regatta of the Beverly Yacht Club, held at Nahant, June 14, was a great success. It was a new departure for the club to have a race so early in the season, the first race usually being placed about July 6. This year, however, the regatta committee decided to hold a special regatta in June, and invite the yachts of Dorchester Club to take part. The day opened clear and pleasant, with a good W.S.W. wind, which kept increasing in force, till at 12 M.—the starting time—it was blowing quite hard, with frequent severe puffs. The judges, Messrs. Sam'l Hammond, J. G. Minot and A. Johnson, were established on the sloop *Laxen*, and fired the preparatory gun punctually at 12. The course for the first class was round the Fog Buoy, on the Graves, then round Buoy No. 2, off Winthrop Head, and return, 10½ miles, the distance from the Fog Buoy to No. 2 being a dead beat. Course for third class, leaving Buoy No. 2 on the port hand and return—7 miles. The first half of this course was made in one long and a couple of short tacks. The course for second class was announced as the same as that for the third, but the owners of some of the boats desiring more of a beat, it was arranged by mutual consent to sail the first class course. Guns for the several classes were fired at intervals of five minutes, and the boats got off in the following order, all but *Œnone* and *Fairy* hailing from the Beverly Y. C., the Dorchester Y. C. being represented by the boats named above. The first class boats were sloops, those of the other classes cats, and *Fairy* and *Volante* were the only keels in the race.

One other boat started in the second class, but as she arrived late, and returned direct from the Fog Buoy, her name is not given. *Hebe*, B. Y. C., and *Dream*, D. Y. C., of this class, arrived too late to start. In the first class light sails were allowed, and jib and gaff topsails were in order on the first and last sides of the course; but going to windward, two sails were all that any of them wanted, and even then they had plenty of wind in the puffs. The race between *Muriel*, *Fanchon* and *Œnone* was looked forward to with interest, as they are all fast. *Fanchon*, however, completely distanced her competitors, and landed the first prize, while the other two had a close struggle for second prize, *Œnone* making best time, but being beaten with allowance by *Muriel*. The race in the second class was, however, the most exciting. Very rarely are four boats of equal reputation brought together for the first time. For two or three years previous to '78, the *Peri*, in the hands of Mr. Sidney Burgess and her present owner, Vice-Com. Lee, stood at the head of her class in these waters. She is one of Herreshoff's best boats. *Fancy* was built last season by Pierce Bros., and carried off nearly all the prizes in her class, but had never met *Peri*, as the latter was not in commission last season. *Josie* was built last autumn by Smith, and was one of the few boats that beat *Fancy*, winning the D. Y. C. cat-boat race and coming in first in sweepstakes at Nahant. *Holden* is a new Pierce boat, this being her first race. The result was very close between *Holden* and *Fancy*, *Holden's* actual time being 38s. better than *Fancy's*. She, however, has never been measured, and until she is, it is doubtful which boat gets the first prize. Her builder's measurement is 19.10; if this is correct, she wins by 14s. She was entered provisionally as 20ft.; it this is correct, *Fancy* wins. The chances are in favor of the latter. *Josie* was overpowered by the strong wind and head sea, and *Peri* seemed unable to hold her own. All carried whole sail, but had all they wanted. In the third class the *Gladys* is a new Pierce boat, this being her first race. *Psyche* and *Mirage*, also built by Pierce, were new last season, and both had excellent records, *Mirage*, in the hands of Mr. Burgess, winning easily in every race but one, where she started, and even beating the second class, *Psyche* being second only to *Mirage*. To-day *Psyche* had the race from the start, outsailing the others with ease. *Mirage* would have done better with a reef in; she seemed afraid to carry her sail full, and after being badly beaten by the other three, gave up the race. At first *Bluebell* and *Gladys* had it nip and tuck, but as the sea increased, the latter rode more easily than her competitor, and soon made sure of the second place. Prizes were in each class—1st, a telescope; 2d, a silver medal. Following are the actual and corrected times:

FIRST CLASS.

Name.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Fanchon	Arthur Burgess	28 3	2 13 59	2 12 39
Œnone	S F Freeman	26 4	2 28 58	2 25 20
Muriel	C G Weld	21 5	2 30 05	2 20 42
Fairy	C A Perkins	23 4	2 35 45	2 23 40
Volante	Geo S Rice	21 9	Drew out.	

SECOND CLASS.

Holden	S W Burgess	20 (?)	2 23 44	2 17 11 ?
Fancy	P Grant, jr	19 5	2 29 22	2 17 05
Peri	Geo Lee	18 6	2 35 47	2 21 49
Josie	C H Minot, jr	17 6	2 43 49	2 34 04
Mona	H B Richardson	18 0	Drew out.	

THIRD CLASS.

Psyche	R D Sears	17 0	1 33 17	1 22 01
Gladys	S D Warren, jr	15 6	1 33 07	1 24 48
Bluebell	W Lloyd Jeffries	16 6	1 33 16	1 26 23
Mirage	H P Sears	17 0	Drew out.	

Large numbers of yachts were present watching the race, including the flagship *Foam*, the schooners *Brenda* and *Rebecca*, and the sloops *Madeap* and *Alice* of the E. Y. C., and the schooner *Bonie* and sloops *Clyde* and *Kitty* of the Beverly Y. C. Above lengths are taken on water-line.

REEF POINT.

EASTERN YACHT CLUB.—The squadron of the Eastern Y. C. is now returning from a lengthy cruise around the Cape to Sound waters, after having witnessed the Harvard-Yale University Race at New London. The fleet left Manchester, Mass., June 21, and included a large number of yachts, among others the schooners *Foam*, Com. Boardman; *Meta*, Mr. Dexter; *Tarolinta*, Mr. Montgomery Sears; *Romance*, Mr. C. W. Amory; *Latona*, Mr. Dudley Pickman; *Halcyon*, Mr. Hayne; *Dawn*, Mr. W. B. Merrill; *Magic*, Mr. C. V. Whitten, and the cutter *Enterprise*, Mr. Frank E. Peabody.

HAVERHILL YACHT CLUB.—The first regatta of the season was sailed by the Haverhill Yacht Club Saturday, June 21, at 1:45 P. M. As only one boat of the second class and one of the third were ready to enter for the race, both *Linnie May* and *Vixen* sailed with the first class. The day was very pleasant, with a fair breeze from the S. W. The yachts got away in close order at the signal gun from the judges, with the wind a little forward of abeam. There was a little tooling by the various skippers whenever a chance afforded, but nothing of note occurred in that direction. Soon after turning the buoy at Groveland Bridge, the yachts *Pinafore* and *Linnie May* collided, the latter boat striking *Pinafore* just aft the stern, making an ugly cut. Being a case of misunderstanding, it was not clear which boat was to blame, so no claim of fowl was entered. The result is given below:

Name.	Owner.	Corrected Time. H. M. S.
Empress	C T Paul	1 10 48
Abbie M	F Harris	1 11 20
Emma L	Tuxbury & Heath	1 17 21
Linnie May	A L Reed	1 26 57
Twilight	J Meadowcroft	1 27 10
Vixen	E F Brown	1 34 42
Pinafore	G W Simonds	1 37 21

The annual cruise has been appointed for the Fourth of July, the trip to take up three or four days along the shores of Cape Ann, Salem, and points thereabouts.

WEATHER HELM.

JERSEY CITY YACHT CLUB.—The twenty-first annual regatta of this club was sailed, June 17, in a whole sail breeze from due N.W. Course for first and second class, from line between judges' and stakeboats off Bedloe's Island, to Buoy 8½, on Southwest Spit, turning it on port hand, and home, keeping to the eastward of Bedloe's Island each way. For third and fourth classes, from club house, foot of New Jersey Avenue, passing between Ellis and Bedloe's Island to Buoy 17, off Robin's Reef, turning on port hand, and return same course. Sail twice over; time allowance, 2m. to the foot, one-half of overhang included in length measurement. Flying start, single gun. Judges—Messrs. John A. Hilton, Wm. Clarke and Wm. Hughes. In spite of the printed sailing directions a couple of skippers, who either cannot read or else do not know starboard from port, had to round some of the marks just the wrong way, in one case losing first money by their stupidity. As the wind was, quick time was made, for there was no beating to do, except on the short stretch from the islands up to the club house. *Intrepid* took a bad knockdown before starting, but finally came out of it right side up. She was well handled during the match by "Bob" Williams. The big ones went down through the Narrows for the Spit outside with booms to port, and the little ones hauled around Bedloe's Island for the lower mark. It was all plain sailing, a few of the fleet tacking around Robin's Reef, most, however, jibing with a regular "thud," as booms fetched up on lee quarter. On the return some close shaving was done in the work from Bedloe's up to the club house, and the second round was a repetition of the first. *Willie* got around first, and *Jessie Payne* lost the race in her class by rounding the wrong way, as subsequent events showed, for on the second round she outfooted *Willie*. There was some lively rolling done, and booms dipped as the fleet flew before the wind to the passage through the islands on the second round. *Alice* wisely had hauled a reef down, and was none the worse for it. In the meantime the cabin yachts had a fine run with a free wind, down to the spit, then home on the port tack, making the line without any beating and bringing the flood up with them. The result is appended:

FIRST CLASS—CABIN SLOOPS.

Name.	Owner.	Corrected Time. H. M. S.
Linda	Vice-Com A P Ball	3 48 15
Pilgrim	E H Washburn	3 52 30
Intrepid	M Merritt	3 59 00
Mary	C E Gardner	4 30 00
Mignon	C W Reames	4 54 50
Minnie T.	H C Roome	

SECOND CLASS (Open yachts over 25ft).

Knight Templar	R Donshea	4 11 10

THIRD CLASS (Open yachts under 25ft).

Willie	M Lampson	2 23 57½
Jessie Payne	F Payne	Disq'ned
Jessie G	G N Weston	2 31 45
Bijou	H Van Dyke	2 32 12
Anna Bell	Com J A Nugent	

FOURTH CLASS (Open yachts under 20ft).

Annie Forsyth	A Forsyth	2 40 30
Alice	C D P Gibson	2 46 07½
Edna	J S Meltzer	
Alert	H A Greene	
Huldah	E Zeigler	

LONG ISLAND YACHT CLUB.—This club, with headquarters at Frank Bates, South Brooklyn, sailed their annual match June 24, a date which unfortunately conflicted with that of the *Vixen-Regina* match, and consequently scant justice has been done by the press to an event which brought a fine list of entries to the line. Course, triangular, from stakeboat off foot of Thirty-seventh street, So. Brooklyn, to Buoy off Robins Reef, passing to westward, thence to and around Fort Lafayette and return home, twice over; distance, 20 miles. The first class cabin sloops to start from same point to and around Southwest Spit and home. Wind fresh from S.S.E., hauling more to S. all day; tide on the ebb. It was a sure case for the *Elephant* among the big ones, and readers of these columns know the reason why. We had expected much from a craft of her displacement, especially in a breeze and little sea, but she surpassed even the most sanguine estimates, in the manner in which she got away from all the rest. There was lots of wind, too much for some of the clothes-pin rigs aloft, and so topmasts came down all around without the trouble of unfidding. *Rowan* jumped her masthead off, *Reveille* and *Lotos* lost topmasts, and *Louisa B.* carried away backstays and gave up. Evidently a little more and a little better stuff in spars and gear is badly wanted among the fleet. The sailing time was as below:

FIRST CLASS CABIN SLOOP.

Name.	Owner.	Corrected time. H.	M.	S.
Elephant	John G Prague	4	33	50
Sophia	R Bush	5	27	10

SECOND CLASS CABIN SLOOPS.

NEW JERSEY YACHT CLUB.—Owing to the lack of wind

the eighth annual regatta of this club was not brought to a close. It will be resailed at a future date.

PHILADELPHIA YACHT CLUB.—The seventh annual regatta of this club was sailed June 16, from Shackamaxon street wharf to Delanco Buoy and return, a course of over twenty miles. The boats of this club are divided into three classes, as follows: First Class—*Willie Kleinz*, *George Hoff*, *Kate Baisly*, *Thos. Pratt*, *Geo. F. Smith*, *Entwistle*, *Anna*, *McCormick*, *Mary A. Black*, *Snyder*, *Ashton* and *Nettie*. Second Class—*Riddell*, *Clara*, *Feary*, *Chas. Abel*, *Mulville*, *Martin*, *Curren*, *Leary*, *Geo. Lewis Gilbert* and *Enchantress*. Third class—*Moore*, *Josephine*, *Flick*, *Disston*, *Thacher*, *Geneva*, *Jones*, *McCully*, *Austin*, *Schulyer*, *Hildebrant*, *Allen*, *Ulmer*, *Bickley*, *Rusk*, *Crawford*, *Nugent*, *Burdge*, *Leatherbury* and *Thos. H. Martin*. At 10:30 A. M., the third class boats were started with a spanking breeze from southwest. At 10:45 the second class boats got away, and, fifteen minutes later, off flew those of the first class, and in a few minutes the entire river, as far as the eye could see to the northward, was dotted with the white sails of these beautiful little crafts. At Five-mile Point the *Kleinz* led the fleet of her class. At Bridesburg the *Black* upset, and at Tacony the *Nugent* followed suit. Off the House of Correction the *Hoff* carried away her throat halliards and gave up the race. The *Kleinz* rounded Delanco Buoy at 12:25, and the *Entwistle*, 12:28; *Ashton*, 12:29; *Baisley*, 12:29½. The run down was made against a heavy head wind and strong flood tide; the sea in many instances breaking entirely over the boats and half filling them, and it required the utmost exertions to keep them from swamping.

The *Kleinz* (the old Smoky Hollow champion) passed the home stake-boat first, at 2:37; the *Anna*, 2:43. The *Entwistle* upset a few yards from the stake-boat, and the *Ashton* came in third. Of the second class boats, the *Enchantress* came in first at 2:35; *Abel*, 2:42. Third class, *Crawford*, 2:17; *Flick*, 2:18½. The judges were Wm. Kirk, Chris. Ulmer and Amos Jones. The prizes were a silver pitcher and silver cake and fruit basket combined, to the first and second boats of each class.

CHESTER (PA.) REGATTA.—This regatta, sailed from Chester June 16, was most successful. There were five classes of of boats, as follows: First Class—Cabin yachts over 30 feet long—*Comet*, *Peter Lane, Jr.*, *Clara*, *Selene* and *Minerva*, of Philadelphia, and *White Wing* (Com. Klotz's boat), of Chester. Second Class—Cabin yachts under 30 feet—*Gallagher*, *Stella* and *Quay*. Third class—Open yachts—*Camden*, *Bianca* and *Sappho*. The above all belong to the Quaker City Club, and participated in the annual regatta of the club on the 12th. Fourth class—Fishing skiffs—*Bertie and Sallie*, *Euterpe*, *Sallie and Annie*, *Maggie*, *Vixen*, *Foam*, *Melissa*, *Emma C.* and *Bella D. King*. Fifth Class—Free to all—*Pioneer*, *Nautilus*, *Rebecca*, *Mignon*, *Lula* and *Æolus*. This fleet had all the wind they required, and bowled over the course from Edgemont avenue pier, Chester, to a buoy off Cherry Island flats, and return, a distance of about thirty miles. The boats got away at 11:45. The first prize for first class boats, champion flag, was won by the *Minerva*; time, 3:19. Second prize by the *White Wing*, 3:26. The *Clara* and *Comet* coming in at 3:31. Second Class—*Stella*, 3:38; *Gallagher*, 3:40 Third Class—*Bianca*, 3:59; *Camden*, 4:01; *Sappho*, 4:05. Fourth Class—*Vixen*, 3:37½; *Emma*, 3:41; *Foam*, 3:42¼. Fifth Class—*Nautilus*, 3:53; *Æolus*, 4:15. The first prize for each class was champion flag; second prize, anchor, marine glass or rigging lamp. The judges were I. J. Amies, of Chester, and William Post and John McCaulley of Philadelphia.

SEAWANHAKA YACHT CLUB.—Coston night signals have been adopted. Club lights will be red and blue lights in succession.

NEWBURYPORT YACHT CLUB.—The second annual regatta of this club was sailed June 17 in a fresh breeze from the N. All went away with booms to starboard, the run out and home being with sheets lifted. *Videtle* rounded the seaward mark first, but sprung her board and lost her chances. *Clytie*, Com. Thompson's new craft, got away with all in her class and in the third. The *Blanche* was sailed by Mr. Lewis A. Horton, a gentleman who has lost both arms in the service of his country. In this class *Keturah* had things her own way. A hop in the evening brought matters to a pleasant close. We append our correspondent's summary, with the lengths given on water line:

FIRST CLASS.

Name.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Correct Time. H. M. S.
Dauntless	T H Boardman	22 1	2 01 49	1 58 31

Gem	J H Worthen	19 6	1 21 20	1 21 20
Nell	C W Cooke	16 7½	1 25 55	1 23 22

CHICAGO YACHT CLUB.—The annual regatta of the Chicago Y. C. was sailed June 14. The management of the match does not seem to be of the best, but allowance must be made for inexperience. There were no entries in the first class, and the expectation of close work between *Grayhound* and *Cora* were not fulfilled. Courses for the four classes, fifteen, twelve, nine and six miles out into the lake and return, leaving stake-boat on port hand. It was a beat out to the weather mark, and a free wind from the northwest home. *Ina* and *Frolic* made a long stretch alongshore to the southward and failed to find the wind. The little fellows made short boards out into the Lake and gradually worked into a nice wholesome breeze to their advantage. The two big sloops made a very close race all the way out, *Frolic* finally planting herself on the weather of McGiehan's famous model and rounding the mark with a lead of 1m. 50s. *Ina* made a close turn but was slower setting her light duds for the run home with lifted sheets. After a very exciting stern chase the two big ones fetched in as follows: *Ina*, 5h. 4m. 20s., and *Frolic*, 5h. 4m. 50s., making their actual sailing times, 3h. 37m. 11s. and 3h. 37m. 32s. respectively. *Ina* allows *Frolic* 1m. 45s., therefore the latter wins first prize, $50, by 1m. 24s., and *Ina* pockets second, $25. Of the third class yachts, *Perie* rounded the stake first with *Goodenough*, *Little Buttercup* and *Zephyr* close aboard, this order being maintained on the run down the wind. *Peri* takes first prize and *Goodenough* second, valued at $40 and $20. In the fourth class the judges declared no race, only one boat making the course. As a matter of course, one yacht, which acted as stake-boat, ignominiously capsized. A race in American waters without some such evidence of the deplorable condition of yacht modeling in our country is becoming the exception.

HAVRE (FRANCE) INTERNATIONAL MATCH.—The *Societe des Regates du Havre* will sail their annual international matches off Havre, July 7; course about 30 miles. No American yachts have been entered according to our latest advices, and so the prizes among the larger classes will probably all go across to fill British lockers with ample plate and British hearts with national pride. It is just possible that *Sappho* under the Italian ensign of Prince Sciarra may be found at the line, for she has been out on the ways at Cowes for an overhauling.

COLUMBIA YACHT CLUB.—The twelfth annual regatta of this thriving Corinthian club was sailed June 23 over the new triangular course visible from club house, as announced before in these columns. Course to be sailed three times over, distance 15 miles; corinthian rules in force. Wind light and variable from S. W. till latter part of race. During the match *Spray*, *Rambler*, *Katie* and *Vida* gave up, and after a pleasant but uneventful race the finish was made as under.

CLASS A—CABIN SLOOPS.

Name.	Owner.	Length. FT. IN.	Sailing Time. H. M. S.	Corrected Time. H. M. S.

Kate	W H Rowe	20 6		
Vida	Friedrichs & Graham	20 0		

ATLANTIC YACHT CLUB.—Quite a fleet of this club has been cruising East during the past fortnight, partly with the intention of being present at the great 'Varsity Race at New London, and partly for the purpose of meeting the Eastern yachts during their stay in the Sound. There were nearly a hundred yachts of all kinds collected in New London waters, from the big schooners of the E. Y. C. down to the small cabin craft of local celebrity only. A conference between the yachts of the Atlantic Y. C. and those of the Eastern Y. C. brought about a race on July 28, from New London to Greenport, which proved quite an interesting affair. Following conditions agreed to: Course, from Pequot House dock, New London, to stake-boat of Manhasset House, Shelter Island, harbor of Greenport. Start, flying, first gun at 10 A. M., and second gun the signal for starting; ten minutes later the time of each yacht to be taken as it passes the imaginary line, and any yacht not crossing within fifteen minutes after the second gun to be handicapped. Anchors, chains and boats to be in their usual places. Schooners to use working sails only, including main-topmast staysails; sloops to use their regular working sails. The entrance fee to be $15 for schooners and $5 for sloops. The winner in each class to be awarded the sweepstakes. First class schooners, 80ft. and over on the water line; second class schooners, under 80ft.; first class sloops, 55ft. and over, and second class sloops, under 55ft. Time allowance to be based on the Eastern Yacht Club measurement.

Wind light and baffling from S. W. until near the end of the course, when the racers ran into a fresh sou'wester and got all they wanted. *Intrepid* did exceedingly well, out-sailing the whole pack, centre-boards and all, until near the finish in Gardiner's Bay, where her bowsprit went short aft at the stem. So much for carrying a jib out to bowsprit end on so large a craft instead of reeving off a forestay. But for this accident *Intrepid* would have scored a great victory, more particularly considering the light weather during the greater part of the day. The cutter *Enterprise* showed some fine sailing, and though she parted peak halliards, scored a good second, with only *Winsome* ahead of her on time, and a fleet of centre-boards in her wake. Such performances must surely astonish some of the Bourbons, who think nothing can sail that has not a fin amidships. The old *Phantom* showed the stuff she has in her landing for her new owner a first prize, with time to spare. If Mr. Hovey will only rebuild *Phantom* on her present lines, for we understand she is badly rotten, he will have one of the fastest fair weather schooners ever built. *Peerless* ripped her jib and was thereby thrown out near the finish, but she did enough alongside of the Boston schooners to show that she is fast even when sailing with other than her usual customers in New York harbor. Entries as follows:

FIRST CLASS SCHOONERS.

Name	Owner.	Club.	Length W. L—Ft.
Foam	Com Boardman	Eastern	79.10
Intrepid	Lloyd Phœnix	Eastern	100.92
Atalanta	Wm R Vermilye	Atlantic	84.35
Phantom	Rear Com Hovey	Eastern	87.54
SECOND CLASS SCHOONERS.			
Agnes	Com Fish	Atlantic	65.25
Azalea	John M Forbes	Eastern	60.60
Peerless	J R Maxwell	Atlantic	....
SLOOPS.			
Winsome	Rear Com Norton	Atlantic	41 app.
Enterprise	F E Peabody	Eastern	43 app.
Regina	F M Hall	Atlantic	44 app.
Schemer	C P Underhill	Atlantic	37.17
Nimbus	L H Biglow	Atlantic	33 08

The time calculated upon water line measurement made *Intrepid* allow *Atalanta* 4m. 26s., allows *Phantom* 4m. 39s., and *Foam* 6m. 47s. Of the second class schooners *Peerless* allowed *Azalea* 3m. 27s., and *Agnes* 7m. 10s. Of sloops, *Regina* allowed *Enterprise* 3m. 2s., allowed *Winsome* 4m 50s., allowed *Schemer* 9m. 11s., and *Nimbus* 14m. 6s. The tug *Wellington* was chartered to go over the course and act as judges' boat. *Intrepid* got a late start, owing to fouling the sloop *Romance*, but caught the fleet in fine style. Once out of the harbor, the fleet cast in all directions in obedience to the variable wind and in search of luck. *Peerless*, *Atalanta* and *Azalea* went south after more wind, and were consequently left to leeward when the S.W. blow came on. Rails were put in, and a slashing breeze sent all through the Gut, with *Intrepid* in the lead, *Phantom*, *Foam* and *Agnes* following. Off the fish houses on Long Beach *Intrepid* carried away her bowsprit, and had to anchor to clear the wreck, after which she was towed up the harbor. *Enterprise* parted peak halliards, and thus lost the race to *Winsome*. The *Regina* and *Winsome* lost a man each, but managed to pick them up again. Sloops are rough on their crews in a snappish sea, and life lines should be rove off around the quarter. *Winsome* also took a knock-down, another awkward peculiarity of our river models, but she fortunately came out of it, masthead up. Fine boats to go to sea in! Yet there are individuals who maintain that our frying-pans are the best attainable in the way of yacht design! The summary is appended:

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Intrepid	10 44 00	Disabled.		
Atalanta	10 33 00	3 17 30	4 44 30	4 40 04
Phantom	10 48 00	3 12 30	4 24 30	4 19 51
Foam	10 47 00	3 21 30	4 34 30	4 27 43
SECOND CLASS SCHOONERS.				
Peerless	10 45 00	Disabled.		
Azalea	10 45 30	3 36 00	4 50 30	4 47 03
Agnes	10 37 30	3 30 30	4 53 00	4 45 50
SLOOPS.				
Regina	10 40 45	3 32 00	4 51 15	4 51 15
Enterprise	10 47 30	3 42 00	4 54 30	4 50 30
Winsome	10 36 30	3 41 00	5 04 30	4 49 15
Schemer	10 43 00	Disabled.		
Nimbus	10 43 30	Did not finish.		

Phantom, *Agnes* and *Winsome* take the sweepstakes in their class. The latest "cross-bones" from Herreshoff's ingenious hands, the catamaran *Goodie-Two-Shoes*, sailed across with *Tarantella*, of New York, and got in with the rest of the yachts, escaping the most of the blow. The yachts of the Eastern Y. C. left Greenport, June 29, for Newport, to join the rest of the squadron which did not take part in the race across. They will then proceed to Vineyard Haven and disband. The Atlantic fleet put for the West.

DORCHESTER YACHT CLUB.—The forty-eighth regatta of this club was sailed June 28, off commercial Point, Boston. Being the first of a series of three championship matches, the entries were confined to yachts of the club and club rules in force. No second class boats came to the line. Course for first class centre-boards and keels: Down the bay, leaving Cow Pasture Bar Buoy on the port; Buoy No. 7 on the starboard; Spectacle Island on the port; Sculpin Ledge Buoy on the port; Red Buoy No. 6 on the lower middle, on the port; Cow Pasture Bar Buoy on the starboard, to the judges' yacht —9½ miles. Course for third and fourth classes: Down the bay, leaving Half Tide Rock on the port; Old Harbor Buoy on the port; Cow Pasture Bar Buoy on the starboard, to Dolphin, with flag on it, between Savin Hill and Harrison Square, leaving it on the port, to Half Tide Rock, leaving it on the port; Cow Pasture Bar Buoy on the port to judges' yacht—7 miles. Wind fresh from S. E. In the first class *Volante* gave up. The following is the summary of the race:

FIRST CLASS CENTRE-BOARDS.

Name.	Owner.	Sailing L'gth. FT.	IN.	Cor. Time. H.	M.	S.
Fanchon	A Burgess	26	4	1	23	42
Waif	King & Clark	29	8	1	30	20
FIRST CLASS KEELS.						
Echo	A H Blanchard	25	9	2	00	00
Fairy	C A Perkins	25	2	2	01	60
Volante	Geo S Rice	22	3	..	..	..
THIRD CLASS CENTRE-BOARDS.						
Hoiden	S W Burgess	21	7	..	50	31
Dream	C Barnard	19	3	..	54	54
Maud	D A Hall	19	5	..	56	20
Stella	C M Warren	20	1	1	20	26
FOURTH CLASS CENTRE-BOARDS.						
Annie	W H Nicholson	16	7	..	59	24
East Wind	D Robinson	17	10	1	00	51

The judges were Albert S. Glover, Hartford Davenport and Edward P. Sharp, all members of the club. *Fanchon*, *Echo*, *Hoiden* and *Annie* are the winners of the first of the series.

THE UNIVERSITY RACE OF '79.

THAMES COURSE, NEW LONDON, JUNE 27.

IN spite of the prevailing impression that this year's University Race between the eight-oared crews of Harvard and Yale would be a more closely contested pull than last year's, the contrary has turned out to be the case, Harvard winning easier even than in '78, scoring for the Cambridge crimson the fifteenth victory in the nineteenth race of the two universities.

A brisk S.W. wind ruffled the surface of the Thames, but not enough to interfere with good time, which, however, was not made. The race was postponed by request of Yale from 4:30 to 6 P. M., in the hope of attaining smoother water. Professor Agassiz, as umpire, brought the crews to the start, Harvard responding first, but a fresh and damp squall sent them back to their boat-houses. It was not until a quarter of seven that Harvard again launched, with Yale a few minutes later. Mr. Fuller, the stroke of the latter, in getting aboard slipped and split the bottom of their shell, which had to be placed on the trestles for repairs, while the crimsons sat naked to the waist in their shell at the start. It was not until sunset that both crews announced their readiness, Yale having stripped the wash-boards from her boat, as the water had become comparatively smooth again. Harvard won the toss, and took the western side of the course, while Yale to the east got a little more of the wind. Yale got away the best, both crews pulling 40, but at the quarter-mile the Cambridge boat shot out ahead, and at the half-mile had a lead of a length with an easy stroke of 36. At the mile there was four lengths between them, which continued to increase in spite of a spurt from Yale. At two miles Harvard had ten lengths to spare, Yale slowing down to 32. At three miles Harvard was almost out of sight in the dusk, and finally spurting up to 37, crossed the line just as they liked. Time: Harvard, one mile, 5m. 39½s.; two miles, 11m. 4½s.; three miles, 16m. 51½s.; four miles, 22m. 15s. Yale, one mile, 5m. 51½s.; two miles, 11m. 53½s.; three miles, 17m. 57½s.; four miles, 23m. 58s. The names, ages, heights and weights of the crews are as follows:

HARVARD.

Name.	Class.	Age.	Height.	Weight.
Bow—R Trimble	'80	21	5 11¼	160
No 2—N M Brigham	'79	23	5 11½	178
No 3—F Peabody, Jr.	L S	21	5 11½	166
No 4—M R Jacobs	'79	23	5 09½	170
No 5—V D L Stow	'80	20	6 01	180
No 6—W H Swartz	'79	23	5 09¾	185
No 7—W Smith	'79	21	5 10	190
Stroke—W A Bancroft	L S	24	5 09¾	162
Averages		22.5	5 11	174½
Coxswain—F H Allen	'80	20	5 07	110

YALE.

Name.	Class.	Age.	Height.	Weight.
Bow—J B Collins	'81	20	5 10¾	163
No 2—T H Patterson	L S	21	6 00	158½
No 3—C B Storrs	'82	20	6 01	170
No 4—O D Thompson	'79	23	5 10½	160
No 5—J W Keller	'81	22	6 02	191½
No 6—G B Rogers	'80	21	6 03	177
No 7—H W Taft	'80	20	6 02	169½
Stroke—P C Fuller	'81	22	6 01	159½
Averages		21 2	6 01	169½
Coxswain—A Fitzgerald	'82	18	5 08	91½

Vast crowds viewed the race, which, with the exception of the unavoidable postponements, was successfully carried out in every way, and the local authorities of New London, from the Mayor down, deserve the thanks of the public for the manner in which all arrangements were put into effect and the course kept clear, in spite of the numerous craft, most of whose skippers had never before seen a boat race, and had but vague ideas about keeping clear of the course. The separation of the two leading universities from the ruck of colleges and grammar schools scattered all over the continent, we regard as a most important step in the right direction in college boat racing, and one which, while placing the Harvard-Yale race above all others in importance, cannot fail to be of benefit to other schools, inasmuch as it conduces to a spread of popular interest in aquatics by focussing attention upon two rival crews, in place of scattering speculation and sympathies among the ruck of purely local institutions.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salvelinus fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land locked Salmon, *Salmo gloveri.*	Striped Bass, *Roccus linneatus.*
Muskalonge, *Esox nobilior.*	White Perch, *Morone americana.*
Pike or Pickerel, *Esox lucius.*	Weakfish, *Cynoscion regalis.*
Yellow Perch, *Perca flavescens.*	Bluefish, *Pomatomus saltatrix*
	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setæ, same as wings.

Lightning Bug, No. 10.—Body of equal parts of dark brown and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of light yellow and green, ringed alternately; feet, red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern or brown hen; setæ, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Felid Green, No. 10.—Body, feet and wings, a pale green.

PRINCESS LOUISE SALMON FISHING.—The Princess Louise, despite the great pains newspaper editors and reporters took to ridicule the ways of Canada's new royalty, has in more than one way shown her good sense, and is setting a right royal example for the emulation of her fair sisters on both sides of the border. She has just been salmon fishing up the Metapedia, and succeeded in bringing to gaff a 28-pound salmon. Those who witnessed the feat report that the fish displayed an appropriate amount of unusual pluck, and severely tested the royal wrist. At last accounts Princess Louise was "high hook," the Duke of Argyle being second.

HUNTING AND FISHING IN MICHIGAN.—The line of the Flint and Pere Marquette Railway, West of the Saginaw River, abounds in hunting and fishing resorts which are not excelled in any other part of Michigan. Hunting and fishing parties can obtain *special reduced rate tickets* to any point on this line, also to any point in Northern Michigan on the G. R. and I. R. R. North of Reed City, and on the J. L. and S. Division of the M. C. R. R., North of Bay City. Through tickets for sale at the company's offices in Toledo and Detroit. Dogs and camp equipment carried free. For further information in regard to rates, transportation, etc., apply to J. P. Nourse, General Ticket Agent, East Saginaw, Mich.—*Adv.*

BLUEFISH IN THE GREAT SOUTH BAY.—After a little lull the bluefish have again "struck in" on the South side of Long Island and the waters of the Great South Bay are teeming with them. During the past week very large catches have been made, 100 fish being nothing unusual for two or three rods. The fish are all taken by the "chumming" process, although the supply of "bunkers," or menhaden, the oily fish which supplies the material for "chum" and bait is not as abundant as could be desired. The fish run from two to three pounds in weight but are remarkably strong and gamey. The favorite points for fishing are in the channel which runs North and South, nearly opposite the Surf House, from "the Elbow" to the point of Fire Island, and on the "Cinders." While chumming, an occassional weak fish is taken, also large flounders and sometimes a shark.

Outside the Inlet the large bluefish are also fairly abundant, and run from five to ten pounds in weight. They are also taken with rod, the boats anchoring from two to three miles off shore generally about South of the Lighthouse. It is not possible to get out every day, however, and anchor with a small boat, on account of the heavy sea which generally accompanies anything in the shape of a good strong breeze. The fishing grounds of the Great South Bay can be reached from any of the stations on the South Side road, from Auntyville to Potchogue, the most central probably being Bay Shore which is directly opposite the head of the channel.

The Wa-wa-yanda Club of Greenwood Lake has shifted its quarters and built a commodious club-house at Whig Inlet adjoining Uncle Jessie Conklin's.

NEW YORK—*Shelter Island, June* 29.—The fishing for the past week continues to be light, what few are caught have been found in Long Island Sound and the Peconic Bays. The steamer *Peconic* has made June trips up Sound as far as New Haven and returned with about 75,000 each time. The yacht *Mary E.* has sent in to Peconic works about 125,000. Gardiner's, the Eden of bunkers, seems to be entirely deserted by them at present. Oil is on decline and factory men are despondent. We know not of any large catches this week, ending June 28, with the exception of Capt. Tallman on Monday, who caught 200,000 in the Sound. The steamers all seem to have about the same luck, viz., from 200,000 to 300,000 each. McL.

MICHIGAN—*Grand Rapids, June* 23.—The Blue Grass Club Winchester, Ky., went up north from here Tuesday, June 17, to the chain of lakes between Petosky and Cheboygan. They returned Thursday, 26th, highly delighted. Never had so much sport, they said. Caught all the fish, bass and pickerel they wanted, and more too. Say they will come up again in the fall with the "Muckletonians." They encamped at Smith's, foot of Bad Lake, and used Andrew's tug boat for excursions to the different fishing grounds. The party consisted of Dr. Wash. Miller, Pres., Winchester, Ky; J. W. Poynter, W. D. Rash, S. R. Zinn, P. B. Dudley, A. R. Sphar, W. P. Wills, J. G. Wills, W. B. Ford, L. T. Lewis, J. J. Eubank, Capt. Jas. Parsons, Montgomery Co., Ky.; Dr. H. H. H. White, Yazoo City, Miss; Robt. Brown, colored cook; John Armstrong colored valet.

Chas. Johnson, New York; Chas Kipp, St. Johns, Mich.; Jas. G. Bunt, Hillsdale, Mich.; Chas. F. Kimball, Postmaster Pontiac, were on the Jordan River six days, fishing, June 11 to 18; caught nearly 2,000 trout; average nearly 100 per rod per day took; three weighing respectively 2 lbs. 6 oz., 2 lbs. 8 oz., and 2 lbs. 10 oz. Johnson says he never saw so many trout in the Jordan, and he has fished it several years, and never saw such fine averages. They took many weighing from 8 to 15 ozs.

WISCONSIN—*Baraboo, June* 25.—The trout streams at Wilton Station are daily visited by anglers from all over the country. Fred. Pearson and Dick Metcalf, our high hook anglers, were out the other day and brought back a fine display of speckled trout. The fish bit good, but they thought the mosquitos bit better. E. H.

NORTHERN MICHIGAN.

COLUMBUS, O., June 16, 1879.

EDITOR FOREST AND STREAM:

I desire to give parties contemplating a trip to Northern Michigan this summer or fall a few items regarding the same that may be of benefit. I know it would have been to me had I been able to receive any such information before going myself. Having traversed the route by both water and rail, I am able to give information from personal experience.

The trip by lake to Cheboygan (opposite Macinac Island), the point at which you will leave the steamer, is quite a long one, as going and coming will consume more than a week's time from their starting point, be it Sandusky or Detroit. The route by rail is shorter and much faster, giving more time for visiting the many places of amusement and interest which have to be reached by water, thereby giving all the water navigation, either by steam, sail or row-boats, any one wishes. The only direct route is by the Grand Rapids and Indiana Railway, which, with its leased lines, extend from Cincinnati to Petoskey. Parties south or west of Ohio, or in Southern Ohio, should make Cincinnati their starting point, there taking the Cincinnati, Richmond and Fort Wayne (controlled by the G. R. & T. R'y), from whence you can take nearly a straight shoot for any point you may wish to stop at in Northern Michigan. From here we go to Richmond, Ind., and for parties living further east or north, Fort Wayne, Ind., or Grand Rapids, Mich., by the most direct routes, would be the most advantageous points to strike.

At Walton there is a branch of this road running over to Traverse City, a beautiful little place, on Grand Traverse Bay, where parties can find excellent fishing within sight of the town, and near there are many of the famous lakes for which Northern Michigan is so noted—Grand Lake, Long Lake, Torch Lake, etc., *ad infinitum*—all full of fish, so that a party cannot go astray for sport at any of them. You will here find good hotel accommodations, plenty to eat, and very gentlemanly landlords. Rates, about two dollars per day, with quite a reduction by the week.

Petoskey, the terminus of the road, is *par excellence* the place to stay. It is built up high and dry, and from there a beautiful view of the bay and Lake Michigan beyond can be obtained. At this place there are excellent hotels. I do not mean backwoods hotels, but hotels where good accommodations can be had at about two dollars per day, or from seven to ten dollars by the week. Very much to my astonishment I found everything here neat and clean, the eatables served up in a very wholesome—and not mixable—shape; room clean, house clean, grand air and beautiful views, and the landlords are all very accommodating and gentlemanly, endeavoring to please all who come their way. The hotels are Occidental and Cushman. Take your choice; I am not salaried for either.

From Petoskey you can go into the interior, to the lakes, by private conveyance, or if you wish to take in the large chain of lakes (which I would advise) take the horse tramway running from here to the head of Crooked Lake, a distance of about six miles, at which point you take a little steamer that plies from the head of crooked Lake to Cheboygan, a distance of about fifty miles. This trip I would advise all who can to take, as it is one of the most beautiful and wild trips imaginable, the trip through Crooked River alone well repaying for the journey. This would be an excellent side trip to take for a gentleman and his family from Petoskey. You can leave Petoskey early in the morning, and have a beautiful ride, by dinner time landing at David Smith's, just at the head of Indian River, where the boat stops about an hour, giving parties ample time for dinner, which is served here at Smith's Hotel, and time for a short rest, arriving before supper time at Cheboygan, at which place stop at the Spencer House, where your wants will be well looked after. Stopping here over night, you can leave the next morning again by the same little steamer, arriving at Petoskey the same evening, or you can go over to Mackinaw Island and from there back to Petoskey by steamer through the strait, but I rather think you will not be satisfied unless you go back the same way, a half dozen trips through the island route not satisfying me.

You will find no more mosquitoes here than at your homes. There are plenty to be found in the marshes, but as soon as you go up a short distance above them, to the location of the hotels, you find very few, if any. Take along some of the Persian insect powder (fresh) and keep it securely bottled so it will not lose its strength, and you are fixed for whatever may appear in the insect line, my experience proving it to be better than all your tinctures, oils and ingredients used for this purpose.

The cost of a trip to this locality is very reasonable, the round trip excursion tickets via. G. R. and I. R'y., are very low, and hotel and other accommodations are all reasonable The fare from here to Petoskey and return is but twenty dollars and thirty-five cents for ten hundred and eighty-eight miles of travel, and from all other points the rates are equally low, not an extortionate price will you find on anything, at any rate this is my experience. I wish to respectfully dedicate this to whomsoever it may be of benefit. FRANK M. BEEBE.

LAKE WINNEPISEOGEE.

LAKE VILLAGE, N. H., April 8, 1879.

EDITOR FOREST AND STREAM:

We have been there and got back, and have had a "boss" time.

"Been where?" you ask. My answer is, "Upon the ice-covered waters of our beautiful lake, which helps our State so much to earn the poetic title, 'the Switzerland of America.'" And justly proud are the sons of Granite State of such a name, for the finest scenery that exists within an area of several hundreds of miles is to be found in this section—and well appreciated, too, for in the summer months our granite hills are sought by thousands of pleasure seekers from all parts of the United States. But not only pleasure seekers but exhausted minds seek the much needed rest which only nature can give, and easily found around this lake and the White Mountains.

Under the picturesque dome of the Ossipee Mountain, which casts its shadow from a distance of sixteen miles upon the waters of Lake Winnepiseogee is located the Bear Camp River House, where in the summer months we find our great national poet, Whittier, taking the much-needed rest that great mind requires.

Fifteen years ago Center Harbor was the most popular resort on the lake, a small village of two hundred inhabitants, whose streets are not numerous, but still beautiful from the elms which thrive on either side. The principal house is the Center House, kept by that most popular landlord, J. L. Huntress. Further around the lake on the east side, is Wolfboro, where the railroad terminates, a pretty village, but made attractive by easy access and large hotels—Pavillion, Gendon and Bellevue. The Pavilion is upon a knoll some fifty feet above the water, with a beautiful lawn sloping gradually to the water's edge, which is almost alive in the summer with small craft of all kinds The Neck, as it is called, runs out into the lake in crescent shape, and forms a basin of nearly a mile in width and two in length; and being thus well protected by the Neck and Big and Little Barn Door Islands from the wind, it is quite safe as a small harbor for ladies and young people to enjoy the pleasures of boating and bathing.

But the locality which has of late attracted much attention is the Wiers, on the extreme west end of the lake, on the Boston, Concord and Montreal Railroad, just where the waters of the lake, running through a narrow channel—"from which the locality takes its name"—flow into Long Bay, at the foot of which is situated Lake Village, a thriving place of two thousand inhabitants. Six years since the Wiers was known only as a railroad station: as the conductors used to express it, "Wiers Station, change cars for Center Harbor," to convey the idea for the traveller to take the steamboat *Lady of the Lake* for Center Harbor, a pleasant trip of eight miles on the lake.

Just north of the station, at the end of a hundred-feet platform, is the entrance to what is known as the Lake Winnepiseogee Camp Meeting Grounds, an association incorporated by the Legislature of this state for a place of camp meetings.

In a beautiful pine grove are seats facing the water and grand stand, accommodating 10,000 people. This association being composed of many men of means outside of the Doctors of Christian ty, has been the great means of beautifying this place. There being no hotel for two years, it led these gentlemen and their friends to buy lots on or near the grounds, and build what closely resembles "beech houses," which are occupied by the owners and parties leasing for nearly four months in the warm weather. Fond of fishing and hunting, they seek this quiet place, leaving their business at home, and come up here with good dogs, tackle and guns.

The sport is more varied than in Maine or the Adirondacks, away from the sound of railroads and steamboat whistles, and although two large steamers and six small ones are running over these waters in the summer, there are trout at the bottom of this lake which "weigh a ton." A short pull in a rowboat from most any trout ground in the lake will place you where you can say after a day's sport, "That is the biggest string of pickerel I ever caught." Black bass also afford good trolling and fly fishing.

Many sportsmen have chosen to build what are called camps upon the islands. They are very plain, but warm and comfortable in the winter, with good, old-fashioned fire-places, whence come hot cakes and rolls in the Dutch ovens, potatoes in the ashes, and tea or coffee on the coals.

Such a camp is ours. We have two rooms—the bed-room in back end, and parlor, kitchen, drawing-room and reception-room, in one, in the front. We can accommodate six in bunks with straw mattresses.

The winter experiences are not always the most pleasant. The strong northwest and northeast winds, with heavy falls of snow, drive the indulger of winter camp life into his retreat till he has a "spell of weather."

Neither is fishing for trout by "bobbing" always pleasant when you sit all day and no bite, but by setting in fifty to a hundred lines, and visiting them four times in twenty-four hours, makes time pass pleasantly. Cusk are the greater proportion of the fish caught in this way, but now and then a trout gets "hung on." These somewhat resemble their salt species—very greedy to take anything suspended from the lake bottom.

The trout of these waters differ from other lake trout even in this State. Their dorsal fins of different shape, the shade of spots is of a peculiar color—and this is not due to "bottom"—and are of a crescent shape on the uppermost side. The average weight of those caught this winter—and it is quite small in regard to numbers—is much less in weight than of previous winters, consisting mostly of "school trout," and once in a while one of eight or ten pounds is carried into the village. Our nearest neighbors on Jolly Island caught in eighteen days, by very industrious bobbing, 71 trout, whose net weight was 216 pounds.

A lake trout is not generally admired for the table. Most everybody complains of bitterness, but this is owing to the dressing—not scraping the skin enough, in order to avoid the bitter taste. Rubbed well in ashes, then thoroughly scraped and cleaned, cooked in the frying-pan, makes a nice dish. When baked they seem coarse in flesh, and dry, but well cooked in the frying-pan they are nice. The cusk caught here are also a very sweet fish, properly dressed and cooked.

For three weeks we enjoyed ourselves as much as a pleasure seeker could ask—fishing, receiving visitors, and visiting our neighbors on the lake; having everything good to eat and smoke, but no drinking, for we live in a temperance town. And now we are at home, we gather in the evening at Clark & Tuck's popular grocery to relate incidents and crack jokes on our three weeks' camp on Lake Winnepiseogee.

GEE.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 3, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 4.—Greenpoint Athletic Club Annual Games; Scottish-American Athletic Club Games, at Manhattan Grounds; Harlem Athletic Club Games. Metropolitan Association Rowing Regatta, Hudson River, off Washington Heights; Open Amateur Rowing Regatta, at Albany, N. Y.; Palisade Boat Club Regatta, Yonkers, N. Y.; Northwestern Regatta, at Toledo, O. Boston Lacrosse Club Match with Montreal Club at Boston.

Saturday, July 5.—Athletic Games at Manhattan Grounds, N. Y.

Monday, July 7.—Potomac Rowing Club Regatta. New York State Association Convention at Rochester.

Tuesday, July 8.—Convention as above.

Wednesday, July 9.—Convention as above. National Amateur Oarsmen Regatta, Saratoga, N. Y.

Thursday, July 10.—Regatta as above. Convention as above.

SALMON FISHING IN CANADA.

SECOND PAPER.

RIVER GODBOUT, Lower St. Lawrence,
June 22, 1879.

MR. EDITOR:

My first letter noted our arrival and departure from Quebec, *en route* for the Godbout, which is 220 miles or more down river. While at Quebec, and at all stopping places, the beautiful *Cruiser* attracted crowds of curious visitors, for a yacht of her quality costing $20,000 or more, is something magnificent in these waters. With her dainty white hull relieved by panels of sombre wood and dark lines of oak in natural color sweeping in graceful curves from stem to stern; with her jaunty spars, her fluttering deck awnings, her flying bunting, and her polished brass fittings and ornaments, she looked like a beautiful May Queen bedizened for a fête. The burgee of the Royal Canadian Yacht Club streamed out at the main; the monograph of the *Cruiser* fluttered at the fore; the British flag waved majestically over the counter; and the breezy Stars and Stripes danced merrily on the bow, in compliment to its Yankee guest. Thus attired, she glided like a swan from under the frowning heights and shadow of the city, and sped onward toward her stormy baptism of the Gulf.

Any person stepping into the main hall of the St. Louis Hotel at Quebec at this season of the year, will discover huge piles of strange baggage. There are strong wooden mess chests with rusty iron hinges and hasps; medium-sized collapsable leather trunks pasted all over with foreign "stickers," and looking as if they had been pounded by all the baggage-smashers of the two hemispheres; leathern hat boxes of unmistakable English cast; shapeless bales bound up with rubber, and corded; bundles of waterproof coats, ulsters, and mackintoshes; long wooden parallelograms fastened with screws and inscribed all over with multitudinous labels, addresses, and directions in marking-ink; leathern gun cases, bundles of rods tied up in oil cloth, metal and wooden bathtubs, varnished cases of homeopathic medicines, tent canvas and poles, portable stoves, bouquets of dangling long-legged boots, and numerous nondescript articles whose contents or utility it would puzzle a second-hand sight-seer to guess; and all of them tumbled together and kicking about as if they belonged to nobody, and attracting no attention whatever. The initiated understand these to be chiefly impedimenta of trans-Atlantic Englishmen bound for the salmon rivers *en bas*. Sometimes as many as fourteen or fifteen pieces belong to one man—articles deemed essential necessaries—for "one can't get everything one wants in America, y'know." Occasionally some of the less pretentious packages belong to native Canadians, or visitors from the States. These piles of baggage usually lie around for several days, then suddenly disappear mysteriously, leaving the much-encumbered hall clear again, so that guests can move about late at night without swearing. These changes attract no more attention than the varying phases of the moon. What is most noticeable, perhaps, is the absence of all bustle. The place is serenely quiet. We are confidentially informed that there are so many scores of guests in the hotel, yet we seldom see a dozen persons together, even at the tables. The Englishmen usually take their coffee and porridge *en recluse;* for dinner they dine out with friends; and as they are invariably booked for designated rivers by invitation of the lessees, they have no questions to ask, no interest in the preparations, and no anxiety whatever as to the time or method of reaching them. It is indeed refreshing and assuring to observe with what implicit trust and nonchalance these anglers from over the water place themselves in the hollow of their host's hand, and there *rest*, waiting only to be moved, like those incapables we read of at the Pool of Bethesda. Whenever the regular steamer, private yacht, chartered tugboat or challoupe, or what-not, is ready, they depart and are gone—gone, as the weasel pops, or the much-written Arab folds his tent and steals away.

Very few Americans come to Quebec except in the character of general tourists: (and speaking of "Americans," so-termed, it seems as difficult to find an acceptable synonym for the citizens of the United States, as distinguished from those of Canada, as it is to discover an appropriate substitute for the much-hackneyed phrase, "speckled beauties," as applied to trout). There are possibly a half-dozen experienced anglers from over the border who have joint rights in certain rivers, or obtain fishing privileges from Canadian friends; and these are perfectly *au fait* as respects localities, times and seasons. They are widely and favorably known and are always welcomed cordially. As for the rest, the greater part come entire strangers, without letters of introduction, or the faintest conception of what they must do when they get here. Most of them have never taken a salmon. To such the services of mine host, Willis Russell, Esq., of the "St. Louis," are always a godsend. Though an "American" by nativity, he has resided many years in Quebec, always acting as quasi interpreter, mediator, and general factotum between his own and his adopted countrymen. He seldom, if ever, fails to get them fishing of some sort. He has even exerted himself so far as to lease a branch of the river Marguerite, and erect six cottages by its choicest pools, for their express accommodation. Each of the cottages has three rooms, comfortably fitted with all conveniences for house keeping, with boats, attendants, provisions, etc.; for all of which very moderate charges are made. The Marguerite is a tributary of the mighty Saguenay, and is easily reached by the Saguenay steamers. It is the most accessible and comfortable billet in the whole of Canada. It is remarkable how few Americans are educated to the high art of salmon fishing. Their aspirations seem not to reach beyond the trout and the bass; reasonably because the Eastern salmon are no longer indigenous to their waters. Perhaps the number of anglers will multiply when the streams of New England are again restocked.

The FOREST AND STREAM has repeatedly instructed its readers how to secure access to the teeming rivers of Canada. W. F. Whitcher, Esq., the Chief Commissioner of Fisheries, resides at Ottawa. He is a member of the American Fish Cultural Association, and in sympathy with the whole fraternity, native and foreign born. Leases of rivers can be secured through him; but the privilege can be enjoyed only by the rich. In addition to the rental and the maintenance of a permanent guardian, which the law requires, is the formidable expense of reaching most of the rivers,—all, indeed, of those emptying into the St. Lawrence. The Intercolonial railroad makes those of the Bay Chaleur and of New Brunswick and Nova Scotia accessible; while the North Port steamers provide fortnightly communication between Quebec and Gaspé, the peninsula which divides the Bay Chaleur and the waters of the St. Lawrence. Therein are many of the best rivers. For the rest, the owner or lessee must provide his own transportation and outfit. Some prefer to pay the wages of the vessel's crew for the whole period of absence, rather than send the vessel away and depend upon the possibly precarious chance of her returning at the appointed time. Indeed, this is the sensible procedure. To be left on the inhospitable coast of the St. Lawrence, where no one lives except the lonely light-house keepers, and no vessel comes except the annual oil supply steamer or the Hudson Bay Company's Coaster; where storms prevail even in the mildest summer months; and where the warmest clothing is a luxury all the year round; would be to court exposure to hardship which even the hardiest acclimated native could not endure unless he were comfortably housed and fed. The chronicles of the Lower St. Lawrence for nearly three centuries are but a history of wrecks, cast-aways, and dire distress; and only by the construction of long-needed lights and beacons within the past half century were the dangers of the passage mitigated.

The rivers of the north shore are very numerous. From the high abutting promontory which forms Cape Diamond at Quebec, to the romantic castellated rocks at Henley Harbor, near the eastern entrance of Belle Isle Strait, there is an almost unbroken wall of towering granite, except where it is slashed by the icy streams which have cut their passage through its perpendicular face. These generally find their sources in lakes far back upon the extended plateau above, from sixty to eighty miles away, and are mainly supplied by the melting of the accumulating snows of long-protracted winters. This plateau is an undulating reach of barren country sparsely clothed with spruces, dwarf poplars, and stunted birches and aspens, with a few cedars, balsams, alders, and swamp willows along the water courses, and is interspersed with bold granite rocks which occasionally rise to rounded mountains of moderate height. The country is wholly uninhabited except by a few straggling Montagnais Indians. Some of the rivers pitch over the dizzy escarpment along the St. Lawrence front in perpendicular falls like those of Montmorenci, a hundred feet high and more; others tumble to the sea in a series of falls and cascades set back in walled recesses or rocky cañons, overtopped by wooded mountains, from whose foot they flow to their outlets in varying moods of froth and glassy darksome pools; others again make their exit by an almost continuous rapid, through physical features much the same, though less rugged and picturesque. All of them are sub-Alpine; or perhaps they more resemble the broken salmon streams of Norway. Those persons who appreciate the conditions necessary for the propagation of salmon, which seek the gravel and shallow waters of the upper stream for spawning, will perceive that precipitous falls at the outlets must present an insurmountable obstacle to their ascent. For the same reason few or no salmon will be found in such rivers as are barricaded by rock two or three miles from their mouths. At the same time, those rivers which present a continuous rapid, while they are Jacob's heavenly ladders for the salmon, are wholly impracticable for the angler. The number of rivers, therefore, which afford the conditions suitable to both fishes and fishers, that is, a succession of pools and rapids, either to a limited distance, or throughout their whole extent, is appreciably small. I have given a partial list of them in Hallock's "Fishing Tourist," published by Harpers in 1873, but will insert an amended list here, indicating in italics those best known in which salmon are found. If it be the only list printed, as I believe, it may be valued for preservation and reference. The best rivers are indicated by small capitals. Beginning at Quebec, and omitting the Jacques Cartier, which is the only salmon river above Quebec, we indicate them as follows:

ST. LAWRENCE, NORTH SHORE.

St. Anne,		Sawbill,
Murray,		Thunder,
Little Saguenay,	tributaries	Magpie,
St. Jean,	of the	ST. JOHN,
MARGUERITE, 2 branches,	Saguenay.	MINGAN,

RESTIGOUCHE,		N. MIRAMICHI,
MATAPEDIA,		S. MIRAMICHI,
Upsalquitch,	Tributaries of	
Quatawaltamkedgewick,	Restigouche.	
Patsabebiac,		

In addition to the foregoing are the Margaree, a notable salmon river of Cape Breton, and the Jupiter and Revillon, both fair rivers on the island of Anticosti. In many instances the construction of proper fishways to facilitate the passage of the salmon is practicable; or the rocks may be blasted into, so as to afford a footing for their ascent. The expense would be great: still there is little doubt that the outlay would be reimbursed in time by the propagation of increased numbers of salmon to be obtained by opening new spawning grounds on the now inaccessible headwaters. Blasting would be the most efficacious, as the moving ice in springtime would endanger any wooden structures. On a few of these north shore rivers are fishermen's cabins, or posts of the Hudson's Bay Company, but the whole coast for the most part is bleak and forbidding desolation for hundreds of miles; and the

only life that exists there are the weird birds which love the storm, the mysterious seal, and the tumbling porpoise.

On the more genial and comparatively low south shore opposite is the terrestrial paradise of the *habitant* and the shrine of all the French saints named in mediæval and modern catalogues. The traveller by the Intercolonial railroad has every opportunity to inspect the tidy cottages, and diminutive farms divided by parallel fences, which extend almost without interruption for four hundred miles from Perce to Montreal, and westward. Every sixth mile has a church and a priest, and if there were only saints enough to go around, there would be a church to every third mile, and no trouble to find a priest for each. As we passed down the river, the tin-coated spires looked very pretty and sparkling in the bright sunshine, and the distant snow-capped summit of Mt. Ste Anne shone intensely clear in the still atmosphere of the calm afternoon. But when twilight began to fall on the close of the long June day, the horizon reddened in the west, and a dull murky haze gathered all around and settled in great banks on the water toward the farther shore. A huge glassy swell began to roll in from the Gulf, which caused the yacht to pitch disagreeably. The barometer fell rapidly. The pilot said there had been a heavy blow outside, and the worst was not over yet: so we were glad enough to scud in under the the shelter of an island near Rimouski, having logged off 150 miles since morning. There we dropped anchor. The air was very still, and when the chains ran over the bow, they rattled with a deafening noise. We noticed that all sounds became strangely distinct. Hosts of gulls circled around and screamed in our ears. When an oar fell, the air seemed to reverberate the sound. Combers began to roll in from the sea, and break with a sullen noise on a distant ledge at the point of the island. Grampusses rolled up alongside and breathed hoarsely through their blow-holes, spurting out little jets of water. White porpoises pitched about in the brine. The far-off evening train on the railroad rumbled past with a thundering sound. All the surroundings assumed a supernatural aspect of form and color. The hills and houses on shore near by grew purple. Distant objects loomed up with sharply-cut lines and magical distinctness. The low-lying Isle Biquette, twenty miles up the river, which ordinarily we could scarcely distinguish, piled itself up three times, and seemed a lofty stratified cliff close by. A challoupe which we had passed an hour before looked like a great white wall of rock lifted into the air. Everywhere the mirage created fantastic shapes. Seals poked their heads apparently as big as barrels out of the mirror-like surface of the bay. White-winged guillemots, gulls, and gannets flapped lazily about us for an instant, and then flew away in ghostly shapes and exaggerated sizes. All these omens were portentous, and we waited anxiously for the development. Presently the sky lowered and darkened. There was a little rain, but no wind A tug came puffing up river with a large ship which had lost its mainmast below the crosstrees, and after awhile a steam tug and a schooner with an off-shore breeze worked in and anchored. We studied carefully the indications and the premonitions. Afterwards we saw a brig ashore on the beach, and we subsequently learned by the marine reports that several vessels had been stranded in a gale on the 7th of June. (This was the 10th.) However, for ourselves, we lay snugly enough at our chains, and after a while supped, smoked, turned in, and slept.

In the morning we found the gale raging, and we never stirred from our berth for forty-eight hours. The air became very cold, and a change most unexpected and disagreeable was inaugurated; continuing for nine days, until the 19th of June, when it became warm again. After two days we ventured to start for our destination, seventy-five miles distant, and were followed by the tug which we ascertained was our own tender, "the *Resolute*" which we had dispatched to the Godbout with stores the day before. The river is thirty-five miles wide at this point, and but for the friendly lee of the island behind which we lay, we would have been exposed to the full sweep of the blast and the careering waves from the Gulf. *Mem.* If any inquisitive person wishes to know how we managed to pass our spare time during those forty-eight dismal hours of storm, I will state for his information that there were three barometers on board, and we were fully occupied in comparing and attempting to reconcile them, as no two agreed. Besides, they persistently went up when they should have gone down, and *vice versa*; and by reference to Bayfield's Admiralty Chart of the Lower St. Lawrence, we ascertained that there were any number of conditions to answer the indications, so that we could take our choice according to our own judgment, with the possibility of the weather being anything but fair.

The passage across from Rimouski to the Godbout was very comfortably made, the wind being off the north shore and no sea running. The *Resolute* followed in our wake. Gradually the well-known landmarks were sighted; the long distant lines of blue hills grew into highlands and spruce-covered mountains; the rocky battlements along the shore showed plainly their scars and seams. Fifteen miles below, Point des Monts ran out into the sea, and appeared to inclose a bay. Finally, we steamed in under the land and anchored just outside a sand-bar, where a shoal of blackfish sported and spouted about us, and the usual complement of sea fowls came out from the rocks to reconnoitre. Directly in front was the station of the Hudson's Bay Co., a single large one-story building abandoned fourteen years before; a dilapidated little church whose ramshackle clapboards rattled in the wind; a few Indian huts, and two or three comfortable, neatly painted cottages—all strung along a sandy grass-grown beach lying at the foot of a wooded sand-hill 300 feet high. A corresponding sand-hill a mile away to the left shows plainly that the river used to flow between the two in former times, when the Godbout came down with a mighty volume from its birthplace, and great ships could find anchorage in fifty fathoms at its mouth. Now the diminutive channel has hardly two feet of water at low tide, and can scarcely be discerned a dozen rods from shore. The hamlet contains about fifty souls. Looking up between the sandy promontories toward the present river bottom, we discover an immense basin completely inclosed by terraced hills, with the river winding through and spreading out into shallows which are divided by pretty wooded islands. Behind the rim of the basin are oval mountains, and looking away up under their shadow, we can discover the snug little cottages which constitute the permanent camp of our friend Allan Gilmour, Esq., the owner of the river. A zigzag path climbs to the summit of the left-hand promontory, where a tall flag staff is planted and a summer house affords rest and shade. Thence there is a grand view seaward as well as inland; and looking up the river with a glass into its principal pool, which glides beside the Camp, we can discern the plash of the fresh-run salmon as they make their festive leaps! Comeau, the guardian of the river, who lives by the sea, says the fish began to run on the 9th of June. It is now the 12th, and to-morrow we will wet our initial line. By to-night all the stores will be boated up from the sea to the camp, the *Resolute* will betake herself back to Quebec, and the pretty *Cruiser* will cross the bar at high tide, and occupy her berth in the lower river until the close of the season. Her arrival is always an event in the little settlement, and the brightest upon the monotony of its dull existence. HALLOCK.

FOURTH OF JULY.—It has been rather fancifully suggested that when Antony would fittingly commemorate the mighty Julius Cæsar he bestowed his name upon that month of the year when glowing Sol beats down with most unrelenting fire upon mankind. Thus the old Roman sought to typify the puissance of Cæsar's name and fame. Possibly some like patriotic motive induced the worthy old gentlemen who had a hand in the Declaration of Independence to also select this same most broiling month of the year, and the most broiling day of that month, as the fitting season to establish and commemorate the birth of the Nation which should increase in might as the sun at this period. Notwithstanding the heat which is pretty safely assured for to-morrow, the day will be devoted to many and varied sports. The orator, who will wrestle with the English language, and the small patriot, daring death at the mouth of the fire cracker, will not have the day to themselves. Yachting, boating, rifle and trap shooting, lacrosse, athletics, archery, hunting and fishing, and miscellaneous sports, etc., will make up the programme of the day. Many of the City firms close their business houses also on the following day, so that employers and employees may celebrate to the full, with no thought of the morrow—nor of the day after the morrow.

GAME PROTECTION.

THE NEW YORK GAME LAW.

BELOW we give the salient points regarding animals and birds. The particular attention of interested readers is invited to its provisions, and we beg of such to give it careful reading, so that we may not be constantly importuned to give the open season for this or that bird or fish. Our readers may also save themselves much possible annoyance by noting the alterations of the old law, the change in the Long Island woodcock season being particularly important:

DEER—Sec. 1. No person shall kill, chase, sell, expose for sale, transport, or have in possession after being killed, any deer, save only in the months of August, September, October and November. No person shall kill, or have in possession, carcass or skin of fawn in spotted coat. No trap, spring gun nor other device for trapping or killing deer lawful. Sec. 2. Pursuit with dogs lawful from Aug. 15 to Nov. 1; never lawful in St. Lawrence County. Dogs in unlawful pursuit may be killed. Deer cannot be killed in Suffolk and Queens counties during five years from passage of act. Each of above offences are misdemeanors; penalty, $50. Sec. 3. Deer cannot be taken by crusting nor when yarded; penalty, $100.

MOOSE—Sec. 2. Cannot at any time be taken chased with dogs, sold, exposed for sale, had in possession after being killed. Misdemeanor, and penalty $50.

WILD FOWL—Sec. 4. No person shall kill, expose for sale, or have in possession after same has been killed, any wild duck, goose or brant between May 1 and Sept. 1; in waters of Long Island, May 1 and Oct. 1. Misdemeanor; penalty, $25. Cannot be killed between sunset and daylight, nor with aid of any light or lantern. Penalty, $50. An attempt so to kill shall be considered a violation of the section. Sec. 5. No person shall kill wild duck, goose or brant with any device known as swivel or punt gun, or any other gun other than such as are habitually raised at arm's length and fired from the shoulder, or use any net, device or instrument other than such gun. Misdemeanor; penalty, $50. Sec. 6. Use prohibited of floating battery, machine or other device whereby gunner is concealed, or use of decoy or bow-house at a greater distance from shore than twenty rods. Misdemeanor; penalty, $50. This section does not apply to waters of Great South Bay west of Smith's Point, Peconic Bay, Shinnecock Bay, Lake Ontario, River St. Lawrence and Hudson River below Albany. Sec. 7. No person shall sail for wild fowl, or shoot at wild fowl, from vessel propelled by steam or sails, or from structure attached to same—except in waters of Long Island Sound, Lake Ontario and Hudson River below Nyack. Misdemeanor; penalty, $10.

QUAIL.—Sec. 8. Cannot be killed, exposed for sale, nor had in possession after killed, between November 1 and January 1. Cannot be killed in Counties of Montgomery, Schenectady, Saratoga, or Albany, within three years from passage of this act. Misdemeanor; penalty, $25.

HARE OR RABBIT.—Cannot be killed, exposed for sale nor had in possession after killed, between January 1 and November 1. No ferrets employed. But owners of nurseries or orchards may use traps or ferrets in said nurseries or orchards, or in fields adjoining such.

WOODCOCK.—Sec. 9. Cannot be killed, exposed for sale nor had in possession after killed, between January 1 and September 1, in Counties of Oneida and Herkimer; and elsewhere January 1 and August 1. Misdemeanor; penalty, $25.

SQUIRRELS.—Sec. 9 fixes close season from February 1 to August 1. Misdemeanor; penalty, $25.

RUFFED AND PINNATED GROUSE.—Sec. 10. No person shall kill, expose for sale or have in possession after killed, any ruffed grouse (partridge) or pinnated grouse (prairie chicken) between January 1 and September 1. Misdemeanor; penalty, $25. Sec. 11. Ruffed grouse (partridge), pinnated grouse (prairie chicken), spruce grouse (Canada partridge) and quail cannot be taken with net, snare nor trap, nor sold nor had in possession when so taken. Misdemeanor; penalty, $10. Traps and snares when found may be lawfully destroyed.

SONG BIRDS.—Sec. 12. No person shall kill, or expose for sale, or have in possession when killed, any eagle, woodpecker, night-hawk, yellow bird, wren, martin, oriole, robin, bobolink, or any song bird. Misdemeanor; penalty, $5.

MEADOW LARK.—Sec. 13. No person shall kill, expose for sale, or have in possession after killed any meadow lark or starling, save only in September, October, November and December. Misdemeanor; penalty, $5.

Section 14 provides that the last two sections shall not apply to killing birds for natural history purposes, or for stuffing as specimens; nor to killing robins on one's own premises, in act of destroying fruit or grapes.

BIRDS' NESTS.—Sec. 15. Unlawful to destroy or rob any birds' nests other than of crows, black birds, hawks and owls; except to protect dwelling houses, or to prevent their defacement.

THE VIRGINIA FISH AND GAME PROTECTIVE ASSOCIATION.—The Virginia Association was organized two years ago by a number of gentlemen who recognized the necessity of combined effort to correct the lawless destruction of fish and game. The plan of work adopted has proved efficacious. Influence has been brought to bear upon the Legislature to secure the enactment of necessary laws, and it is hoped before long to have complete and exhaustive provisions for the protection of game. Public interest has been aroused and maintained by public addresses at State fairs, the distribution of circulars, and through the co-operation of the press, which has most heartily seconded the efforts of the association. Attention has been given not only to the protection in proper season of native fish, but, through the Fish Commission, to secure the introduction of other species. Farmers and landowners and towns are enlisted as protectors of the streams stocked. The association will this year have printed upon cloth and posted in every post office and tavern in the commonwealth, where he who runs, as well as he who stops to hear the bell punch ring, may read.

The roll of membership numbers now more than two hundred names, including many which are eminent in every pursuit of life. The officers are: President, Charles T. Palmer; Vice-President, Dr. O. A. Crenshaw; Secretary, E. H. Fisher; Treasurer, John Ott. Executive Committee—Moses Ellyson, W. Russell Robinson, A. G. Babcock, A. Q. Holladay, Philip Haxall. Committee on Laws—Judge Theodore S. Garnett, Jr., Norfolk; Dr. M. G. Ellzey, Blacksburg A. & M. C.; Col. John M. Patten, Bentivoglio, Albemarle; Thomas Williamson, Leesburg; John S. Wise, Richmond.

THE DELAWARE GAME PROTECTIVE ASSOCIATION.—We are gratified in this connection to note the formation of "The Delaware Game Protective Association," a society composed of influential citizens of that State. The act of incorporation provides in Sections VI. and VII.:

"That hereafter any person or persons, non-residents of this State, who shall kill, destroy, hunt or take any doe, buck or fawn, or any sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge, moor fowl, ruffed grouse (commonly called pheasant), pinnated grouse or prairie chicken, or any kind of grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird, black duck, gray duck, sprig-tail, teal duck, mallard, or any other kind of wild duck, or any wild goose, swan, brant or other wild fowl, or any hare or rabbit at any time, or shall catch any speckled brook trout, or speckled river trout, or any black bass or other game fish at any time within this State, without complying with the by-laws of this game protective society, then the person or persons so offending shall forfeit and pay the sum of fifty ($50) dollars each for each and every offence, and may be proceeded against in any county of this State, wherein such person or persons may be arrested, or wherein such offence shall have been committed, and in default of the payment of the forfeit money, with costs of prosecution, any person or persons shall lie in the common jail until the same shall be paid; one-half of the forfeit money shall be for the benefit of the person prosecuting for the same, and the remainder paid to this Game Protective Association, and all acts or parts of acts inconsistent with this act, are hereby repealed: *Provided*, that nothing in this act shall prevent residents of this State from taking game or fish, subject to existing laws of this State. Justices of the Peace in and for this State shall have jurisdiction to hear and determine offences against the provisions of this act.

"The fee for membership in this society for non-residents shall be five dollars for the first year, and for each succeeding year two dollars. For residents of this State the membership fee shall be two dollars for each and every year; and no resident of this State shall have a vote or voice in the deliberations of this society who shall not have paid to the secretary or treasurer his membership fee."

A further provision is made that the certificate of member-

ship cannot be loaned nor transferred, heavy penalties being fixed for such offence. The officers of the association are:

President, J. N. Mills, Wilmington; 1st Vice-President, John McRodney, Wilmington; 2d Vice-President, James R. Lofland, Milford; 3d Vice-President, Chas. M. Cullen, Georgetown; Treasurer, Richard Hanington, Dover; Secretary, George Churchman, Wilmington; Directors for New Castle Co.—Dr. Linten Smith and Edward Bringhurst, Jr., Wilmington; Richard Smith, Middletown; Tilghman Johnston and Anthony Higgins, Wilmington; Dr. Groves, New Castle; John C. Higgins, Delaware City; Chas. McWhorter, St. Georges; James H. Ray, Newark. Directors for Kent County—John F. Saulsbury, Dover; Wm. Ellison, Camden; Gen. A. T. A. Torbert, Milford; Chas. Harrington, Farmington; Wm. M. Beel, Smyrna; John Goldsborough, Leipsic; Thomas Gooden, Willow Grove; Amos Cole, Hanington; Peter L. Benwiel, Dover. Directors for Sussex County—Wm. M. Ross, Seaford; Thomas Curry and Isaac Floneks, Greenwood; Ebe Tunnell, Chas. Gum and Dr. J. T. Thompson, Lewis; Edward T. Gillis and J. T. Rice, Seaford.

The membership of the new association is very large, and from the influence of the gentlemen promoting the enterprise, there is every reason to believe that the game laws will be hereafter strictly enforced.

PROTECTION IN MISSISSIPPI—*Editor Forest and Stream:* Is uniformity of game laws desirable? Yes. Is it practicable? No. Certainly not at present. Did you ever work to get a bill affecting the whole State passed by the Legislature? If you did not, try it. I remember well the time we had to get the present law on the statute books of the State. We wished to amend the game laws last session. "Pious Jeems," himself a member of the Lower House, will bear me out that on a close canvass we found that if the statute was touched in the shape of an amendment even, the law for the protection of game would be wiped out altogether. You advocate the open season for partridges to begin Sept. 1. Ours is Sept. 15, and we wanted the close season extended to Oct. 15 for at least two good reasons—1st, because it is too hot, and 2d, because one-third of the birds are not full grown Sept. 1, many coveys being hardly fledged. About that time last summer I found three coveys within one-quarter of a mile of the house that could just fly. Of another covey I scorned to shoot the little fellows (and I am not over particular in that respect) in the second week in November. We haven't the same reasons for closing the open season with Jan. 1 that you have—snow. We had the heaviest snowfall last winter that I can remember—ten inches; but in spite of that and the great deal of shooting done during the epidemic, partridges are very plentiful. The bane of the sportsmen in our State in regard to partridges is, trapping by whites and by blacks, and robbing the nests of their eggs, which latter is done by blacks almost exclusively. If we could stop trapping, the birds would swarm in our fields. On the place where I refuged last summer a negro told me that he sold 120 trapped partridges out of his field alone the season previous. I am satisfied that a "uniform game law" will never be established for the whole U. S. You will have to become "sectional" and "draw the line somewhere," not alone on account of our "pure cussedness," but because the conditions are entirely changed in the South. A desirable law in New York might actually be burdensome in Mississippi.

Jackson, Miss., June 20, 1879. G. C. E.

The Rifle.

MASSACHUSETTS—*Boston, June* 25.—The tenth competition in the long-range match at 800, 900 and 1,000 yards, was shot at Walnut Hill to-day, and with very good results, four of the competitors getting 200 or more for the three distances, Mr. Gerrish heading the list with a fine 211 out of a possible 225. The weather was delightful, and there were favorable conditions for the riflemen, a clear light and gentle southerly to southeasterly wind rather assisting their efforts than otherwise. There was also a tolerably numerous attendance of spectators. The result of the competition is as follows:

William Gerrish.															
800	5	4	5	5	5	5	5	5	5	5	5	4	5		4—72
900	5	4	5	5	5	5	5	4	3	5	5	4	3	5	5—68

June 28.—Walnut Hill had a good day for the short-range men to-day. The atmosphere was fair for good shooting, the light was good, and the wind from eight to ten. In the continued competition in the Winchester match, 200 yards, there were 54 entries. The following summary shows the work of the leading competitors:

W H Jackson	5	5	5	4	5	5	5	5	4	5	4	4	4	5	5—70
C M Jewell	5	4	4	5	5	5	5	4	5	3	5	5	4	5	4—68
J Wemyss, Jr	4	5	4	5	5	5	4	5	4	5	4	4	4	3	4—67
A Babridge	4	4	4	4	4	5	4	5	4	5	4	5	5	4	4—65
J Nichols	5	4	4	5	5	5	5	4	5	4	4	4	4	4	3—65
H Tyler	5	5	5	4	4	4	4	4	4	4	4	4	4	5	4—64
W E Guerrier	4	4	5	5	4	4	5	4	5	4	4	4	4	4	4—64
E Whittier	4	4	5	4	4	5	4	4	4	4	4	5	3	5	4	5—64
C N Meiggs	4	4	4	5	4	5	4	5	4	4	4	4	5	5	3	4—64
E Davis	4	5	4	4	4	4	4	4	4	5	5	5	4	4	4	4—63
D J Paige	4	5	5	4	4	4	5	4	4	4	3	5	5	4	4	4—63
C Edward	5	4	4	4	5	5	4	5	4	4	3	4	4	3	5	4—62
C H Grimm	4	5	4	4	4	4	4	4	4	5	4	4	3	3	4	4—60

The 500-yard off-hand shoot did not fill, and consequently was off.

In the glass ball shoot the best score was made by J. Nichols, who covered 26 out of a possible 30, by getting nine singles, eight doubles and nine rotary. In a second trial, Nichols made 21 out of a possible 30.

At the range on the Fourth of July there will be a 200-yard shoot of the Winchester match series; a subscription match, same distance, seven rounds, with 60 per cent. of the entrance fees for the winners; and also a 900-yard carton match, seven rounds, with entrance fee of $1, and 50 cents for second trial. In this latter contest the prizes will consist of a silver medal valued at $15 for the first, $5 to second, $3 to third, and $2 to the fourth. The Ballard match, 900 yards, ten rounds, will also be shot. The last of the series of glass ball shoots, inaugurated on June 17, will be shot on this occasion.

MASSACHUSETTS—*Medford.*—Bellevue Range. At the renewed competion in the Sharps Rifle match on Wednesday, 25th, there were 36 entries, the best shots being:

W Charles	5	5	5	4	4	5	4	5	5—47
C H Russell	4	4	4	4	5	5	5	5	4—45
H K Richardson	5	4	4	5	5	5	4	5	4—46
G Henry	5	4	4	4	5	4	5	4	4—44
J Eastman	5	3	4	4	4	4	5	5	4—44
E S Piper	5	4	4	4	4	4	4	5	4—42
W Jacobs	4	3	4	4	4	4	4	5	4—40

In the 500 yards match there were twelve entries. The scores were:

H S Harris	6	6	6	6	6	5	5—41
H Withington	5	6	6	6	6	5	5—40
W Charles (off-hand)	6	6	5	6	5	4	6—38
H K Richardson	5	4	6	5	6	4	5—35

Springfield, June 30.—The U. S. Armory Rifle Team on their last regular shooting day, Friday, June 27, made the following score at 200 yards:

S S Bumstead	5	5	5	4	5	5	4	4	5—46
F R Bull	5	4	5	4	4	5	4	5	5—45
H J Hare	4	4	5	4	5	4	4	5	5—44
M W Ball	4	4	5	4	4	4	4	5	4—43
J M Cranston	4	4	4	5	5	4	4	4	4—43
Lieut Birnie	4	4	4	4	4	3	4	5	4—40

RIFLE.

Wakefield.—The last meeting in the June series of competitions by the Wakefield Rifle Association was held Saturday afternoon, June 28, at their range. Distance, 200 yards; position, off-hand; rounds, 7 per man. The six best scores are as follows:

J A Henderson	4 4 4 5 5 5—32	D H Walker	5 4 4 4 5 5 4—31
W B Daniel	4 4 5 5 5 5—31	W L Coon	4 5 4 5 4 5 4—31
O Corcoran	5 5 4 5 3 5 5—32	J S Shepherd	5 5 5 4 4 4 4—31

There will be a special 200-yard match July 4, at which three prizes will be offered, only to residents of Wakefield.

—Mr. J. S. Sumner has tendered his resignation, which has been accepted, as a member of the Massachusetts Rifle Association.

CONNECTICUT—*Collinsville, June* 18.—Regular practice meeting of Canton Rcd and Gun Club; 200 yards, off-hand, 3 lb. pull:

Hull	103	Bidwell	90 43
Lewis	96	Kenold	90 42
Andrews	93	Sanborne	84 40
Laubenstein	91		SEC.

CONNECTICUT—*Bridgeport, June* 27.—The following were the the leaders at Sea Side Range to-day in the regular semi-monthly shoot. Wind, 2 o'clock and puffy:

Silverware match, 200 yards, 7 shots.

Geo F Hull	4 5 4 4 4 5 5—31	J McCourt	4 4 5 5 4 5 4—20
H Nichols	4 4 5 5 4 4 5—31	R S Bassett	5 4 4 5 3 5 4—30

For a military rifle, 200 yards, 10 shots.

J McCourt	5 5 4 4 5 4 4 5 4—44	H Nichols	4 3 4 5 4 4 4 4 4 5—41
Geo F Hull	5 3 5 4 4 4 5 5 5 4—44	R S Bassett	5 3 4 4 3 5 3 4 4 4—39
G W Keer	4 5 5 4 4 3 5 4 4 4—42		

Nichol's gold badge, 200 yards.

J McCourt	4 4 4 5 5 4—30	Geo F Hull	4 4 5 4 4 4 5—30

Handicap 500 yards; cartoon target. Long-range give mid-range rifles 3 points; mid-range rifles give military rifles 3 points; long-range rifles give military rifles 5 points.

Geo F Hull, long-range	6	6	5	5	5	4	6	6	4—52
W B Gunn, long-range	5	5	6	6	4	6	6	5	4—52
R S Bassett, mid-range	6	5	4	6	6	5	5	4	5—49
S C Bingman, mid-range	5	3	4	5	5	5	4	5	5—45
D Couger, mid-range	5	4	3	5	6	4	5	4	3—45
J McCourt, mid-range	3	5	5	5	5	4	6	3	3—43
H Nichols, military	5	4	5	4	2	5	3	6	4—42

Ladies' match, 200 yards, 5 shots.

Mrs Nichols	4 4 5 4 4—21	Mrs Slatcher	2 4 2 3 4—15
Miss Kingman	4 4 4 4 3—19	Mrs Hull	2 5 0 3 4—14
Mrs Feck	3 4 2 3 4—17		

SCHUETZENS ON PLEASURE BENT.—The New York Independent Schuetzen Corps is one of the wealthiest of the societies of the metropolis, and in its eighty-five members are represented some of the most opulent of the city's German population. Each year the organization indulges in a pleasure trip, and this season Niagara Falls was selected. The party, numbering about 100, left New York City by the Erie, Sunday evening, June 9, and arrived at East Buffalo next morning. Here they were met by the Germania Band, who accompanied them to the Falls. They were driven to the International Hotel, the Germania leading them. The officers of the corps are as follows: Capt., J. J. Diehl; First Lieut., A. Geib; Second Lieut., C. Bruns; First Sergt., T. Feldstein; Shooting Master, H. H. Hoenack.

The first exercise on the programme was the shoot for the gold medal of the society. The thirty-seven who were to contest took carriages and proceeded to Port Day, where an 80-yard range had been laid out. Each contestant was allowed three shots, and the individual who scored the best bull's-eye was awarded the prize. No other score was kept. Some remarkably fine marksmanship was displayed, and Mr. John Koster, of Koster & Bial, was declared the winner. He was closely pushed by several others, an eighth of an inch deciding the contest in his favor over Mr. C. Waldeck. Besides the sport among the members a medal was offered to the best shot among the guests of the society. Mr. George Aery, President of the Sharpshooters of the Eastern States, proved the successful marksman, his strongest rival being Mr. H. H. Ruetter, President of the Brewers' Association of the United States, who was within a quarter of an inch of him. The afternoon was consumed in viewing the delightful scenery and rugged beauties of the Falls and surrounding country. Goat Island, the Sulphur Springs, the Whirlpool, the historic Lundy's Lane, Prospect Park, the Cave of the Winds, and other localities to which the zealous guides lead the tourists were visited.

As soon as darkness had set in, the evening's programme was opened with a beautiful display of fireworks, the band playing. At nine o'clock the large dining-room of the hotel had been cleared and otherwise prepared for the devotees of the light fantastic. Many of the citizens of the town had been invited to participate, and a large and distinguished party occupied the floor.

During the ball the prizes were distributed, and on Tuesday evening the entire party left the Falls on their return trip.

NEW JERSEY—*West End, Columbia Range, June* 27.—A large number of entries were made in the handicap match. The following are the best scores:

	Actual Score.	Allowance.	Total.
J L Paulding	30	2	30
N D Ward	30	0	30
C H Seymour	28	0	28
B F Hart	28	0	28
R M Seymour	23	0	23
W W Dodge	26	0	26

Col. B. W. Spencer made a score of 29, but it was thrown out, under the rule which prohibits two competitors using the same rifle.

June 30.—Two competitions were shot to-day, viz.: Turf, Field and Farm, and Dudley. The best scores were:

Turf, Field and Farm Match.

	Actual Score.	Allowance.	Total.
E L Field	42	3	45
J Hamilton	44	3	45
S T G Dudley	43	0	43
J L Paulding	40	3	43
A Hasbrel	42	0	42
F H Holton	41	0	41
C H Eagle	38	3	41
W A Robinson	40	0	40

Dudley Match.

	Actual Score.	Allowance.	Total.
F H Holton	41	0	41
J L Paulding	38	3	41
R M Seymour	40	0	40

The Fulton Cup will be shot for on July 4.

COLUMBIA RIFLE RANGE TIME TABLE.—The managers of the Columbia Rifle Range, West End, N. J., have displayed a most commendable degree of enterprise in securing frequent and rapid transit to and from the range. Following is the time-table of the New York, Lake Erie and Western Railroad, trains running daily except Sundays, and stopping at the Rifle Range on signal only:

From New York, 23d street—7:45, 9:45 and 11:45 A M; 12:45, 1:45, 2:45, 3:45, 4:45, 5:45, 6:45 and 8:45 P M. From New York Chambers street—7:50, 10:0 and 12:00 A M; 1:00, 1:5, 3:00, 3:50, 4:00, 4:45, 5:10, 4:50, 6:10 and 6:30 P M. From Jersey City—8:05 and 10:15 A M; 12:15, 1:15, 2:15, 3:18, 4: 5, 4:15, 4:55, 5:05, 5:5, 6:25 and 6:45 P M. West End Rifle Range, arrive—8:14 and 10:24 A M; 12:24, 1:24, 2:14, 3:24, 4:14, 4:24, 5:01, 5:53, 5:14, 6:33 and 6:54 P M.

To New York, leave West End Rifle Range—8:15, 8:23, 8:56, 9:15 and 9:55 A M; 12:15, 12:26, 2:26, 3:55, 4:05, 4:15, 5:24 and 6:15 P M. Jersey City, arrive—8:27, 8:35, 9:5, 9:25 and 10:6 A M; 1:15, 12:45, 2:35, 3:45, 4:15, 4:25, 6: 5 and 6:25 P M. N W York, Chambers street, arrive—8:40, 8:50, 9 2/, 9:40 and 10:20 A M; 12:40, 1:00, 2:50, 4:00, 4:30, 4:40, 5:50 and 5:40 P M. New York, 23d street, arrive—9:00, 9:20, 10:00 and 10:30 A M; 1:00, 1:30, 3:00, 4:00, 4:35, 5:00, 6:0 and 7:00 P M.

The Ad. Sign Co. and Remington matches at 200 yards will be open all day to-morrow, July 4.

Brinton Range, June 28.—Eighth competition for Sharps military rifles. Rifle won by Col. D. Lodor, A. Niemaod leading all competitors, but having previously won a rifle, scored one. Competition for final prize; there were 51 entries, the following being the best scores:

A Niemand	4	4	4	3	5	4	4	4	5—41
Col D Lodor	4	5	4	4	4	5	3	5	4—39—41
Col G E P Howard	5	4	4	4	5	3	5	4	4—38—41
W A Mulford, Jr	4	4	5	4	4	4	4	4	3—40
Lt L H Greene	3	4	5	4	3	4	4	4	4—39
D A Vail	4	4	4	5	4	4	3	4	3—39
A Hasbell	4	4	3	4	4	4	4	5	3—39
D F Davids	3	4	4	4	4	3	5	4	3—38
J A Stearns	4	5	5	3	4	4	3	3	4—38
J R Byrd	4	4	4	3	5	3	4	4	3—37
W Haudenhorst	4	4	4	4	3	3	4	4	3—36
H W Courley	4	5	3	4	3	4	3	3	3—36
J W Martin	3	4	3	4	3	4	5	3	3—35
D Gilbert	4	3	2	3	4	4	4	3	4—35

June 26.—Third competition; Association long-range match:

Frank Hyde	800	5	5	5	5	5	4	5	5	5	5	5	4	5	5—73
	900	5	5	5	4	5	5	5	5	5	5	5	5	5	5—72
	1000	4	4	5	5	4	5	4	5	5	5	5	5	5	5—69—214
A Niemand	800	5	5	5	5	5	5	5	5	5	5	4	5	5	5—69
	900	5	5	5	5	5	5	5	5	5	5	5	5	5	4—73
	1000	3	4	4	5	5	3	5	5	5	5	5	5	5	5—69—211
M J Graham	800	5	4	5	4	3	5	5	5	5	5	5	5	5	4—64
	900	5	4	3	3	4	5	5	5	3	5	3	5	4	5—61
	1000	5	5	5	5	5	5	5	5	3	4	5	5	5	4—71—199

	800 yards.	900 yards.	1,000 yards.	TTL.
A McInnes	60	52	52	184
W A Mulford, Jr	47	49	43	139

June 30.—The first Association match of the season was closed on Saturday, 28th inst., the total amount of $150 for 300 entries having been received. Under a restriction as to first prize, the second prize was won by W. Milton Farrow with the following score of totals: 46, 47, 43; aggregate, 141 out of a possible 150:

A Hubbell	44	47	46 137
F H Holton	45	46	46 137
J W Todd	45	45	47 137

Are a tie, to be hereafter determined, for first, third and fourth prizes.

E M Squier	43	45	45 135
Homer Fisher	47	44	44 135

Are a tie for fifth and sixth prizes. The four remaining winning scores are F. L. Sheldon, 134; B. A. Vail, 133; D. A. Davids, 132; A. Niemand, 131. This match will be followed every Saturday afternoon by one of similar character, of which particulars may be found in the July programme.

June 25.—Canton Rod and Gun Club; Riverside Range; practice meeting at 200 yards, off-hand; 3-lbs. pull, 10 shots:

											M. C.
Moore	11	11	7	10	8	12	10	11	10	11	11—101—45
Andrews	12	8	9	12	10	8	12	8	10	11	10—100—44
Hull	10	11	8	11	10	12	10	9	11	7	9—99—41
Laubenstein	11	11	10	9	12	8	7	8	8	10	9—94—43
Lewis	9	10	11	9	7	8	11	9	12	7	9—93—43
Bidwell	10	10	10	10	7	9	10	10	7	9	8—12—40

THE CHICAGO SHOOT.—A private dispatch from Chicago says that the Manhattan Rifle Club, of this city, under leadership of Capt. Geo. Aery, is the champion team of the great shooting fête. Mr. Wm. Hayes, from Newark, is King. The team made 1,164 out of possible 1,500, shooting at 200 yards and off hand. Mr. Hayes made 210 rings in 10 shots. Our predictions last week that the Eastern shooters would teach a lesson to the Westerners seems to have been fulfilled.

LOUISIANA—*New Orleans, June* 22.—The fourth contest for the new Lilienthal cup took place to-day at Frogmoor. The number of riflemen on hand was as large as usual; the interest taken in the competition is still on the increase. The day was fine, but the wind irregular, blowing in puffs directly across the field. Notwithstanding this disadvantage, the general average of points made was much superior to the average of the last contest, June 8. Capt. W. Gowland, Co. A, Second Regiment, has but lately appeared at Frogmoor, his first performance in public having been on the 8th ult., when in the third competition he scored 21 out of fifty points. He is the first representative of the Second Regiment who has been successful at Frogmoor. Appended is the score (new Lilienthal cup, fourth competition, with military rifles, 200 and 500 yards, five shots at each distance and two sighting shots. Three winnings entitle the winner to possession of the prize;

first contest won by Berceguay, 41; second by Weiss, 39; third by Arms, 42):

	200 yards.				500 yards.				
W Cowland	5	3	4	4	4—20	4	4	4	4	4—20—40
E Berceguay	4	4	4	5	3—20	3	4	3	5	5—20—40
Wm Arms	4	4	4	4	4—20	4	5	3	3	4—19—39
J K Renaud	4	4	5	3	4—20	3	4	5	2	5—19—39
H M Brad ord	4	4	4	4	4—20	4	3	4	4	3—18—38
John Glenn, Jr	5	4	4	3	4—20	3	4	5	3	3—18—38
James Henderson	4	4	4	4	3—19	3	4	3	3	4—17—36

T H Watson	3	3	3	2	3—14	4	0	0	2	4—10—24
J O Allain	5	0	3	4	4—14	2	2	0	0	1— 5—19

The Alabama State Artillery, of Mobile, have forwarded an invitation, through Maj. J. D. Scott, to the New Orleans riflemen, to take part in the military picnic at Frascati, Alabama, on the Fourth of July. Handsome prizes have been collected, and the honors both for teams and individuals are many. It is thought both the Louisiana Field and Continentals will send teams; perhaps the Washington Artillery also.

WISCONSIN—*Milwaukee, June* 20.—The Milwaukee Rifle Club practiced at 900 and 1,000 yards with the following result:

	900 yards.					1,000 yards.					Totals.
Johnson	5	5	5	5	5—25	4	4	5	4	5—22	47—72
Berry	4	5	3	3	5—20	5	4	4	5	3—21	41—61
Drake	4	5	4	4	3—20	3	4	4	3	3—17	37—57
Yale	3	5	5	4	5—22	3	0	0	3	3—9	31—53

NEVADA—*Gold Hill, June* 10.—The incidents and amusements of the Pioneers last Saturday were many and varied, notwithstanding the day was a cold and disagreeable one, and a slight fall of snow greeted the excursionists before the departure of train for the grounds. Five teams competed for the $100 coin prize. The scores were, with a few exceptions, far below the average, owing to the cold cutting wind which swept across the range. Following are the respective scores of the teams:

Sarsfield Guard.

Samuel Nutting	3	2	3	4	4—15	D Mc Pherson	4	4	4	3	3—18
Patsy Field	3	3	4	4	5—19	Patsy O'Day	3	2	4	4	3—16
David Morgan	3	3	4	4	3—17	J H Harris	3	3	4	3	5—18

Total											351

There was also a prize of $25 for the best team of reserves from each company, which also resulted in a victory for the Sarsfields. Following are the scores:

Sarsfield Guard	102	Washington Guard	87
Carson Guard	101	National Guard	64
Emmet Guard	96		

A prize of $20 for the best shot was also offered from each team, which will be seen was won by A. Merritt, of Sarsfields; Pierce, of Carsons (Creedmoor rule); Box, of Nationals; Williams, of Washingtons, and Dunne of Emmets. There was also a private match between W. S. Haskins, of the Sarsfields, and S. Reynolds, of Washingtons. Following are their respective scores:

Reynolds	4	3	3	4	3—17	3	4	5	4	4—20—37
Haskins	4	4	4	4	4—20	4	4	4	4	3—19—39

At the conclusion of the above shooting a match was made between J. R. King of the Carson Guard, and J. D. Channell of the Sarsfield Guard; distance 200 yards, 20 shots each:

King	3	5	4	4	5—21	3	4	4	4	3—19—40
Channell	4	4	3	4	4—19	4	4	4	4	4—20—39

This will lead to another match to be shot at the Mound House some time next month.

Other Winners—Mrs. J. A. Marshall of Gold Hill won the golden arrow, the prize for archery. Mrs. Monahan of Gold Hill won the silver cup, which was offered for the parlor rifle shooting. Miss Sallie Kaneen of Virginia City won the prize of the young ladies' foot race. The Virginia City football club, Sam Davis captain, defeated the Carson Club.

The weather has now moderated, and our next shooting I hope will be a credit to us. BELL.

CALIFORNIA—*Marysville, June* 8.—Regular practice of the Marysville Rifle Club:

THE JULY CREEDMOOR PROGRAMME.

The range at Creedmoor will be very fully occupied during the month of July with match and practice shooting. The events fixed by the N. R. A. are as follows:

Wednesday 9th, (Maj. James H. Jones, Executive Officer)—"Champion Marksman's Badge of 1879."—Fourth competition; The Champion Marksman's Badge to become the property of that competitor who, at the close of the season of 1879, shall have won it the greatest number of times. Open to all members of the N. R. A. and all members of the N. G. S. N. Y. in uniform; 200 and 500 yards; five shots at each; Remington rifle, N. Y. State model.

Saturday 12th, (Gen. Geo. W. Wingate, Executive Officer)—"Remington Match."—Sixth competition. Prize of $300 in gold. All comers; any Remington breech-loader loaded with cartridges furnished from the factory; 900 and 1,000 yards; 20 shots at each distance; position, any.

"We Will" Match," (formerly "National Guardsman Match")—Third competition. Open to members of the National Guard of any State, in uniform; 500 and 600 yards; 7 shots at each; weapon, the authorized military rifle.

"Skirmishers' badge Match."—Fourteenth competition. Open to all members of the N. R. A. and members of the National Guard of any State in uniform; any military rifle; distances, from 500 to 200 yards; second class targets.

Wednesday 16th, (Maj. James H. Jones, Executive Officer)—"Cowperthwait Match."—Second competition. Open to all members N. R. A. and N. G. S. N. Y., in uniform; 400 yards; position, standing or kneeling; rounds, 10 for competitors using military rifles; 9 for all others; two entries at each competition.

Handicap.—Winners of any first prize or place in any monthly or other match of the National Rifle Association, shot at Creedmoor, two points.

Saturday, 19th, (Hon. N. P. Stanton, Executive Officer)—"The Dimond Match."—Fourth competition. Open to all members N. R. A. and all members of the N. G. S. N. Y. in uniform; 200 and 500 yards; 5 shots at each; Remington rifle, N. Y. State model.

Wednesday, 23d, (Capt. William C. Caney, Executive Officer)—"Remington Rifle Match."—Third competition. Prize, a Remington Creedmoor rifle, value $100. Open to members N. R. A.; 200 yards; rounds, 10; any rifle.

Handicap.—1. Any competitor using other than a "military" rifle, four points. 2. Competitors who have in any N. R. A. monthly or other match at Creedmoor made at 200 yds: A. With a sporting rifle, two points over an average of centres (if using such a rifle in this match), two points. B. With a military rifle, over an average of centres (if using such a rifle), two points.

Same day—"Handicap Match."—Fourth competition. All comers; 200 yards; rounds, 10; competitors allowed 2 entries; any rifle. Handicap—1. Rifles other than regular military, 3 points. 2. Winners of any first prize or place in any monthly or other match of the National Rifle Association, shot at Creedmoor, 2 points.

Saturday, 26th, (Col. J. H. Cowperthwait, Executive Officer)—"Secretary's Match."—Fourth competition. Open to life and annual members N. R. A., and active members of any regular military or naval organization in the United States; 200 and 500 yards; position, standing at 200; at 500 yards, any without artificial rest; any military rifle (excluding specials); rounds, 5 at each distance.

Wednesday, 30th, (Maj. Henry Fulton, Executive Officer) "Alford Match."—Second competition. See July 2.

The affiliated clubs have laid down for themselves an interesting series of matches as follows:

Empire Rifle Club—9th.—"Spirit of the Times Match."—200 and 300 yards; 10 shots each distance, off-hand. 16th—"Daly Trophy Match."—300 and 500 yards; 10 shots each distance, off-hand. 23d—Competition for "N. R. A. Bronze Medal."—800, 900 and 1,000 yards; 10 shots each distance. 30th—"All-comers' Class Match."—200 yards; 10 shots; military rifles allowed 3 points. Entrance fee, 50 cents; re-entries, 25 cents, unlimited.

Amateur Rifle Club—16th.—Competition for the "Short-Range Badge."—200 yards; 15 shots; open to club. 23d.—Competition for the "Mid-Range Badge."—600 yards; 15 shots; open to club. 30th.—Competition for a "French Clock," value, $35.—800, 900 and 1,000 yards; 15 shots at each distance, with two sighting shots at 800 yards only; open to club.

Seventh Regiment Rifle Club—2d.—Competition for the "Rifles."—200 yards; 7 shots; open to club. 12th.—Competition for the "Shells."—500 yards; 5 shots; open to the regiment. 26th.—The "1879" Match.—200 and 500 yards; 7 shots at each distance; open to the club.

Twelfth Regiment Rifle Club—9th and 26th.—"Twelfth Regiment Rifle Club Match."—200 and 500 yards; 5 shots at each distance; open to club only; Remington military rifle; entrance fee, 25 cents.

POSITION IN RIFLE FIRING.

EDITOR FOREST AND STREAM:

Sir—Evidently that position should be selected that is best suited for actual operations in the field, and that is suitable for use in an open country, for where there are trees or fences, etc., such rests and cover as they afford are evidently the best for the soldier. The "prone position" (face the enemy) and the "back position" are beautiful on the modern rifle range where the grass is nicely shaven and the rifleman reclines upon his luxurious robe or rug. But for practical operations in the field each of these positions is impracticable. In most open fields there will always be more or less weeds or grass, or something in the way of sighting, and we all know that the slight impediment of a weed or blade of grass will frequently materially deflect the flight of the ball. On flat ground this annoyance is almost inevitable, and on rolling ground it can only be avoided by passing over a crest where you will be fully exposed to your enemy. Of course in long-range (500 to 1,000 yards) these positions might be used, as the exposure on the "off side" of the hill would not be great. But it is within these distances where all the effective work is done in modern warfare, and such a position should be studied as best suits the shorter ranges.

As more practical for the skirmish line in the open, I would suggest what might be designated the "sitting position," which I have used during several years hunting of large game and which was suggested by an old hunter. Several years' experience in the "war business" makes me think it suitable also for that species of sport. In this position the rifleman sits squarely, his left leg thrown forward nearly in line with the line of fire, bent sufficiently to rest the rifle either directly on the knee or else to receive the left elbow as in the kneeling position. The right leg is either in an easy position on the ground or slightly bent, upon which to rest and steady the right elbow. As is evident, this position can be modified to suit the conformation of each rifleman. Now to the application. Either in hunting or approaching an enemy in the open advantage is always taken of the undulations of the ground. If on flat ground the only alternative is crawling on all fours if the weeds and grass are high enough, or if not in "belly-scraping," in which operation your rifle is carried in the right hand and you pull and propel yourself along by your left arm and your left leg. When near enough to see your game through the grass you get ready. Evidently the prone position is not practical, because the weeds and grass obstruct the aim. You therefore swing yourself into the "sitting position," by raising your shoulders about thirty degrees by your left arm and throwing your left leg around from right to left until near the line of fire, and assuming the position as before described, and there you are. Your line of sight and fire are above the grass and weeds, and you have a clear field. In case of game, you are exposed only a short time before firing, and the inevitable "noble buck" drops in his tracks, after giving that convulsive leap you often read about, but never see.

In the case of the skirmisher, after delivering his fire he drops back out of sight into the "belly position" until he loads and has another opportunity to deliver fire. In case where rising ground permits, you approach the crest, first by stooping, then on all fours, and then by "belly-scraping." You crawl to the crest until the ears of the deer can be seen through the grass. Evidently, if you go far enough to get a good shot at its body over the grass, you will be for some distance in full view of the deer, which will soon detect your presence. But, by quickly assuming the "sitting position," you are exposed to view a very short time, and you can deliver a sure fire above all obstruction from grass, and generally with your head only exposed. So with the skirmisher; after each discharge he resumes his "belly position," and is entirely protected from the enemy's fire by the intervening crest of hill; whereas, if in the "prone" position, he has to be so far over the crest as to be exposed all the time.

It is not contended that the "sitting position" is as steady as either of the other two, but sufficiently so for a good shot (after accustoming himself to it) to hit the size of a man at least three out of five times at 500 yards. It has these advantages over the "prone" position: To me the "prone" position is very uncomfortable and "straining," and subjects the shoulder to a great deal of hard hammering, for the line of recoil of the piece is almost directly on the line of the trunk of the body. In the "sitting position" the body is easy, and the shoulder is free to yield to the recoil of the piece, and that is an immense consideration to the skirmisher, who fires 50 rounds sometimes in a few hours. Let his shoulder once become sore from the hammering and his aim is without effect. I hope the rifle associations will give the above some thought.

The "kneeling" position (dropping on right knee, rifle resting in left hand, elbow supported on left knee) is frequently used by me when game have discovered me and are in full view. It is assumed more quickly than the "sitting" position, though it is not as steady.

In long-range skirmishing the skirmisher will generally have time to improvise some artificial rest and cover, and the "back position" will be the less required. It may be objected to the "sitting position" that it will necessitate an ironclad protection to the pivotal buttock. Therein is the additional advantage, for it will afford an opportunity to give the loyal and patriotic army contractor a profitable job.

Montana, June 10, 1879. BEAR PAW.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States.

☞ NEW YORK LAW.—The open season for woodcock in New York State begins August 1, throughout the State.

No JULY WOODCOCK SHOOTING.—There is no woodcock shooting in New York State before Aug. 1.

—Delegates or others going to the New York State Association, meeting at Rochester, July 7th, can secure special rates from this city, by leaving their names at this office. If a suitable party is made up, a special car will be provided.

A SPORTSMAN'S HOME.—One of our Kentucky correspondents who writes for our columns often, is building him a home, a description of which will interest our readers who are longing for a similar lodge in some vast wilderness. The note is dated Neill Springs, Va., May 25:

I have "pulled up stakes" and gone southwest a few miles into the mountains, where rattlesnakes and copperheads disport themselves friskily, the partridge drums with impunity, and the "gay gobolier" struts *some*. Deer a few miles off—wildcats and an occasional bear and "painter," too. I am putting up a log mansion (?). My skiff is anchored on Big South Fork, four miles away. A fine perennial spring within forty rods affords minnows from seven inches down. Two miles off are valleys of wide extent, which are annually thick with quail, and, I doubt not, snipe plenty in season. Except a pointer owned by my cousin, my dogs are the only ones in the county.

Quail, turkey and deer shooting, and bass, salmon and jack-fishing in turn. Will you come? I am busy building and preparing for business—tanning.

SHOOTING BY MOONLIGHT.—On the sheep ranches of Texas, Colorado and New Mexico, where the mountain lions commit depredations on the folds, it is customary for the ranchmen to set out a caress for a bait near by, and lie in wait on moonlight nights and shoot the varmints. The people in India have a like experience, only more of it; and as lessons

may perhaps be learned from them, we copy the following hints from the Calcutta sporting paper called the *Asian*. The contributor says:

To begin: I may as well state that the great secret of success in night-shooting is to place one's-self as nearly as possible one the same level with the "*Jawar*" one wants to shoot; and I need not remind "Jehu" that shooting at tigers in this position at night is extremely dangerous. Great caution should be exercised, and after firing he should not even wink.

I have used the following sight at night with great success:

Make a small black silk button, as round as it can possibly be made, and about the size of an average pea. To this round button attach two black silk threads. Tie this on to the muzzle of the rifle, keeping the black silk button directly on the head sight of the rifle. The sight is now complete for night-shooting.

With this sight, none of the back sights should be raised, but the rifle used with all the back sights flush with the rib.

Another important point to be observed is to keep the moon to one's back; but as this cannot be obtained throughout the night during full moon, the shikaree should sit with his back to the south and facing north, if possible. Even when there is no moon, the sky clear and lighted by the stars only, this black sight can be seen fairly well, but on such occasions the "*Jawars*" can only be dimly discerned.

LOUISIANA—*Monroe, June* 18.—This is a beautiful country. Fine hunting and fishing in this parish, Ouachita. Game, deer, turkeys, ducks, squirrels, quail and snipe in great abundance. We have good snipe shooting within two miles of town, and it last from four to five months. The country is interspersed everywhere with marshes, ponds, lakes with numerous bayous and creeks emptying into the Ouachita River, and for duck shooting in the winter (mallard, canvas back, teal and wood ducks) and fishing in the summer, there is no country except lower Louisiana, and like places, equal to this. M. N. C.

"ROD, GUN AND QUILL."—*Editor Forest and Stream:* The editorial note in the last issue, headed "Rod and Gun and Quill," was to the point. How much better than the universally decried pot-hunting is such greedy butchery, such savage desire to kill and wound, to destroy more than anybody else? Such stories are too common, and too seldom properly noticed; of numberless trout caught, quail shot in huddles, deer slaughtered beyond any possible use, and not a word said in condemnation of the miserable business. Of what use are close times or any possible attempts at protection, when men who call themselves sportsmen indulge in such hoggishness, and are so far from feeling any shame for it that they send accounts of it to the first sportsman's paper in the land! AWAHSOOSE.

Ferrisburg, Vt., June 28.

TO TEXAS AND BACK.—*Editor Forest and Stream:* Through your courtesy in introducing me to many of your prominent railway men, I have been enabled to undertake with great comfort a railway journey of over four thousand miles right through the States to San Antonio, Texas, and back—all accomplished in less than three weeks. To say I never enjoyed a trip more would fall far short of what I wish to convey. None but those who have taken such a journey can fully realize the boundless resources of your vast country, or can appreciate the extraordinary development of its wonderful wealth of land and unrivaled scenery. I was particularly struck with the vast strides made of late years in the Lone Star State. From Denison to "Golden Gate," all the way to San Antonio, the incessant relay of field after field of corn and cotton, alternated with rich prairie pastures, was simply amazing; and then, after so many days' travel, to find one's-self in that lovely sanatorium of the West, San Antonio, with its verandahed houses esconsed in brilliant foliage, studded and dotted here and there around the wayward meanderings of its capricious, yet romantic, river; red-birds, blue-birds and mocking-birds singing all around; sweet doves in countless hundreds, and young prairie chickens, gave an enchantment to the scene I never before experienced. True, the weather was hot by day, but the delightful fresh breezes from the Gulf, carrying ozone and fragrance from millions of flowers, gave an extra vigor that more than compensated for any relaxation experienced by day. Americans need not go to Paris to die and be happy while such Edens as San Antonio are at home. J. CUMMING MACDONA.

New York, July 1.

RUST PREVENTIVE.—*Editor Forest and Stream:* Much has been writen lately in FOREST AND STREAM of certain substances to be used upon guns and other firearms as rust preventives. I wish to add my own experience. I have recently opened one of my guns, which I packed away more than a year ago. At the time of putting it away I carefully coated it inside and outside with Eaton's "Rust Preventer." When opened it was perfectly free from rust or discoloration of any kind. Part of the time the gun was in a damp place near the sea shore. This seems to me to be a good test of the value of Eaton's preparation. I give the facts, not because I have any interest, either direct or indirect, in the article mentioned, but because I want to recommend a really good thing to my brother sportsmen. But why will the gentlemen who manufacture these things persist in such frightful misuse of English as to call them "Preventers," "Preventatives," etc.? Against such misnomers I feel bound to protest. Some one has proposed to mix mercury with cosmoline or vasseline. This would doubtless make an effective rust preventive, but it would be open to the objection that holds against the ordinary blue or mercurial ointment, namely: it is dangerous to handle. I do not think that the addition of the mercury would add much, if any, to the usefulness of either of the above substances. C. B.

Bethlehem, Pa.

REMEDY FOR POISON OAK AND IVY.—Let me give you a remedy for the effects of poison oak and ivy, which I have found to be of the greatest value both upon my own person and upon others. It is sulphate of zinc, 60 grains; distilled or rain water, 8 oz. This mixture may be applied four or five times daily. It is not caustic, and so does not destroy the tissue; hence it may be used with perfect safety. It stings slightly when the vessicles are broken, but I have always found this sting a pleasant relief from the intolerable smarting itch of the rhus itself. I have used in a rather extended experience acetate of lead, nitrate of potash, bicarbonate of potash, bichloride of mercury (this last is effectual, but extremely dangerous), and grindelia robusta; but not one of them has so uniformly sure and quick in its action as the sulphate of zinc. The fluid extract of grindelia, diluted with four or five times its bulk of water, is a very pleasant application for allaying the intolerable itching, but its effects upon the poison itself is simply *nil*. C. B.

Bethlehem, Pa.

COLUMBIA RIFLE ASSOCIATION GLASS BALL TOURNAMENT.—A glass ball tournament will be held on the grounds of the Columbia Rifle Association, at West End, N. J., on Saturday next. Shooting will begin on arrival of train on Erie R. R., leaving foot of Chambers street, N. Y., at 10 o'clock A. M. Five matches will be fought, as follows, open to all comers:

First, twenty-five single balls—First prize, association gold badge and 10 per cent. of entrance money. The badge to be held by the winner for one month, and to become the personal property of the competitor winning it three times. Second prize, 10 per cent. of entrance money; third prize, 5 per cent. of entrance money.

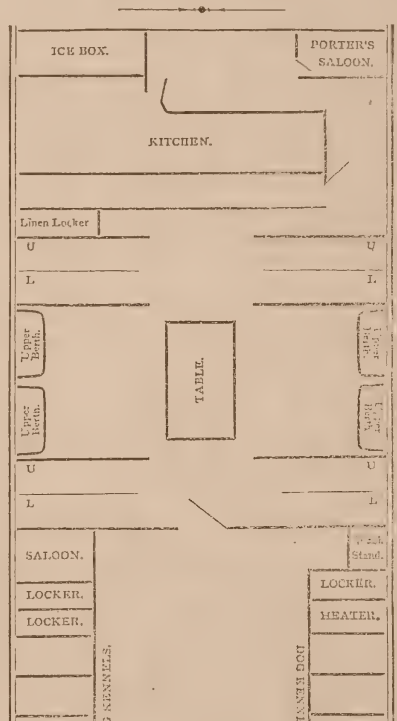
Second, sweepstakes at twenty-five single balls, entrance fee $2—First prize, 50 per cent. of entrance money; second prize, 25 per cent.; third prize, 10 per cent.; fourth prize, 5 per cent.

Third, sweepstakes at ten pairs of double balls, entrance fee $2—Entrance money divided as in No. 2.

Fourth, classified sweepstakes at ten pairs double balls, entrance fee $2—Entrance money divided as in No. 2.

Fifth, classified sweepstakes at twenty-five single balls, entrance fee $2—Entrance money divided as in No. 2.

A Hatch glass ball trap will be given to the competitor making the best aggregate in Nos. 3 and 4. A year's subscription will be given to the best aggregate in all of the above named matches.



A CAR FOR SPORTSMEN.

The Pullman's Palace Car Company have just turned out from their shops at Detroit, Mich., two cars designed especially for the use of parties of tourist sportsmen. The most approved appurtenances have been adopted and the cars are models of comfort and convenience. Both cars are essentially the same, but fishermen will probably prefer the "Izaak Walton," while gunners will take the "Davy Crooket." The diagram given above will sufficiently explain the plan of the cars.

THE NEWARK GUN CLUB.

NEWARK, N. J., May 29, 1879.

EDITOR FOREST AND STREAM:

"Bayard," in his communication to a contemporary, appears to have been quite put out by an innocent letter I wrote to your paper. He seems to have the idea that mine was an attack on the Wa-gun-nas Gun Club, of Newark, and that it was entirely one-sided. As to the absurdity of the so-called puff I gave to Kay's Chips, he should purchase some of those articles and try them to see whether the results really are so absurd. In the first place, the chips are neither gotten up by the old Eley wire cartridge nor copied from it. Messrs. Kay have spent months of study and experiment in making their concentrators all that is claimed for them. Eley's cartridge acts on the distributing principle of a sieve, while Kay's is upon the gradually expanding principle, which latter has been found correct. I don't intend to enter into any scientific discussion as to why it is correct, but it is based upon facts which can be proven to "Bayard" if he will pocket his pride and pay a visit to Mr. Kay, who is chief of the "mob of shooters" he so sneeringly refers to,

As to the same "mob of shooters," the Newark Club: constant failures of various shooting clubs having taught the "mob" that an organization was almost always the cause of grumbling and discontent. The members have none of it, but keep together by the purchase of badges by subscription, and shooting for them from time to time. In this way a party has been kept together for nearly four years. Any one has the privilege of drawing his subscription at any time if dissatisfied, and the badge and traps—also subscribed for—are the entire property owned by the "mob." The Hurlingham Gun Club did not establish such a precedent when Bogardus went to meet them. He was received as a shooter, and his social position was not called in question when he faced the five traps with his aristocratic competitors.

However Henley rules or not, the Wagunhas accepted, under certain restrictions, the challenge extended to them by the "mob," but the "worthless chips" stuck in their throat. The Newarkers did not confine their antagonists to muzzle-loaders and cylinder bores, but they might shoot chokes of modern construction. It is well known that the favorite gun of the "mob" is a cylinder bore of 10 gauge and about nine pounds weight, experience having taught that such an arm is available for all purposes, and most of the members are not well enough off to own an armory from which a selection may be made. The "mob," moreover, claims that the "worthless" chips will make cylinders shoot as well as choke bores are supposed to—see Kay's advertisement—and the Wagunhas seem to have the same idea, else if they are as "worthless" as "Bayard" represents, why should they be barred? Besides, the "mob" are fully aware that nearly all guns fall at the distance named—thirty yards rise—to properly kill good, fast birds, and that such shooting, instead of trying the skill of the shooters, only resolves the match into one of luck as to which side will get the majority of slow incomers. This restriction was something the same as if it had been said: "We will toss up whether the birds are fast or slow; if fast, it will be equivalent to a miss, and *vice versa*, and the party with the fewest fast birds will be judged the winner."

The Wagunhas may take comfort in the fact that at least three of their members are also integral parts of the "mob," and another proviso of the acceptance of the "mob's" challenge was that no member of the Wagunhas should shoot on the other side, quite a new idea, as it is generally conceded that when parties are members of two clubs—even if one of them is a "mob"—they have the right to select on which side they shall compete in case conclusions are tried between them. As far as the "mob" being "doubled up like a jack-knife," etc., it was simply this: Finding the Wagunhas did not like to meet them because their guns were loaded to kill, nothing more was said on the subject. SIDE LEVER.

It is due to "Side Lever" to state that his communication has been inadvertently overlooked, otherwise it should have appeared promptly upon its receipt.

—See Bogardus' advertisement.

PIGEON MATCHES.

SEND IN SCORES EARLY.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

LOUISVILLE GUN CLUB TOURNAMENT.—The full scores of this well-conducted tournament will appear in our next issue. The shooting was of excellent character, and the meeting a most successful one.

AN OHIO IDEA AND A GOOD ONE.—"Buckeye Boy" writes: "Correspondents, in reporting scores of matches in which Card rotary trap is used, omit to mention notch at which spring is set. As the force of the spring makes a great difference in the shooting it would be well to mention it."

MAINE—*Topsham, June* 26.—Riverside Club; Card trap:

G H Goud	1	1	0	0	0	0	0	1	0	0	0	1	0	0	0—4
Fisher	0	0	0	0	0	1	0	1	1	0	0	0	0	0	0—3

B. E. N.

Bellevue.—The 3d meeting of the Raymond Sporting Club at picturesque Bellevue, Friday, 27th, the principal feature of the day being glass ball shooting, 30 balls, 10 Bogardus, 10 double and 10 rotatory, counted as one score per man. The first prize in the first class is a gold badge; in the second, a silver badge; and in the third a silver badge. Entries close when the entry fees equal the value of the badges. The result was as follows:

First class.

B F Schaffer	Single	1	1	1	1	1	1	1	1	1—10
	Double	0	1	0	1	1	1	1	1	1— 8
	Rotatory	1	1	1	1	1	1	1	1	1—10—28
G B Blanchard	Single	1	1	1	1	1	1	1	1	1—10
	Double	1	0	1	1	0	1	0	0	1— 6
	Rotatory	1	1	1	1	1	1	1	1	1—10—26
W B Witherell	Single	1	1	1	1	1	1	1	1	1—10
	Double	1	1	1	0	1	1	1	1	1— 8
	Rotatory	1	1	1	0	0	1	0	1	0—6—24
W H Harrison	Single	0	1	1	1	1	1	1	1	1— 9
	Double	1	1	0	0	0	1	1	1	0— 6
	Rotatory	1	1	1	0	1	0	1	1	0— 7—22

Second class.

D Kirkwood	Single	1	1	1	1	0	1	1	0	0	1— 7
	Double	1	1	1	1	1	1	1	1	1	1—10
	Rotatory	1	0	1	1	1	1	1	1	1— 9—26

Third class.

J E Nason	Single	0	1	1	1	0	1	0	1	1	0— 6
	Double	0	0	0	1	0	0	0	0	1	0— 2
	Rotatary	1	0	0	1	1	0	0	0	0	0— 3—11

ALGONQUIN GUN CLUB—*New York City, June* 24.—Following is the score of the Algonquin Gun Club; fortnightly shoot, June 24, at grounds, Weehawken, New Jersey:

Jas Dunscith	11	11	11	11	11	11	11	11	11	11—20
John H Hill	11	01	11	11	10	11	01	11	11	11—17
R C Brenner	01	11	11	11	11	11	00	11	01	11—16
Wm Burns, M.D	10	01	01	11	11	11	11	11	01	11—16
Thos Fougherty	11	01	01	01	11	11	11	01	11	01—15
Louis Brenner	10	11	10	11	00	01	11	00	11	11—13
Wm McCabe	10	10	10	11	01	11	11	00	01	10—12
Geo Williams	00	10	01	11	01	01	10	01	00	01— 9
David Simpson	10	10	10	11	01	01	00	10	01	00— 8
Geo J Saur	00	10	00	00	10	00	00	00	00	00— 2

Jas Dunscith took the prize, valued at $25, having won it three times.

MYSTIC GLASS BALL CLUB—*Somerville, Mass., June* 26.—Card's revolving trap, 21 yards rise:

E L Johnson	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1—15
Chas Ellsworth	1	1	1	1	1	1	1	0	1	1	1	1	1	1	1	1	1	1	1	1—14

F Woodbridge	1	0	1	1	1	0	1	1	1	0	1	1	0	1	1	1	1	1	1	1—15
Gellett	1	1	1	1	1	0	1	1	0	1	1	1	1	1	1	1	1	1	1	1—12
Harras	1	1	1	1	1	0	1	0	1	1	1	1	1	0	1	1	1	1	1	1—12

Sweepstakes:

Johnson.....1 1 1 1 1—5 Mullay.....1 1 0 1 0—3
Ellsworth.....1 1 1 1 0—4 Woodbridge.....1 1 0 0 1—3

Ties: Mullay..... 1 1 0 0 1—3 Woodbridge.....1 1 1 1 0—4

NEW JERSEY—*June 24.*—Third of the seven matches by the Bergen Point Amateur Gun Club for gold badge; 25 glass balls, 15 yards rise, Bogardus traps and rules:

Moore.....1 1 1 0 1 0 1 0 1 1 1 1 0 0 0 1 1 1 1 0 1 0 1 1—17
S L Davis.....0 1 1 1 0 0 1 1 1 0 1 1 0 1 1 1 0 1 1 1 1 1 1—19
C H Davis.....1 0 1 0 0 0 1 0 1 0 1 0 1 1 0 0 0 1 1 1 0 0 0 1—12
Wilmerding.....1 1 0 1 0 0 1 1 1 1 1 0 1 1 1 0 1 0 1 1 1 0 1 1—19

Ties, 18 yards, 3 balls each.

S L Davis.....1 1 1—2 Wilmerding.....0 0 0—0

MIDWAY SHOOTING CLUB—*Matawan, N. J., June 26.*—Monthly shoot at Morgan's Station for club badge; 22 entries under the following rules: 7 birds each, 5 traps, handicap; use of both barrels; 1¼ ozs. shot.

C Applegate, 26 yards.....1 1 1 1 1 1 1—7
J Vanbrackle, 26 yards.....1 1 1 1 1 1 1—7
F E Hyer, 24 yards.....1 1 1 1 1 1 1—7
I Straus, 22 yards.....1 1 1 1 1 1 1—7
A Teneyck, 23 yards.....1 1 1 1 1 1 1—7
H A Warne, 26 yards.....1 1 1 0 1 1 1—6
Dr Marsden, 23 yards.....1 0 1 1 1 1 1—6
D Arowsmith, 24 yards.....0 1 1 1 1 1 1—6
J Ivins, 24 yards.....1 1 1 1 1 1 0—6
C Warne, 24 yards.....1 0 1 1 1 1 1—6
E Vandeveer, 24 yards.....1 0 0 w
A R Coleman, 23 yards.....1 1 1 1 1 1 1—7
G Everett, 23 yards.....1 1 1 1 1 1 1—7
C Muerhead, 23 yards.....1 1 1 1 1 1 1—7
I Lamberson, 25 yards.....1 1 1 1 1 1 1—7
S Lamberson, 25 yards.....1 1 1 1 1 1 1—7
J H Bergen, 23 yards.....1 1 1 1 1 1 1—7
G H Wild, 23 yards.....0 1 0 1 1 1 1—5
R Worrell, 22 yards.....1 1 1 1 1 1 0—4
S Cobberly, 23 yards.....1 0 1 1 1 0 1—5
J L Perhune, 26 yards.....1 1 0 0 w
G Farrington, 23 yards.....0

Their being ten ties on seven birds, it was agreed to shoot what birds were on hand, miss and go out:

Vanbrackle.....1 1—2 Coleman.....1 1—2
Applegate.....1 0—1 Everett.....1 0—1
Hyer.....1 1—2 Muerhead.....1 1—2
Straus.....1 1—2 I Lamberson.....1 1—2
Teneyck.....0 —0 S Lamberson.....1 1—2

Ties to be shot off at next monthly shoot.

JERSEY CITY HEIGHTS GUN CLUB—*Marion, N. J., June 25.*—First contest for a gold badge; 25 balls; the winner to win it six times to be the owner; three Bogardus traps and rules; 19 yards rise:

Burdett.....1 1 0 0 1 1 1 1 1 w
Levering.....0 1 1 1 1 1 1 0 0 1 0 0 w
Cannon.....1 1 0 0 1 1 0 1 1 0 1 0 1 1 1 1 1 1 0 1 0 0 1 0—16

THE WILLIAMS GROVE TOURNAMENT.—*Editor Forest and Stream:* The sportsmen's reunion at Williams Grove, Cumberland County, Pa., on Saturday, June 23, met with fair success. We arrived on the grounds on the 9 A.M. train, and found that we were on an island, beautiful beyond description, perhaps forty acres. Situated in the centre a large and ice cold spring supplies water cold and pure. Our meals were furnished by a Mr. Russ, who furnishes board for all who may come unprepared with the necessaries of life. We found the trap arrangements complete in every respect—a screen made of boards, double thickness, about two and one-half feet high and sixty feet long, semi-circular in shape, hiding from view the three Bogardus traps. The pull ropes were passed through board troughs, the three connecting and continuing in one main trough to the trap puller, giving the shooter no chance of knowing which trap was being pulled, and no communication between puller and parties placing balls on the traps, and the traps being moved to throw in a different direction at every pull. With the fact that the shooting was done in the grove, many of the balls being thrown into and through the tree tops, will account for not more full scores. As I have been an eye witness to many contests of the kind, I must confess that this was the best arranged, best conducted, and most intricate test of skill that I have ever witnessed with the shot-gun.

First match, 18 yards rise, three Bogardus traps and rules:

J Rupp...1 0 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—28

Peace.....1 1 0 1 1 1 0 0 1 1—7
Owens.....0 0 1 1 0 0 1 1 1 1—6
Holland.....1 1 0 1 1 1 1 0 0 1—6
E Snell.....1 0 0 1 1 1 1 1 0 0—6
S S Rupp.....0 1 0 0 1 1 1 1 1 1—6
Crist.....0 0 0 1 0 1 1 0 1 0—4
Oyster.....1 1 0 0 0 0 0 0 1 1—4
J Snell.....0 0 0 0 0 1 1 1 0 0—3

In the shoot off for second, Dunbar won; for third, J. C. Rupp won.

Third match:

J C Rupp.....1 1 1 1 1 1 1 1 1 0—9
Dunbar.....1 1 0 1 1 1 1 1 1 0—8
S S Rupp.....1 1 1 0 1 0 1 1 1 1—8
Bamford.....1 1 1 1 0 1 1 0 1 1—8
Holland.....1 1 1 0 0 1 0 1 1 1—7
Hippensteel.....1 0 0 1 1 1 1 1 1 0—7
Noble.....1 0 1 1 1 1 0 0 1 1—7
Dill.....0 1 1 0 0 1 1 1 1 0—6
Searles.....0 0 1 1 0 1 1 0 1 1—6

Ties on eight—miss and out.

Dunbar.....1 1 1 1 1—7 Bamford.....1 1 1 1 0—4
S S Rupp.....1 1 1 1 1 1 0—6 Brandt.....1 1 0 —2

Ties on seven.

Noble.....1 1 1—3 Hippensteel.....1 0—1
Holland.....1 1 0—2

Fourth match, rotating trap, balls thrown in every direction:

J C Rupp.....1 0 1 1 1 1 0 1 1 1—8
Bamford.....1 1 1 1 1 1 0 1 1 1—8
G H Keller.....1 0 1 1 1 1 1 1 1 0—8
Noble.....1 1 0 1 1 1 1 0 1 1—8
G D Keller.....1 0 1 1 1 1 1 1 1 0—7
Brandt.....1 1 1 0 1 1 0 1 1 1—7
Dicks.....1 0 0 1 1 1 1 0 1 1—7
J H Snell.....0 1 1 1 0 1 1 0 1 1—7
Searles.....1 1 1 0 1 1 0 0 1 1—7
E Snell.....1 0 0 1 1 1 0 1 0 1—6
Dunbar.....0 1 0 0 1 0 1 1 0 1—5

Ties—Rupp took first, Stuart second. Snell third with his score of 6.

Fifth match, three Bogardus traps:

J C Rupp.....1 1 1 1 1 1 1 1 1 1—10
Brandt.....1 1 1 1 1 1 1 1 0 1—9
Bamford.....1 1 1 1 0 1 1 1 0 1—8
Noble.....1 1 1 1 1 0 1 1 1 0—8
Stewart.....1 1 1 0 1 1 0 1 0 1—7
Searles.....1 1 0 0 1 0 1 1 1 1—7
Stuart.....1 1 0 1 1 1 0 1 0 1—7
G H Keller.....1 0 1 1 0 1 0 1 1 1—7
G D Keller.....1 1 0 0 1 1 0 1 0 1—6
E Snell.....1 1 1 0 0 0 0 0 1 0—4
Crist.....1 0 0 1 1 0 1 0 1 0—5
Dunbar.....0 1 1 1 0 0 0 0 1 0—4

Sixth match, double balls; traps 10 yards apart; 18 yards rise, both sprung at same time:

J C Rupp.....11 10 10—4 Dunbar.....01 00 11—3
G H Keller.....11 10 10—4 Dicks.....10 10 10—3
Stewart.....10 10 11—4 Brandt.....10 00 10—2
Searles.....10 10 10—3 Oyster.....00 00 10—1
Bamford.....10 10 10—3 J H Snell.....10 00 00—1

Ties on 4.

Rupp.....11 10—3 Stewart.....10 00—1
Keller.....00 10—1

The shooting in this match was poor on account of smoke hanging, being impossible to cover second ball.

Seventh match; 5 balls, 3 traps:

Wade.....1 1 1 1 1—5 G D Keller.....1 1 1 1 0—4
Brandt.....1 1 1 1 1—5 J D Rea.....1 0 1 1 1—4
J C Rupp.....1 1 0 1 1—4 Willis.....0 1 1 1 1—4
Bamford.....1 0 1 1 1—4 Crist.....1 0 1 0 1—3
Atticks.....0 1 1 1 1—4 E Snell.....0 0 1 1 1—3
J H Snell.....0 1 1 1 1—4 Bitner.....1 1 0 1 0—3
Dicks.....1 1 0 1 1—4 Dill.....1 0 1 0 0—2
G H Keller.....0 1 1 1 1—4 Oyster.....0 0 1 0 1—2

Ties on five—miss and out.

Wade.....1 1 1 1 1—6 Brandt.....1 1 1 1 0—4

Ties on four, 31 yards, miss and out.

J C Rupp.....1 1 1—3 Rea.....1 0 0—2
Bamford.....1 1 0—2 Dicks.....1 0 0—2

Attics, Willis, Snell, Keller, G D Keller, out on first. SCHELL.

Rational Pastimes.

CRICKET.

FIXTURES.

July 3—Utica, N Y, Belleville (Ont) vs Utica.
July 4—Staten Island, Belmont vs Staten Island.
July 4—Portsmouth, N H, Boston vs Portsmouth.
July 4—Syracuse, Belleville (Ont) vs Onondagas.
July 4—Chestnut Hill, Baltimore vs Chestnut Hill.
July 4—Prospect Park, Paterson vs Manhattan.
July 5—Oswego Falls, Belleville (Ont) vs Oswego Falls.
July 5—Staten Island, Staten Island (2d) vs Columbia.

—A team of Philadelphia cricketers will probably make a tour through Canada early in August.

—The second eleven of the Staten Island visit Philadelphia on the 16th and 17th to play the second elevens of the Young America and Germantown clubs.

—The Staten Island's first eleven will shortly play the Young America, Germantown, Merion and Belmont in Philadelphia, and the Baltimore at Baltimore. The 21st to the 26th are the dates.

ALBANY C. C.—The following are the names of officers elected at a recent meeting of the Albany (N. Y.) Club. William Lacy, Pres.; Frederick P. Olcott, Vice-Pres.; William H. McNaughton, Sec'y; George Story, Treas.

SYRACUSE TOURNAMENT.—The Onondaga C. C. has selected the 21st, 22d and 23d insts. for their tournament. Major A. H. Davis, President of the O. C. C., will offer a silver cup for competition. The St. Georges, of New York, and the Port Hope Club, of Canada, have been invited to send teams for those dates. The cricket outlook in Western New York is very encouraging, and great credit is due Mr. C. H. Millward, Secretary of the Onondagas, for his untiring efforts to popularize the game. A new club has been recently organized at Utica, with W. Clark, M. D., for Secretary, and also one at Oswego Falls, with Mr. Thos. Carr for Secretary. The latter club gives promise of becoming quite a strong and permanent organization.

BALTIMORE VS. CHESTER.—For the first time, elevens of these clubs met on the Baltimore's ground at Mount Washington, on the morning of the 25th ult., and despite threatening clouds, followed by rain in the afternoon, the home club won a creditable victory by ten wickets. The Pennsylvania visitors, up to their match with the Baltimorians, had an untarnished record. This, coupled with the recent defeat of the home club, made them feel confident of success. The Baltimore eleven, however, remembering that "a game is never lost until it is won," showed a marked improvement since their last venture, and this time did finely for their club. For Baltimore, T. Smith led in the batting with 31 (not out) and 7 (not out), while Oldham took 17 of the Chester wickets for 23 runs. For the Pennsylvanians, Harrison made top score for his side with 7 and 11; Griffin, 13 and 0, and Wood, 10 and 1, Wood doing well with the ball, capturing 6 wickets for 23 runs. Annexed are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Baltimore	56	11 (no wkts dn)	67
Chester	48	17	65

DORIAN VS. MERION.—Never was the uncertainty attending the game of cricket more fully illustrated than in the match on the 26th ult., at Ardmore, between the first elevens of the above named clubs. The Merions, with a first class eleven, containing their best bowlers, were defeated by the young Haverford College boys by one inning and 10 runs, Fox alone getting into double figures—14 and 14 (not out). The bowling and fielding of the collegians was magnificent, as the bowling analysis shows, Lowry taking 11 wickets at the expense of only 38 runs, and Newkirk credited with 9 for 37 runs. When it is remembered that this was against a strong batting team, including several of the best batsmen in the country, the skill of the Dorians cannot be too highly commended. For the victors Lowry contributed 15 and Newkirk 20. The totals are as follows:

	1st Inn'g.	2d Inn'g.	Tota
Dorian	90	..	90
Merion	40	50	90

ST. GEORGES VS. MANHATTAN.—The St. Georges, without Cross and Richardson, achieved a brilliant victory over a strong eleven of the Manhattans, on their grounds at Hoboken, on the 26th ult. Captain Soutter led the score for his side with a capital 49 (not out); Hyde-Clarke, 34; Giles, 29; Conover, 26; Houssling, 13, and Moeran, 10—the innings of the home club closing for the large total of 191. For the Manhattans Hosford contributed a careful 31 (not out); G. Scott, 21; Hulbert, 20; Haywood, 17; Jenkins, 13, and Norley, 10—their innings footing up 131, thus leaving the St. Georges the winners by 60 runs.

LARGE SCORES.—It may be remarked that on the 26th ult. 465 runs were made in the three innings of the St. Georges, Staten Island and Manhattan clubs. This speaks well for New York batsmen, who, by the way, never before scored as well as they have done this season.

STATEN ISLAND (2d) VS. NEWARK.—Twenty-five years ago there was no town in the country that could boast of as jolly a lot of cricketers as Newark, or who played the game better in the old-fashioned way. But alas! "Death's winning ball" has sadly thinned the ranks of these kindred spirits, and the few that are left have long since given up rubbing their shins after the visitations from the youthful Hallis, and calling out "'Ows that!" with a mixture of other interrogatory exclamations. It was early this spring that a reunion of old players and patrons of the game was suggested, and from this meeting sprung the newly re-organized club. Several weeks ago the Staten Island Club kindly extended an invitation to the Newarkers to play their inaugural game on the 26th ult., at their beautiful grounds. The Jerseymen accepted, but with becoming modesty named the Island's second eleven. Since the match, however, it has occurred to several of the Newark team that as far as the result went they might as well have elected the first or even the fourteenth; for second elevens, like being given out "leg before wicket," are things that no fellow can understand. Heller's second-sight is but child's play to the mystery connected with a second eleven! The tact with which this indivisible collection of unites is produced, throws old Greenleaf's pet brain stunners in the shade, and the intrigue which is used in their formation would make a Machiavelli's mouth water or cause his teeth to grind with envy. Should a skeptic hint in the hearing of a second eleven captain that the cricket's finger-board points to several first eleven men in his team, he will be pounced upon and buttonholed, until he is persuaded that a more wretched lot of players was never before assembled for the purpose of wielding bat and trundling ball. In time he will become so thoroughly convinced that the sun never backed such a lot of "muffins," that all the brains he has left will be employed in wondering "why on earth" such men are played at all if their club wishes to win. The very players themselves will decry their own proficiency until the game and its belongings shine outas the quintessence of all the cardinal virtues. The Newark team went to the Island and were defeated by one inning and 24 runs. It is apparent that it was no discredit for a newly organized club, which virtually had no practice, to be defeated by an eleven of cricketers who are in daily training and have the finest and most available grounds in the vicinity of New York, and an immense number of players to draw upon. When the Newark club, which has plenty of good material, secures a proper ground to practice upon there will be a very different showing. It was a lovely day for cricket, and although the match was too one-sided to be interesting, yet it had special features. The game was enjoyed by every one, and it was fun to see old Fred Hallis make the stumps fly again. In days gone by, Hallis was one of the club's right-hand men. He has always been known as a very fast bowler, and his record shows that in 1859 he captured 6 wickets of the All England eleven for 47 runs. Besides Hallis, the Newark team includes Walters, the once famous pitcher of the Mutual base ball club, who is probably the fastest underhand bowler in the country. The fielding of both elevens was about equal, but the catches that were missed by the Newark team during the early part of the Staten Island's inning proved to be very disastrous for the visitors. The batting, however, of the Newarkers was certainly inferior to that of their opponents. The game was begun promptly at eleven with the home club at the bat, and before being disposed of they had scored 143. It may be remarked that 5 of the best wickets were down for 33 runs. The principal scores were; Eyre, 42, a well-played inning with a slice or two of luck; Roberts, 25, including two boundary hits, to square leg, for 6; Irving, a steady 25 (not out), and Dodge, 12. Satterthwaite took 4 wickets; Hallis, 4; and Walters, 2. For Newark, Borrie contributed 20 and 5; Satterthwaite, 8 and 10; W. Knight, 12 and 5; and Walters, 2 and 12. Bayard's bowling proved very successful, taking 10 wickets for 36 runs. Appended are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Staten Island	143	..	143
Newark	63	56	119

SINGLE WICKET.—A series of single wicket matches are being played on the Staten Island's grounds. Prize bats will be awarded to the winners by the club.

ANOTHER AUSTRALIAN TEAM FOR ENGLAND.—The Sydney men seem determined to have the honor and glory of sending an eleven of their own home, and according to the telegrams received arrangements have been nearly completed for so doing. There is no doubt that they can turn out a wonderfully strong eleven if all the best men will go, but they certainly cannot find any efficient substitute for Blackham, even if they find Bayley's, Boyle's and Horan's places easy to fill. There is also another scheme stated to be on foot between the associations of our own and the sister colony to send home a representative eleven of the two colonies. Of course both schemes cannot be carried out, but whatever eleven goes

home will, I fancy, find itself in a very different position to the pioneer team. The element of novelty will be wanting, and although there is every probability of the expedition being a pecuniary success, the members of the next eleven going home will find that socially they will be received very quietly. As I have said, the novelty will have worn off, and an Australian eleven in England will be looked upon as a thing of course, not calling for any attention out of the common. But of course if another eleven is got together it will be a mere monetary speculation, and so long as that comes out right, as there is little doubt it would if properly managed, everybody connected with it will be quite satisfied.—*Australian, April* 19.

OTTAWA VS. WEST END.—These two clubs of Ottawa, Ont., met for the first time on the 21st ult. Ottawa went first to the bat and scored 227, of which D. J. Smith contributed 58. The West End in their first venture were out for 63, and had to follow their inning. When time was called they had made 55 for 5 wickets.

UPPER CANADA COLLEGE VS. TRINITY COLLEGE SCHOOL OF PORT HOPE.—The annual match between these colleges was played on the grounds of the former organization at Toronto, on the 26th ult. The U. C. C. has, from the infancy of the game in Canada, been noted as a nursery of cricketers; and certainly no institution in the Dominion has turned out so many good players. This game is one that always excites attention among the collegiates and their friends, and on Thursday afternoon a large number of spectators, including many ladies, turned out to witness the yearly contest. The Queen's Own band enlivened the merry scene with selections of excellent music, and as both colleges had put their best elevens in the field the game from start to finish was full of interest. As will be seen by the score, Upper Canada won by 51 runs:

ARCHERY.

ARDEN ARCHERS—*Marietta, Ohio, June* 28.—Score made at the first regular meeting, June 28, by a few members of the Arden Archers, of Marietta, O. We are expecting to send a team to the Grand National Association Meeting at Chicago. Why do not other teams in practice publish scores? We receive more enthusiasm from seeing big scores made by other teams, and then trying to equal them, than from any other way. So far this season, I think, there have been no scores made at the American Round published. We would like to know what the Wabash Merry Bowmen and the Kokomo Archers are doing:

	40 yds.	50 yds.	60 yds.	Total.
Edward Devol	175	87	57	319
C G Slack	153	108	72	333
Lorenzo Devol	93	42	27	162

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ We cannot attempt to give specific directions where to go for game and fish. Correspondents must keep themselves posted by consulting our news columns.

J. B., Boston.—No charge for claiming names.

W. R.—To register your dog write to John B. Munson, St. Louis, Mo.

J. W.—For portraits of Carver send to Chas. Zimmerman, St. Paul, Minn.

G., Fishkill Landing, N. Y.—The guns are reliable, and are for sale by leading dealers.

L. M., Otago, New Zealand.—We shall give same attention to rifle matters as we have in the past.

J. T., Plumsteadville, Pa.—You will find trapping about Connecticut Lakes. See last week's answers.

T. M., Orange, N. J.—The New Jersey woodcock season was not altered at last Legislature. The season opens July 4.

BUFFALO.—You will find good duck and other wild-fowl shooting in Saginaw Bay, Mich. The birds feed on the wild rice there.

J. M. D., Wheeling, Va.—Chilled shot will not injure your choke bore. If you use buck shot you must chamber them carefully.

T. A. K., Ognawka, Ill.—To procure blue rock pigeons for stocking purposes send to Chas. Reiche & Bros., Chatham St., New York.

REO, New York.—You might secure New York A. C. grounds for football match. You will not find any English rabbits in this country.

F. F. M., New York.—In Lake Morawog, near Washington, you will find bass fishing, and trout in the streams if you can learn where to go for them.

BASS, Philadelphia.—For bluefishing on Long Island Sound, latter part of July, go to Sayville, L. I., where Charles Hulse will take good care of you.

G. N. A., Brooklyn, N. Y.—The Arm of Liberty now set up in Madison Square is not a model but a portion of the real statue which is to be erected on Bedloe's Island.

W. W.—There is newspaper testimony to the return of the migratory quail to Rutland, Vt., this spring. We shall shortly publish something reliable from that part of the country.

W. E. A., Morris, Minn.—For good woodcock shooting in Minnesota you may go to Frontenac, Goodhue County; to St. Peter, Nicollet County; or to Parker's Prairie, in Otter Tail County.

H. C. K., Albany.—Good salt water fishing about Portland, Me. For gunning there are wild fowl, snipe, woodcock, ruffed grouse. Also salmon in Sebago Lake, 15 miles distant, and trout in streams.

L. W. M., South Weathersfield.—Your dog wants careful nursing and a nourishing diet, with a tonic—say iron and quinine, five grains daily. You can do nothing for the fits, and they will probably leave him as he recovers his strength.

G. C. A., St. Paul.—What will I give my spaniel bitch to bring her into heat? I have given her cantharides, eight drops twice a day for atout a week, but it has no effect. Ans. Give her nothing, unless it is a couple of raw eggs twice a day. The medicine you have given her is more than sufficient, if unadulterated, to have killed her.

T. L. N., Cleveland, O.—At Mt. Desert, Maine, you will find trout fishing in Eagle Lake, 3½ miles from Bar Harbor; in Jordan's Pond, reached by wagon road from Bar Harbor; and in Long and Denning's Ponds, near Southwest Harbor. Somerville, at the head of the Sound, is a good initial point. For flies see head of Sea and River columns. There is excellent salt water in the neighborhood also.

F. H. S., Moodus, Conn.—1. What food is the best to feed a setter dog on during the hunting season? 2. Is it advisable to commence hunting with a dog that you have not previously taught to retrieve? Ans. 1. If only one dog is kept feed him liberally on the scraps from the table. If necessary to prepare food for him, boil meat and vegetables together, and thicken with oat or corn meal. 2. It makes no difference as far as the "hunting" is concerned; it is only a convenience to have him retrieve.

F. N. M., Yonkers, N. Y.—The pickerel (*Esox reticulatus*): Back, greenish gray; sides, yellowish green, reticulated with oblong irregular markings; fins, deep yellow or red. Quite a different species from the pike (*Esox lucius; E. afinis*). The body of the pike is very dark green or greenish black; sides, in some waters, dull olive green, shading to white on belly; in other waters, of vivid green and gold; fins, greenish, those below tinged with red. Irregular dusky streaks on sides. Is gamy fish; much superior to pickerel.

A. H., Detroit.—I find a fine strip of gummed paper very handy for marking for windage on the inverted rear sight bar of my military rifle. Will such windage marks be within the rules, and allowed in the fall matches—interstate and international military—at Creedmoor? Ans. The rule permits the blackening and scratching of the rear sight bar. If the bits of paper were pasted on only, they would possess no advantages over the bright scratch. If the ends of the paper were allowed to project beyond the upper or lower edge of bar, objection would no doubt be made.

NEWFOUNDLAND, Boston.—Your dog can be easily cured by pursuing the following treatment: Commence at once giving him Fowler's solution of arsenic, at first six drops twice a day, increasing to 12. Rub on the spots where the hair is falling out crude petroleum two or three times a week. Pour into his ears twice a day as much of the following mixture as they will hold, first washing them thoroughly with Castile soap and water: Goulard's extract and wine of opium, of each ½ oz.; sulphate of zinc, ½ dr.; water, 8 oz. Hold the flap of the ear down for a few minutes until it has time to saturate. The diet would be better if you added plenty of green vegetables cooked into the meat.

D. I., Bloomsburg, Pa.—1. I have a setter three years old. Six months ago a white skin began to grow over his eyes, and has now nearly closed them. What can I do to remove it? 2. Has wild celery ever been grown in Pennsylvania? 3. Is wild celery a fresh or salt water plant? 4. Can you tell me whether there is any wild rice growing in Pennsylvania at present, and where? Ans. 1. It it is simply a film and not a cataract it may be cured by placing in a quill as much powdered burnt alum as can be taken up on a small knife blade quarter of an inch from the point, and blowing it in the eye. We have known of a cure being effected by placing in the eye three or four times a day a small pinch of pulverized white sugar. 2. Do not know of its having been grown artificially. 3. It is a fresh water plant, but grows in brackish water also. 4. Yes, at Blooming Grove Park, Pike Co.

Publisher's Department.

PHILIP HIGHFIELD BOWS.—Concerning these English bows, John J. Pickett, Esq., of Washington, writes to the American agents:

2,142 PENN AVE., WASHINGTON, D. C., Jan. 8, 1878.

MESSRS. PECK & SNYDER:

Gentlemen—I have bought, since taking to archery, some 50 bows at a cost of from $2 50 to $20,00 each, and I have no hesitation in saying that I have more satisfaction out of a 6ft. 65lb. Highfield lemonwood obtained from yourselves near a year ago, than from any bow I have ever pulled. My son (an athletic youth) has shot with it ten thousand times (at a moderate estimate) and the long yellow stick seems to grow tougher the more it is used. JOHN T. PICKETT.

A WATCH FOR THE FIELD.—We notice a remarkably nice black-faced nickel watch, just the thing for boating and fishing, where a fine watch may get wet and be ruined. They are furnished for eight dollars (less than the interest on the price of a gold watch) by Hall, Nicoll & Granbery, 20 and 22 John street, N. Y., who fully warrant them.

—Nothing is more in keeping with the present aspiring nature of the thermometer than the delightfully cool and ease-compelling hammocks, manufactured by J. P. Travers & Son, and advertised in another column. These hammocks are strongly made and of the most comfortable shape.

New Publications.

FRANK FORESTER'S FUGITIVE SKETCHES—We have read with great interest this little volume of 150 pages, lately published at Westfield, Wisconsin, at the low price of sixty cents per copy. Its editor is "Will Wildwood" (F. E. Pond), of that place, who has made a study of sporting literature, and has collected with great industry many of Herbert's sporting tales and sketches, originally published in various periodicals of thirty years since—articles which have never yet, to any great extent, been republished, and which therefore have almost the interest of an original work to the present generation. These sporting sketches of the lamented Forester, now rescued from oblivion, bear the stamp of the brilliant pen that produced the "American Field Sports," and will be welcomed and valued by the great fraternity of sportsmen. They present a succession of attractive pictures of woodland scenery, and lead us forth again to the romantic domains of the natural world—to mountain and stream, to sea shore and forest and prairie—sylvan retreats so dear to the sportsman. The contents of this volume are entirely new to us, and we have had a feast in reading the chapters on the Quail, the Snipe, the Woodcock, the Bittern, the Stag, the Trouting Trip to the Mountains, and the Geese Shooting Adventure at Barnegat. We trust that the volume will meet with the ready sale that it so well merits. McL.

Shelter Island, June 7.

TROUTING ON THE BRULE RIVER, OR LAWYER'S SUMMER WAYFARING IN THE NORTHERN WILDERNESS. By John Syle King, Chicago. Chicago Legal News Co., 1879.

In paper, type and binding this is an exceedingly handsome volume of 293 pages. It relates the vacation rambles of a party of Chicago lawyers on the Brule River and on other streams of Wisconsin, and Michigan, and delineates the actual life and incidents of the party in canoes, on portages, in tents and with abundant fly fishing, and some gunning. The author claims that the merit of the book is in its "minute and faithful portrayal of the real life of real persons in pursuit of holiday pastime and respite," mainly with the fly-rod as their wand of enchantment. And a perusal of the work neatly confirms the justice of the claim, and affords us a delightful picture of that abounding "innocent revelry in the luxuriance of summer life which only anglers enjoy to the utmost." The preface contains information generally of sporting regions of the Northern portion of Wisconsin, and adjacent Michigan, the routes to them, and hints as to outfits; and, also incidentally, some fine passages as to the fascination of angling and instances of some noted men who have ennobled and made it a glory of sport. There is a map of the same regions with tables of distances in several routes. These are valuable features of the work. The style is always flowing and vigorous, is often graphic and brilliant, with a charming delicate and subtle vein of humor and pleasantry throughout, a rounding in happy allusions, with touches bordering on poetry, and an occasional graceful professional turn of thought, just enough to remind the reader that it is a lawyer who writes of lawyers at holiday play. It is really a most attractive volume, and deserves a popularity which will rank it with the best of summer books of the kind, and we doubt not, will afford to the writers brethern of the bar, and to others, an insight into the pleasures of FOREST AND STREAM which will, as the author says, he hopes it may induce in them a desire to go and do likewise.

MAP OF THE COMSTOCK LODE.—The *Mining Record*, of 61 Broadway, N. Y., publish a new map of the "Mines of the Great Comstock Lode," Virginia City, Nev. Those interested in this branch of our national industries will find the map of great benefit. It is sent post-paid for $1.

A LITTLE GUNNING.—The following account of "a little gunning," done by a farmer's boy, was narrated by the father to a correspondent of the Hartford *Times*. And yet they say game in Massachusetts is becoming scarce:

"I had a yearlin' heifer die along the last of the winter, and after skinning left the carcass on a lot back of the house; but as the weather got warmer I agreed I'd haul it up back of the barn and put it into the dung heap. Well, one Saturday night, after I had got done my day's work with my team, I drew the carcass up back of the barn. Next morning my boy looked through a knot-hole in the side of the barn and saw more crows than he could count hovering about the place. He wanted to get his gun and pepper even, but I told him he had better not be shooting Sunday and by the next day the crows would be better baited and likely there would be more there. Monday morning there was snow on the ground, but more crows than ever about the place. So the boy loaded his gun and went out. It wa'n't long afore I heard him fire and I went out to see what luck he had, and I found that he had winged six crows at one shot. He went about his work and later in the day thought he would try 'em again, and that time he brought down twelve. That evening 'long about 8 o'clock, as I was getting sleepy in my chair, my boy spoke up and said: 'I believe I'll go out and see if I can't get a fox around that carcass.' He wa'n't gone long 'fore I heard him fire, and I went out to see what he had hit. I found that he had shot a skunk that was prowling around, for he knew a fox would not come as long as the skunk was there. He gave it up for that night, and went to bed. The next day he shot more crows, and when night came he went out again for a fox. Another skunk was skulking about, but he did not want to fire, so he rigged a trap, and Mr. Skunk soon went into that, and he was out of the way. Later in the evening his fox appeared, and was knocked over by a charge from the boy's gun. Crow shootin' was good for several days after. One day we were out by the sap place, and a big hawk flew over. I said to the boy, "We must get him." "But how?" says he. I told him I would show him; so I set a trap and put in one of the dead crows for a bait. 'Twa'n't many hours 'fore the hawk was caught; and then we figured up that from that carcass of the heifer we had got about forty crows (besides a good many that probably died from getting hit, as we frequently found dead ones in the lots near by,) a fox, two skunks, and a hawk that had wings of about five feet spread."

A PYRAMID OF GERANIUMS.—*Mr. Editor:*—Five years ago I commenced trimming some double geraniums so as to form a pyramid, and I have one, of which I send you a drawing. The four centre plants are ten feet high. There is no difficulty in wintering them over in large pots in the hall of the house, giving them but little sun or water. The smaller plants are hung up on the beams of the cellar. In February begin to pot these and water them a little. Leaves soon start, and water is more freely given. When the time for planting them out comes I have a circular bed prepared, eight feet across, and several poles set deep and firm in and near the centre. The plants are taken out of the pots and planted, trimming them to a point. Water them freely for a week or two, and flowers at once form, and by the first of June are out. At no time last summer was there less than fifty clusters of flowers, and sometimes one hundred.

AN EXPENSIVE BEAR.—Mrs. Vredenburgh, having sued the members of the Crescent City Rifle Club, of New Orleans, secured a verdict of $15,000 in her favor. Her husband had been killed by a pet bear kept on the club grounds.

—"Wine maketh glad the heart," said the King of Israel; and the Hebrew heart of David's day was gladdened by a real wine, the wine of grapes; while the ancient Egyptian heart rejoiced in wine of barley, that is, beer. The invention of beer as a beverage is ascribed to Osiris, twenty centuries before the Christian era, and it was known to the ancient world as wine of barley. In the modern times the nationalists of Latin origin drink wine more freely than those of Saxon origin, who consume much beer. The agriculture of European countries is largely influenced by the popular demand for beverages. Within the last two decades, beer has been rapidly gaining favor in Latin countries. Beer saloons now flourish in Paris, Rome and Madrid, as well as in Berlin, Vienna and Hamburg. In Paris, for example, the annual consumption of beer has risen to over one hundred million litres (about 250,000 gallons), and many Parisians have come to the conclusion that beer, though inferior in attractiveness to wine, allays thirst, stimulates digestion, refreshes the system, and is nutritive.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d ST., NEW YORK, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.

MRS. W. H. KINSLEY, 158 West 22d Street, New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS. SAMUEL GERRY & CO.

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,

N. ORMS, 59 West 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS

NEW BOOK!
The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1 72. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

JAS. MEYER, Jr.'s, GIRONDIN DISINFECTANT,

Stands to-day unique in its action, and having the advantage of being ODORLESS AND COLORLESS, is adapted for any purpose for which Disinfectants are used.

FROM THE "FOREST AND STREAM."

The following letter shows the appreciation in which the GIRONDIN DISINFECTANT is held by the Westminster Club, it having been used at the dog shows in this city for the past two years:

MR. JAMES MEYER, JR.:

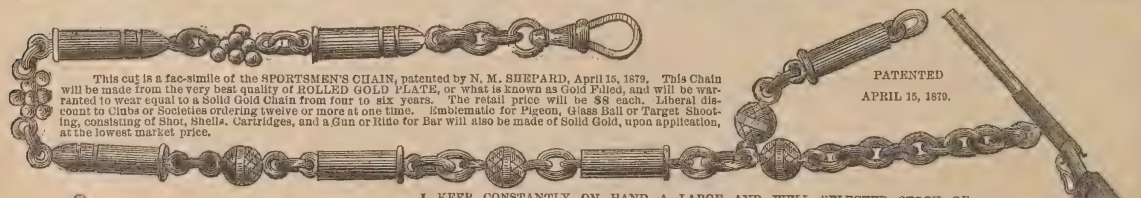
WESTMINSTER KENNEL CLUB, N. Y., May, 1879.

Dear Sir—We take pleasure in acknowledging our entire satisfaction with the purity of the atmosphere at Gilmore's Garden during our Third Annual Bench Show. We had 953 dogs on exhibition, and an average attendance of 6,000 daily, and the purity of the air was maintained to the end by the liberal use of your GIRONDIN DISINFECTANT. Saturday morning we ceased using it, and by noon the air had become very disagreeable and offensive.

Yours, etc.,
H. S. WEBB, H. WALTER WEBB, C. DU BOIS WAGSTAFF, ROBT. C. CORNELL, and others.

For Sale by all Druggists in quart bottles, ten gallon kegs, half barrels & barrels.

PASSAIC CHEMICAL CO., Sole Agents for U. S.



This cut is a fac-simile of the SPORTSMEN'S CHAIN, patented by N. M. SHEPARD, April 15, 1879. This Chain will be made from the very best quality of ROLLED GOLD PLATE, or what is known as Gold Filled, and will be warranted to wear equal to a Solid Gold Chain from four to six years. The retail price will be $8 each. Liberal discount to Clubs or Societies ordering twelve or more at one time. Emblematic for Pigeon, Glass Ball or Target Shooting, consisting of Shot, Shells, Cartridges, and a Gun or Rifle for Bar will also be made of Solid Gold, upon application, at the lowest market price.

TRADE—"BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

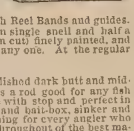
COMPLETE FISHING OUTFIT.

Having made special terms with the manufacturers, I am able to offer to the patrons of this paper the following **Complete Fishing Outfits** at the lowest prices ever offered.



OUTFIT NO. 1 Consists of a three-jointed Ash Rod, finely varnished, with brass mountings. A well-finished brass reel which fits the rod perfectly, an extra laid linen line and half a dozen hooks on good single snells. The regular price of this outfit is **$1 00** and I offer it for **$1 00.** This is just the thing for the boys and girls who want to fish with us, and is bound to please all who receive it.

OUTFIT NO. 2, A fine three-jointed Rod, dark polished butt, Brass mounted with Reel Bands and guides. An elegant large brass reel with stop, and extra laid linen line with half a dozen hooks on single snell and half a dozen extra tied and finished on **double** snell. An elegant patent Bait-box (as shown in cut) finely painted, and warranted to suit every one, also a good sinker and float, making a complete outfit for any one. At the regular price this outfit would cost **$4 50** and my price is only **$2 00.**

OUTFIT NO. 3 Consists of an elegant three-jointed **Bass Rod**, with finely polished dark butt and middle joints, and **lance wood tip,** full brass mounted with reel bands, guides, etc., and is a rod good for any fish up to twenty pounds. A finely finished brass **Multiplying** reel (as shown in cut) made with stop and perfect in every way, an extra finely finished linen line with one dozen best double snelled hooks and bait-box, sinker and float. Regular price of this outfit **$7 50,** I offer it for **$5 00.** This outfit is just the thing for every angler who may want to fish for any kind of fish and yet have tackle suitable for all, as it is made throughout of the best material and in the best manner. Goods warranted as represented or money refunded. Any of the above sent by express upon receipt of price. Mention this paper to secure the above outfits at prices offered. Address all orders to

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

".THE FISHING LINE,"

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET.
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

The Delaware Shell.

Our Improved Shell Now Possesses the Following Merits:

4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL.

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

For Forest and Stream and Rod and Gun

A SONG OF THE CRIMEA.

IN 1855 Her Gracious Majesty, Queen Victoria, caused a proclamation to issue, calling upon her subjects to unite in forming a fund to provide for the widows and orphans of those who nobly fell in the Crimean War. A *soiree* was accordingly held in the Scotch settlement of New Richmond, County of Bonaventure, under the presidency of the late lamented William Cuthbert, Esq., M. P. P. for the county—the worthy founder of that prosperous settlement, and a noble specimen of Scotia's sons. The writer was chosen to deliver a lecture, which he concluded with the following lines, little dreaming that he would live to see one of the noble line of Campbells Governor-General of Canada and united in marriage to a daughter of England's Queen:

Air: Scots wha hae.

Scots who were by Campbell led,
Scots who ne'er the foeman fled,
Welcome to your gory bed,
And to victory.

Well may Scotia vaunt that hour
When the Czar's o'erwhelming pow'r
Like a storm was seen to lower—
But ye did not flee.

Well ye stood the deadly fray,
Man and horse in proud array;
Dearly did the foeman pay
His temerity.

Inkerman, thy battle field
Taught the Czar's proud host to yield
When the Scotsmen—whom God shield—
Bid them turn and flee.

Honor to them, all who fought,
All who deeds of valor wrought,
On that glorious but dear bought
Field of victory.

Here's to Saxon, Celt or Scot,
Alma's deeds are not forgot;
Widows, orphans, ye shall not
Pine in penury.

Here's to England's Queen and laws,
Here's to whom in freedom's cause,
From its sheath the bright steel draws,
Death or liberty!

PHILIP VIBERT.

For Forest and Stream and Rod and Gun.

Lake Fishing in Winter.

IN Canada we have a weather prophet, who pretends to know more about the times and the seasons than the rest of the Dominion. He sometimes strikes off the weather correctly, and such proof of omniscience counterbalances a hundred false alarms. I know not what his prophecy for last March was, but as a safe one it would have been that great quantities of snow would fall, and that snow-storms would prevail; it would probably be something of that nature. Had he done so he would have been correct, for I do not remember of ever seeing so much snow as during the month of March of this year. I have good reason to be certain of this fact, for I was caught in a snow-storm when on a fishing excursion about twenty miles north of Quebec. When driving out on the excursion and looking at the road over which we passed, whose track—hardly wide enough for the passage of our *berlise* (a sort of box on runners)—was marked out by *balizes* (small fir trees stuck in the snow), for the fences were far beneath the dazzling white surface of driftland mound, I deemed that it would be impossible to heap more snow on this heavily-burdened country, where but tree-tops were visible and houses were buried to their roofs; and I could not help doubting that months of burning Sahara suns could melt the awful piles of ice and snow. I thought that the whole summer must pass before the grass could be seen and the rivers run again, and believed it impossible for any more snow to fall without defrauding the Arctic regions of their just due; but one of my companions, Odilon Déchene, pretended to be a judge, and predicted a storm. However, I must not recount this story irregularly.

It was toward the end of last month when we—that is, Odilon, just named, Alfred Déchene and myself—made arrangements for a few days' fishing among the lakes north of Quebec. At eight o'clock on a Tuesday morning our *berlise*, well packed with provisions, consisting of canned meats, biscuits, tea, coffee, and some refreshments of a more exhilarating nature, and furnished with buffalo robes, drawn by a wiry Canadian pony, started with its load of hardy fishermen. Our jehu was a young boy, who required no whip to put the pony to a trot, but with a single "*Marche donc!*" got all the speed required from him. The sun shone brightly as we rushed through the quaint and narrow streets, left behind us the old battlements and walls, and took the road running by the St. Charles River, called by Jacques Cartier the Cabir Coubat, on account of its interminable windings, down whose valley the wind swept with a bitterness easily imagined when the temperature showed fifteen below zero. And although the buffalo robes were thick and comfortable, and our pipes threw clouds of smoke freely enough, we were glad to make a stoppage at the American House, in the village of Indian Lorette, where we rested the pony, and warmed ourselves in the cozy parlor, and refreshed the inner man. Not then, as is the wont in summer, when hundreds of visitors go to this delightful village, where charms and attractions would take pages to recount, did the Indian youth come out and offer us to shoot for coppers, or forest maidens insist on selling their moccasins, bead and straw work. These Indian boys and girls have still the straight, black hair and dark eyes, but most of them have mixed their Huron blood with that of the white man, and the dusky belles are as keen after the last fashions as their city rivals. But in this village are to be found the hunters of bear, moose and caribou, and he who wishes to indulge in such sports must go to Lorette to hire the Indian hunters Sioui and Gros-Louis, and many others, whose deeds in the chase are chronicled in the village records.

Leaving this village the road became very narrow, and it was impossible to meet or pass another vehicle without the foundering of both horses to their bellies, and on one of these rencontres we wholly came to grief, for our pony got entirely beyond her depth and fell over, dragging the *berlise* and ourselves with him. The upset in a snow-bank is not dangerous so long as the horse is not vicious, and even then he is almost powerless in the soft and smothering snow. Untackling our poor brute, righting the *berlise*, replacing the *impedimenta*, reharnessing and shaking off the snow, we were soon again on the road, and shortly commenced to cross Lake St. Charles, which presented a peculiar sight, for the surface, being level, the shores, which on this lake are not high, appear at a great distance, and one seems to be traveling on a desert of snow. This lake is one greatly resorted to in summer, not only by fishermen, but those wishing to pass the warm months away from the dust and heat of the city. The fishing in it is excellent, and some very large trout have been taken there. Leaving the lake, we engaged a man named Pierre Verret to follow us and assist in the cutting of the ice-holes and to bring with him the gudgeon for bait. Verret was not then at home, he having taken advantage of one of the many holidays with which the Province of Quebec relieves her people from over-work, and while attending to his spiritual duties was amusing himself by a round of visits to distant friends.

After driving a few miles we arrived at the camp, but, to our disappointment, it was locked, and no one to be seen in the vicinity. However, a sort of stable was near at hand, and of this we took possession, and prepared a fire and supper, to which, it is needless to say, we did justice, for Odilon and myself were paramount in the preparation of dishes, which, thanks to the invention of canned edibles, were astonishingly varied. Here we parted with our pony and the jehu, who had instructions to return for us in four days, making ourselves as comfortable as possible in the stable, we enjoyed a smoke and cards till about midnight, when the man in possession of the camp came back, and we turned in for the night, sleeping on fir branch beds, over which we threw our wraps. The camp was a log hut, small but snugly built, and without cracks or crevices to let in the cold; but this certainly had also a disadvantage, for it shut out all ventilation, and tobacco fumes and smoke from the stove did not add to our comfort. Notwithstanding this we slept well, and it was late when we awoke the next morning to prepare for breakfast. The pure fresh air was more reviving than Jean Marie Farina's best eau de cologne to our fevered brows and heavy heads, and a running stream near by supplied us with pure ice-cold water for our ablutions, after which we felt like new men. We were in the midst of a forest, and high mountains hid from view the rest of the world, and not a sound was heard in this solitude; for there seemed not a thing of life there but ourselves, and our voices echoed back from the mountains with a ghostly ring, and there was no motion far or near but the floating by of the fleecy clouds above our heads. Not even the wind could reach us in this seclusion in the hermitage in the wilds; even the running stream, which supplied us with the clear cold water, was hidden beneath a snow-bank, which hushed its gentle murmurs. Fastening on his snow-shoes, Déchene went to the bush to cut some firewood, in order that our supply might not run out. I remained to assist in the cooking. We took this leisurely, as we would do nothing till Verret arrived with the gudgeon, and, having so much time on our hands, the result was a marvelous display of the culinary art. I might make my readers' mouths water with a recital of the bill of fare in French, but I will simply say that to us, with appetites sharpened by the exertions of the previous day, the cold morning air and the fast caused by the delay in preparation, that breakfast was luxurious, and fit for the most fastidious gourmand. A smoke of course followed, and we then put on our snow-shoes, and, striking north, we went in search of the lakes, which we came upon at two miles distance; both small lakes, and in close proximity, one called Sac Blanc, and the further one Sac Lud Ouest. Here we set to work to cut holes through the ice with long iron chisels, not an easy operation, when it is considered that the ice was from two to three feet thick, having a covering of the same thickness of snow. We worked steadily at this not very exciting employment for some hours, and managed to pierce four holes, two in each lake, and were on the point of returning to the camp when Verret arrived with the bucket of gudgeons and our lines. This was most fortunate, as we were enabled to set lines immediately, after which we returned to camp and again made preparations for another feed. I must confess that this style of fishing is not very exciting, that the setting of lines to be hauled up in the morning is a kind of fish murder; but when one considers all the surroundings of such an excursion, the camp life, the long drive, the mountain air, the rig-out which is supposed to be according to Hoyle (?) in such matter, viz., a blanket, coat, moccasins, and close fitting fur cap, the immense fish usually taken, and the countless other incidents so different from every-day life, one cannot help being fascinated by the *tout ensemble*, and coming back, hoping soon to participate again in such diversions. The evening was spent in the usual way, playing cards, singing and conversation, with the concomitants of hot Scotch and a pipe. At times we would venture out of the hut to escape the heated atmosphere and enjoy the pure ozone of the mountains, and at such times on such a night, when the full moon shone brightly down on the snow-clad hills, and the leafless trees cast their ghostly shadows across untrodden fields, there came over one a feeling of solitude and weirdness which was almost akin to fear. In the morning it was a subject of discussion whether we should breakfast before visiting our lines, and I know not if a love of sport or a desire to taste fish gained the day, but we decided on the visit. Over two miles on snow-shoes was quickly done, for we were anxious as to our catch. From the four holes we took nine trout, the largest being over two pounds. Again setting our lines, we returned to camp, and added the item of fish trout to our bill of fare. I know not, but it certainly seems undoubted, that in the country, especially in winter, one either requires a vast deal more to sustain nature, or the indolence forced on one causes him to eat a great deal more than in town.

After breakfast the whole day was before us, so again putting on our snow-shoes and shouldering shovels and chisels, we made for the lakes, and lustily turned to and cut three more holes in the ice, so as to give more play to our lines. While we were thus engaged the wind had arisen and the sky looked threatening, and angry drifts whistled by us, and by the time we had baited our fish-lines and looked at the others capturing three more trout, the storm had fully declared itself. Before leaving we marked the ice-holes with *balizes*, so that in the event of a heavy fall we could find them in the morning. The gale blew furiously, and we were almost blinded by the snow, but as we approached the camp we found that its secluded position was hardly affected by the gale, but that the snow fell heavily, quickly obliterating our footmarks. The evening was spent as heretofore, except that there was no moonlight wandering, for the snow was too deep, and we were speculating on the possibility of being entirely snowed-up and being unable to reach town. But these evil imaginings did not have any effect on our appetites; in fact our cook almost outdid himself in catering for the party, so that as the hours wore on we became satisfied that even a week's blockade would not be after all such a melancholy or unfortunate occurrence. The first who opened the door in the morning was nearly smothered under an avalanche of snow, and all had to turn out and assist in shoveling a road from the hut. Outside it had the appearance of a mound of snow, with but the newly-shoveled entrance visible. It was still snowing, but around us all was calm, yet we knew not whether outside of our little spot the tempest raged.

A visit to the lakes after breakfast was a heavy undertaking, for the snow was very deep, and each step was a labor. As expected, the gale was still blowing, but was evidently on the decrease. Our ice holes were covered, but we found them by the *balizes*, and were fortunate enough to make a haul of two dozen, one being five pounds. Again we set our lines and returned to the camp, where we were obliged to remain the rest of the day inactive. As the snow was too deep for walking forth, this was absolutely necessary. This imprisonment was certainly becoming monotonous, and the sole amusement of eating, drinking and smoking began to pall. However, there was nothing for it but to face the emergency, and we lived through the day and night. We breakfasted next morning before visiting the lines, as this was our last day. The gale had subsided, but the walking was terribly fatiguing. Again we made a good catch, taking two dozen and three, most of them over two pounds, one touching six. We returned to camp with our booty and

tackle, and commenced preparations for our departure. In the midst of these our brave little Canadian pony made his appearance with the boy and *berlise*, and we quickly transferred our catch and luggage to the latter; but on account of the depth of snow did not get in ourselves, as it would be impossible for the pony to drag the *berlise* over such roads. These became better after a few miles, and we embarked and proceeded somewhat more quickly, but till we had passed over Lake St. Charles the drive was very tedious.

At last—and it seemed a very long last—we arrived at Lorette, and made another stay at the American Hotel, where mine host, Lt. Amand, produced his best to refresh us weary travelers. It was evening when we left Sorette, and in two hours afterward were climbing up the hills of the old walled capital of Canada, where we were glad to seek repose after our long drive.

In all the lakes north of Quebec there is excellent trout fishing in summer and winter, but it is winter alone when the monsters are taken, and that in the manner I have just described. Some of these have weighed as much as fifteen or sixteen pounds, and I have even heard of their weighing twenty. It is an unnatural way of taking trout, but, as I have above said, there are the *outré* circumstances connected with it that lend a sort of charm, and a few days in the wilds in the midst of a Canada winter is a sort of relief to the monotony of a city life, where, after the most that can be had to give a color or contrast to existence, an artificial or an imitative palling to the senses and wearying to the mind.

FERDINAND ROBERGE.

Fish Culture.

MISSOURI FISH COMMISSION.—Missouri has fallen into line, and by the appointment of an energetic Board of Fish Commissioners, has initiated fish culture. The commissioners are: John Reed, Lexington, Mo.; I. G. W. Steedman, St. Louis; Silas Woodson, St. Joseph, Mo. Chairman Steedman writes: "We are late in the field, but are in earnest, and hope to atone for loss of time by availing ourselves of the accumulated experience of our contemporaries."

THE HUDSON SALMON.—We are gratified to receive from Prof. Spencer F. Baird this note, which sets at rest any question concerning the salmon recently captured in the Hudson River:

OFFICE U. S. COMMISSION FISH AND FISHERIES,
WASHINGTON, July 4, 1879.

EDITOR FOREST AND STREAM:

DEAR SIR—I notice in your issue of July 3 that a salmon weighing 6½lbs. was taken below the lower dam of the Saranac River, at Plattsburgh, about a week ago. This is probably one of the 36,500 Penobscot salmon planted by the U. S. Fish Commission in the Saranac River in 1875.

SPENCER F. BAIRD, Com.

MAINE.—Mr. Everett Smith, of Portland, and a frequent contributor to this paper, has been appointed Fish Commissioner for that State, the other commissioner being Hon. E. M. Stillwell of Bangor. This appointment is an eminently proper one, as Mr. Smith, in addition to being a sportsman and a naturalist, has given much attention to the subject of fishways and fish propagation.

LOBSTERS FOR THE PACIFIC COAST.—When Mr. Livingston Stone went out to California recently to begin his summer work of gathering eggs at Baird, on the McCloud River, he took with him a number of black and striped bass, eels and lobsters. The transfer was most successfully made, a supply of sea water meeting the shipment at Winnemucca. The lobsters are nearly all females, and are estimated to contain somewhere in the neighborhood of 1,000,000 eggs. The black bass were deposited in the Crystal Springs Reservoir of the Spring Valley Water Company, in San Mateo County; the striped bass in the vicinity of Martinez; the eels in the Sacramento, and the lobsters at Duxbury Reef.

Natural History.

DO WOODCOCK BREED TWICE A YEAR?

SEEING the question discussed, "Do Woodcock Breed Twice a Year?" I offer the following: I have spent the greater part of my life in Loudoun County, Va., where a great many woodcock breed, and have shot great numbers of them spring and fall for thirty years past, and I have studied their habits closely and with great interest. As a rule, I think they raise but one brood; for at the homestead where I was born and raised, nearly every season there were raised in each alder swamp a single brood; usually on the place from five to seven broods, and very seldom more than one brood in the same swamp. Watching them with intense interest from the time the pairs arrived until the first day of July, I knew them as well as I did the broods of chickens in the yard. Sometimes, when I knew only one pair of old birds were in the swamp, and the first brood was early hatched, I have known the pair to hatch and rear a second brood, and then have seen both broods with one pair of old ones day after day. When I went to the swamp to shoot them, I knew as well how many were there as I did how many pigs the sows had. I have often seen two broods and a single pair of old birds, and never in such case doubted after the above experience that the little ones were the second brood. Rarely, if ever, do the parent pair leave the broods until about the middle of July, when the birds disappear from their usual haunts. In case of their raising a second brood, I have always found the two broods with the one pair of old birds, and I have noticed this fact every season when I have shot much at this game in July. About the middle of July the broods separate and scatter about singly; or, occasionally two will be found together, and the impression is general that they migrate northward at this time, returning in October. I think not. They simply separate and withdraw to less-exposed places than where they breed, and gather again in the swamps prior to their southern migration. It is perfectly certain that these birds rear two broods a year not very rarely. The Virginia quail do so as a rule, but they break the pairs first; the hen turns over the first brood to the care of the cock, takes another mate, and brings up another brood. But not only do the same pair of woodcock bring up their two broods a year, but I am of the opinion that the same pair often resort to the same swamp, season after season, to rear their broods. I could add many interesting facts about the habits of woodcock, but I will not venture to trespass further upon your space.

Blacksburgh, Va., May 1. M. G. ELZEY.

ASBURY PARK, N. J., May 4, 1879.

EDITOR FOREST AND STREAM:

I was much surprised to see, from the article headed, "Do Woodcock Breed Twice," that there are some sportsmen who were not aware of this very well-known fact. I did not suppose that any one who had ever studied the habits of this fine game bird would deny that woodcock breed twice each year. I should like to ask those who doubt this whether these birds have their regular time for laying and raising their young, or whether they lay whenever they feel like it. With us they have a regular time and keep to it. I have found their nests the first of March, and again in June, and it seems impossible that there should be so much difference in birds on the same grounds. The second nest is usually very near the first, often only a few hundred yards distant. I think that the doubting person has not watched woodcock very closely, or he would be of a different opinion.

G. R. SQUIRE.

Apropos of these communications, which have been crowded out of our columns for several weeks, we have to say that this spring, as usual, at least one pair of birds to our knowledge have reared a second brood, and the young of the last hatching are scarcely able now to fly. It will be remembered that last spring was quite backward, and hence the birds are not so far advanced as they were last summer. We have no hesitation in declaring that in the Middle and New England States woodcock almost always breed twice. From Dr. Elzey's letter we infer that they may not always do so in the South.

ELECTRIC POWERS OF THE MEXICAN STAR-GAZER.

EDITOR FOREST AND STREAM:

Last winter, while making some collections of the ichthye fauna of the east coast of Florida, I obtained at Indian River Inlet—opposite Ft. Capron—a specimen of the Mexican star-gazer, *Astroscopus y-græcum*, which possessed electric powers in a high degree. This peculiar property has hitherto been unknown, I believe, in this fish. Back of the eyes—which, of course, were on the top of the head—were two slight depressions of a triangular oval shape, similar to the shape of a finger-nail, and soft and elastic to the touch, feeling somewhat like small cushions. Upon applying the tip of a finger to these surfaces, strong electric shocks were emitted, so powerful in fact that some of the persons present could not be induced to repeat the experiment, one trial being sufficient to convince them of the electric powers of the fish. The shock transmitted was similar to that of a galvanic battery, and the sensation produced was decidedly unpleasant.

Among those present, and who experienced the peculiar properties of the fish, were Messrs. R. D. Hoke, James Bassett, and the famous "Jim" Russell, who were engaged in "turtling" in the vicinity. The fish was kept alive all that day, and a number of persons who interviewed him were more than satisfied that he was a veritable piscatorial battery of decided electric qualities.

I also obtained, near the same locality, a specimen of *Gerres plumieri*, which, Prof. Jordan informs me, has not before been noticed anywhere on the United States coast.

Cynthiana, Ky., June 19. J. A. HENSHALL.

NESTS AND EGGS OF THE GENUS EMPIDONAX.—In the "Proceedings of the United States National Museum for 1879," Dr. T. M. Brewer, the well-known oologist, has printed an interesting paper on the "Nests and Eggs of the Eight North American Species of Empidonaces."

The notes with regard to most of the species are very full, but in the case of *Empidonax hammondii* only two sets of eggs appear to have been examined. From Dr. Brewer's study we learn that, so far as known, the eggs of *E. minimus, Obscurus* and *Hammondi* are always pure white without spots, while those of *Traillii, Acadicus, Pusillus* and *Difficilis* are almost always more or less spotted. Eggs of *E. flaviventris* are some time pure white and again marked with well-defined spots.

THE MUD-HEN OF THE WEST.—*Rushville, Ill.—Editor Forest and Stream:* The article on "The Mud-Hen of the West" by "Byrne," was one of great interest to me. He states that it feeds on mosses, water grasses, etc. Now, I also live on that part of the Illinois River where there are so many of these "mud-hens," and therefore have a good opportunity of watching them. On the 14th of April I sat behind a fence close to the water and watched them at six or eight yards distance. They would climb out on the shore and eat grass the same as tame ducks. But all "mud-hens" do not eat such food. I refer to the young ones. Last August I captured two out of five or six, which, with the old one, was feeding in shore at Spring Lake. Taking them home I found they would not eat vegetables, but would eat from 40 to 50 flies from my hand. They were somewhat smaller than a young chicken, and of a red color. One finally chilled and died, the other escaped.

AIX SPONSA.

The different names given to this bird (*Fulica americana*) in different sections of the country are quite curious. By ornithologists it is universally called the coot, but we have excited the risibles of various shooting men on the New England coast by calling it by that name, for in New England a coot is a duck (*Œdemia*) while the true coot (*Fulica*) is called a "sea crow." Why? Mud-hen is the common name for this bird in the West, and a very good one too, except that it would apply just as well to almost any of the rail family, and indeed it is often given indiscriminately to any member of the group. We would especially like to know, however, to what characteristic of the coot the term "sea crow" applies.

THE COMMON GALLINULE IN ILLINOIS.—*St. Louis*—Mr. Philip Burg sent me for identification a fine specimen of the "common gallinule," shot by him while snipe hunting in Illinois, near Carter's Station. The bird is an entire stranger in this part of the country, and probably the first of his kind seen this far from his usual home, the Gulf of Mexico, eastern shores of the Floridas and eastern parts of the Carolinas. The distinguishing marks of the bird are: Frontal plate and bill deep carmine; the ends of both mandibles yellow; iris, bright red. The bare part of tibia, just below the feathers on thigh, carmine. The wings have a narrow edging of white, which runs along the outer quill. Specimen, full grown male.

PERDIX.

Our correspondent is in error in supposing the common gallinule to be a stranger to the soil of Illinois. It has been there before. (See Ridgway in Annal's Lyceum of Nat. Hist., N. Y., vol. X, p. 337, 1874.) It is a bird of wide distribution, and has been taken in California, Kansas, Minnesota, Canada West, New England, West Indies and South America to Chili.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JULY 5.—One red-billed dove, *Columba flavirostris, Hab.* Mexico, presented by A. J. Lespinasse, Esq., U. S. Consul; one Indian tortoise, *Testudo nidica, Hab.* Re-union Island, presented by Capt. John H. Goldsmith, Salem; one ring dove, *Turdus risoria*, presented by Andrew C. Zabriskie, N. Y. City; one gray squirrel, *Sciurius carolinensis*, presented by Mrs. Howland, N. Y. City; one carrier pigeon, lit on S.S *City of New York*, 100 miles from the city, presented by Mr. C. A. Jacobson, Brooklyn; two hawks, *Buteo borealis*, presented by Master Frank C. Coley, Westport; one mocking bird, *Mimus polyglottus*, and one bullinch, *Pyrrhula rubicilla*, presented by Mr. John Satherland, N. Y. City; six yellow-bellied liothrix, *Liothrix luteus, Hab.* India, purchased; one swan goose, *Anser cygnoides*, purchased; three sea lions and a baby, *Zalophus gillespii*, placed on exhibition.

W. A. CONKLIN, Director.

The Kennel.

DISTEMPER.

EDITOR FOREST AND STREAM:

Our experience with distemper has taught us to look upon it as a febrile disease, having its origin in a blood poison similar in many of its chief characteristics to typhus fever in man, and, like all other diseases caused by and depending upon a blood poison, unless promptly and properly treated, has a speedy termination in death. Distemper or any other disease manifesting such a variety of symptoms can be successfully treated only by combating the symptoms separately as they arise. First, let us consider distemper as a febrile disease. In using the term fever, as applied to a morbid state of the system, we must remember that the same word is also used as a part of the designation of several complexed diseases: as typhus fever, yellow fever, remittent fever, etc. The word used in this double sense is empirical and perhaps unfortunate, but custom has rendered it unavoidable. If custom is to continue to use the word fever in this double sense, distemper in the dog should be called distemper fever; there is no more meaningless word in the English language than distemper, but until science shall establish a better one we must submit to the term (I would suggest the name "blood poison fever"). Distemper is almost universally admitted to be a blood poison accompanied by fever. The efforts of nature to drive the poison out of the system results in inflammation of the mucous membranes of the entire system, which inflammation produces general fever. Fever is never present without inflammation. Some may differ with me upon this point. This is the theory upon which I founded my plan of practice, and as the practice has been successful, I will cling to the theory. Theory which is not proven by practice is disproven by it. At the present state of science it is idle to speculate upon the origin of the blood poison of distemper; it is sufficient to know that we have it, and that its potency is sufficient unto death. That the inflammation of the mucous membrane is general we have proven to our satisfaction by not only a few, but many *post mortem* examinations. That the inflammation affects the mucous membranes of the eyes, nose, mouth, lungs, stomach, bowels and sexual organs, every case gives evidence from the exudation of pus or mucus from these parts. The general symptoms of fever are, increased heat of the whole body, dryness of the skin, mouth, etc., diminution in bulk of the excretions; muscular debility. The pulse of fever is characterised by moderate acceleration, with variable increase of force in the beat, functional disturbance of stomach, brain, etc., etc. Heat is the most essential characteristic of the febrile state, having given name to it in all languages. Fever, as a symptom in the first stages of distemper, is (so to speak) the pulse of the disease. To the inexperienced, a few degrees of heat, more or less, cannot be detected; to remedy this use a thermometer. Place the bulb of the instrument under the pit of the forearm, holding the arm down to exclude the air; hold it there at least five minutes. In the early stages of the disease the height of the fever as indicated by the temperature of the body as shown by the thermometer is *prima facie* evidence of the severity of the attack. In my hands this has never failed, which is one of my reasons for naming distemper "blood poison fever." Fever is always present in the early stages, diagnosing and prognosticating the disease, first by its presence, next by its degree of violence, by its duration, and lastly by its subsidence or absence. The natural heat of the blood is about 98 or 100 degrees, but in fever and inflammatory diseases it will sometimes reach 107 degrees, but rarely. In distemper 104 degrees is fatal in 95 per cent. of cases, and the cases are to be judged by a variation from 98 to 107 degrees; should a high degree of heat occur for only a short time and then subside permanently, it only has its comparative value. A high or comparatively high degree of heat for twenty-four hours is dangerous. Subsidence or entire absence of fever after it has been violent for any length of time is not always a good symptom, but is almost invariably a forerunner of extreme prostration which terminates fatally.

Many writers and practitioners have described and treated distemper as a disease running into several separate and distinct types, when in reality it is exactly the same cause producing the same effect in different locations and different organs, such as the head, chest, stomach, bowels, etc., etc. There is but one way to reach each of these organs, viz., through the blood; hence the general treatment will be the same for every type of the disease, and as any or all of the different symptoms may occur in any case, we vary the general treatment only as the symptoms arise.

The disease has been called nead distemper when the blood poison locates and produces the most violent symptoms in the head, commencing with dullness, stupor, and ending in coma, convulsions and death. Mild distemper is when the dog only exhibits the general symptoms in a mild form; no case of mild distemper (which did not run into complications) ever terminated fatally. In chest distemper the disease attacks the throat, bronchial tubes, lungs and all adjacent organs, often attacking the head. I never knew a case in which I was positive it had extended to the heart which recovered. Belly distemper is another one of its classifications in which diarrhœa is the leading feature; the diarrhœa may be watery, mixed with mucous or pus, or it may resemble tar or pitch; the peculiar color and sticky character of this discharge is caused by partly digested blood. All authorities upon distemper tell us this is an exudation of blood from the smaller intestines, and when the color is brighter and redder, showing undigested blood, it is from the larger or lower bowels; they have only arrived at this conclusion from analogy, with experiments made upon the human subject, and in this they have made a great mistake; it is digested blood, but it does not come from the bowels exclusively, but from the stomach. When very dark it comes from the stomach, and we can judge of the origin of this exudation of blood by its color and consistency, being darker and less bright in color in proportion as it has been acted upon by its passage through the digestive organs. The ignorance upon this point is one of the reasons why the effect of distemper upon the substances of the liver and upon the mucous surface of the gall bladder has been uninvestigated; and as it was necessary that the symptoms arising from this complication must have a name, it was termed the "yellows." What an expressive name for an organic disease! Distemper poison disturbs the proper functional duties of the liver by invading its entire substance, manifesting itself in the usual way, by inflammation, and exudation from the mucous membranes of the biliary ducts and gall bladder. As the cause of this disorder is the same which causes them all, the general treatment should be the same.

Distemper is a blood poison fever, and in many respects is similar to all other fever poisons. First, it is similar in its mode and location of its attacks upon the system; the surfaces and organs most prone to affection in the diseases under consideration are those which are eliminative and desecating; those whose normal products can hardly be retained for any time within the body, much less out of it, without undergoing a fetid decomposition, which sufficiently stamps them with an excrementitious character. The skin, stomach, bowels, lungs, tonsils, kidneys, liver, etc., etc., are the favorite resorts of fever poisons; just as they are the surface by which naturally the organic waste of the several tissues is eliminated. In distemper this elimination is of a most rapid and alarming character—a wasting away of the entire system. Nature, in her vain efforts to throw out the poison from the system, eliminates the tissues upon which life depends; hence the extreme nervous and muscular prostration. If from other and earlier symptoms you are not able to diagnose, this very rapid loss of flesh and strength is a feature, together with the sunken and staring eyes, which cannot reasonably be mistaken for symptoms of any other disease in the dog. A common cold or any other form of febrile disease may mislead you by the similarity of symptoms in the early stages. There are, of course, features in all diseases which require experience to understand, and which practice alone will enable as to say yea or nay with positiveness. Distemper has been in the past the most fatal of all diseases (especially to the valuable high bred dogs). It has always been a wonder to me that it should be so; though it is the most fatal, its general symptoms and course are so well marked, the cause (blood poison) so well known, it is remarkable that a more successful treatment has not been established upon general pathological principles. To distinguish distemper in its first stages from other diseases having (seemingly) similar symptoms, is easily done by bearing in mind the peculiarities, both great and small, of these similar symptoms. To be able to make a prompt and correct diagnosis is the master branch of medical science. A doctor, like a poet, is "born, not made"; the born doctor has an innate keen preception of physical and mental conditions and changes, has a sensitiveness of touch, which reveals to him the temperature of the body in fever or collapse to a degree almost unerringly as the thermometer, and which detects the one hundred and one contortionate variations of the pulse as it writhes under the persecutions of disease. While the genius of the born physician is a boon indeed to any one who would treat disease in man or beast, yet for our purpose it is not a necessity. The first symptoms of what is usually called mild distemper (which may take any or all of the forms of the disease) are dullness, a languid indisposition to move about, and in the act of lying down, when partly down, will fall the balance of the way, as though the muscles were unable to sustain his weight. This latter symptom of falling is not present in the early stages of any other disease. The general dullness is concentrated in the eyes, that speaking organ of the dog; they have a glassy, sunken, staring appearance, which tell you plainly of the misery within. The eye of the dog in health is full, liquid, and sparkling with intelligence. The contrast once seen, even by the unobserving, can never be forgotten. Often one of the earliest symptoms is a cough. This cough is sometimes dry, but oftener is accompanied by the raising of mucus, which mucus is very disagreeable to the dog; he will gag, and then vomit a mouthful of this mucus, which he shakes out of his mouth as thoroughly as possible. This vomited matter he will never devour; in most other cases he will. The vomiting is not always occasioned by the cough; he will often vomit without coughing. He often vomits just before going into a convulsion, or just after coming out of one. The cough is brought on and aggravated by exercise; seldom present when quiet. This cough and vomit (if not mixed with grass) is an infallible sign of true distemper, though it may appear too late to be of use in diagnosing the case. On the other hand, it is often the first indication of the disease—not that this is the starting-point of the disease, but that the other symptoms were not noticed. This cough is usually attended by sneezing. The appetite often fails entirely, which is a bad symptom, indicating that the disease has already become deeply seated in the digestive organs. Thirst is always present, which increases as the appetite diminishes. This thirst we take advantage of to get sufficient liquid nourishment down him to sustain life. In the treatment of distemper a strict dietetic course is as essential as the administration of the proper remedies. As we said before, the disease eliminates the tissues of vitality itself in its attacks upon the vital organs. It saps out the substance of the nerves and muscles, and it is absolutely necessary that sufficient nourishment should be given to prevent general collapse of the system. While easily digested, highly nutritious food must be given, and in large quantities, often repeated; the least indigestible food acts as a foreign body in the stomach, and aggravates the disease, often one mouthful of such food being the direct cause of death. The food we use is beef tea, made from fresh, lean beef; let it cool, and strain off every particle of grease which may arise. We consider Leibig's Extract of Beef (the solid kind, which comes in small jars, and can be had of any druggist—in it there is nothing but the pure beef essence, is free from fat, albumen, mucus, etc., etc.,) at the very head of the invalid dietetic list. The most delicate stomach can retain it when it can retain nothing else. Next in importance to being able to retain the food is the amount of nourishment it contains, and beef tea made from this extract is second in this respect to no article of diet with which I am acquainted. Well beaten eggs come next on the list. Gruel made with Graham flour, sweetened slightly, is good. A little beef tea may be added to this to make it palatable. Arrowroot is good. Sometimes he will eat panada made from Graham crackers when he will eat nothing else. Make the panada exactly as you would for a person. Sweet cream poured over Graham gruel, or alone, is good, and is often relished. Many dogs die during distemper from insufficient nourishment, the person in attendance supposing he was giving enough. Nourisment must be given in proportion as the system is depleted. A grown setter or pointer should have from four to six ounces of strong beef tea or its equivalent every hour, day and night. It is often necessary to resort to stimulants, the best of which is the best brandy, next port wine, then whisky. It is not generally known that dogs are fond of brandy and whisky when diluted with three or four times its bulk of water; most dogs will drink to intoxication, but if he once becomes drunk you can never get him to drink it again. Under ordinary circumstances, two teaspoonfuls of brandy or whisky should be given every hour or half-hour, as indicated. In the early stages the nose is usually warm, dry and scaly, the inside of the mouth and tongue are hot but moist. When in extreme prostration the nose, mouth and tongue are cold, pale and clammy, the feet and legs get cold, and if the disease is not arrested the coldness extends to the body. Distemper sets in like all other fever poisons, with chilliness, if not with a decided chill, no matter how warm or how cold the weather may be, the dog shivers and hunts for a warm spot, in which he should be humored; nothing is more important than warm, comfortable, well-ventilated, clean quarters, with plenty of light. Of all others, this point is most apt to be neglected in the management of dogs; as most people seem to think anything or any place is good enough for a dog. Not so; proper food and quarters are *the* great preventative of distemper and many other ills. Yellow pine or cedar shavings make the best bed for a dog, for vermin will not collect in them. It is seldom that shavings sufficient can be had; the next best bed is made with long wheat straw; get it with as little short stuff and dust as possible. Oat straw generates mange; in fact any bed will produce mange which is allowed to get broken up short, dusty and foul. All dogs' beds should be raised from the ground, the bottom of which should be made of inch-square strips, half an inch apart, so as to allow the fine particles to sift through. Another very important point is to have the dog's bed so deep that he can't work down to the boards in turning round as most dogs do to settle themselves to their liking. From twelve to fifteen inches is the proper depth for the bed.

As soon as you are positive your dog has distemper, shut him up in a room by himself, away from all other dogs, and as much as possible from all noise. Warmth and ventilation are points not to be overlooked. The dog must be allowed no water except what he gets in the liquid food and other drinks ordered. Should the dog take all the liquids offered him, and still want to drink, give him rice water or gum arabic water. As you value his life, keep him from filling his belly with rubbish, such as coal, coal ashes, leather, straw, sticks and stones. Inflammation of the stomach causes this morbid appetite, and if indulged in is aggravated tenfold. When force is required to administer food or medicine, be careful not to frighten the dog by harshness or roughness. Especially in distemper is it necessary that the dog should not struggle; the slightest exertion aggravates the disease. Many dogs have been hurried to their graves by forcing them to exercise. It requires two persons to forcibly administer food or medicine. A small cream pitcher is a very convenient vessel to use in giving the liquids. The first person should take the dog by the muzzle with the left hand, the heel of the hand, or part next the little finger, should rest over the eyes of the dog, and the thumb on one side and the fingers on the other side should press the lips against the dogs teeth, thus preventing the dog from shutting his teeth on your fingers; with the right hand you catch the lower jaw the same way. Force his mouth open only far enough for person No. 2 to pour in the liquid; the sides of the dog's mouth form a funnel. When you have poured in about two ounces, shut the dog's mouth as close as your fingers will allow; he cannot swallow unless you shut his mouth, but will cough and throw out the liquid. Should he not swallow promptly, rub his throat gently, which will force him to swallow.

M. VON CULIN.

For Forest and Stream and Rod and Gun.

DOGS.—No. 7.

WHEN describing Sentry's foraging visits to Mr. Rowcliffe I forgot to state that Margaret tried on several occasions to send him back with an empty basket, but to no purpose; he would not touch it, leaving it at the kitchen door and returning home evidently disgusted with such shabby treatment. But he would go the next day and bark for admittance to recover his basket. We had at that period a most valuable maid servant, who was as fond of the dog as either master or mistress, and at meal time he was her constant companion, sitting on her left with his right paw on the edge of the table. Having watched her for some time, a gentle touch of the paw would remind her that he also needed food. Anne was a particularly clean girl, and taught her canine friend to remain on the front door mat in dirty weather until she wiped his feet, that he should not soil her floor cloth (for with her everything in and around the house was ours or mine), and he never ventured to run in with dirty paws.

He never stole meat or food of any kind, and would watch the cat to prevent her from picking and stealing. If she gave him any trouble by persisting in her attempt to pilfer, she found herself suddenly seized by the neck and gently carried off to the garden. On one occasion, in his youthful days, he committed a most outrageous breach of good manners. Anne was in the habit of chopping up his food, and he eyed her wistfully one day chopping suet, which he thought was a tit bit specially prepared for himself, and supposing she had forgotten him, he availed himself of her temporary absence to devour the whole. Anne, on discovering the theft, did not resort to kicks and cuffs, as usual in such cases, but showed him the dish and scolded him well. This was his first and last theft.

Though apparently equally fond of us all, still I stood uppermost in his affections, and the least semblance of anger or personal violence toward me was met by his placing himself in front and showing a very formidable row of teeth—such a demonstration being sure to restore order. He would fetch the bootjack and slippers, remove my boots from the hall, returning each article to its proper place. He had a great dread of a thunder storm, and would hide under a bed the moment he saw a flash of lightning. He was equal to any terrier for rats or mice, and would watch a rat hole for hours. I have seen him kill two rats at the same time, one with a stroke of of his paw, when another was being crunched between his teeth.

From London I came to Gaspè as the Chief Superintendent of the Gaspè Fishing and Coal Mining Company, embarking at Liverpool, on board the *Acadia*, one of the celebrated Cunard Line, then commanded by that genuine British seaman, Capt. Harrison, the first Captain of that huge leviathan, the *Great Eastern*, who was unfortunately drowned by the upsetting of his boat at Southampton.

Previous to shipping Sentry, I went to Mr. McIver's office, the agent of the line, to see what bargain I could make respecting the dog's passage, five pounds being the rate advertised. Naming the large sum I had to pay for self and family, I claimed a free passage, that he should go free. Fortunately Capt. Harrison was in the office, and he inquired if the splendid animal he had seen at the Adelaide was mine. Having answered in the affirmative, he observed: "Well, I think the amount paid by Mr. V. entitles him to some consideration, and such a dog as his is entitled to a free passage." "Well, if you think so, Harrison, I suppose it's all right." "Thank you, gentlemen," and off I started to conduct Sentry on board before the steamer left the dock, omitting to get a pass from the agent. On reaching the *Acadia* I was somewhat abruptly questioned by a person, who, I soon ascertained, was the purser, when the following colloquy took place: "Is that your dog?" "It is." "Have you a ticket for his passage?" "I have not, but Mr. McIver has agreed to his passing free." "Unless you produce a ticket or pay me five pounds, you must take the dog on shore at once." Sentry knew there was something amiss, and growled furiously at the purser, who was somewhat startled at this manifestation of the dog's displeasure. Just at this stage of the proceedings Capt. Harrison stepped on board, and soon brought the purser to his senses. It was the overbearing manner of the man that annoyed me. The captain kindly told the boatswain to secure the dog in a safe place, which being done, I returned to the hotel. The following morning I was feeding and caressing him after breakfast, when Capt. Harrison joined us. "I quite forgot about your dog, Mr. V. Let him run on deck." "How very considerate you are, captain, this morning. I suppose the purser wants to get that five pounds out of me at all hazards. What about that notice—eh?" (A pensity of five pounds imposed on the owners of dogs allowing them to be loose on deck.) "Oh!" rejoined the captain, "that is all very well when we have a dozen dogs. Is he quiet?" "Very; but he will not allow himself to be kicked or knocked about by the crew." "No one on board this ship will dare do that. Let him loose by all means." No sooner said than done, and off went Sentry, skipping and jumping like a mad creature, until he joined his mistress on the quarter-deck, where quite a scene took place, to the great amusement of the passengers. The late Bishop Hughes was among the number returning from Rome, and he and Sentry became warm friends.

From that time the dog had the free run of the ship, and became a general favorite, not giving the least cause of offence to any one during the voyage. He was welcome alike with the officers of the ship in their mess-room, or with the crew. But his purveyor-in-chief was the butcher, to whom I promised a gratuity if he attended to his wants; and he never had such glorious feeding as fell to his lot on board the good ship *Acadia*.

Arrived at Halifax, we established our quarters at the Halifax Hotel. The first morning at breakfast my wife fancied a mutton chop. There being none on the table, I requested a waiter to order some. None appearing, I jogged the waiter's memory. "All right, sir; I have attended to your order." "But where are the chops?" "Told cook they were for the dog, sir!"

As we traveled by land to Gaspè, the dog would have been a troublesome companion. Fortunately I fell in with Capt. Peter Mabe, the master and owner of the schooner *Pilot*, of Gaspè, who took charge of Sentry and all my heavy luggage, which he delivered safely at New Carlisle, where the faithful animal died, Anno Domini, 1849, having attained his eighteenth year.

Sentry's training throughout was one of kindness. I never beat or ill-treated him in any way, and I must avail myself of this opportunity of entering my protest against the cruelty often practiced by trainers of animals. Patience is the grand secret. I firmly believe that nine-tenths of the vicious dogs are made so by ill-treatment. I never had a vicious horse, ox, cow or dog, and I have raised many. I purchased a cow some years ago of a man who had the repute of being cruel to dumb animals. The first time she was milked, the girl came from the stable in great distress, assuring me that my new purchase was a devil. She kicked like a horse; had kicked her, and sent the milk pail flying. No wonder her late owner sold her, etc. I requested Mary to return with me to the stable and I would assist her. The moment I approached the animal she began to kick. I patted and spoke to her kindly, but to no purpose. I then got a piece of light rope, made a noose, caught the fore-leg, raising it from the ground, and held it tight over her back. This settled the kicking for the time being, and she was duly milked. I soon discovered she had been brutally treated, expecting a kick or a blow from any one who approached her in the stable. I resorted

to kindness, patted her, rubbed her neck, spoke to her mildly and soon convinced her she would not be ill-used if she left off her bad tricks. In a week she became as quiet as any of my horned cattle. Girls, never marry a man who is cruel to dumb animals. PHILIP VIBERT.

Percé, March 13, 1879.

(To be Continued.)

RETRIEVER.—An English retriever, represented as a perfect water dog, is advertised in another column. From the photo we have seen we should imagine him to be very handsome and intelligent.

DOG FOUND.—A gentleman of this city while shooting on the "Big Pine," New Jersey, on July 4, found a very handsome black and white setter dog evidently exhausted by the heat and severe exercise. The dog was properly cared for, and should this meet his owner's eye he can obtain information as to his whereabouts by applying at the office of this paper.

FOX HUNTING IN ENGLAND.—During the season the Heythrop hounds have been out one hundred times. Have killed 105 foxes, and run to ground 35 more. Frost and snow prevented the hounds hunting on 31 days.

—Mr. H. W. Abbott, Jr., of Nahant, Mass., claims the name Roy for his English setter dog pup, whelped May, 1879, by Mr. Rogers' Fox, out of Mr. Sharp's Zoie.

—Messrs. E. & C. Von Culin, of Delaware City, claim the name Lady Delaware for their Carlowitz-Ollie bitch, whelped September 28, 1878.

—The imported English setter bitch Nell, owned by Mr. Oscar Purdy, of Tarrytown, whelped on Monday, June 23, six puppies—three dogs and three bitches. Sired by H. R. Bishop's Irish setter dog Doctor. Five are red, with white breast, and one is black, with white breast and feet. All are strong and handsome.

—At Bloomsburgh, Pa., June 12, Mr. T. E. Dillon's liver and white pointer bitch Victoria (May-Sensation) whelped two dogs and one bitch, lemon and white, and two liver and white bitches, by R. M. Lindsay's Champion Viscount.

—Mr. Jno. Thompson's English setter bitch Belle, has been bred to Mr. L. F. Whitman's (Detroit) Rattler (Rob Roy-Pickles.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States.

☞ NEW YORK LAW.—The open season for woodcock in New York State begins August 1, throughout the State.

AN EXCELLENT PROJECT.—It is proposed, and we believe permission has been obtained from the Supervisors of Suffolk Co., to cut a canal through the narrow strip of land which separates the waters of Great South Bay from those of Shinnecock Bay. The advantages to sportsmen if this connection is made will be very great, as besides the prospect of continuing the inlet from the sea to the latter bay, which is now open, it will enable the well appointed boats of the former to enter Shinnecock for the purposes of gunning and fishing. The necessary amount to complete this work is being raised by subscription and we understand it is to be prosecuted with vigor.

HUNTING HORN.—In response to "L. L. H.'s" inquiry, two weeks ago for the tin horn used by hunters, a Bath, Me., correspondent writes that the horn described is the "fog horn," used by coasters and fishermen. Instead of the old-fashioned horn, a brass reed is fitted in the mouth-piece, after the principle of the clarionet or accordion; and this is what he wants. They can be found at any ship chandlery store on the Atlantic coast.

MAINE—*Machias, June* 28.—Cold and wet this spring, but think game prospects good. A young fawn was caught last week by a young man in Whitneyville—a beauty—but it was soon set at liberty, for it was too young to live without a mother. S. B. H.

NEW JERSEY—*Newark, July* 6.—The Joe Miller Camping Club, of this city, have gone to the Shawangunk Mountains, where they propose to linger a week fishing, shooting and enjoying themselves. The members whose names were booked for the trip were: Joseph C. Miller, Dr. Gedicke, C. H. Crane, George Stroebell, E. Horschel, A. W. Frazee, George Arnold, Edward Daniels, Frank B. Allen, F. A. Rigby, A. Schieber, Charles Graves, Frank Nichols, Ed. Grover, J. Grover. The Lively Camping Club at Greenwood Lake have named their resting place Camp Solomon. They are now enjoying themselves immensely.

South Amboy, July 7.—A woodcock was picked up on the 2d almost in the village by Mr. Wm. Brash, of this place. It was seen to fly against the telegraph wires, and when picked up life was not quite extinct. It was in poor condition. Fair bags have already been made around here. Old "Dad" Applegate promises lots of quail and rabbits for the fall shooting. A. C. W.

DELAWARE—*Delaware City, July*, 5.—The woodcock are upon us in full force, and the sport is immense. They have not been so numerous in this section for years. Could we only succeed in keeping the market-gunners in the traces of the game law, there would be even better shooting than there is. Hundreds of "long-bills" have been killed and marketed during the latter part of June. We know they are very palatable, but if our Philadelphia (game market for this place) friends would be convinced, we are quite sure they could enjoy them just as well in July as in June. The thing is as broad as it is long, for the sooner they are hunted the earlier they are gone. E. VON CULIN.

VIRGINIA—*Rawley Springs, June* 28.—The season for deer opens August 1, and the mountaineers tell me that there are unusual numbers in the woods. C. P. S.

OHIO—*Aurora, July* 4.—First day of woodcock shooting in Ohio. More birds than last year, and better developed. C. H. Root, W. North and myself bagged eighteen birds in two hours. H. H. B.

—A Dougall gun has won the grand prize of London, June 16, in the hands of Mr. Dingman, and also won the championship at Paris, on June 18, in the hands of the Duke de Rianzares.

SHOOTING THE MIGRATORY QUAIL.

EDITOR FOREST AND STREAM:

The quails come to the Island of Sicily from the North of Africa in the month of April. They remain near shores till the month of May, when they retire to the mountains for the summer. There they breed and remain until the young birds are strong enough to bear the return journey to Africa in the month of September, October, etc. The birds come in with the northwest wind at night, they feed in the early morning and squat near the feeding grounds at mid-day, when they will not flush until a dog, or a foot of the sportsman is upon them. But the most important fact of all regarding the shooting of this delicious bird is that the sportsman must be promptly on the spot before daylight and must not enter the field until he can clearly see a bird flying, for if he cross the fields even without any dogs before the time above mentioned he will lose the birds, because the quail will fly in the dark at the least voice and, whistling, will carry away with him every quail on the field. This is our experience all over Sicily. It is a beautiful sight on the top of Mount Pellegrino, only four miles from the city of Palermo, to see two hundred sportsmen with their dogs stretched in line waiting for the watch word "Go" which proceeds from the oldest of the brotherhood, to go in at once for the slaughter.

The birds are shot singly in the spring and not in flocks as in the autumn season. These flocks, however, are not so large as the flocks of American quails. The bird flies quicker than the American bird on account of it being a stronger bird of the two. The flesh is very delicate and juicy, and it will be in my estimation a valuable addition to American game.

PROF. G. PRIZZO.

—See Bogardus' advertisement.

PIGEON MATCHES.

SEND IN SCORES EARLY.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

THE LOUISVILLE TOURNAMENT.

LOUISVILLE, KY JUNE, 1879.

Purse No. 1—22 entries, 5 single birds, 21 yards rise:

Doup	1 1 1 1 1—5	Vogel	1 1 0 1 1—4

Wigginton	1 0 w		

Third tie.

Watkins	0 1 1—2	Doup	1 1 1—3

Doup wins the gun.

OSAGE CLUB.

OSAGE CITY, Kas., July 5, 1879.

EDITOR FOREST AND STREAM:

One of the most brilliant and interesting shootings that has occurred in the West took place here yesterday between George Stockwell, of Atchison, Kas., and J. M. Hirshey, of this city. Each man had 50 single birds at 26 yards rise, use of one barrel. The purse was $240. The score is as follows:

Hershey.......1 1 1 1 0 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—45.

Stockwell......1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1—44.

W. H. Ellet, of Eldorado, referee; A. Black, of Osage City, and W. Randall, of Burlingame, Judges; S. M. Berry, of Osage City, Scorer. There was a very large attendance, with many ladies present. When the twelfth bird had been shot, and the score showed the Atchison man 2 ahead, betting was 5 to 1 against Hershey. At the twenty-second bird a nice question came up. Stockwell hit a bird, which flew over the crowd and alighted on top of a carriage. The bird was challenged, and Stockwell climbed up on the carriage to gather his bird. Mr. Hershey and his friends claimed that under the rules of the Kansas State Shooting Association, Stockwell was bound to be on the ground when he gathered his bird. The bird was allowed, but the general sentiment among sporting men was that the decision was wrong.

In the afternoon the members of the Osage City Gun Club had a friendly shoot for the State Medal, a fine piece of gold workmanship, which the club won at the State tournament at Ottawa last fall. Mr. Hershey did not shoot. Amos Black got the prize by a score of 20 balls from a rotary trap. William Melbourne, 19—shooting at 21 yards. The Osage City Gun Club had a shoot at Topeka with the Topeka Gun Club, about two weeks ago, in which the Osage City men were victorious at all points—pigeons and balls, single and double rises. Mr. Hershey attended the Texas State Tournament at Waco, a few weeks ago, and after winning the first three shoots was barred out. He, however, brought with him a beautiful medal, which he now has. It is safe to say that Mr. Hershey is one of the best, if not *the* best amateur shot in the West.

OSAGE.

TORONTO GUN CLUB—*Woodbine Track, June* 27.—No. 1 Squad; wind, west, light; at 26 yards; 100 yards boundary:

J Barrett	1 1 1 1 1 1 1 1 1 1 1 1—12
H Millar	1 1 1 0 1 1 1 1 1 1 1 1—11
C C Small	1 1 1 0 1 1 1 1 1 1 1 1—11
J James	1 0 0 1 1 1 1 0 1 0 1 1— 8

No. 2 Squad—24 yards; 100 yards boundary:

E Perryman	1 1 1 1 1 1 1 1 0 0 1 1—10
W Kennedy	1 0 1 0 1 0 1 1 6 1 1 0— 8
Robt Wilson	1 0 1 0 1 1 1 1 0 1 0 0— 7
W Villiers	1 1 1 1 1 1 1 1 1 1 1 1—12
J Douglas	0 0 1 1 1 0 1 1 1 1 1 1— 9

No. 3 Squad—20 yards; 100 yards boundary:

R Morrison.........................0 0 1 0 1 1 0 0 —3
T Taylor.............................1 1 1 1 1 1 0 1 1 1 —9
W Taylor.............................0 1 1 1 1 1 1 0 1 —7
I B Graham..........................0 0 1 1 0 1 1 0 0 —5

Not sufficient birds to shoot out; will be completed hereafter. Arrangements will be completed for the club to shoot on Saturday, 12 birds each, handicap, for a gold and silver medal; general average in four shoots; June, July, August and September; highest average takes the gold medal, and next highest the silver one; club rules; medals in club room. I. B. G.

MAINE—*Bath*.—Sagadahoc Association for the Protection of Fish and Game; second shoot for association badge; rotary trap, Bogardus rules. Following is the score:

M.

MASSACHUSETTS—*Boston, July* 4.—The Massachusetts Rifle Association held the closing match of a series to-day, each man shooting at 10 single, 10 double, and 10 balls from a rotary trap (a possible 30), Bogardus rules to govern:

R W Bowles	28	25	25	78
H E Pierce	25	25	27	77
W M Walker	50	24	23	67

Yesterday's trial closed the match, and the prizes, on the best aggregate of three scores, were awarded as follows:

J C Haskell	30	28	30	88
C M Stark	27	29	27	83
H W Eager	28	27	28	83
H E Pierce	17	27	25	79
R W Bowles, Baltimore, Md.	28	26	25	78
G Cross	24	26	27	77
J N Frye	24	23	25	73
H Mortimer	22	22	24	68
E M Small	20	21	24	48
W Walker, Logansport, Ind.	20	24	23	67
E C Gove	23	20	23	66
R Schaefer	20	23	22	65
J S Sawyer	22	18	24	64

The prizes aggregate $155 in value, the first being an elegant silver-plated prize cup (fifteen inches in height), richly engraved and ornamented with appropriate sporting emblems, valued at $45.

Medford, July 4.—Raymond Sporting Club weekly shoot; 36 entries; 30 balls per man counted as one score, 10 Bogardus, 10 double and 10 rotary—30:

	Single.	Double.	Rotary.	Total.
G B Blanchard	10	10	9	29
B F Shaffer	10	9	9	28
J C Smith	10	9	8	27

Worcester, July 4.—Re-union of Worcester and Marlborough Sportsmens Clubs. The $25 silver goblet and case offered for the best score by Mr. A. B. F. Kinney, of the club, was won by Mr. J. E. Browning, he breaking 20 out of 25 balls. Other scores were: G. J. Rugg, 24; W. H. Cole, 23; M. D. Gilman, 19. All others fell below their percentage or withdrew before finishing their scores. Mr. M. E. Shattuck presented the club with a box of cigars. It was shot for, 5 balls to the score, together with a purse of $13, divided into three prizes. Messrs. W. S. Perry and E. T. Smith tied on the 5 balls, and divided the first prize and then shot for the cigars—won by Mr. Perry. Messrs. W. H. Haskell, of Lynn, and Alba Houghton divided the second, and Messrs. L. R. Hudson and W. H. Eager third. A generous lunch was served by Mr. A. P. Pond, a member of the Worcester Club and senior proprietor of the Bay State House, and the rest of the day was spent in competition for numerous small prizes contributed by the contestants.

NEW YORK GUN CLUB—*Bergen Point, N. J., July* 5.—Pigeon match between H. Dunleavy and L. F. Watson; 30 yards; 5 traps; Hurlingham rules:

H Dunleavy..11 11 01 11 10 11 10 10 11 11 11 10 11 11 11 10 11 *1 11 11 01 11 10 11 11—41

C. E. B.

BROOKLYN GUN CLUB.—The Brooklyn Gun Club match for the certificate of membership of the Blooming Grove Park Association, presented by the FOREST AND STREAM—25 birds, 5 traps, 15 entries—resulted in four ties of 21 each. In shooting off Mr. Wilson won, killing 27 at 31 yards, missing 4; Willard, Gildersleeve and Barker each killing 26 and missing 5, the first two at 31 yards and the others at 27 yards, while of the other shooters Messrs. Eddy and Broadway each killed 20.

NEW JERSEY—*Newark, June* 30.—Match between Newark's champion professional, Henry Langstaff, and Geo. Wooden and H. E. Winans; 11 Kay's balls, Bogardus traps; 18 yds. Winans and Wooden greenhorns.

H. E. W.

LONG BRANCH GUN CLUB.—The Long Branch Gun Club, which is made up of New York gentlemen, formally opened its new shooting-grounds, near Deal Beach Station, July 4. The park is laid out with much taste, being surrounded by a pretty fence, and having near the entrance a handsome club house of Swiss chalet style, with upper parlors and balconies for the lady visitors. A five-bird sweep opened the day's sport, nine going to the traps. Messrs. Edgar Murphy, Dr. Zellner, Joseph Lee and Walter Green killed all, the ties being decided on next sweep. The next was at three birds, the same gentlemen tieing again, when they agreed to divide the stakes. Dr. Zellner and Mr. Murphy then shot a match at ten glass balls for $25 a side, the men using a Winchester repeating rifle, the glass balls being thrown crossways by hand. Both men tied on the first ten balls, the ties to be decided by five extra balls. Before the tie was decided both men shot at thirty balls.

PENNSYLVANIA—*Catawissa, July* 2.—Match between chosen sides of F. and G. C., of Catawissa; Card's rotary trap; 18 yards rise; 10 glass balls each; loosers to pay expenses of broken balls and general expenses; July 1:

Fives divide purse. ABE DACOTAH.

A BOY CARVER—*Fort Wayne, Ind., July* 3.—The following score was made this P. M. by Fred A. Stinnett, a youth not yet fourteen years old, son of W. W. Stinnett, Train Dispatcher Wabash Railway. One hundred glass balls thrown by hand; distance, 15ft.; rifle, a Remington .22 cal.; gun wiped every 10 shots:

1 1 1 0 1 1 1 1 1 1 0 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1
1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1
1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1 1 1 1—93.

He also hit 12 copper cents out of 15, thrown in same manner and distance as the balls, and hit 5 out of 7 balls thrown by his own hand. F. C. G.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Savelinus fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	Striped Bass, *Roccus linneatus.*
Land-locked Salmon, *Salmo gloveri.*	White perch, *Morone americana.*
Muskalonge, *Esox nobilior.*	Weakfish, *Cynoscion regalis.*
Pike or Pickerel, *Esox lucius.*	Bluefish, *Pomatomus saltatrix*
Yellow Perch, *Perca flavescens.*	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setæ, same as wings.

Lightning Bug, No. 10.—Body of equal parts of dark brown and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of light yellow and green, ringed alternately; feet, red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern or brown hen; setæ, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Fetid Green, No. 10.—Body, feet and wings, a pale green.

TARPUM SCALES.—Our correspondent "Bexar" sends from Corpus Christi, Texas, two scales of a Tarpum captured by him on the 25th of June, at that place. The fish measured 5ft. 6in. in length, and weighed 81 lbs., and from all accounts afforded as much sport on a line as any game fish known. The writer says: "A more lively fish never got fastened on a line. At least half a dozen times he let six feet of daylight shine between him and the water, and he had his mouth open, shaking it like a trout all the time. It was glorious sport and lasted nearly an hour." The tarpum is seldom taken with a hook, but frequently with a harpoon. It is locally known as "Grand *Ecaille*," (pronounced akaiye) signifying large scales. In Louisiana it is called the silver fish, and in the Carolinas, the tarpum. Its scientific name is *Megalops atlanticus*. These scales are a marvel. They are translucent and horny, and constitute an almost impenetrable armor plate where they lap over each other. That portion of each scale which is exposed resembles chased silver, and when wet is as brilliant as can be imagined. We have specimens which we obtained at Savannah twenty years ago, and they do not seem to have lost their brilliancy in the least degree. Those just now sent us from Texas measure 3x3½ inches in diameter and the silvered part of each is one-fifth of the whole. Our friends in the South Atlantic Seaboard and the Gulf of Mexico may be able to contribute much information concerning their food, habits, spawning seasons, migrations, etc.

THE DINGEE SCRIBNER RODS.—Dingee Scribner is the best known rod maker in the Canadian Provinces. He is especially known to anglers who visit the maritime Provinces in quest of salmon. Twenty years ago we used his greenheart rods and his attractive artificial flies, and have always recommended them to visitors to those "parts." But Mr. Scribner's tide of fortune has not always been at the flood. Not a long time ago a fire destroyed the city of St. John, where he is located, and he shared the common fate of nearly all the merchants and artizans. It has been customary to liken any person who has recuperated after being burned out to a "phœnix rising from his ashes;" but Mr. Scribner is not that kind of a bird. He is merely an unfortunate fisherman who is trying to retrieve his losses; and we therefore take an especial pleasure in recommending American anglers who visit New Brunswick in quest of salmon, land-locked salmon and trout, to his good offices. His artificial flies for land-locked salmon are a specialty. Mr. Scribner has been a frequent advertiser in these columns, and while not aiming to divert patronage from American rod makers, claims a share from those who can make it convenient to fit out in St. John for Provincial waters. Address him at Waterloo street, St. John, New Brunswick.

SHARBOT LAKE FISHING—*Kingston, Ont., June* 30.—The fishing season is fairly opened and promises excellent sport for lovers of the rod. On the 20th inst., a party of five, consisting of W. C., J. C., J. R., J. B., and your humble correspondent—all worshipers at the shrine of the immortal I. W.—gathered up our tackle and camping outfit, jumped aboard the 3 P. M. Kingston and Pembroke train, our destination being the famed Sharbot Lake, distant from Kingston about forty-five miles; fare, $1.40. No charges for boats, tackle or camping equipments. Arrived at the Sharbot Lake Station 6:30. Got our camp goods and tackle in the boats and struck for the south end of the lake, where we went into camp. For five days we had royal sport with the black bass. The lake is protected by special act of Parliament from all descriptions of nets and snares, and the fishing in consequence is really superb. Nowhere in my fishing experience have I seen the bass so game, large and plentiful. Our fishing was done exclusively with the fly, except an occasional troll for pike, which are abundant and of immense size, being frequently taken weighing 15lbs., and even more. Nearly every color of fly proved good, but the most effective was one with orange body and dark turkey wings, and one made entirely of peacock's feathers, tied so as to bring the eye of the feather directly over the body of the hook. Bass are taken nearly every day weighing as much as 6lbs. The writer struck and landed two at one cast which weighed together a trifle over 9lbs. The proprietor of the hotel, Mr. Ferrin, keeps a book, in which is recorded the catch of his

customers. I noticed numerous New York signatures, among which was a Mr. Jos. H., who, on the last afternoon of his stay, killed seventeen bass, ten of which weighed over 5lbs. each. Those who prefer hotel to camping life can find good accommodations and fare at Mr. Ferrin's hotel. Mr. F. is a genial, whole-souled Yankee, and welcomes his guests in true sportsman's style. The hotel charges are $2 per day. He also keeps a number of boats and carsmen, who can be had at moderate figures. Any one desiring any further particulars can have them cheerfully furnished by addressing me. They are welcome to come, and if they find the enjoyment and pleasure we found in our six day's camp, we shall be amply repaid. AL.

GASPÈ FISHERIES—*Percé, July* 1.—So far the codfishery is the most abundant known for some years past, and exceeds that of the whole season of 1878—at least in Percè. The reports from the North Shore are equally satisfactory. Bait is scarce, as usual at this season. Salmon is abundant, so far as I can learn. One of 45lbs. has been caught at Sandy Beach, Gaspè Bay. Colonel Walker and Mr. Harris, of London, Ontario, who have leased Grand River, have been very successful, having caught twenty-seven fish in five days. One, which I have to thank them for, was a noble fish, weighing 26lbs. when cleaned—just such another as Doctor Clark gave me the last summer he fished Grand River. L'Evesque, who has so far landed the greatest weight of codfish in Percè, caught a monster halibut at the commencement of the fishing season, measuring 8ft. 6in. in length and 4ft. 6in. in breadth. Unfortunately it was cut up without being weighed. Fourteen schooners—the first of the American mackerel fleet—passed here, steering for Gaspè, on the 24th ult. June has been an unusually cold, wet month. Bad for the crops, as well as for drying fish. PHILIP VIBERT.

MAINE—*Milltown, June* 30.—In our Grand Lake stream this season, the home of the land-locked salmon, the fish have been abundant; did not take the fly readily until about the middle of June, but great numbers were killed by trolling and bait fishing. Since the weather came warm they take the fly, and five pounders are not uncommon. The season is now about over. G. A. B.

NEW HAMPSHIRE—*Crawford House, White Mountains, July* 2.—Moistened my first trout hook this morning in the "Wild Ammonoosuc." Fished two and one-half miles, and hooked 105 of the speckled beauties, many turning the scales at eight ounces. Shall strike some of my favorite streams soon, and will inform you of the results. That genial angler, Col. Spencer, will shortly measure baskets with me. Weather cool and accommodations fine. A. J. J.

MASSACHUSETTS—*New Bedford, July* 3.—This is the culminating point in the sword fish season, of which queer fish large numbers have been caught the past week. Blue fish are very abundant and large, and some fine catches of bass have been made the past week at Cuttyhunk and the Vineyard. More large trout weighing from 1½ to 2½ pounds have been taken in our streams than for many years past. CONCHA.

NEW YORK—*Buffalo*—Black bass, rock bass and perch are very plentiful hereabouts this season, especially off Point Albino and Port Colborne, Canada. PENNANT.

LONG ISLAND—*Canarsee, June* 28.—Fishing for blackfish, bluefish and flukes has afforded great sport during the present week. With friend, hooked a fine mess of the latter to-day. R. B. H.

ADIRONDACKS.—*Raquette Lake, Hamilton Co., N. Y., July* 1.—Large trout are taken by trolling in this region—Raquette Lake, Adirondacks—during the past week. Alvah Dunning, one of the oldest guides and best of fishermen, captured two, weighing respectively 17 and 27½ pounds. These followed closely upon a splendid 15-pounder he landed out of Blue Mt. Lake, a total of 59½ pounds, making the three fish average 19¾ pounds—not bad for any waters! And a proof, trout still are plenty in our lakes. The black-flies are nearly gone, and the woods become habitable. W. W. D.

VIRGINIA—*Rawley Springs, June* 28.—Fishermen cannot do better than to come here for trouting. The Joy River, which runs within two hundred yards of the hotel, abounds in trout for fifteen miles. Good hotel accommodations here, and rates low. C. P. S.

LOUISIANA—*Monroe, June* 18.—In the bayous and lakes we catch trout, white perch, goggle-eye, sun or red perch and blue cat. In the river all of the above and what is known here as the "bar" fish caught only when the river is low in June, July and August, when the sand bars are showing. I think they are white bass. They are nearly white with trout-like mouths, and bite only at minnows or flies. It is of common occurrence for two persons in a skiff to start fishing (right in front of the city on the bars) at daylight and return to breakfast with 100 to 150 of these beautiful and delicious fish, 8 to 14 inches in length. The fish come in schools and bite more greedily than any fish I ever saw, and I have fished from the lakes of Connecticut to Western Texas. M. N. C.

MICHIGAN—*Detroit, July* 4.—Messrs. L. Hommedieu and Vernor, of this city, were up to Slocom's Star Island House, St. Clair Flats, on the 1st inst., and made a string of 28 fine black bass.

Detroit, June 28.—Peter Frantz and a couple of friends were out after a few of the finny tribe on the 24th inst. They made a string of 78 pounds, pickerel and perch.

WISCONSIN—*Menasha, June* 28.—Fishing here has been first rate this season. A party of a dozen from Nashville, Tenn., have been fishing here for a week past and have had good luck, bringing in some large strings. S. L. H.

OREGON—*Portland, June* 15.—Had a fair day's sport on Gale Creek yesterday, four of us catching 240 speckled beauties (*Salmo fontinalis*). The "coachman" seemed to be the favorite fly. W. L.

FLY FISHING FOR BLACK BASS IN FLORIDA.

EDITOR FOREST AND STREAM:

During the past winter while in Florida I had quite an extensive experience in fly-fishing for black bass in the following waters: Elbow Creek and Turkey Creek, near Eau Gallie; North and South prongs of San Sebastian River; Taylor Creek, near Ft. Pierce; North and South forks of San Lucie River; several streams flowing into Lake Worth, and Snake Creek, Miami River and Snapper Creek, emptying into Bay Biscayne. While the bass would at all times take the minnow eagerly the artificial fly was not so uniformly successful. On some days the bass would rise at every cast, and after having hooked one, "his wife and his aunt, his sisters and his cousins" would jump up all around to see what had become of the "brown hackle"; but on other days they were as shy and coy as a maiden in her teens. On these latter occasions—and they were not few—it was simply "Love's Labor Lost," as they were provokingly indifferent to the choicest and most varied assortment of flies; whether done up in liveries of gold and silver, and all the hues of the rainbow, or decked in more sober garb, it was all the same, they utterly refused to take part in the exercises. Why this was so is one of those things that "no fellow can find out, you know." It is the common experience of all, in Florida or elsewhere.

While the streams above mentioned literally swarm with black bass, my expectations in regard to their immense size were not realized. I found them to average in weight about the same as in Wisconsin or Minnesota. The heaviest fish I caught weighed nine pounds, though I saw some in the water apparently larger. I saw but one variety, the large-mouthed species, *M. Pallidus*.

The flies I used were tied by C. F. Orvis, of Manchester, Vt., and were marvels of artistic skill, almost too pretty to cast upon the water. Mr. Orvis—himself a veteran fly-fisher—has left the old ruts and taken a new departure in regard to artificial flies, as well as to rods and reels. They have only to be used to be appreciated. The following is a description of a few of the most "taking" flies:

McLeod—Emerald green body, ribbed with gold; yellow and red floss tag; green drake tail with red ibis and mottled yellow; hackle, yellow; wings, black splashed with brown; scarlet antennæ.

Imperial—Red floss body ribbed with silver; green drake tail, with red and white; black and white hackle; wings, large, grayish white tipped with black; scarlet antennæ.

Green and Gold—Emerald green body, ribbed with gold; scarlet tag; white and scarlet tail; yellow hackle; olive green wings.

The Abbey, Royal Coachman, White Ibis and La Belle were very successful flies, the last three being especially useful toward dusk, having white wings.

The black bass of Florida fully sustains and upholds the honor and reputation of the family for gameness and bravery; and whether at the North or at the extreme South, and whether "caught out on the fly" or "put out on the foul"—by the murderous spoon—he is the same dashing, leaping, bold and untiring fish. J. A. HENSHALL.

Cynthiana, Ky., June 14, 1879.

A TRIP TO THE ADIRONDACKS.

NEW YORK, June 16, 1879.

EDITOR FOREST AND STREAM:

I left this city Sunday night, June 1, via N. Y. C. & H. R. R., for Amsterdam; arrived Monday morning, and at 1 P. M. of that day, in company with Messrs. G. & L. Kellogg, residents of Amsterdam, we drove, via Funda's Bush, Northville and Wellstown, to Lake pleasant, sixty miles from Amsterdam. A more delightful ride one could not wish for. We were received in nice style by Mr. D. Sturges, proprietor of the magnificent hotel at the foot of Lake Pleasant, and I must add that Mr. S. is a very fine gentleman and keeps a splendid house; and what makes it more pleasant than many I have had the opportunity of visiting is that he does not charge extravagant prices.

Here our guides, Mr. B. Page and C. Sturges, met us, and we started on Tuesday at 1 P. M. for the fishing grounds. As one of our party was somewhat familiar with these parts we started three hours in advance of our guides (who had to employ a team to carry the boats, provisions, etc., to the river, some six miles) and walked the six miles to Jessup's River, where it was our intention to fish until their arrival. It began to rain very hard indeed, still we did not permit that to interfere with our fishing, so we went at it without care or fear, and between the trout bites and mosquito bites we had a very lively time of it for a little while; still we braved it out, and in about twenty minutes we had caught twenty-eight very nice trout. That being all we wanted for our supper, we quit fishing and returned to the trail to await the arrival of our guides. Well did we have to wait, I tell you. It seemed forty hours in the drenching rain; however, it was only two. At last they came, and we were not long moving down the river in our boats some six miles to a cabin where we were to go into camp. Jessup's River I should call Jessup's Creek, judging from the number of draws we had to make on account of the trees that had fallen across it; the proper name should be "brook."

We reached the cabin about 9 P. M., and a wetter lot of beings never lived. We were not long, however, in getting a good fire, and having a very good supper, we did not fare very badly.

Wednesday was a pleasant day, and we managed to get fifteen pounds of trout from Jessup's River.

Thursday morning we packed up our traps, and traveled some two and one-half miles over a mountain to what is called Dug Mountain Lakes, two very small bodies of water, not larger either of them than a good-sized mill pond. There was a small strip of land between these lakes, where we were again fortunate in finding a comfortable cabin of logs. After getting settled in our new home, we launched our boats upon Lake No. 1 to try our luck. We were out just two hours fishing, and caught thirty-five pounds of as fine trout as I ever saw together; five of them weighed two and a half pounds, and the smallest would weigh a quarter pound. We sent this lot of fish in to Lake Pleasant, some ten miles, by one of our guides.

Carrying the fish in was not our only excuse for sending a guide so far. It had rained considerably since getting into the woods, in consequence of which our supply of bread was getting short, and it is a well-established fact among all good fishermen that in camping out you must be well supplied with bread. After partaking of one of our regular dinners, which consisted principally of trout, we went after more of the speckled beauties. During the evening fishing we had rather poor luck, only taking about twelve pounds.

Friday morning we went for them again, still confining ourselves to Lake No. 1, and in two hours had captured thirty to thirty-five pounds more of nice fellows. In the afternoon of same day we carried our boats to Lake No. 2, to try it. I don't think we had got more than ten feet from the shore when one of our party hooked a two-pound trout, and from that time for the next hour and a half we had the finest sport imaginable, catching forty pounds; two of two and a half, and a number that would weigh one pound each.

Saturday morning we tried Lake No. 2 again, fished two hours, and got about fifteen pounds of very nice ones; returned to camp, partook of lunch, packed up, left our boats, and traveled out of the woods to our starting point, Lake Pleasant, ten miles; bade farewell to our guides and Lake Pleasant friends; drove that evening to Northville, and remained over night. Early next morning we started again for Amsterdam, where we arrived in good season with seventy-five pounds of dressed trout.

This furnishes what I call about as a nice a time as anybody can ask for in the way of fishing, but before closing must express my entire satisfaction with the above-named guides, and can cheerfully recommend them to any parties visiting their section.

JOHN M. GILL.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ We cannot attempt to give specific directions where to go for game and fish. Correspondents must keep themselves posted by consulting our news columns.

G. L., Tarrytown.—We cannot find the pedigree of the dog you mention.

C. H., Peoria, Ill.—We should advise you to consult a surgeon with regard to removing the tumor.

R. H. B., Jamestown, N. Y.—The Ballard rifle (not gun) is manufactured by Schoverling, Daly & Gales, New York.

J. N. J., Oquaka, Ill.—Measure your gun barrel to find how long it is. The barrel would be just as long if the stock ran out to the muzzle.

THOMPSON, N. Y.—I have a setter pup two months old. At what age should I cut his tail, and how? Ans. Do not cut it until he is a year old and not then unless it is very long.

J. G., Fort Clark, Texas.—See early number for article upon divining rods. No scientific instruments to determine pressure of water under ground except drills for boring holes.

C. G. F., Frederick, Md.—Please state the proper charge for a gun of 3 lbs. 12 gauge 31 in. barrels and choke-bore breech-loader; want charge suitable for partridge, rabbit, squirrel, woodcock and pheasant shooting? Ans. 4drs. powders, 1⅛ oz. shot.

J. R., New York.—The catalogue of the birds procured by Mr. Ober in Martinique is published in the Proceedings of the National Museum You may obtain it by writing to the Museum at Washington, or possibly of Mr. Geo. N. Lawrence, this city.

A. H. M., Philadelphia, Pa.—At Blue Mountain Lake, Adirondacks, you will find plenty of trout, very large and good fighters. There are good accommodations for ladies and children, and the access is easy. You may write to Chauncey Hawthorne, who keeps a house there.

BACHMAN, Easton, Pa.—The Newhouse traps can be bought of S. Newhouse, Oneida, New York. Most gun dealers keep an assortment in stock. We think you can be supplied by Shipley, 503 Commerce street, Philadelphia. Write to C. L. Whitman, of Weston, Vermont, or R. E. Robinson, Ferrisburgh, Vermont, for information such as you ask for.

H., Huntingdon, Tenn.—1. What species of eagle is the largest? 2. What is the weight of the largest species of eagle? Ans. 1. The Northern Sea eagle (*Haleœtus pelagius*, Lieb.,) is the largest of the true eagles, though the Harpy eagle, of South America, is one of the most powerful. 2. The Northern Sea eagle is said to weigh from 12 to 14 pounds.

J. I. W., Huntingdon, Pa.—For Entomology consult "Our Common Insects," by A. S. Packard, Jr., Salem: Naturalists' Agency, $2.50; "Guide to the Study of Insects," same author, $7; "Relation of Insects to Man," same author, Estes & Lauriatt, Boston; "American Entomology," by Say, $12 to $18.

C. S. A., Chicago, Ill.—Duluth is an excellent point to start from for north shore of Lake Superior. For full directions, particulars of streams, expenses, etc., see article on "The North Shore of Lake Superior," Nov. 7, 1878. Capt. Robinson, of steamer *Ontario*, Sault Ste Marie, will tell you all you want to know about it.

J. M. S., Bridgeport.—At what time of the heat should I get my bitch lined to get a larger number or dog pups, or doesn't it make any difference? Ans. Although we have known some instances of bitches being served at the latter period of the heat having a preponderance of dog puppies, we are not prepared to assert that there is anything in it.

G. T. C., Canon City, Colorado.—"Hallock's Sportsman's Gazetteer" contains a very full list of books on angling and fish culture. Several hundred of its own pages are devoted to descriptions of salt and fresh water fish and their habits. The best American books on fish culture are Seth Green's "Fish Catching and Fish Hatching," price $1.00, and Livingston Stone's "Domesticated Trout," $1.75; but neither is by any means a complete work on general fish culture.

BIXAR, Corpus Christi, Texas.—I stand very much in need of a fine very strong line fitted for a reel, one that I will not lose every 10 pound red fish with. Can you tell me what I want and where I can get it? Ans. Send to any East ern tackle dealer for a 12 strand linen line, if to be used for fine fishing with rod and reel; and for a heavy hand line ask for a bluefish or cod line, either of cotton or linen. Laid cotton lines are pleasanter to handle than linen, as they are softer.

ANNEX, Staunton, Va.—1. The digestive apparatus of my young Newfoundland dog is in terrible bad order. Diarrhea and costiveness continually alternate and vomits frequently. Sleeps a great deal. Nose hot, variable appetite. Falling off in flesh. Lively one day and dull the next. 2. What is a "hair ball" in the stomach? Does it produce same symptoms as worms, and how to get rid of it? Ans. 1. Worms most probably the cause. Areca nut, 2 grains to each pound of dog's weight to be given on a fasting stomach, with one oz. castor oil four hours after. 2. Have never had a case and know nothing about it.

T. R. O., Philadelphia, Pa.—In the vicinity of St. John, N. B., are Riley's, Saddler's, McCrakens, Chambers', Lerrio, Bal's, Beaver, Deer, Latemer, Long's, Spruce and Lomond lakes, all within from 7 to 20 miles of the city, and affording excellent trout fishing. In Mispeck, Nereps, Radcliffe's, Collins' and Garnett's creeks is good stream fishing. From Halifax, N. S., you may go for trout to Hobiey's Lake, East River, and other waters, reached via stage to St. Margaret's Bay. Five Islands, Indian River and the Dartmouth lakes are good trout waters.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY JULY 10, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

—Mr. Hallock, our Editor-in-chief, has now returned from his fishing cruise to Canada, much refreshed and ready for work. The third letter of his interesting series will be found in the current issue of FOREST AND STREAM.

QUAIL, NOT PARTRIDGE.—Begin right. Call the newly imported migratory quail by their real name. They are quail, not partridge, as they have already been miscalled.

THE INDIANAPOLIS "KAMPING KLUB"—If its principles and practices are such as would seem to be symbolized by the English disregard of conventional orthography, manifested in its name, the Kamping Klub of Indianapolis, Ind., is a praiseworthy institution. The members, we are told, have banded themselves together for the express purpose of withdrawing from the restraint of business and society, and plunging into the solitudes and wastes, where they revert into that indefinable state of existence, whose joys and hardships make up the charm of camping out. The officers of the club for 1879 are: President, W. Rose; Vice-President, W. F. Elliott; Secretary and Treasurer, Geo. A. E. Haugh. Last summer the club had a delightful time, and at last advices were actively preparing for another diet of locusts and wild honey, this time probably among the Northern lakes. In their excursions the attempt is made to combine profit with pleasure, science with sport, and different members are appointed to investigate and report upon various subjects of science and natural history. A museum has been formed, the growth of which affords a constant incentive to the collection of rare specimens, and the "Kamping" men unite the character of sportsman and naturalist after the true ideal of the FOREST AND STREAM reader, for, as a matter of course, each man of them reads that paper as regularly as the postman brings it around.

—The complimentary banquet, given to the New York Game Protective Association by Messrs. Starin and Corwin at the Manhattan Beach Hotel, Coney Island, last Tuesday evening, was a most pleasant affair. The *menu*, which was one of those for which the Manhattan is famous, was the least of the many features which combined to make this reunion of veteran gentlemen sportsmen a notable one. Toasts, speeches and *bon mots* followed each other, and many happy things were said which, like all after-dinner good things, would lose their charm if transferred to paper. The banquet was, moreover, noteworthy as a recognition of the Society's moral force in the community, a recognition which it has well earned.

SALMON FISHING IN CANADA.

THIRD PAPER.

RIVER GODBOUT, Lower St. Lawrence,
June 25, 1879.

MR. EDITOR:

My friend and host is a veteran athlete from the "Land o' Cakes," mighty in stature, of majestic mien and sinewy arm, venerable in years, rich in wealth, and powerful to command. He is lord of the Godbout realm. Salmon are his minions, and his imported Forrest rod his sceptre. When he sways it, the big fish leap before him, and obsequious subjects graciously offer up their lives. His dominion lies far "down to the nor'rud," where the great whales spout, and the dreadful octopus stretches out its giant arms; where the ice lingers far into July, and the lap of Spring is capacious enough for the most prolonged and protracted Winter. From the top of the lofty tower where I am now writing, he surveys his 5,000 acres of wilderness possessions, and overlooks the moody river which betimes is black and white with its raging outflow, and anon more placid as its temper subsides with its diminished volume. His gracious reign has already extended fifteen years. The Governors-General of Canada, Premiers, Bishops, Judges, and noted dignitaries from both sides of the "great herring pond" have paid him court and enjoyed his munificent hospiality. King Olaf never acted the host in better or more generous part. When the salmon season approaches and the run of fish is about to begin, he sets forth in his steam yacht *Cruiser*, (more luxurious than the barge of Cleopatra,) sails down the mighty St. Lawrence full 500 miles, as we have just now done, hoists the British ensign on the staff of his tall tower, surveys the premises from the winding balcony outside, and in the name of the Queen, the Fish Commissioner, and all the newly created Knights of the New Dominion, declares the angling season open! Then follows a stir throughout the Camp, which has been silent and tenantless for ten long months. The blasts of November have shaken it; the winter snows have piled around the clustering cottages; floods of spring have threatened them; and the breaking ice-fields floating down the swollen tide, have even shoved them from their foundations, despite the fenders of stone and timber which were built for their protection Even now the tardy spring has scarcely opened the buds and blossoms, and on this 25th of June all vegetation has the appearance of an April development in the latitude of New York. On the 14th of June ice formed, and on the 15th we had a flurry of snow. Last winter's ice still remains in many of the secluded gullies. Up to the 19th the mid day temperature averaged only about 50 degrees. Then warmer weather began; though winter clothing is still indispensable to comfort. But such weather is phenomenal, even for this region of wind and cold. And this induces me to enjoin upon sportsmen, as I have often done before, to provide themselves always with an abundance of warm clothing and waterproofs, especially when visiting high latitudes. The inexperienced invariably suffer from neglect of this precaution.

And now while the cook is polishing up the rusty stove in the kitchen, and several attendants are setting things to rights throughout, let us climb a neighboring sandy hill and survey the situation. A zigzag path leads to the top, and on the summit there is a flag staff sixty feet high and a rude shelter with seats for rest. This promontory is visible fifteen miles out to sea, and is a chosen landmark for navigators. Directly opposite it is another sand bluff a half mile distant; and these two elevations, extending to the right and left in a range of spruce covered hills, enclose a great basin which was formerly the bed of a mighty river, and a harbor where vessels might anchor in fifty fathoms of water. But now the old river bed is a grassy bottom, through which the Godbout flows with comparatively insignificant volume, dividing itself for a while into three branches, so as to enclose the two pretty wooded islands, and then uniting again, and reaching the salt water by a single channel, with scarcely three feet of water at low tide. At high water the yacht can run in over a sand bar and find safe shelter under the lee of a sandy spit covered with spaces which runs parallel with the St. Lawrence, and was itself once a mightier sandbar at the mouth of a mightier river. The present sandbar is merely a projection of the spit; and the spit itself a projection of the sand bluff beyond; and the bluff, in its turn, a projection of a still higher elevation, each of which marks the gradual recession of the waters both of the river and the Gulf. This greater elevation is 270 feet high. It is a ridge of sand mixed with sea shells, and is called the "Hog's Back." It is so narrow at its apex that two persons cannot walk abreast, and so steep that the stunted bushes and trees on the seaward side are constantly slipping down to the beach, while the taller spruces which clothe it landward, seem to stand on the tops of those below them. From this high point of observation is a wonderful view. The outlook is toward an apparently boundless sea, flanked on the left by the Point des Monts, fifteen miles below, and outlined on the right, as far as the eye can reach, by the blue hills of the distant south shore, thirty-five miles away. Beyond the hills the snow-capped summit of Mt. Ste. Anne glitters in the sun; stretches and patches of snow can be seen on many of the higher elevations; down toward the Gulf several long lines of smoke indicate passing steamers; there are three or four ships and a couple of fishing smacks in the offing. The foreground is rugged. Great combers of surf roll in with the tide, and chase each other over the sandy flats at the mouth of the river, while breakers dash and thunder against the bases of the great perpendicular cliffs which flank us on either side up and down the coast. As far as we can see the shore is cinctured with foam, and a host of sea birds are hovering above the towering crests. To the left, on a grassy beach, are the dilapidated quarters of the Hudson's Bay post, the little tumble-down church, and the hamlet where Napoleon Comeau, the guardian of the river and his relatives and neighbors reside. In summer the picture is very pretty, but in winter it must be desolate enough. Yet Comeau finds much employment and profit in shooting seals, spearing porpoises and the like; while the forest back of him gives occupation for his traps and gun.

Turning our backs to the sea, we now overlook the basin of the Godbout, lying directly beneath our feet, so deep that its inequalities of surface are blended, and the dark evergreens which line its bottom and sides, contrasting with the vivid foliage of the newly leaved birches, seem like a woven carpet of velvet. Its rim rests against a girdle of rounded mountains, dark with the sombre hues of spruce. Through its centre meanders the pretty river enclosing the twin islands. Just where its flow is deepest and most placid, and the river bottom the smoothest and most grassy, we can discern the numerous cottages of the Camp; and a little further beyond, the foaming waters of a rapid tumbling out of a gorge among the trees. A fleet of boats is struggling up the stream with stores landed from the steamer. Five acres of the bottom was long ago cleared of undergrowth, so as to secure immunity from the black flies and mosquitoes, and a cool draft of air, as well as a vista looking out to the sea between the sand bluffs. There are five cottages, and several outbuildings which include a kitchen, ice house, fish house, etc., ranged along the margin of the river. The largest cottage contains a dining room, three chambers, and two bath rooms, and is flanked by the tower already referred to, which is three stories high and was originally designed to reach above the flight of flies; but like the ambitious Tower of Babel, it failed of its purpose. The second story of the tower is a chamber, and the third a reading room and sky parlor, looking southward to the river St. Lawrence, eastward upon the smoothly flowing reach of the Godbout in front, and northward into the gorge above, whence tumbles a series of rapids and pools, forming three wooded islands in the glen. Four Castle-Connell-"cotts," or punts, like those in use on the Shannon, are drawn up in line along the river with their noses against the bank, looking in shape like so many alligators basking in the sun. One of them is a genuine importation from Ireland, and the other three were made from its model. They are 25 feet in length, rising at the prow and stern like gondolas, and stiff enough to be steady for casting the fly. No other craft could be devised more suitable for the work required of them, which is chiefly in the rapids, and they can be beached in a jiffy when desired. The river banks are so difficult or impracticable throughout, for shore casts, that the boats are in constant requisition. They are propelled solely by poles and paddles. There is a pretty canoe drawn up on the beach beside them which adds an aboriginal tinge to the picture. Sitting on the porch of the main cottage we obtain a 120-yard rifle range directly across the river; and from the same firing-point facing down stream, a 1,000-yard range, with a full-sized Creedmoor target in position. Some tall shooting has been done at the shorter range, where many glass bottles are repeatedly broken in succession,—for mine host and his retainers are not only salmon fishers, but mighty Nimrods whose antlered trophies adorn many a hall and wall. Indoors we find many conveniences and luxuries, such as cushioned arm chairs, rocking chairs, mattresses, iron cots, mosquito bars, and gauze screens at all the windows. The kitchen is a marvel of completeness, and the larder contains an abundant variety of canned meats and soups, vegetables, sardines, jellies, hams, corned beef, cheese, milk, ale, champagne, sherry, lime juice, seltzer, and so many other things which one may desire or need, that, to the case-hardened sportsman who has been accustomed to rough it in tents, the appointments seem truly luxurious. Yet the occupants are neither novices nor hearth-rug gentry. The chief mentor is a veteran 63 years of age, brought up on the frontiers of the Canadian lumber district, and is the owner of many of the largest mills; but he believes that comfort at any price is preferable to misery. He believes in forefending the arrows, slings, hardships, and hard knocks of a campaign rather than suffer and endure them. So say we all of us, as we grow older. We do not propose to test ourselves to the utmost limit of deprivation, and live like savages, facing the elements, and tearing our food with our fingers.

Such equipment as Mr. Gilmour has of rods, reels, lines, flies, gaffs, wading clothes, weighing scales, score books and slates, face protectors, fly oil, and the like, few men ever saw befor. Canada, Great Britain, and the United States are alike scoured in search of the best appliances. In a single box, just consigned, he has £35 worth of Kelso flies of best approved patterns, to say nothing of quantities of other makes. Of American goods I noticed a Leonard bamboo rod, (which he much values,) two reels from Abbey & Imbrie, of New York, and another from Conroy, Bissett & Malleson, of the same city. As a rule, however, the old Scotchman tenaciously and obstinately clings to anything Scotch, and, I believe, claims Scottish superiority for almost everything except the Godbout! There are no salmon rivers in Scotland like the Godbout, he says, either for "wickedness," or plethora of fish—or for black flies! Black flies are the very devil on American rivers. Nothing in nature so much tries the angler's temper and patience. Imagine a person standing helpless for

forty minutes, with both hands holding the rod while he kills his fish, and the unconscionable insects attacking him on every exposed part of his body! No writer ever did justice to the situation. It is interesting to observe the devices employed to protect the exposed parts of the person. Nets, gloves, gauntlets, wristlets, helmets, masks, oils, essences, and a score of other contrivances are called into requisition, but without much relief. The best remedy is to wear woolen clothing and tuck the trousers snugly into the boots. Wading pants which come to the arm-pits are an effective remedy, but very hot in warm weather. For the hands wear lamb's-wool lined leather gloves. They protect the hands and wrists completely, and can be pulled off or on easily. All other kinds of gloves stick. A loose linen helmet over the head, and drawn tightly over the face with an elastic through a hem is quite efficacious, but the flies are apt to crawl underneath. Pull your soft hat well down, turn up your coat collar, and wear untinted glass goggles, if the flies attack your eyes. With such a rig you are not only nearly fly-proof, but an interesting subject for a photographer. Oils and emolients do not give satisfaction. A compound of tar and oil is the very best of all preventives, but it is sticky and disagreeable. While our cool weather lasted, flies did not trouble us, but with the first warm day they came in swarms, and their energy and persistency is now something terrific. Fortunately we have one place of refuge after the battles of the day: yet our closely guarded houses are not altogether exempt. Despite the protective screens at all the windows, the rooms fill rapidly when the doors open, and swarms follow any person who enters. They come in by the back-load. Instinctively flying toward the light, they gather upon the windows and creep about the glass in darkening myriads. On Sundays, when there is no fishing, the leisure hours are profitably employed in repeating the Shorter Catechism and mashing them, one at a time, with the end of the forefinger, changing to the thumb or middle finger when that gets tired. It will be readily perceived that at the rate of two a second, which is a fair business, a very large number can be disposed of in a short time, and the room be cleared if the doors be kept shut. But there is another more expeditious method, which is to smear the panes with oil, into which the flies flying are immediately and immovably stuck, and of course soon perish miserably. When the windows become so covered as to be obscured, the darkening mass is scraped off with the back of a case knife and the oil renewed. Fortunately the creatures disappear at nightfall, so that unalloyed rest and sleep are assured.

Successful fishing in the Canadian salmon rivers is no child's play. To secure good scores, it is not only necessary to understand the habits of the fish; to cast and play the line properly; and to handle the fish judiciously when hooked, but each stream has its physical peculiarities, so that even the most skillful angler will be beaten by those who are perfectly familiar with the river he fishes. Moreover the labor is excessive in such rapid and tumultuous rivers as the Godbout, and the utmost tact is very often required to save a fish. Though a frequenter of the more quiet streams of New Brunswick and Nova Scotia for the past twenty years, the feats accomplished here often astonish me. Perhaps I can convey an intelligent idea of the difficulties and dangers of the sport by taking the reader through the successive pools, of which there are fourteen in all.

In the first place I must tell you that this is only a *three-rod* river, although there are five of us fishing here at present. Rivers are gauged according to their capacity to afford good angling for a given number of rods, and the rentals are determined accordingly. When a party is on a river, certain pools or sections are assigned to each rod each day, and these pools are fished in rotation, so that all have equal chances. The season begins about the middle of June, though a few fish arrive earlier. They come in gangs with each tide, and the experienced hand can usually tell whether the arrival be large or small. In the early part of the season the rivers are very high, so that the lower pools afford good sport at low tide; but as the river falls and diminishes in volume the lower pools within the reach of tide-water become useless at all times, for they are shallow at low tide, and salt at high tide. In neither case will the salmon take the fly. It is apparent that an early run of fish is most desirable, for the river is then likely to be full with the spring flood, and the fishing range is much extended. The run of fish this season is late, and we have taken only about seventy in all, though some of them are unusually large for the Godbout, one-half of them ranging between 18 and 28 lbs. Salmon vary in average size in different rivers. The average here is 11 lbs.: in some rivers it is double. The deficiency in weight is however made up in numbers. The following is a statement of the take here for eleven years:—

Number of Fish.	Weight lbs	Rods.	
373	4,405	4	June 20 to July 14
523	5,125	5	" 18 " 21
427	6,669	4	" 11 " 20
273	3 066	3	" 15 " 3
215	5,493	4	" 16 " 17
299	4,48	4	" 17 " 16
509	5, 21	5	" 15 " 15
217	2 349	4	" 20 " 9
132	1,495	6	" 19 " 12
272*	3 077	4	" 27 " 7
177	1,936	3	" 28 " 8

* This was the year 1874. The lessees and their friends left early, and the river was subsequently fished by Nicholas Comeau, the river guardian, who is one of the best anglers in the world, and second only to Allan Gilmour, Esq., who is still high rod on the Godbout. Comeau fished from the 8th to the 17th of July and took 365 fish, weighing 3,873 lbs., which is said to be the best rod fishing ever known.

When the salmon first come into the river from the salt water they are gorged with capelin, sand eels, shrimp, and other sea food. Their arrival is indicated by the splashes which they make in leaping from the water. In the height of the season as many as fifty are seen in the air together. It has even been asserted with some emphasis, that on a certain year they kept the occupants of the camp awake at night with their noise, which was like falling boulders plumping into the water from the heights opposite. When the fish come all is excitement at the Camp. Up goes the bunting from the flagstaffs on the tower and promontory, and all the gaffers come up from the hamlet below to the Camp. A boat is assigned to each gaffer, and each doughty knight of the rod comes forth *en grand tenue*, and takes his place in the bow, prepared for a fair hand-to-hand, stand-up fight with the salmon. The results will be duly recorded in the evening on the bulletin slate which hangs at the end of the cottage. All the gaffers are Frenchmen, and the angler who cannot parley a few words (*un peu*) will be likely to stand at the tail of the list. Now we are all ready—"*Montez, a la roche, a hvut.*"

The Godbout River heads in Minecuagan Lake, whence also flows the Mineconegan River in a southwesterly direction toward the St. Lawrence. It is sixty miles in length, but only two miles of it are suitable for rod fishing. From its source to its mouth it is a turbulent stream, tumbling through gloomy mountain gorges with a continuous precipitous pitch, and piling itself into billows of foam against huge boulders which obstruct its tortuous channel. It seems a marvel how the salmon can ever work their way to their spawning grounds in the upper stream. The limit of the fishing is at what is called the "Upper Pool," where the long pent waters rush down through a cañon sixty feet deep, with an impetuous discharge and spread out into a broad basin just under the shadow of an impending mountain. After whirling awhile in an inky eddy, flecked with bubbles and foam, it jams itself against a confronting cliff, and then dashes off again as impetuously as before, though in a broader and more shallow channel. Below, the shores are nearly vertical all the way, and fringed with trees. The bed is choked with boulders and the air is damp with the spray which rises from churning waters. It is whiteness all the way to the Camp, save where temporary pauses are made at the pools, which I have no doubt are most acceptable and necessary halting places for the salmon in their tedious ascent. Following the river, a path has been constructed through the woods with much difficulty and expense, so as to communicate with the pools. Trees have been chopped away, rocks blasted out, hewn logs stretched across chasms, hollows filled up with stones and earth, hand-rails placed where the brink is dizzy and the footing precarious, jetties of stone built up around projecting cliffs which bar the passage. There are drinking cups at the cold wayside springs which trickle down the moss-grown rocks. At two of the pools long reaches of ladders are laid over the boulders in the foaming midstream so as to reach to points of vantage for casting. At other pools boats are moored for special service there. Halfway down, the stream is crossed by a rope ferry which swings you across the foot of a rapid to a landing cut in the solid rock, whence an iron railing assists the ascent up the bank. The expense of all these improvements was fully a thousand dollars. Oh! this is the luxury of salmon fishing, indeed. In my ignorance, begotten of a limited experience, I had imagined the most difficult salmon river to be no more than a series of placid pools, in which the fish having been secured by a long line delicately cast and manipulated was handily brought to gaff; or if perchance he ran into the gently rippling rapids below, then to be followed by a hasty chase over the slippery stones, and peradventure a wetting in the lower stream. I had never thought of saving a fish in a mill-race, and even shuddered at the possibility of hooking one there. Here it is different—as I shall prove in an additional letter, for this is already too long spun.

HALLOCK.

The Rifle.

MASSACHUSETTS—*Boston, July* 4.—A general programme was made up at Walnut Hill for the National Holiday, four rifle matches and a glass ball match were on the list. Each was well contested, and a large attendance of spectators witnessed the display. The conditions were excellent for shooting, the wind staying quite steadily throughout the sport.

The amateur series at 200 yards was the first match.

O M Jewell	5 5 4 4 4 5 4 5 5 5—46
E F Richardson	4 5 5 5 4 5 4 4 5 4 45
S Lewis	5 4 5 4 4 4 5 4 3 4—42
M Williams	5 4 5 3 4 4 4 3 5 5—42

A Subscription Match also at 200 yards, was the next event, and Mr. Jewell also took first prize in this competition, with an excellent 33, the number of rounds per marksman being seven. The names of the four prize winners, with their scores, are appended as follows:

O M Jewell	33	E F Richardson	32
L L Hubbard	32	E F Brooks	30

The 900 yard carton match had 40 entries. The shooting in this match was of a high order. Messrs. Gerrish and Brown tieing for first place, on the remarkably good showing of 40 out of a possible 42. The tie was shot off, and was decided in favor of Mr. Gerrish on the first round, he getting a "carton" or "six," against a "bull's eye" for his opponent. The first prize is a silver medal of the Massachusetts Rifle Association.

W Gerrish	6 6 6 4 6 6 6—40	Jas Wemyss, Jr.	5 6 5 5 5 4 6—36
J F Brown	5 6 6 4 6 6 6—40	W M Ward	4 5 6 5 6 5 4—35
Salem Wilder	5 6 6 6 6 4 5—38	N Washburn	6 3 5 5 6 3—34
W H Jackson	4 5 6 6 6 6 5—37		

The renewed competition in the Winchester rifle match had 28 entries, Mr. Hubbard leading his competitors on 68. The conditions of this match call for fifteen rounds per man at 200 yards. The best scores are as follows:

L L Hubbard	5 4 4 5 4 5 5 5 4 4 4 5 5 4—69
E F Richardson	5 4 4 5 4 5 4 4 5 4 5 4 5 4 5—67
L L Winship	5 4 5 4 5 5 5 4 4 5 4 4 4 4 4—66
A Babbidge	5 5 4 4 5 4 3 4 4 5 4 5 5 5 4—66
W Charles	4 4 4 5 5 4 4 4 4 4 4 4 4 5 5—64
J Wemys, Jr.	4 4 4 5 5 4 4 5 4 4 4 4 4 5 4—64
J Borden	4 4 5 4 4 4 4 5 4 4 4 4 5 4 4—63
E F Brooks	3 4 4 4 5 5 4 4 5 4 4 4 4 4 4—62
R Page	4 3 4 5 3 4 4 2 4 5 4 4 3 4 3—56

July 5—Several matches were fired at Walnut Hill range to-day, and much interest was manifested in the sport. The weather was nearly all that could be desired, an unsteady one to five o'clock wind being the only objectionable feature of the day to the men before the butts. The first event decided was the 500-yard off-hand match. One gentleman (Mr. E. F. Richardson) made 27 out of a possible 35, seven rounds, at the distance.

The Winchester rifle match had a large number of entries. Good results were recorded. Mr. Jewell again coming to the front with an excellent 69, 15 rounds, at 200 yards. This match will be concluded Saturday next, the requisite number of entries having been made to warrant the announcement. Following is to-day's result:

O M Jewell	4 5 5 5 5 5 4 5 4 5 5 4 5 5 4 4—69
J Braten	5 4 4 4 5 5 5 4 5 4 4 5 5 4 5—68
L L Winship	5 4 4 5 4 4 4 5 5 4 5 5 5 5 4—67
J Nichols	5 4 5 4 4 5 4 3 5 4 3 5 5 5 5—66
J A Lowell	4 3 4 5 5 5 4 4 4 4 4 5 5 5 4—66
R Davis	5 4 5 4 5 5 3 4 5 4 4 4 4 4 4—65

The chief event of the day was the *Spirit of the Times* match. In this there was another fine display of the shooting for which Massachusetts riflemen have become famous. Mr. Sumner heads the list with a splendid 217 out of a possible 225. Other of the competitors made good records at the several distances at which the match was shot, as will be seen by the subjoined summary:

J S Sumner.																
500	5	5	5	5	5	4	5	5	5	5	5	5	5	3	5—72

Bellevue Range, July 3.—The Medford Amateur Rifle Association in regular competition to-day shot at 200 yards in the Sharps match, with scores:

H H D Cushing	4 4 5 5 5 5 4 5 5 4—46
H K Richardson	4 4 5 4 4 5 5 4 5 5 4—46
J B Osborne	5 5 5 4 5 4 5 5 4 5—45
J Eastman	5 4 4 5 5 4 4 4 5 4—44
R Sawyer	4 4 4 4 4 4 4 4 5 5—42
C H Russell	5 4 4 4 4 5 4 4 4 4—42
D J Ridge	5 5 4 4 4 4 4 3 4 4—40
W A Webber	4 3 3 4 3 4 3 3 4 3—34

Same range, July 4—The Raymond Sporting Club had a glass ball shoot to-day, and a rifle competition as well. The rifle work was at 200 yards off-hand, and out of possible 50 the following were scored:

D Kirkwood	5 5 5 5 5 5 4 4 5 5—48
H K Richardson	4 4 4 4 4 5 5 4 5 5—44
H H Cushing	4 4 5 4 5 4 5 4 4 5—44
C M Gueth	5 5 5 4 4 4 4 4 4 4—43
E Bennett	3 4 4 4 3 5 4 4 5 5—41
H K Lyman	4 3 3 4 4 4 4 4 4 4—39
E Jones	4 3 3 3 3 4 4 4 5 3—36
W B Witherell	3 4 2 4 3 3 4 4 3 3—33

South Framingham, July 2.—The rifle club was out yesterday. The badge was taken by W. H. Trowbridge by a score of 41 out of a possible 50. This is the fifth week Mr. Trowbridge has taken the badge. Following is the score:

W H Trowbridge	3 5 4 5 4 4 4 4 4 4—41
Fred L Oaks	4 4 5 4 4 4 4 3 4 4—40
Charles H Clark	3 2 4 3 2 3 4 0 4 3—27

Akron, July 5.—The following is the score made by the Akron Rifle Association June 20; distance, 200 yards, "off-shoulder:"

S Fralick	4 4 4 4 5 4 5 5 4 5—44
W H Carter	5 4 4 5 5 4 4 4 4 5—44
C B Peters	4 4 4 4 3 5 5 5 4 5—43
Joe Young	3 5 5 4 4 4 4 4 4 4—42
A Eves	4 4 4 4 4 4 4 5 4 4—42
H Wing	4 4 4 5 4 4 4 4 4 4—41

The badge was won by Mr. Fralick.

Collinsville, July 4.—Canton Rod and Gun Club, Riverside Range. Practice meeting at 200 yds., off-hand, 3lbs. pull, 10 shots:

		Mass.	Creed.
O B Hull	12 10 11 11 9 11 11 10 9 12—106		46
G F Lewis	9 10 11 12 10 9 10 7 12 8— 98		43
Sanborn	10 10 8 10 6 10 10 9 8— 88		40
Bidwell	7 5 10 6 11 10 11 10 4 12— 86		40
Andrews	11 10 11 5 10 9 5 7 9 8— 85		40
Lauterstein	10 9 6 11 6 6 8 9 8 10— 83		37
Pfister	11 5 9 7 7 6 4 10 8— 78		38
Chapin	5 10 4 5 9 9 12 8 8 8— 78		38

Hopkinton, July 4.—The Hopkinton Rifle Club held a match at their 500-yard range last week. The weather conditions were unfavorable, with slight haze and gusts of wind. Some good scores were made. Below is the summary:

N Jewell	4 5 4 5 4 5 5 5 5 5 4 5 5 5—71
O C White	4 2 5 5 5 5 5 5 4 5 5 5 5 4 4—66
E P Rose	3 2 3 4 0 3 4 4 4 4 0 5 5 4 5—51
G P Wood	5 3 3 3 5 5 2 2 4 2 3 2 4 3 3—49
P W Smith	2 4 4 4 4 5 3 5 5 5—41

To-day the club held a match in Cloftin's Grove with the Framingham Club for a prize of a silver cup, offered by engine Company No. 4. It was won by the Hopkinton Club. The weather conditions were bad. Seven rounds at 200 yds., off hand, and seven at 500 yards. The following is the summary of best scores:

Hopkinton Club.														
A L Rice	5	3	5	4	4	4	4	5	4	5	5	5	5	5—63
N Jewell	2	4	0	4	4	4	4	5	4	5	E	5	5	4—57
Framingham Club.														
F S Oaks	4	4	4	4	5	5	2	5	4	4	0	2	2	4—60
W H Trowbridge	3	3	2	4	3	4	4	2	3	4	2	3	5	5—47

—The Beachmont Rifle Club is holding a series of shoots for a silver cup. The conditions are that the cup must be won three times by the same person to become his property.

Mr. Guith won it on the 2d inst. for the second time on a score of 40 out of the possible 50. The wind was a troublesome drawback, as it came fresh and very strong. Mr. E. Bennett did good work, although not in the competition, making 47. Following is the summary:

E Bennett	4	5	5	5	5	5	5	5	4	4—47
C M Guith	4	4	4	4	4	4	4	4	4	4—40
H Sawyer	4	4	4	4	3	4	4	4	4	4—39
C Barrett	4	5	4	3	4	3	4	4	4	4—38

NEW YORK—*Buffalo.*—The spring meeting of the Bay View Rifle Association was held June 26. The day was fine, with the sun hot, but a refreshing breeze from the lake. The meeting opened with a 200-yard match for the "Utley Badge;" military rifles, ten rounds per man. The shooting was not fine, 39 out of the possible 50 winning.

The second match was a team competition, open to teams of seven from any regiment or company in the division, military rifles, 200 and 500 yards, five rounds at each range. Three teams entered. At the 200 yards Company B was first with 97 in possible 175. The final score stood as follows: Sixty-fifth Regiment, 93 98—191; Company B, Seventy-fourth Regiment, 97 92—189; Company D, Seventy-fourth Regiment, 93 50—143.

The third contest was at three ranges, 200, 300 and 500 yards, any rifle, five rounds at each distance, the first prize being the "Hickox Badge." The following are the winners:

	200 yds.	300 yds.	500 yds.	Total
C D Arnold	19	21	17	57
G T Quinby	15	18	18	51
A Shepard	17	14	13	44
J C Graves	11	19	11	41

On the second day of the meeting the weather continued excellent—wind enough to keep the marksmen cool without interfering with the work at the mid-ranges. The attendance was much smaller, but the shooting much better than on the first day. The third match was at 500 and 600 yards, any rifle, any position, five rounds, Capt. Penfold winning the badge on 40 out of the possible 50 points. The following are the winning scores:

	500 yds.	600 yds.	Total.
C C Penfold	21	19	40
G C Farnsworth	18	18	36
G T Quinby	18	16	34
C D Arnold	20	13	33

The closing contest of the meeting was open to teams of two, 200 and 500 yards, military rifles, each man limited to one minute at each range, and to fire as many rounds as possible in that time. There were five teams entered, and the spectators were afforded considerable amusement by the efforts of the men to get off the greatest number of shots. At the first distance C. D. Arnold led the field with 9 hits, score 27, followed by L. P. Kirchmeyer, 8 hits, score 22. At the close Col. Rockwood's team won with 77 points.

GREENER'S WEST SIDE RIFLE CLUB.—Score for week ending July 6:

H Holzmann	48	A Dory	44
S R Campbell	46	P Kaus	44
J C Craig	45	G Roesner	43
J Reitmeier	45	C Welker	42
E Nefl	44	J A Reitweisner	41

On the 1st Greener's West Side Rifle Team had quite an enjoyable time at their gallery, 744 Ninth Avenue. A handsome captain's badge was presented to J. Reitweisner, he having made the highest average score for the past six months. The following officers were installed for the ensuing six months: Pres., S. R. Campbell; Vice-Pres., Jos. Roesner; Sec., J. C. Craig; Treas., G. Greener; Sergt.-at-Arms, H. Reitweisner.

SCHUETZEN NOTES.—The following festivals will take place in the present month:

1. New York City Schuetzen Corps, the 14th and 15th insts., at Jones' Wood; ring and man target, also bull's-eye targets; open to all comers.

2. Brooklyn Independent Schuetzen Corps, the 14th and 15th, at Koch's Park, South Brooklyn; also targets open to all comers.

3. Shooting festival and presentation of a flag of the Union Hill Schuetzen Corps, at Schuetzen Park, Union Hill, the 16th.

4. New York Central Schuetzen Corps, festival at Jones' Wood the 30th and 31st of July; $400 in prizes, at man and ring targets, which are open to all comers.

The following is the score with which the Manhattan Rifle Club team, Captain Geo. Acry, became victorious over fourteen other teams, and therefore the champions of this great western festival:

W Hayes	23	24	17	22	24	22	19	24	20	21—216
L Vogel	17	23	24	23	23	21	15	18	20	21—205
Chas Zettler	19	19	24	17	23	19	21	24	18	18—202
D Miller	23	23	16	15	21	17	20	23	23	17—197
W Klein	8	21	17	19	19	19	15	17	18	24—177
F Raschen	17	13	20	23	14	2	20	18	19	21—167—1164

Wm. Hayes made 210 rings in 10 shots, and became King of said festival.

The Ninth Ward Reform Schuetzen Club elected the following officers: W. F. Schneider, President; Chas. Beil, Vice-President; Hy. Schumacher, Secretary; C. D. Schute, Treasurer.

The Atlantic Brewery Guard, well-known citizens of the up-town western side of this city, elected the following officers: John Klinker, Captain; F. Ehlen, Secretary; H. Hingslage, Treasurer.

The Empire Brewery Guard, friends of the proprietors of the Empire Brewery in West Tenth street, have the following officers for this year: B. H. Helms, Captain; C. F. Kross, Secretary, and John H. Rahe, Treasurer. They will hold their festival the 19th of August at Schuetzen Park, Union Hill.

NEW JERSEY.—Brinton Association match, July 5. Open to all members of the N. J. State Rifle Association. Distance, 200 yards; position standing; ten rounds, any rifle; entrance fee, 50c.; 36 entries and re-entries; the following being the best scores:

R M Squier	4	4	4	5	4	5	5	5	5	5—46
J W Todd	4	5	4	4	5	5	4	4	5	5—45
A W Gibbs	5	4	4	5	5	4	5	4	4	5—45
D F Davids	4	4	4	5	4	5	5	4	4	4—43
F H Holton	4	4	4	4	3	4	5	5	5	5—43
Homer Fisher	4	4	4	4	5	5	4	4	4	4—42
G J Seabury	5	4	4	4	3	3	5	4	5	5—42
J W Martin	4	4	5	4	4	4	4	4	4	4—41

Capt W H De Hart	4	5	4	5	4	4	2	4	4	4—38
J H Burroughs	5	3	0	4	5	5	5	5	3	4—38
E H Reed	5	4	4	3	4	4	4	3	4	4—37
F H Holton	3	4	4	3	4	3	4	5	4	2—36

NEW JERSEY.—July programme of the New Jersey State Rifle Association, Brinton Range, Elizabeth:

Re-entries in the following matches, where otherwise allowed by the terms of the match, will not be received latter than 5:30 P. M.

July 1—"Ballard Match."—Third competition. All comers; 200 yards; any breech-loading rifle; 10 rounds, without cleaning. The three best scores of any competitor, whenever made, to take the rifle.

July 3—"Champion Marksman's Badge of 1879."—Members of the National Guard of N. J. 200 and 500 yards; rounds, 5 at each distance; the military rifle in use by the State. A fac-simile in gold of the Marksman's Badge issued by the State of New Jersey will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times.

July 5—"Sharps' Match for Military Rifles."—Fifteen competitions for Sharps' military rifles. Open to all members of the N. G. of N. J. or members of the N. J. State Rifle Association. 200 yards; 10 rounds; any military rifle, without cleaning. Prize—To the highest score in each competition a Sharps Military Rifle (Borchard pattern). Only one rifle can be won by one person. After fifteen competitions, the person who has made the highest score in the greatest number of competitions shall be entitled to a Sharps new Mid-Range Rifle.

July 5—"Association Match."—Open to all members of the Association. Final winners of the first prizes in the monthly matches of this Association, open to any rifle, and those who in the previous Association Match may have made an aggregate of more than 135 points will be allowed to enter only in the first class. The second class to include all others except those who may elect to shoot in first class. 200 yards; 10 rounds; any rifle. To be shot for each week until the total amount of entries shall amount to $150, at which time the prizes will be awarded.

July 8—"Whitney Match."—Third competition. All comers; 200 yards; 10 rounds; any rifle. To be won three time before becoming the property of the person winning the same.

July 10—"Association Long Range Match."—Fourth competition. Members of the Association; 800, 900 and 1,000 yards; 15 shots at each; any rifle. The first prize to go to the person winning the most competitions during the season under the following conditions:

Handicap—Every competitor will be handicapped on each competition after the first, by deducting from his score as many points as he may have made in any of these competitions above two hundred. This condition to apply only to the scores in determining the winner of the first prize.

The second prize to go to the person who at the close of the season shall have made the highest aggregate of three full scores at all the distances in any three competitions. The third prize to go to the person who, having never won a first prize at these distances, at the close of the season shall have made the highest aggregate of three full scores at all the distances in any three competitions.

July 12—"Winchester Repeating Rifle Match."—Fifteen competitions for Winchester Repeating Rifles, open to all comers, except final winners of first prizes in the monthly competitions of this Association which have been open to all comers. 200 yards; 10 rounds; any rifle. Competitors using military rifles as such without cleaning shall receive an allowance of three points. Only one rifle can be won by one person. After fifteen competitions, the person who has made the highest score in the greatest number of competitions shall be entitled to a Winchester Repeating Rifle, model 1876.

July 12—"Association Match."
July 15—"Ballard Match."
July 17—"Champion Marksman's Badge of 1879."
July 19—"Sharps Match for Military Rifles."
July 19—"Association Match."
July 22—"Remington Match."—Fifth competition. All comers; 200 yards; 10 shots; any rifle. Rifle to be won three times before becoming the property of the person winning.
July 24—"Association Long Range Match."
July 26—"Winchester Repeating Rifle Match."
July 26—"Association Match."
July 29—"Ballard Match."
July 31—"Champion Marksman's Badge of 1879."

COLUMBIA RIFLE RANGE.—*West End, July 7.*—A meeting of the Columbia Rifle Association was held at Columbia Range this morning, at which a board of directors was elected for the ensuing six months. The newly elected directors are: Col. B. F. Hart, Col. E. P. C. Lewis, Col. Braine, Senator Rabe, Capt. Anderson, John Kennell and S. Parish. Col. Lewis was re-elected President, and Major Henry Fulton Superintendent of shooting and Executive Officer. The attendance at the range this afternoon was fair. Two matches—the Sharps Rifle Match and a match for teams for a purse of $50—were on the programme, but the former only was filled, the marksmen feeling delicate about trying their skill against the New York Amateur Rifle Club, which has won in all former competitions. In the rifle match there were 16 entries and re-entries. The conditions were 500 yards, 10 shots, weapon, any rifle; any position; match or sporting rifles to allow military rifles 5 points; rifle and 20 per cent. of entrance money to first man; 15 per cent. to second man; 10 per cent. to third man, and 5 per cent. to fourth man. The rifle was won by R. Rathbone with a score of 50 out of a possible 50. Dr. Dudley, in three entries, made the extraordinary score of 147 out of a possible 150. The highest scores were as follows:

R Rathbone	5	5	5	5	5	5	5	5	5	5—50
F H Holsen	5	5	5	5	4	5	5	5	5	5—49
Dr Dudley	5	5	5	5	5	4	5	5	5	5—49
"	5	5	5	5	5	5	4	5	5	5—49
"	5	5	5	5	5	5	5	5	4	5—49
W E Church	5	4	5	5	4	5	5	5	5	4—47

WASHINGTON, D. C.—The announced match for a valuable badge, presented by Mr. A. A. Adee, came off at Banning range on the Fourth of July, and had the usual bad luck of a scorching, blustery day. In fact the spiteful treatment of the Columbia Rifle Association by the weather thus far this season has passed into a Washington proverb. With the thermometer at 102 deg., a brisk fish-tail wind that blew blankets and score-books off the platforms, and a feeble sprinkling at the last range from the edge of a passing storm that whirled the wind around to a twelve o'clock gale, the scores made need no apology—but the weather certainly owes the club one. A number of visitors, ladies among them, braved the heat to witness the match, but only a few shots were bold enough to fight the thermometer and the anemometer as well as the target. Mr. Adee, not choosing to enter for his own badge, was invited to join the shoot in a Pickwickian sense, and managed to hold his own at the first stage. On opening at 1,000 yards, the first few rounds looked bad for even passable scores, only a dozen bull's-eyes being made by the nine contestants. The wind shifting a point or two, steady work was begun on the fifth round, when Burnside, the two Scotts, Canfield, Coulsen and Adee got on successfully, and for the remainder of that stage the shooting was exceptionally good. Partello settled down to his work on the sixth round, and brought up the white nearly every time thereafter. On counting up, Dr. Scott, Partello and Adee led with totals of 69 each, Col. Burnside following with 67 and Laird with 65. Moving back to 1,100 yards the shooting began fairly, but the wind again freshed and twisted and disconcerted all calculations. Walter Scott here came to the fore with an admirable 63, for which he had to work hard, while Col. Burnside pressed him close with 61, and Laird got a creditable 59, with Dr. Scott next on a tally of 58. The others all fell into serious difficulties, and Lauritzen withdrew. The sky now grew overcast, and a violent thunder-storm seemed imminent, but only the extreme end of the whirl struck Bennings as the firing began at 1,200 yards, and made things lively for the marksmen. Partello got involved in "unaccountables," and after running up five of them, withdrew from a contest which had opened most promisingly for him. Mr. Canfield and Dr. Coulson followed him and packed up their guns. The others held on, although for all but Col. Burnside and Dr. Scott the fight was hopeless. The Doctor began badly with outers and mags, but pulled together at the last. He was, however, beaten by Col. Burnside, who made the top score at this extreme range, and with it and his lead of one point at the first two stages won the match and the badge by the very passable aggregate of 187. The following are the scores, as far as completed:

Col J O P Burnside	1000	4	4	3	5	4	5	5	5	5	5	4—67
	1100	5	5	4	5	3	5	0	4	4	5	3	4—61
	1200	5	5	0	3	5	5	4	4	3	3	4	5	5	3—59—187
Dr S I Scott	1000	5	5	4	5	5	5	4	5	4	5	5	3	4	5—69
	1100	4	4	3	5	5	5	4	4	4	3	3	4	4	5—58
	1200	5	2	3	3	3	2	4	5	5	5	0	3	5	4—49—176
Walter Scott	1000	5	5	4	4	5	5	5	5	3	5	5	4	3	4—62
	1100	3	4	3	5	5	5	4	5	4	4	4	3	5	4—63
	1200	5	4	0	2	0	3	5	3	2	2	4	4	3	5—44—171
A A Adee	1000	4	3	5	4	5	5	5	5	5	4	4	5	5	5—69
	1100	4	3	5	3	0	5	4	2	3	5	5	3	4	5—51
	1200	5	4	2	0	3	4	5	4	4	3	4	4	3	3—47—167
C H Laird	1000	4	4	5	4	4	3	5	4	5	5	5	5	3	4—65
	1100	3	4	5	3	3	3	3	5	4	5	4	5	3	4—59
	1200	3	5	0	2	4	4	3	3	5	5	3	0	0	0—40—164

On Saturday next, the 12th inst., the Columbias inaugurate a series of matches for a superb gold medal, presented by Prof. Wm. Harkness, at 800, 900 and 1,000 yards, in weekly competitions until the end of October, the three highest scores of each competitor to be aggregated and compared, and the leading grand total to win.

P. S.—On Thursday, a calmish day, Partello made 218 and Adee 210 in practice for Fourth of July.

VIRGINIA LADIES AT THE SCORE.—*Rawley Springs, Rockingham Co., Va., June 28.*—I so seldom see in your paper any accounts of rifle shooting done by ladies that I take the liberty of sending you the following scores made to-day in a match for a silver rifle (watch charm). The rifle used was a Ballard .22 cal., the target a ready measurement reduced to 70 feet practice, the distance 75 feet, number of shots, 5:

	Inches.		Inches.
Miss Appoline Alexander	2¼	Mrs Alexander	2¾
Miss Roller	2¾	Mrs Dorrilliers	4¼
Mrs Stokes	3½	Miss Halstead	5

Miss Alexander's score is one of which she may justly feel proud, as it is far above the average of the members of any (male) clubs in the large cities. There will be a prize offered each week during the season, and from the interest manifested to-day you may look for scores which will make some of our celebrated marksmen look to their honors.

HANDICAP.

ILLINOIS—*Chicago, June 28.*—Northwestern Rifle Range, George H. Thomas Post Rifle Club, 200 yards offhand, score:

Tyrrell	4	4	5	4	5	5	5	4	4	4—44

C.

EXPRESS RIFLES IN INDIA.

An officer of the Bengal Staff Corps contributes the following on the matter of Express bullets and methods of stopping large game. It will be read with interest as coming from one familiar with the use of this class of arms, where their employment is a matter of vital consequence on many occasions:

EDITOR FOREST AND STREAM:

Sir—In your issue of the 17th of April there is a letter signed "Sunny South." His remarks on large bore spherical ball rifles are somewhat out of date as far as India is concerned. The officer of the British army alluded to by him, the late Captain Forsyth, Bengal Army, effected by his theories a complete revolution in sporting rifles in India, and laid the foundation of what is now known as the Express system.

Before his time the type of sporting rifle was a poly-groove

14 to 20 gauge, with a very sharp spiral, firing a patched spherical and sometimes conical bullet with a very small charge of powder from 1½ to 2 drams, the result of which was very slow velocity, small killing power and high trajectory, and many sportsmen preferred-using their smooth bores with comparatively heavy charges of 3 or 4 drams, the loss of accuracy, which, moreover, was not much felt at the short ranges big game is usually fired at, being counterbalanced, by the hard hitting and bone-smashing qualities of the smooth bore.

Forsyth, however, changed all that. His system only gave sufficient twist to the rifling to spin the ball. Anything in excess of that he held to be prejudicial, as causing useless friction in the barrel and consequent loss of velocity, to say nothing of the liability to strip. He increased the charge of powder nearly threefold and the velocity of the ball was doubled, the point blank range being increased from 70 to 120 yards. Within the last ten years, however, the Express small bore rifle has almost completely ousted the large bore spherical ball rifle in the estimation of Indian sportsmen—its great recommendation is its extreme flatness of trajectory consequent on its enormous initial velocity, which in comparison to those of ordinary military rifles is as 4, or perhaps 5, to 3. This does away with the necessity of judging the distance at all ordinary sporting ranges up to 200 yards. The second great advantage of the Express hollow bullet is the shock given to the system of any thin skinned animal struck by it; it can also smash bones in a wonderful manner considering its lightness. Powerful large bore rifles of 6 or 8 gauge using 10 to 14 drams powder, and balls or explosive shells are used by the few sportsmen who have opportunities of shooting thick skinned game like rhinoceros or bison: an Express bullet would splash on their hides with not much more effect than on an iron target.

Some sportsmen in India consider the 450 Express large enough for all thin-skinned game, including tigers, bears, etc. It has the recommendation of being light and handy to use—from 8 to 9 lbs. as a double barrel—but the usual rifle used for large game is the .500, weighing about 9½ lbs. and firing a 115 to 150 grain charge of powder with a 340 grain bullet, while some even prefer the .577 Express, which is comparatively a monster, firing 6 drams and a 480 grain bullet. This latter, however, is not much in favor except among those who can afford to keep a special weapon for dangerous game. Indian sportsmen prefer a rifle to be as light as possible so long as it can stand the recoil of the heavy express charge of powder, and there is no use in having a strictly sporting rifle, one that has to be used for snap shooting at running game, heavier than necessary, though weight may be an advantage in a target rifle.

The .360 miniature Express, firing 45 to 50 grs. powder and 120 grs. lead, is a good deal used for antelope shooting, though I think the .400 is a better size, being proportionately much more powerful. The double rifle is preferred by nearly all Indian "shikarries" to the single, though the latter is very commonly used on account of its cheapness. The latter are of many systems; the Westley Richards and Martini Henry are the commonest, .450 is the usual size.

I may mention that I know from experience that the Martini Henry Government Rifle, used with 270 grs. hollow bullet and 100 grs. powder, which is all that can be got into the Government shell together with a lubricator, makes a most successful, cheap and accurate Express rifle, the sighting being altered to suit the trajectory, and I fancy any small bore military or target rifle can be made to take the Express charge successfully. The actual form of rifling is not a matter of much import as long as the grooves are not too deep. With respect to the shape of Express bullets, some have cannelures into which lubrication is put, others are plain and covered with a parchment paper wrapper, and the lubrication done by a wad. They seem to be equally accurate, perhaps the latter keeps the barrel cleaner. An Express bullet fired into an earth bank at about 120 yards forms a ring of about 1½ inch in diameter, unless it breaks up into several pieces as sometimes happens; the penetration is very little, from 4 to 6 inches. BENGAL SEPOY.

R. Pindi Punjab, May 24, 1879.

Rational Pastimes.

ARCHERY.

OHIO—*Marietta, July 5.*—The following scores at the American Round were made in practice, July 5, 1879, by some of the members of the Arden Archers:

	40 yds.	50 yds.	60 yds.	Golds.	Total.
Edwin Devol	184	227	108	5	419

CRICKET.

FIXTURES.

July 12—West Philadelphia, Belmont (2d) vs Oxford.
July 16—Nicetown, Staten Island (2d) vs Germantown (2d).
July 17—Stenton, Germantown, S. Island (2d) vs Young America (2d).
July 17—Staten Island, Manhattan vs Staten Island.

WANSKUCK CRICKET CLUB, of Providence, R. I., recently elected the following officers for the season af 1879: President, T. Stainsbury; Vice-President, A. Martin; Secretary and Treasurer, R. Stokes; Captain, G. Oldham; Assistant Captain, J. Broadhead; Executive Committee, A. Martin, G. Oldham, W. Smith, J. Hopkins and F. Thackery.

WINNIPEG vs. DUFFERIN PARK.—These clubs, of Winnipeg, Ont., played their first match of the season on the 21st ult.; Winnipeg, 117; Dufferin Park, 61.

EUREKA vs. FREDERICTON.—These two clubs of Fredericton, N. B., played their third game of the season on the 24th ult., the result of which will be seen from the subjoined scores:

Fredericton.

First Inning.		Second Inning.

The Eureka Club was organized May 28, and played its first game with an eleven from the Fredericton Club on May 31, and one on June 9 with same club. The first it won by 7 wickets, and the second with 6 wickets to spare.

ST. JOHNS VS. LONGUEUIL.—A match took place between the above-named clubs at St. Johns, Que., on the 1st. inst., resulting in a victory for the former by 35 runs:

	1st Inning.	2d Inning.	Total.
Longueuil	60	31	91
St. Johns	62	64	126

DAFT'S TEAM.—Mr. Peck, of the firm of Peck & Snyder, No. 124 Nassau street, New York, will arrive in New York from London on the 9th inst. Mr. Peck will act as agent for the English visiting team, which is expected to reach here early in September. The eleven will be composed of the best professionals in England. The first match will be played at Ottawa, ont., when it is proposed to put a team of 15 American (United States and Canadian) players against them. Two-thirds of the gate money go to the foreigners.

CRICKET AT HALIFAX.—The Garrison Cricket Ground was occupied the afternoon of the 26th ult. by a match between the 97th and 101st regiments. The former won handsomely by 7 wickets.

ST. JOHN VS. HALIFAX.—In the cricket match between these cities the former won by 115 runs: first inning, St. John 59, Halifax 41; second innings, St. John 130, Halifax 33.

UXBRIDGE VS. TORONTO LACROSSE CRICKET CLUB.—A match between these clubs was played at Uxbridge, Ont., on the 1st inst, resulting in favor of the home club by 4 wickets.

TORONTO VS. WHITBY.—The Toronto eleven visited Whitby, Ont., on the 1st inst., and played a drawn game with the club of that place:

	1st Inning.	2d Inning.	Total.
Toronto	157	93	249
Whitby	137	42 (3 w'k'ts)	179

ST. CATHERINES VS. BUFFALO.—On the 1st inst., the Canadian team visited their old antagonists on their grounds at the Front. Unfortunately for the home club, several of their best men were unavoidably absent, which enabled the visitors to win in a canter by one inning and 29 runs. The following is the score:

St Catherine.

In the second inning Mr. Gordon's slow lobs proved very effective.

CRICKET AT FREDERICTON, N. B.—On the Officers' Square ground a match was played between the Old Fredericton eleven and a picked eleven from the Fredericton and Eureka clubs, which was won by the former in a one-inning game by 35 runs. O'Brien, for the victors, bowled 66 balls, 5 runs, 7 wickets. This match was by odds the best of the season, and was earnestly watched by a large number of spectators:

MERION VS. GIRARD.—The largest scoring inning of the season was made by the Merion eleven at Ardmoor on the 5th inst. when they defeated a not over strong eleven of the Girard Club. It seems to be useless to protest against the revolving of such excellent players as Law and Haines. Fortunately for the game, there is, however, but little glory in winning with them against young clubs like the Girard, and the Merion club, of all clubs, is well aware of this. It was only a few years back, when their club was cutting its eyeteeth, that the Merion gentlemen were foremost in denouncing the swapping of good players. Let them remember this and let the young clubs, which we hear are "always to be encouraged," bar revolvers in every eleven they play against, and aid in breaking up the greatest evil in "the noble game."

PENINSULARS.—*Detroit, Mich., July 5.*—The Peninsulars of this city commenced their Canadian tour on Monday by playing the Carlton Club of Toronto at that place on a very nice wicket which had been specially prepared for the match. The Carltons took first inning, but made no stand against the splendid bowling of Dale and Armstrong, 25 being the total of the innings. The Peninsulars then took a turn at the bat and in spite of some very good bowling ran up a score of 137,

of which Heighs made 48, Dale 18, Trelvar 16, and Hinchman 11. Carlons, in their 2d inning, made 72, thus losing the match by an inning and 40 runs. Tuesday found the Peninsulars at Hamilton, and at about 10 A. M. play was called, Heighs and Bamford being at the wickets on behalf of Detroit, but when 6 runs had been made, all by Heighs, Bamford was given out, stumped, the batsman being anything but satisfied with the decision, but this was only the forerunner of what was to come from the Hamilton umpire. Suffice it to say, that the total of innings amounted to 78, of which Dale made 23, Trelvar 18, Littlejohn 12, and Heighs 9. The Hamiltonians made 96, of which Symonds made 22, Hyman a flukey 20, Wand 12, and R. Hope 10. The cream of the batting was done by Symonds and Wand. Both are splendid batsmen, Symonds hits the hardest but Wand has the best style and is probably the safest bat, but most of the pleasure of the match was marred by the decisions of the Hamilton umpire, who is either shamefully unfair or miserably incompetent, and the wonder is that the Hamilton players, who are courteous gentlemen, should engage such a spoil sport. Wednesday the busy P.'s turned up at St. Marys, and at 9:30 sent Heighs and Trelvar to the wickets to the bowling of White and Crosthwaite, and before a run was scored Heighs played the ball back to the bowler, but Trelvar and Armstrong thrashed the bowling so unmercifully that the total reached 142, Armstrong making 76, not out, and Trelvar 29. When time was called the St. Maryites had made 63 for the loss of 6 wickets, the match being drawn, but virtually won by the Peninsulars. The P.'s arrived home at 10 P. M. on Wednesday night, took a rest on Thursday, and on Friday played on their own ground 22 of Essex County, Ont., Can. Play began at 10:30, the eleven fielding, and found it a tougher job to dispose of the Canucks than had been anticipated, as they succeeded in running up a total of 114, of which Atkinson made 32, Girdlestone 16, not out, and Lett 15. Heighs and Irvine were deputed to commence the rubbing off the runs. Heighs got busy at once, making 2 off the first ball bowled, and in spite of the 22 in the field runs came a pace all through the innings, the total being 154, or 40 runs ahead, of which Calvert made a well-got 45, Heighs 17, Trelvar 14, Littlejohn 14 and Dale 13. Well done, all of it.

STATEN ISLAND (2d) vs COLUMBIA.—The Columbia Club, from Hoboken, which recently defeated the Staten Island's second, visited Camp Washington on the 5th inst., and played their return match. This time, however, the Island team won a victory by 1 inning and 11 runs. The bowling and fielding was poor on both sides. The full score is annexed:

GERMANTOWN (2d.) vs. TRENTON.—The latter named club from Trenton, N. J., visited the Germantown's ground at Nicetown on the 4, inst., and played a friendly game with a good second eleven of the home organization. From want of practice the visiting eleven did not make a good showing; but by securing a good ground, and stirring up such old cricketers as Dick Stevens and Waterman, and several old hands at Lambertville; cricket would undoubtedly get a good bold again at the Capital. The score will show that the Jerseyites were defeated in a one innings game by 162 runs:

MERION CLUB MATCH.—In consequence of the failure of the St. George's to visit Ardmore on the 4th inst., the gentlemen of the Merion Club played a club match on that date. Two teams were selected, one hailing from Radnor and the other from Ardmore, the former winning by 91 runs. For Radnor, Thayer scored 90 and Ewing 51. For Ardmore, Morris, 39; Maule, 27; and Hoffman 18:

	1st In'g.	Total.		1st In'g.	Total.
Radnor	207	207	Ardmore	118	116

MERION (2d) vs. GERMANTOWN (2d).—These second elevens met at the grounds of the former, at Ardmore, on the 28th ult., and played a one-inning game, which resulted in favor of the home club by 23 runs. Annexed are the totals:

	1st Inn'g.	2d Inn'g. (79 for 4 wkts)	Total.
Merion	103		103
Germantown	80		80

GIRARD vs. CHESTER.—The Girard boys won a victory over the Chester Club, at Chester, Pa., on the 4th inst., by five wickets. The following is the full score:

UNITED STATES vs. CANADA.—John P. Green, Esq., Secretary of the Cricketer's Association of the United States, on the 24th ult issued the following circular letter: "The executive committee of the association are about opening a correspondence with the Canada clubs, in reference to a match between the States and Canada, to be played in Canada in the latter part of August. The visiting team are this time to pay their own expenses, and receive no share of the gate money, it being intended that the match shall be an annual one, and played alternately on the above basis in Canada and the United States, and that the gate money received at the matches played in the States shall constitute a special fund, out of which to meet the expenses of future international teams visiting Canada. The secretaries of the clubs connected with the association are therefore requested to send, before July 5, a list of players who desire to take part in this match, from whom the team can be selected; and it is hoped that such a response will be received as will insure the sending of a strong team and add to the record already made."

YOUNG AMERICA vs. BALTIMORE.—The second match of the Baltimore tour was played at Nicetown on the 3d inst. Comparing it with their match with the Germantowns the day before it was like getting out of the frying pan into the fire, but the Young America kindly "let up" and only beat their guests by one inning and 50 runs! The score and analysis of bowling tell the tale:

Baltimore.

CHESTNUT HILL vs. BALTIMORE.—The third game of the roving Baltimores was played at Chestnut Hill on the Fourth of July. Altogether this was the most close and interesting match of the visitors' plucky trip. It is with regret that we have to record that they were defeated by nine wickets, particularly after playing two near first innings. The Baltimorians, however, are not the first explorers in the heart of American cricket and, if it be any consolation, we can assure them that older organized parties have gone there and faired worse. Below is the full score:

—The Editor of these columns acknowledges with pleasure his election as an Honorary Member of the Royal Nova Scotia Yacht Squadron. All the more is this compliment appreciated, coming as it does from one of the best managed and most spirited yacht clubs in America.

ROYAL NOVA SCOTIA YACHT SQUADRON.

OPENING CRUISE AND SPRING RACE JUNE 14 AND JUNE 21.

THE members of the Squadron and their friends had every reason to be satisfied with the appearance of the weather on Saturday, June 14, which broke with a clear sky, bright sunshine and a fresh breeze from the N. W., shifting by W. to S. W. in the course of the afternoon. The wind was very fresh, and blew in frequent heavy squalls that buried yachts to the rail, and demanded skillful steering to avoid damages or accidents. The yachts of the Squadron flying the burgee at the topmast head and the red ensign at the peak, were assembled inside Georges Island, Halifax harbor. *Seafoam*, flying the broad pennant of Vice-Com. Hussey, sailed past the line from south to north heaving to, when clear, to await the *Daphne*, on board of which Rear-Com. Stairs hoisted his flag, receiving a salute of seven guns as he swept by the yachts and the battery. The Vice-Com. signalled to form line astern,

and the fleet tailed off after him in that order. The Vice-Commodore was followed by *Daphne*, *Petrel*, *Hebe*, *Phantom*, *Psyche*, *Spray*, *Mutu*, *Osprey*, *Volante*, *Lily*, *Edith*, *Fiona*, *Naiad*, *Bertha*, *Vixen*, *Mystery*, *Albatross*, *Kate*, and *Marie* joining subsequently, and by the *Arrow* steamer, with a large party of guests. The fleet stood up the harbor toward the Dartmouth shore, passed under the stern of *H. M. S. Bellerophon*, saluted and then streched down the harbor. Off George's Island a tolerable line abreast was formed by signal from the Vice-Commodore, and the yachts were sent off for a spurt of racing as far as York Redoubt. *Osprey* and *Volante* among the smaller schooners were taking the squalls with noble indifference to their weight, while the little chaps, *Bertha*, *Vixen*, *Marie*, *Lily*, *Edith*, *Mutu*, hung on in plucky style. With no end of a breeze on their quarters the yachts made short work of the return journey. Off the Lumber Yard *Seafoam* hove to, signalled to sail round Commodore and salute, and presently, first *Mystery*, then *Petrel* dipped their ensigns, followed in quick succession by every yacht, and the final signal of thanks and dismissal sent the lot all over the harbor to catch one last howling squall which carried away the *Psyche's* main sheet, tore away *Vixen's* chain plates, broke *Naiad's* mast, sent water on board the yachts by the barrel full, washed decks and whipped the awning off the *Arrow*. There were twenty-one yachts out under the Squadron ensign, a larger number than has as yet been seen on such an occasion in the harbor. The annual dinner took place in the evening at the Halifax Hotel, some forty gentlemen sitting down to the capital spread provided by Messrs. Hesslein.

OPENING RACES.

After this successful opening cruise the racing members of the Squadron had a chance on Saturday, June 21, there being a race for yachts over 10 tons, one for 10 tonners, and one for 5 tonners. The luck of the Squadron in the matter of weather did not fail in this case, and again a beautiful sky and pleasant breeze made things agreeable for all concerned. The seven-ton *Phantom* made her *debut*, sailed a good race and won for her owner his first prize of the season. *Isabel*, another new sloop, showed up, and by her performance at the beginning of the race made people believe she was destined to lower *Psyche's* flag, as she led her class round Navy Island flag-boat, with *Brookfield* hunting her hard. *Volante* was in want of a much heavier breeze, for which her rig, schooner, is better fitted than that of a sloop. *Psyche*, in Mr. Brookfield's hands, has evidently recovered her form and went in grand style, winning easily in her class. In the large class showed up the *Hebe*, really an 8-tonner, but entered at 11 tons to give her a chance of trying her speed by the side of the *Petrel*. It was her day, altogether, but though she won without time allowance, and thus scored another brilliant victory, she had to sail harder for it than she has yet had to do, except, perhaps, when she met *Kestrel* last year. *Seafoam* performed wonderfully well, account being taken of her not having hoist enough to her mainsail, which seriously interfered with her success, and of the disadvantage of a new crew, most of whom were not used to her. But her helmsman made her do mighty pretty sailing for all that. In the 5-ton class *Muta* had it all her own way, sailing a right good race. The first race started was that for 10-tonners, when the following came to the line:

Name.	Rig.	Tons.	Owner.
Phantom	Sloop.	7	W H Troop
Psyche	"	7	W H Brookfield
Daphne	"	6	A E Jones
Kate	"	9	W H McSweeney
Isabel	"	6	Capt. Welch
Volante	Schr	9	F Rudolf

At 12:42 P. M. *Isabel* got off with the lead with *Psyche*, *Daphne*, *Phantom*, *Kate* and *Volante* following. *Volante* successfully blanketed *Phantom* and kept her behind, but the sloop drew out at last and launched out for the front. It was first a free, and then a close, reach up to the Narrows, the course being from the Lumber Yard to a flag boat off Navy Island, then around a boat off Four Mile House, round a third off Bedford, and home. Wind light and puffy, as it always is from the W., and *Isabel* was first to haul round Navy Island mark, with *Psyche* after her; *Kate* next, but some distance behind, then *Phantom*, *Daphne* and *Volante*. Sheets were flattened in to beat across the Basin, and the next mark was rounded by *Psyche* first, with *Phantom* a good second, *Isabel* having been cut out. Up went balloon jib, *Isabel* setting a spinnaker to port and losing time in consequence, for it buried instead of driving her. Her skipper soon saw this and had it off her, and balloon jib up instead, in a twinkling. The breeze improved in strength, and, after turning the last mark off Bedford, the yachts were close hauled for the return trip, finishing:

Name.	Time. H. M.	Name.	Time. H. M.
Psyche	3 15	Kate	3 23
Phantom	3 17	Isabel	3 25
Daphne	3 18	Volante	3 28

Psyche taking first prize and *Phantom* second, having 1m 10s. to the good after allowing *Daphne* her time. A protest has, however, been entered by the owner of *Daphne*, who claims the prize on the ground that the time was wrongly taken, and the prize, presented by Mr. Sumichrast, is withheld till the sailing committee have decided the case.

The first class yachts were started 12:50 P. M., the course being the same as for the second class. The following entered and started:

Name.	Rig.	Tons.	Owner.
Petrel	Sloop	20	A C Edwards.
Seafoam	Schr.	27	Vice-Com Hussey
Albatross	"	17	D Cronan
Hebe	Sloop.	11	J E Butler

Hebe entered at 11 tons, to allow her to compete in the first class

Albatross went off with the lead, *Hebe* next, *Petrel* came third and *Seafoam* much later, having to take her position after the starting gun had fired. Navy Island mark was turned by *Hebe* first, *Petrel*, *Seafoam*, *Albatross*. At Four Mile House flag-boat *Petrel*, just ahead of *Seafoam*, met *Phantom* on starboard tack going for the boat, and had of course to give way, losing time by this and making *Seafoam* lose some too. The schooner went round smartly and took the boat from *Petrel*, but lost her lead of her again on the run to the head of the Basin, the mark there being rounded by *Hebe*, *Petrel*, *Seafoam*, *Albatross*, in order named. *Petrel* raced up alongside of *Hebe* and was dropping her, when the small chap rushed forward with a will, resuming and keeping the lead. The wind headed all and tacks had to be broken off George's Island before the line could be crossed, which was done as follows:

Name.	Time. H. M. S.	Name.	Time. H. M. S.
Hebe	3 09 00	Seafoam	3 12 00
Petrel	3 10 00	Albatross	3 18 00

Hebe taking the prize without time allowance.

The third class sailed the Passow course—from Lumber Yard round Dartmouth Ferry Buoy, Commissioner's Point Buoy, Fort Clarence flag-boat and Leopard Buoy, twice round. They started at 12:59 P. M., the following crossing the line:

Name.	Rig.	Tons.	Owner.
Vixen	Sloop	3	R T O'Donoghue
Lily	"	5	W H Weeks, M D
Edith	"	5	W Atkinson
Mar e	"	3	W F Mitchell
Muta	"	5	Lt Dunlop, R A

Muta had the race in hand from the first, and the other yachts went for the second prize, presented by Mr. Sumichrast, which *Lily* cleverly landed. They finished thus:

Name.	Time. H. M. S.	Name.	Time. H. M. S.
Muta	3 14 00	Marie	3 29 40
Lily	3 25 10	Vixen	3 40 00
Edith	3 29 10		

A special general meeting of the squadron was held on the 30th June, when the Honorary Secretary read a dispatch from the head of the Admiralty, stating that the Blue Ensign of Her Majesty's Fleet was granted to the squadron, as also the title of Royal, so that the full title is now Royal Nova Scotia Yacht Squadron—the recognition thus accorded by the Imperial authorities being highly appreciated. Thanks were voted to His Excellency Admiral Inglefield, His Honor Gov. Archibald, His Excellency Gen. MacDougall and His Worship Mayor Tobin for their support of the squadron's application to the Admiralty. A unanimous vote of thanks to the Honorable Secretary, Mr. Sumichrast, for the perseverance and energy with which he has labored to obtain these privileges for the squadron was passed on motion of Commisary-General Murray, seconded by Capt. Wall, R. A. The squadron now takes rank, as it deserves, among the Royal Yacht Clubs of Great Britain, and a bright future is in store for it. The warrant for the Blue Ensign held by the late Royal Halifax Yacht Club has been cancelled by the Admiralty.

The officers and members of the Bay of Quinte Yacht Club, Belleville, Ont., have presented Mr. Sumichrast, R. N. S. Y. S., with a handsome B. Q. Y. Club flag, in recognition of his services to yachting. Mr. C. P. Kunhardt, Yachting Editor FOREST AND STREAM, has been elected an honorary member of the squadron, on the proposal of the Vice-Commodore and Honorable Secretary. Mr. T. Manning, New York, has been appointed Honorary Agent of the squadron The yawl *Nymphœa*, Mr. C. E. Brown, has gone on a cruise to Bay Chaleurs. The *Mystery*, F. C. Sumichrast, has been sold out of the pleasure navy; her owner is in treaty for a larger vessel. The *Spray* has returned from a cruise to the eastward. Mr. J. W. Stirling has sold his catamaran *Naiad* to Mr. Cogswell, and has contracted with Devan, of Dartmouth, for the building of a 5 ton cutter, iron keel, flush deck, running bowsprit and topmast, etc., and he will have a good and seaworthy craft. The venturesome Goldsmidt and his wife made Halifax on their way around the world, and were liberally fitted out by the squadron and the British men-of-war on the station. They are looked upon as a pair of idiots.

BOSTON CITY REGATTA.

The matches sailed July 4, for prizes offered by the municipality of Boston, called forth a large list of entries, and but for the strong breeze many more yachts would have come to the line; but it is one of the necessities imposed upon American yachting by faulty model that we must shirk a stiff breeze or take our chances of drowning. The wind was blowing fresh from W. S. W., excellent 5 ton weather, but nevertheless, the 91 entries dwindled away to less than half the number at the start. The steamer *Wm. Wooley* went over the course with the City Committee consisting of Alderman Hugh O'Brien and Councilmen Wooley, Brawley, and Cavanaugh, and the judges, Com. M. J. Kiley, Wm. Morris, D. L. Adamson, Frank A. Drew, and Hartford Davenport, also members of the press and guests. Courses:

First class, distance 20 miles—From judges' boat, out Broad Sound, leaving Ram Head Buoy on the starboard, Fawn bar on port, rounding Fog whistle off the Graves, thence to Bell Boat on Hardings, up Lighthouse channel, through the Narrows, leaving Fort Warren, Gallop's Island, Nix's Mate buoys and Spectacle Island on the port, to the judges's boat.

Second class—Distance 14 miles—From judges' boat down West way, leaving Thompson and Rainsford Islands on the starboard, Long and George's Island and Point Alderton buoy No. 3 on port, and back through the Narrows, leaving Fort Warren, Gallop's Island and Nix's Mate buoys, on the port to the judges' boat.

Third class—distance 8 miles—From judges' boat round Cow Pasture buoy No. 6, Dorchester Bay, thence to buoy No. 7 (off Fort Independence), leaving it on the starboard; thence to Sculpin ledge buoy, leaving it on the port; thence to buoy No. 6 on Lower Middle, leaving it on the port to the judges' boat.

Fourth class, distance 4½ miles—From judges' boat to Buoy No. 7, leaving it on the port, Fort Independence on the port, Buoy No. 11, Slate ledge on the port, to judges' boat.

At noon precisely the first class were sent away for the run out with reefs down all around. *Thistle* set topsail when off Long Island and ran into third place, and later she set balloon jib, rounding the bell buoy on the Hardings. No sooner had she luffed and trimmed sft than away went her light duds to leeward, *Adrienne* profiting by her misfortune and dousing topsail in time. *Thistle* met with a serious accident after crossing the line at the finish, by colliding with the committee steamer, the hand at the wheel becoming confused. After clearing the wreck she was towed up to the city. The schooners of the first class had a good thrash to windward against the strong ebb tide and made a fine race in the slashing breeze. In the first class *Rebie* capsized, *Thisbee* split mainsail in jibing and *Lena* was sensible in housing her topmast. In the fourth class, *Fincy* and *Unique* fouled off Buoy 7, protests were lodged and *Nonpareil* was dismasted. *Adrienne* and *Breeze* are to be measured before awarding prizes. Owing to the different courses sailed it was very difficult to obtain more than the annexed summary:

FIRST CLASS.

For sloops and schooners, 35ft. and upward; prizes $50 and $30 to each rig:

SLOOPS.

Name.	Owner.	Length. Ft.	Actual Time. H. M. S.	Corrected Time. H. M. S
Maccap. c b	W C Cabot	43 00	3 19 21	3 42 44

NEW BEDFORD YACHT CLUB.—The union regatta of this club was sailed June 26 in New Bedford harbor under corinthian rule of fixed ballast. Course 16 miles; wind heavy from S. W. Prize, the cup presented by Ed. R bisson, M. D., of New Bedford, another cup offered by the club and $5 gold piece, offered by Com Haws, N. B. Y. C. The match drew a large list of entries from the near-by clubs, and shows how much more satisfactory "union" or "open matches" are than the huckstering spirit which confines entries to club yachts only, open to yachts over 20ft. A very spirited race was sailed as under, a supper and music at the club house finishing up the day:

Name.	Dimensions. Ft	In.	Start. H.	M.	S.	Return. H.	M.	S.	Cor. Time. H.	M.	S.

Gip-y	22	0	2	20	30	5	54	16	3	19	19

Lizzie and *Echo* were ruled out for infraction of regulations. First prize goes to *De Lorey*, second to the famous *Wanderer* from Providence; *Thorn* takes third prize. The New Bedford Y. C. has been tendered the thanks of the Eastern Y. C. for the manner in which they were entertained while in the harbor.

BEVERLY YACHT CLUB.—The forty-fifth special regatta of this club was sailed July 5, off Cotuit. Course from judges' boat off Codman's wharf, around stake-boat off Perkins Point, to stake-boat one mile S. W. by S and home, sail over three times; distance, 9 miles. Wind fresh from N. E. Won by sloop *Waquoit*, A. T. Perkins, in 1h. 17m. 27s. Corrected time with *Mystery*, Capt. Stocton, second in 1h. 17m. 54s., followed by *Norna*, F. C. Lovell, in 1h. 19m. 41s.

NEW MARKET, N. H., REGATTA.—The Newmarket Y. C. held a regatta open to all, on Great Bay, Newmarket, N. H., July 4, with the following result:

First class—*Neptune*, A. G. Henderson, first prize; *Ida Lewis*, William Simpson, second prize; time, 1h. 26m. Second class—*Dido*, T. B. Robinson, first prize; *Pinafore*, J. C Davis, second prize. Third class race will take place the 15th instant.

The catamaran *Huldah* lost her mast and a man overboard.

NAHASSET YACHT CLUB.—Owing to high winds July 5, the eleventh regatta of this club saw very few craft willing to start. *Holden*, S W. Burgess, was the only starter and her owner brave enough to sail the course was justly awarded the prize in her class.

WEST LYNN YACHT CLUB.—The regatta sailed by this new club, July 5, resulted as follows: First prize, in second class, $15, was taken by the *Inez*, Goodridge Bros., in 1h. 8m. 45s.; second prize, $10, by *Vesper*, Frank Hulen, in 1h. 9m. 9s. The first prize for the third class, $10, was taken by *Cora Etta*, Charles Dow, in 1h. 10m. 47s., and the second prize, $5, by the *Nellie*, Homan Bros., in 1h. 11m. 2s. No first-class boats were entered.

QUINCY YACHT CLUB.—The union regatta of this club was sailed July 4, in a piping breeze off Quincy Great Hill, open to all yachts not over 30ft. long. First class 22 to 30 ft.; second class 18 to 22ft., and third class, less than 18ft. Measurements taken on water line with one third overhang added. Only one starter in second class and therefore no prize. Three prizes to each class. Courses:

First class—distance 8 miles. From Mear's Hotel, passing between Sheep and Grape Islands, to red buoy between Bunkin Island and Downer Landing, leaving it on the port; thence, leaving Bunkin Island on the starboard, to red buoy off Hull, leaving it on the port, thence, leaving Sheep Island on the port, to buoy on Channel rock, leaving it on the starboard; thence, leaving Raccoon Island on the port, to judges' yacht.

Third class. From Mear's Hotel, passing between Sheep and Grape Islands, to red buoy between Bunkin Island and Downer Landing, leaving it on the port; thence, leaving Bunkin Island on the starboard, to red buoy off Hull, leaving it on the port; thence, leaving Sheep Island on the port to judges' yacht.

Flying start. Judges—Messrs. C. H. Porter, Jas. T. Penniman, Sigourney Butler and Jos. Glover. The *Altaire* failed to complete the course, the rest finishing as under.

FIRST CLASS.

Name.	Owner.	Length. Ft. In.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Œnone	S P Freeman	27 08	1 42 45	1 19 16

Elmer	F Chubbuck	17 05	1 42 30	1 17 57
Zip	G W Morton	16 09	Not taken.	

OCEANIC YACHT CLUB.—The Oceanic Y. C., of Jersey City, sailed their twelfth annual regatta in New York Bay, June 16. Wind light but steady from N.W., with the tide running ebb. Course, from stakeboat off Jersey City Y. C. house, around mark off Bedloe's Island, thence to and around a mark inside Black Tom Island, off "Murphy's," and back to start, sail four times over. On the second round the *Lillie* worked out to the front, and maintained her lead, with Com. Geo. Smith doing the handling of the stick. She beat the catamarans, which is not saying much for the latter, but, except in strong beam winds, catamarans have less speed than boats of the ordinary type. Times as subjoined:

Name.	Sailing Time. H. M. S.	Corrected Time. H. M. S.
Lillie	2 59 15	2 23 05

LAKE GEORGE REGATTA.—The entries for the canoe races, Lake George, to be held July 16 and 17, are as follows: Charles E. Chase's (J. C. C.) *Bubble;* E. A. Ranson's (J. C. C.) *Ted;* R. D. Wyncoop's (J. C. C.) *Belle;* Carl Bergman's (J. C. C.) *Mute;* William J. Fitch's (J. C. C.) *Argo;* Robert J. Wilkins' (J. C. C.) *Saskatchewan;* C. B. Naux's (N. Y. C. C.) *Dot;* Charles Knapp's (N. Y. C. C.) *Coquette;* K. N. Putnam's (N. Y. C. C.) *Kahoolah;* W. Whitlock's (N. Y. C. C.) *Clochette;* F. Hussey's (Passaic C. C.) *Elsie;* M. L. Higgenbottom's (J. C. C. C.) *Onondaga.* Canoe camp and transportation will be furnished free. Several members, among them Com. C. E. Chase, leave Jersey City, Thursday, July 10, at 9 A. M., bound for Troy by steamer. There canoes will be launched and Whitehall reached by way of the Champlain Canal; thence down the lake to Ticonderoga; portage across and up Lake George, arriving at Caldwell in time for the canoe races. An island opposite the hotel has been set apart for their use, and a jolly lot of canoeists will make things pleasant in the camp. The return home will be made entirely by water, with one portage only. The club burgee of the Jersey City C. C. is pointed with blue, white and blue horizontal stripes.

DUXBURY YACHT CLUB.—This flourishing club sailed a fine match in the stiff breeze from S. W., blowing, July 4. No first-class yachts came to the start as most larger craft had gone to Boston to take part in the city regattas there, but the smaller classes were well represented. Judges—Messrs. Aug. Winsor, Geo. A. Green, C. Cuttriss, S. W. Gifford and W. A. Drew. We append the summary:

SECOND CLASS.

Name.	Owner.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Patsy	Pollo	1 16 27	0 53 02
Flora	Cook	1 17 47	0 53 10
Pearl	Caine	1 15 12	0 53 23

THIRD CLASS.

Unique	Reed	1 22 13	0 55 51
Clara	Newell	1 22 2	1 05 51
Florence	Sanderson	Not taken.	

FOURTH CLASS.

Little Charlie	Ranson	1 20 40	1 20 40
Sadie C	Williamson	1 26 50	1 23 35
Hornet	Watson	1 23 42	1 23 42
Wanderer	Gamea	1 26 48	1 26 48
Annie M	Winsor	1 22 10	1 23 10
Montana	Richards	Not taken.	

The winners were: Second class, *Pansy;* third class, *Unique;* fourth class, *Little Charlie, Sadie C.*

Rowing regattas, a collation and a hop at the club house followed.

NEWPORT CITY REGATTA.—Following the excellent example of Boston, the city authorities of Newport, R. I., offered prizes for four classes of yachts, to be sailed for July 4. Courses, first and second class from an anchor off Long Wharf to and around Gould Island and return, thence to the westward of Rose Island around the south point of Goat Island back to start, distance 7 miles; for third and fourth classes, start from an anchor, sail twice around Goat Island and return, distance 3 miles. The following is a summary:

FIRST CLASS.

Name.	Owner.	Start. H. M. S.	Return. H. M. S.
Hebe	William King	1 00 02	2 22 00
Annie and Kate	George Denniston	1 00 00	2 18 30
Carrie	Thomas Shay	1 00 00	2 23 00

SECOND CLASS.

Dick	Benjamin Crowley	1 30 00	2 39 45
Parole	Isaac Clark	1 30 00	2 36 00
Lizzie	Benjamin Briggs	1 30 00	2 25 00
Quits	A A Low, Jr.	1 30 00	2 24 00

THIRD CLASS.

Reindeer	Richard Joumans	1 04 00	1 40 00
Jerboa	J D Hidler	1 04 00	1 40 02
Parole No 2	N Thompson	1 04 00	Not finished
Leona	Sydney J Colford	1 04 00	1 43 00

FOURTH CLASS.

THIRD CLASS CENTREBOARDS.

Mable		1 06 46	42 49

LYNN YACHT CLUB.—The first regatta of the Lynn Y. C. was sailed in Lynn harbor, June 25. Fresh breeze from S. E. Two prizes in each class. Flying start, club rules in force. Judges, J. W. Haines, Q. A. Towns, F. L. Earle, C. M. Marston. Courses as follows: First and second class, from off club-house around Old Sunk Buoy, leaving Pines Point, Western Lobster Rock and Old Sunk Buoys on the port, and, returning, leaving Western Lobster Rock Buoy on starboard, to starting point. Third class, from off club-house, around Pines Point and Western Lobster Rock Buoys, leaving them on port, to judges' boat. No starters in first class. Summary is appended:

SECOND CLASS (Centreboards).

Name.	Owner.	Length.	Act'l Time. H. M. S.	Cor. Time. H. M. S.
Expert	E G Souther	23 2	1 59 38	1 15 47
Mule	Otis Pecker	21 1	1 53 36	1 32 43
Nellie J	C H Clifford	20 9	2 10 22	1 44 14

THIRD CLASS.

Mabel	G H Cushman	16 9	1 06 59	47 07
Alpha	J B Roney	18 6	1 08 47	50 27
Carrie	J H Aspinwall	15 9	Not taken.	
Gracie	A A Parmenter	17 4	Not taken.	

The first prize in the second class was a silver cake basket, taken by *Expert;* second prize, solid silver sugar spoon, taken by the *Mule.* In the third class the first prize was a silver pickle dish and a pair of napkin rings. First prizes go to *Expert* and *Mabel,* second prizes to *Mule* and *Alpha,* the latter, we believe, a cat-boat of large displacement.

PROVIDENCE YACHT CLUB.—The match for the "Harvey J. Flint" cup was sailed on Narragansett Bay, June 24. The sloop *Peck and Dixon* had won the cup in two races and a third victory would have given her possession. But the *Wanderer* got away with her, and it will take some good sailing to beat that craft. Course, Rocky Point to Quonsett Point Buoy and return, 15 miles. Wind fresh from the S. Three entries and times as under:

Name.	Owner.	Sailing Time. H. M. S.	Corrected Time. H. M. S.
Wanderer	B Davis	2 26 13	1 58 07
Peck and Dixon	C Peck	2 21 52	1 49 03
Lizzie	O Cameron	2 42 52	1 51 45

WEST BRIGHTON YACHT CLUB.—This club, with headquarters at Staten Island, sailed its first annual regatta June 28. Course from New Brighton down to the lower bay, to and around the buoy off Sandy Hook and home, distance 25 miles. Starters: *Excelsior,* Commodore J. H. Dilks; *Parole,* C. Van Name; *Bessie G.,* Gallagher; *Patience,* McMurry; *Bull-dozer,* Langton; *Ariel,* Busteed; *Hi-Pi,* Dilks; *Fog,* Parker; *Zephyr,* Croak; *Sallie,* Leslie, and *Sadie,* Wheeler. Won by *Zephyr* in 3h. 27m., with *Parole* second, in 3h. 30m.

PORTLAND YACHT CLUB—*Editor Forest and Stream:* At the regular monthly meeting of the P. Y. C., on July 2, the resignation of J. P. Thomas as Commodore P. Y. C. was received and accepted. The *Princess* having been sold he had ceased to be a yacht owner as required for such office. Vice-Commodore A. K. Paul, sloop yacht *Viva,* was elected Commodore, and William Senter, Jr., sloop yacht *Gracie,* elected Vice-Commodore.

GEO. DOANE RAND,
July 5. Sec. P. Y. C.

YACHTING NEWS.

ALBERTINE VS. LADY EMMA.—*Editor Forest and Stream:* The great two to one match race between the *Albertine* and *Lady Emma* for $3,000 at Mississippi City to-day, resulted in a defeat for the *Albertine.* The start was made at 12:04 for the S. Eastward stake boat with a dead beat, both boats carrying jib, mainsail and gaff topsail, the *Albertine* having the windward position. On rounding the windward stakeboat the *Lady Emma* was leading by 2m. 7s. Going free both boats had out balloon jibs and jib topsails, when the *Lady Emma* broke her balloon jib pole and lost about 1m, making the southward stake only 57s. ahead, and the home stake, first round, 48s. ahead. The second round was made in about the same way as the first, except the *Lady Emma* rounded the windward stake 5m. 4s. ahead, and finished the race under jib and mainsail in 2h. 26m. 37s., beating the *Albertine* 4m. 33s. The wind was fresh and steady, with a 12 to 13 mile breeze, and a good chuck of sea on. The *Lady Emma* was sailed by John Carney, of Mobile, and the *Albertine* by John Clemens, of Biloxi. PELICAN.

MILWAUKEE ITEMS.—Commodore Heyer, of Racine, has launched his yacht *Undine,* and is fitting her out for a summer cruise. The Commodore will hug the shore of Lake Michigan as far north as Sheboygan, probably. The *Undine* has some very fair points, and is an excellent sailer.

The Mitchel Boat Club gave their annual sociable to their friends at the Plankinton House Arcade this year, 200 guests being present. The boys are putting in some good licks in practice, and are already in excellent trim. Their boat-house, which was destroyed by fire a short time since, is being rebuilt on a larger scale. A club-room is to be above the boat-house proper, which will accommodate six boats in addition to the two shells. The locality is on Milwaukee River. A ladies' boating club has been organized here lately. They practice above the dam on the lake, and have shown some very good results of their experience. The ladies are daughters of prominent business men of our city.

Rowing is an excellent exercise, and there is no reason why the ladies of America should not learn to handle the spruces as the fair sex now does in England. The Milwaukee ladies have, therefore, our best wishes for the future, and we are certain none of them will regret the bouyancy and ruddy health they will acquire from "paddling their own canoe."

HOW NORNA SAILS.—In a slashing breeze, during the *Vixen-Regina* race, the schooner *Norna,* Mr. Chas. H. Contoit, got under way with the new pilot boat *Lawrence* No. 4. The latter was going to try it on the yacht, for she actually set balloon jib topsail and gaff topsails, carrying more canvas than the yacht; but *Norna* polished her off very nicely in a turn to windward from the Narrows to the Hook, and for a long time—as long as the wind continued fresh—held her own with the two racing sloops. *Norna* held a better wind, and stood up like a steeple, heeling several degrees less than the *Lawrence.* We are satisfied that in a stiff breeze *Norna,* like *Intrepid,* will turn out a fast sailer. With her short rig, it is manifestly unfair to compare her with such oversparred, fair weather schooners as *Tidal Wave* and others. Give her breeze, and *Norna* is no slouch.

FIRST YAWL IN THE EAST.—At last we have a yawl in Eastern waters, and judging from the favor with which she has been received by many, she will have a host of followers very soon. Mr. Eaton has shown his good sense in sticking to his handy yawl rig in spite of the stupid clamor for the sloop or cat raised by river tars. As Mr. Eaton informs us, he had his yacht cutter rigged, but found it too much work to reduce and reef in a blow, and so he shifted to the handier yawl, which experience teaches him to retain. Mr. Eaton's little craft, whatever objections may be made to the details of her fittings, is an excellent type of the small Corinthian cruiser we are anxious to see displace the sand-bag machines in vogue. Only 20ft. on water line and 25ft. on deck, with scant 7ft. beam, and 4ft. draft aft and 2ft. 6in. forward. She has comfortable stowage below for two or three hands, besides a roomy forecastle for cooking and spare gear. She carries 1½ tons iron ballast, about half of which is on the keel. On deck, her gangways and quarter are clear, the house being kept narrow and low, so as not to interfere with working ship, while her cockpit is roomy enough for four. All this in a yacht which is only the length of a small cat-boat, and which can be built for less than $500! A little ship instead of a worthless sailing machine! A safe, handy, able little cruiser, and not a man-trap of an open sand-bag flinger.

INTERNATIONAL MATCH.—The owners of *Katie Gray,* 10-ton sloop, Bay of Quinte Y. C., have accepted the challenge of the owner of *Ella,* 20-tons, of Oswego, to sail a 30-mile race at Kingston for $250 a side. Race to be sailed under rules of the Royal Canadian Y. C., July 15.

MATCH ON THE DELAWARE.—There was a drifting match between tuckups *Douglass,* Southwark Y. C., and *Campbell,* of same club, from Philadelphia to Chester Buoy. Result in favor of *Douglass* by four miles, the latter catching a light streak of wind. Prize, $50.

MATCH RACE AT CHARLOTTE, N. Y.—The sloop yachts *Ida* and *Belle* of Rochester, N. Y., sailed a match race June 30, at Charlotte for a purse of $100. The *Ida* won.

A YACHT RACING ASSOCIATION.

EDITOR FOREST AND STREAM:

I want you to give me space just to say how entirely your article under the above heading in issue of 5th inst. has, in my opinion, hit the nail on the head. As a yachtsman, devoted to every phase of the sport, be it designing, building, fitting out, racing, cruising, or manœuvering in fleet, I have given a good deal of thought to the future of yachting on this continent, and I have come to the conclusion that we can pretty well make or mar that future. We can mar it by going on in the desultory way we have done, founding hosts of new and frequently short-lived clubs, adopting all sorts of measurements and classifications,—playing at yachting, in short, instead of setting ourselves seriously to rival our English friends. I know it will not be generally accepted, but the British are ahead of us, spite of the victories of *America* and *Sappho,* and the defeats of *Cambria* and *Livonia.* Take them all round, up and down, fore and aft, they surpass us as yachtsmen in the small as well as the large classes of yachts. Why? Because they have profited by years of experience, and never failed to turn to account the lessons they learned. They have progressed steadily and rapidly, because they saw the advantage of working together. Look at their small craft—they would drown most of our bigger yachts; the five-ton *Freda* would live in a wind and sea that would vastly annoy our largest sloops. Look at their racing; prizes of value—worth sailing for, very well worth winning, amounting to thousands of pounds annually. Their regattas are sights to see and remember, and the way in which small craft are handled in gales of wind would astonish our people. I am not exaggerating; I can give you names of yachts and dates of events. Now, what have the English come to? A Yacht Racing Association, whose rules nearly every club has adopted and obeys, so that an owner knows exactly that wherever he sails in British waters there is one code of regulations, one classification, one rule of measurement. It is plain that this conduces to the success of yacht racing.

The turf has its supreme tribunal; so has the rifle; so has rowing; so, in England, have cricket, football, foxhunting—nearly every sport in fact. Yacht racing would assuredly be vastly benefited by the establishment in this country of a National Yacht Racing Association. At present a student of yachting records plunges into a labyrinth when he essays to master all the different rules of measurement, classification, prizes, history of contesting yachts, etc. This is needless; worse, it is hurtful to the sport. An association for the regulation of all these matters is the remedy. It will not detract from the glory of the established clubs, nor diminish their influence in the least, but it will do what no club can do—harmonize the laws of racing. Let us hope it will also put an end to the shifting-ballast abomination, which is the canker of yacht racing; that it will give us a uniform and sensible rule of measurement, and above all, one that will foster the building of yachts suitable for cruising in rough as well as racing in smooth waters. Then we shall see our noble sport advancing with giant strides, and taking the place it should, but does not, occupy. There are matters of detail on which I might say a few words, but for the present I must belay and coil away, wishing you and the proposed Association good luck.

ROUGE-CROIX.

FISH AND GAME.

[From an Address Delivered before the Annual Meeting of the Fish and Game League, April 1, 1879, by Col. THEODORE LYMAN, Brookline, Mass.]

Fish and game are known in two relations,—first, as objects of pursuit; secondly, as articles of food.

Hunting and Fishing may first engage our attention. They are interesting alike from their antiquity and their universality.

The studies of our day have followed man far back of all history or tradition, and have found his traces among the remains of animals that no longer live, and that belong to the age once called antediluvian. When the mastodon roamed through the north of Siberia and America; when the broad-headed elephant browsed in the rolling country of France; when huge tigers, bears, and hyenas sought their prey in Central Europe, and horses of species no longer known grazed our modern plains,—even in that remote antiquity, man already existed, and, albeit a low savage, began to assert his superiority. He was, even then, a hunter; one who, by craft and address, destroyed animals immeasurably stronger, and converted them to his uses. Among the earliest stone implements (and all early implements are of stone) we find rude flints, which may have been used as primitive spear-heads, or were, perhaps, held in the hand as a kind of dull ax. Very soon followed objects which were unmistakably arrow-heads; and, deep in the peat-bogs of Denmark, have been found bones of extinct animals in which still stuck bits of such flint arrow-heads, shot at them ages upon ages ago. These primitive wild men lived, like our Indians, by hunting and fishing. In time, they came to make a variety of tools from stones and from the horns and bones of deer. Some of them, in later days, owned herds of horses, on which they feasted, like the present tribes of South-eastern Russia; for we find, in their ancient camps, piles of horse bones, calcined by fire, and split to extract the marrow. All such people, of whatever place or period, were hunters and fishers. Both in Europe and America we dig up, in their villages, abundant bones of deer and of smaller animals, as well as of fishes in great variety,—flounders, bass, salmon, alewives, and even unsavory sculpins and goose-fish. Nor can we deny the certain evidence of cannibalism, showing that many of the earliest inhabitants feasted on their captive enemies, like the Polynesian savages of modern times. Their hunting must certainly have been of a primitive sort. Doubtless they lurked near the watering-places of deer, hoping, by a sudden blow, to bring down a heedless buck; or, relying on numbers and agility, the boldest ventured to surround a bear, and assail him with heavy clubs and sharp stones. With them, perhaps, originated the poacher's art of tickling trout; nor could they fail, at times, to capture abundantly of the migratory fishes that crowded the shallow rivers, or that, in great schools, were driven ashore by their finny enemies.

Nobody can give any good natural reason for progress in man. It can be said that he does progress, and that bare statement must suffice. And so, in course of time,—much time,—the European primitive savages ceased to eat their neighbors; took to raising some grain; had herds, and built rude houses. With all this, they began to work metals, and learned first to melt tin and copper together, and make instruments of hard bronze. The chase was still foremost in their minds, as witness the bronze arrow-heads, and knives and fish-hooks, not to speak of needles for sewing deer-hides, and fishing-nets made of twisted vegetable fibers. They were the unknown people sometimes called Lakers. Along the margins of the Swiss lakes they drove piles, on which were laid platforms, which, in turn, supported cabins. Approached only by a narrow causeway, these lake hamlets furnished a good refuge from enemies who lacked boats to attack them. Their situation gave easy opportunity for fishing; the neighboring alluvial ground was suitable for such scanty crops as they could cultivate; and the vast woods and mountains beyond never failed to furnish red deer, bear, chamois, and mountain goat.

In the age of bronze, mankind remained certainly a long time, before the art of smelting and working iron was discovered, as is shown by the fine workmanship of many of the ornaments and weapons—a workmanship that could have come only from many centuries of practice and improvement. The warriors of Homer probably knew only bronze for their weapons, and critics incline to the belief that no word meaning steel can be found in the Iliad or the Odyssey. In the chronicles of the earlier Jews, we see what a place was held by "brass," or, more properly, bronze, not only for sacred vessels and ornaments, but for weapons. That the working of iron was a stupendous event is indicated by the mythology of the ancients, where we find Vulcan among their deities, distinguished entirely by his skill as a smith. This metal, capable of taking on all shapes and many degrees of hardness and elasticity, has made our present civilization possible. Nevertheless, it is, in some respects, base; or, more properly, it is in ever unstable equilibrium, seeking new combinations with oxygin or acids, so that it begins immediately to change and deteriorate when left in neglect. Thus it happens that the iron age has left us, for the greater part, only rusty stains, to indicate where swords and battle-axes once were buried beside their owners, while bronze objects have come down through thousands of years, fresh as from the hand of the founder.

With iron there come on the stage nations who fall within the historic period—the Egyptians and the Greeks, and, later, the Carthaginians and Romans; and at last, like a specter host dimly seen through the mist, our own ancestors, the northern Germans and Scandinavians and Gauls. We, of the proud English and American race, are, in written history, a people of yesterday. Not a poor Jew who peddles pencils or cravats in our streets, but laughs at our barbaric origin, as he thinks that his people were poets, prophets and philosophers for thousands of years, while our forefathers roamed half-naked in the forests of Europe. It is even so! The familiar opening words of Cæsar's military commentaries, "All Gaul is divided in three parts," are the first words of our written history. He goes on to describe us, just as Stanley to-day describes the negroes of Central Africa, or the Jesuits of the Seventeenth century told of the North American Indians. Cæsar, and with him Tacitus, speak of the great stature and strength of these Northerners, who were astonished that such under-sized men as the Italian legionaries should be able to conquer them. They were all hunters, and many of them were clad in the skins of wild animals brought down in the chase. The great Roman—centre of the most finely-centralized government the world has ever seen—little thought that, within a few generations, these terrible huntsmen would pour in resistless torrents through the Alpine passes, and carry by storm the very walls of the Eternal City. So it happened, and happened with reason; because the primitive, untutored hunter is a warrior by nature. Other men are warriors only by discipline and force of circumstances. This truth obtains in all grades—among Scotch Highlanders and mountain Swiss as among the North American Indians. There is no question that the excellence of the rebel infantry in our own day was in some measure due to the considerable number of men in the South whose chief pleasure or occupation was shooting. In this trait a great difference is to be observed among nations. The old Hebrews were conspicuously lacking in love of hunting, albeit we are told that Nimrod was a mighty hunter. They were a pastoral people, living with their herds, in tents, and in a country not well stocked with fish or game. So David, when he slew a bear, won credit for saving his flock, and Samson, when he overcame a lion, was extolled for courage and strength; but neither was praised as a hunter. The Jews were, by choice, neither hunters nor warriors. Albeit they showed an obstinate courage when driven to the wall, they were in constant dread of the surrounding tribes, and fell an easy prey to Egypt and Babylon. Indeed, we may say in general of the oriental people, that they had small interest in field sports. It is true that we find the greyhound represented on the Egyptian monuments, and some hunting scenes, where game is carried home by servants; but the great er part of these stone histories relate to religion, diplomacy, or conquest. Fallen though they be from their great estate, the Arabs and Egyptians of to-day have the general mode of life of their remote ancestry. The former glory in their flocks and herds, their fine horses and camels; the latter are content to follow the retreating Nile inundation with seed-corn, and to catch the tasteless fishes of the river, which the children of Israel longed for.

To find the fathers of true sportsmen, we must come back again to our barbarous Northmen. Just as Dr. Oliver Wendell Holmes was the first discoverer of Myrtle street, so the Roman generals, a little before the Christian era, were the first discoverer of the Transalpine hordes! Both had existed long before, but nobody knew about them. The political and domestic life of the Germanic races, grew of course, from their own special nature; and we are not surprised, after the overthrow of the Roman power, and the crumbling of an empire which only the genius of a Charlemagne could keep together, to find the land divided among petty military chiefs, each holding by weapon-right, and getting what he could out of his neighbors and subjects. Here was a hot-bed in which to grow hunters; and they grew and throve, and have continued unto our own time! These feudal princes and barons drank in the love of the chase with their mothers' milk. European forests and mountains abounded then in large game, and the proprietors, excluded by caste-rules from trade or agriculture, had no employment save religion, or fighting or hunting. No wonder that this last became not only an art, but a passion, which exhalted its object to highest importance. Game became a thing to be tenderly protected; to be slain only by rule and by measure. Thus are explained the game laws of England,—which exhibit the anomaly of a cruel code among a people eminently merciful. It might once have been said there, that one might nearly as well kill a man as a salmon. Indeed, from before the days of Robin Hood to the present time, these severe enactments kept in being a set of outlaws and poachers, who slew the king's deer and snared the squire's partridges.

CURE BY ABSORPTION.

"SAPANULE."

The Great External Lotion and Fluid Absorbent. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath.

"SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sprains Sores, Piles, Boils, Chilblains Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving it smooth and soft. Soreness or India rubber of feet in a whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths.

"SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., Cor. 22d St., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the occasion shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it

MRS. W. H. KINSLEY, 158 West 22d street, New York.

SAMUEL GERRY & CO.

FROM HON. JOHN BEATTIE.

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.

GENTLEMEN: Recently I took a severe cold, which settled all over me For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE" Truly yours,

N. ORMS, 59 Wes. 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS

SAMUEL GERRY & CO., Proprietors, 237 Broadway, N. Y.

For Sale.

FOR SALE.

A Sportsman's Home. I have a plantation of 1,292 acres which I wish to sell. It has on it a beautiful dwelling house, outhouses, stables, cribs, etc. It is entirely new; the soil is very fine, and is well known as the finest game farm in Eastern Virginia. The birds around it quail, snipe, turkey, woodcock, geese, ducks and deer, also beautiful fish in the streams. The house is newly furnished, the grounds are in grass and beautiful flowers; there are a fine pair of horses, carriage and wagon, and provisions to last one year. I will sell the whole as it stands for $10,000, $5,000 cash and $5 000 on two years' time at 6 per cent. I refer all parties to Capt. John M. Taylor, who has been on the farm and is well known to the sporting world. C. D. EPES, Nottoway Court House, Va. jy10 1t

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 701 pages and 20 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1 75. Orders for five copies and upward filled for $1.50 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1 50.

JAS. MEYER, Jr.'s, GIRONDIN DISINFECTANT,

Stands to-day unique in its action, and having the advantage of being ODORLESS AND COLORLESS, is adapted for any purpose for which Disinfectants are used.

FROM THE "FOREST AND STREAM."

The following letter shows the appreciation in which the GIRONDIN DISINFECTANT is held by the Westminster Club, it having been used at the dog shows in this city for the past two years:

MR. JAMES MEYER, JR.:

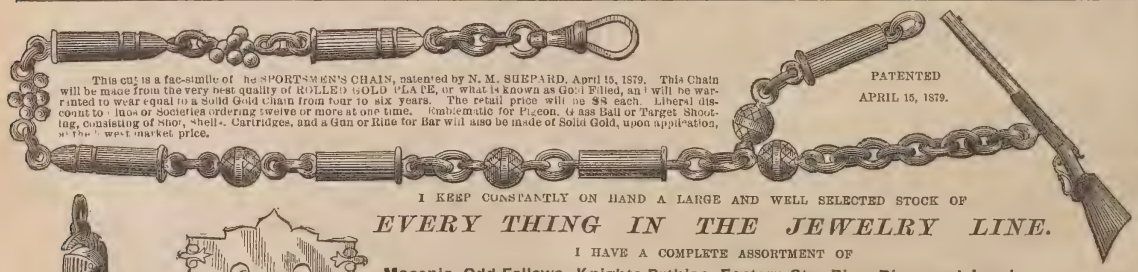
WESTMINSTER KENNEL CLUB, N. Y., May, 1879.

Dear Sir—We take pleasure in acknowledging our entire satisfaction with the purity of the atmosphere at Gilmore's Garden during our Third Annual Bench Show. We had 953 dogs on exhibition, and an average attendance of 6,000 daily, and the purity of the air was maintained to the end by the liberal use of your GIRONDIN DISINFECTANT. Saturday morning we ceased using it, and by noon the air had become very disagreeable and offensive.

Yours, etc.,
H. S. WEBB, H. WALTER WEBB, C. DU BOIS WAGSTAFF, ROBT. C. CORNELL, and others.

For Sale by all Druggists in quart bottles, ten gallon kegs, half barrels & barrels.

PASSAIC CHEMICAL CO., Sole Agents for U. S.



This cut is a fac-simile of the SPORTSMEN'S CHAIN, patented by N. M. SHEPARD, April 15, 1879. This Chain will be made from the very best quality of ROLLED GOLD PLATE, or what is known as Gold Filled, and will be warranted to wear equal to a Solid Gold Chain from four to six years. The retail price will be $8 each. Liberal discount to those or societies ordering twelve or more at one time. Emblematic for Pigeon, Glass Ball or Target Shooting, consisting of Shot, Shells, Cartridges, and a Gun or Rifle for Bar will also be made of Solid Gold, upon application, at the lowest market price.

PATENTED
APRIL 15, 1879.

CAPT. A. H. BOGARDUS—FOREST AND STREAM AND ROD AND GUN.
This chain is pronounced by every one who has seen it to be the handsomest thing of the kind ever presented before the public. Parties can rely strictly upon getting a first-class article at a little money. A large assortment of Shell and Cannon Charms always on hand.

FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME, AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

The Stevens Shooting Gallery Rifle is a Specialty, and challenges the world. There are more of them used in Shooting Galleries than of all other kinds combined. The Austin Bros. and Frayne Combination use them when shooting apples from the heads of each other and of different members of their families, which they have done almost nightly for years; in some cases the marksman points the rifle over his shoulder and takes aim by the reflection in a small looking-glass before him. They give this Rifle decided preference over all others in performing these dangerous feats.

TRADE—"BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

Apply to

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agent's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, EPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line)

FOR THE

Trout, Grayling & Black Bass Fisheries,

AND THE

Famous Summer Resorts and Lakes

OF

NORTHERN MICHIGAN

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma

affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET,
Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P. M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *Continental* leaves New York at 11 P. M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

ONE OF THE WORLD'S WONDERS,

SOUR LAKE.

The Great Watering Place of Texas.

This remarkable natural phenomenon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lake and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarrhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address

J. A. MERCHANT,

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'C CO., NEW YORK.

The DelawareShell.

Our Improved Shell Now Possesses the Following Merits:

1st. Perfect Uniformity of Flange
2d. They are Sure Fire and Gas Tight.

4th. The Primers are Easily Expelled and Replaced, and can be Reloaded a Number of Times.

PRICE AS LOW AS ANY OTHER SHELL.

ADDRESS, **Delaware Cartridge Co.,**
WILMINGTON, DELAWARE.

Dittmar Powder

THE CHAMPION POWDER OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL.

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

For Forest and Stream and Rod and Gun.

A Trip to Bear Lake.

SITTING here in the U. S. Court-room at Jackson, Miss., awaiting the infliction of being placed upon the jury, it occurred to me that it might not be amiss to detail the experience of a party from Vicksburgh who went over into Louisiana in search of game and fish.

Bear Lake had been often mentioned as a body of water abounding in fish, where they could be hauled out by the cart-load; and as to game, the woods literally swarmed with squirrels, with such an abundance of wild turkeys and deer as to make hunting sport indeed. So it was not difficult to get together a party of ten, including the gentleman of color who was to preside over the culinary fixings, to make a trip and explore the country.

The time was February, and the weather was unusually mild. The winter had been a warm one, and the plum, peach and cherry trees were in bloom. At the date of departure there had been no rain for a length of time, and one had almost forgotten that rain could fall in the South. And for this reason, perhaps, the preparations of the party for encountering inclement weather were quite meagre. But they have learned from experience since to provide for the worst, and now that all of these gentlemen are attached to a prominent club they are not caught out half "fixed up." The party crossed the river by ferry early in the forenoon and took the cars to a crossing called Lake One, a distance of twenty-one miles into the interior, where we found a large yawl which the railroad, in time of high water, used for transferring passengers over that part of the road that was submerged, and which the superintendent had directed to be turned over to us. Into this monster we loaded our entire outfit, including a fine lot of minnows one of the party had captured ten miles back of Vicksburgh. Bell, Boswell and myself, being the chief fishermen of the party, were ordered into the yawl and started up the lake. The rest of the party started out afoot with their guns, promising to have a supply of meat for our supper when we should arrive at Bear Lake. It was two o'clock, and the distance was eight miles by water, and about five miles by land. The yawl was down nearly to her guards and moved as lubberly as a water-soaked log. None of us were experienced oarsmen, and all rather light weights except Bell, who is as strong as an ox and as tough as a pine knot. Our progress was slow and very tiresome. We passed out of Lake One through a narrow channel, now and then obstructed by trees and brush, into another lake, longer and broader, and upon which it seemed our progress was slower than that of a snail. After leaving this lake we came into Round-a-way bayou, a horse-shoe-shaped stream which drains this part of the country, and after a painful amount of twisting and winding, ultimately finds an outlet into the Tensas River near the western part of the State. Our course was down stream. In many places we found the channel very narrow and the current quite swift. The drift-wood and brush proved an intolerable nuisance. Often these offered an almost insuperable barrier to our progress. The axe was constantly brought into requisition. Now and then, when we saw a pile of this material ahead of us which we supposed would yield to a shock, we would give it a shock by putting on all the steam we could muster and driving our heavy yawl into it. Often we forced our way through; then again we didn't, but on the contrary, were brought up standing against some solid obstruction with a jar that would have smashed an ordinary vessel the size of ours. At other times the momentum we gave her would be just sufficient to run us fairly and squarely upon a substantial brush pile and leave us there to dig and scratch and pry out as best we could. At one time we ran upon what Bell has always persisted in calling a "staub," say a snag, just far enough under the water not to be visible, and near enough the surface to assume a very firm position as near the centre of our boat as well could be. The water was over ten feet deep and we could not reach bottom with our oars, so we just staid there about half an hour, heaving this way and that, nearly upsetting now and then, and thinking many things even if we never said them, till at last Boswell got out his rod, put it together, and attaching a strong twine to it, succeeded in hooking it over a strong limb near shore; and with this hawser we pulled off.

When the sun was nearly down and we had journeyed but little over half the way, we came to the "boss" obstruction in the shape of a giant cypress tree that had fallen entirely across the bayou. Near the shore, and from the roots ten feet out, the tree was submerged but not deep enough to allow our laden boat to pass over. The banks were steep, and a "carry" was a serious matter. All of us were very tired, and many of our "traps" were heavy, especially one immense box containing our "grub" and cooking utensils. So we tried to get over by moving our load towards the stern of the boat, running her as far up as we could and then transferring to the bow, thus getting the vessel across by sections. It wouldn't work, and at the present writing I cannot but wonder that we did not break her literally in two. If our plan of placing the cargo in this way had succeeded, I guess that when we had transferred enough in the bow to elevate the stern and given her a push to send her over, she would have instantaneously sought the bottom head foremost.

A hasty consultation resulted in a determination to stop and go into camp, then and there. Bell, in our efforts to lift over, had got out on the body of the tree, and was standing there when this conclusion was reached. He was on the side of the boat toward the centre of the stream, and the stern of the boat had drifted in toward shore, the bow resting lightly on the log. We determined to fire a gun to indicate our location to the other party. There was a gun in the yawl. Bell called for it. Upon handing it out we warned him of the danger of being kicked off into the water. He pooh-poohed the idea, and insisted on firing the signal. We let him do it, and he did it. As he pulled the trigger he leaned up to the gun to counteract the shock, but it did no good. The gun was a deuce of a kicker, anyway, and in this instance had an extra charge. At the report Bell, hopelessly out of perpendicular, cast a hurried look toward the yawl, threw the gun to the writer, and fell with a splash upon his back into the chilly bayou, fifteen feet deep. When he took the unlucky shot his back was toward the boat, and of course he fell in that direction, and so near it that Boswell and I grappled him and hauled him in After going ashore we built up two large fires, put our soaked companion between them, gave him a good smoking, and dried him out.

Later, two of the hunters came up the bayou to see what was the trouble. They had been to Bear Lake, and left their comrades there. None of those were woodsmen, and our comrades had to return for them and conduct them to camp, which they only reached about ten o'clock that night. Of course we had no supper. The cook was exhausted, and the hunters had killed no game.

The next morning we cut a passage for our boat through the tree-top, and resumed our journey as before. We had not rested well during the night. The fire had broken out among the leaves two or three times, and came near consuming our tent and commissary. We reached Bear Lake, after an awful time of it, a little before noon. All the hunters, save one, had returned from the woods "down in the mouth," having seen nothing to shoot. Bear Lake looked inviting, and anxiety was manifested to see what the fish would do. Bell and I tried it first from shore. We soon got several bites, and as soon learned that we were among the gars. Well, to end it, we hauled our lumbersome boat out of Round-a-way into the lake, fished it up one side and down the other, tried every manner and kind of bait, natural and artificial, the result being not a solitary fish or a single nibble, save those from a pack of infamous gars. Of course we determined to pull up and leave. While the preparations for this were going on, the writer tried the bayou, and succeeded in catching a species of white perch, called in this country "gasper goo." This one weighed about four pounds, and though not regarded as a very edible fish, we determined to devour him for supper. Meat was growing to be a serious question.

We put up a written notice, telling our absent hunters we would return and camp at the camp-ground of the night previous.

Boswell deserted the boat's crew and gave us the colored cook as a substitute. We reached our old camp-ground so much earlier than we anticipated, that we concluded to push on further up before going into camp. Not long after leaving this place we ran the boat upon an obstruction, so as to put her nearly upon a balance. Bell had been standing upon the bow with a long pole, steering and pushing drift aside, and when we hung here and stuck he told the writer to go astern with an oar and give her a heave. The order was obeyed. Bell was at the time enjoying the luxury of a smoke. It so turned out that both of us gave a terrible push at the same time in opposite directions, and the boat described a circle like a flying horse, while Bell pitched out like a flying squirrel, head-foremost, going under just as though he was purposely making an experimental dive. Of course we had to dry him out again that afternoon. He hung on to his pipe with his teeth, and declares he took one whiff under water.

We went into camp early, and were soon joined by our absent hunter, who, though one of the best woodsmen and indefatigable walkers in the country, was pretty badly blown. He had had no success, and if a few poor rabbits had not been sacrificed for our benefit our meat diet would have been light. Rain began to fall early, but stopped by dark, when mosquitoes put in an active appearance. We had only one small tent, and were put to for room. It is not remembered who was honored by the companionship of the cook. Later, rain fell in abundance, and in the morning we found everything soaked. Our journey was resumed in the same order, with an understanding that the hunters must shoot pee-wees if they could find no larger game. We had barely gotten under way before a drenching rain-storm came up and wet every one to the skin. The writer had a brimless cap, and he shivers now at the recollection of the stream of water that found its way down his back bone. The party that reached the railroad station were the sorriest-looking fellows I have ever seen. They staid there shivering over a little fire for nearly two hours before the train came along and took them home.

The expenses of the trip, not including individual outlay for tackle and ammunition, were $44, and it is a standing joke in Vicksburg that our party captured a fish that cost $11 per pound. And the worst feature of it was that when we left Bear Lake we forgot our fish, and left it haltered out in the water there, thus being deprived of eating this most high-priced member of the finny tribe. Thus ended a barren excursion to Bear Lake.

Fish Culture.

For Forest and Stream and Rod and Gun

CONCERNING EELS.

THIS is a subject proverbially slippery, and having escaped from the grasp of so many writers, I feel sensible of the difficulty of handling it successfully myself. Although many very interesting facts have been clearly established in regard to the natural history of the common eel (*Anguilla tenuirostris*), it is to be regretted that there is yet a want of precise data on some important points. For more than two thousand years the reproductive process of the species seems to have been involved in doubt and obscurity. I find on turning to my copy of "Oppian's Halieutica," written during the early part of the Third Century of the Christian era, that among many other errors and absurdities contained in his poem—sanctioned by the Roman Emperor Caracalla—was that false notion, so prevalent in subsequent ages, that the eel was hermaphrodite and impregnated itself, as it set forth in the following lines:

> "Not thus conchs, eel and polypi embrace,
> Nor purple lampreys rear their embryo race.
> In selfish coils hermaphrodite they sit,
> And their own power the vital spume emit;
> Which gradual dropp'd on sands or slimy mud,
> A silver offering renders to the flood."

Whether Oppian was indebted to Aristotle—who lived some five hundred years before—for this notion, or whether it came from his own brain as a poetic fancy and was palmed upon the world under a poet's license, no one can tell; but it is certain men who claim to be close observers of nature, in Europe and in our own country, strange as it may seem, entertain the same opinion.

While I am not disposed to undervalue the labors or discoveries of any of the recent writers upon this subject, but rather to give them the full meed of honor due, I confess that I have been a little surprised that certain facts discovered and clearly established by other workers in the same field years ago were entirely ignored, or, at least, not duly recognized and credited. The migration of the eels in the spring and fall, as a regular habit, was noticed and mentioned by some of the English writers on fish a long time ago.

In the interesting paper read by Robt. B. Roosevelt before the "Fish Cultural Society" at its last meeting in your city, he refers to an article on the generative habits of eels, read by him the year previous, Feb. 27, 1878, and says: "Then, for the first time, was made public an authoritative announcement of the discovery of their eggs, Prof. Spencer F. Baird stating that he had received some six weeks previous several eels in which the eggs were not only visible but so far advanced as to be nearly ripe for emission."

As long ago as 1833, the following public announcement was made in England: "One of the most interesting investigations on fish is that of Mr. Yarrel on the generation of the eel. This *vexata quæstio*, which has occupied the attention of naturalists from Aristotle downward, has been at last set at rest by Mr. Yarrel, who has proved by actual examinations and dissections, carried on through eighteen months in succession upon specimens of eels procured from different parts of the country, that it is oviparous, having melt and roe like other fishes. He has traced them down to the brackish water, whither they go generally, though not universally, to deposit their spawn; and he has followed the young in their extraordinary spring journeys up the great rivers and into the brooks and rivulets, in which they seek out for themselves appropriate haunts."

Now, the above appears, to me at least, to be a public and authoritative announcement, and contains all that was claimed in the announcement made by Mr. Roosevelt, February 27,

1878. In verification of an old proverb—"You cannot hide an eel in a sack"—it will be found by referring to "J. G. Wood's Natural History," vol III., page 369, that he repeated the substance of the above announcement sixteen years ago in the following language:

"The reproduction of the eel has long been a subject of discussion, some persons thinking that the young are produced in a living state and others holding that they are hatched from eggs. This question has, however, been set at rest by that universal revealer, the achromatic microscope, which has shown that the masses of oily-looking substance, generally called fat, are really the aggregated clusters of eggs; and that these objects, minute as they may be—not so large as the dot over the letter 'i'—are quite perfect, and under the microscope are seen to be genuine eggs."

The microscope has been recently employed with success and satisfaction by certain persons to examine and identify the ova of eels. It may not be generally known that about 200 years ago Leuwenhoeck, a Dutch naturalist and physiologist, used the microscope—as improved by himself—to examine the ova and spermatozoa of various species of fishes, and to him belongs the credit, no doubt, of demonstrating their wonderful fecundity by actually counting the ova, aided by the microscope. He found that a middling-sized cod contained 9 384,000 eggs—about the same number as Mr. Fred Mather found in Mr. Blackford's six pound eel.

In conclusion, permit me to add that I have not been eating carp of late, nor do I wish to rob any one of their well-earned plumes; yet I think from the facts herein stated, in truth and candor it must be admitted that very few, if any, important facts have been discovered concerning the eel that were not known years ago. Finally, the eel is not hermaphrodite, but bi-sexual; it is not viviparous, but oviparous, the ova and milt having been repeatedly discovered and recognized by competent experimenters and eminent physiologists of former years. There is yet one interesting and important point in regard to the reproductive process of the eel to be determined—viz., *modus operandi* of fertilizing its eggs. I fully believe that this is within the range of possibilities, and that the time is near at hand when this profound and long-sought secret in the generation of eels will be brought to light through the experiments of fish culture and the researches of modern science. The man who solves this difficult problem will add a valuable item to our knowledge of the natural history of fishes, and will richly deserve a gold medal.

Philadelphia, May 20, 1879. C. A. K.

THROUGH NEW HAMPSHIRE WILDS WITH SALMON FRY.—The New Hampshire fish commissioners planted 100,000 land-locked salmon fry in the Upper Connecticut Lake last week, and Com. Sam Webber sends to the Manchester *Mirror and Farmer* an interesting account of the journey. It is no easy matter to transport a lot of fry through the wilderness. Following is the account of the trip after their arrival at Colebrook:

Mr. E. G. Bailey, the proprietor of the Parsons House, took good care of us and the young fish which were placed under the stream of the aqueduct in his barn, and furnished us with a team and driver in the morning to take us to First Connecticut Lake, twenty-five miles further, which place we reached at noon, after an intensely hot ride. Our ice was all gone, but Landlord Tibbets, of the Lake House, took our fish cans right into his spring house, where in a large tub he had about a dozen two or three pound lake trout swimming about leisurely, and one of which he soon caught and cooked for our dinner. After dinner Mr. T. furnished us with a buckboard, on which the fish cans were lashed with ropes, and a guide to drive and pilot us through to Second Lake, and the "tug of war" began.

The team we brought from Colebrook took my companion and myself to the end of the road, where we reached the unbroken forest, which stretches for miles away to the north, far into Canada, and here we dismounted and took to our own propellers. Lashing our valise and basket on to the buckboard with the fish cans we started in through a blazed road to the lake, and such a road few four-wheeled vehicles ever got over in safety.

Now the off fore-wheel would be in black mud to the hub, while the nigh hind one was high in the air on a stump or stone, and in a minute the position would be reversed. Nothing but a buckboard would ever live through it. The water jetted in fountains through the strainers in the tops of our cans at every jolt, and if the fish were possessed of any powers of imagination they might have thought themselves newly drafted into some first-class circus and being initiated in grand and lofty tumbling!

I would have given a handsome premium long before we got "out of the woods" to have insured the safe arrival of half of our cargo. However, we found a brook or spring about every half-mile and refilled our cans and ourselves with cold water, for the heat in the spruce woods was intense, and the perspiration was dripping from every pore. At 5 P. M. we saw daylight again, and soon emerged on the shore of the lake at Mr. Chester's comfortable camp, where we found two cold clear springs, running into the lake over a stony bottom, which afforded a capital place to empty our cans and a first rate opportunity for the young fish to hide among the stones, which they did so effectually, that in less than two minutes hardly a live one was to be seen out of the whole lot. The dead ones remained on the bottom, and gave us an opportunity to estimate our losses, which he concluded to have been somewhere between one-fourth and one-sixth of the whole.

THE COBBOSSEECONTEE FETE.—The Kennebec Association for the Protection of Fish and Game held their annual Piscatorial Fete on one of the beautiful Cobbosseecontee Lake islands, near Augusta, Me., July 4. The lake, which is nine miles long and two miles wide, was stocked nine years ago with black bass, and within the last three years some 30,000 land-locked salmon have been placed in its waters. The form of celebration adopted by the Kennebec people was sensible. Such occasions as these tend to popularize game associations and to enlist public interest in their work. The morning was devoted to bass fishing by quite a number, who arrived on the ground early. They had good luck and fine sport. The bass were of unusually large size, several weighing three and four pounds each. Nearly all the fish were caught with flies and by trawling with from fifty to one hundred feet of line, from boats, and in shallow water. Old trout fishermen declared they never had better sport on Rangeley or Moosehead Lakes. Daniel Whitehouse was champion, catching 35 bass, some of them weighing four pounds. Major Nye and Captain Black caught a fine string of fish, weighing 35 or 40 pounds, and many others caught fine lots. Dinner was served at 1:30, to which Hon. E. M. Stillwell had contributed a 12-pound salmon. At 2:30 the band stopped playing, and G. W. Martin, President of the Association, said:

Gentlemen—In calling this Association to order, I take the occasion of expressing my pleasure at meeting so many members, and in observing the growing interest in our annual Piscatorial Fete. I feel it is well to thus meet on this beautiful lake, in the groves of this green island, for "the groves were God's first temples." Like the aboriginees, who once lived on the banks of our rivers, we come here to hold our ceremonies at the opening of the fishing season. It is an Indian custom where salmon are plenty to gather at the falls and watch for the first run of fish, and then give thanks by dancing and singing; holding it as a sacrilege, an offence to the Great Spirit, to kill the first fishes that pass, because they believe they are bolder and stronger, and will find better spawning grounds in higher streams, and furnish abundance of fish for the next year. So we, in a more rational way, protect our spawning fish, and have gathered here today to have our little "war dance," and celebrate the grand work we have accomplished.

The Association transacted its usual routine business, and added several members. The Secretary's annual report was read, showing the Association in a prosperous condition. The Cushnoc Heights Gun Club had a spirited glass ball shoot, H. A. Thorndike winning the club badge. There were 13 entries in the rifle match. The piscatorial prize, a large bass, was won by E. W. Moore. The rifle shooting was very fine; Rus. Clement, Steve Russell, Thorndike, Fish and others made good scores.

Natural History.

Migration of Some Warblers Through Summit, N. J., During the Last Spring.

1. *Mniotilta varia*, Black and White Creeper.—First seen on the 23d of April. These birds breed here.

2. *Parula americana*, Blue Yellow-backed Warbler.—First seen on the 6th of May, and afterward becoming very common. Left about the 12th of May.

3. *Helminthophaga pinus*, Blue-winged Yellow Warbler.—Obtained a single specimen on the 30th of May. Breeds here.

4. *Helminthophaga ruficapilla*, Nashville Warbler.—First seen about the 10th of May. Saw none after the 11th.

5. *Dendræca æstiva*, Yellow Warbler.—First seen about the 10th of May. Breeds here.

6. *Dendræca virens*, Black-throated Green Warbler.—First seen May 3, and were common until about the 9th of May, after which time I saw none, though these birds are said to breed here.

7. *Dendræca cærulescens*, Black-throated Blue Warbler.—First seen May 2d. This bird is not very plentiful in this part of the country. Left about the 9th of May.

8. *Dendræca coronata*, Yellow-rump Warbler.—First seen on the 23d of April, afterward becoming very common. The day before they left they were so numerous that one tree contained about fifty. The next day, May 12, there was not one to be seen.

9. *Dendræca blackburniæ*, Blackburnian Warbler.—Saw a single specimen on the 8th of May.

10. *Dendræca striata*, Black-poll Warbler.—First seen May 12. At the date of writing (June 4) it is still here.

11. *Dendræca castanea*, Bay-breasted Warbler.—Saw a single bird on 4th of May.

12. *Dendræca maculosa*, Black and Yellow Warbler.—Saw a single bird on the 13th of May.

13. *Dendræca palmarum*, Yellow Red-poll Warbler.—First seen on the 15th of April, and after that became quite common. They left about the 28th of the same month.

14. *Dendræca pinus*, Pine Warbler.—Saw a single bird on the 4th of May.

15. *Geothlypis trichas*, Maryland Yellow-throat.—First seen on the 6th of May. Breeds here. I found a nest containing five eggs on the 17th of May.

16. *Dendræca pennsylvanica*, Chestnut-sided Warbler.—First seen on the 6th of May. Left about the 12th. I have seen none since, though they are said to breed here.

17. *Icteria virens*, Yellow-breasted Chat.—First seen about the 7th of May. Breeds here.

18. *Setophaga ruticilla*, Redstart.—First seen May 7. Breeds here.

GEO. LAWRENCE NICHOLS.

HOW SEA TURTLES DEPOSITE THEIR EGGS.—*Titusville, Brevard Co., Fla., July* 3.—Just returned from a surveying trip to Crane Creek, 45 miles south of Titusville. Went over to the beach and saw plenty of deer tracks. Three deer killed by the hunters while I was there; two in one day. Their tracks are very numerous on the beach side of Indian River. The sea-turtle, principally logger-heads and green turtle (*Thalassochelys caouna* and *Chelonia mydas*), are now laying their eggs on the beach in great numbers. Found ten nests in walking a quarter of a mile on the beach, just above high water. Nearly all the nests had been robbed by the bears (*Ursus americanus*), who patrol the beach nightly for this purpose. The tracks of these fellows are very numerous in the sand. The numerous deep holes, about the size of half a barrel, and the many hundreds of empty shells scattered about attest to the thoroughness of their work and their unfailing instinct in finding the nests. The turtles leave a plain path in the sand where they crawl up from the water and return, but the exact point where the nest is made often puzzles the experienced hunter, as they paw up the sand for five or six feet about the nest, and often make false demonstrations as if for the purpose of misleading the hunter.

When they have decided upon a place for their nest they excavate with their flippers a hole in the sand a foot to eighteen inches in diameter, and two feet to two and a half feet deep, in which they deposit their eggs, closely packed one over the other. The eggs, from 90 to 160 in number, fill the hole to within a foot or a foot and a half of the surface. They then cover them over with sand, packing it hard with their flippers, and smooth off the surface so nicely that the novice is at a complete loss to determine where the nest is located. The best way for the novice to find a nest is to take a ramrod and thrust it into the sand, all about the area of their operations until the eggs are felt. I found but one nest on this trip with eggs, but this one contained 160 eggs, the largest number I have ever found or heard of in one nest. The eggs are soft-shelled, perfectly round, white and about the size of a pullet's egg. They are considered quite a luxury. A peculiarity in their cooking is that they cannot be boiled hard. They are not as hearty as hens' eggs, and a man can easily eat a dozen at one meal. Now is the time for the bear hunter. One hunter killed three bears in one night on the beach by lying in wait for them on the top of one of the numerous Coast Survey tripods that are standing along the beach. These tripods are excellent places for this purpose, as they are so high that a good view of the beach each way is obtained and the bears cannot scent the hunter; and last, but not least he is out of the reach of bruin's claws, and free from the annoyance of mosquitoes and sand flies. AL. I. GATOR.

A STRANGE NESTING PLACE.—A curious instance of the persistency of a pair of blue birds in building in an unnatural place has recently occurred under my notice. On the campus of the State University at Minneapolis stand two cannons which are used every morning in artillery drill, and from which blank charges are frequently fired. A few days since a pair of blue birds selected one of these guns as a nesting site. The nest was accordingly built, but, of course, had to be removed next morning. This was repeated for several days, the nest built one day being destroyed the following morning. At length one morning, the person whose duty it was to charge the gun did not look to see whether the nest was there or not, but rammed down the cartridge with a will. On trying to fire the gun it would not go off, so the load was drawn and an examination made, which disclosed a nest and the parent bird jammed into a scarcely recognizable mass against the breech. Perseverance is a commendable trait, but in this case, at least, it resulted disastrously to the poor bird. OBSERVER.

SKUNK BITE.

FORT JOHNSON, N. C., April 19, 1879.

EDITOR FOREST AND STREAM:

I have just noticed in a recent number of the FOREST AND STREAM a short notice on the subject of "Skunk Bite." When a boy, in Ohio, I had, among other dogs, a Scotch and a bull terrier, and both, for some reason best known to themselves, seemed to have an inveterate hatred for the skunk, and so constantly hunted and killed them, that, especially during wet weather, they became almost as offensive as the delectable skunk himself. I have known both, and especially the bull, to have frequently been severely bitten, but always without serious results, and never then knew nor heard that the bite was dangerous. I have since heard on the Plains and in the far West that the bite of a skunk was dangerous, but never saw a person who could say so from his own personal knowledge, and thus far have classed such stories with those of your moon-spoiled fish. I do not, however, doubt that this animal may become rabid any more than I do that fish may spoil, moon or no moon. But I imagine that the cases of rabid skunks are extremely rare, at least east of the Mississippi River. On the desert and alkaline plains of the far West, where water and sustenance are sometimes scant, such cases may be much more frequent. S.

The Kennel.

ROCHESTER DOG SHOW.

OWING to the short time for organizing this show, the entries were very small—113 in all—and most of them for exhibition only, which, we suppose, means free entries. The time for holding the show undoubtedly kept many from sending their dogs, but the building it was held in was admirably adapted for the purpose; indeed, we have never seen one better suited. The dogs were all placed in large, roomy coops covered with wire, which could be easily opened. The Judge, Mr. A. B. Lamberton, assisted by Mr. Williams, of Dansville, conscientiously discharged his duties, and, take it all through, very satisfactorily.

The English setter classes were a fair good class. In the dog class Mr. Macdona easily won with Ranger Rival; his Dash III. (Decimal) did not arrive in time to be judged. Mr. Francis' Boy, a very handsome black, white and tan dog, got second, and deservedly so. Rip, owned by Isaac H. Andrews, of Spenceport, was V. H. C., and right well he merited it. In the class for bitches were some good ones. Mr. A. S. Francis took first with his Whirlwind (Rob Roy–Juno), a handsome bitch, but a little under size. Mr. Asa L. Sherwood's Grace took second. We fancied his fine setter bitch Moll for this place, but she was out of coat and condition. Mr. Weighell's Fan, V. H. C., has the making of a good one in her.

The puppy class was very good. Mr. Francis' Tony should most certainly have had first instead of Net. In red or red and white setters, Mr. Whitney's Sport, Syracuse first prize winner, took first, but had Mr. Macdona's Rover II. arrived in time the tables would have been turned. Mr. Weighell's second prize dog, Jerr, shows his age too much to commend him. In the Irish setter bitches Mr. Weighell took first and second with Breeze and Bird, two very good ones. In the puppy class Mr. Weighell again took first.

The Gordon dog class was only very moderate; not at all up to the high standard that we have seen at New York, Boston and Philadelphia. In the Gordon bitch class only one entry, but a rare good one, exhibited by Asa L. Sherwood. Puppy class very fair. First should certainly have gone to Don, owned by Mr. Van Velyer, of Oneida, but we fancy the judges thought he was over twelve months, and he certainly looked to be so. Pointer dogs extra good, including Mr. Macdona's Croxteth, a second prize winner at Hanover; Prince, a first prize winner at Albion; Don, another Syracuse first prize winner, owned by G. W. Dakin; Bob, who took first at the last N. Y. Show, owned by Isaac Weighell—all four good, besides other good ones, particularly the young dog Sensation II. The judges were a long time in deciding, but finally agreed to split the prizes, equal first going to Croxteth and Don, and equal second to Bob and Wink. The lat-

ter dog was never exhibited before; he is a particularly good headed dog and fashionably colored.

Pointer bitches only fair. Water spaniels only two entries, but both good, particularly Mr. Young's Duck, who took first. Cocker spaniels only one entry, but an exceptionally good one, owned by Miss Starbuck, of Rochester. The foxhounds were an especial feature of the show, Mr. L. M. Wooden exhibiting a grand lot—probably the first lot of hounds owned by a private gentleman in America. He easily got first and second. His magnificent puppies were very attractive. Beagles good; indeed Mr. Dodge's Rattler and Roxey are a hard pair to beat. The bitch this time captured first.

Fox terriers were extra good. Mr. J. G. Fox's Young Spot easily took first. A finer bodied dog we never saw. His ears are not perfect; with that exception he is a grand dog. Greyhounds two, and both good ones. Collies poor, except the winner Southside. She is a really grand dog. St. Bernards, with Mr. Macdona's two magnificent specimens there, could not help but be attractive; Mateo, the dog, is the best we ever saw.

The other non-sporting classes, with the exception of pugs and Yorkshire terriers, were not good. The miscellaneous class were, as usual, what it means.

PRIZE LIST.

English Setters—Dogs—1st, Rev J C Macdona's Ranger Rival; 2d, A S Frances, Rochester, Boy; V h c, Isaac H Andrews, Spencerport, Rip; H c, Isaac Weighell, Rochester, Dan; C, B Moeller, Rochester, Ned. Bitches—1st, A S Frances, Rochester, Whirlwind; 2d, Asa L Sherwood, Skaneateles, Grace; V h c, Isaac Weighell, Rochester, Fan; H c, A S Frances, Rochester, Daze; C, Asa L Sherwood, Skaneateles, Moll. Puppies—1st, Isaac Weighell, Rochester, Ned; V h c, A S Frances, Rochester, Tony; H c, A L Sherwood, Skaneateles, Rome.

Red and White Setters—Dogs—1st, J W Whitney, Rochester, Sport; 2d, I Weighell, Rochester, Jerr. Bitches—1st, I Weighell, Rochester, Breeze; 2d, I Weighell, Rochester, Bird. Puppies—1st, I Weighell, Rochester, Weber.

Gordon Setters—Dogs—1st, I Weighell, Rochester, Sport; 2d, W H Atkinson, Lima, Fred; V h c, Eng. Setter, J A Rice, Spencerport, Grouse; H c, F W Little, Rochester, Mack. Bitches—1st, A L Skaneatlas, Maggie. Puppies—1st, I Weighell, Rochester, Joe.

Pointers—Dogs—1st, J C Macdona, England, Croxteth; ½ 1st, G W Dakin, Syracuse, Don; 2d, I Weighell, Rochester, Bob; ½ 2d, M M Hollister, Rochester, Wink; V h c, W S Newman, Avon, Shot; H c, M J Newhouse, Oneida, Sensation. Bitches—1st, I Weighell, Rochester, Dot; 2d, C L Betts, Rochester, Lola; C, W L Sheldon, Rochester, Flora. Puppies—1st, G W Dakin, Syracuse, Lady; V h c, F A Sinclair, Mottville, Snapshot.

Water Spaniels—Dogs or Bitches—1st, D D Young, Detroit, Duck; 2d, I Weighell, Rochester, Flora.

Cocker Spaniels—Dogs or Bitches—1st, Miss M A Starbuck, Rochester, Sailor Boy.

Fox Hounds—Dogs or Bitches—1st, L M Wooden, Rochester, Drive; 2d, L M Wooden, Rochester, Fly, V h c, I Weighell, Rochester, Joe; H c, I Weighell, Rochester, Lewis; G H Osgoodby, Pittsford, Rant.

Beagles—Dogs or Bitches—1st, J N Dodge, Detroit, Rattler; 2d, J N Dodge, Detroit, Roxey.

Fox Terriers—Dogs or Bitches—1st, O J Fox, Delaware, Young Spot; 2d, W B Duffy, Rochester, Charley; V h c, F L Dolanty, Rochester, Buffer.

Greyhounds—Dogs or Bitches—1st, E A Van Velzer, Oneida, Spur; 2d, Geo Morgan, Oswego, Major.

Collies—Dogs or Bitches—1st, J A Nottingham, Syracuse, Southesk; 2d, withheld.

St Bernard—Dogs or Bitches—1st, J C Macdona, England, Braurfels; 2d, J C Macdona, England, Marco; Hon 1st, E S Ellwanger, Rochester, Martie.

Bull Terriers—Dogs or Bitches—1st, Martin Young, Rochester, Nigger; 2d, A Britton, Billy.

Black and Tan Terriers—Dogs or Bitches—1st, W S Sheldon, Rochester, Jim; 2d, W W Chapin, Rochester, Tiny II.

Yorkshire Terriers—Dogs or Bitches—1st, Mrs Kistermann, New York, blue and tan dog; 2d, Mrs Kistermann, New York, blue and tan dog.

Rough Haired Terriers—1st, Frederick Feek, Rochester, Nip; 2d, S Holoman, Rochester, Pepper; V h c, M Young, Rochester, Billy; V h c, J Harris, Syracuse, ——.

Pugs—Dogs or Bitches—1st, D Davis, Toronto, Charley; 2d, J M Backus, Rochester, Poney.

Any Breed of Dogs not assigned a class—Medal, Alert Hose Company, Rochester, Nero; medal, F C Yehle, Syracuse, Pudy; medal, H M Greeley, Rochester, Jacko; medal, E A Cowley, Rochester, Magon; medal, W Bartholomay, Rochester, Bruin; medal, Edw H Rowett, Rochester, Flora; V h c, M J Blackall, Spenceport, Fritz.

ALEXANDRA PALACE DOG SHOW.—This great English dog show, given by the Kennel Club, was held at the Alexandra Palace, near London, on July 2, 3, 4, 5 and 7. It was probably the largest ever held in the world, there being 1,200 entries, divided as follows: Bloodhounds, 65; mastiffs, 54; St. Bernards, 73; Newfoundlands, 25; keepers' night dogs, 2; great Danes, 8; deerhounds, 8; greyhounds, 14; foreign dogs, 11; pointers, 63; English setters, 43; black and tan setters, 16; Irish setters, 31; retrievers, 59; spaniels (sporting), 59; fox terriers, 174; dachshunde, 44; sheep dogs, 94; Dalmatians, 3; Pomeranians, 8; poodles, 16; bull dogs, 33; bull terriers, 23; Bedlington and Irish terriers, 33; smooth-haired terriers, 8; black and tan terriers, 24; Skye terriers, 18; hard-haired Scotch terriers, 15; Dandie Dinmont terriers, 41; Yorkshire terriers, 1; pugs, 30; Maltese, 4; Blenheim spaniels, 14; King Charles, 11; Italian greyhounds, 2; toy terriers, 11; sporting puppies, 7; fox terrier puppies, 13; non-sporting puppies, except mastiffs or collies, 22; collie puppies, 9; mastiff puppies, 10. The winners in the pointer and setter classes were as follows:

Pointers (large)—Champion's. Dogs—R J L Price, Wagg. Bitches—R J L Price, Maud. Open classes—Dogs—1st, Barclay Field, Dick; 2d, T Slatter, Beau; 3d, R J L Price, Eos Cymryw. Bitches—1st, G J Moore, Moss; 2d, J Kennedy, Reine; 3d, S Price, Juno. Small size champions—Dogs—1st, J Kennedy, Cedric. Bitches—1st, R J L Price, Bow Bells. Open classes—1st, R J L Price, Bastow; 2d, A P Haywood-Londsdale, Bow; 3d, W Arkwright, Don Jose. Bitches—1st, R J L Price, Peal-o'-Belle; 2d, W Arkwright, Thistle; 3d, R J L Price, Merry Belle. Puppies—1st, T Slatter, Bean, Jr.; 2d, T Slatter, Bonny.

English Setters, champions—Dogs—1st, G J Mitchell, Rock II. No bitches entered. Open classes—Dogs—1st, T B Bowers, Bandit; 2d, G Cartmel, Prince of Orange; 3d, A P Heywood-Lousdale, Fred V. Bitches—1st, Major Ireland, Ruth; 2d, T B Bowers, Bine Bell II; 3d, H P Garde, Wild Daisy. Puppies—1st, withheld; 2d, T Webber, Moll III.

Black and Tan Setters—1st, E L Parsons, Bob; 2d, J H Salter, Rex II; 3d, T Jacobs, Marquis. Bitches—1st, C B Hodgson, Regalia; 2d, J T Richardson, Moss; 3d, E L Parsons, Jessie.

Red Irish Setters—Dogs—1st, T M Hilliard, Count; 2d, J Waddington, Shot; 3d, T Richardson, Pam. Bitches—1st, C T Abbott, Kate; 2d, do, Kitty; 3d, J H Salter, Ireland. Puppies—1st, G W Gordon-McHoffie, Rosy Red.

—The red Irish setter bitch Tyke, by Rory O'Moore, owned by Mr. E. J. Robbins, of Weathersfield, Conn., whelped on July 1 eleven puppies, sired by owner's Dick Hatterick (Elcho-Nell).

—Mr. David G. Hartt's (Northport, L. I.) liver and white pointer bitch Flash by Sensation, whelped, June 23, six dogs and two bitch puppies, one liver and white, sired by Champion Snapshot.

—The same owner's red Irish setter bitch Lu Lu whelped, on July 8, seven dogs and two bitch puppies.

—Mr. Jas. R. Tilley (Locust Valley, Long Island) reports the following litters of Gordon setters as having been whelped at his kennels. June 2, Grace, 7 puppies—3 dogs and 4 bitches—sired by imported Grouse. June 11, Di, 6 puppies—5 dogs and 1 bitch—sired by Jerome's Shot, Jr. June 13, Dot, 4 puppies—3 dogs and 1 bitch—sired by Shot, Jr. A portion of each of the above litters will be offered for sale.

—Mr. L. F. Whitman's champion blue belton bitch Mell, has whelped 10 puppies—4 dogs and 6 bitches—sired by same owner's Rattler.

—The beagle bitch, Fanny V., owned by G. Pounall, of Christiana, Pa., whelped 9 puppies—3 dogs and 6 bitches—sired by Victor (Ratter-Blue Bell), both imported and bred by Sir A. Ashburnham, Broombaven Park, Hastings, Sussex, England.

—Mr. E. J. Robbins' Irish setter bitch Bridget Plunket (Plunket-Stella) has been bred to Bob (Rory O'Moore-Mirah).

—Mr. D. G. Hartt's beagle bitch Topsy, has been bred to "Montclare's" Rambler, and his Gordon bitch Bell to Warwick, a son of Champion Rupert.

—The Imperial Kennel's (of Toms River) black pointer bitch Gwendolin has been bred to Mr. F. Schushardt's Jim, on July 2. Also their Daisy to T. Forman Taylor's One-Eyed Sancho, on July 12.

—Capt. C. D. Veile, U. S. A., now stationed at Fort Davis, Texas, claims the name of Scout for his lemon and white pointer dog, purchased from the Westminster Kennel Club, by Sensation out of Daisy II.

—Mr. J. Bardwell, of Boston, claims the following names for his black and tan Gordon pups by imported Grouse out of Mollie Bawn: Dogs—Trump, Tyrone, Imp, Otto, Grouse III. Gyps—Midget, Phantom II. and Vision. Mr. Bardwell's bitch (black and tan Gordon) Mollie Bawn threw 15 puppies—10 bitches and 5 dogs—sired by Hanlan's imported Grouse. Seven are alive, and very large and healthy.

—Mr. Geo. Pounall, of Christiana, Pa., claims the following names for beagle pups by Bess and Dan, whelped May 11, 1879: Forman, Fleet, Fairy, Fanny VI., Flora. All are white, black and tan.

—Mr. James Ratcliffe claims the name of Royal Prince for his lemon and white dog puppy out of Orphina by Rattler. Whelped May 12.

—Mr. W. Tallman, of Providence, claims the following names for his Bonibel-Dan pups: Bonibel II. for black and white ticked bitch; Blanche for white bitch with lemon ears, and King Philip for white dog with lemon ears.

—The following of Mr. Macdona's dogs, just imported, are for sale: St. Bernard dog Marco, a prize-winner at Hanover dog show, and bitch Bramfels, bred by Prince Solms, dam of Princess Louisa's Bertha and Princess of Wales' Bruno. Price, £300 for the pair. Pointer dog Croxteth, by Bang out of Jane, 18 mos. old, winner of fourth prize in Field Trial Derby, and second at Hanover Dog Show. The coming dog of the day. Price, £150. English setter dog Decimal-Dash III., by Llewellin's Dash II. out of Duchess, by Pilkington's Dash out of Lloyd Price's field trial winner Queenie, 18 mos. old. Price, £100. Irish setter Rover II., by Rover out of Nina, the grandest young Irish setter in the world. Price, £150. For further particulars apply to kennel editor of FOREST AND STREAM.—*Adv.*

—Mr. Chas. J. Keeser, of Washington, D. C., has bought from E. V. Kercheval, of Clarke County, Va., the black and white pointer dog Plato, a grandson of Judge Pendleton's celebrated pointer dog.

The same gentleman has sold his red and white Irish setter dog Larry to Geo. A. Kimball, of Chelsea, Mass., and his white setter bitch Mollie to C. J. Miley, of Lancaster, Pa.

—Mr. Thos. Meyer, of Jersey City, has purchased from Mr. Frank C. Hollands the cocker spaniel bitch Feather.

Yachting and Boating.

DETROIT YACHT CLUB.

ANNUAL REGATTA, JULY 4.

EDITOR FOREST AND STREAM:

Our club held its second annual regatta on Lake St. Clair, July 4. The course sailed by the first and second class yachts was a triangular one of eighteen miles; for the third class six miles to the outer stakeboat and return, making the course twelve miles; the start and finish being about a quarter of a mile off Ironmonger's Hotel. The entries were as follows: First class—*Amy, Ives, Myrtle, Mabel* and *Ida*. Second class—*Lillie S., Adelade, Wayward* and *Sheila*. Third class—*Daisy* and *Marian*. Judges, Capt. John Craig and H. C. Penny. Time Keeper, Morse Stewart, Jr.

Through the kindness of W. K. Muir, the club had the use of his fine steam yacht *Scotia* to start the race, while the *Glances* pulled out to set the stakeboats. At 12:35 the warning gun boomed forth, and at 12:45 the starting gun was fired, and away went the white-winged fleet, the *Amy* being the first to cross the line at 12:50, closely followed by the others. The scene was a most beautiful one, as the fleet of graceful yachts flew before the strong northwest breeze, carrying every stitch of canvas they dared, most of them heeled over to the rail, and throwing the white spray far above their bows. The *Amy* kept the lead she had gained at the start, although closely pressed by the *Myrtle* and *Mabel*; the second class yachts, the *Wayward, Lillie* and *Sheila*, and the third class yacht *Daisy*, being all close together, skimming along over the heavy swells like a flock of sea gulls, while the *Ives, Marian* and *Adelade* were quite a distance in the rear of the fleet. But the *Ives*, with her immense spread of canvas, went booming along, and rapidly decreased the distance between her and the leading yachts. Before the first stakeboat was reached she was the second boat in the line, the *Amy* being the only one to turn the stakeboat ahead of her. From the first to the second stake the sailing was close hauled, and the breeze had freshened up so that it almost blew a gale, while the sea rolled up in huge waves, washing over the smaller yachts as though determined to swamp them. Soon after passing the first stakeboat, the *Myrtle* shipped a heavy sea, nearly filling her with water, and she withdrew. The *Ida* caught a heavy puff after rounding the first stake, and capsized, leaving the race in her class to the *Amy, Ives* and *Mabel*. The *Ives* kept close up with the *Amy*, and when within about a mile of the second stakeboat, got out to windward of her, and rounded first. Then, squaring away for home, she set an immense balloon jib. *Amy* was the second boat to turn, with *Mabel* right in her wake.

In the second class the *Adelade* shipped a big sea, which ruined all chances of her getting a prize. The *Wayward* took the lead in her class with all the others right after her. There was some very pretty sailing done, and this race was the most exciting one of the lot. In the third class we had but two yachts, the *Daisy* and *Marian*, the other yachts in this class belonging to the club not daring to venture out into the lake with the sea running so high. They both did some fine work and made good time. Appended is the list of yachts taking part in the regatta together with their dimensions and the time made in the regatta:

FIRST CLASS.

Name.	Rig.	Gross Meas'nt. FT.	IN.	Sailing Time. H.	M.	S.	Cor. Time. H.	M.	S.
Amy	Sloop	46	6	3	22	20	3	10	14
Ives	Schooner	66	8	3	01	30	3	01	30
Myrtle	"	44	3	out			out		
Mable	"	43	5	3	31	40	3	17	41
Ida	"	45	9	out			out		

SECOND CLASS.

Lillie S.	Sloop	38	1	3	50	57	3	50	57
Adelade	"	——	——	out			out		
Wayward	"	33	4	3	43	30	3	40	55
Sheila	"	33	8	4	09	20	4	06	57

THIRD CLASS.

Daisy	Sloop	27	1	1	29	55	1	26	55
Marian	"	26	7	1	42	20	1	42	20

The *Mable* carried away about 15 feet of her foretopmast before the race, but rigged up a jurymast and started with the rest. Had it not been for this accident she would probably have made a better showing. The *Myrtle*, as before mentioned, shipped too much water balast, and was obliged to withdraw, while the *Ida* capsized. The *Adelade* lost a man overboard early in the day, but he was rescued all right. As she also took in more water than was good for her she withdrew.

Altogether, the regatta was one of the most successful and exciting held in these waters, and the club may feel proud of it. Below is the list of prizes and the names of the winning yachts:

First Class.—First prize, a challenge flag, valued at $25, and $25 in gold, taken by the *Ives*. Second prize, an elegant pair of marine glasses, presented to the club by Messrs. M. S. Smith & Co., and $10 in gold, taken by the *Amy*. Third prize, $10 in gold, taken by the *Mabel*.

Second Class.—First prize, $25 in gold, taken by the *Wayward*. Second prize, a pair of marine glasses, valued at $15, taken by the *Lillie S.* Third prize, a beautiful silver water jug, presented to the club by Mr. W. K. Muir, taken by the *Sheila*.

Third Class.—First prize 15 in gold, taken by the *Daisy*. Second prize, a pair of silver cups, valued at $10, taken by the *Marian*.

At the meeting held on Monday evening, July 7, the prizes were distributed, and the club decided to have another regatta early in September, the exact date to be decided upon at our August meeting. We are getting in a large number of new members, and the future looks bright. We are steadily working upward and onward, and in time hope to have a club that will build up and keep up the manly and noble sport of yachting in this vicinity,

ED. H. WILLIAMS, Sec'y D. Y. C.

SALEM (MASS.) REGATTA.—The annual city regatta was sailed, July 4, in a stiff S.E. wind, with the following result:

FIRST CLASS.

Name.	Owner.	Actual Time. H.	M.	S.	Corrected Time. H.	M.	S.
Excelsior	Powers	1	51	06	1	23	53
Crest	Parker	2	16	10	1	51	46

SECOND CLASS.

Cyda	Bridge	1	11	14	48	32	
Nettle	Weston	1	16	02	49	50	
Fanchon	Burgess	1	15	15	49	51	
Mignon	Dodge	1	24	55	1	01	25

THIRD CLASS.

Carrie	Bray	1	38	45	1	14	38		
Vesta	Gardner	1	26	05	1	14	58		
Holden	Burgess	1	08	40	46	37			
Expert	Souther	1	07	41	47	10			
Coquette	Brown	1	15	50	52	16			
Delphine	Brady	1	15	53	55	15			
Dash	Huntington	1	21	15	57	24			
Iota	Cedia	1	30	55	1	06	21		
Ella	Osgood	1	42	05	1	20	43		

FOURTH CLASS.

J B Topham	Coates	1	11	20	48	42			
Effie	Miller	1	13	05	51	24			
Zephyr	Chase	1	33	20	1	11	58		
Mirage	Sears	57	15		33	55			
Tuna	Servey	1	00	55	38	22			
Pocy	Rock	1	04	15	41	47			

In the first class *Excelsior* takes the prize. In the second *Cyda* takes the prize as keel schooner, and *Fanchon* as centreboard sloop. In the third class *Carrie*, keel sloop, and *Holden* and *Expert*, centreboards, take the prizes. In the fourth class the *J. B. Topham*, keel, and *Mirage*, centreboard, take the prizes. Judges, Edward Kemble, E. H. Dodge, F. T. Dalrymple, E. H. Rice, C. S. Benjamin and C. W. Richardson.

OSWEGO REGATTA.—The open regatta sailed at Oswego, N. Y., July 4, brought quite a number of yachts to the line. At 11:20 the following were sent away over a course twelve miles long: *Ella, Rhoda, Idler, Magic, Mystery, Isabelle, Lottie Blair, Adelaide, Rival, Blackbird, Balaklava* and *Ida*. Prizes were distributed by the bushel, and so *Ella, Magic, Adelaide, Rhoda, Blair* and *Isabelle* all got a slice in the order named, from $30 down to $5. No times were taken, and the whole thing was of the primitive country fair type, where every

pumpkin is the biggest, and all help themselves to leather medals. *Ella* gained four miles lead over the ruck, which is the one saving incident that makes the match worth recording.

BEVERLEY YACHT CLUB.—Forty-fifth regatta. Open race, Cotuit, July 4. Course from judge's yacht off Coodman's Wharf, rounding a stakeboat off Perkins' Wharf and stakeboat one mile S.W. by S. off Perkins' Point, to judges' yacht—nine miles. Wind very strong, S.W. by W. Most of the boats were double or triple reefed. Following is the summary:

Name and Port.	Owner.	Length. FT	IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Fanny B Esty, Osterville.	O Hickerson	26	4	1 14 51	1 08 05
Ethel, Osterville	H C Crosby	21	9	1 17 33	1 09 41
Edro, Osterville	D Crosby	22	2	1 17 26	1 10 09
Carlew, Centreville	Bear-c	24	3	1 17 42	1 12 35
Mystery, B Y C	H Stockton	19	1	1 26 28	1 14 59
Carp, Osterville	J Adams	21	4	1 23 23	1 15 22
Norna, B Y C	F C Lowell	19	1	1 29 26	1 18 00
Waquoit, B Y C	A T Perkins	21	6	1 26 22	1 18 12
Essie, Centreville	G H Fuller	26	4	1 23 37	1 19 27
No Name, Cotuit	A Coolidge	16	4	1 59 30	1 43 44
Alert, Cotuit	B Small	16	4	Not taken.	
Garibaldi, B Y C	R S Codman	15	3	Disabled.	
Edith Rose, —	W Fish			Disabled.	
Peep, B Y C	E J Lowell	12	9	Disabled.	
Louyse, B Y C	T Coolidge, Jr.	12	7	Disabled.	

First prize goes to *Fanny B. Esty*, second to *Ethel*, third to *Edro*. Judges' yacht, *Nina*. Judges—Geo. P. Gardner, W. D. Hodges, J. Templeman Coolidge.

Forty-sixth regatta; special race for first class, Cotuit, July 5. Course as in forty-fifth regatta; wind strong N.E.:

Name.	Owner.	Rig.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Waquoit	A T Perkins	sloop	21 6	1 25 37	1 17 27
Mystery	H Stockton	cat	19 1	1 29 20	1 17 54
Norna	F C Lowell	cat	19 1	1 31 07	1 19 41

Waquoit takes first prize and *Mystery* second prize. Judges' boat, *Nina*, B. Y. C. Judges—J. Templeman Coolidge, George P. Gardner.

Forty-seventh regatta; special race for second class, Cotuit, July 7. Course as in forty-fifth regatta:

Name.	Owner.	Rig.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Nina	F C Lowell	cat	15 1	1 46 43	1 27 57
Louyse	T Coolidge, Jr.	cat	12 7	1 57 16	1 33 42
Garibaldi	R S Codman	cat	15 3	1 55 14	1 37 33

Nina takes first prize and *Louyse* second prize. Judges' yacht, *Norna*, B. Y. C. Judges—J. Templeman Coolidge, Wm. D. Hodges. Former reports of the 45th regatta of this club are incorrect. REEF POINT.

SEAWANHAKA YACHT CLUB.—In obedience to the circular issued by order of the Vice-Commodore, the yachts of this fleet proposing to join the annual cruise collected in Glen Cove harbor, July 8, Vice-Com. O. E. Cromwell in charge. The fleet was not a large one, but many vessels will join at the various ports along the Sound. The fleet sailed for Oyster Bay, thence to Black Rock, and possibly Thimble Island, New London, Shelter Island, Stonington, Newport and New Bedford will be taken in on the way. Corinthian rules are enforced, sails being restricted to working sails and spinnaker, and owners must steer their own yachts as far as possible.

SOUTHWARK YACHT CLUB.—The June regatta of this club was sailed on the 23d ult., but for want of wind was not very interesting. According to the rules of the club, the champion flags won by the three classes of boats at the annual regatta must be won twice again during the season to entitle the winners to permanent possession. In addition to the flags a sum of money was subscribed by each boat, which was to go along with the flags to the successful boats. The following boats were entered and tried to sail over the course—from Dickerson street wharf to Chester Buoy: First class double-enders—*Maid, Mitchell, Young* and *Emma Brugam*. Second class double-enders—*Morgan, Emma, Cutter, Hagan* and *George*. Tuckups—*Boyle, Douglass, Ohris. Kleinz, Sparks, Wade, Gradwell, Lenoir* and *Campbell*. It was a drift all the way down, with *Boyle* leading near the turn, followed by *Douglass, Mitchell, Campbell* and *Maid*, while *Cutter* led in the second class. Finally, the race was abandoned, as there was no prospect of reaching the lower mark, four miles below Lodge's Point, with the flood tide turned against them. A number of yachts under command of Com. Harper, of the South Camden Y. C., visited Trenton, N. J., July 4, a very enjoyable cruise being the result.

SOUTHERN YACHT CLUB.—The matches, July 4, off Bilox, under the auspices of the S. Y. C., were sailed successfully in a stiff breeze from S.W. Course, a triangular one, sail twice over, distance, 9 miles. At 1:25 P. M. a start from an anchor was effected, and all went away with a free sheet along the shore side of the course, and then beat up the second side and came back to the start with a leading wind. First round finished as follows: First class, *Cydmus*, 2h. 34m.; *Pluck and Luck*, 2h. 34m. 59s. Second class, *Xiphias*, 2h. 38m.; *Phantom*, 2h. 28m. 43s.; *Puck*, 2h. 44m. 35s. Third class, *Maggie*, 2h. 41m. 5s.; *Gypsey*, 2h. 41m. 23s.; *Juanita*, 2h. 43m. 26s.; *Cromwell*, 2h. 44m. 44s.; *Mury A.*, 2h. 46m. 35s. Fourth class, *Olivia*, 2h. 45m. 5s.; *Claire F.*, 2h. 45m. 40s. The latter two fouled in rounding, but no protest was lodged. During the second round *Pluck and Luck* hauled up on *Cydmus* a little, and *Cromwell* gave up, her shrouds carrying away. After some sharp manœuvering on the part of *Cydmus* at the last mark the finish was made as under:

FIRST CLASS.

Name.	Time. H. M. S.	Name.	Time. H. M. S.
Cydmus	3 23 28	Pluck and Luck	3 24 38

SECOND CLASS.

Xiphias	3 31 00	Phantom	3 32 01
Puck	3 41 25		

THIRD CLASS.

Maggie	3 36 00	Juanita	3 38 03
Gypsey	3 36 23	Mary A	3 45 00

FOURTH CLASS.

Olivia	3 42 35	Claire F	3 42 25

Gypsey claimed a foul from *Maggie*, which has not yet been decided. *Cydmus* was sailed by Carlos, *Pluck and Luck* by Robert Dolbear. *Xiphias* by John Clemens, *Maggie* by Martin Green, and *Olivia* by Sam Gantier. *Pluck and Luck* wins on time allowance in first class, *Xiphias* is second; third class in doubt until claim of foul is decided, and *Olivia* wins in fourth class.

BUFFALO YACHT CLUB.—*Buffalo, July 7.—Editor Forest and Stream:* Some time ago a committee waited on the Fourth of July Committee of Buffalo City and asked for a sum of money to defray any expense that our club might go to, such as buying prizes, etc., but they kept putting us off until finally they dropped us out of the day altogether, when, had they made an appropriation of even a small amount, we would have treated Buffalonians to the grandest sight they ever saw, as our yachts were all ready but two, and the wind from the north was just fresh enough for an exciting regatta, but we were not going to display ourselves after the appropriation was *non est*, and we all agreed to go where we wished. The night of the 2d of July the new schooner yacht *Petrel* was completely stripped of all her sails and rigging by river thieves or pirates, loss $125, but we have offered a reward for the arrest and conviction of the thieves, and think that we will overhaul them. This yacht was going to Bay View, on Lake Erie, on the Fourth, but the loss of her sails prevented her. The yachts *Telephone, Mystic* and *Arrow* went up the lake on a short cruise, and the schooner *Corsair* took a party down the river to Sheerwater, a beautiful spot some 8 miles this side of the Falls. The schooner *Fleetwing* left Buffalo at 7 P. M., July 3, for Point Abino, Canada, distance 12 miles. We arrived there at 11 P. M., turned in, and at 4 A. M. cast off and started for Erie, Pa., distance 75 miles from the Point, and we made the run in 10¾ hours. We went across the lake wing and wing, and it was a most charming sail. Met with quite an ovation at Erie, and from the looks of the docks we judged that the whole town had turned out to receive us. The leading boat clubs gave us a dinner, and we passed the time very pleasantly. Left there at 8 P. M. Saturday, and arrived home last night at 11 P. M., a long trip down, but we had head winds to contend with, and besides, we were becalmed for 3 hours about 5 miles from Buffalo. The new sloop yacht *Cygnet* was launched last week, and they are now hard at work finishing her up, and when she is ready for sea I think she will take the rag off of everything around here. The sloop *Kittie* has been raised, but looks worn out, although with a thorough overhauling she will yet make a good boat. PENNANT.

MARBLEHEAD REGATTA.—The open matches under the auspices of the Marblehead Yacht Club, forming the sixth annual regatta at that place, were sailed June 17, Bunker Hill Day. Wind fresh from N. W. and at times puffy. Five classes with courses as follows;

For the first, second and third classes—Distance, 8 miles; from stakeboat off Skinner's head, leaving Half-way Rock on starboard, thence to a stakeboat, thence to Marblehead Rock, back to starting point. For fourth and special classes—Distance, 5 miles; from stakeboat off Skinner's Head, leaving Gray's Rock on port, Coney Island on port, stakeboat off Beckford's on port, Gray's Rock on starboard, back to starting point.

After a false start, the large fleet of 72 yachts got away. There had been entries to the number of nearly 150! Topsails had to come down outside and coamings were brought awash. *Breeze* and *Adrienne* had a fine match together, resulting finally in favor of the former by a very small margin. The *Unique*, of the *Julianar* type, attracted considerable attention and stood up to her canvas much better than the rest in spite of her narrow beam. Being under-sparred and not having enough breeze for her kind, she failed to take the prize, but showed fine sailing alongside the craft of the flat-iron model. *Cyda*, a new boat by Keating of Marblehead, did good work in beating *Loiterer* and landing first money. We annex the result of the sailing, the list including only those yachts whose times were taken, other entries having failed to start or not finishing, the official record being sadly deficient in full particulars. *Starlight* and *Dash* started but did not finish:

SPECIAL CLASS.

Name.	Owner.	Cor. Time. H.	M.	S.
Inez	Joseph W Bowden	59	95	
Grace	D O Doherty	1	02	15.5
Lurline	B F Russell	1	06	40
Saroni	J F Bowden	Not taken.		
Transcendence	J Fabens	1	03	24
Sadie	A L Dean	1	10	28
Fly	C H Berry	1	11	30
Nellie	John Blaney	1	12	50

First prizes go to *Breeze, Cyda, Lillie, Gael, Posy, Hard Times, Holden* and *Inez*. Second prizes to *Loiterer, Magic, Lottie, Eugenia, Sunbeam, Fancy* and *Grace*. The dories *Transcendent* and *Sadie* also take first and second prizes in their class among the open boats. During the match *Echo* and *Quimper* fouled, throwing the latter out, though *Echo* under reefed canvas, owing to her having been run into previously by *Vif*, made the whole course in fair time. *Lillie, Mabel, Eugenia* and *Posy*, in true American style, carried away topmasts, because they could not do anything else with them. *Lurline* took a bad knock-down, *Musette* twisted off her rudder, *Wild Flower* ran down a boat, *Addie Elmer's* crew were in "kingdom come," and what with a long list of other casualties one may well conclude that the day was not over-favorable to our pasteboard craft. The big *Tarolinta* and Mr. Little's handsome schooner *Brenda* were in harbor during the racing.

The forty-eighth regatta, and fifth of the season, was sailed July 12. The match was one of a series for the champion pennants of the club, to be sailed for in classes, but without time allowance. Wind from E.—puffy. First class for yachts 21 to 30ft. Course from judges' boat, leaving Spindle Rock on port hand, a stakeboat or buoy anchored off the southwest Breaker Buoy off Pig Rocks, on starboard hand; Fog Buoy, off the Graves, on starboard hand; Egg Rock on starboard, and returning to judges' boat—distance, thirteen miles. Two starters—*Fanchon*, Arthur Burgess, length 25ft. 6in., and *Waif*, L. W. Clark, length 28ft. 7in. The latter got some of her topsail gear adrift, and *Fanchon* won in 2h. 36m. 48s actual, and 2h. 31m. 13s. corrected time, beating *Waif* by 8m. 44s. Only one prize, which goes to Mr. Burgess' sloop. Second class, for yachts 17ft. to 21ft. Course, from judges' boat, leaving a stakeboat or buoy one and a half miles east by south of Egg Rock on starboard hand; leaving a stakeboat or buoy off Little Nahant on starboard hand, and returning to judges' boat—distance, six miles. The starters included some of the best sailers in the club, and *Hoiden* for the nonce turned tables and won handsomely from Com. Grant's *Fancy*. The following is a summary:

Name.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Holden	S W Burgess	19 09	1 11 34	1 04 38
Fancy	P Grant, Jr	19 01	1 15 00	1 07 23
Josie	C H Minot, Jr	17 09	1 15 15	1 06 23
Nereid	J F Brown	18 02	1 20 35	1 12 13
Mona	H B Richardson	18 09	1 26 33	1 17 56

Prizes go to *Hoiden* and *Josie*. Third class for yachts 14ft. to 17ft. Course, same as for second class boats. Summary:

Name.	Owner.	Length. FT. IN.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Psyche	R D Sears	17 0	1 06 31	56 51
Frolic	N H Gibbs	16 8	1 09 59	59 54
Mirage	H F Sears	17 0	1 11 35	1 02 06
Blue Bell	Com Jeffries	16 6	1 12 13	1 01 57
Avis	E M Haskell	16 7	1 12 23	1 02 10
Rose	F E Cabot	15 6	1 25 22	1 15 57

Prizes go to *Psyche* and *Frolic*. Judges—Messrs. F. W. Lawrence, Arthur B. Danny and Wm. A. Jeffries, aboard the schooner *Fearless*, E. Y. C.

ROYAL CANADIAN YACHT CLUB.—The officers elected for the year are as follows: Commodore, A. R. Boswell; Vice-Commodore, John Leys; Captain, J. H. Haggerty; Hon. Secretary, H. J. Grasett; Committee, R. P. Stephens, W. J. Bains, W. Hope, J. H. Ferguson, Geo. Harman, A. G. Sprague, J. C. Robertson, H. A. Briscoe. The fleet comprises the following yachts: Schooners—*Oriole*, 95, W. C. Campbell; *Geraldine*, 28, Com. A. R. Boswell; *Ripple*, 35, C. Ball & B. Jones; and *Countess of Dufferin*, 200, Major C. Gifford. Sloops—*Coral*, 17, W F. McMaster; *Gorilla*, 35, Major Chas. Gifford: *Lady Stanley*, 35, A. Hugel; *Brunette*, 24, C. Heath; *Irene*, 35, S. Smith; *Coquette*, 17, J. Stuart. Cutter—*Rivet*, 17, R. Elmsley. Yawls—*Alarm*, 38, H. J. Grasett; *Imogene*, 6, Hon. W. P. Howland, C. B.; *Madeleine*, 6, G. E. Gillespie; *Pixie*, 3, Capt. Stupart, R. N., and several smaller craft. The match for the Prince of Wales Cup will be sailed some time in September, when the Marquis of Lorne will be present.

THE IDLER.—Since the advent of the schooner *Idler* upon the Lakes, great interest has been excited to see the famous New York schooner sail alongside the lake craft. Of course in the minds of the natives she has already been beaten time and again, but we might as well caution the skippers of lumbering grain and iron ore schooners not to back their opinions with cash, or their purses will be sadly depleted. The *Idler* can sail around anything yet turned out from Western yards in spite of the following news we have received from her. Says a dispatch from Milwaukee—it is considered sufficiently important to telegraph such news out there: "The captains of the schooners *Wells Burt* and *American* claim to have beaten the yacht *Idler* at the lower end of Lake Michigan, working against a strong head wind." Now, with all due deference to these worthy fresh-water tars we beg to disbelieve any such thing. Then comes along another, this time couched in the more evasive term "it is reported" that the *Helvetia* had a brush with the *Idler* on the way up Lake Michigan and outsailed her. We venture the assertion that *Idler* can sail two knots to every one of even such a noble specimen of architecture as the redoubtable *Helvetia* may be. Then again some heroes of the lakes are said to be willing to wager ducats upon the sloop yacht *Greyhound* against the *Idler*. Now these worthies should either learn the difference between a small sloop and a 200-ton schooner, and that a match between the two under any circumstances would be a farce, or they should clap a stopper on their jaw tackle. Our correspondent, however, sets matters right again when he discounts all this exuberance on the part of the dug-out skippers, and says that Chicago yachtsmen who know something about a boat are delighted with *Idler's* appearance and speed.

SAN FRANCISCO YACHT CLUB.—Tickets of admission to the club house at New Saucelito have been issued by the club, and through the courtesy of the secretary we are enabled to offer the privileges of the club house to friends bound for the Golden Gate and desirous of inspecting one of the neatest and most commodious club houses in America. The tickets bear upon their face a well executed cut of the club house by Capt. Moody, of San Francisco, and show in the offing a yawl, catamaran and schooner with Bermuda mainsail, typical of the yachts of the club.

GLOUCESTER REGATTA.—In the open races, sailed July 4, the following yachts started: *Ida Bell*, J. Bearse; *Bonny*, S. James; *S. X.*, A. Hobbs; *Sassacus*, B. Griffin; *Idle Hour*, E. Tucker; *Eva*, H. Wheeler; *Mary*, J. B. Lloyd; *Hattie G.*, F. Gaffney; *Moses Rust*, E. Kennedy; *Zephyr*, P. Stanwood; *Dash*, D. Stanwood; *Alice*, A. Wheeler; *Advance*, H. Smith. Won by *Ida Bell* in 2h. 18m. 41s., with *Bonny* second in 2h. 21m 40s., and *S. X.* third in 2h. 23m. 18s. These three yachts take prizes.

THE IDA.—This is the name of a tiny little craft hailing from Baltimore, and in charge of Capt. Chas. Baifcke. She arrived at Gowanus on the 1st inst., after a prolonged cruise in the South of one year's duration. The captain informs us that he never wants to go to sea in a finer, abler boat than this little specimen. She is a sample of what depth and draft will do toward making even the smallest yacht a seaworthy and reliable cruiser. The *Ida* is only 18ft. long, about the size of a small cat-boat, has 6½ft. beam and 4½ft. depth, with a draft

of 3ft. 6in. All the gear leads aft and is within the reach of a single hand. In this little yacht Capt. Haffcke set sail from Baltimore June 1, one year ago, and taking boldly to sea made Florida and the Mexican coast by the outside route. On his return to the North advantage was taken of the inland channels and sounds along Georgia, the Carolinas and Virginia, for the purpose of observing the country as closely as possible. Here is a sample of what sport can be got out of a diminutive yacht, if she is only built upon right principles, and not spread out like a pancake. Imagine an 18ft. boat of the customary man-trap model attempting to cruise to the West Indies and back, what a helpless figure she would cut as soon as outside of the rivers, and still we meet with those who think small boats cannot be built as safe and seaworthy as large ones, and that the sloop of to-day is the acme of the yacht-builder's art.

PROVIDENCE YACHT CLUB.—The "Anderson Challenge Cup," given to the club by Mr. E. J. Anderson, will be sailed for in September of each year, until won three successive years by the same yacht, when it will become her property. Four entries or no race. One class only with time allowance. Fixed ballast, but no restriction as to sail. Entries to be made to Mr. E. F. Dustin, Secretary P. Y. C., Providence, R. I. As fixed ballast is one of the conditions of the match, we hope all advocates of legitimate racing belonging to this club will not fail to bring their flyers to the start. Such racing should be encouraged quite as much as the sand-bag nuisance should be frowned down.

OGDENSBURG REGATTA.—The open matches sailed at Ogdensburg, N. Y., July 4, brought out a fleet of eight yachts, most of them from the Canadian shore. Course, ten miles; wind fresh, most craft having down a close reef. Entries: *Surprise* of Trenton, *Puzzler* of Brockville, *Faith* of Ogdensburg, *Amelia* of Brockville, *Wide Awake* of Belleville, *Emma* and *Mystery* of Kingston, and *Peerless* of Brockville. *Puzzler* gave up on the first round, and her example was followed by *Wide Awake*, *Amelia* and *Mystery*. *Surprise* carried away throat halliards and ran for harbor. *Faith*, after having gained a good lead, capsized in loyal fashion, and only two out of the lot were still on their legs, *Emma* and *Peerless* having things to themselves. *Emma* finally got in safely, and was awarded the prize, and thus the honors go to Canada, and well they may, for the yacht clubs on the north shore of the Lakes have exhibited a great deal of earnestness and spirit in development of the sport. The *Emma* was built and sailed by Cuthbert, of Toronto. The following are her dimensions: She is of slightly greater draught than the *Surprise*, and is a little longer over all. The hull is of pine, with oak keel, stem, stern post and frames, sheer and garboard strakes and covering board, pine deck and cabin grained in oak and cherry. The dimensions of the hull are: Length of keel, 27ft. 9in.; extreme breadth of beam, 10ft. 5in.; depth at bow and stern, 4ft. 6in.; galvanized Swedish iron nails for fastening. The dimensions of canvas are as follows: Mainsail, 26ft. hoist, 34ft. on boom, 20ft. gaff and 40 on leech; balloon gaff topsail, luff 26ft., leech 15ft., foot 22ft.; jib, luff 40 ft., leech 28ft., foot 24ft; jib topsail, luff 44ft., leech 26ft., foot 20ft., together with a large balloon jib; bowsprit outboard 18ft. 6in.

DORCHESTER YACHT CLUB.—The first club championship match was sailed July 12, for a silk pennant, offered by Mr. G. H. L. Sharpe, Secretary of the club. Regular triangular club course, distance seven miles. Wind variable from E. *Rocket* took the lead and won, with plenty to spare. Summary:

Name.	Owner.	Length. Ft. In.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Rocket	B F Bass	36 03	2 19 27	1 48 08
Dream	C Barnard	30 03	2 21 50	1 54 09
Aaule	W H Nicholson	16 07	2 21 12	2 02 41
Curlew	G H L Sharpe	19 02	Withdrew.	
Spray	W C Taft	17 10	Withdrew.	

PROTESTS DECIDED.—In the regatta of the Beverly Y. C. off Nahant, June 14, the first prize has been awarded to *Fancy*, in the second class, after re-measuring the *Holden*. The latter takes second prize. The judges of the Boston City Regatta, July 4, have also decided the protest entered by *Adrienne* against *Breeze* in favor of the latter, after testimony to the effect that *Breeze* dragged her anchor, but only crossed the line after the gun to start. This decision Mr. Pfaff, of the *Adrienne*, fully concurred in, and *Breeze* takes first prize among the first class schooners by 23s.

RIVERTON (N. J.) YACHT CLUB.—The annual regatta of this club was sailed July 4, over a course from Riverton pier to lower buoy off Eight-mile Flats, thence to buoy off Torresdale, sail over three times. Wind fresh from S.W. A large fleet of small craft were entered, and after a spirited race, in which, as a matter of course, half the fleet capsized, fouled buoys and lost spars, the little *Thistle* and *Charlie* carried off first and second prizes in the first class. In the second *Ethel* won easily, *Moonlight* second, both taking prizes.

HAVERHILL YACHT CLUB.—Since the organization of the Haverhill Y. C. it has been a custom of the yacht owners to take a cruise Fourth of July week, and this year the mooring ground in front of the club house looked lonesome Friday, the 4th. The yachts *Vision*, *Lucy*, *Collins* and *Abbie M.*, Fleet Capt. Harris, started Saturday and cruised to Marblehead and Lynn. They were unfortunate enough to get caught off Plaine Island in the severe squall Sunday June 29. The *Abbie M.* ran into Ipswich, and the *Vision* managed to reach Essex River safely. Both parties describe their position as being very perilous; it was a piece of good luck to cross the bars of those harbors all right in such a blow. Wednesday after, the *Emma L.*, Capt. Tuxbury, sailed for Portland and other points in Maine. Also went down river the same day *Magic*, Capt. Foist, *Linnie May* and *Josie*, J. Jutras, and in company with them, the *Lizzie Warner*, these boats taking a trip around the Cape to the South. Thursday evening the yachts *Pinafore*, *Twilight* and *Willa K.* sailed for Cape Ann, the *Willa K.* making around the Cape, returning the same day, went into Annisquam, spending Saturday there, sailing for home Sunday morning, arriving in Haverhill at 4 o'clock P. M., as did nearly all of the fleet. Last year the fleet cruised in company, while this year they were very much scattered, hardly two yachts getting together during the time. All reported a good time, very good weather being experienced. WEATHER HELM.

KEEL SHARPIES.—Concerning the new keel sharpie recently built by Mr. Thos. Clapham, of Roslyn, L. I., we learn that she is a decided success, and is a very steady boat on her helm, and very fast with sheets lifted, and is ready to race anything that chooses to try her on.

DOUBLE CANOEING.—Com. Chase, of the J. C. C. C., has taken along a companion in his canoe in the shape of a Florida alligator of the rising generation. This peculiar pet and *compagnon de voyage* measures about 9in. long, and is as tame as a kitten. It will be allowed full run of the canoe, and can paddle about in the bilge or sun itself on deck *ad. lib.*, and should its memory of Florida's verdant hammocks still be bright, the sight of the green grass and a whiff of fragrant country air may serve to still the little fellow's pangs for "home, sweet home" in the sunny South. He is fed once or twice a week by having his jaws pried open and soft meat and fish stuffed down his throat, and for a snooze delights in crawling up the Commodore's sleeve, where he will clog and refuse to be shaken out.

THE CANOEING INTERESTS.—Mr. N. H. Bishop, from whose pen we have published many interesting sketches of his voyage South in a canoe, and who is well known in literary fields through his "Voyage of the Paper Canoe," and other works of a similar character, has been elected honorary member of the Jersey City Canoe Club. Mr. Bishop's works have been translated into several languages, and are published in Europe as well as America. The charts and mass of special information being highly valued. His "Second Voyage to the Gulf of Mexico" is now in press, and we will soon be able to review this book for our readers' benefit.

LONGUEUIL RACING.—The first races of the Longueuil Boating Club for the season took place Saturday, 5th inst. The judges were Mr. T. Boyd, President of the club, and Mr. T. P. Butler. The Secretary, J. Thos. Ostell, acted as starter. The first race was a sailing race for "Ladies' flag," won last year by the *Iona*. The following yachts passed the line in the order named: *Dauntless*, *Waterwitch*, *Iona*, *Neva*. They were becalmed at Longue Point, and not going around the course in the time agreed, the race was declared off. The next race was single scull, two miles. R. Lusher and Gus Pell started, Lusher taking first water lead the best part of the way, coming in winner by three lengths. The pair-oared for junior members, for a prize presented by the President, brought the following crews out: No. 1, N. Lusher, B. Cotte, P. Cotte, coxswain; No. 2, J. Lovelace, J. Moffatt, E. Lovelace, coxswain; No. 3, F. McClure, F. Pell, G. McClure, coxswain. The three boats got a capital start, and No. 3 soon took the lead, keeping it up for the whole mile, and coming in winner by three lengths. The pair-oared race, two miles, for two cups presented by Messrs. Lovelace and Ostell, was a well-contested one. Three boats started: No. 1, Harry Pell, R. Lusher; No. 2, T. P. Butler, K. M. Ireland; No. 3, Frank Foster, Gus Pell. No. 1 and 3 made a good race, although No. 3, having a heavier boat, could not keep up with their opponents, who came in four lengths ahead. The last race was a challenge between the married men crew and the four-oared crew from St. Marie, one mile and a half. Both boats started in capital style, but it soon became evident that the St. Marie had more training, and they came in winners by about four lengths. The first moonlight excursion of this favorite club took place Wednesday, the 9th inst. The steamer *Montarville* left Island Ferry Wharf at 7:45 P. M., calling going and returning at Longueuil. A very enjoyable time, with music and dancing, was had, every one returning home delighted with the club's efforts to entertain its guests.

THE ENTERPRISE WINS.—In the recent race from New London to Greenport between yachts of the Atlantic and Eastern Yacht Clubs, the following are the correct times made by the sloops, all previous reports being in error. *Regina* had to allow *Enterprise* 3m. 51s., and *Winsome* 5m. 15s:

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Enterprise, E Y C	10 47 30	3 42 00	4 54 30	4 50 39
Regina, A Y C	10 40 45	3 32 00	4 51 15	4 51 15
Winsome, A Y C	10 56 30	3 41 00	5 04 30	4 59 15
Schemer, A Y C	10 43 00	Disabled.		
Nimbus, A Y C	10 43 30	Did not finish.		

Enterprise, the only keel yacht among the lot, and a cutter at that, therefore wins the prize with 36 seconds to spare. This should go far to remove the silly prejudice existing in New York waters against keels and handy rigs.

EASTERN YACHT CLUB REGATTA.—Full report from our special correspondent appears next week.

MODEL SAILING RULES.

For the benefit of the rapidly-increasing number of yachtsmen on the Lakes, we add the "sailing regulations" of the Detroit Yacht Club, which are among the best, simplest and most perfect we have seen. That it should be left to a comparatively young organization of the West to teach the older clubs of the seaboard how to measure yachts for match sailing, speaks proportionately as much for the vigor, commonsense and intelligence of the Lake yachtsmen as it does for the incapacity and lack of logic among leading minds of the Eastern clubs, all of whom seem incapable of grasping more than one figure at a time, and consider it too much "theory" to stretch a tape-line three times instead of once. Exception in this respect must be made of the N. Y. Y. C. and the R. N. S. Y. S., the only two clubs along the Atlantic coast which do not subscribe through sheer slovenliness and laziness to the stupid heresy of sailing on length measurement alone. The following are the rules of the D. Y. C. referred to:

1st. The first class shall consist of all yachts measuring over thirty feet on the water line. The second class shall consist of all yachts measuring over twenty-two and under thirty feet on the water line. The third class shall consist of all yachts measuring less than twenty-two feet on the water line.

2d. Measurement shall be made as follows: Length on the water line; greatest breadth of beam and depth of hold from under side of deck to top side of planking, at or as near the mast as possible.

3d. Yachts may carry not to exceed one man for each five feet of gross measurement.

4th. After the start, the shifting of dead ballast, throwing out, taking in or booming out of ballast shall not be allowed. Each yacht or boat must bring back the same persons with which it started.

5th. All ceilings, seats and fixtures must be kept on board and in their places during the regatta.

6th. Anchoring will be allowed during the race, but no means must be used to propel the boat but sails.

7th. The regatta committee reserve the right to place a scratcher in each yacht or boat sailing in the regatta.

8th. The course to be sailed will be as follows: For first and second class yachts, east by south six miles, thence north-northwest six miles, thence southwest six miles, passing between the home stakeboats. The course for the third class yachts will be east by south six miles around stakeboat, thence home, passing between the stakeboats.

9th. The start will be a flying start, all three classes getting under way at the same time.

10th. The warning gun will be fired at 10 o'clock A. M.; the starting gun at 10:10 A. M., and ten minutes will be allowed for the yachts to get across the line after firing the starting gun. The race must be made within six hours from the start.

11th. A time allowance of two seconds per foot of gross measurement per mile shall be made for first and second class yachts, and one second for third class yachts.

12th. There shall be no restrictions as regards the number or kind of sails to be carried.

13th. The ordinary hand lead and line only shall be used in sounding.

14th. A competent person shall be placed in each stakeboat to make observations, and in the event of any information being required, he may be examined by the judges for that purpose.

15th. Yachts on the port tack must invariably give way to those on the starboard tack; and in all cases where the doubt of a possibility of a yacht on the port tack weathering the one on the starboard tack shall exist, the yacht on the port tack shall give way. If the other yacht keeps her course and runs into her, the yacht on the port tack shall be liable for all damages.

16th. Any yacht or boat touching any stakeboat or buoy used to mark out the course (except as specified hereafter) shall forfeit all claim to a prize.

17th. Any yacht or boat bearing away, or altering her course to leeward, and thereby compelling another yacht or boat to bear away to avoid collision, shall forfeit all claim to a prize, except when two yachts or boats are approaching a windward shore, buoy or stakeboat, with a free wind, and so close to each other that the weathermost cannot bear away clear of the leewardmost, and by standing on further would be in danger of running a-hore or touching said buoy or stakeboat. Such leewardmost yacht or boat, on being requested to bear away, is immediately to comply. The weathermost yacht or boat must, however, in this case, bear away at the same time as the one she hails, if she can do so without coming in contact.

18th. When two yachts or boats by the wind are approaching the shore, a buoy or stakeboat together, and so close that the leewardmost cannot tack clear of the windwardmost, and by standing on further would be in danger of running ashore or touching such buoy or stakeboat, such weathermost yacht or boat, on being requested to put about, is immediately to comply. The leewardmost yacht or boat must in this case, however, tack at the same moment as the one she hails, if she can do so without coming in contact.

19th. When rounding a buoy or stakeboat, the yacht or boat nearest thereto shall be considered the headmost boat, and should any other yacht or boat that is in the regatta compel a yacht or boat nearer any buoy or stakeboat to touch the said buoy or stakeboat, the yacht or boat so doing shall be liable for all damages and forfeit all claims to a prize. Yachts or boats so compelled to touch a buoy or stakeboat shall not suffer any penalty therefor.

20th. Yachts or boats going free must invariably give way to those by the wind on either tack.

21st. Yachts rounding a buoy or stakeboat shall leave it on the port side.

22d. Yachts or boats, in finishing the regatta, shall pass between two boats anchored in line at the starting point.

23d. Yachts or boats entering in the regatta shall be governed by the rules and regulations thereof in all particulars, and any yacht or boat breaking any of the rules and regulations of the regatta shall forfeit all claim to a prize and be liable for all damages that may occur.

The decision of the judges shall be final in all cases.

Take notice especially of Rules 2, 3, 4, 11, 12, 14, and go and do likewise.

Cricket.

—A number of reports have been deferred until our next issue.

DAFT'S TEAM OF ENGLISH CRICKETERS.—Daft's team of splendid cricket players will sail from Liverpool to Quebec on August 28, where they will play their first match on or about Sept. 10, and with Ottawa on Sept. 15. Three other games will probably be arranged for in Canada. The team will then proceed to Detroit, where the first game in the United States will take place. As far as known, the cricketers will then visit Western New York, New York City and Philadelphia. It is necessary that all fixtures should be made and the route mapped out before Daft leaves England. That no time may be lost, and that this grand international cricketing tour shall in every way be a success, Mr. Andrew Peck, of the firm of Peck & Snyder, 124 Nassau street, New York, has been empowered by Daft to arrange for all matches and attend to the business connected with them in the United States. Secretaries of American clubs would therefore do well to communicate with Mr. Peck at once, as but a limited number of games can be played. The list of players and other information is expected by the next English mail. Full particulars will be found in our cricket columns.

STATEN ISLAND VS. LONGWOOD.—A capital match was commenced on Friday afternoon, the 11th inst., on the Island grounds between the above named clubs. This was the second game of Boston visitors, and a goodly number of cricket enthusiasts, among whom were many ladies, turned out to bid the Longwood gentlemen a hearty welcome. It is well worth recording, that the Boston eleven was to a man the same that played the Islanders just one year ago at Longwood, and we trust that many years will see no changes in its ranks. At 4 o'clock the game commenced with the Longwoods at the bat. The feature of the innings being Farley's 45, contributed without a chance. Hubbard and Caton both batted carefully and well, the latter being run out by a lucky shy by Stevens. At 6, the home club sent Harvey and Moore to the wickets, the latter gentleman, however, was unfortunately injured and obliged to retire. Mylie took his place, and when time was called at 7, the telegraph showed 40 runs up. The light was very bad, indeed, during the last two hours of the play, and the Islanders deserve credit for their stand. On Saturday, at 10:30, the match was resumed, and before the home club was got rid of, 129 runs were on the book. It was now the Longwoods turn, and they went in for their second innings, with 38 runs behind. Jones, however, got hold of the bowling, and played an inning of 43 in rare good form, his hitting being both hard and clean. Bixby added 21, and Hubbard a good (not out) 20. The venture closing for 116, which might just as well have been over 140. And here we will say, that in both this and the St. Georges match, the Boston gentlemen lost a vast number of runs from want of starting sharp on the first. The Islanders although pushed for time, succeeded in making the necessary number of runs for the loss of 4 wickets, Ronaldson helping with a (not out) 40. It is but proper to congratulate the Staten Islanders on their victory, which was achieved against the best bowling they faced this season, Farley's being particularly good. The full score is annexed:

ST. GEORGE VS. LONGWOOD.—The first of the two matches played between the Longwood, of Boston, and New York club was opened on Thursday morning, the 10th inst., on the grounds of the St. Georges Club, at Hoboken, N. J. For several years past these clubs have met annually, alternately between Boston and New York, and their matches are always considered as special events of the season. The morning dawned with a pleasant breeze sweeping the ground, but toward afternoon it died out, leaving the day sultry and very trying to the players. The wicket was hard and dry, but thanks to Giles, the club's excellent ground man, it was as level as a billiard table, and played quite true from start to finish. At 11:15 the field was taken by the home club, with the Bostonians at the wickets. With comparative ease did the gentlemanly visitors bat the fast round bowling of Soutter and Moeran; but after 19 runs had been scored off, the former substituted Bance, with what a Canadian paper calls "slow lobs," at his end. This judicious change at once began to work wonders, the batsmen being all abroad in their play at the slows, and by them six wickets were clean bowled for 19 runs. We remember once (in 1864) seeing old Kendall help to scuffle out the Philadelphia club for 10 runs in the same way. Every now and then there are "slow lob" revivals, which catch the sinners unawares; but it is, however, the fact of being caught napping that generally does the damage, rather than the excellence of the bowling itself. The inning of the Longwoods closed for 71, of which Bixby's 21, Hubbard's 18 and Fay's (not out) 12 were the features. Conover, as usual, fielding superbly, a fine low catch at point marking his play. The St. Georges' venture yielded 150, Bance's 57 being top score, in which was a slice or two of luck early in the innings. Holland batted in fine form, as did the other double figure men. Peabody was kept busy at long leg, which position he filled very creditably. Late in the afternoon the Bostonians commenced their second inning, and when time was called the tins showed 90 runs for 6 wickets. Attention is called to the summary of fall of wickets and analysis of bowling. St. Georges won by 79 runs on first inning. Score:

OSWEGO FALLS VS. ONONDAGAS.—The return match between these two clubs was played at the Falls on the 5th inst., which resulted in favor of the home club by 8 wickets. For Syracuse, Bex obtained a fine 21 and Millward 11. For the Oswegos, Shoesmith (not out) 23 and H. Backus a fine (not out) for same number of runs. The batting of the visitors was particularly weak, their last five in the first inning going out without a run. The following are the totals:

	1st Inn'g.	2d Inn'g.	Total.
Oswego Falls	53	37 (2 wkts)	90
Onondagas	42	47	89

NORWICH VS. SIMCOE.—A match was played at Norwich, Ont., on the 4th inst. between these clubs, which resulted in a victory for the former by 9 wickets.

CRICKET AT BARRIE.—The Law Students Club was defeated by the Union Club on the 4th inst. by a score of 64 to 61.

YORKVILLE VS. TORONTO.—A match was played on the University grounds, on the 4th inst., between the above named clubs, resulting in favor of the former by 61 runs. The following are the scores: Yorkville, 108; Toronto, 47. For the visitors, Redmond 23, Baines 28, and Donaldson (not out) 10. For Toronto, Sproule and Brough obtained 21 and 12 respectively.

OSWEGO FALLS VS. ONONDAGA.—On July 4 the match between these clubs was largely attended at Danforth Park, Syracuse, N. Y. The home club scored 58, which was easily beaten by the Falls Club with 8 wickets to spare.

STATEN ISLAND VS. BELMONT.—Three first-class matches were played on the 4th inst., in the vicinity of New York; the most prominent one, however, was between the above-named sides. The Belmont, of Philadelphia, is a young organization, but one composed of good stuff, and the Island gentlemen were well pleased to receive a visit from its eleven. The Staten Island Club, like the famous St. Georges, are patrons of the "noble game," believing in the advancement of cricket, and leaving no stone unturned to make their matches popular and interesting. Besides having a goodly list of playing members, they also control a number of cricketers belonging to other clubs. This practical method of having, as it were, two strings to one bow, enables them, when necessity requires, to draw on a tolerably strong reserve corps. Remembering that the Belmont had recently beaten the Philadelphia and Chestnut Hill Club of Philadelphia, the Staten Island had the good sense, on this occasion, to play an amalgamated team against their guests and thereby win from them a ball. We cannot speak too highly of the courteous and delicate way with which the Staten Island thus deadened the sting of the Belmont's defeat. Would that all clubs were as thoughtful and considerate. It must be extremely gratifying to second eleven Staten Island men, who have the welfare of their club at heart, to watch with what readiness Mr. Ridgeway Moore (Secretary of the St. Georges) and Mr. Bance (who always plays with St. Georges against Staten Island), are always willing to lend a helping hand. The score is annexed, St. Georges' members, in italics:

Belmont.

Albany	9	19	63	86	88	88	107	142	147	149

Ties are remarkably rare in cricket. The St. Georges, however, played a tie match with the Young America, at Germantown, July 12, 1865—score 99 to 99. Another tie game was played at Ardmore, Aug 5, 1876, Rev. T. D. Phillipp's Canadian team vs. Merion—score 140 to 140.

BELLEVILLE VS. ST. CATHERINES.—At Belleville, Ont., these clubs played an interesting match on the 8th inst., when the visitors were defeated by 5 wickets.

OWEN SOUND VS. SAUGEEN PENINSULARS.—On the 7th inst. the Owen Sound Club defeated the picked eleven from the Saugeen Peninsulars by one inning and 59 runs. The match was played at Owen Sound.

LOCAL MATCH AT BARRIE.—The return match between the Law Students Club and Unions resulted in a victory for the students by one inning and 25 runs.

MANHATTAN VS. PATERSON.—The Jersey Club visited the Manhattan's at Prospect Park, on the 4th inst., and played their return match as will be seen by the score, the visitors were defeated by 35 runs. Score:

Manhattan.		Paterson.

HAMILTON VS. TRINITY COLLGE.—This match was played on the 27th ult., on the grounds of Trinity College, Toronto, and resulted in an easy victory for the visitors by one inning and 38 runs. The Trinity team was composed of old and present collegians. The batting of H. C. Semonds 68 (not out), for Hamilton, was a fine display of all-round cricket. This gentleman is undoubtedly one of the best bats in Canada; in 1877 he scored 150 for Port Hope in addition to many other large contributions. We are indebted to Alex Hawlay, Jr., Esq., Secretary of the Hamilton Club, for the following score and bowling analysis:

GRAND MATCH AT HAMILTON, ONT.—*Hamilton vs. Peninsular.*—This match, which has been looked forward to by all true lovers of cricket, took place on the 1st inst., on the Hamilton Grounds. The weather was all that could be desired, and the ground was never in better order or looked prettier. Great care had been bestowed on the wicket, and it played well throughout. There is one credit which must be given to cricket lovers in Hamilton, viz., that the same generous applause is given to an exhibition of good cricket by foes as it is to friends, and this is a feather in their cap, for it is not the same as a rule elsewhere. At 10:30, the hour for commencing, there was a fair audience, and in the afternoon the attendance was remarkably large, the ladies especially gracing the scene by their presence. Both clubs played their strongest teams, Detroit as usual having their professionals, while Hamilton for the first time had the services of Mr. B. Waud, who some years ago kept wickets both for his university and the gentlemen of England, and on this occasion well sustained his reputation. The Hamilton Captain having won the toss, elected to take the field. The subjoined score shows the individual play, but the features of this inning was the steady batting of Trooper, Dale, Treloar, and Littlejohn; the magnificent stumping of Bamford by Waud, and the catching of Armstrong by the same fine player; the innings closing for 78. After lunch, Hamilton went in for their innings, and during the stand made by Semonds, Waud, Hyman and Harvy, better batting, bowling and fielding has seldom been seen on the Hamilton ground, Dale handling the ball with great success—at one time sending down seven maiden overs in succession. The Hamilton's venture closed for 96. The Peninsular commenced their second inning, and when time was called had lost five wickets for 23 runs. Score:

[The foregoing is the record of this match, originally prepared and intended for publication by the Cricket Editor.]

PENINSULAR (2d) VS. WINDSOR.—A large number of the lovers of the game assembled on the cricket grounds at Windsor, Ont., on the 1st inst., Dominion Day, to witness the match between these teams. The score will show that the match was sufficiently close, to be interesting, and the lookers-on were repaid by seeing some good cricket. The home club won by three wickets:

Peninsular.

First Inning.		Second Inning.	
T Davies, b Lang	4	b Lang	0

—The New York and Sea Beach railway opens to day, the 17th instant. Boats will connect with the road at Bay Ridge to West Brighton Beach, and the trip from the Battery to the beach is expected to be made in thirty-five minutes.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 17, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

Trade supplied by American News Company.

GODBOUT.—Owing to some detention while *en route*, the fourth letter of Mr. Hallock's Godbout series, did not reach us in time for this week's issue. It will appear in our next.

—That great pleasure may be derived from *Pain* is shown by the satisfaction with which the public witnessed the display of fire works at Manhattan Beach last week. The exhibition's name was Pain, you know.

—We were compelled last week, as again to-day, to give more than usual space to reports of out-of-doors meetings, pigeon and glass ball tournaments, yachting, cricket, etc. Those of our readers whose tastes incline to other things must be content to wait their turn. Patience is a cardinal virtue this weather.

WHITE MOUNTAINS.—The season at the White Mountains is now at its climax, and an increased number of visitors are availing themselves of the facilities which new railroad lines afford to reach the attractive resorts which they now penetrate. One can reach the Profile, the Crawford and the Fabyan by rail, and it is only a day's ride from New York by the New York and New Haven Railroad, with parlor cars and sleepers running through without change. As the three hotels named are under one management, a party stopping at either one can leave baggage behind and make the grand tour unincumbered and at trifling expense, making his choice of railroad, private conveyance, or "Shank's mare."

OFF FOR CAPE VINCENT.—A party of fishermen with their rods, reels, fly books, bait boxes, wives and children have gone from New York and vicinity to Cape Vincent, N. Y., for a long vacation. Among those who bought their through tickets the other day were Messrs. Geo. N. Wild, of Red Bank, N. J.; C. E. Tyler and I. C. Pierson, of Plainfield, N. J.; Geo. W. Shiebler, of Newark, N. J.; D. F. Harris, of New York, and Mr. Henry C. Squires, who appears to have been the prime mover of the expedition. Host Rathbun, of Cape Vincent, dispatched to the latter gentleman last Wednesday a 25 pound muscalonge, which was on exhibition in Cortlandt st. Mr. Squires had the monster laid out in state inside, with a placard in the window inviting the curious to enter and do homage to the fallen Cæsar. The curious came, dozens of them. He will never place a big fish on free exhibition again. Eight Newark families breakfasted on as many portions of the muscalonge, and there were a few fragments left over too.

THE SPORTSMAN'S AGE OF GLASS.

NO remarkable prophetic vision is necessary to foresee the coming Age of Glass. The glass ball is growing in favor, or, as the reporter would clothe the thought in more fitting terms, the fragile crystal sphere is in the ascendant upon the smoke-beclouded horizon of the shooting universe. Not only do the long established clubs keep up the fire along the line with old time ardor; but peaceful, slumbering communities all over the country are being infected, and hillsides which have been silent since the bombardments of the Revolution now echo to the shots of Saturday afternoon glass ball match. Even the staid and aristocratic rifle associations, hitherto confining themselves to short and long range bull's-eyes, with a bit of contempt for the more democratic ball business, now plant the traps on their ranges and invite the world into competitive demolishing of whole hogsheads of the brittle targets. Walnut Hill, Bellevue, the Columbia Association's and other ranges have yielded to the demand for this sport, and other ranges must fall into line.

Glass ball shooting is cheaper than rifle shooting, or than bird shooting; so cheap in fact that any one who can afford to have a gun at all can well stand the trifling expense of the broken balls. Besides being less expensive, the glass balls possess several other very decided advantages over pigeons. Birds are becoming every year more difficult to procure. Managers of shooting tournaments are sadly thwarted in their calculations by the perversity of the birds which refuse to fall into the snare of the fowler. But the glass ball is always on hand. No anxious club secretary need write to the FOREST AND STREAM to know in what part of the country the balls are nesting. All that is necessary is to fix the date of the tournament and then telegraph a money order for Bogardus' rough or Paine's feather filled. There is no necessity of feeding the balls in the coops, nor danger that they will die before the trap is sprung. The shooter is not obliged to retrieve the smashed balls as he must the killed birds, nor do the wounded balls fall dead just out of bounds. Another important consideration is that no vigilant tender-hearted S. F. P. C. A. ever hampers the sport. We have not as yet heard of any State legislature prohibiting glass ball shooting on the ground of cruelty to the balls. Sportsmen and S's F. P. C. A. may very properly hold different views as to whether or not the wild pigeon was introduced into the scheme of creation expressly for trap shooting; but as to the proper mission of the glass ball there can be no such dispute.

We fail to find any reason why we should not expect a continued and increasing prosperity of glass ball manufacturers and shooters. The sport is year by year gaining dignity as perfection in it is rendered more difficult. Mechanical ingenuity has been applied with such good effect to the construction of the trap that it has come to be a most intricate contrivance. Good glass ball scores under these circumstances are nothing to be ashamed of. When the last solitary *Ectopistes migratorius* (plain English, wild pigeon, but harder to hit with its Latin name) shall have been sprung from the trap, and its feathers scattered to the thirty-two points of the compass by the rain of lead from a thousand guns, and the race shall have taken its inevitable place in the category of the *Dodo* the *Moa* and the *Archæopternyx*, the glass ball will be in its full glory and the Sportsman's Age of Glass a present reality.

HO! FOR CONEY ISLAND.—New Yorkers of the past generation used to go a great way for their surf, sand, and sea breezes. At first it was Fire Island; then came Long Branch and Rockaway, much nearer, but still far away. Meanwhile Coney Island laid neglected at their very doors. Three years ago it was unthought of, or despised. Contemplate the change to-day. Why, the united voices of all the journals of the land, in daily and weekly acclamation, cannot exhaust the theme of praise and wonder, and thankful gratitude to those who have made it what it is. Periodically, in times past, it has been customary for a storm to rise, and blow and wash the island out of recognition in a single night. Sand hills would shift, inlets open and close, and vessels strand upon the sites where buildings had stood the day before. Even so, by an agency almost as potent, a transformation has just now been effected within a space of time too brief to realize as commensurate with the prodigies therein performed. The shifting sands and desert wastes have passed away and given place to a combination of attractions and delights almost incomparable on the globe. At night the spectacle is one of unsurpassed magnificence, especially on those gala Saturday nights when the whole beach is ablaze with the glory of pyrotechnic display given by the Manhattan Beach proprietors. Those persons who have seen all the old world creations, look on with amazement here. No one realizes until they have seen. Every day 100,000 people visit Coney Island and depart with fullest satisfaction of what they have enjoyed. Those grand establishments the Manhattan and Brighton Hotels are crowded with guests who have hitherto summered elsewhere. In all the little hamlets around about summer boarders congregate; for they have learned that here they can enjoy all the delights of the beach by day, and take their nightly rest close by at weekly charges quite within the means of purses which are not long. New York and all its environs now appreciate most heartily the privileges which they enjoy, and wonder that they had not been Heaven-sent before.

NEW TYPE.—Next week we shall appear in a new dress, and we hope with increased attractions.

GAME PROTECTION.

THE NEW YORK GAME LAWS.—Sportsmen are already complaining of the new game laws relating to deer hunting. They say August is too early to kill doe when fawns are not wholly independent of the mother before the first of September. Moreover, it is cruel and unsportsmanlike to run deer with dogs in the hottest month of the year, as this new statute permits, and it is asserted that another game law will be presented to the Legislature for adoption next winter.—*Troy Times.*

We pointed out the defects in the game law as it was proposed previous to its passage, and prepared a compromise table of close seasons which we printed. We were glad to see the bill modified in regard to some of these suggestions of ours, though the deer clause was not one of them. We urged the first of September.

NEW YORK QUAIL SEASON.—The inadvertent omission of the word "except" in the following paragraph, published in our issue of July 3, led to a mistake which was at once apparent:

Quail.—Sec. 8. Cannot be killed, exposed for sale, nor had in possession after killed, except between Nov. 1 and January 1. Cannot be killed in Counties of Montgomery, Schenectady, Saratoga, or Albany, within three years from passage of this act. Misdemeanor; penalty, $25.

The Rifle.

THE ENGLISH AND SCOTCH EIGHTS.

The selection of the eights of England and Scotland to compete for the Elcho Shield on the 24th inst., has brought out some fine marksmanship in some wretched weather. The first prize meeting was held at Sandwell Park, near Birmingham, by permission of the Earl of Dartmouth, on the 11th, 12th and 13th of June. The English Eight Club has been formed with the express intention of creating a wider constituency from which to select the English Eight, and the club already numbers ninety members, among whom are most of the distinguished small-bore shots of English nationality. The captain of the Eight, Sir Henry Wilmot, M. P., and the Adjutant, Major Waller, are respectively president and honorary secretary of the new club, and the competition was carried out under arrangements made by them. On the 12th inst., the serious business of the meeting began. The captain of the Eight had determined to select six men and two reserve men on the result of the two days' shooting, retaining two nominations to the team in his own hands. The two gentlemen to complete the Eight will be selected shortly before the day of the match for the Elcho Shield. Fifteen shots each at 800, 900 and 1,000 yards on each day. The gold, silver and bronze jewels of the club go to the three highest scorers in the two days' aggregate. The scores by totals at the several ranges stood:

	800 yds.	900 yds.	1,000 yds.	Total.
Sergt Gilder	68	69	90	227
Mr Evans	70	70	83	223
Capt Phillipps	65	60	88	213
Lieut Toller	64	63	85	212
Mr Humphry	63	67	77	212
Mr Taylor Baker	68	64	74	206
Lieut J Deeley	70	59	77	206
Mr Backhouse	69	60	77	206
Mr Metford	64	60	81	205
Major Scriven	63	63	79	205
Capt Pixley	67	57	77	201
Lieut-Col Bland	62	64	72	198
Sir H Halford	72	64	61	197
Lieut Baker	59	66	69	194
Lieut Moser	62	64	68	194
Martin Smith	67	42	79	188
Mr Hawley	60	62	53	175
Mr Block	48	65	65	168

On the 13th there was a marked improvement in the weather, but dark clouds were wafted to and fro, and the conditions were not to be boasted of. The scores ran:

	800 yds.	900 yds.	1,000 yds.	Total.
Gilder	73	67	91	231
Turner	74	66	91	231
Humphrey	74	64	92	230
Evans	72	61	92	225
Toller	66	63	88	217
Bland	68	63	87	217
Deeley	61	63	85	209
Halford	72	70	67	209
Moser	69	68	81	207
Backhouse	65	61	79	205
Baker	63	58	79	205
Metford	68	62	79	205
Phillipp	68	59	76	203
Hawley	67	68	75	200
Pixley	62	63	71	196
Scriven	57	55	74	186
Block	57	52	71	180
Smith	61	49	57	167

The following gives the totals of the last five shots at 1,000 yards on each day. By subtracting them the regular 15-shot total may be reached:

Gilder	24	Block	14
Humphrey	21	Phillipp	22
Metford	17	Deeley	19
Halford	13	Pixley	21
Hawley	17	Moser	17
Evans	21	Toller	23
Turner	20	Backhouse	24
Scriven	18	Bland	20
Baker	20	Smith	19

Gilder	24
Humphrey	21
Metford	17
Halford	13
Hawley	17
Evans	21
Turner	20
Scriven	18
Baker	20
Block	14
Phillipp	22
Deeley	19
Pixley	21
Moser	17
Toller	23
Backhouse	24
Bland	20
Smith	19

The following rifles were used by the competitors: Gilder, Sharpe, B. L.; Evans, Metford, B. L., by Gibbs; Humphry, Remington, B. L.; Turner, Field-Turner, B. L.; Toller, Metford, M. L., by Gibbs; Phillipps, Metford, M. L., by Gibbs; Bland, Metford, M. L.; Deeley, Metford, B. L., by Westley Richards; Backhouse, Metford, M. L., by Gibbs; Metford, Metford, B. L., by Westley Richards; Moser, Ingram, M. L.; A. Baker, Metford, B. L., by Westley Richards; Pixley, Metford, M. L.; Scriven, Metford, B. L., by Gibbs; Hawley, Metford, M. L., by Gibbs; Martin Smith, Metford, B. L., by Westley Richards; Block, Metford, B. L., by Gibbs; Halford, Metford, B. L., by Westley Richards.

According to the plan of selection, Messrs. Gilder, Evans, Humphry, Turner, Toller and Phillipps take places on the team with two places to be filled by appointment.

The selection of the Scotch eight was concluded at the Cowglen range, near Glasgow, on the 16th ult. The wind was gusty and tantalizing, and though all the men except Sergt. Fletcher use the back position the scores were not over good. Under the new rules the first competition only settled the places of four men, and these, with the next six in order of merit and two gentlemen nominated by Lieutenant-Colonel

Malcolm, the Captain of the Eight, are obliged to have a second competition for the final selection of the team. The method of selection is simple and yet popular. The first four men who have shot themselves into place meet along with the Captain and make the selection for fifth place. That man is then called in, and the sixth man is then choosen, and so on till the team is completed and the re-erve men fixed on. After that is done the Eight divide themselves into two teams of four each, and thus arranged these four, with their special reserve man, are expected to meet on some convenient day and shoot over the ranges, so as to get acquainted with the rifles and be able to assist each other in the matter of windage and elevation. At the conclusion of the shooting, a meeting of the four successful men, along with Captain R. Menzies, was held on the ground, when the remaining members of the team were selected according to the rules. First of all Captain Thorburn was called in—a sure sign that his name was added to the list; and in a few minutes later Corporal W. Caldwell was also called, making six out of the eight. The selection of the remaining two men was not proceeded with so quickly, and there was a little delay till R. M'Vittie was asked to come and take part in the deliberations, and help them to make the final selection. Ultimately M. Caldwell was chosen and his name added to the Team, while Captain Johnston, who was expected to have been called earlier, was added to the reserve list, along with H. R. W. Dunlop, of the London Scottish. The adherence of Captain Johnson to the prone position had something to do with the selection. With the exception of Sergeant Fletcher, who shot himself into place during the first competition, all the members of the Team have adopted the back position, and there is a strong feeling that a man who shoots lying on his face is more apt to be shaky than a man who lies on his back. The team thus selected is made up as follows:

M. Boyd, Irvine; Sergeant Fletcher, 2nd Stirling; Lieutenant M. Kerrell, London Scottish; J. G. S. M'Kenzie, Edinburgh; Captain Thorburn, Peebles; Corporal W. Caldwell, 1st Renfrew; R. M'Vittie, 7th Dumfries; M. Caldwell, 1st Renfrew.

Reserve Men.—Captain Johnston, 105th Lanark; R. H. W. Dunlop, London Scottish.

A FATAL RANGE ACCIDENT.—A most unfortunate occurrence at the Bellevue Range, Medford, Mass., brought the shooting to a sudden close on Saturday afternoon, the 5th inst. Mr. Geo. Richardson, the victim, was marking, while at the firing point his nephew, H. K. Richardson, was doing good scoring. The accident took place after two hours' practice at the 500-yard range. Mr. Henry Withington fired the last shot previous to the accident, and was engaged in cleaning his rifle. His sole companion at the firing station was Mr. Horace K. Richardson, who was taking aim, the danger signal having been lowered. Mr. George Richardson was serving as marker, and it is supposed that he suddenly formed the intention of improving the appearance of the bull's-eye which was considerably defaced. Quickly raising his danger signal, he darted in front of the target with a brush in his hand, just in season to receive a mortal wound. The ill-fated shot entered at the back, passed through the chest, cut off the thumb of the right hand holding the brush, and entered the target. Mr. Richardson instantly fell, and before his companions could render assistance he was dead. The deceased was nearly 64 years of age. He leaves a wife and five children. The mishap has occasioned considerable comment in rifle and other circles, and a needless amount of apprehension is experienced in some quarters as to the likelihood of a similar tragedy occurring at any time. The fact is, however, that a repetition of the occurrence is one of the least likely things to happen where ordinary care and intelligence are exercised; indeed, with these provisos, it may be said to be impossible. The marker, in all rifle pits, is so sheltered from the flight of bullets that only the grossest ignorance or carelessness would expose him to the chance of being hit by one of them on its way to the target. On all well-conducted ranges the "pits" are provided with appliances which have reduced to a minimum the danger attending the marking of shots. The danger has always been in the "splashing" of bullets—that is, the shattering of them into minute fragments by contact with the iron targets. For a while, because of the imperfect safeguards employed, this was a source of a good many accidents, and the loss of an eye, disfiguration of other features, a badly cut hand, arm or breast, were frequently chronicled as resulting from "splashes." But even this danger was at last in a great measure provided against, and, by the adoption of the plate-glass look-out the "trap," and a proper system of signalling at all first-class ranges, the marker's duty has been rendered much less perilous than is, perhaps, generally supposed. That, in the case at present under consideration, the victim, though presumably versed in the duties of the position he had assumed, was very careless, is, it would seem, self-evident to those who are acquainted with the manner of conducting rifle competitions. Otherwise it would, in the nature of things, have been impossible for him to have been shot as he was. Surely no blame can attach to the young man who fired the shot, nor should the sport of rifle shooting necessarily be condemned as dangerous because a life was lost in consequence of neglect in taking precautions which should have suggested themselves to a thoughtful person. Let it rather be urged in order to ensure absolute safety in future to those persons participating in any capacity in rifle competitions that no precaution, however slight, be neglected, both at the firing points and at the butts, which the rules and common sense dictate.

MASSACHUSETTS—*Attleboro.*—The Attleboro Amateur Rifle Club held a two days' shoot at Menanhant on the 9th and 10th. The first match was at 200 yards, ten shots, five prizes: J. H. Crowell, 45; F. J. Rabbeth, 43; C. E. W. Sherman, 43; D. H. Robinson, 40; E. L. Freeman, 40. The second match was a combination, ten shots each at 200 and 600 yards, for four prizes. Following are the winners in order of rank. J. H. Crowell, 42 49—91; F. J. Rabbeth, 42 49—91; E. L. Freeman, 39 49—88; B. J. Angell, 42 46—88. The third match was a carton match, for five prizes, at 600 yards; ten shots; possible 60. Winners: J. H. Crowell, 56; F. J. Rabbeth, 54; C. F. Crawford, 54; E. L. Freeman, 51; F. D. Freeman, 50.

Collinsville, July 9.—Canton Rod and Gun Club, Riverside Range. Practice meeting at 200 yds., off-hand, 3lbs. pull, 10 shots:

	Mags.	Creed.
Moore	11 8 10 12 11 11 12 10 9 7—101	45
Hull	10 11 9 10 10 9 9 10 9 10—97	41
Lewis	10 8 8 9 10 6 10 12 9 10—92	40
Andrews	11 11 11 10 6 8 9 9 10 7—91	42
Bidwell	7 11 6 11 9 10 7 9 9 9—89	41
Laubenstein	12 9 9 9 12 8 8 6 9 6—87	40

CREEDMOOR.—The New York Rifle Club met for weekly 200 yards practice, July 9, and shot for the C. E. Blydenburgh Badge; at the word of command. The following were the best practice scores made:

F J Donaldson	4	4	5	4	4	4	4	5	4	4—42
W H Dunlap	3	4	4	3	5	4	4	4	4	5—41
N O'Donnell	3	4	4	4	4	4	4	4	4	4—39
J W Mangam	4	2	5	4	3	4	3	5	4	3—39

They next shot for the H. D. Blydenburgh Badge for off-hand shooting at 500 yards. Seven of the leading scores are appended:

N O'Donnell	4	3	3	4	5	5	4	4	4	3—39
J W Mangam	2	3	4	4	5	5	4	4	3	4—39
A J Bowlett	3	4	5	4	4	3	3	4	5	5—38
Fred Alder	2	2	4	5	3	4	5	3	4	4—36
E B Barker	5	4	2	2	4	4	3	5	3	4—36
W H Dunlap	2	4	3	4	5	3	4	2	3	0—30
F J Donaldson	2	0	2	3	4	3	3	5	3	3—28

A subscription match followed, at 200 yards, in which Mr. Fred Alder led with the following score, claimed as the best ever made in a subscription match at Creedmoor. He made eight bull's-eyes in succession. Score: 5 4 5 5 5 5 5 5 5 —49.

SEPPENFELDT VS. SOUTH BROOKLYN.—The teams of these two off-hand clubs met for another test of ability on the 11th inst., at Koch's Schutzen Park, and at the ring target made scores as follows:

Seppenfeldt team.

John W Adams	21	18	20	24	20	24	22	23	24	20—213
Wm Seppenfeldt	17	24	20	23	24	19	20	24	21	21—213
A Keller	18	19	20	20	25	23	19	22	22	24—212
E Holzmann	18	19	22	21	19	19	18	23	24	24—207

Total										1195

MATCHES AT WEST END RANGE.—A glass ball tournament will be held on the grounds of the Columbia Rifle Association, at West End, N. J., on Thursday, July 17, 1879, and every Thursday thereafter. Shooting will begin at 10:30 A. M., on arrival of train on Erie R. R. at 10 A. M. from foot of Chambers street, N. Y. Six items make up the programme, as follows:

First event, twenty-five single balls—First prize, association gold badge and 10 per cent. of gate money. The badge to be held by the winner for one month; and to become the personal property of the competitor winning it three times.

Second event, sweepstakes at twenty-five single balls. Entrance fee, $2.

Third event, sweepstakes at ten pairs of double balls. Entrance fee, $3.

Fourth event, classified sweepstakes at ten pairs double balls. Entrance fee, $2.

Fifth event, classified sweepstakes at twenty-five single balls. Entrance fee, $2.

Sixth, team match—Open to teams of four from any club or association. Entrance, $10 for each team.

The matches are open to all comers, and a year's subscription to the FOREST AND STREAM will be given to the best aggregate in first five.

MARYLAND—*Baltimore.*—At the annual meeting of the Maryland Rifle Club, July 3, the following officers were elected for the ensuing year: President, A. G. Alford; Vice-President, J. B. Armstrong; Secretary and Treasurer, H. B. Coulson; Executive Committee—L. Deitrich, B. B. Lynch, Ed. Melchior, A. V. Canfield, Jr., Capt. Zollinger. The Patapso Rifle Range opened for the season of 1879 on Saturday, July 12. Rules of National Rifle Association governing, with shooting every Wednesday and Saturday.

WEST VIRGINIA—*Wheeling, July* 4.—Independence Day was enjoyed by the Maynard Rifle Club here with a series of matches at Tingle Range. The weapons used were of various sort, including many muzzle-loaders, and short-range was accordingly shot over in the several contests. Prof. Dwight, who will be remembered as one of the last American Team, led the field, gaining three matches out of five. The day was unfavorable for good shooting, as there was a strong wind blowing across the range all day. The distance was 100 yards; position, off hand. The target was the Massachusetts, with a four-inch bull's-eye, with an inner circle two inches in diameter, which counted 12, the remainder of the bull's-eye counting 11. Rings one inch apart from the bull's-eye, decreasing the count one point every inch. In the first match the scores ran:

Applegate	8	11	10	10	10	9	10—49	Babcock	6	8	11	10	7—42
McIntyre	12	7	10	7	9	9	5—45	McClellan	8	8	10	7	8—41
Dr Shriver	9	9	10	7	9	9	4—44	Virgin	8	5	6	11	10	9—39
Dwight	10	18	7	8	6	9	4—42	Jones	9	11	10	2	10	9—40
Stanton	9	6	9	8	10	9	4—42	Applegate	5	8	7	7	w	

Second match, three shots each:

Dwight	10	11	8—29	Dr Blatt	6	5	8—19
McIntyre	10	10	8—24	Lewis	8	5	6—19
Applegate	11	8	9—23	Carroll	6	7	6—19
Shriver	9	9	9—27	Warthen	5	9	4—18
McClellan	7	9	8—24				

Third match, three shots each:

Dwight	10	12	10—32	Applegate	10	10	4—24
McIntyre	9	10	12—31	Shriver	7	5	11—23
Dr Bratt	9	7	9—25	Frost	10	9	2—21

Sharps rifle match, for a fine Sharps short-range rifle and appendages, value $50; seven shots each:

Dwight	12	11	11	10	12	8	10—74
Virgin	9	10	11	11	12	11	9—73
Dr Bratt	9	12	11	12	7	9	8—68
Shriver	9	10	7	10	9	9	10—64
McClellan	9	8	8	11	12	8	8—64
Applegate	9	9	9	6	8	10	10—62
Applegate (re-entry)	9	4	10	7	9	9	10—58
Roberts	9	3	10	6	9	6	11—54
Stipes	7	11	6	3	9	9	7—52
McIntyre	2	10	9	5	w		

Fifth match, three shots each:

Dr Bratt	12	11	10—33	Dwight	10	9	7—26
Applegate	10	10	11—31	Roberts	7	5	10—22
McIntyre	9	11	11—31	Davis	9	2	8—19
Virgin	11	9	11—31	Leighton	8	3	6—17

LOUISIANA—*New Orleans, July* 4.—Frogmoor was drawn upon heavily for amusement to-day, and the unusual event of two regular matches being contested attracted a crowd of riflemen into the field. The fifth competition for the Lillenthal cup and the fourth for the Mobile or Inter-State Trophy took place. The shooting generally was not above a fair average and the contests were in consequence little exciting. In the Lilienthal, Major Arms won for the second time and put up the highest score yet made in any of these matches. In the Mobile contest the Washingtons had the good fortune to break the run of the Louisiana Field, and the match now takes on another and better look. The individual scores are given herewith:

Summary—New Lilienthal cup, fifth competition, between individuals under military rules; distances, 200 and 500 yards; five shots at each distance and two sighting shots. Three winnings entitle the winner to possession of prize. First contest won by Bercegeay, score 41; second by Weiss, score 39; third by Arms, score 41, and fourth by Gowland, score 40.

Fortier	4	3	0	3	2—12	withdrawn					—12

Summary—Inter-State or Mobile trophy, fourth competition under new rules, which require five winnings to entitle to possession; distances, 200 and 500 yards; teams of eight; seven shots at each range, with military rifles. The prize was won the first, second and third times by the Louisiana Field Arillery.

A PROPER PROTEST—*Salem, Mass., July* 11.—In looking at the scores made at Walnut Hill, July 9 (and the same can be said of previous dates), I notice that the number of scores published does not correspond with the number of entries. There are several "crack shots" who regularly attend the shooting at Walnut Hill, who, if they make a poor score, or are beaten by members of the second or third class, invariably refuse to allow their scores to be published, or, if published, they use an *alias*—of which they have several—and thus, to the uninitiated, keep up their reputation by always having a large score under their names. This, I consider, is unfair; because, while giving the public an exalted opinion of the "crack shots," it also gives an erroneous impression in regard to the shooting of the other members. Cannot this be remedied so that all may be on an even footing in regard to having their scores published? AMATEUR.

RIFLES IN WAR AND PEACE.

BRAILA, Roumania, June 10, 1879.

EDITOR FOREST AND STREAM:

SIR—Your impression of May 2 to hand. As regards your correspondent's ("G. M.") remarks, I do not find them at all to the point. We ought to be pretty well up in the various points of the "Peabody," considering it is our adopted national arm. There is no more similarity between the Peabody and the Martini than there is between the needle gun (*Zundnadel-geweha*) of "Dreyse" and the host of other bolt-actions which afterward came out. The Martini-Henry is simply a rifle with a Martini action, combined with a Henry barrel and bullet. Now, this so-called Peabody-Martini has undoubtedly a Henry barrel and bullet, but where the Peabody part is I cannot discover. I do not hesitate in saying that this Peabody-Martini must have been made from a genuine Martini-Henry as a model, as it even has the indentation for placing the thumb in the act of pressing the trigger, and this last is roughed exactly the same as the English rifles. There is not the least doubt about the Peabody being the earlier of the two, nor is there any doubt but that Martini's invention was worked out as an improvement on the Peabody, taking this as the earliest practical form of hinged falling block. I believe, however, that there is a very ancient breech-loading gun of this form still in existence. But, after all, most breech-loaders are more or less worked out from others. Probably Henry's patent rights have not been recognized, and therefore the rifle is dubbed Peabody-Martini instead of Martini-Henry. We take it that they need not be at all "funky" about these Martini-Henry's in England, considering that it is the same rifle as that from which the "deadly lead hail" was fired from Plevna, with the exception that the English cartridge contains more and stronger powder. We here are not so far from Plevna as not to be pretty well up in what took place. It is quite correct that each soldier was supplied with a large box of ammunition, and, what is more, they did not waste time in closing the action. They simply pressed down the lever to open the breech and eject the empty case; then put in a fresh cartridge and pulled the trigger, which closed the action and exploded the cartridge at the same time. Seeing this, any one at all acquainted with the rifle may form a pretty lucid idea as to "lead hail" kept up. S. R.

P. S.—*June* 10.—I regret to find that the above has not been sent off. I have since read your article "Carver en Grande Tenue." You are mistaken when you suppose that the Winchester is not known. It is known well enough, but very little used, as up to 1876 it carried no charge, and was very unsuitable for sporting purposes, as the trajectory was painfully high. Of course, it is in its element when used on glass balls at a range of a few paces; and then the balls can't turn on the sportsman and bite, as is the case with a

tiger. With the English sportsmen who use the rifle, the "Express" is, at the present day, the *sine qua non*. If the Winchester were hand made, so as to allow of different types, and it were strong enough to stand the heavy charges of the "Express," then it would be a wonderful weapon against dangerous game. These "Express" cartridges are from 3½ to 4 inches long, which, I suppose, would be rather awkward for the Winchester form of action. S. R.

—A number of rifle scores are deferred to next issue.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salvelinus fontinalis.*	Sea Bass, *Centropristis atrarius.*
Salmon, *Salmo Salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land locked Salmon, *Salmo glover.*	Striped Bass, *Roccus lineatus.*
Muskalonge, *Esox nobilior.*	White perch, *Morone americana.*
Pike or Pickerel, *Esox lucius.*	Weakfish, *Cynoscion regalis.*
Yellow Perch, *Perca flavescens.*	Bluefish, *Pomatomus saltatrix*
	Spanish Mackerel, *Cybium maculatum.*
	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setæ, same as wings.

Lightning Bug, No. 10.—Body of equal parts of dark brown and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of light yellow and green, ringed alternately; feet, red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern or brown hen; setæ, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Fetid Green, No. 10.—Body, feet and wings, a pale green.

—A party of Lehigh Valley railroad officials go to Alexandria Bay for a fishing campaign.

THE WHALE THRESHER.—Last week we found displayed at the stand of C. A. Lewis, 310 Washington Fish Market, this city, a huge fish which is familiar enough to blubber-hunters, but quite a curiosity to land lubbers. It was a species of shark (*Alopias vulpes*), or fox shark, commonly known as the "whale thresher." The specimen on view was 14 feet long, and attracted a great deal of attention. It was caught in a pound net at Woods' Hole, Mass., and killed by a lance in the side. The creature is at once recognized by many most striking peculiarities, chief of which is the wonderfully long upper lobe of the tail, which is equal to the length of the body from the tip of the snout to the base of the tail. It is flat, and in texture seems like a compound of whalebone and gristle. The thresher uses it like a flail, and the hearty slaps which he and his busy coterie give to the tormented and half-crazed whale while in pursuit thereof sound like the reports of muskets fired at a distance. These fish most always hunt in company with swordfish, and while they leap high in air and whack the whale's back to the right, left, and all over, the swordfish punch and prod him from beneath, so that he is kept constantly on the surface and there worried until he finally succumbs and dies in an ensanguined pool of blood and brine which covers the ocean for leagues. This strange combat, and stranger alliance of two different fish against a marine mammal has its counterpart on the great plains where the coyotes and big timber wolves join in worrying and destroying the huge bison which chances to be detached from the main herd. The food of the thresher consists mostly of small fish like herrings. Its teeth are very small; so that it is evident that the object of his attack must be blood, and not flesh, incited perhaps by a natural animosity. In color it is a dark slate or blue black.

EXCELLENT SALMON SCORES.—A New York city correspondent sends the following excellent scores of three days' fishing (really two) last month:

Mr. Editor: The following is my score angling in Canada. If surpassed by any other person I will venture to say he was a fatigued man and required no rocking that night, and a spruce bough bed a luxury.

June 22.—Anchored canoe on fishing ground 1:45 P. M., returned to camp 7:30 P. M. with ten beauties, fresh run fish, weighing thus: 40, 32, 23, 22, 25, 23, 22, 21, 20, 23—251 lbs. or a salmon averaging 25 lbs. landed every 35 minutes, not a leader or hook lost, and every fish hooked came to the gaff, and one fly killed 7 salmon. The fly was thus composed: Medium sized Limerick hook, body black mohair wound with gold tinsel and dark hackle; tail, topknot feather of golden pheasant with a turn of red at root; wings, a small portion of orange topped pheasant head feather, surmounted with barred tail feather of same and small Guinea fowl hackle wound round the head. I have always found this a killing fly in high clear water.

June 25—Continued with fair sport, 12, 24, 15, 25, 22, 20—118 lbs.

June 24—Wind N. E.; cold; ther. 50. Salmon will not rize to the fly under these circumstances. Broke camp and returned home. W.

NEW HAMPSHIRE—*Second Connecticut Lake.*—Fish Commissioner Sam'l Webber, who has been up to Second Lake planting landlocked salmon fry, reports excellent trouting in First and Second Lakes, and later in the season there will be grand sport with both rifle and rod. Mr. Chester's camp is comfortable and clean; four bed-rooms with good beds. It is an excellent place for a summer jaunt. The route is via Calebrook, over a rough road. See our Fish Culture columns.

NEW HAMPSHIRE—*Crawford House, White Mountains, July* 7.—Since last communication I have had great sport in a small pond just below the hotel. I succeeded in landing 43 brook trout on the 7th inst., several being of fine proportions and taxing my utmost skill to secure. While enjoying the fresh morning air—4 A. M. on the 7th—I hooked what must have proved a two-pound fish (nothing but trout in said pond), but being too eager to land the same, had the mortification to see my hook tear out. I verily saw two trout that must have weighed three pounds each. On the 9th inst. L. W. Fairchild, whose exploits with the fly in the Adirondacks are so familiar to all, and myself, fished the Saco below the Willy House, and brought to creel 161 trout. Total catch thus far, about 500. A. J. JOHNSON.

FROM CAMP BARRY—*Camp Barry, near Mouth Missiquoi River, Highgate, Vt., July* 7.—On the 2d inst. myself and better half, Mrs. ——, left "Wash Sargent's," Highgate Springs, Vt., in one of his light, but seaworthy, boats for a week's cruise among the bays and creeks in the vicinity where the Missisquoi River enters Lake Champlain. So far we have had good sport, though at times the weather has been a little rough. On the 4th we were caught near Macquam Bay in a terrific blow, but our staunch little craft was equal to the occasion, and we escaped with only a severe drenching; more fortunate than a friend of ours, Dr. Sheerer, of St. Albans, who, with a couple of friends, Messrs. Fonda and Wilson, were caught in the same gale, which capsized their boat. Messrs. Fonda and Wilson were lost, and the Doctor was only picked up after a battle of four and a half hours with the waves. Our catch thus far has been pickerel, dore, and the small-mouth black bass. The latter were taken with a phantom minnow by my "gude wife," who uses my light salmon rod to catch with. These fish are very gamey and die hard; average weight, from two to three pounds. Saturday morning Mrs. —— hooked a maskinonge, who soon ended the fight by biting off the casting-line. We leave *en route* for Sargent's this afternoon, and expect a rough time, as it is, for this usually quiet Puritan lake, blowing great guns outside.

July 8.—We have arrived safely at Sargent's, though very wet. Those who are fond of good bass fishing I would recommend them to visit this place. Sargent's boats are good, and he is a good fellow, and knows all of the best fishing and shooting grounds in this vicinity. I saw numerous broods of wild ducks in the grass along the shores of the bays, which bespeak good sport there after September 1—that is if the pot-hunters will not kill them off with their dogs in August. I am informed that Nat Sheets and Herbert Donalson, of Hog Island, go into this nefarious business wholesale. Will the Vermont State game overseers please make a note of this? And if once caught and punished it would have good effect, and make the game laws more observed in future. STANSTEAD.

MOVEMENTS OF THE FISHING FLEET.—The leading incident of the fishery movements the past week has been the large number of arrivals from Bank codfishing trips, 9 arrivals having been reported with moderate fares, aggregating 400,000lbs. The number of Grand Bank arrivals has been 8, and the receipts 270,000lbs. fresh halibut. The Georges fleet continue to meet with fair success. Thirty-five arrivals have been reported since our last issue, bringing 650,000lbs. codfish and 56,000lbs. halibut. The number of inshore arrivals has been 9; receipts, 125,000lbs. codfish. The mackerel fishermen continue hopeful, but have small success to report as yet. The number of arrivals the past week has been 13, but only 2 brought fares, amounting to 300bbls. Total number of fishing arrivals for the week, 74—*Cape Ann Advertiser, July* 12.

BUNKER FISHING.—The amount of bunkers brought in to the Peconic Works, Shelter Island, from June 30 to July 3, was 164,500. The steamer *Peconic* caught 153,000 in Long Island Sound. The steamer *Amagansett* caught 550,000 in two days of the preceding week off the south shore of Long Island. We hear that the Eastern fishermen are all coming this way again. The law in Maine does not allow bunkers to be caught within three miles of the shore, and therefore business in the Eastern waters is dull. McL.

MICHIGAN—*East Saginaw, July* 7.—Went up the Saginaw River about six miles yesterday. The fishing party consisted of three; two fished and one rowed the boat. Our catch was 29 bass and 11 pickerel; weight of all, 102 pounds; largest bass, 5 pounds; largest pickerel, 8 pounds; time of fishing, about four hours. G. W. S.

Archery.

For Forest and Stream and Rod and Gun.

HOW TO AIM.

MR. HORACE A. FORD, than whom no better archer ever lived, has attempted in his book, now very rare, called "Archery; Its Theory and Practice," to lay down a rule for "sighting in" or aiming an arrow. But he does not make himself well understood. That he intends to advise sighting over the point of the arrow, is plain, and it is equally plain that he recommends keeping the direct vision on the point of aim. It is very hard, however, to determine just what his theory is with regard to when the aim is to be taken. Whether "on the draw," over the point of the arrow at full draw, or over the point of the arrow at three-fourths of the draw. After studying his directions all together, and each separately, I have concluded that he intends to lay down the following rules, viz.:

1. Raise the bow with the left hand, the arrow properly knocked, meantime drawing the string with the right hand and extending the left arm nearly straight.

2. When the arrow is drawn about three-fourths up, or, when the right wrist is about even with the chin, pause an instant to take aim over the arrow-point.

3. In taking aim have the full length of the arrow directly under the right eye. Keep both eyes open, the direct vision fixed on the point of aim, the indirect vision on the arrow.

4. As soon as the aim is accomplished, finish the draw steadily, and loose instantly and smoothly by a continuous backward motion of the right hand.

I have adopted this method of shooting, and think it the best possible in target practice, for the following reasons: Because the aim is then taken while the muscles are not at the greatest strain, and because it does not endanger the bow like pausing to take aim at the full draw.

Some very fine archers take aim while at full draw. A notable example is Mr. John A. Bové, of the Wabash Merry Bowmen, who also drops his right cheek upon his drawing hand just before loosing. The flight of his arrows is beautifully smooth, but very high for the strength of his bow. He shoots a perfect line, and is rapidly improving in keeping length.

Before adopting the theory embraced in the four rules printed above, the archer must consider his nerve; for if he is inclined to shake he would better adopt the continuous draw, fixing his aim quickly while in the act of loosing. This practice—which may be called Ford's—of aiming on a partial draw, leads to one great defect, if care is not used, which may be explained thus: Say you draw your arrow up three-fourths of its length, and fix your point of aim over the pile of the shaft. Now you finish your draw and loose; but if that part of the draw made after taking aim is not in exact lineal continuation of the former part, your arrow will obviously miss. This is the difficult point to attain—viz, to pause a moment in the draw to take aim and then resume the draw and finish it in the same line. Nothing but regular, systematic, intelligent practice will serve your turn in accomplishing this nice feat.

Do not attempt to use a heavy bow. The greatest archers have come to grief by it. You will never make a first class archer if you use a bow of much over fifty pounds, no matter how powerful a man you may be. To train for target-shooting requires the discharging of many arrows in succession, as often as one has time to practice. The effect on nerves and tendons is ruinous to perfect work if you have a heavy bow. Mr. H. A. Ford, whose score of 1,440 at the double York round has never been equaled, ruined his power of loosing nicely by using a 56 or 57-pound bow, and so, finally, after holding the championship of England for near twenty years, fell in the prime of life below mediocrity and retired from public shooting. It was lately stated that Major Fisher, who succeeded Ford, has also injured his left arm by the occasional use of overpowerful bows. Mr. H. H. Palairet, present champion of England, shoots a 46 or 49-pound bow. Peter Muir, the old master bowman of Scotland, in his palmiest days, delighted in a 46-pound yew of his own make. I would emphasize the lesson of these examples by stating that I myself am suffering from what I hope is only a temporary breakdown in my "aiming and loosing" from having done three weeks of hard shooting with a 57-pound bow. Will H. Thompson suffered in the same way during a part of last May by using the same weight of weapon. He is now scoring remarkably well with a forty-nine pound bow.

Let me ask the archers of America if it is not a common occurrence with each of them that, after making some fine scores one day, the next day the shooter is "all rattled and off, and can do no satisfactory hitting? This will not happen if a bow easily handled by the archer be used. He is a remarkably constituted man who can do good, even shooting, day after day with a bow heavier than 50 pounds, and I think I am safe in advising every American archer to choose a clear, smooth-pulling bow at least five pounds lighter than he is inclined to shoot, and in no case, however athletic the individual, to use a heavier than 55 pounds. Test your strength thus: Draw an arrow—twenty-eight inches long, of course—to the head on your bow, and see if you can hold it there a second with perfect ease. Then shoot six dozen arrows in succession, each one fully drawn up, and if there be the slightest uneasiness in the joints of your right hand fingers, or in your left shoulder or arm, be sure your bow is not safe for you. It is too heavy. Of course, a proper bow will tire you; but there is an easily distinguished difference between tiring the joints, tendons, etc., and straining them. The former is natural, the latter is dangerous.

The reason for making observations like some of the above in a paper on aiming may not at first plainly appear; but the merest tyro in archery will soon discover that (so nicely must his physical and mental condition be adjusted in aiming and loosing) his hitting depends upon about "four and twenty things," each one of which, as Ford well says, must be remembered and performed just the same each time he shoots. This cannot be done if the shooter is overbowed. He must be able to command his weapon with almost careless ease, or his aim and loose will have in them some obscure defect, almost undiscoverable, which will cut his scores down discouragingly low. With a snakewood bow, backed with hickory or lance, with a drawing weight of 46 pounds, a good archer will easily command all the ranges of the York Round.

MAURICE THOMPSON.

THE PACIFIC SLOPE TOURNAMENT.

FOR the past two years much interest in archery has been manifested in California, and during the season of 1878 several interesting matches at short ranges were shot between the San Francisco and Oakland Clubs. So greatly has the love for the pastime grown this year that a grand tournament was held at San Francisco on the 20th and 21st of June, open to all archers of the Pacific Slope. There were many archers and a large number of spectators in attendance, and altogether the meeting was a success. The shooting was done at thirty, forty, fifty, sixty and eighty yards, and the scoring was exceptionally fine for archers, the most expert of whom are only beginning their second season. We subjoin the scores as they were furnished us, but we are sure there is one error in the sixty yards championship shoot. Either the score of Mr. Frank C. Havens of 202 with 30 arrows at 60 yards is wrong, by a mistake in the amount of his score, or 60 arrows instead of 30 must have been shot. There is probably no archer now shooting who has ever scored 200 points with 30 arrows at 60 yards, Mr. Will H. Thompson's score of 193 heading the achievement at that range with that number of arrows, though two or three of the best English archers have within the last twenty years shot a score as good, proportionately, with 24 arrows. Judging from Mr. Haven's scores at 50 yards, we conclude that the mistake has been made in the number of arrows shot, 60 instead of 50 being shot at 60 yards.

Club match for a cup; 30 arrows each at 30, 40 and 50 yards:

Among the guests of the afternoon was Mr. Edward L. Brewster, of Chicago, one of the Executive Committee of the National Archery Association. The Brooklyn Club has joined the National Association and will be represented at the coming convention.

ROBIN HOOD ARCHERY CLUB.—The Robin Hood Archery Club celebrated the Fourth with a prize meeting in the afternoon and a display of fireworks in the evening. The shooting commenced at 5 P. M., but as the weather looked threatening the lady members were rather adverse to proceeding with the sport. The Robin Hood called the gentlemen archers together at the "white flag," or fifty yard range, and opened the match. From the first flight of arrows there were very responding thugs on the face of the targets. In fact the records of the 25 arrows shot by each archer only rolled up a score of 17 as the highest to any one of them, which was to be accounted for from the fact that the shots were made too rapidly, in their efforts to finish before the approaching storm should burst upon them, and on account of a very strong wind blowing directly across their range. After the gentlemen had completed the shooting at 50 yards the ladies put a claim as to their right to shoot, and the Robin Hood assembled the archers at the "gold flag," or ladies' range (30 yds.). The ladies started with a telling flight of arrows, but the storm cloud burst and the rain came down in torrents, the wind blowing a young gale. There was a general stampede for the house of the Lady Paramount, which adjoins the grounds of the club. As there seemed to be no possibility of a cessation of hostilities on the part of the storm king the prize meeting was adjourned to the next day, Saturday, at 5 P. M. sharp. The members and their invited guests made themselves comfortable, forming groups of congenial spirits to await the abating of the shower and the display of fire works. At 7:30 refreshments were served, and some of the gentlemen members succeeded in making a good record, especially on the ice cream, at short-range, off-hand. At about 8:30 the rain ceased falling and the fireworks were put in motion. The display was opened with a flight of a large rocket, and in rapid succession followed batteries, mines, blue, red and green lights, bengolas, wheels, candles and garden pieces in almost endless variety. The affair proved a great success in spite of the rain, and "was almost fairy time" when the last archer bade his hostess good night. On Saturday at the adjourned meeting the shooting began at 5 o'clock P. M. The weather was delightfully cool and could not have been better if it had been ordered in advance. The shooting was over the 30 and 40-yard ranges at four thirty-six inch targets. The scores made were fair. The prizes being two arrows of gold in the shape of a pin, given as a badge of honor as best shot. In addition there was for the ladies a beautifully finished quiver, and for the gentlemen an arrow. The score of the winners stood as follows:

	Hits.	Value.
The Lady	10	34
The Gentleman	26	68

WISCONSIN—*Oconomowoc, June* 7.—We send you a few of the best scores of two of the members of the Chicago Archery Association, who for the past week have made the woods of this lovely summer resort resound for the first time to the twang of the English bowstring:

The Double York Round.

	Hits.	Score.
W B S	99	452
S E E	92	421

The best single 30 arrows at 60 yards was made by S. E. E., 24 hits, 126; by W. B. S., three successive golds at 60 yards, and two successive golds at at 100 yards at two different times. BOWSTRING.

AMERICAN BOWS VS. ENGLISH BOWS.—*Editor Forest and Stream:* One great drawback to archery is the high price of the best English bows. This, however, is being rapidly overcome by American makers. Several of these—and notably Mr. Horsman*—are turning out most excellent weapons, both bows and arrows. No doubt a good self-yew is the best possible bow; but a snakewood, backed with lance or hickory, or a lance backed with the same, may be relied upon for excellent results. I have in my collection of fine bows a yew, made by Mr. Aldred, of London, a self-snake by Highfield, and two snake backed with lance, and one bullet-wood backed with lance, by Horsman, of New York. I rank the yew above all of them for steady, fine work; but no hard wood bow of any maker is better than those by Mr. Horsman, and, of course, yew bows cannot be owned by many archers. I have prevailed upon this gentleman to attempt to make a yew bow, and have ordered some two or three, with confidence that they will be as good as any English bow. I can see no reason why we should not make our own bows, and after awhile, when some of our cool-headed and steady-handed athletes have trained in the York Round, beat the English in an international shoot. MAURICE THOMPSON.

Crawfordsville, Ind., July 4.

* Also Conroy, Bissett & Malleson.—ED.

Game Bag and Gun.

July is a close month for game, except as to woodcock, in certain states.

☞ NEW YORK LAW.—The open season for woodcock in New York State begins August 1, throughout the State.

NEW JERSEY WOODCOCK SHOOTING.—The alteration of the New York woodcock open season has had the effect of drawing great hordes of gunners into New Jersey. That State needs a non-resident law.

NEW HAMPSHIRE.—*Warner, July* 8.—Woodcock appear to be quite plenty, but we are sadly in want of good dogs. M. C. H.

LONG ISLAND—*Good Ground, July* 12.—Bay birds have commenced to fly, and it looks as though we were going to have a good season. We have had a good flight to-day; George, my son, got a good bag and was home at the house by 9 o'clock. I think if you will come down any time now you will stand a good chance to get some first-class shooting. Our Inlet continues open and the bay is in first-class condition for sailing and shooting. WM. N. IANE.

OHIO—*Youngstown, July* 8.—H. Wick and B. Miller succeded in bagging 22 woodcock on July 4; D. Jones and J. Rudge bagged 18 the same day. P. Gaither, of Flint Hill, killed 14 out of 16 shot at, on July 5. Gaither is one of the best wing shots in this vicinity. Several other parties were out shooting woodcock on the 4th, but with what success I am unable to learn, owing to the fact that they always wait until they have heard of the largest bag made and then go it one better. BUCKEYE BOY.

OHIO—*Hudson, July* 7.—The Fourth has come and gone, and with it came the open season for woodcock shooting, and that is the signal call for all the hunters in the land to go forth to the slaughter. The birds are plentiful and strong of wing for summer. The days are hot and dry, so the birds have left the open for the thick and tangled swamps, which are almost impassable for man or dog; but a number of good bags are reported. A party of three report 29, another of two report 27 woodcock and 3 or 4 pigeons, a party of two report 18, another 13, and single persons report from 4 to 10. There will be woodcock shooting for three or four weeks, when they retire to moult, and rest until fall, when they appear in the tall corn of the bottom lands, large, fat and handsome birds and strong of wing. BUCKEYE.

ILLINOIS.—Excellent prairie chicken (pinnated grouse) shooting may be found at Rankin, Ill. Sportsmen who may apply to Mr. Rankin there will be shown first-rate sport, provided they go as gentlemen who are seeking pleasure.

INDIANA QUAIL AND WOODCOCK.—Few spots in this country afford better quail and woodcock shooting than the country about Fort Wayne, Ind., if one knows just where to go for the birds. There is a market hunter named Frost living there, formerly an English poacher, who knows every foot of the country, and can show the stranger rare fun. Roanoke, Ind., and the region about, offer unusually good opportunities to bring down the swift flyers. October is the time to go.

THE NEW FIREWORKS.—Capt. A. H. Bogardus gives an exhibition of his new patent fireworks on the *Columbia* this evening. The steamer leaves Pier 2, E. R., at 8 o'clock, going down to Coney Island, whence a fine spectacle will be witnessed.

NEW YORK STATE ASSOCIATION.

The New York State Association for the Protection of Fish and Game convened at Rochester, New York, under the auspices of the Monroe County Sportsmen's Club, July 7, Pres. A. B. Lamberton in the chair. The following delegates responded to the roll call:

Audubon Club—James Brackett, C C Morse, Homer Jacobs, H H Morse, William L Markell.

Seneca Gun Club—Milton Hoag, James F Lawrence, J P Murry.

Mount Morris Sportsmen's Association—Henry H Scoville, George W Burt, Orson C Matteson.

Queen City Club, Buffalo—Charles Gaber, G W Smith, George Stanala, Louis Nechter, Joe August.

Adirondack Club, Adams—A D Ripley, M B Lockwood, G B R Whipple, M A Hackley, Henry Flower.

Livingston Sportsmen's Association—A McArthur, O F Sherwood, Henry N Arnold, Elijah, Youngs, George Goode.

Central City Sportsmen's Association—James Geddes, James Manning, H Soule, O G Jones, G H Baxter.

Phœnix Sportsmen's Club—Z T Case, Stopen Compson, H H Jones.

Wayne County Sportsmen's Club—John Vandenburgh, J B Pardee, William B Harper, A Humphrey, C E Stevens, M J McIntyre.

Rochester Sportsmen's Club—J M Aikenhead, J R Felt, A R Hunt, Thomas Relyea, Eugene Whalen.

Lewis County Sportsmen's Association—R J Richardson, L C Davenport, C P Kerley, S S Raines, F M Read.

Onondago County Sportsmen's Club—D W Peck, J E Hudson, Fred Frazer, Thomas Kimber, Jr., F P Denison.

Dean Richmond Sportsmen's Club—M H Peck, Thomas Cook, Christopher Warner, W H Parsons, F B Lusk.

Leatherstocking Club of Oswego County—Albert F Betts, Wm N Cornell, W Z Maltby, N A Wright, G W Lyman.

Lelioy Sportsmen's Club—R A Augur, T P Heddon, H S Hannum, William L Bradley, P P Staunton.

Albion Sportsmen's Club—George S Huchinson, F W Dunham, E B Rogers, F S Hassett, N B Baker.

Forester Club, of Yates County—James Coryell, Charles Wagener, Calvin Russell, H D Pratt, George T Wyckoff.

The Forest and Stream Sportsmen's Club, of Akron, N Y—Edwin Tyler, Guy Welles, R S Tabor, N B Wickware, H Patrick.

Jefferson Sportsmen's Club, Watertown—E L Sargent, R P Flower, Geo W Flower, E A Andrews, A M Kenyon.

East Buffalo Shooting Club—John Grabe, Chas Klinck, Robert Linck, George Turner, Charles Cammon.

Scottsburgh Sportsmen's Association—H S Purchase, John Gilman, John Flory, Doct Crisfield, Myron Walkley.

Corning Sportsmen's Club—W H Clark, G P Millar, J C Moore, A Alexander, C L Fuller.

Steuben Sportsmen's Association, Wayland—Nicholas Malter, Peter Gessner, Henry Schley, H C Moora, George Folts.

Waterloo Sportsmen's Club—A S Hollenbeck, Henry Fox, E M Ten Eyck, Francis Bacon, E V Barton.

Conesus Sportsmen's Club—J E Cogan, John Toles, J J Gilder, H Mills, H A Whetman.

Farmers Village Sportsmen's Club—John L Ryno, A P Sayre, V L Cuse, William Parrish, J G Stacy.

Avon Sportsmen's Club—Winfield Newman, Orange Sackett, Frank Brayton, Frank Bowen, Archie Alexander.

Steuben Sportsmen's Association, Pulteney—A Baker, M H Hall, E A Prentis, C W Wagstaff, H A Hess.

Spencer Club, of Lyons—Peter J Powell, R E Pomeroy, J W Robeson, Isaac Ray, N B Briggs.

Seth Green Rod and Gun Club, Dansville—A P Burkhart, H A Townsend, John Faulkner, J T Bryant, C J Bissell.

Buffalo Gun Club, Buffalo—Captain B Hammond, George Gibbons, R Edge, C G Strong, Ray P Tipton.

Forester Club, of Buffalo—John Sidway, H R Jones, George Smith, George J Marsh, Robert Newell.

Ontario County Sportsmen's Club—G M Compton, R L Goodwin, Frank S Lapham, J E Duffy, John M Fish.

Niagara Falls Shooting Club—Jacob W Witmer, Henry C Howard, Alva Cluck, Hiram E Griffith, Wm Pool.

Dansville Sportsmen's Association—J Faulkner, Jr, J Hyland, M A Stearns, J F Williams, L B Faulkner.

Central Gun Club—A Paul, Walter Campbell, Murry Campbell.

Genessee Sportsmen's Club—Willet K White, Dr. Peer, James Brown, H B Hooker, G W Crouch.

Audubon Club—Thomas Collins, Peter Heniz, George Meister, George R Vine, Charles F Tabor.

Fountain Gun Club—Abel Crook, Frank C Chamberlain, Charles W Wingert, Alex Hunter, Wm Cleaver.

Long Island Shooting Club—A Eddy, G F Gildersleeve, L B Radin, Wm Hughes, F P Pike.

Brooklyn Gun Club—A Elmendorf, Hon H A Gildersleeve, G C Chappell, E H Mattison.

Monroe County Sportsmen's Club—Wm J Babcock, E G Billings, Seth Green, M M Hollister, James Ratcliffe.

Of these forty-two clubs ten were newly added as members of the Association, viz.:

Waterloo Sportsmen's Club, Avon Sportsmen's Club of Livingston county, Steuben Sportsmen Association of Wayland, Spencer Club of Lyons, Ontario County Sportsmen's Club of Clifton Springs, Seth Green Club of Dansville, Conesus Sportsmen's Club, Fountain Gun Club of Brooklyn, Central Gun Club of Cohoes, and the Steuben Sportsmen's Association of Pultney.

The delegates were welcomed with an address by the President, in which a vigorous prosecution of the serious work for which the Association had been established was ably urged;

the enforcement of the game statutes, protection of game in other ways, and the importation of new or extinct game and fish being parts of this work.

The balloting for the place at which to hold the next convention was unusually spirited, the claims of Dansville, Seneca Falls, Brooklyn and Niagara Falls each being presented by their delegates. The contest simmered down to a run between Dansville and Seneca Falls, the latter finally coming out ahead—93 to 79. The Seneca Gun Club and the Phœnix Sportsmen's Club of that place to decide which should do the honors in 1880.

The following officers were elected for the ensuing year:
President—Horace Silsby, Seneca Falls.
First Vice President—Z. V. Case, Seneca Falls.
Second " " —Anthony Elmendorf, Brooklyn.
Corresponding Secretary—C. H. Williams, Seneca Falls.
Treasurer—W. J. Babcock, Rochester.
Recording Secretary—John B. Sage, Buffalo.

TRAP SHOOTING.

Contest No. 1—Match at single traps; 10 single birds; class shooting; first prize, Vanity Fair prize; second, India scarf; third hunting coat; fourth, Bogardus trap and balls. Birds very strong flyers; strong breeze:

Pistol Shooting—Ten shots; deliberate; any pistol; string measure; 15 yards:

	Inches
J H Andrews, first prize	14 11-16
John B Sage, second prize	16 14-16
J A Rice, third prize	25 6-16

Rifle Shooting—Off-hand; 100 yards; string measure; telescope barred:

	Inches.
G F Stillson, first prize	19 4-16
O G Jones, second prize	26
Dr C E Rogers	28 11-16
S A Servie	51 15-16

Fly Casting—In the trout fly casting there were five entries—H. H. Morse, A. B Lamberton, L. A. Pratt, John J. Neldman and Judge Geo. W. Sill. Each man was allowed five minutes for style and five for distance. Seth Green, of Rochester, and Reuben Wood, of Syracuse, were judges. James Geddes, of Syracuse, was referee. A strong wind blew during the casting. In the single-hand casting, John Meldrum, of Syracuse, took first prize, 66 feet; A. B. Lamberton, of Rochester, the second prize, 60½ feet; L. A. Pratt, of Rochester, third prize, 60 feet. In the salmon casting, John Meldrum, of Syracuse, took first prize, 72 feet; A. B. Lamberton, of Rochester, second prize, 66 feet; and James R. Chamberlain, of Rochester, third prize, 62 feet.

PIGEON MATCHES.

Send in Scores Early.—To insure insertion in current issues all scores should reach us Mondays or Tuesdays. Reports should therefore be mailed upon the same day the matches are shot. Promptness on the part of correspondents will materially enhance the proper record of field contests.

—A large number of reports, among them that of the Gulf City Gun Club, have been unavoidably deferred.

—The cheapest place near New York to shoot glass balls is at the Columbia Rifle Association Grounds, West End, N. J. A series of matches is held every Thursday, beginning at 10:30 A. M. There is an excellent opportunity here to win a year's subscription to Forest and Stream, and all for two cents.

The One-Armed Men.—*Jersey City Heights, July 9.*—The match for the one-armed championship of the United States and a purse of $500 came off as advertised at the West Side Driving Park, N. J., on the 9th inst., between W. S. Canon, of Newark, N. J., and L. A. Boughton, of Cassville, Wis. (30 birds, 30 yards rise, both barrels.) Owing to a serious oversight in properly advertising the match (your paper being the only one, we believe, that mentioned the matter at all, the daily papers being ignored altogether), there was not so many present as was expected, but sufficient of the old sports of the trigger had heard of the novel match by word of mouth to be present in respectable force. The birds, furnished by Mr. Canon, were a very superior lot, and were off at the word go, and stood not upon the order of their going, but went at once, and with a vim and a twist that bothered the shooters very effectually. From the start it was to be seen that Mr. Boughton was outgunned decidedly. Mr. Boughton, in the first place, is not a quick shooter, and has been accustomed to shoot (when he has shot at all at the trap) altogether at 21 yards rise. He also shoots an open-bore gun, making, as we are informed, even at its best pattern, only 225 pellets in a 30-inch circle at 40 yards. This will not do at drivers and "old uns," who will get away 45 or 50, sometimes 60 yards before the shot reaches them. Mr. Canon used a Hollis gun, bored and targeted by the Kay Brothers, of Newark, and, with their celebrated chips, a bird well covered at 60 yards even would wilt like a flower before a furnace blast. Mr. Boughton made some very clever shots, hitting his birds hard, but not sufficiently to bring them down. We think that at 21 yards rise, or with a stronger or closer shooting gun, he would give the champion a close run, and perhaps turn the scale entirely. The following is the score:

At the toss up Canon appeared first, and had an in-commer, which he killed easily. Boughton to the right killed with second barrel; Canon's second to the right killed with second barrel; Boughton's second a hard bird, hit with both barrels, but away, a straight away killed in good style; Boughton's dead out of bounds, to the right a clean kill, an in-comer for Boughton and stopped suddenly; Canon then had a slow riser, which he prevented rising further; Boughton had a driver, which he tingled, but it got away; Canon's sixth was a driver, and went off kiting; B's left a kill; C's a driver, killed with second barrel; B's to the right hit hard, but not hard enough; the 8th for Canon a driver, and cut down in good style; for B. a left-hander, and killed; the 9th hit with both barrels, but off; Boughton, to the right and away; the 10th Canon killed to the right with second barrel; Boughton the same; 11th a good kill; for Boughton a clean miss; 12th a kill to the right, driver and miss; 13th left and miss, driver and miss; 14th straight away, clean kill, driver killed with second barrel; 15th straight away, miss, hard hit but off; 16th driver and a miss, driver and a kill; 17th in-comer and a kill, driver and a kill; 18th in-comer for Canon and a kill; first bird to the left for Boughton and a miss; 19th a swift bird to the right and neatly stopped with second barrel; same style of bird for Boughton and missed; 20th off like a streak o' greased lightning, but grassed handsomely; same for Boughton (the two best shots during the match); 21st to the right killed, to the right killed with second barrel; 22d to the left killed, driver hit with both barrels but failed to come down in time; 23d to the right killed, slow riser killed; 24th driver and too much so, right-hander failed to score; 25th ditto, left-hander and a kill; 26th right-hander and a kill, straight away and a kill; 27th hard hit with both barrels at a twister, but it twisted away; the same with Boughton; 28th, Canon had a left-hander and missed; (Here Mr. Boughton failed to shoot or to call no bird, and it was scored against him.) 29th to the left and a kill, straight away and a kill; 30th a driver and neatly stopped, a driver hit hard but failed to call in.

Recapitulation.

Canon...... 1 1† 1 1 1 0 1† 0 0 1† 1 1 0 1 0 0 1 1 1 1 1 1 1 0 0 1 0 0* 0 0 1 1—20

Boughton... 1† 0 0* 1 0 1 0 1 0 1† 0 0 0 1 0 1 1 0 0 1 1† 0 1 0 1 1 0 1 0—14

After the match the Jersey City Heights Gun Club held their regular monthly shoot for the silver cup. It was cleverly won by Mr. Canon, killing 6 birds out of 7. It seemed to be Mr. Canon's day, and he was heartily congratulated by his brother members; after which several sweepstakes were engaged in, until the shades of night put an end to the entertainment. Jacobstaff.

† Killed with second barrel. * Dead out of bounds.

A New England Association—*Worcester, Mass., July 8.—Editor Forest and Stream:* An effort is being made by the sportsmen in this vicinity, connected with local sportsman's clubs, to organize a New England Glass Ball Association, and arrange for a tournament at some central point in New England in August. At this tournament it is proposed to have matches between State and local clubs. Sportsmen and sporting clubs from other States will be invited to be present and give exhibitions of skill in the use of the rifle and shot-gun. With this object in view, the Worcester Sportsman's Club, of Worcester, Mass., have kindly consented to receive the names and addresses of all sportsmen and sportsmen's clubs who would like to participate, or are in any way interested in such a tournament. If the project meets with sufficient favor and encouragement, the club will call a convention of delegates from each club at some central point, probably Boston, some day during the last week in July, at which an association can be organized, if it is deemed feasible, committees appointed, and definite plans agreed upon. Should a convention be called, due notice will be given in the Forest and Stream of July 24. It is desirable that responses to this invitation be sent in by July 19 at the latest, and as much earlier as possible. The Worcester Sportsman's Club are taking a lively interest in this matter, and have called a special meeting, to be held next Friday evening, to consider the subject.

Maine State Tournament.—*Lewiston, Me., July 8—Editor Forest and Stream:* The Maine State shoot, which comes off early in September, bids fair to bring together the largest delegation of sportsmen ever assembled at one time and place within the State. Nearly, if not quite, every club within the State will be represented. The Androscoggins Sporting Club, under whose auspices the shoot is to be conducted, reckon that there will be from 80 to 100 delegates to participate, and calculate it will take three or four days to shoot off for the different prizes. The contest this year promises to be the hottest that has ever been held in this State, as the diamond badge (which cost about $300) will become the private property of the Androscoggin Club of Lewiston, or the Forest City Club of Portland, should either of them win it this year, each having held it two years. A strenuous effort will be made to keep it out of the hands of these clubs. It is rumored the Forest City Club are practicing on the sly, with the view of capturing several of the leading prizes this year, they having been skunked last year. Lewiston.

New Hampshire—*Nashua, July 11.*—Score made by amateurs on the Fourth. We have some good shots here, who only need a little practice to become experts. A gun club is now being formed. Eighteen yards rise, Bogardus trap:

CONNECTICUT—*New Haven.*—The New Haven Gun Club held a monthly shoot on the 9th, sweepstake shooting ran from 9 A. M. until 3 P. M. At that hour the regular contest for the gold medal opened. Messrs. Folsom, Jorey and Hanson led the score. The three then began shooting off the tie. On the first shoot all three broke their five balls. On second Hanson dropped out. Folsom and Jorey continued to shoot until they had broken 43 balls out of 45. At the end of the 45 balls their powder exausted. They will shoot off next week Mr. Folsom used a Fox 10-gauge gun. sent on time from the American Arms Co., of Boston. The score stood:

Folsom	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Jorey	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Hanson	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Longdon	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1—18
Porter	0 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 1—17
Beers	1 1 1 1 1 1 1 0 1 1 1 0 1 0 1 1 1 1 1—17
Cowell	1 1 1 0 1 1 0 1 1 1 1 1 1 0 1 1 1 1 1—17

Perry Belmont, 28 yds	* 0 0 1 1 1 1 1 * 1— 6
Benjamin West, 28 yds	1 1 0 0 0 w

NEW JERSEY—*Deal Beach, July* 15.—*Long Branch Gun Club Grounds.* Fifteen bird match, $25 each, between Carroll Livingston, R. C. Thompson and D. C. Leach; handicap rise; Hurlingham rules:

Carroll Livingston	30 yds	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1—14
R C Townsend	27 "	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—14
D C Leach	25 "	1 1 1 0 1 1 * 1 1 * 1 1 1 1 1—12

ANTICOSTI GUN CLUB—*Washington, D. C., July* 12.—First match: sweepstakes; $2 entrance; 21 yards rise, ground traps, Bogardus rules. 5 birds each:

Hobday, Norfolk, Va	0 1 0 1 1—3	Wagner	1 1 1 1 1—5
Mayhew	1 0 1 1 1—4	Rothwell	0 1 1 0 1—3
Krause, Norfolk, Va	1 0 1 1 1—4		

Second match, same as above:

McNelly, A	1 0 1 0 1—3	Krause	1 0 0 1 1—3
Rothwell	1 1 1 0 0—3	Stumph	1 1 1 0 1—4
Morgan	1 1 1 0 0—3	Shelton	0 0 1 1 1—3
Hobday	0 1 1 1 0—3		

Third match, same as above; Mayhew and Wagner were handicapped to 16 yards;

Rothwell	1 1 0 1 1—2	Mayhew	1 1 0 1 1—4
Morgan	1 1 1 0 1—4	McNelly A	1 1 1 1 0—4
Stumph	1 1 1 1 0—4	Krause	1 0 1 1 0—3
Shelton	0 1 0 1 1—3	Hobday	1 0 1 0 0—2
Wagner	0 1 1 1 1—4		

Ties on four birds, miss and out; all missed their first but Wagner, who got first.

Ties on three for second money.

Shelton	0 0 w	Krause	0 1 1 1 1 0—4
Mayhew	0 1 1 1 1 0—4		

Had no more birds and they divided.

Glass balls, 18 yards rise, rotary trap:

Ball	1 1 0 1 1 0 1 1 0 1—7	Shelton	1 0 1 0 1 1 1 0 0 0— 5
Morgan	1 1 1 1 0 1 0 0 1 0—6	Wagner	1 1 1 0 1 1 1 1 1 1— 9
McNely, A	0 0 1 0 1 1 1 1 0 1—6	Case	1 1 1 1 1 1 1 1 1 1—10
Stumph	1 1 1 1 0 1 1 0 0 1—7	Ready	1 1 1 0 1 1 1 1 1 1— 9

Match at ten balls, $1 entrance; $3 first, $2 second:

Wagner	1 1 1 1 1 1 1 1 1 1—10	Ball	1 0 1 1 1 0 w
Mayhew	0 1 1 0 0 w	Case	1 1 0 1 0 w
Mills	1 0 1 1 1 1 1 1 1 1— 9		

J. A. T., Sec.

TEXAS—*Willis, July* 5.—Our young club, just organized, had its Fourth of July shoot yesterday as follows; from Card's rotating trap, smooth amber balls, 18 yards rise:

First match.

J R Hill	0 1 1 0 1 0 1 1 0 0 0 1 0 0 0 0 1 1 1 1—10
C L Jordan	1 1 1 1 1 1 1 1 0 1 0 1 1 1 0 1 1 0 1 1—16
Amos Williams	1 1 0 1 1 1 1 1 1 1 1 1 1 0 1 0 0 1 1 1—16

Second match.

Amos Williams	0 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1—17
N A Cravans	1 0 0 1 0 1 0 1 0 1 0 1 w
C L Jordan	1 0 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1—18
J T Thompson	1 0 0 1 0 0 0 1 1 1 1 0 1 1 1 1 0 1 1 0—12
Shep Grove	1 1 0 1 1 1 0 1 1 1 1 1 0 1 1 1 0 1 0 0—14

Williams and Jordan shoot off tie until one misses:

Williams	1 1 1 1 1 1 0—6	Jordan	1 1 1 1 1 1 1—7

Third match.

J R Hill	1 1 1 1 0 1 1 1 1 1 1 0 1 0 1 0 1 1 1 1—16
Shep Grove	1 1 1 1 1 0 0 0 1 0 0 1 1 0 0 1 0 1 1 0—11
J C Hill	1 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 0 1 0 1—16
C L Jordan	1 1 1 1 1 1 1 1 1 1 0 1 0 1 1 0 1 1 0 1—16
Amos Williams	1 0 1 1 1 1 0 1 0 1 1 0 1 1 1 1 1 1 0 1—15

Fourth match.

Frank Hill	0 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 0 0—16
Shep Grove	0 0 1 1 0 1 1 0 1 0 1 1 1 1 1 0 1 1 1 1—14
J R Hill	1 1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 0 1—17
C L Jordan	1 0 1 1 0 1 1 1 1 1 0 0 1 1 1 0 1 1 0 0—13
Amos Williams	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 0 1 1 1 1—18

Fifth match.

Amos Williams	1 1 1 1 1 0 1 0 1 1 1 0 1 0 1 1 1 1 1 1—16
C L Jordan	0 0 0 1 1 0 1 1 0 1 1 1 0 1 1 0 0 1 0 1—11
J R Hill	1 0 1 0 1 1 1 1 0 0 w
Shep Grove	1 1 1 1 0 0 1 0 0 0 1 0 1 1 0 0 0 0 1 1—10
Frank Hill	1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 0 1 1 0—17

C. L. J.

OHIO.—A glass ball tournament under the auspices of the Globe Shooting Club will be held at Wapakoneta, O., July 22d and 23d. Prizes amounting to $1,000 are offered; contests open to all. The Secretary is Mr. I. Young, Wapakoneta, O.

OHIO—*Hudson, July* 4.—The Highflyer Shooting Club met before the trap to-day for the first time in three months. Messrs. Bissell and Root are members of the Aurora Club, of Aurora, Ohio; 15 single balls, 18 yards rise, Bogardus traps and rules:

H Bissell	11	E Blackman	12
C Root	11	J Seymour	6
N Lewis	13	I Towmar	5
G Stow	9	I Bishop	8
C Cartwright	6	D Williams	8
R Hanson	4		

BUCKEYE.

MINNESOTA—*Sauk Centre, July* 5.—The Sauk Centre Sportsmen's Club having organized with R. Harrison as president, S. Pendergast vice-president, and S. M. Bruce secretary and treasurer, it was thought best, among other attractions gotten up by the citizens of this place toward the celebration of the glorious Fourth, to initiate the members into the "mysteries of the trap,' only one of said members having previously participated. Owing to the scarcity of the birds this season, only a few could be obtained, hence few were put up at the match. Six single rises, 21 yards rise, 80 yards boundary, wild pigeons; St. Paul Club rules:

Bennett	0 1 0 0 1 0—2	Bishop	1 1 1 1 0 1—5
Sprague	1 1 1 0 0 1—4	Lothrop	1 1 0 1 0 0—3
Harrison	1 1 1 1 0 0—4	Mulliken	1 1 1 1 0 1—5
Sheets	1 0 1 1 0 0—3	Scheifiens	0 1 0 1 1 1—4
Jones	1 1 1 1 0 1—5	Pend rgast	0 0 1 1 1 1—4
Carpenter	1 1 1 1 1 1—6	White	0 1 0 0 1 1—3

Ties on five—26 yards.

Mulliken	1 1 1—3	Bishop	0 0 1—1
Jones	0 1 1—2		

Ties on four—26 yards.

Pendergast	1 1 1—3	Sprague	1 0 0—1
Scheifiens	0 0 0—0	Harrison	1 1 0—2

Ties on three—26 yards.

White	1 0 0—1	Sheets	0 1 1—2
Lothrop	1 1 0—2		

Second tie—31 yards.

Lothrop	0 0—0	Sheets	0 1—1

INDIANA—*Goodland, July* 9.—Fourteen single rises; 21 yards:

Peacock	1 1 1 1 1 1 1 1 1 1 1 1 1 1—14
Traugh	0 1 1 0 1 1 1 1 1 1 1 1 1 1—12
Page	1 0 0 1 0 1 1 1 1 1 1 1 1 1—11
Dudgeon	1 1 1 1 1 1 0 1 0 1 0 1 1 0—10
Hardy	0 0 1 1 1 0 1 1 1 1 0 0 1 1— 9
Healey	0 1 0 1 1 1 1 1 1 0 0 1 0 1— 9
Higby	1 1 0 1 0 0 1 0 1 1 0 1 1 1— 9

BLANK.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ We cannot attempt to give specific directions where to go for game and fish. Correspondents must keep themselves posted by consulting our news columns.

T. C. G., Cedarville, O.—The ball fell dead on the market. Did not succeed.

G. F. K., Syracuse.—To remove the lice give your dog's coat a good dressing with whale oil.

H. J. T.—For marsh birds try Marshpee, Barnstable Co., Mass. For gunning and ducking skiff see issue of March 2, 1876.

C., Woonsocket, R. I.—The Sebago Lake salmon trout fishing begins in September. You will find trout fishing in the vicinity.

P. G.—For canvas for canoe use No. 8, which you can get from any sail or awning maker. Write to Whitlock, Slover & Co., 57 South st., N. Y.

F. S. E., Beverley Farms, Mass.—For guides, accommodations, etc., in region of the Schoodic Lakes, Me., write to David Dresser, Princeton, Me.

N. S., N. F., Yellow Bird, O.—There are several strains of double-nosed pointers in this country, and it would be impossible to trace a pedigree for your dog from the mere description.

W. S., Boston.—Target for archery practice should be 30in. in diameter; bull's-eye, 6in.; rings, 3in. wide. Colors: Bull's-eye, gold; first ring from bull's-eye, red; then blue, black, and outside white.

F. R., Newport.—We prefer planking with cypress because oak on small craft shrinks so much in time as to cause much leaking and calking. Hackmatack frames are equal to white oak in small craft.

G. H. K.—Colvin's canvas boat is no longer in the market. A correspondent writes us that he has a 10ft. Colvin boat, nearly new, in perfect order, which he will sell upon satisfactory terms. Address this office.

REGISTER, Philadelphia.—If the attack of chorea is so very slight, a change to country air, with liberal diet, may effect a cure. Quinine, say two grains per day, given for several weeks, would be likely to help him.

J. C. W., Indianapolis, Ind.—You will find excellent sport with large and small game on the line of the Northern Pacific R. R. The vicinity of Fargo and Bismark and the country west will give you all the shooting you want.

J. L. L., Portsmouth.—My dog has his mouth and tongue covered with warts, from the smallest pea to the largest bean. Is there anything that will cure them? He has them over two months. Ans. Touch them with caustic.

T. H. A.—See articles on boat building published in FOREST AND STREAM during the winter months of 1877-'78, or send to Van Nostrand publisher, 27 Murray st., for Neilson's "Boat Building," and mention our name. Cannot give instructions here—too long.

C. B. A.—Heavy cotton drilling will serve very well as a cooler for camping traps. Waterproof by the following recipe: Pass slowly through strong boiling solution of yellow soap; then digest for an hour or more in strong bath of alum or lead acetate dissolved in water.

J. A. D., Quebec.—A bets B that B will not make a score of 11 points at rifle shooting at 400 yds. B fires, and makes 19 points. Who wins? Ans. If A and B meant that the score would be 11—no more, no less—A wins; if they meant that it would not be so high as 11, B wins. Without quibbling B has won.

H. F. L., Boston.—For sack racing any large sacks of coarse material may be used. They should be large enough to contain the whole body of the racer, being secured about his neck. You must make your own regulations as to distance. Any mode of progression is allowable—hopping, crawling or rolling.

UNCAS, Norwich, Conn.—It is not unusual for some dogs' noses to remain dry and warm even when they are in comparatively good health. A change of diet, with a little iron and quinine, or a table-spoonful of cod liver oil twice a day might be beneficial. Bake your corn meal instead of boiling it.

G. E. D.—Very useful book on canoeing is "Log of Cruise on Baltic,' by Baden Powell. Can order from England upon receipt of $2.40. Or see "Canoe and Flying Proa" and "Canoeing in Kanuckia," published by Harper Bros., New York. Will publish something about building cheap canoes next week or so. Scattered information in all our back volumes.

HAMILTON.—No publication especially devoted to yachting in America that we know of. You will find the latest news and general information in our columns ahead of all other publications in America. Hunt's "Yachting Magazine" is an English monthly, price 1s. per copy. Send to book dealers, or direct to Hunt & Co., 119 Church st., Edgware Road, London, England.

G. S. C., New York City.—We have no knowledge of any such trap. 2. By watching our trap shooting records you may secure names of most of shooting clubs. No full list exists. 3. The statistics given—height, 5ft. 5in.; weight, 113 lbs.—are very good for a sixteen-year old boy. The large chest measure—32in.—we think you must have mistaken. 4. Pedestrianism is a healthful exercise physically, but of late it has affected the brains of its enthusiasts. If you can walk without being an idiot about it the exercise is excellent.

R. M. W., Hoosac Falls, N. Y.—Bathe the eyes with water in which a few drops of carbolic acid have been dropped. Small doses of iron and quinine, say one grain of each twice a day, will have a good effect on the system. We presume the dog has no cold, but merely an increase of the discharge from the eyes, which is common in the small spaniels, particularly as they become aged. Once a week is often enough to wash large dogs. If they have access to water they will bathe as often as they desire, and should not require washing unless troubled with fleas.

C. W. L., Boston.—Answer sent by mail some time ago, but as your address was not specific it may not have reached you. Do not admire so large a spritsail as a boat 16x4 would require, unless you are satisfied with rather small sail. For speed and handiness prefer lug as follows: Foot, 12ft; luff, 8ft. 6in; head, 7ft. 6in.; leech, 14ft., diagonal from tack to head, 14ft. 6in. Lay this out, bend halliards to the yard 2ft. from luff, and the proper "peak" will result. Step mast about 3ft. 2in. from bow. Ballast must be got by experiment in such a boat. Try old iron or stone—or, best, put iron shoe on keel, or try an iron centreboard.

M. P. R., Washington, Ind.—1. Can you give me some directions for building a boat large enough for two persons to hunt and fish in and not very heavy? 2. We have a small lake here, covering about 10[illegible] acres, from which black bass have been taken weighing from one to seven pounds, but they have all been taken with the live minnow. Do you think they would take the fly or spoon? I don't think they have been tried. It is from two to twenty feet deep. Ans. 1. See our back files, vols. 8 and 9, for various kinds of boats and how to build them. 2. It is always correct to assume that fish will best take as bait that which they have been accustomed to as natural food. You can tell what they will do when you experiment.

—The dogs advertised by W. H. Pierce in the present issue are guaranteed, and will be sent on approval to responsible parties.—[*A d*[illegible]

A NEW CRICKET CLUB.—The old Springfield (Ill.) Club is *non est*, but through the exertions of the Rev. Robert Nourse, Pastor of the First Congregational Church, a new organization, called the "Springfield Congregational Cricket Club," has just been established in connection with his church. The following officers have been elected for the ensuing year: Pres., Rev. Rob't Nouse; Treas., Frank Godley, Esq; Sec'y, Chas. Wilson, Esq.; Executive Com.—Messrs. Ed. Reece, Ray Hickon and J. W. Berry. Mr. Nourse has set a most commendable example for others of the cloth. Cricket and sermons will go first rate together.

FISH AND GAME.

[From an Address Delivered before the Annual Meeting of the Fish and Game League, April 1, 1879, by Col. TEODORE LYMAN, Brookline, Mass.]

(Concluded.)

Great nobles who were skilled sportsmen were considered important personages. The grand falconer of France attended the king on all state occasions. He received a high salary, and was allowed to keep three hundred hawks—a fortune in itself; for a cast, or pair of hawks, were sometimes sold for a thousand pounds sterling, and a single highly trained bird was esteemed a proper gift to a crowned head. Extravagant love of field sports led to much tyranny on the part of the nobles. John of Salisbury, who wrote seven hundred years ago, says: "In our time, hunting and hawking are esteemed the most honorable employments and most excellent virtues by our nobility; and they think it the height of worldly felicity to spend the whole of their time in these diversions: accordingly they prepare for them with more solicitude, expense and parade than they do for war; and pursue the wild beasts with greater fury than they do the enemies of their country. Husbandmen with their harmless herds and flocks are driven from their well-cultivated fields, their meadows and their pastures, that wild beasts may range in them without interruption." It was the desire to preserve game that led to the system of walled parks, of which that of Woodstock is said to be the first, dating from the early Norman kings. Their grand hunts were what we should call "drives;" that is to say, the sportsmen were placed in stands near where the game was wont to run, and then the foresters, with horns and our dogs, beat the woods and drove the game into the open, where it was shot with the long-bow or the cross-bow.

* * * * * * *

Our rapid review has brought out this anomaly, that the most civilized nations the world has seen, Americans, English, German, Scandinavian and French, are the descendants of men whose tastes were for violence and bloodshed, and who held the gentler virtues in slight esteem. Here is no anomaly, but the general law that the most admirable things come from the growth, the transformation, and the perfecting of gross matter. The fruits and flowers of our garden, good to eat and fair to see, are the changed forms of foul manure heaps and sewage. The pretty bird that sings among the shrubs is built of slugs and noisome insects. In like way it seems that great moral qualities have a rude beginning. What is so divine as the mother's love of her little child? Yet it has its prototype in the ferocity of the tigress, who tears in pieces every creature that approaches her lair, and ravages a district that her cubs may be fed. What is so admirable as the martyr's constancy, which holds him up in presence of torture and the stake! And still it is only the infinitely perfected courage of the bull-dog, whose savage jaws not death itself can loose. This law, rightly seen, is not bad but beneficent. For what is finer, what more full of hope, than this inevitable progress toward something higher, this gradual dropping off of evil members, and the persistence, growth, and triumph of the good body? Let our study be, then, to find out what *is* this good body which is to be cherished.

Plainly, the chase was a necessity of primitive man, as a means to food, just as war was a means to preservation. And the chase still has this proper function, if thereby we mean the pursuit of all wild creatures that may be useful to the human race.

See what a vast matter here is at once. For we thus include not fowling and shooting and trapping, but, what is more important than all of them, the sea-fisheries. All depend on the same taste. What impels the cunning fly-fisher to seek the trout or salmon is the same taste that decides the poor seaman of Gloucester to brave perils as great as those of battle, in the hope of getting a fare of cod and halibut.

The aggregate of the world's fisheries is stupendous; an important item in the nourishment of the human race. Wherever we turn, the abundant water-harvest greets us. Some little alewife streams on Cape Cod produce annually one hundred tons of animal food. The yearly herring cure of Scotland reaches 3,000,000 barrels. From the Norwegian cod-fisheries come 19,000 tons in weight each season; and the amount of fresh fish distributed from the great centre of London reaches over 80,000 tons in the twelvemonth. And all these fishes, we must remember, are wild animals of the water—just as deer, buffalo and hare are wild animals of the land; or partridge, woodcock and duck are wild animals of the air.

Now, at last, we are ready to reply in a reasonable way to the question, "What is a hunter or fisherman good for?" a question often asked in a sneering tone, as if expecting the emphatic answer, "Nothing!" There are not wanting people, and very good people, who consider a sportsman an anachronism—a sort of feeble mediæval imitation, quite out of place among schools, law offices and ingenious carpet-looms. They have a horror of what they call "gunners," and picture to themselves all the Rip Van Winkles they have known—the loafers and tipplers of their native village; tattered heroes of rusty double-barreled guns, with some powder in a brown paper, a pound of shot in an old stocking, and vagrant percussion caps wandering about the lining of their waistcoats. Sorry sportsmen are they indeed; and for the rest, of not much use when you have five tons of hay down and a thunder-shower is coming up! Yet they have their reason for being; they are a sort of living protest against our over-anxious, overworked, over-precise New England life. As they sit by the hour, watching the floating cork in some quiet pond, their round shoulders and falling faces cry out louder than words, "Oh, give us a rest! Our fathers have toiled and fretted and moiled, and have taken neither pleasure nor peace, and we, their offspring, are played out. So do give us a rest! They are a good lesson to us—something like the "shocking example" of the temperance lecturer. Let us see exactly how to profit by it. The chase, as we have seen, has two elements—first, the pursuit; secondly, the capture of wild animals.

From the pursuit many advantages may come—fresh air, a communion with Nature, the exercise of skill, gymnastics of the body, healthy excitement, and the like; and then from the capture, man derives wholesome food. You see cruelty has no part here. The real sportsman kills his game mercifully, and makes use of it, just as the butcher uses the meat from his shambles. Here, then, we have the tests of legitimate sporting: first, the pursuit of useful game; secondly, its use as food for man. In proportion as field-sports fail to satisfy these two conditions, just in that proportion are they illegitimate. We may observe that such illegitimate sports tend to extinction as civilization goes forward. The horrid badger-drawing and bull-baiting of Elizabeth's time have disappeared. Rat-killing and cock-fighting are confined to the lowest part of our population; and even now, a strong stand is taken against trap-shooting. Fox-hunting in England still maintains its fashion, because it really is an almost purely gymnastic exercise, in which the fox's personality is lost in the vast concourse of men, women, dogs and horses. Considered as proper hunting, it deserves the celebrated sarcasm of Andrew Fairservice: "It's just amaist as sily as our auld daft laird here and his gomerils o' sons, wi' his huntsmen and his hounds, and his hunting cattle and horns, riding haill days after a bit beast that winna weigh sax punds when they hae catched it!"

But true hunting and fishing maintain their rightful popularity; and no men are so fit to cope with great affairs as those, who, on fitting occasions, can take dog and gun, and tramp all day through the autumn covers, or wade a brook of a June morning. Such are the English gentry who make laws in parliament; such was Daniel Webster; and such would have been Horace Greeley; if he had not made the fatal mistake of "waiting forty years to go fishing." One cannot do better than end with the hearty words of old Sir Thomas Moore:

Manhood I am; therefore I me delight
To hunt and hawk; to nourish up and feed
The greyhound to the course, the hawk to th' flight,
And to bestride a good and lusty steed.

HUNT'S UNIVERSAL YACHT LIST.—Hunt & Co., 119 Church St., Edgware Road, London, N. W.

Messrs. Hunt & Co. have sent us a copy of the latest issue of their "Universal Yacht List" for the year 1879. It is an excellent and handy little work, and though we have no means of ascertaining its correctness, all our English contemporaries agree in vouching for it in this respect. The book affords an excellent index to the present condition of yachting in England. The burgees and ensigns of all the clubs of Great Britain and many private signals in colors form a series of valuable collections and a registry of private colors which cannot fail to be of benefit in avoiding repetitions. A glance at these charts shows that yellow, green and black bunting is far more prevelant in England than with us, for we have confined ourselves almost entirely to variations of red, white and blue. Acker's and the Commercial Code are also given. A list of over 600 subscribers preceeds the body of the work, and then follow the various yacht clubs of Great Britain with their officers for the year, stations, entrance fees, addresses of secretaries, etc. The main portion of the volume is occupied by a full list of yachts, their tonnage, builders, sailmakers, distinguishing flags, owners, clubs and signal letters, etc. Alphabetical indices, foreign clubs and a variety of useful matter completes a very handy little pocket volume, always desirable to have near by. From it we gather that there are 50 regular and fully recognized yacht clubs in Great Britain besides quite a number of sailing clubs of various grades. The acceptation of the term yacht club is much more strictly defined than with us, for in England only organizations composed of seagoing decked vessels are designated yacht clubs, the open boats and half-decked little ones being more properly consigned to the "sailing clubs." Again the list of yachts belonging to each club and their average tonnage is much greater than in clubs of corresponding rank in America. Hunt has enumerated 3,705 legitimate yachts, and it is quite certain therefore that the number in Great Britain reaches fully 4,000! The British Colonies are all chips of the old block, for wherever the Anglo-Saxon has planted his civilization yacht clubs are to be found. Thus we find in Hunt's list the Royal Canadian of Toronto, the Royal Nova Scotia Yacht Squadron of Halifax, Royal Malta of Malta, South Australian, Royal Sydney of Sydney, N. S. W., Victoria Yacht Club of Williamstown, and many others. The leading foreign clubs are also enumerated, in which, as usual, New York fares badly, being represented by only one club, while Boston has several. With few exceptions, our Metropolitan clubs are suffering badly from localism and want of spirit, for they are being surpassed on all tacks by their Eastern brethren. The agent of Hunt & Co. in New York is Mr. John G. Dale, 15 Broadway. The yacht list can be procured either direct for 6s. sterling or through the book stores generally for a somewhat larger price.

THE 22d ANNUAL FESTIVAL
OF THE
New York Schuetzen Corps,
CAPT. D. G. YEUNGLING, JR.,

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d ST., NEW YORK, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:
A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.
HENRY BERGH, President.

MESSRS. SAMUEL GERRY & CO.:
For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.
MRS. W. H. KINSLEY, 138 West 22d Street, New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.
GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,
JOHN BEATTIE, Providence, R. I.

MESSRS. SAMUEL GERRY & CO.
GENTLEMEN: Recently I took a severe cold, which settled all over me For three days I suffered intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE." Truly yours,
N. ORMS, 59 West 22d Street, New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-workings at Washington, Richmond and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1 72 Orders for five copies and upward filled for $1.40 each, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.
Address H. G. NEWSOM,
Franklinton, N. C.

JAS. MEYER, Jr.'s, GIRONDIN DISINFECTANT,

Stands to-day unique in its action, and having the advantage of being ODORLESS AND COLORLESS, is adapted for any purpose for which Disinfectants are used.

FROM THE "FOREST AND STREAM."

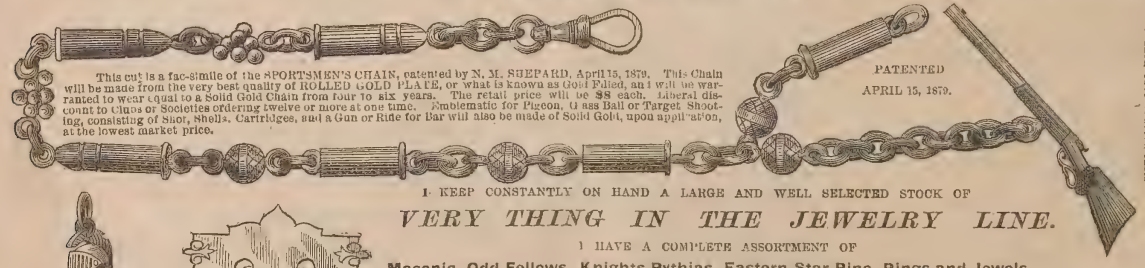
The following letter shows the appreciation in which the GIRONDIN DISINFECTANT is held by the Westminster Club, it having been used at the dog shows in this city for the past two years:

WESTMINSTER KENNEL CLUB, N. Y., May, 1879.

MR. JAMES MEYER, JR.:
Dear Sir—We take pleasure in acknowledging our entire satisfaction with the purity of the atmosphere at Gilmore's Garden during our Third Annual Beach Show. We had 953 dogs on exhibition, and an average attendance of 6,000 daily, and the purity of the air was maintained to the end by the liberal use of your GIRONDIN DISINFECTANT. Saturday morning we ceased using it, and by noon the air had become very disagreeable and offensive.
Yours, etc.,
H. S. WEBB, H. WALTER WEBB, C. DU BOIS WAGSTAFF, ROBT. C. CORNELL, and others.

For Sale by all Druggists in quart bottles, ten gallon kegs, half barrels & barrels.

PASSAIC CHEMICAL CO., Sole Agents for U. S.



This cut is a fac-simile of the SPORTSMEN'S CHAIN, catented by N. M. SHEPARD, April 15, 1879. FIRE-ARMS, AMMUNITION AND ALL ARTICLES CONNECTED WITH THE SAME, AND SOLE AGENT FOR

J. Stevens & Co.'s Celebrated Arms.

The Stevens Shooting Gallery Rifle is a Specialty, and challenges the world. There are more of them used in Shooting Galleries than of all other kinds combined. The Austin Bros. and Frayne Combination use them when shooting apples from the heads of each other and of different members of their families, which they have done almost nightly for years; in some cases the marksman points the rifle over his shoulder and takes aim by the reflection in a small looking-glass before him. They give this Rifle decided preference over all others in performing these dangerous feats.

TRADE—"BEATS THE WORLD."—MARK.

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactued under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

Apply to

READ the following Extract from the *Representa-tive Agents' Paper* of the world, THE PHILADELPHIA, Pa., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

THE LARGEST, SPICIEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

COMPLETE FISHING OUTFIT.

Having made special terms with the manufacturers, I am able to offer to the patrons of this paper the following **Complete Fishing Outfits** at the lowest prices ever offered.

OUTFIT NO. 1 Consists of a three-jointed Ash Rod, finely varnished, with brass mountings. A well-finished brass reel which fits the rod perfectly, an extra laid linen line and half a dozen hooks on good single snells. The regular price of this outfit is **$1 90** and I offer it for **$1 00.** This is just the thing for the boys and girls who want to fix-nunns sup up, and is bound to please all who receive it.

OUTFIT NO. 2. A fine three-jointed Rod, dark polished butt, Brass mounted with Reel Bands and guides. An elegant large brass reel with stop, and extra laid linen line with half a dozen hooks on single snell and half a dozen extra tied and finished on **double** snell. An elegant patent Bait-box (as shown in cut) finely painted, and warranted to suit every one, also a good sinker and float, making a complete outfit for any one. At the regular price this outfit would cost **$4 50** and my price is only **$3 00.**

OUTFIT NO. 3 Consists of an elegant three-jointed **Bass Rod,** with finely polished dark butt and middle joints, and **lance wood tip,** full brass mounted with reel bands, guides, etc., and is a rod good for any fish up to twenty pounds. A finely finished brass **Multiplying** reel (as shown in cut) made with stop and perfect in every way, an extra finely finished linen line with one dozen best double snelled hooks and bait-box, sinker and float. Regular price of this outfit **$7 50,** I offer it for **$5 00.** This outfit is just the thing for every angler who may want to fish for any kind of fish and yet have tackle suitable for all, as it is made throughout of the best material and in the best manner. Goods warranted as represented or money refunded. Any of the above sent by express upon receipt of price. Mention this paper to secure the above outfits at prices offered. Address all orders to

Sportsmen's Routes.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, HENOVA, BRADFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

FRANK THOMSON, Gen'l Manager. feb17-tf

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids & Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUS SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, Hartford, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P.M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *The Continental* leaves New York at 11 P.M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A.M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursions to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

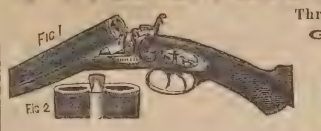
THE BAKER GUNS



Three-Barrel GUN.

Two Shot and One Shell.

We make the best double gun in the world for the money—choke-bore, rebounding locks, extension rib. Our $35 gun has the best twist barrels, and the best material throughout. All guns sent on trial and guaranteed.

Price—Twist Barrels, $35. Damascus steel, $50 to $200.

A new feature in the Gun line. It is light, compact; from 8 to 10 lbs. in weight. The rifle is perfectly accurate. It has proved a great success for all kinds of shooting. An owner of this valuable gun cannot make a mistake and take the wrong one when he goes out for game. All guns shipped on trial and guaranteed. Price, $75 to $250.

W. H. BAKER & CO., Syracuse, N. Y.

SEND STAMP FOR DESCRIPTIVE CIRCULAR.

"I used a Baker gun I purchased from R. B. Huffham, of San Antonia, Texas, on Macdona Ranch, Baker County, price $85. I was much pleased with its action, precision and range. The charge I used was four drams of Dittmar powder, and one and one-eighth ounces of Spark's No. 7 shot. It killed a large Mexican eagle at 90 yards. The action is simple, convenient, easy, very strong, and quicker than the top-snap action of any of my English guns—of our best makers, Boss and others. J. CUMMING MACDONA, Cheadle Rectory, Cheshire, England.

ONE OF THE WORLD'S WONDERS.

SOUR LAKE,

The Great Watering Place of Texas.

THIS REMARKABLE Natural Phenomemon consists of a circular pool about an acre in extent, in a continual state of ebullition, produced by escaping gases. Around the lake are a great number of wells and springs, of thirteen distinct varieties of water—sulphur, soda, alum, iron, etc. The waters of the lakes and many of the springs are very acid. A specific for rheumatism in its worst forms, dyspepsia, chronic diarrhœa, skin, kidney, venereal and female diseases. Fishing excellent and game abundant at all seasons. Open all the year. The tourist, whether for health or pleasure, and the student of nature, can find no place more interesting. Sixty miles east of Houston on New Orleans R. R. Board, week, $10; month, $35. Address J. A. MERCHANT,
ap24 3m Sour Lake, Texas.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest Packed in wood and metal kegs of 25 lbs., 12½ lbs and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder

of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass ball and Pigeon shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"

FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. *Slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *rifle* powder of the country.

PURE TIN-COATED AND BURNISHED
DROP AND BUCK SHOT.
American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 5,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD MANUFACTURING COMPANY, NEW YORK.

THE DELAWARE SHELL.

PRICE AS LOW AS ANY OTHER SHELL

Address, **Delaware Cartridge Company,**
Wilmington, Delaware.

DITTMAR POWDER,
THE CHAMPION POWDER OF THE WORLD.
No Smoke--No Dirt--Less Recoil.
STRONG AND SAFE.
SUPERIOR IN EVERY RESPECT TO BLACK POWDER.

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

CAPTAIN BOGARDUS' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing so many shots in succession, and that the Captain had used about 200 pounds of the same powder during the last year in one gun, shows, without doubt, that the powder is EFFICIENT, UNIFORM, and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusets Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes, in using the DITTMAR RIFLE POWDER.

Great facilities and greater demand, have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us, will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for Gallery Rifle Practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

A GREAT INVENTION!
IMITATION
STAINED GLASS.
Patented December 3, 1878.
CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of $1.00.

Agents Apply to **L. Lum Smith,** Patentee & M'f'r, 717 SANSOM ST., PHILADELPHIA, Pa. (Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald*:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD
The Largest, Spiciest, and only
REPRESENTATIVE PAPER OF ITS KIND.
ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald*. Selected.

IT MAY NOT BE.

JOHN G. WHITTIER.

IT may not be our lot to wield
The sickle in the ripened field;
Nor ours to hear, on Summer eves,
The reaper's song among the sheaves.

Yet where our duty's task is wrought
In unison with God's great thought,
The near and future blend in one,
And whatsoe'er is willed is done.

And ours the grateful service whence
Comes, day by day, the recompense:
The hope, the trust, the purpose stayed,
The fountain, and the noonday shade.

And were this life the utmost span,
The only end and aim of man,
Better the toil of fields like these
Than waking dreams and slothful ease.

But life, though falling like our grain,
Like that, revives and springs again;
And, early called, how blest are they
Who wait in heaven their harvest day!

The Game and Fish of Alaska.

[FROM OUR SPECIAL CORRESPONDENT ON BOARD THE JAMESTOWN.]

Editor Forest and Stream:—

I PROMISED you my first impressions of Alaska. I partially fulfill my promise by now taking advantage of the twilight and jotting down a few. When you will get them is a case of "quien sabe!" We found on arrival here, that although we were three weeks from San Francisco, yet our dates (May 22d) were the latest, and they still stay so, for the monthly mail steamer is now thirteen days over due, although we know that she left San Francisco on time, for she left when we did; and we little thought that as she under steam parted company, heading direct for Sitka, and we, forced by a northwesterly wind almost as directly away from it, that we would arrive here first, and have to send out a relief party to look for her. And if she don't come—if she has come to grief, through some one of the many dangers which those who navigate these seas encounter, when or how we shall send our mail, becomes a problem second in importance only to the mate to it, when and how shall we ever get any?

We live in hopes, though. Our little steamer, with a gallant party, well armed with howitzer, Gatlin, rifles, and revolvers, well provisioned and equipped, has been favored with splendid weather, and will probably find her, if she is between here and Wrangel. Before this letter is finished we shall know.

This has been the longest day in my life, and at the same time one of the shortest; the sun rose at 3:02, and set at 8:58, seventeen hours and fifty-five minutes of uninterrupted sunshine, and the weather has been, except that there was no haze, like an Indian summer day. For the first time, since our arrival on the 14th, we have been able to revel in the entirety of the magnificent scenery. Not a cloud has to-day hidden from our eyes the summits of any of the grand mountains which surround us; they have stood in relief against the blue sky, in strong contrast, one with another; the higher ones of three thousand feet, with peaks bare of trees, but covered with mantles of beautiful white, from which, radiating toward the dense forests are ravines filled with snow, and in the sunlight resembling ribbons of silver; then still nearer to us, the lower mountains and high hills, covered to their tops with dense foliage; and surrounding us, the nearest within a hundred yard radius, are flocks of balsam covered islands. Can you imagine the Thousand Islands, embowered in the Adirondacks, with the Alps for a background?

Sitka has been fearfully maligned; for scenery no harbor in the world is its equal, not excepting Naples and Rio de Janeiro. They have Vesuvius and the Sugar Loaf, we have Vestora, eternally snow clad, and Edgecombe the beautiful.

Sitka's climate has been maligned; we have been here a week and have had but one bad day; one other day it rained considerable, but it was not a hard, pelting, drive-you-into-the-house kind of rain, but a gentle fall of drops, so little that it seemed as though they originated in a vaporizer, and with our rubber clothes and boots, we set it at naught, and hunted and fished as though it rained not. Between rains the climate is dry, and our guns do not suffer, as on our own sea coast.

Sitka's resources have been maligned. In a commercial point of view it *pays*, and could be made to pay better, but all that comes into another branch of my correspondence. I will not bore your readers, nor emasculate other letters by telling you ought of its lumber, its minerals, nor its status politically. I will get at what I know will prove of more interest, and it too, is of great importance, viz.: its fisheries. A branch of the Kuro Suir, or Japan Gulf Stream, sweeps by here and so warms the surrounding seas, that they are filled with life. Algæ, of variety and size that are wonderful, and fish beyond calculation; cod in plenty, and five-pound sea bass, and Norway haddocks, halibut, and strange fish that I know not, are so abundant, that from the Indians who attend us, a "bit" will purchase all that ten men can eat; and the salmon will soon be here in crowds; they are just beginning to run, and the canning factory of the Messrs. Cutting, of San Francisco, has begun operations for the season. "How are the mighty fallen," I reflect, when I see a lordly salmon resting in the bottom of the canoe of some filthy Indian to be traded off for a few crackers, if sold ashore, or for ten cents from one of us, who are "ruining the prices."

There will be good shooting soon; the ducks come next month, and by that time the grouse will have grown large enough, and both are in profusion. Venison is plentiful—and such venison. I had on my table to-day a piece of a saddle, for which (the whole saddle) I paid a dollar, and it had streaks, or rather layers of fat, over half an inch thick; the flavor was excellent. By-the-way, my table is a good one, aside from my groceries, which I would pay dearly enough for had I not secured them in San Francisco. I have grouse, speckled trout, salmon trout, salmon, sea bass, cod, etc., splendid crabs, good clams, fresh eggs, radishes, and onions, and if we stay until fall shall have as good potatoes, beets, and cabbages, as any one could wish. Our only meat is venison, the town possesses one cow only, and she is unprovided with a spouse; goat meat I forgot; that can be had by those who want it. All of these things are very cheap, except the vegetables. (I am promised green peas next month.) So we eat and grow fat, when we thought to have had commons.

I "went a-fishing" to-day; I was tired and with a headache, from a lot of very tiresome "pow-wow." A woman had died the night before, and another had been accused by the "doctor" as a witch, and was to be killed accordingly. In Sitka all failures on the part of the medicine man are by him attributed to witchcraft, and the unfortunate accused has no more chance than, in the days of our disreputable Pilgrim forefathers, did a woman under similar circumstances in Salem. Of course we stopped, and insured that it would stay stopped, the sacrifice of the old lady, and then, as I said, I went a-fishing.

Four miles from the ship, a beautiful little river, fed by the melting snow on the mountains, makes its way to the sea, debouching in a bay a mile in width, formed by precipitous mountains, the ravine of the river, and two or three others snow lined, furnishing the only breaks to the contour. I went for trout, and I got them—got so many, and so easily, and so unscientifically, that the sport palled on me. A hundred rods from the mouth of the river we found the remains of a heavy crib dam and flume, where, in olden times, the Russians had a saw mill, now gone to ruin. In the deep and swirling water under the dam the trout were plentiful and hungry. I was well fitted out with my Orvis bass fly rod and appropriate gear, and I gave my first cast with a "coachman," a "scarlet ibis," and a "hackle," for I could not guess what color nor shape they would prefer. It was all the same; not a rise could I get; and at last I was reluctantly compelled to adopt the bait of the country, with which, yielding to urgent advice, I had provided myself, and that was salmon roe. It is quite tenacious, and a bait will sometimes catch a second fish. With a sinker on my line and a "gob" of roe on my hook, it was but an instant before I had a good fish. And for two hours our catch was uninterrupted, except for the time required to play the large ones. I had no landing net, and standing as I did some fifteen feet above the water, I felt a little nervous at first when I found it necessary to lift the fish with the rod, but the little rod was sound, and landed fish of twice its weight without an accident.

The trout were of two varieties, the most plentiful being what are here termed salmon trout. I should call them silver trout. They are a slimmer fish than the *fontinalis*, one of thirteen inches length weighing just thirteen ounces, while one of our Adirondack trout of same length would weigh over seventeen ounces. The back is of an olive green, dark on top and shading down at the median line, so that the transition from the green to the silver side and white belly is not abrupt. In the green portion there are pale yellow specks. The head is like that of the *fontinalis*, but somewhat longer, the tail is forked, and the second dorsal has the true trout development. From head to junction of tail the body resembles that of a mackerel. Thirty-six of these, ranging from eight to thirteen inches in length, rewarded my two hours' work, and with them four genuine speckled trout, with crimson specks and red fins, and tail squarer than the silver trout, but not, I think, as square as our eastern fish. These were about four to six ounce fish. Neither of the varieties bit savagely, like our trout.

At this season the salmon are daily expected to begin running up this and the other rivers in the vicinity to spawn. It is probable that the instinct of these fish, who undoubtedly depend upon this spawn for their daily rations, has taught them that they need not rush to secure a bit of roe. So they take it easy and mumble at the bait, like kittens would, but when hooked they are quite gamy and afford considerable sport. My two hours work filled my fifteen pound basket, and I've worked many a time from daylight till dark for much less.

We can do no shooting as yet. The grouse are bringing up their young, the geese have been here and gone north until fall, the ducks have not yet arrived, and the elk and bear, with which we are assured the forests are well provided, are a little too far off for us to get at until we shall have exhausted the resources nearer home. It may happen that some of us will have a bear hunt on hand "quite unexpected like." Indian River and Saw Mill Creek, where we go for trout, will soon teem with salmon. I am told that in certain pools, and in shallows, the water each year is black with their heads, each with mouth wide open striving to follow the example of the youth whose motto was "Excelsior." Then Indians scoop them up and prepare their winter's supply of smoked salmon, which to them is nearly the only food; and the bears too—brown bears and black bears, and worst of all, cinnamon bears—come to the the feast and fill up on salmon. Since I saw the big one in Woodward's Garden, San Francisco, my ambition to encounter a wild one has been greatly modified. There are one or two narrow places on the trail along the face of the cliff that leads up to the dam, and should a bear happen to meet one at about such a place, one or the other would have to take water, and I fear that it might not be the bear.

Before I left the East, everybody when they bade me "good-bye," had a little commission, alway sthe same—"bring me some seal skin." I want to answer a dozen or so of my friends at once. There are no fur seal skins to be obtained here. Nearly all of the fur seals are captured on the island of St. Paul (or John), or St. Matthew, a thousand miles to the westward, a delightful abode of storms, and unknown reefs, and mountain currents, and fur seal and sea lions, which I would far prefer to hear my friend Eliot describe and talk about than to visit in person. Here I find beaver, and fox, and otter, mink, mountain sheep, deer, and bear skins, but *no* fur seal.

The *California* came in early this morning, having been detained at Portland, till she is fifteen days overdue, a long time for us to wait for mail and papers. She brings us dates to June 1st, but no FOREST AND STREAM's for me; please remedy that defect. The steamer leaves this afternoon, and I must wind up. PISECO.

Sitka, Alaska, June 21st, 1879.

For Forest and Stream and Rod and Gun.

GREVE SHOOTING IN FRANCE.

AFTER the gathering of the grape harvest in France, there is found, among the vineyards, a bird called the gréve, which offers to the sportsman as fine an opportunity to display his skill as the most ardent lover of shooting could desire. Little larger than our common robin, difficult to approach, and as rapid on the wing as a blue-rock, it requires more than average quickness and steadiness to bring down this small, but gamy bird. The method most pursued in hunting them is as follows: The sportsman stations himself on the outside of the vines and sends in beaters to flush the birds. When flushed they jump up with a peculiar whistling noise and fly straight toward the nearest woods. Then it is that they offer a chance to the marksman, who must take them as they fly over his head.

One day last October I sallied forth with several friends, prepared for a grand battle, and, having prevailed on some of the little boys of the neighborhood to accompany us as beaters, together with their dogs, (the latter being of as many different breeds and sizes as one could well imagine) we made our way to the nearest vines, amidst which we were pretty sure to find the object of our search. Sending the beaters into the vines we stationed ourselves on the outside and awaited, not long, however, for before we were well fixed in our respective positions the whistling of the gréves was heard and out they darted in every direction. There must have been fifty of them, and yet out of all that number, I was unable to kill one, and, in fact, I was not alone in my misery, since only one of the party killed his bird—while the rest had missed as clearly as myself, and, as for the birds, well! they were far beyond reach—no doubt laughing in their sleeves, (provided they were gifted with such an article) far in the midst of the woods, where it would have been folly to pursue them.

At the next vineyard we flushed, not the expected gréves,

but a "compagnie," or covy, of partridges, and being rather numerous they gave us sport for half an hour, at the end of which time they betook themselves to a vineyard, which had not yet been stripped of its grapes, and on our having the audacity to follow them, we were greeted with such a choice selection of French oaths as made us somewhat ashamed of the paucity of the English language in that respect. Nevertheless, we had already bagged quite a number, and although we left them with much regret, yet what we had of them made up in some small degree for what we left.

Imagine a bird about the size of our ruffed grouse, and closely allied to that noble bird in appearance, with habits like a quail and found like the latter in the stubble, and you will have some idea of the pleasure of hunting this bird. There is no bird to my knowledge, and my experience has not been very limited, more worthy of being preserved. I have often wondered why it has not been imported into the United States. Every day sees more and more of those beastly little Messina quail brought over to ruin our dogs, and yet here is a bird lying well to a dog, which will breed wherever placed, and withal hardy and capable of enduring a winter which would kill off our own quail by the thousand, neglected or overlooked entirely by those who wish to breed new species of game birds in this country. They offer all the advantages of the quail, together with the size of a grouse, and when let loose in good ground with plenty of cover, will be sure to stay, and if allowed, breed in the same place year after year. But I have wandered off from my subject, and it is like wandering off from the road—hard to get back again. One peculiarity about the grève worthy of mention, is that they cannot be shot during the middle of the day. In the early morning, and from 3 until dark in the evening, they are found in quantities undiminished by the constant fusilade, but, from 11 until 3 in the afternoon, they disappear and no one seems to know where they go. They are not in the vines, nor yet in the woods, and they are as completely lost to mortal vision as if swallowed up in the earth. During the little expedition that we made we did not pretend to shoot during the above hours, but resting ourselves after a long morning's tramp we took our luncheon, washed down with a bottle of "vin ordinair" obtained at a farmhouse nearby. I know it is a custom among some Sportsmen to take out hunting with them what their fond wives (supposing them married) are deceived into imagining to be pocket-pistols, but a Frenchman does nothing of the sort. He knows he can obtain a bottle of wine at any farm-house for a mere song, and would look with horror upon anyone who indulged in "eau de vie," when on a shooting expedition.

This grève shooting lasts from two to three weeks, and one would think that the number of hunters with or without their *permis de chasse*, (for it costs somewhat over $5 to own a gun in France, and many own them, yes, and use them without paying the government a sou,) would soon exterminate, but you have only to try shooting them, or perhaps I should say at them, to determine at once the cause of the continuation of the breed. My experience was that one bird out of four was good shooting, and I am not ashamed to confess that my first attempt was not crowned with anything like such a result. In fact, the first bird I saw was flushed, and had got safely out of reach before I had my gun to my shoulder, and the grand total for three guns in one days' shooting was only nineteen birds. I didn't dare to count my empty cartridges. Such is the grève, a bird than which none flies swifter, none is harder to bring to bag, and none gives more satisfaction to a sportsman who shoots for the love of shooting, and delights more in one bird killed which required quickness and skill to bag, than in forty which demanded nothing further than being able to lift a gun to one's shoulder. W. D.

New York, June 12.

LETTER FROM TEXAS.

Editor Forest and Stream:—

My letter from Sour Lake, in FOREST AND STREAM of May 8th, has caused me to receive numerous letters seeking more light on that place. I hope you will allow me to reply to them all in a lump, since it is to FOREST AND STREAM that I am indebted for this avalanche of inquiring friends. They come mostly from the North, and invariably ask if it would be safe for people from higher latitudes to visit that place in summer. Now I am no doctor, and am somewhat puzzled to answer that question. I can only state such facts as I know, and your readers can judge for themselves. Sour Lake is about thirty-five miles inland from the Gulf of Mexico. It is separated from the gulf by a great prairie traversed here and there by narrow lines of forest. During spring and summer, in fact during pretty much the entire year, there is a robust, glorious breeze from the gulf sweeping over this prairie and hitting Sour Lake and its divisions square in the face. This breeze is of as pure air as moves anywhere over God's globe, if not a little purer. There is no malaria on this great prairie to contaminate it. The myriads of prairie flowers infect it with sweet perfumes which only make it the more delightful. This perpetual breeze tempers the heats, so that usually it is not nearly so hot in summer in this region as it is in the North. Now some of you Northern folks will not believe this, but upon my honor, it is so. I tried the North on thoroughly during the summer of '76 and I found it the hottest country that ever I invaded. It was too much for my hot Southern blood, and I concluded that if a man wants a good summer resort he must go South. Then the nights in this Gulf country are simply grand. I imagine they are like the nights of Heaven. One can sleep like a top, and before morning he will find it comfortable to creep under a good heavy quilt. Such is my experience nearly every night in summer. Now these are facts, and why should it hurt a Northern man to come here in summer, where he finds a better condition than he is accustomed to? I don't believe it will do it, but he must be his own judge in the matter. I first came to Texas in April, from my native heath in North Carolina. The previous winter I had passed in New York city, with its snows and slush and nor'-easters. The country seems to me a paradise of beauty, and to enjoy it fully I bought a horse and rode all over the State for months, taking all sorts of weather. It did not hurt me at all, but made me more robust and hearty. My first spell of sickness in the State occurred nine years afterwards, when Yellow Jack got hold of me in this place. And I would not have had that spell had I not been in love at the time. I then lived in the mountains of West Texas and my lady-love lived in Houston. While Yellow Jack was raging in the last named place, I grew suspicious that some fellow might steal a march on me during my absence, and I hastened into the city. In about ten days thereafter Yellow Jack had me good fashioned, but in the meantime I had won my lady. You see "none but the brave deserve the fair." Now how many fellows will you find who would have done that same for his sweetheart? 'Tis my nature. When I go into love I go in all over; when I go into anything I go in all over. I do detest a half-way man.

But to be candid, I think people from the North would enjoy themselves better at Sour Lake in fall and winter, because the country then offers such grand resources for sport, and much of it is of a kind that stirs the blood to hunt. In spring and summer it would be beastly to shoot the game, and no true man would do it.

While I am writing I wish to "go for" Mr. E. V. Smalley of the New York *Tribune*, who lately visited our State and has written a good deal about us in the *Tribune*. We are grateful to him for his letters, though he is by no means a flatterer. He seemed to seek the truth, and where he criticised us I think the criticism well put. But he makes a bad blunder in what he says of the wheat of West Texas. He says it is a poor, dark stuff, and that in order to make tolerable bread of it the Germans mix it with rye flour. He wrote this from the German town of New Braunfels. It is a terrific blunder. That same rather darkish flour is as rich and nutritious as any in the world—more so than any that can be made from Northern flour. If Mr. Smalley had studied the matter he would have known that Southern wheat is always richer than Northern wheat, and also commands a higher figure. The best wheat in the United States is that grown in California and Texas, where the climatic conditions are about the same. So in Europe the wheat of Spain is better than that of the British Isles and Germany. All the world over, southern wheat affords the most nutrition, bulk to bulk, and that grown by the Germans of Comal is no exception to the rule. It is the custom of the Germans everywhere, I believe, to mix their wheat flour with rye flour. Again, Mr. Smalley abuses our Irish potatoes, saying he found them at New Braunfels so watery as to be unfit to eat. It is likely that in that particular locality the potatoes may not be good, owing probably to the too great abundance of lime in the soil; but in this locality we raise as fine potatoes as I can see anywhere. We ship a great many to the North in April and May, and the Northern people buy and eat them eagerly. If they were not good they would not do so. The only trouble with our Irish potatoes is that they will not keep well through our summers; but to compensate for this, we can grow a crop in the fall as well as spring, and many of us do so.

But now please allow me to abuse the Texans some. I know them as well as any man in the world, for I am one of them, and have been for 21 years. I have sat under this rose and smelled all its fragrance. They allow themselves to be controlled and led by the nose by a class of politicians who are unfit for such leadership. Our State offers the grandest field for the display of statesmanship on the American continent. Nature has made it a grand empire in itself, and this grand empire calls upon us for development. We want artesian wells on the great plains; we want forests planted; we want great systems of drainage and irrigation, and we want geological and meteorological surveys and explorations. These things can only be done, as they ought to be done, by the State. They are objects worthy of statesmanship, and the accomplishment of them would in a few years make Texas the most powerful commonwealth on the continent. But the men who control our State and its legislatures never take such thoughts into their poor craniums. Suggest such things to them and they cannot comprehend them, or they openly make sport of them. This is all owing to ignorance; if they had been educated better they would have more sense. I have almost despaired of Texas ever doing anything worthy of her during my time, on account of the enormous prevalence of these ignoramuses in public places and their influence over the people. We have statesmen here, men of large comprehension and equal to the occasion, but they are overshadowed by these ignoramuses and live in retirement. It is the fault of the people that it is so. They ought to read more and think more, and they will never accomplish anything of much account until they contract habits of reading and thinking. Let them educate themselves to a higher standard, and they will never rest content under a leadership of such low standard. They will throw off their unfit ignoramuses and demagogues and bring forward their truly great men. Their State will blossom like a great garden through the change. Poets, scientists and historians will flourish, instead of being repressed, as they now undoubtedly are, through the unwholesome influences of ignorance and demagoguery. We ought to have a hundred thousand readers of FOREST AND STREAM in the State. As an educator to a higher and happier standard, as a civiliser and beautifier, it has, I think, no equal. If we study Nature we cannot help falling in love with her; and being in love with such a dame will elevate and make men of us in spite of ourselves. And where may one love Nature more ardently than in Texas, where she has put on her most lovely and varied forms? N. A. T.

Houston, June 8th, 1879.

KING WILLIAM AS A SPORTSMAN.—King William III., of Germany, has been a mighty Nimrod in his day. The *Schiessliste* of his exploits since 1819 chronicles the death of more than seven thousand head of game, including a fierce aurochs, bears, wolves, boars, deer, hares, pheasants and partridges. The Emperor also bears an unpleasant evidence of his devotion to sport. In 1819, while hunting, his companion's arm discharged its contents into the Prince's right hand, of which the fore-finger had to be amputated. Guns play the same pranks in the hands of careless royalty as with other people.

THE Travers Hammock, combined with the Folding Frame, is a superior Spring Bed; a common strap passed through the rings is all that is necessary. The cheapest and neatest thing for Hotels, Boarding Houses, &c.

Fish Culture.

CULTURE OF LANDLOCKED SALMON.

Editor Forest and Stream:—

I observe some of our papers attribute the want of success with the landlocked salmon in some of our States to the "absence of the blue-back trout, upon which the landlocked salmon feeds in the lakes of Maine, etc., etc." I do not know of a blue-back trout existing in any of the waters of Maine to which the landlocked salmon is indigenous. Into all the natural haunts of the landlocked salmon in our State the pickerel has found its way, but without detriment to the former, as there is no bait to which they will rise so freely as to a young pickerel. Indeed, I am informed by many close observers, that the pickerel in Grand, Sebec, and Sebago Lake, are diminishing in numbers from year to year. If failures have occurred in attempts to successfully transplant this valuable fish, it has been from a wrong selection of locality. In our report for 1875, we took occasion "to warn gentlemen that this is not a mere pond fish. It must have access for breeding, as well as health, to broken, running water, but above all, an abundant supply of feed, such as smelts, blue-back trout, the whole tribe of Cyprinidæ, chub, red fin, etc. Fine blooded stock cannot be bred by simply purchasing the animals and turning them into pastures. There must be plenty of feed to produce fine stock."

The introduction of the landlocked salmon into Rangely waters has proved a success, and it now begins to afford fine sport. Every year more or less of them are taken on the fly, but in all cases thus far, they are invariably turned back alive into the water. Mr. Atkins planted the first of these fish in Rangeley waters some twelve years since. From all the lakes in the State where we have introduced them we have received good accounts. Our usual custom has been to supply the pond we select for stocking with some thousands of the young fish for three years in succession; the number being governed by facility of access, as much as by size of the pond to be stocked. We this year assigned to Rangeley waters, sixty-three thousand eggs, being nearly one-half of our entire stock. We have this year distributed one hundred and eighty-four thousand of these fish within our own State. Rangeley having a good hatching house, provided by the Oquossoc Club, has much facilitated our operations there, as transporting the live fry long distances is a most wearisome duty for the Commissioners and an expensive one to the State. Mr. Stanley and myself, during the last month, transported to Kineo House, Moosehead Lake, twenty thousand young salmon from Bucksport, with the loss of scarcely more than *twenty* fish. Mr. Dennen, with his well-known liberality, has made full arrangements for a hatching house to be built in season for the taking of trout spawn this autumn. It will be our care to supply it in the future with sea salmon ova for the stocking of the Kennebec River, and landlocked salmon ova for the fall stocking of Moosehead Lake. Mr. Dennen proposes to furnish his hatching troughs with a yearly supply of trout eggs, to compensate for the immense draught of fish yearly taken from the waters of this popular place of summer resort by anglers. The Commissioners of the State have long had in view this only practical method of re-stocking our rivers by establishing hatching houses at their sources, whither the eggs of fishes can be sent when packed for transportation, as readily as boxes of raisins or preserves.

We owe a debt of gratitude to the Oquossoc Club, of Rangeley, and to Mr. Dennen, of Kineo, for the initial force their intelligent aid has afforded us.

E. M. STILWELL.

MANCHESTER, N. H., July 16.

Editor Forest and Stream:—

We have completed the distribution of land-locked salmon in the waters of New Hampshire for this season as follows, viz.:

Sunapee Lake	10,000
Squam "	10,000
Connecticut Lake	8,000
Ponds in Cheshire County, in Dublin, Nelson, Harrisville, Marlboro, &c.	10,000
Massabesic Lake, Manchester	5,000
Nutt's Pond	5,000
Echo Lake, Franconia Notch	2,500
Tarleton Ponds, Piermont	5,000
New Found Lake, Bristol	5,000
Mascoma " Enfield	5,000
Star Pond, Springfield	1,500
Rocky " Hollis	2,000
Jones' " Raymond	5,000
Nentchewamock Pond, Wakefield	5,000
Dunkin's " Ossipee	5,000
Merry Meeting " New Durham	5,000
Winnepesaukee Lake	5,000
Bradford Pond	5,000
Sandwich Ponds	5,000
Chester Pond, Northfield	2,500
Total	106,500

Or as nearly that as possible, being the net proceeds of 116,000 eggs received from C. G. Atkins, Assistant United States Fish Commissioner, from Grand Lake Stream in Maine last spring. Of these the first lot sent of 50,000 hatched with very small loss. The second lot of 68,000 did not come out quite as well, some of them dying with "dropsy" as I reported to you in May.

I notice that you have seen my report of the trip to Connecticut Lake with the lot taken there the last week in June, and will add to that, the announcement that I saw your occasional correspondent, Edward Norton, who was waiting at Colebrook for a party from New York and New Haven, whom he was going to take in the woods. Let me also repeat the high commendations of Mr. Chester's clean and comfortable camp, and his skill in cookery, to say nothing of the cold springs which supply his cabin with the purest water, and which are of themselves a luxury to those who prefer this article "as a beverage" in the woods, among whom count the writer, who has learnt by long experience that all stimulants are worse than useless, while undergoing fatiguing exercise.

We had as I here said in the *Mirror*, but half a day to spend in fishing, ourselves, but other parties there brought in a number of the lake trout or "lunge" as they there call them, and which I can now identify as being neither more nor less than the Salmo of Lake Winnepesaukee, by whatever name he be called, whether *Symmetrica, Confinis* or *Namayeush*.

With regard to our experience in New Hampshire with land-locked salmon, I can say but little, for want of longer experience, but what we know may be summed

up as follows: In 1877 we received from Mr. Brackett, Commissioner for Massachusetts, 6,000 young fry, which we distributed in various waters in the State, among others in Sunapee Lake, Squam Lake, and a pond in Sandwich.

Of these, one was taken in Sunapee in 1878 about six inches long; this year we have not heard of any from that lake. Of the lot placed in Squam, one was reported to me three weeks since, as having been taken at Ashland on the Squam River, four miles below the lake, weighing 1½ lbs.

Of those placed in Sandwich pond, one was taken in May, in a pond two miles below the one in which they were placed also weighing 1½ lbs., and one was taken July 5, by Commissioner Powers, while fishing for trout, in the pond in which they were placed, 17½ inches long, and weighing 2¼ lbs. This is all we can yet say with certainty as to their growth, but we have so much faith in their adaptability to our waters, that we have just voted to appropriate $200 for the coming season in aid of the Grand Lake Stream enterprise for procuring *ova*, and also voted $300 toward the Bucksport enterprise for procuring the eggs of the Penobscot salmon for the Merrimac River, Massachusetts contributing a like sum.

We have, through the kindness of Prof. Baird, had a supply of California salmon eggs for the last three years, but the increase in the salmon crop of the Penobscot has been so great this year, from artificial planting, that it has been decided to start the works at Bucksport again.

Besides this we are jubilant in the prospect of taking a lot of eggs ourselves at the hatching-house at Plymouth this fall. Commissioner Powers has already taken twelve large salmon, eight females, and one thirty-eight inches long, and they are going up the river daily. Five large fish, estimated at nearly three feet long each, were seen all day Sunday, under the Amoskeag Bridge, in this city, but on Monday they were gone, and Mr. Powers reports that all he has taken have been trapped in the night, and found in the morning, so that we suppose our visitors started up stream Sunday night.

The bill protecting salmon for three years longer, or till 1882, has passed our Senate and got to its third reading in the House, and we hope by the time that its prohibition expired, to be able to invite your staff to nearer fishing-grounds than the St. Lawrence. SAM. WEBBER.

Natural History.

CROWS IN CAUCUS.—A gentleman tells us of a marvellous sight which he saw on the 2nd day of last March, while he was journeying from Harper's Ferry to Washington. It was about an hour before sunset, and looking down the Potomac river toward the sea, as far as the eye could reach was a continuous flight of crows, moving in a belt about a third of a mile wide, and finally dropping out of sight over a high ridge on the north side of a mountain lying to the eastward. A resident of the neighborhood who was familiar with the movement said the crows were going to their roosting place, and that this phenomena had occurred every night for years. The flight lasted for a full hour in a steady flowing stream which ended in a circling eddy, as the birds settled down to their roosts, resembling a great black funnel, or whirlpool. It was a most amazing sight, and vastly more engaging than flights of pigeons roosting, which are intermittent; whereas this was continuous. The birds had doubtless scattered for forage during the day along the shores of the many estuaries and tributaries of the Chesapeake, and when darkness came winged their dusky flight back to their appointed rendezvous. The last bird home must have arrived late to bed!

ALBINISM.

BOSTON, June 29th.

Editor Forest and Stream:—

IN the remarks which you append to the extremely lucid and interesting communication on Albinism, by M., in your last issue, you have, I think, struck the key note of the question, but it seems to me that the subject is sufficently interesting to permit following it a little further. M. objects to the term partial Albinism, on the ground that the individuals who have that peculiarity are simply among the many instances of more or less variations from the perfect type of their species. Even admitting this, the term might still be used with propriety as being a simple way of showing the character of the variation; but I go beyond, and claim that the term is an appropriate one, as the individuals are not mere variations of type, but are instances of an imperfect, and not of a different development. As you say, why should the variation be confined to white? Albinism may be a disease, in the sense of being different from the normal perfection, but it is due to the absence of judgment, and consequently an imperfection, and as such it seems to me a very different thing from the claimed universal tendency to change (generally so to speak, of a progressive nature) on which the evolutionists build their theory. There is nothing to which Albinism can be more appropriately compared, than a soft shelled egg, which is in every respects a perfect egg, except that it lacks the calcareous salts which are needed to form the shell; yet one could hardly say that a soft shelled egg was a variation of type. That this imperfect development (albinism) may be transmitted to progeny, I am not prepared to deny, indeed, the distinct breeds of white rabbits and mice would prove that it is, but I should regard it rather as the perpetuating a morbid tendency, as is the case with tubercular, cancerous and scrofulous disease, and insanity, than as the handing down a variation from the original stock.

The doctrine of the survival of the fittest is a very taking one, but in the case of quail and English sparrows, it seems to me that it would work exactly the opposite to M's statement. Certainly the time of greatest danger to these birds is during the winter, when the ground is covered with snow. They are two of the comparatively rare kinds of birds that winter in our northern latitude, and it is at that time, other food being scarce, that they are in especial danger from snakes, owls, foxes, &c. Now in that season of their greatest danger, those of them that have any decided amount of white in their plumage, will of course, be less likely to catch the eye of their hungry enemies; hence this variation from the type, instead of being killed off, should increase and multiply.

If we consider the presence of white feathers in the plumage of birds as a variation, it is strange that in no other way do we find variations to such an extent. Centuries and centuries are required to roll on before we find any marked change of type, yet here we see the color of the entire plumage radically changed from one individual to its progeny. We see a bird, every feather of which, with the exception say of the primaries of one wing, is the exact counter part of those of its progenitor, in color marking, &c. Those that differ are pure white; is such a variation of type found elsewhere? Inasmuch as we know that this whiteness is due to the absence of pigment, are we not justified in regarding it as an imperfect development, rather than a variation? MIC MAC.

One or two points in "Mic Mac's" communication we desire to notice very briefly, and the others we leave for the consideration of our correspondent M.

Mic Mac says, speaking of the inherent tendency to variation in animals, acknowledged to exist by all biologists, that the changes are "generally, so to speak, of a progressive nature," and by "progressive" we assume that he means favorable. This statement, according to the theory of natural selection, as enunciated by Darwin, is decidely incorrect, though it is very commonly believed to be one of the principles upon which the development theory rests. The truth is, however, that there is no more tendency toward variation favorable to the animal than toward that which is unfavorable. But the animal in which unfavorable variation takes place is not likely to survive, and so transmit its peculiarities to its offspring; so that an unfavorable variation would not be transmitted, and in the specimen in which it first takes place might be so slight as not to be noticeable. The animal in which the variation is favorable, however, as it is likely to live, and have progeny, some of which may inherit the advantage peculiarity, and which again would transmit this variation to their descendants, would be likely to give rise to a race or variety in which the change would be so strongly marked as to be at once recognized. Thus the favorable variation alone would be brought to the attention of observers, while the unfavorable one, never having a chance to become pronounced and well marked, would always be overlooked. Mic Mac's reference to the quail and English sparrow, though plausible at first sight, is evidently not to the point. It is true that during the winter, a white bird would have an advantage over its dark colored brethren, but it must be remembered that the ground is covered with snow only for two or three months during the year, and that, for the remaining nine or ten, the light colored bird would be much more exposed to the attacks of its enemies than if it were normally colored.

Some birds and mammals, as Mic Mac of course knows, which inhabit those regions where the winter lasts for half the year, become white at the approach of winter, and, when the snow melts in spring, resume their dark covering. The ptarmigan and the Arctic hare are cases in point, and there is no doubt that the changes of color which they undergo are protection, and have probably been brought about by the peculiar conditions by which they are surrounded.

Other points in Mic Mac's letter we leave, as we have said, to our friend M. to answer.

CURIOUS IF TRUE.—Mr. F. C. Browne, a well-known naturalist of Framingham, Mass., sends us the following excerpt from a local paper, which he believes from careful inquiry to be authentic, though he is not personally cognizant of the incident narrated:—

The railroad employees of this and other sections are very much interested in the movements of a pigeon during the past few days, the facts of which are as follows: Since Thursday of last week, a beautiful white and slate-colored dove, of what is known as the "Tumbler" variety, has followed Conductor O. Smith's northward bound freight train on the northern division of the Old Colony Railroad, daily, from a point about one mile this side of Walpole Centre station to a certain spot in Medfield, where it alights on a particular barn, when the engine stops to take water, reappearing the next day at the same place in Walpole. During a part of the way the dove flies just back of the cab, under the pillar of smoke, within a few feet of the engineer, and, for a part of the way, beside the engineer's window, within two feet of his hand as he stretches it toward her. Occasionally she falls back to the rear of the train, as if surveying it, but only to resume her wonted place a moment later. The engineer has tried several times to run away from the beautiful bird by putting on extra steam, but to no purpose, as she seems to have the wings of the wind. When the train passes under a bridge, the dove mounts gracefully above it, and tumbling immediately to its place again on the other side. Mr. Warren Cutting, the engineer, seems to be the favorite of the strange visitant, and all of the train men have watched the performances with the most lively interest. Some think that this unexpected experience bodes evil to the train and its men, while others say the bird is a forerunner of good luck.

AS TO DECREASING ENGLISH SPARROWS—*Washington, D. C., June 7.*—Many parts of Washington and Baltimore are so infested with *Passer domesticus* that sleep in the early morning, when we need it most, is *impossible:* and, also, they keep up their damnable strident notes throughout the day, to the infinite disgust of people who have nerves. Their unclean and saucy habits render them decidedly obnoxious. Bread soaked in strychnine solution does not seem to thin them out. If Dr. Coues (or any other naturalist) has at his pen's point a mixture that will "take them off," he would confer a favor by printing it.

R. E. DUCAIGNE.

SINGING MICE.—John L. Schofield, of Blackville, Northumberland Co., New Brunswick, Canada, enjoys occasional visits from a singing mouse which domiciles in his store. He says:

"I think it is a common house mouse, as I could not see any difference between it and other mice I have seen. It appears to enjoy singing very much, keeping up its notes for over an hour at a time, with only slight intermissions (this it does every evening). Its singing, sometimes, somewhat resembles the song of a canary; and, at other times, it sounds like water dropping rapidly from a height. I never heard of any singing mice in America."

Singing mice are not very uncommon; and numerous facts on the subject have been published in the past in FOREST AND STREAM, and in other journals. The cause of the singing has never yet, we believe, been satisfactorily explained.

ALLIGATORS ASHORE.—The following communications refer to a letter published in FOREST AND STREAM last May:—

Norfolk, Va., May 23d.—Your correspondent, S. C. C., writing from Marietta, Ga., speaks of seeing what he terms an "Upland Alligator", and seems surprised that he should have seen him basking in the sunshine, on a public road. His appearance can easily be accounted for.

Alligators when dissatisfied with their places of abode, either on account of scarcity of food, or severe drouths drying up the ponds in which they live, pack up and go without ceremony, sometimes traveling long distances in their search for deep water.

I am a native of Florida, and for several years cultivated cotton on a plantation, on either side of which was a fresh water pond, or lake, one of them being very much deeper and larger than the other, and in very dry seasons, when the small pond would become very shallow, I have encountered alligators making their way across my cotton field to the large lake, and as the darkeys used to say: "dey weeds a mighty big row", that is to say, their trails are very wide. It is best to let them *severely* alone, as they are ugly customers on dry land.

While on the alligator subject, I would like to give the readers of FOREST AND STREAM an account of a little frolic I had with one when a lad of fifteen.

On Lake Jackson in Lear County, Fla., we used to have famous duck shooting. On one occasion I was on the lake and had succeeded in bringing down five or six ducks. My dog after retrieving one or two refused to go into the water, so there was nothing left for me to do, but wade in and bring them out myself; which I proceeded to do, fortunately carrying my gun with me; just as I was in the act of picking up the nearest duck, my attention was riveted upon a pair of the queerest looking eyes I ever saw, and it took only a second to determine to what they belonged. You may talk about "quills on the fretful porcupine" standing on end, it faintly expresses the size of the scare under which I was laboring. I had presence of mind enough to throw the gun into position, and pull the trigger, fortunately with good effect. After the monster had ceased to struggle I dragged him ashore by the tail. He measured just the length of one of our Florida pine fence rails, *ten feet.* This is about the average length of a grown alligator, but they are frequently twelve to fifteen feet long. W. A. B.

Another correspondent writing from Fernandina, Fla., and referring to the same communication as the preceeding, says:—

It is a very frequent occurrence to come upon alligators out in the high dry pine woods of Florida sometimes a mile or two from any body of water. They travel from one creek or cypress pond to another, and occasionally the trail made by their dragging tails can be seen in the sand on the travelled roads. 'Gators ten and twelve feet in length thus occasionally take the overland route.

A. B. C.

The Kennel.

THE DACHSHUND.

AT the late Hanover Dog Show a meeting of German dachshund breeders was held and a series of points by which these dogs should in future be judged was adopted. Whether these points will be adopted at English shows remains to be seen, but there is every reason to believe that they will be. One important point was settled at the meeting, that was that the German dachshund and the French basset belong to the same race, but the report of the meeting goes on to say that the present basset cannot be considered any longer to belong to this class of dogs, but is only a dwarf form of the *chein courant;* therefore it differs strongly from the German dachshund in the present day. In commenting upon this question the representative of the London *Field*, who was present, gives but a qualified assent. He says:

To my mind, the *small-sized* black-and-tan or red bassets of the present day, being perfect copies of the dachshunde of the same markings, I fail to see in such a case why a distinction should be made between the breeds. Indeed, there is no difference, and this was proved by the fact that, at Hanover, some half-dozen bassets were entered in the dachshund classes; and I contend that, barring their color, they would have had a right to be so entered, if entered in dachshund "hound" classes. And this brings me to the whole question, which to my notion lies in a nutshell, viz., that dachshunde, by weight of facts, should be divided, as I stated in my report last week, into two grand divisions—the "hounds" and the "terriers". Indeed, the difference in the two types is so

marked, in good specimens, that no difficulty is experienced by a connoisseur in placing them. But if the matter be not speedily looked to, it is very evident that the two distinct strains will be blended at no distant day into one general breed, and this should be deplored. If a man mates his dachshund "hound" dog with a dachshund "terrier" bitch, he will, in the litter thus produced, get probably some "hound" pups, some "terrier" pups, and some sort of a "half-and-half" pups, which will grow into neither type, and eventually will puzzle people to know how to classify them. There are already many such mongrel dachshunde.

Now, I am a stickler for the "hound" type, because dachshund hounds have exceedingly well defined characteristics, which their "terrier" congeners (with due respect to their breeders) have not. The terrier dachshund's short feather and light bone behind, his apple head and pointed muzzle and grating tongue, displease me from a sportsman's point of view; and I think I am right in wishing to preserve the old "hound" type, viz., longer ears, somewhat houndy heads, as much bone behind as in front, plenty of propelling power, and—comparatively with size—plenty of music.

At the same time, I quite understand that for terrier work the heavier, dachshund hound would not answer and I therefore quite accept the no tion of dachshund terriers being bred for the work they have to do; but what I argue is, that the two breeds should be broadly separated at shows, and in this view I trust I shall not be alone. And, by the way, before going any further, it may be as well to enlighten a certain class of men who criticise disparagingly dachshund terriers on the ground, forsooth, that they are "nowhere" with killing foxes or badgers, as compared with some of our own terriers. This view of the mat ter evinces a degree of ignorance of the way in which the sport is carried on which should be forthwith dispelled. The dachshund terrier is not asked to kill under any circumstances. He may bolt his quarry—and he does so now and then—but his special functions are simply to mark the quarry, and follow it into its stronghold, and by giving tongue incessantly direct the men as to where they are to dig in order to secure their prey. Therefore, an ordinary terrier which would go in and kill his game would give no end of trouble to the diggers, since they would not know in which direction to carry on their operations. As regards that sort of thing being called sport, it is a pure matter of fancy. It is exciting enough, in all conscience; and if the definition of sport, broadly speaking, is one which is to be endowed with sufficient elasticity to embrace everything which tends to give relaxation and fun to the sportsman, then digging foxes and badgers is sport.

As regards the history of dachshunde, the minutes of the meeting stated that:

"The German dachshund—which during the sixteenth century was called by many names, such as Erdhundle, Lochhundlin, then as Schlifferlin and Schlieffer (from creeping,) and later as Tachsschlieffer, Dachskriecher, Dachshund (provincially Teckel) has been considered as an original race by many. In fact, in the days of the Merovingians they are said to have existed under the name of Bibarhunt. Of course there are no reliable records about these dogs, which in those days were used for hunting under the earth, and even in these times ordinary dogs, such as Sanbellers and Otterhunde, are often used in the absence of dachshunde."

This then goes to prove that even in olden times there were dachshunde used as terriers; but, as their points are not given—"there being no reliable records about these dogs"—may it not be readily admitted that these dogs were dachshund hounds of diminutive sizes, which, being small, were unable to pursue their quarry even under ground, after having hunted it through the coverts? I think this ought to be the solution of the question. In short, all the dachshunde now bred must have originally descended from a "hound" fountain head, because one can breed terriers readily enough from hounds by crossing with other breeds and by choosing puny specimens; but no one can breed hounds from anything but hounds—*ergo*, the dachshund "terrier" of the present day is descended from the dachshund "hound" of old, and I argue that the latter type should therefore be preserved in its purity, if possible.

The following are the points agreed upon:

1. General appearance, low and very long structure, deep and well developed chest, legs very short, the forelegs turned inwards at the knees with the feet considerably bent out. The whole appearance is weasel-like; the tail is not much crooked, and is carried either straight up or a little sloping. Hair close, short and smooth; expression intelligent, attentive, and lively. Weight not over 10 killos.

2. Head long and pointed towards the nose; forehead broad and flat; nose narrow; the lips hang over a little, and form a sort of fold in the corner of the mouth.

3. Ears of medium length, tolerably broad and round at the ends, placed high up, and at the back of the head, so that the space between eye and ear appears considerably larger than with other hunting dogs; they are smooth and close, and droop with any shaking of the head.

4. Eyes not too large, round and clear, rather protruding, and very sharp in expression.

5. Neck long, flexible, broad, and strong.

6. Back very long, and broad in the hind parts.

7. Breast broad, ribs deep and very long, and back of body higher than the front.

8. Tail of medium length, strong at the root, and gradually running to a short point, almost straight, occasionally with a small curve.

9. Fore-parts much stronger than the hind; muscular shoulders, which are short, bending outwards, the knee inwards and the feet again outwards.

10. Hind legs—knuckles strong and muscular; pasterns very short, and quite in comparison with the front legs.

11. Fore-feet much stronger than the hind feet, broad, and the toes well closed; the nails strong, uneven, and particularly of a black color, with a strong pad to the feet. The hind feet are smaller and rounder, the toes and nails shorter and straighter.

12. Hair short, close, and glossy, smooth and elastic, very short and fine on the ears; coarser and longer on the lower part of the tail. The hair on the lower part of the body is also coarser.

13. Color black, with tan on the head, neck, breast, legs, and under the tail; besides dark brown, golden-brown, and hare-gray, with darker stripes on the back; as also ash-gray and silver-gray, with darker patches (*Tigerdachs*). The darker colors are mostly mixed with tan and with the lighter colors; the nails ought to be black, and the eyes dark. White is only to be admitted in the shape of a stripe on the chest straight down.

14. Teeth—upper and lower teeth meet exactly; they must be strong in every respect.

Those dogs may be considered as *faulty* which have a *compressed or conical head*, if the nose is too short or too narrow, if the lips are too long, *long* faltering ears, thin neck, and narrow chest, if the front legs are not regularly bent, or if the *crookedness of the legs is so strong as not to carry the weight* of the body. Further: the feet, if they are not regularly formed; if the hind legs are too long, and likewise the tail when too long and heavy and conspicuously crooked. With regard to color, it is to be said that white as ground-color is also to be considered faulty, with the exception of what is mentioned before.

With these points, as regards the classes of dachshunde to which they apply, I quite agree; but in conclusion I can only repeat what I stated in my report, viz., that dachshunde at shows should be divided into "hounds" and "terriers"; the latter not to exceed a certain weight, and to be still subdivided into "dogs" and "bitches." The "hounds", if sufficiently numerous to warrant forming into several divisions, to be classed by weight, and each class to be subdivided into "dog" and "bitch" classes.

The portraits we print are those of Fritz and Diana, two celebrated dogs owned by Mr. Barclay Hanbury, of England, and both of which were imported from Germany. Some few years since, much more interest was taken in the dachshund in this country than appears to exist now, a fact we are sorry to record, as he is a lively, merry little worker, and affords much sport when rabbits are abundant. Dr. Twaddell, of Philadelphia, imported some very fine specimens and has been the most successful exhibitor at our shows.

DEATH TO FLIES.

BUFFALO, July 14, 1879.

Editor Forest and Stream:

Two weeks ago a cocker bitch of mine whelped. In a very short time there were two hundred and fifty millions (actual count) of flies gathered to the feast. As soon as practicable, I removed the bedding (sawdust covered with coarse cotton cloth) and added new bedding. Kennel perfectly clean, but still the flies came in swarms. At my grocers I noticed some patent "Fly Plates", used for exterminating flies. I purchased six and tacked them up on the walls of the kennel and watched results. In twenty minutes the flies began to drop, and in less than two hours I swept up nearly a pint of dead flies. I found plenty of dead ones, too, *outside* of the building, and to-day there are very few flies in my kennel. The pups sleep quietly and the dame is not nervous nor restless. These "plates" consist of little tin dishes about an inch deep; the preparation is put in the bottom and covered over by a prepared paper. You tack the dish on the walls, of course out of reach of the dogs, cover the paper with water, and as soon as it becomes thoroughly saturated it is ready for use, and if a fly sticks his bill into the solution (which they like) he is a "dead bird", and will never get "outside of the boundaries" alive. HUMANITY.

SUDDEN DEATH OF A DOG.—*Memphis, New York, July 18, 1879.—Editor Forest and Stream:* My thorough-bred cocker spaniel "Dash" came to an untimely end on Monday last. I give you the particulars as to his symptoms and death, as they came under my personal eye. He was full of his usual vivacity up to within 20 minutes before he died, following me playfully down to my farm, as he also did once around the lot in which I was racking. I went to the well for a drink and as I commenced pumping he made a rush for the trough and for a few moments seemed to enjoy the ablution. He followed me partly around the field after this, and all at once gave a yell and commenced baking, acting as though he was scared and trying to get away from some danger. He would run against me and the horse, jump into my lap, and acted perfectly crazy, for about two minutes. My first impression was that he was being stung and I started up, he following for a few feet and suddenly fell in a spasm and died in less than fifteen minutes. I am at a loss to conjecture as to his ailment. I am quite sure it could not have been poison, and give you the full particulars hoping you can give some information to your patrons through your valuable paper which may have valuable stock liable the same disease.

WARREN SULLIVAN.

[The cause of death was un-doubtedly drinking too much cold water when heated. Ed.]

—The St. Bernard bitch Juno, im-Sune, imported in 1875 from the and the property of Mr. Chas. H. Allen, ofAlbany, whelped on the 7 inst, 10 puppies, 7 dogs and 3 bitches—sired by imported Chamounix.

—Mr. N. Elmore, of Granby, Conn., has purchasedfrom Mr. Geo. Pownall one-half interest in his beagle Victor, by imported Rattler out of imported Blue Bell.

IMPORTATION.—Dr. J. S. Nevin, of Ontario, has recently imported from England the Gordon setter dog Blossom (5080 E. K. C. Stud Book), by Shot out of Mr. Macdona's Bloom. We have not seen Blossom, but he is represented as having a remarkably fine head, good shoulders, back and quarters, and in color is black with golden tan. Hehas won in England first prizes at Agricultural Hall, Bath, Barton-on-Trent, Manchester, Alexandre Palace, Edinburgh, Bristol, Swindon, and other places. He will be used for stud purposes.

—Mr. John H. Rogers of Boston, Mass., claims the name Zang for his red setter dog, whelped May 27th, 1879, by his red setter Fox out of Mr. Arthur Sharp's red and white setter Zoe.

—W. E. Leavitt, of Flushing, has sold his dog "Sir Lancelot", winner of the 3d prize in the last New York show to a gentlemen in New Jersey. We understand that the price paid was $500. Sir Lancelot was bred by Northrup, of Newton, "Moreford strain"; very handsome and beautifully broken.

DOG LOST.—Dr. J. S. Niven of London, Ontario, has had stolen from him his Gordon Setter Don. The dog's fore feet are white. Any nformation concerning him received at this office or by the owner.

—The red Irish setter bitch Gipsie, owned by Mr. G. W. Bassford, of White Plains, whelped on the 23d inst., eight all red puppies, sired by Rory O'Moore.

THE UNSTABLE TURF.—Nothing more surely indicates how precarious is the footing of even the longest established institutions, than the following comments from the New York *Sun*. There are not only great and mighty tides in the affairs of men, but varying and uncertain currents, which make and unmake fortunes, direct events, establish fashions, change men's fancies, and play fast and loose with best laid schemes and fixed establishments:

An unexpected rival to the old established race courses in the East has sprung up at Brighton Beach, in the neighborhood of which more people have gathered during the last two years than at any other summer resort on the continent. Although this course is not yet completed, the few preliminary races have drawn a large attendance, and almost exhausted the supply of steeple-chasers—so nearly so, in fact, that there were not enough of these game racers at Monmouth Park at the meeting which closed on the 12th to carry out the announced programme of steeple and hurdle races. This state of affairs is attracting the attention of horsemen; they are asking how far Brighton Beach will affect Long Branch, Jerome Park and Saratoga hereafter. If the magnates of the turf conclude to take an interest in the new course, the matter will become serious. However, the Saratoga Association, with its usual pluck, means to carry out its programme of one hundred races, no matter what obstacle may arise.

There is no doubt that the Brighton is the most merciful summer track in the country, whatever may be said in favor of other tracks.

NEW JERSEY ATHLETIC CLUB.—The opening games of the New Jersey Athletic Club, will take place on their grounds, Elysian Fields, Hoboken, New Jersey, July 29. If the weather should prove stormy, games will take place the first clear day. Special ferryboat, Midland, will leave Barclay Street Ferry 1:30 P. M. and Christopher Street, at 1:45 P. M. Charles T. Battelle, Secretary, P. O. Box, 250, Hoboken, N. J.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Trout, *Salvelinus fontinalis.*	Muskalonge, *Esox nobilior.*
Salmon, *Salmo Salar.*	Pike or Pickerel, *Esox lucius.*
Salmon Trout, *Salmo confinis.*	Yellow Perch, *Perca flavescens.*
Land-locked Salmon, *Salmo gloveri.*	

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Bluefish, *Pomatomus saltrix.*
Sheepshead, *Archosargus probatocephalus.*	Spanish Mackerel, *Cybium maculatum.*
Striped Bass, *Roccus lineatus.*	Cero, *Cybium regale.*
White Perch, *Morone americana.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*

FISH IN MARKET.—Bass, 25 cents; blue fish, 8 cents; salmon, 25 cents; mackerel, 30 cents; weak fish, 8 cents; Spanish mackerel, 25 cents; green turtle, 12½ cents; halibut, 15 cents; haddock, 6 cents; codfish, 6 cents; black fish, 12 cents; flounders, 8 cents; porgies, 6 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheep's head, 18 cents; soft clams, 30 cents to 75 cents; salmon trout, 18 cents; Canada brook trout, 35 cents; whitebait, 75 cents; smoked salmon, 15 cents; dry cod, 6½ cents; hard crabs, $3:50 per hundred; soft crabs, $1.75 per dozen; frogs, 30 cents.

A WISCONSIN FISHING TOWN.—If we may legitimately draw our inferences from the *Ashland Press*, which is quite as fishy in its way as the *Cape Ann Advertiser*, the principle article of subsistence out there has to have the scales scraped off before it appears upon the table. Ashland big fish are as much of a curiosity in their way, as California's big trees. It is said that Editor Tifield has a fish-vane on the *Press* office pinnacle, which knows no North, no South, no East, no West; the usual designations of the points of the compass being converted into mystic symbols of trout, bass, muskalonge, and nondescript monsters. The vane being independent of the inconstant winds, and whirled about by some occult device of the *Press* staff, points to trout, or to bass, etc., as the weather may be good for each of these respectively. The piscatorial stranger within Ashland's gate looks from his bedroom window in the morning up to Tifield's fish-vane, notes which way its tail points, and selects his tackle accordingly.

The last number of the *Press* constitutes itself a guide-board to the principle whaling grounds about Ashland, and we herewith avail ourselves of a part of its information for the benefit of our readers:

Trout Streams.—Besides the coast rock fishing grounds, which extend from directly opposite Ashland across Chequamegon Bay, and west for a distance of forty miles, there are the following noted trout streams, all of which can be reached from Ashland: Silver Creek, Marengo, Trout Brook, Brunsweiler, Upper White River, Long Lake Branch of White River, West Branch of White River, Brule River, Fish Creek, Whittlesey's Creek, Bono's Creek, Vanderbenter's Creek, Sioux River, Onion River, Pike's Creek, Raspberry River, Sand River, Siskowit River, Bark Point Creek, Iron River, and many other streams.

Bass and Pickerel Lakes.—English Lake, Lake Harriet, Long Lake, Island Lake, Pike Lake, Blooder Lake, and others.

Muskalonge and Pike Lakes.—Butternut Lake, and Dryden's Lake on the line of the Central Railroad.

Houghton Point—directly opposite Ashland, across the bay, is a favorite picnic ground, and is visited annually by many parties. There is good rock fishing in its immediate vicinity.

Fish Creek—one mile west of Ashland, is a beautiful trout stream, deep and clear as crystal. The banks are lined with flowers, and there are many delightful spots where picnic parties can camp out and enjoy good fishing. Boats ascend the stream for a distance of five miles.

Whittlesey's Creek and Farm—two miles from Ashland, at the head of the bay. A fine trout stream and cosey rural retreat.

NEW HAMPSHIRE—*Nashua, July* 11.—Trout fishing has been excellent this season, and is no doubt the result of the protective laws which have been in force for the last few years.

The trout taken this season have been larger and more in number than for years. We are having some good sport with pickerel, which are fairly abundant in the ponds adjacent. A few black bass have been taken at Cromwell's Falls, in the Merrimac. They are on the increase, thanks to the State Commission.

Some of the *solons* are trying to tinker the best law on trout we ever had, and one that gives general satisfaction. We trust that there are enough common-sense fishermen in the Legislature to defeat it. WEBB.

TROUT AND POTATO BUGS.—Last year there was some discussion as to whether or not potato bugs would poison trout, and a variety of conflicting opinions were expressed with observations to substantiate them. Our correspondent, "Webb," of Nashua, N. H., writes, under date of 11th inst.:

Recently, while stopping at "Spaff's" Camp, on the Upper Megalloway, I picked up a lively potato bug. We were at least thirty miles from any cultivated land, and in the midst of the forest primeval. The pesky critters seem to be heading toward the North Pole; and the chances are that they will reach it before Bennett's Arctic Expedition, which lately sailed from San Francisco. The same week, two gentleman from Portland, while fishing in the Umbagog Lake, took a number of trout, which, when dressed, were found to contain from ten to twenty potato bugs each. Who will tie the *first* potato bug? It will be a success without doubt. I have since learned that during the same week, while a gang of men where driving a raft of logs on Umbagog, that there descended on to it a perfect swarm of these beetles, which, after a night's rest, rose and departed. Probably thousands fell into the water, or were washed off the logs, thus accounting for those found in the trout. WEBB.

THE FISHING OTTER.—A correspondent asks us to describe the angling device known as the otter or painter. This we have already done several times, we believe. However, not to be disobliging, let us say that the otter is a board 36 x 40 inches long, and 8 x 10 inches wide, loaded with a strip of lead so as to stand on edge. Pass cords through holes bored at the four corners, and at a distance of five feet unite the ends and adjust, as with the belly band of a kite. From the united ends lead a long line to a boat or a shore, and at proper intervals along this line adjust short lines, say five feet long, with baited hooks. When the angler takes the end of the long line in his hand, and walks along shore or is propelled in a boat, the board, or "otter," keeps the line taut and keeps pace as he moves. The baited drop lines passing through the water attract fish, and are very killing.

PACIFIC COAST SHAD.—We have received the following interesting communication from Oregon, and, in replying to the questions asked, confess that we are beyond our depth. Quite likely the fish referred to is one of the *Coregoni*, many varieties of which are found on the Northern Pacific coast, and extending far into Alaska:

PORTLAND, OREGON, June 30, 1879.

Editor Forest and Stream:

Some days ago one of our Columbia River fishermen, while "Drifting" for salmon, caught a peculiar fish, which he preserved and exhibited to his employers; and one of them, an Eastern man, without any hesitation pronounced it a "*shad*," and, to place the matter beyond a doubt, it was shown to other parties familiar with the fish, and they all agreed with him. Now the only "shad" on the coast were put in the Sacramento River about 600 miles south of where the fish was taken, and although they are becoming numerous there, and in San Francisco Bay, is it not rather strange that this one should come so far north of its native waters? Or is it the nature of the fish to travel around? Perhaps some of your many readers can throw some light upon this subject, and lessen the ignorance of the writer in this respect.

If you will give this place in your valuable paper, you will confer a favor upon a number of interested parties in this city, as well as upon Yours truly,

WILLIAM LANG.

FISHING AT ALBURGH SPRINGS.—Mr. Andrew Clerk writes to FOREST AND STREAM regarding the fishing at Alburgh Springs, Vt.:

Last Wednesday myself and two boys went fishing on Lake Champlain, and brought home 23 fish; on Thursday we captured 30, our four year old youngster of the genus Imbrie taking more than his share. On Friday we landed some 50 fish; four of the bass weighed respectively 2, 2½, 3 and 3½ lbs. One-half of all the fish we take are black bass, the remainder being pickerel, wall-eyed pike and perch. My largest pickerel thus far weighed 7½ lbs. I find my Abbey & Imbrie split bamboo rod does admirable execution. I have been giving the youngsters a chance at trolling, and have done but little fly fishing as yet. I am stopping at the Manison House, where the rates are only from $7 to $10 per week, and the accommodations well worth the money. I am surprised that more New Yorkers do not come here. The nights are always cool, and saying nothing of the splendid fishing, the beneficial effects of the mineral springs ought to induce many more tourists to come than are here. I should advise coming by the Hudson River and Vermont Central Railways, in preference to the Delware and Hudson, on account of the better connections.

MOVEMENTS OF THE FISHING FLEET.—The mackerel fishery is looking up a little, and as the quality of the fish improves more are salted. 11 arrivals have been reported since our last issue, 7 of them with fares aggregating 1,480 bbls. The number of Bank arrivals for the week has been 5 from Western Bank with 415,000 lbs. codfish, and 9 from Grand Bank with 230,000 lbs. halibut. 23 Georges arrivals have been reported, bringing 300,000lbs. cod and 13,000 lbs. halibut. The Inshore codfish fleet are troubled by a scarcity of bait and the depredations of the dogfish. Only 2 arrivals have been reported the past week, bringing 34,000 lbs.codfish. Total number of fishing arrivals for the week, 49.—*Cape Ann Advertiser July* 18.

CONNECTICUT—*New London, July* 14.—The trouting season past has been in all respects the best in many years. The catches have been larger and the fish of greater size. Towards the latter part of the season the brooks were very low, and the fish collected in the pools afforded an opportunity for fly catching. Black bass fishing in Konomoc is attended with small results, but fish are caught, and the largest taken has not been over 2½ pounds. MISAL.

NEW JERSEY—*Forked River, July*, 14.—We are having fine weakfishing. The *Belle*, Capt. Barkalow, with Mr. W. M. Leslie of New York, came in to-day with 52 fish weighing from 1 to 3 pounds, but they will run larger than this later in the season. Large quantities of sheepshead are taken here in nets; 1,300 pounds were brought in one day last week and shipped to New York. I have no doubt they could also be caught with hook and line, and they would afford fine sport, as they will average 10 pounds each, and I hear of some being caught that would weigh 14 pounds. A law has been enforced at Barnegat against fishing on Sunday, and several parties who went out from there to fish on Sunday were arrested and find, besides being put to some inconvenience. This law does not affect us here. A.

NEW YORK—*Lowville, July* 19.—A large number of fishermen and sportsmen have gone into the woods by way of Lowville. They report good success in catching trout, and have seen plenty of deer by daylight, while fishing on Oswegatchie and the Beaver River waters. The Fenton, House, No. 4, is rapidly filling up with the usual guests, and Wardwell and Dunbar at Stillwater, Munsey at Little Rapids, Boyed Edwards at Smith's Lake, and Twist, Grant, and Allen at Oswegatchie, report plenty of guests. H. W. HAY.

Quogue, Long Island July 29.—Occasionally there is a run of blue fish at the inlet, which are caught from the shore at flood tide by throwing a squid.

Fire Island, July 21.—The blue fishing season has opened in full force, and the sport is yielding good returns. D. S. S. S.

PENNSYLVANIA—*Hornellsville N. Y., July* 20.—Three parties have lately returned from Pine Creek, Pa., with about 1,000 brook trout, mostly small ones; average about ¼lb. No very large trout, have been caught there this season yet. They say the water is so cold that the large ones have not come to the spring holes yet.

Yachting and Boating.

NEWPORT YACHT CLUB—*What it might do and become.*—At the annual meeting of this club, July 18, the following officers were elected: Commodore, H. A. Mott, New York; Vice-Commodore, S. C. Powell, New Haven, Conn.; Treasurer, G. F. Pratt, Boston; Secretary, W. V. Olyphant, Brooklyn; Measurer, Richard Youmans, Newport.

If this club desires to make itself felt in the annals of yacht racing, no better port nor more promising opportunities could offer. Let the club vote liberal prizes open to all recognized yachts, and a fleet will annually come to the line which will show more cracks with racing flags aloft than any other match in American waters, and we would at last have something like the great meetings at Cowes, Isle of Wight, in August. To land "the" cup of Newport would become the highest ambition, and the worthiest laurels an American yachtsman could wish. To pocket the club prizes in club races with no entries worthy the name is driveling sport. Let us have something new, something with life and competition in it; get out of the dreary old rut in which we have been sailing so long. A grand match every year under liberal and enlightened sailing rules; no cheap plated ware, but a solid substantial emblem or a purse worth the racing; a course for the large ones from the Reef Lightship around the Vineyard and home, and for the twenty-tonners and under to Block Island and back; a regatta committee who knows their business, and can grasp something more than length measurement and balloon jibs; a day in our "fixtures" that will not conflict with other events, and a slashing breeze from the South-east that will curl up the breakers on the shoals and fling the spray mast high along the cliffs—ah! what grand sport there would be to see the flyers from New York, the heavy fellows from the East, and the stray sprinkling from Philadelphia and the Sound ports turn up with fighting flags at the start, all eager for the gun. What a grand sight to see them off—off for the sea, with a lanyard gale laying their combings in, crews crouched to windward, light spars bucking, and gear hull straining to the best. Now they dip, now they rise, and as they master each angry sea toss the spray from their dripping bows with a dash of scorn; aye, as things of life they drive furiously on, on to the goal the skipper has set, and—but then most of the fleet would have been a wreck long ere this, and we may as well save ourselves the rest of the picture.

Still there are great opportunities for the Newport Yacht Club if it but choose to make the most of the material at hand, weak-kneed though it be in a seaway. Let them select courses in waters our crafts can venture in, put up the prizes, and we warrant the Newport Yacht Club will grow to the level of the largest club in the country. The open races will bring to its roll members by the hundred and clippers by the score. Will the new board of officers let the world know they live?

HONORS TO THE JEANNETTE.—The San Francisco Yacht Club fleet turned out in force to act as an escort to the Arctic yacht Jeannette as she passed through the Golden Gate into the waters of the Pacific on her voyage to the North Pole. The club resolved to perform the little act of courtesy out of compliment to James Gordon Bennet, the promoter, and Capt. De Long, the commander of the expedition, both being members of the New York Yacht Club. Thousands of people crowded the hills of the city and watched the little Jeannette as she steamed slowly to windward with a fleet of thirty-five yachts, and a lot of steam launches, tugs, plungers, etc., flitting about her, making a very imposing marine spectacle in the breeze prevailing. Capt. De Long was very much impressed with the interest manifested and sent back by Mr. Bradford in the pilot boat a letter which was published, expressing his gratification at the courtesy extended to himself and officers. Mrs. De Long left the Jeannette just outside the Heads, returning to the city in the S. F. Y. C. Commodore's yacht, Frolic, aboard of which was a number of her husband's friends. The following formed the club fleet and acted as escorts: Frolic, Consuelo, Clara, Magic, Startled Fawn, Lively, Cornelius O'Connor, Twilight, Fawn, Ida, Enid, Tommie, Jennie Griffin, Mollie, Mayflower, Laura, Queen of the Bay, Ariel, Virgin, Sappho, Azaline, Sarah Gibson, Emerald, Fleta, Robert Gibson, Geo. Peabody, Rocket, Millen Griffith, Rabloni, Giremer Irwin, Isabel, Lizzie Allen, and lots of smaller fry. *Dodger* finally won and takes the prize, consisting of side and anchor lights. Another race for September is set

down in the club fixtures. Judges, Messrs. Philip W. Parks and R. D. Evans. Summary:

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Dodger	10 46 00	12 46 15	2 00 15	1 59 00
Coquette	10 43 00	12 47 00	2 4 00	2 01 00
Startle	10 43 30	12 46 00	2 2 30	2 03 00
Breeze	10 47 30	12 58 00	2 10 30	2 08 15

CHICAGO YACHT CLUB.—The Union regatta of the Chicago Yacht Club was sailed in a light wind July 11, a large fleet coming to the line. Course, from stake-boat off foot of Jackson street, around a stake-boat two miles off Thirty-ninth street, thence around the crib, thence around the south end of the Government pier to the point of starting. The prizes were as follows; First class—prize pennant of the Chicago Yacht Club. Second class—prize $25 in cash. Third class—first prize, $20; second prize, $10; third prize, Vanderwecken's work on yachts. Fourth class—first prize, $15; second prize, $10; third prize, $5. Judges: C. E. Kremer, Captain Root and John A. Farrow, with Captain George E. Weir and Dr. Wilkins for alternates. The wind was too light and fickle to attach much importance to the result, the Signal Service reports not averaging over a three mile wind. The following is the summary:

FIRST CLASS:

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.
Cora	2 30 00	5 31 00	3 01 00

SECOND CLASS:

Ina	2 27 50	5 15 20	2 48 30
Qui Vive	2 30 00	5 31 25	3 01 25
Mamie	2 29 07		
Anon			

THIRD CLASS:

Nameless	2 28 19	5 20 00	3 06 19
Zephyr	2 28 19	5 41 30	3 15 11
Goodenough	2 28 04	5 46 08	3 18 04
Peri	2 24 40	5 54 08	3 29 32
Little Buttercup	2 26 01	6 14 20	3 48 19

FOURTH CLASS:

Fleetwing	2 27 51	6 45 00	4 26 09
Annie	2 25 59	7 15 20	4 44 40
Lincoln	2 28 45	7 30 20	5 02 40
Wonder	2 28 00		
Mischief	2 28 19		

The *Idler* and *Frolic* of the C. Y. C. have been on an extensive cruise to Lake Superior, and it is reported that the *Countess of Dufferin* may be bought for Chicago parties at the coming auction at Coburg, Ont., August 14. The club seems to be prospering and the taste for yachting spreading.

TOLEDO YACHT CLUB. — The first regular annual regatta of this new club was sailed in Maumee Bay, Ohio, July 12. Wind light from N.; course from the Columbu, dock to the black can buoy, thence around Turtle Island and return, distance 22 miles. The following yachts came to the start: *Stella*, Commodore Arthur L. Smith; *Idler*, Perue; *Red Ribbon*, Jung; *Ada*, Hepburn. Time allowance, apparently based upon size and sail area as follows: *Stella* allows *Red Ribbon* 8 m., *Ada* 12 m. and *Idler* 1 m. The fleet got away at the first gun at 12 h, 8 m.; the *Ribbon* getting off with the lead. Turtle Island was rounded by *Ribbon*, *Stella*, *Ada* and *Idler* in the order named, whence all eased sheets for the run home and set kites below and aloft. The finish was fetched by *Stella* at 5h. 55m.; *Red Ribbon* at 6h., *Ada* 6h. 15m. 30s. and *Idler* 6h. 38m. *Red Ribbon* therefore takes first prize on time and *Stella* second.

COHILL-NORCROSS MATCH.—The *Chas. Cohill* and *Josie Norcross* of the Coopers Point Yacht Club, sailed a match July 14, on the Delaware for a purse of $25. Course from Coopers Point to the Horseshoe buoy and return. Both made a close turn of the lower mark, and then lightened ballast as the wind fell on the home stretch. The yachts finally crossed the line so even that Capt. R. G. Wilkins, the judge, declared the race a dead heat, and decided to sail the match over again in August.

NEENAH (Wis.) YACHT CLUB.—The annual regatta of this club was sailed over a 12 mile course, July 5. *Carrie Morgan*, of Oshkosh, took first prize in 2 h. 27 m. 6 s.; *Albatross*, of Neenah, second prize in 2 h. 41 m. 20 s.; *Niobe*, of Oshkosh, turned turtle.

THE INTERNATIONAL MATCH.

OSWEGO, N. Y., JULY 16.

Editor Forest and Stream:—

The International Yacht race between the *Katie Gray* of Belleville, Ont., eleven tons, and the *Ella* of Oswego, N. Y., twenty-one tons, took place yesterday, July 15, in Kingston Harbor, Ont. On account of classification the *Ella* was obliged to allow the *Katie* about ten minutes time. The start was made at 11 o'clock with the wind light N. N. W. The course was a rectangular one of 11½ miles, to be sailed three times. At the start betting was about even, but at 1:30 P. M., the *Ella* having rounded the course once, and having four minutes and five seconds a lead of the *Katie*, odds were in offered in favor of the former of $100 to $75. At 2:52 the *Ella* rounded the course a second time twelve minutes and thirty seconds ahead. Bets were now offered of $8 to $1 and even $10 to $1 on the *Ella*, but no takers. At 4:10 both boats being upon the third round, and the *Ella* within seven miles of home, a heavy squall from the N. E. drove the *Ella* far to windward of her course, and then shifted so that she was obliged to tack several times to regain it, the *Katie* meantime being in such position that the gale benefitted her, and in consequence thereof she reached the home buoy three minutes and time allowance ahead of the *Ella*. The result was totally unexpected, and could have only arisen from the combination of wind and weather which so favored the one and delayed the other. The *Katie* declines to repeat the race although the *Ella* is only desirous of so during. All yachtsmen present admit the superiority of the *Ella*, notwithstanding the result. Time of the race seven hours. Purse $500.

YACHTSMAN.

THE CUTTER'S BEAUTY.—Even the New York *Herald* is compelled to acknowledge the beauty of the cutter, and this is the way it pays tribute to the most graceful and thoroughbred there is among all types of yachts: The cutter rig with all its light sails is certainly very picturesque, and the *Muriel* would strike even an uncorinthian eye as a most beautiful sight when under way.

EASTERN YACHT CLUB.

ANNUAL REGATTA, MARBLEHEAD, JULY 9.

Editor Forest and Stream:

The day for this race, the principle event of the year in Boston's waters, opened pleasant with a stormy puffy wind from the N. W. The start was ordered from an anchorage, and the regatta committe on the *Bradley* were early on hand and arranged the line for the start. Marblehead Rock formed one end of the first line, and Sch. *D.* anchored to the S. W. of the Rock, the other end; the second line was formed between two stakeboats anchored to the westward of the first line. The steamer *Gov. Andrew* with members and ladies aboard came down about 11 A. M. from Boston, and took aboard the members from Beverly and vicinity, at Marblehead, the steamer afterwards followed the first class yachts over the entire course.

The first class schooners and sloops and the second class schooners formed on the first line, and the third class schooners and second class sloops on second line.

The entries were as follows, the lengths are official:—

SCHOONERS, FIRST CLASS:

Name.	Owner.	Length. FT.
Halcyon	Chas. J. Paine	89
Phantom	Rear, Com. Hovey	82
Foam	Com. Boardman	84

SCHOONERS, SECOND CLASS:

Name	Owner.	Length. FT.
Fearless	E. B. Phillips	58
Sylph	A. C. Wheelwright...entered as 50 really	47
Latona	D. L. Pickman	64½
Brenda	James L. Little	64

SCHOONERS, THIRD CLASS:

Name.	Owner.	Length. FT.
Dream	Greely S. Curtis	44½
Hermes	Messrs. Quincy & Robbins	36
Loiterer	W. W. Kellett	35

SLOOPS, FIRST CLASS:

Name.	Owner.	Length. FT.
Enterprise	F. E. Peabody	48
Madcap	Water C. Cabot	45

SLOOPS, SECOND CLASS:

Name.	Owner.	Length. FT.
Effie	H. W. Crowninshield	37
Ariadne	W. G. Saltonstall	36
Violet	J. W. Wheelwright	31

Of these *Enterprise* and *Violet* are cutters with fixed bowsprits.

Course for boats on first line: leaving Halfway Rock, Davis' Ledge Buoy, and Egg Rock on starboard; Pig Rock Stakes on port to judge's steamer, 34½ miles. Course for small boats: leaving Halfway Rock, Whistling Buoy off the graves, and Egg Rock on starboard hand, Pig Rock on port hand to judge's yacht, 22 miles.

The whistle for the large boats to start was sounded at at 11:35, and jibs were quickly set for the run to the Rock, 2¾ miles; wind fresh on port quarter, no balloon jibs or large topsails allowed in the two first schooner classes.

Halcyon and *Fearless* seemed to get the best of the start, with *Latona* well up and *Phantom* in rear of *Halcyon*. The Rock was rounded as follows:

Yachts.	Time. H. M. S.	Yachts.	Time. H. M. S.
Halcyon	11 48 18	Phantom	11 48 46
Foam	11 50 35	Latona	11 50 16
Fearless	11 50 48	Brenda	11 51 16
Madcap	11 52 30	Sylph	11 52 53
Enterprise	11 53 41		

Sylph being a third class schooner entered in the second class by assuming greater length.

After jibing round the Rock they had the wind astern on the starboad tack, as far as Minot's Light, 13¾ miles; but the breeze became lighter and more streaky as they left the shore, and about a couple of miles from the Rock *Halcyon* got into a flat calm; while *Phantom*, holding a slight breeze went to the front followed by *Latona* and the two sloops, while *Brenda* ranged up on *Foam*, and all closed on *Halcyon*; *Latona* soon after passed *Phantom* and held the lead for several miles, until *Halcyon* caught a breeze and ran to the front, the same puff starting up *Phantom*, sending her ahead of *Latona*. The run over was uneventful and slow, wind being light and streaky and the yachts starting up by jerks the only steady gain was made by *Foam*, who passed *Latona* and the sloop *Sylph* had for some time been lost to sight, and it was though she had given up; but as the club steamer ran up to Davis' Ledge Buoy to see the turn she was seen coming down the south shore on the port tack, almost dead before the wind and some distance ahead of *Halcyon*; she had run round the shore in an arc, covering much more water than the others but holding a good breeze all the way. The buoy was rounded as follows:

Yachts.	Time. H. M. S.	Yachts.	Time. H. M. S.
Sylph	2 42 30	Phantom	2 49 30
Halcyon	2 50 03	Foam	2 50 25
Enterprise	2 50 47	Madcap	2 51 45
Latona	3 00 03	Brenda	3 00 46
Fearless	3 01 40		

Sylph took a long stretch in shore on the starboard, tack and then beat up the shore for some distance, holding a land breeze, the others making a short stretch in but tacking before reaching Minots' Light. *Halcyon* forereached and weathered *Phantom* from the instant her sheets were flattened in, passing her to windward. *Foam* broke tacks with the others and stood in toward the shore, where she seemed to get it lighter than the others; *Fearless* took a long tack to the North-east, and at once began to show her customary wonderful power to windward.

From Davis' Ledge to Egg Rock is 12¾ miles, and was almost dead to windward: *Halcyon* gained gradually and took a good lead, but as they approached the North shore, *Phantom* was seen to be to windward, and when they went round on the starboard tack and headed for Egg Rock, she was a length or two ahead. In a minute or two a fresher breeze came off the land, and *Halcyon* ran through her opponent's lee, only to see the latter get a puff shortly after, and run into the lead again. This time the Rear Commodore kept what he got, and although *Halcyon* gained in turning Egg Rock, and a little on the run to the Pig, *Phantom* went over the home line first at 6:24.40, only four minutes within the time limit. *Halcyon*, however, was close behind and crossed at 6:26.7, but eighty-seven seconds behind, and as her opponent had to allow her four minutes, the prize goes to the usual resting place in *Halcyon's* plate locker, *Phantom* taking second.

The third boat in was that really wonderful little wind jammer, *Fearless*, who beat the whole fleet with allowance, though 19 minutes behind *Sylph* at Davis Ledge. Some way astern came *Foam* and *Enterprise* neck and neck; then *Sylph*, *Madcap* and *Latona*, *Brenda* giving up after rounding Egg Rock, and going to her moorings. *Enterprise* sailed beautifully and astonished the lookers on who expected to see *Madcap* win in the light wind. *Enterprise* and *Fearless* take first and *Sylph* second prize in their classes.

The small boats started at 11:40, and held a good strong breeze over the entire course, being frequently rail under. Their course lay along shore, which explains this. *Dream* and *Effie* ran away from the others, and landed first prizes; the others after a close race came in with *Hermes* leading, *Lorterer* and *Ariadne*, leading *Violet*. *Hermes* gets a second prize; but as *Violet* is only hired from Mr. Whiting of the Berverly Yacht Club, she does not come within the rules of the club, and so she could not take a prize; does not count as an entry, leaving two regular entries only, and no second prize awarded.

The official times are a follows:

FIRST CLASS SCHOONERS:

Name.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Halcyon	6 51 07	6 47 07
Phantom	6 49 40	6 49 40
Foam	7 21 32	7 17 32

SECOND CLASS SCHOONERS:

Fearless	7 05 15	6 59 56
Sylph	7 33 17	7 19 54
Latona	7 34 05	7 34 05
Brenda	drew out	

THIRD CLASS SCHOONERS:

Dream	3 42 46	3 42 46
Hermes	4 07 18	3 58 05
Loiterer	4 13 18	4 03 57

FIRST CLASS SLOOPS:

Enterprise	7 22 57	7 22 57
Madcap	7 25 34	7 24 39

SECOND CLASS SLOOPS:

Effie	3 31 35	3 31 35
Ariadne	3 47 15	3 46 09

Time of *Violet* is not announced as she is not owned by a member of the club. She was not in her class. A large number of yachts accompanied the racing boats over the course, or were present as spectators, including *Dauntless* and *Clochette*, of the N. Y. Y. C.; *Romance*, *Alice*, *Anna Carrie*, *Rebecca*, *Idler* and *Tarolinta* of the E. Y. C.; *Wayward* of the B. Y. C.; and *Ethel Adrienne* and *America* of the Boston Y. C., as well as many others.

REEF POINT.

BEVERLY YACHT CLUB.—Through an oversight the forty-eight regatta of this club published in our last issue was placed under the heading of Marblehead Regatta. The times of the 3d class yachts were erroneously reported and should have been greater by 10m. all around. The result is not affected thereby.

BUFFALO YACHT CLUB.

SECOND ANNUAL REGATTA, JULY 15.

The Second Annual Regatta of the Buffalo Yacht Club was sailed July 15, off the new Goverment pier. Wind fresh from S. W., with a lively sea on, which moderated later in the day. Course about ten miles long. The match excited a good deal of interest and brought out many spectators aboard the steamers *Pearl* and *R. G. Stewart*. The following were the entries:—

Name.	Owner.	Rig.	Length Water Line. FT.	IN.	Builder.
Hattie	A. H. Chillcott	Schooner	36	8	Chillcott.
Corsair	P. C. Cook	Schooner	30	2	Beck.
Curlew	J. F. Ellsworth	Sloop	28	6	Hingston.
Telephone	G. H. Mills	Sloop	19	2	Smith.
Petrel	H. B. Doyle	Schooner	31	0	Mason.
Fleetwing	M. A. Robinson	Schooner	27	6	Emmons.
Arrow	John Bowen	Sloop	25	2	Emmons.

Start flying, time being taken as the yachts passed the breakwater. *Corsair* got off first, followed by *Curlew*, *Telephone*, *Petrel*, *Fleetwing*, *Arrow* and *Hattie*, the latter making a late start. *Corsair* led around the first mark closely followed by *Curlew*, who snatched the lead from her on the way to the second, with *Petrel* third and *Fleetwing* fourth. *Hattie* did not do well, and was soon virtually out of the race. The first stakeboat was again rounded with the *Arrow* in the lead, *Fleetwing* having worked up into a good second, *Petrel* next, then *Corsair*, *Curlew*, and *Haltie* and *Telephone* astern, and down to leeward. Though *Curlew* was timed as the fifth to round, she was well to windward of the rest and in a favorable position. *Arrow* held to a close wind and had some difficulty in finding the mark. *Fleetwing* ran up on *Curlew* but could not catch her; she was followed by *Arrow* and *Corsair*. *Fleetwing* then set flying jib, holding a good second with *Arrow*, expressly built to beat her, some three miles in her wake, *Corsair* out of the fun. The last mark was jibed around, and the run from there to the finish was devoid of further incident. Summary as under:—

Name.	Start. H. M. S.	Finish. H. M. S.	Actual Time. H. M. S.	Corrected Time. H. M. S.
Corsair	3 20 15	5 35 00	2 14 45	2 12 15
Curlew	3 20 27	5 23 17	2 01 50	1 55 50
Telephone	3 20 35	not taken.		
Petrel	3 20 45	not taken.		
Fleetwing	3 20 55	5 24 15	2 03 20	1 57 20
Arrow	3 21 40	5 29 20	2 07 40	1 58 40
Hattie	3 24 15	not taken.		

First prize, marine glasses, goes to *Curlew*; second prize, a box compass, goes to *Fleetwing*. Regatta Committee: Messrs. E. E. Benedict, W. A. Riggs and J. C. White. Judges: Messrs. J. O'Brien, E. D. Berry and C. L. Bryant; Referee, Mr. Thos. Kean. The winning yacht is a sloop, 29 ft. on deck, 28 ft. water line, 10 ft. 8 in. beam, and 26 in. hold, and was built by Hingston of Buffalo. A full list of the club's fleet will appear in our next issue.

ALBANY YACHT CLUB.—The annual regatta of this club was sailed July 17 for the unawarded second prize of the previous year, when all but one yacht capsized. Course from Albany to Pard Hook Light and return, distance 14 miles. Wind fresh and puffy from W. Starters: *Coquette*, Jones; *Startle*, Gradinier; *Artful Dodger*, Carman; and *Breeze*, Clark. The start was a flying one. It was a single reach down to the mark with the *Dodger* in the lead. *Coquette* shook out reefs, and went into second place, followed by *Startle* and *Breeze*. In this order the lower mark was rounded. On the run home *Dodger* had a bad knock down and *Coquette* ran hard and fast, the rest then going about for the western shore.

ROWING EVENTS.

LAKE GEORGE CANOE REGATTA.—The canoe races which the authorities of the Lake George Regatta had instituted in connection with the boat races, brought together quite a number of canoeists from various parts of the country, who established a camp on one of the islands in the lake. The sailing race was started July 17, after the race for double sculls had been decided. Six canoes started: *Clochette*, W. Whitlock; *Kaloolah*, K. N. Putnam; *Fitania*, Judge Smith; *Star*, L. F. D'Oremieulx; all of New York C. C., and *Bellerophon*, J. C. Platt: *Snark*, R. G. Platt. Course triangular, about three miles. Same rules in force which governed the New York Canoe Regatta held in June. *Clochette* reached the first stake ahead with *Kaloolah* second. The latter capsized after rounding. None of the canoes could do much on the wind and in working to windward, so they dropped out one by one until Judge Smith in his *Fitania* had it all his own way and won easily. The paddling race was one mile straight-away, and was won by the Rev. Chas. A. Cressy, clergyman of the village, in a canoe of queer appearance built by himself.

VIRGINIA AMATEUR OARSMEN REGATTA.—The first annual regatta of the Virginia Amatuer Oarsmen took place on the 15th inst., at Fredericksburgh, Va., on the Rappahannock River.

For some days this old town with its quaint old time characteristics of narrow streets, and two story houses has been in an unwonted state of excitement over the event of this regatta. Although the racing was not to come off until after 5 o'clock, all the morning people were flocking in from the adjacent country, and the railroads brought trains loaded with visitors. A grand stand had been erected at the finish of the races. The races were witnessed by 3,000 or 4,000 persons, and altogether were a grand success for this old town.

It is to be hoped that this event is the precursor of many to follow that may stir up the young bloods of Virginia to prowess, and an energy that will revivify this grand old State.

The first race was called at 5 o'clock, and was for single sculls, one mile and return, for a handsome silver cup, nine inches high, presented by the citizens. For this there were two entries, Mr. W. F. Roberts, of the Potomac club, of Georgetown, D. C.; and Mr. Horace Hardy, of the Chesapeake club, of Norfolk, Va. Roberts took the lead and was never headed, winning with the greatest ease; time, 17 minutes. The second race was for working boats—one mile straight-away—three entries as follows; Appomattox, Petersburg—J. W. Pegram, coxswain; W. H. Cuthbert, No. 1; J. H. Cabannis, No. 2; Fortesque Whittle, No. 3; Carter R. Bishop, No. 4; colors, navy blue and white. Rappahannocks, Fredericksburgh—F. Hazard, coxswain; J. L. Marye, Jr., stroke; E. M. Young, No. 2; A. C. Doggett, No. 3; W. S. White, No. 4; colors, light blue and white. Kanawhas, Richmond—W. D. Lee, coxswain; Thos. Christian, stroke; A. S. Peticolas, No. 3; David Walker, No. 2; D. P. Morton, No. 4; colors, blue and white. The prize was four silver goblets. This was merely a procession, the Kanawhas taking the lead at the start and winning by over a half a mile, the Appomattox second, and the Rappahannocks beaten out of sight; time 14 minutes. The third race was between two four-oared shells of the Potomac club, the "Heavy Weights" and Light Weights, as follows: Shell Potomac—Cropley, stroke; Doyle, 3; Zappone, 2, and Dodge, bow; Shell Pinafore—Zeigler, stroke; A. Snyder, 3; W. Snyder, 2, and Roberts, bow. Both crews rowed side by side for over a half mile, Both crews commenced to turn at the same time. The "Heavies" were quickest around. They raced to the bridge, when the "Light Weights" spurted and drew up even with their opponents. From here out it was one continual spurt, the "Heavies" finally taking the lead by a length and a-half. When within fifty yards of the finish both crews struck a sand bar and had to cease rowing. The "Light Weights" got off first and won the race; time, eleven minutes. The fourth race was a four-oared gig race, one and a-half miles straight-away, for the challenge cup, between the Rives club, of the University of Virginia, and the Rappahannocks, of Fredericksburg. Crews—Rives club: John R. Redwood, coxswain; Chas. Lee Andrews, stroke; De Courcey Thom, No. 2; B. D. Gibson, No. 3; F. H. Carter, bow; colors, cardinal and grey. Rappahannocks: T. C. Daniel, coxswain; James Carswell, stroke; Wm. F. Grafton, No. 3; S. Brooke Daniel, No. 2; Josiah Hazard, Jr., bow; colors, light blue and white. The University crew were the favorites by long odds and rowing in magnificent form, won the race with ease, beating the Fredericksburg crews by over twenty lengths. The prizes, four silver goblets, and an elegant challenge cup made by Tiffany & Co., were presented by the citizens of Fredericksburg. The association is now an assured success. It meets in 1880 again at Fredericksburg. It is composed, at present, of four clubs; one from the University of Virginia, one from Petersburg, one from Richmond, and one from Fredericksburg. It is expected that at least five other clubs will enter the association by the next regatta.

—A four oar race between the Mystics of Mystic, Conn., and the Thames Rowing Association of New London, is talked of, but it is doubtful if it comes off. If the Mystics send the proper challenge and put their own men into their boats, and do not endeavor to run in members of the Argunauta Boat Club who may be summering there, the Thames can and will send a crew, but as it now stands will not risk a race with any crew a member of which has been debarred and not reinstated. MISAL.

YACHT LAUNCHED.—Mr. David Kirby has launched a new sloop yacht July 17, from his yard at Rye, Westchester Co., N. Y. She is for Frank P. Dudgeon, of Peacock's Point, L. I. Waterline 36 feet 8 inches; on deck 40 feet 6 inches; beam 13 feet 3 inches and 4 feet 4 inches deep. She will receive a moderate rig and is intended for cruising only. We have also among our yachting collection a handsome model by Mr. Kirby for a sloop of some 40 feet length. She embodies certain peculiarities for which the Rye yachts have become famous, and resembles the *Arrow* somewhat in her comparatively steep deadrise, long bow horizontally considered, and long easy section lines aft, with short full waterlines and broad stern. From the same source we have a very interesting review of the question of yacht design which we hope to publish at an early opportunity, as our readers will be glad to study the opinions and conclusions of one who has had a life-long experience at his profession and who combines felicitious expression with depth of reasoning.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We cannot attempt to give specific directions where to go for game or fish. Correspondents must keep themselves posted by consulting our notes columns.*

T. B. R., Oquawka, Ill.—For pigeons, write to H. T. Phillips & Co., 50 Michigan Grand Avenue, Detroit, Mich.

W. T. G., Elm City, N. C.—H and T traps cost about $25 per set. Send to Parker Bros., Meriden, Conn., for catalogue.

JIM, Newport, R. I.—Where can I get a fishing-reel, nickle plated (holds about 100 yards); also, how much it will be? Ans. At any of the principal tackle shops. Cost, $10.

RACING YACHTSMAN.—You must be a member of the club to sail for the cup.

F. I. M., South Norwalk, Conn.—Samuel's Ornithology and Oology of New England costs $6.

J. M. S., Bridgeport.—Give your bitch a good purge, and follow it with a little iron and quinine, say 5 grains a day. She has no symptoms of distemper.

M. B. S., Port Washington.—We do not know the present address of B. H. Crane, the bird embalmer, who formerly lived in Grand Rapids.

E. J. M., Milwaukee.—My setter pup, six months old, has small scabs coming on different parts of his body (head, neck, legs.) Be kind enough to inform me what the trouble is, and a remedy. Ans. Rub him with crude petroleum on the parts affected.

J. H. S.—The arrows known to archers and dealers as "Gents best footed, with parallel points, painted and gilt, and painted between the feathers," are the only good arrows. They cost from $9 to $10.50 per dozen.

F. L., Chelsea.—The "mizzen" of a yawl is brailed up and furled up and down the mast sometimes, though more generally, if of the lug pattern, the halliards and gear are unbent and the sail sent below.

J. T. N., St. Louis.—My setter's eyes have matter in them every morning; nothing else wrong with him except constipation, caused I suppose by being tied up most of the time? Ans. Bathe the dog's eyes with tepid water; give him a good purge and more exercise.

C. C. W., St. George, N. B.—Do you know of a well broken dog and bitch, cockers, at a moderate price? Ans. It is a difficult thing to buy broken Spaniels. Better buy a brace of puppies from one of the advertisers in our columns, and have them broken, or break them yourself.

P. F. H., Corry, Pa.—Give your dog Fowler's Solution of Arsenic, commencing with five drops twice a day and increasing to ten; continue for two or three weeks, unless his eyes look very red, when gradually stop. Rub the bare spots on his body with crude petroleum.

R. H.—You are quite mistaken. As a matter of fact, the cutter has more square feet of available deck room, more cubic feet of available cabin room, and more ventilation below than the sloop of same size, all contrary notions and imaginations, notwithstanding. We have the figures before us, and will take up the subject in due time.

D. H. H., Gallatin, Tenn.—Can you inform me the nearest point where I can procure a pair of thoroughbred Newfoundlands, and at what cost? Ans. We know of no one who gives attention to breeding Newfoundlands in this country, and you would probably have to send abroad for them. Write to Dr. Gordon Stables, Twyford, Berks, England.

R. H. M., Boston.—Please advise me as to which is the best $50 double-breech loading shot gun in the market. I can get a Bonehill, Colt, Claborough, Fox, and many other makes, but am not an expert in choosing. Ans. All the guns you mention are excellent. We prefer not to select for you, however.

ATK SPONSER, Rushville, Ill.—1. We have sent you form of organization of Sportsmen's Club. 2. The total expense of migratory quail, delivered in New York was about $20 per hundred. 3. Wild ducks or other birds may be captured as specimens in a natural history collection, provided the collector has a permit from a natural history society.

W. L. R.—The thumb of the right hand should not be used in drawing the string, or in holding the arrow. The string should be drawn back by the first three fingers of the right hand alone, the string being held by these fingers half way between their tips and their first joints, the arrow being held between the first and second fingers.

R. W. H., Oconto, Wis.—What becomes of the common rice-rail in the winter? I have hunted more than twenty years for wild fowl, where these little fellows abound, and never yet could see any signs of migration. The Indians say they bury themselves in the mud and lie torpid during the winter. Ans. They migrate South, where they are known as ortolan. In the West Indies they are also known as butter-birds.

HENRY L—The true position in shooting is with the left side to the target, the heels six inches apart, the left toe pointing forty-five degrees to the right of the target, and the right toe pointing ninety degrees to the right of the left toe. In the book you speak of when the Archer is shooting *South*, and the left toe points South-west and the right North-east, the word has been misprinted. It should be North-west.

A. A. S., LANCASTER, PA., *July 21st*, 1879.—My setter bitch has been troubled for some time as follows: bad cough, discharge of secretion of the eyes, some days much more than others; alternate hot and cold nose; appetite generally good, and hair coming out so much that her kennel has to be cleaned almost every morning. She has no affection of the skin that I can observe. Ans. Give your bitch a Dover powder night and morning. She wants more exercise, and a good purge. A few capsules of tar would also be beneficial.

M. W., Pond Quogue, L. I.—The word meerschaum is derived from the German, and its literal translation means (meer) sea, and schaum (foam) sea-foam, but these are not its component parts, as many suppose them to be. It is a kind of clay, composed of magnesia combined with silex or flint. The name was probably given to it on account of its pure whiteness of color and lightness of weight. It is found chiefly in Turkey and Asia Minor

G. B., Clarinda, Iowa.—Please inform me of some reliable publication on general gunsmithing. Ans. We know of no book which approaches so near to what you seem to require as the "Hand-book to the Selection and Management of Fire Arms," Illustrated. There are also Greener's books and Wilson's Breechloader," all for sale by the Orange Judd Company, 245 Broadway, N. Y. The difficulty with most works is that they are behind the age.

W. H., Will you please give me, in your next edition, some information in regard to a good camping place by a lake or stream for boating in the State of Maine, and how to reach it? Ans. Would recommend west branch of the Penobscot. You can go in to head waters via. Moosehead Lake, or take rail to Mattawamkeag, and go up stream. If you wish something more primitive, take the east branch of the Penobscot.

C. B., Shakopee, Minn.—Have you any knowledge of a race of dogs called "Spanish pointers?" If so, give a short description of the dog. Ans. The Spainish pointer was at one time quite common in this country, and the breed itself is supposed to have been introduced into England from Spain. The principal characteristics are a coarser coat and heavier head and bone than the dog of the present day.

PED, Buffalo.—1. Is it counted an unusual thing for sportsmen to keep a recorded pedigree of spaniels in America? 2. Is it done in England? 3. Have the clumbers, Trimbush and Fairy an authentic *recorded* pedigree. Ans. 1. Nothing unusual about it; there are fifty pedigrees of spaniels recorded in the N. A. K. C. Stud Book. 2. Yes. 3. While their own names are not recorded in the Stud Book, the pedigrees of their progenitors are in the English K. C. Stud Book.

W. G. E., Birmingham, Ala.—With regard to stocking your pond, we would advise you to turn in indiscriminately all attainable varieties of the perch and carp families, as food for each other and food for the table—chub, yellow perch, suckers, the common carp, darters, etc. Artificial effort will not materially aid their propagation. Hallock's Sportsman's Gazetteer, describes all food fishes indigenous to Southern waters, though it does not tell how to propagate them. There is no work of the sort extant. All kinds of fish devour each other, even when artificially fed.

E. E. B., Meadville, Pa.—I have a red-Irish setter pup who is at times extremely stubborn, while at other times, will obey every command. He frequently, when instructing him to retrieve will refuse to hold any article in his mouth. I have tried every means to break him of it, but failed. What shall I do? I might add that the stubbornness is not merely "puppyish," to use the term, but is inherited from the mother. Ans. Your only course is to overcome his stubborness by patience and perseverence; should these fail, resort to the spike collar.

F. A. J., Culver's Point, N. Y.—1. Is it an invariable rule to challenge every bird, dead or alive? Ans. Not a rule; it is optional. 2. I was shooting to-day with a gentleman. He shot at a bird, the bird fell and I thought it was dead. The referee asked me if I challenged the bird, and I said "No." There were some boys who gathered the birds, and when they went after them, this bird went as fast as they did. Now was this a lost bird? Ans. It was a dead bird if not challenged.

H. V. S.—You cannot accuse the tug captain of theft, unless you have evidence to that effect; nor can you expect him to return your boat at his expense, if he has found her adrift in the river. Two things you should do: Prove your property and offer to refund expenses the parties finding her may have been to, as well as pay expenses of her return. If they refuse, then the only means left you is to have recourse to law, and a reputable lawyer is the best man to apply to. Steer clear of the shysters and sharks who flourish in plenty.

A. P. H.—Tonnage of schooner *Agnes* of the A. Y. C., old measurement 54; new measurement 30 1-2. Length water line 53 ft. 11 in.; beam 16 ft. 9 in.; depth of hold 5 ft. 9 in., and draft of water 4 ft. 6 in., without centre board. With latter down about 12 ft. Built 1871 in Brooklyn by Paillon. Tonnage of *Regina* old 42, new about 23. Length over all 50 ft.; water line 44; beam 16 ft. 6 in.; depth 5 ft. 6 in.; draft 4 ft., with board about 12 ft. Built by Wm. L. Force, of Keyport, N. J.

J. C. H.—For a beginner, would recommend "Yachtsman's Handy-book" by Rosser, which contains practical instructions in navigation. Then if you desire later to study the abstract theory, you will find Coffin's Theoretical Navigation as used at the U. S. Naval Academy, an excellent book for the student; but for its perusal a knowledge of higher mathematics is necessary. "Bowditch's Navigator" is the volume in general use by ship captains in connection with the Government Nautical Almanac, but is beyond your needs; does not meet your wants fully; can procure the Handy-book on receipt of $2. For cost of instruments write to Merrill's Sons, 179 Water Street, N. Y.

F. P. G., Clarksville, Tenn.—My setter has eight pups, and all have been unusually bright and healthy until they were four weeks old; at that time one showed weakness in the loins—at this time, one week after the first symptoms, it has scarcely any use of its limbs—it has appetite and does not seem in pain. This morning another has symptoms similar to those of the first pup; they both look bright and wish to be playful, but have almost no use of their limbs? Ans. The trouble is probably in the condition of the bitch's milk, if she is nursing them, or else in the state of the kennel. Give the bitch the most nourishing food, or if the puppies are weaned, give them plenty of good milk. The kennel should be warm and dry. Eight puppies are too many for a bitch to nurse unless she is remarkably strong and has an abundance of milk.

SHERB., Portsmouth, N. H.—Can you tell me of any method whereby I can kill the pickerel which infest a stream which I design for a trout-brook next season. I have been advised to throw in a barrel of lime at its head waters, as an efficacious remedy, but thought you might suggest something better. Please also give me a list of some good works on trout culture which contain *plain, comprehensible* directions suitable for an amateur. Ans. You can kill your pickerel by liming the stream, or by throwing in a quart of soft soap above. The best books on trout culture are Stone's Domesticated Trout, price $1.75, and Green and Roosevelt's Fish Hatching and Fish Catching, price $1.

J. L. S., Dugdale, Pa.—Is there any book written by Mr. Murray or any other person on the interior of Newfoundland, and the cost of reaching St. John. Are the Indians hostile to party going to the interior of island? Ans We published ten papers in FOREST AND STREAM, beginning Dec. 31, 1874, which gave all that part of W. E. McCormack's book relating to Newfoundland, of general interest. Only certain portions relating to the geology and botany of the Island, were omitted. This book first printed in 1832, has recently been republished in St. Johns. The cost is probably $1.00, though we are not positive. Write to any book dealer and he will supply it. The Indians are by no means hostile. There are very few people of any kind in the interior. Monthly steamer from Halifax to St. Johns, fare about $30.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 24, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

NEW TYPE!—Here we are again with a new outfit of type, as fresh as a daisy and as proud as a Saratoga belle in a new dress! Nothing makes an editor so happy as a new set of type, especially if it be paid for.

Now look into our beaming face, and note our clear, sharp-cut lines. They are not the wrinkles of infirmity or decay, albeit we are leaving a train of years behind us—but indications rather of a vigorous condition and good form. We may be permitted to brag high on our present state of health, for our lungs are sound and our circulation good. Once in a while it is absolutely necessary for us to come up and blow, like a whale. It does us a heap of good, and tends to frighten away the small fry. We have naturally a great deal of respect for most of those contemporaries who swim in our water, but when we step out in new type, we want them them to stand just a little aside. Hot weather will never choke us off, and there isn't heat enough in this latitude to melt our composition. Our metal has the true ring. We shall continue to furnish seasonable sketches and readable matter all through the vacation season. We don't refuse a holiday ourselves, and we know what the boys like when they are off in the mountains and down by the sea.

Now look at us again; turn us around and con us over. If you discover anything not right, just let us know and we will find a remedy. New type! why, boys, we feel like we had been born again and made over. New type! there's nothing like it. And when this same new font shall fade and all the lines grow dim; when he who now reads with visual eye shall put on specs, and finger out the blurred aud blemished lines; when, in fine, that great Millenium shall come when every boy shall own a Rod and Gun, and every Forest and Stream shall teem with game and fish; let those who hear our chuckling exultations now, turn not a sad and pitying look upon our frontispiece; for when this new dress is done, by Jove! we'll get another font and set 'em up again.

AMERICAN RIFLEMEN AT WIMBLEDON.—The cable is bringing fragments of encouraging report from the several Americans who are now busy with their rifles on the English shooting common. Hyde, Farrow, Morse and the others are well spoken of and will no doubt bring the credit which rightly belongs to American made arms. Our only regret is that we should not have real American riflemen as our representatives, instead of the mere agents of gun works.

—Stay-at-home people are now enjoying the very fine weather.

THE LESSON OF RECENT YACHT MATCHES.

THOUGH nothing new to ourselves, the results of recent yacht races must be somewhat startling to our Bourbon friends whose ambition and experience extends no further than the smooth water racing machine. The fact that in all important races of late, keel yachts have won, keel yachts with ballast on their keels, and keel yachts of the cutter type and cutter rig, should certainly convince the skeptics that such craft *can* be made as fast on or off the wind, blow high, blow low, as ever was the frying pan model, with centre-board and ye ancient rig of the North River brick sloop and all her weaknesses thrown in. *Regina* and *Vision* never sailed better than when rigged with double head sail; *Intrepid* beat all the centre-board cracks including *Phantom*, *Atalanta* and the likes in the sail from New London to Greenport; *Enterprise* in the same match won from such flyers as *Regina*, *Winsome*, and *Sohemer*, and the same cutter again astonished the faithful by handsomely beating *Madcap* at Boston, and *Madcap* is unquestionably the fastest sloop of her formage in America! *Muriel*, cutter, shows herself quite the equal of the centre-boarder in the fleet cruising up the sound under the Seawanhaka colors, and everything goes to prove that a seaworthy model and a sailors' rig are not by any means incompatible with speed even in our summer breezes and smooth water, to say nothing of the other advantages craft of the cutter type offer beyond what can be found in the sloop in the way of accommodations and coal cabins below. But then your truly loyal Bourbon learns nothing until too late, and so the cutter may not become popular until one day she shall outnumber the smoothing-iron fleet, when all her good qualities will suddenly be discovered and the honest boat come into favor at last to the discomfiture of the machine. That day may come sooner than the jack-tars of the raging Sound imagine, for there are now nine cutters afloat in Boston and New York and we know of six new ones to be added this winter; so the fever is spreading and the taste for honest yachts is growing apace. Already in the East the keel and wholesome draft hold sway; in New York only does the centre-board and the frying pan still reign supreme, but even here we know their grip is weakening. Why should New York have to learn from Boston? Yachtsmen should take the lessons of the recent races to heart and log another mile ahead.

CITY RECREATION PARKS.

THE officers of "The Detroit Recreation Park Company and United Clubs' Association," of Detroit, Mich., have secured in that city a plot of ground upon which improvements are to be begun at once to provide suitable grounds and facilities for all kinds of out-door games and exercises, during all seasons of the year.

Accomodations will be prepared for the following recreations: base ball, lacrosse, cricket, foot ball, quoits, lawn tennis, archery, curling, bowling, skating, croquet, pedestrianism, etc. Special inducements will be offered to make the park attractive to ladies, not only as spectators, but as participants in some of the games. This is a move in the right direction, and we are pleased to learn that the project has met with the unqualified approval of the citizens of Detroit.

The following well known gentlemen are the officers of the Recreation Park Company: James McMillan, Prest.; A. E. Brush, Vice-Prest.: Sect. and Treas., F. O. Davenport; Corresponding Sect., A. C. Bowman; with Messrs. Hendrie, Moran, McGregor, Taylor and McLoughlin, for Directors.

The formation of this Recreation Park reminds us that New York city is to-day without a play ground, and that its inhabitants are driven to other cities and towns to procure their manly recreation. In this connection, a clever article appeared about two years since, in one of the New York morning papers, headed "A Plea for Cricket." In a most comprehensive way did the writer, in a few words, show the absurdity of the Central Park Commissioners, in refusing the New York cricketers the use of that part of the Park which was originally intended for them, and which is designated "Cricket Ground" on the maps from which the park was laid out:

It seems a great pity and a wrong, that our cricketers should be obliged to forego their favorite exercise while the broad and unused sward of the Central Park lies invitingly open before them, and would be gladly resorted to were permission granted for its use. It cannot be urged by those who have the misfortune to be unacquainted with cricket that the park would be defaced or injury come to the turf through its practice: for the fact is, one of the first necessities of the game, is a perfect condition of the ground, and its preservation the first care of the player. So far from being an injury, a well appointed cricket ground of four or five acres would be an ornament, and the matches played there a great attraction and source of pleasure. The roads are open to the riding and driving public; the walks are beautiful and well used; the waters around the city are open to the lovers of yachting and boating; but to those who prefer a more vigorous exercise, or who cannot afford horses or yachts, the privilege of following their own course of physical culture, or what is best suited to their own means or personal requirements seems to be denied. It really seems almost ignoble that in a great metropolis like New York, with the means at its command, *and the ground already made*, this splendid sport should be allowed to languish without offering a helping hand to rescue, it and the more especially because it can be done without the expense of one cent to the city.

Let the authorities of New York city look about them, and take a lesson from what other cities are doing throughout the country. Philadelphia is most liberal in her encouragement of her clubs, and guards their interests with jealous care. Brooklyn's Prospect Park is open to both cricketers and ball players; and the authorities in many other cities, also, wisely encourage manly exercise, knowing that it keeps a community not only physically but morally healthful.

WHITE MOUNTAINS.—The error in our last issue, to the effect that the Fabyan, *Profile* and Crawford House at White Mountains were under the same management, ought certainly not to have been made by the writer, who had visited them all in person only the week before. It was a slip of the pen not easily accounted for. The Profile is under the same management which it has enjoyed for years, namely, that of Messrs. Taft and Greenleaf, its owners. It is one of the very choicest spots in the whole range, and guests of the house can find better trout fishing on the premises then they are likely to get anywhere else in the vicinity. One pond is specially set apart for breeding purposes, and there is an admirable hatching house at the outlet which leads from it into Profile Lake. It was our good fortune, while there, to receive and accept an invitation from that veteran angler and author, Wm. C. Prime, to fish the celebrated "Lonesome Lake", his private property, which is reached by a bridle path up an ascent of 1000 feet. We lifted a baker's dozen of trout out of their limpid element in a few minutes, and "rested" the pond. Mr. Prime's hermitage is one of the most delightful seclusions imaginable, or would be, were it not directly under the eye of the "Old Man of the Mountain". Of course the old man keeps mum enough, but Mr. Prime is continually giving himself away in those characteristic letters which he is now writing for the *Journal of Commerce* over the same old signature of the big W. which he appended to the solemn "Owl Creek Cabin Letters" thirty years ago. This season, for the first time, the Profile House can be reached by all rail. New York passengers can take the New York and New Haven Railroad in the morning and reach there the same night.

It is the *Twin Mountain* House which, with the Fabyan and Crawford, forms the mountain trinity of attractive homes to which our note of last week referred. They are under the management of A. T. & O. F. Barron, and afford all the comfort and delight which tourists could wish. We would advise visitors who are fond of fishing to take their rods, simply asserting that to our personal knowledge there is good trout fishing to be had, near by, though we decline to tell where, for fear the brook wouldn't afford wading room. The experienced angler will soon find out for himself.

OUR ALASKA CORRESPONDENCE.—Those of our readers who are familiar with the *nom de plume* of "Piseco", which by the way graced the very first issue of this journal six years ago, will appreciate our good fortune in having secured the kind offices of the commander of the sloop-of-war Jamestown, now on the Alaska station, who has promised to send us occasional letters from that far-off territory. The first of these appears as the leading article of the current issue of FOREST AND STREAM. This able officer has been sent to Alaska not only as a sort of plenipotentiary, but also as chief of a scientific corps, and we are certain that the duty could not devolve upon a more capable or efficient person. All that can be learned of the ethnology, political economy, physical characteristics, and resources of the country will be doubtless discovered, so far as limited time will permit. The material information contained in the letter now before our readers is altogether new, and constitutes merely a foretaste of the feast of good things promised.

COOL, BREEZY, AND ENCHANTING. — There was a grand exhibition of fireworks at Coney Island last week, given by the proprietors of the Brighton Beach Hotel. The entertainment was free, and as many spectators assembled as the available standing space would permit. On the same night Capt. Bogardus gave his unique exhibition of signal fireworks of various colors, fired from an ordinary shot gun. The whole beach was ablaze from end to end with calcium lights, colored fires, groups and rows of gas jets, illuminations of all kinds, blazing rockets, and bursting asteroids, while music from a half-dozen of the best bands in the world made stirring and delicious melody. Never before in history has any public received so much for little money as they now nightly receive at Coney Island. The liberality of all the chief proprietors seems unbounded. They actually vie with

each other as to who shall show the most open hand. And yet there is a margin of profit to these energetic promoters; and more than all, there is good order among the hundreds of thousands, and absolute courtesy despite the crush. Hurrah for Coney Island!

ARCHERY SCORES AT THE NATIONAL MEETING.—The National Archery Association having appointed the 12th, 13th, and 14th days of August, 1879, for the first "Grand Annual Meeting" of the archers of the United States, great interest is being manifested among archers as to the relative skill of the different competitors for the fine prizes offered by the Association. In England, where the "Grand National Meetings" have been regularly held since 1844, archers are well aware of the average scoring of almost all shooters; but archery being new to this country, and our archers generally having had only one season of target practice, and this only at short distances, and the scores of very few having been published, and these generally having been the exceptionally fine scores, made as much by good fortune as by skill, all are in the dark as to the ability of the probable competitors. For this reason the very opportune communication from Mr. Thompson, which we publish in our Achery Department, will be read with eager interest—which see.

THE BOSTON MARKSMEN.—The report in our rifle columns of the close of the Winchester match on the Walnut Hill range shows that the members of the Massachusetts Rifle Association are as proficient at short range as they have proven themselves at long range. At Creedmoor it was formerly the practice to separate the marksmen into long and short range men, but Walnut Hill set aside this rule from the start. Capt. Jackson's score of 213 in the possible 225 at 200 yards, is a fine one at any circumstance, but especially so as coming from the source, for Capt. Jackson's off-hand shooting is strictly according to military rule, without hip rest or any bunching of the shoulders about the rifle heel. Again must we protest against the high scores from the "Hub", as surely and steadily they are ruining our chances of ever again seeing a match for the Palma, for even the most thick-witted English marksman would hardly be willing to try scores with one who is continually beating the record.

A WORD ABOUT THAT PISTOL SHOOTING.—Mr. Frank N. Lord, whose skill with the pistol was described in these columns a short time since, sailed for Europe last week, just in time to escape a score of challanges from numerous rivals and hosts of letters from incredulous readers of FOREST AND STREAM. We published a communication from one of these doubters the other day, refraining from comments upon it because we thought then, as we think now, that the writer had been tricked by the account in question into an unbecoming jesting mood. But it now appears that there are some of our readers who do seriously entertain doubts about Mr. Lord's performance of the feats narrated by us. To all such incredulous people, we may make two replies. First: The FOREST AND STREAM does not publish on its own authority accounts of pistol shooting, nor any other shooting, which it does not know to be authentic. Second: Mr. Lord is not a gentleman who cares to accept challenges from Tom, Dick and Harry; nor, when his skill has been so demonstrated in public, does he care to contradict correspondents who took pains to send him their opinions that he is claiming more expertness than he possesses. He takes great pleasure, however, in exhibiting his skill to gentlemen, and has devoted many an evening to voluntary entertainments of this character. Gentlemen who are desirous of seeing Mr. Lord shoot will have no trouble in doing so, upon his return, if they care to invite him to give such exhibitions. Probably by correspondence with Mr. J. S. Conlin, a series of these entertainments could be arranged at his gallery.

COLUMBIA VETERINARY COLLEGE.—The course of lectures delivered by Dr. E. S. Bates on Veterinary, merits the attention not only of physicians but of all interested in animal pathology. The treatment and cure of animals is too little understood. While there is a full list of practicing physicians for human ailments, the number who understand the care and cure of dogs, horses, and the like is altogether too few. No doubt there is a lucrative field here for well qualified practitioners, and many men who are hesitating as to a choice of profession would do well to select that of Veterinary, and at once fit themselves therefor. Dr. Bates' next course of lectures will begin on October 1. See advertisement.

SABLE ISLAND.—Should any of our readers be interested to learn more of that mysterious and dreaded island, lying off the coast of Nova Scotia, which the recent wreck of the steamship, *State of Virgina*, has brought prominently to notice, they may be gratified by refering to an illustrated sketch written for Harpers Magazine by Mr. Hallock, the editor of this paper, in December, 1866. It comprises 16 pages and 10 engravings. A more weird tale is seldom old.

FOUR negroes were hung in different parts of the South last week. Isn't this drawing the color line rather closely?

SALMON FISHING IN CANADA.

FOURTH PAPER.

RIVER GODBOUT, Lower St. Lawrence, June, 1879.

Editor Forest and Stream:—

Hunting the boar, the stag, and the bear, has always been Royal sport, and the Chase the prerogative of Kings from time immemorial. Whether angling, either as an art or an avocation, has ever been classed by divine warrant in the same category, I trow not: there may be no precedents of recognition in the musty past. Doubtless the royal retinue of the olden time, in full panoply of gorgeous trappings, bristling arms, blatant bugles, and bell-mouthed hounds, swept haughtily past the solitary angler by the quiet river side, and scarcely deigned him a thought, or even a sneer. Certainly enough, all the precepts of Bishop Sanderson, and the philosophy of Walton and Wotton, could not command a decent respect from old Sam Johnson, or persuade Venator that hunting and angling had any right to be mentioned in the same breath. However that may have been in the ancient past, the present utters no doubtful sound—at least, so far as salmon fishing is concerned. Salmon fishing has been ennobled, as a sport, by Her Royal Highness, the daughter of the Queen of England and Empress of India, and conjointly by her loyal spouse, the Marquis of Lorne, Governor-General of Canada. With her own regal hands the Princess Louise has captured a twenty-five pound salmon on the River Restigouche, not lang syne, and sent it home to her Queen mother with the Jock Scott fly which caught it fixed in its jaws, as a trophy of her prowess, and affidavit that the feat was all her own!

No lukewarm sportsman is His Excellency, the marquis. It was my good fortune to be privately presented to him, on the eve of his excursion down river. The occasion was this: Our yacht, the *Cruiser*, laid at Quebec, with steam up for below. A messenger from the Naval Office found me then waiting at the St. Louis Hotel. He presented an official envelope superscribed: "On her Majesty's service." Under the seal it ran:

"*Dear H.:* The Marquis will be at my office in a few minutes. If you wish to see him, come down at once. Yours truly,
"J. U. GREGORY."

I jumped into a cab and hastened to the lower town, rattling down the almost precipitous streets, which even then were all ablaze with bunting and embowered with triumphal arches of evergreen inscribed with words of loyalty and welcome to "Lorne and Louise," who were that day to inaugurate the new Dufferin Terrace. I found the royal party on board the steamer *Druid*, inspecting cabin quarters which they were to occupy *en route* to the Restigouche, where they were going to fish. The *Druid* is a Government vessel, commanded by Captain Marmion, with whom it had been my pleasure to make several voyages around the Gulf of St. Lawrence as many as fifteen years before. While I was pleasantly engaged in a friendly chat with the veteran salt, my friend Gregory came up the companion-way in company with Mayor DeWinton, His Excellency's aid-de-camp, and having presented me, announced that the marquis would be pleased to see me presently. I held one of Abbey & Imbrie's oreide reels in my hand, and, like an old helmsman, "stood by the wheel," determined to shirk no duty. With a natural good tact and gracious consideration, Mr. Gregory had taken occasion to impress upon the marquis that, although the editor of a journal, I was neither a penny-a-liner, nor an interviewer; and so, when I came to a front face and present, I was introduced simply as a fellow-sportsman. His Excellency graciously took me by the hand, and we occupied common ground at once. We talked fish and fishing tackle, the natural history of the country, and kindred topics; and when we finally parted I was quite at my ease, and felt more than ever the truth of the old adage, that "one touch of nature makes the whole kin." Had we never fished, we had never met.

Earl Dufferin, his predecessor, was a most proficient angler; and so was the countess. Both were at one time guests on the Godbout. They fished the river in 1873, staid two days, and are credited with a score of seven fish aggregating 71 lbs. in weight. The other evening mine host was recounting some of the incidents of that visit. Dufferin had on one occasion fought a fish manfully in "the Shea," one of the most difficult pools on the river, where the old Scotchman delights to test the mettle of his visitors. In an attempt to bring the fish to gaff, after a long struggle, he slipped on the rocks and plunged into the drink. He got a thorough wetting, but saved his fish and won a reputation. The laugh, however, does not come in here; but when his lordship appears an hour after in a dry suit of Mr. Gilmour's habiliments, loaned *in extremis*, which were as much of a fit as one could expect where one man was only of fair average size, while the other stood six feet two in his socks, and weighed at least sixteen stone!

It was very pleasant on those cool evenings in June to sit on the cottage verandah and listen to the chronicles of the Godbout, as they fell from the lips of the laird of the realm. There were no flies whatever, but a fire was lighted on the sandy beach in front, just for its genial blaze and warmth. Sportsmen know what jolly good company a lightwood fire is, and how pleasant it is to watch the forking flames and the rising sparks and the deep glow of its ruddy heart, and to poke together the shortening embers so that they will kindle afresh. Up into the darkening canopy of night the smoke rises with many a mysterious column and fold; and while the evanescent volume melts and accumulates, a sense of good-fellowship, peace, and repose gathers around the heart, exciting very much the same moods which possess the smoker when he abstractedly watches the incense floating away from the bowl of his ash-cinctured pipe. For

> Through the thin weft of that vapory blue,
> Which so gracefully curls and then fades from my view,
> Bright visions of life seem to come and to go,
> Like wavelets which break in the tides' ebb and flow.

While we talk of past exploits and discuss the problems of the future, the murmuring lapse of the darkly flowing river almost at our feet, the rush of the rapids some forty rods above, and the frequent plash of the salmon close beside us, stimulate our ardor and play upon each nerve with an electric thrill. We are none of us novices, either in age or experience. The youngest is forty-five. Yet, you know, the old war-horse will prance at the sound of the bugle, and tremble when he snuffs the battle from afar. At these nightly *siestas* the plans of the morrow were always laid, and the several pools assigned. There are fifteen pools in all, beginning with the "Upper Pool." Then follow in their order, down river, the "Eagle," the "Kennup," the "Indian," the "Doctor's Stone," the "Haworth," the "Shea," the "Chartres," the "Glassy," the "Belle," and the "Kate," all above highest tide-water—and what glorious pools they are! wild with rooks; cool with ever-glancing spray; spangled with vivid evergreens; sombre in shadow, and sparkling in sunshine; entrancing in solitude; rippled only by the winds and the swirl of the leaping salmon! Just below the double rapid, which is formed by the outflow of the "Belle" and the "Kate," where a pretty island divides the twin pools, we reach the "Camp" pool, an excellent cast, even at a medium stage of water; then follows the long reach which flows past the cottages for a stretch of three hundred yards or so, with the "Kaley Stone" at its foot; then "Kelt Point," the "Heights," the "Bear," and the "Cross" pools, successively. All of these latter are more or less affected by the tides. If the run of fish is early and the river is full, they afford good sport, and the "Bear" and the "Kaley Stone" are favorite casts. At high-tide (when the water becomes salt), or at low water, they are useless, and the scope of the river is contracted in proportion. Often the river falls before the run of fish begins. All of these lower pools are fished from the Castle-Connell punts, to which I have referred, the angler standing in the bow, and the gaffer keeping the craft in favorable position with his setting pole and drag. I have mentioned that these boats were very stiff, and that it was as easy to cast from them, standing, as from the land. The rapids here are not rough; the bottom is clear; there is amplitude of elbow room, for the river is wide; and none but the veriest "muff" would think of losing a well-hooked fish, except through defective tackle. He can kill him on a short line, or let him run the reel out and follow indefinitely with the boat. However, when a fish is hung, it is customary to push for the shore at once, and handle and gaff him from the land. The character of this portion of the river is very much like what I have been accustomed to previously, elsewhere. "The "old man" said the fishing was very pretty for ladies, but veterans of the angle sought something more worthy of their mettle.

There was a variety of rods on the river, both of British and American make. Most of the gentlemen had Kelso rods, and very pretty tools they are, indeed. Mr. Gilmour and I had each a Leonard rod also; and besides, I had my Mitchell rod, which was made expressly for this trip, and very handsomely it acquitted itself, I must admit. It is due to the Scotchmen, with all their nurtured prejudices, to say that they admitted that my American rods were equal to their imported Forrest rods in all respects save length. They demand a rod from 18 to 18½ feet long, and I have been thoroughly taught to coincide with their opinion. Our American salmon rods are inverrably made too short. The advantages of a rod longer than 17 feet were repeatedly demonstrated. Our American reels are decidedly superior to the foreign, both in workmanship and action. In lines we stand equal, but in flies are absolutely nowhere in comparison. I have never seen flies so beautifully dressed as those made by Forrest. Besides, they are all dressed on two hooks, which stand at an angle of 45 degrees. Flies so made not only behave better in the water than a single hook, but they fasten a fish more securely. When I first saw these double hooks, I thought they were an imposition upon the fish—that the fish were not given a fair chance! but now I am ready to sing praises to any one who will land a salmon in the broken water of the Upper Godbout with any number of hooks! So do we gather wisdom by experience. The favorite patterns are the Jack Scott, silver doctor, dun wing, and black doe, though a few others are occasionally substituted. As to length of line, 100 yards is enough, unless a fish gets away in the rapids, and then 300 yards would not suffice. In such cases, the chances are always in favor of a dead

loss, for the line is pretty sure to get foul of a boulder or be cut by a rock in the long run. Nevertheless, I have twice seen fish saved with 150 yards, when a foot less would have lost a score.

A word or two, now, as to casting:

In my recent association with anglers who are vastly superior to myself, I have been most critically observant, and therefore in the absence of lucid and proper book instruction, will attempt to impart what I have learned, premising that I have angled for salmon just twenty years. Old salmon fishers know that a rod not less than 21 feet long used to be deemed indispensable to a requisite length of cast, as well as to the lifting the line clear of boulders and mid-channel obstructions when a hooked fish was on the rampage. Such a rod was a most ponderous and tiresome affair; and in order to rest the angler, a leather thimble or socket was fastened to a waist-belt, to hold the but. It will readily be seen that such a device must hamper the free action of the rod, and to a degree endanger success. It sets the muscles of the body, impedes the action of the arms, and deranges the center of gravity. A runner with his arms tied would be in like predicament. Any rod, therefore, which is too heavy to be held in the two hands and wielded, not only while casting the fly, but in handling a hung fish, ought to be discarded. Except by a man of prodigious strength I doubt if a twenty-one feet rod can be made to cast as far as an eighteen feet rod. Seventy-five feet is a good cast with any rod, and sufficient for general service. I have seen Mr. Gilmour cast 92 feet under great disadvantages, playing out his line in the most effective and artistic manner. Such a cast may sometimes raise a fish where a shorter one would fail. Of course the general principles of casting with a heavy two-handed rod, are the same as with a light trout-rod, but an expert trout-angler will have to practice long before he can cast a salmon-line skillfully. The upward and outward lift of the line, the check of the rod at an angle of 45 degrees behind the shoulder, and the straight forward downward cast are all the same; but the motion in salmon casting is more deliberate because the implements are heavier. The trout rod is manipulated solely with the wrist: the salmon rod enlists the wrists, arms, and body. Like the rod itself, the body must be elastic and sympathetic with it. In drawing line off the reel preparatory to delivery, do it gently and not with a rapid motion, or the line will back-lash or overrun, and the mess which will certainly result may cost you a fish, and perhaps a part of your tackle. Calculate the distance to be cast and never throw a longer line than is necessary. Salmon are frequently hooked on very short lines. Having laid the line out properly to the distance required, the manipulation of the fly follows. In trout fishing we trail or skitter the fly upon the surface, and the trout jumps at it and over it from below and above. A trout seldom takes a submerged or still fly. He seems to see the deception and leaves it. Salmon, on the contrary, most always take the fly submerged; and the angler having made his cast and taken up his slack as speedily and deftly as possible, should at once impart to his fly some such motions as a shrimp makes in the water, though not quite as jerky, moving the tip of the rod laterally three or four feet every three seconds or so. He may cast down stream and draw against the current, or across the stream and let his fly sweep around to the center pool. As a general rule, however, the educated angler casts straight for the tail of a pool, for the fish seldom lie anywhere else, and casting at random is sheer waste of time. The angler who is familiar with a river knows just where the fish lie, for their resting places depend upon the conformation of the river bottom. He therefore has a great advantage over a stranger. On the Godbout all the gaffers are experienced hands, and if guests will only be guided by them, and fish when and where directed, they are likely to tie the best scores of the old habitues.

As a rule salmon roll up sluggishly to the surface and take the fly so quietly that a novice wouldn't notice it: but the ever-watchful eye of the expert is always on the alert. Practice enables him to look into the depths and discern and anticipate the movements of the fish. Success in salmon fishing, even more than in trout fishing, depends upon the ever watchful eye. If a trout breaks, it is usual to cast directly at the break at once, and if he rises to the hook and misses, then to cast, twice, or repeatedly until he hooks himself. The reason for this is that each trout has his lair or hole, and having darted at a fly, returns at once to the same spot. With salmon it is different. Never cast at a break, and if a salmon rises once to a fly and misses, immediately cast somewhere else—anywhere but there. A full minute should elapse before a second trial is made. In trout fishing we are accustomed to "strike" at the instant of a rise. In salmon fishing he who strikes will most certainly lose his fish. We do not exactly let the salmon hook himself, but we instinctively tauten the line a little at the proper instant, and presto! the fish is hooked. The movement is as difficult to describe as is the mysterious wrist-knack which fastens a trout. The instant you find your fish is fast raise your rod to a perpendicular and *keep it there*—unless the salmon leaps from the water: in which case dip your rod deferentially at once. It is a politeness which will cost nothing, and may save your tackle. Your subsequent manœuvres will depend upon the movements of the fish.

In my next letter I will catch a few salmon in detail, as we caught them in the upper and center pools of the Godbout, just to show how it is done. I hope I have not exhausted the reader's patience by preliminary description. Let them not think that we went home empty-handed. During the ten days while I was on the river, our joint score comprised 62 fine salmon which averaged 14 lbs. apiece, and aggregated 916 lbs. in weight. HALLOCK.

The Rifle.

—The National Rifle Association of America has opened for competition at Creedmoor a new contest, entitled "The Remington Shot Gun Match" with a first prize of a Remington double barrel breech-loading shot gun presented by E. Remington & Sons, value $200. At the close of the 12 competitions the prize shall be awarded to that competitor who, having made two or more scores shall have made the highest aggregate of two scores. Open to all members of the N. R. A. Entrance fee $2. Rifle and position, any. Rounds 15 each at 800, 900 and 1,000 yards. Competition not to be coached in any way.

—What promises one of the most attractive and largest shooting festival of this season will be held by the New York Schuetzen Corps, Captain D. G. Yuengling, will be held on the 4th, 5th, and 6th of August next. The targets are open to all comers, distance 200 yards. There will be a Union target divided in 25 ½ rings, with 25 prizes. A man target, and a number of bullseyes targets are to be provided.

MASSACHUSETTS.—*Walnut Hill, July* 12.—To-day on range first was the last day of the Winchester match series. It was moreover an almost perfect day for shooting and the score stood extra fine as a rule. There were eighty-seven entries in the match which was off-hand, at 200 yards, 15 rounds:—

J. A. Lowell	5	5	4	4	5	4	4	5	5	5	5	5	5	5	5—71
Capt. W. H. Jackson	5	4	5	5	4	4	5	5	5	4	5	5	5	5	4—71
H. L. Lee	4	5	5	5	4	4	5	5	4	4	5	5	5	4	4—68
E. F. Richardson	5	4	4	4	4	5	4	4	5	5	5	5	4	4	5—67
W. Charles	5	4	5	5	5	4	4	5	4	4	5	4	4	4	5—67
E. Whittier	4	4	4	4	4	5	4	4	5	5	4	4	5	5	5—66
G. L. Winship	5	5	4	5	4	4	4	4	5	5	4	4	5	4	4—66
A. Babbidge	4	4	5	4	3	5	4	5	5	4	4	5	4	5	5—66
R. Davis	4	5	5	5	4	5	4	5	4	4	4	4	5	5	4—65
C. U. Meiggs	5	4	5	4	4	5	5	4	4	5	4	4	4	4	4—65
E. B. Souther	4	4	5	4	3	5	4	4	5	5	5	5	4	4	4—65
C. R. Griffing	4	4	3	5	4	5	4	5	4	5	4	5	4	4	4—64
C. Edwards	4	5	4	5	4	4	4	4	4	4	4	5	4	4	4	63
R. Page	4	4	5	4	4	4	5	4	3	5	4	4	5	4	5	63
W. E. Guerrier	4	4	4	4	5	5	4	4	4	4	3	5	5	4	4—63
J. Wemyss, jr	4	4	4	5	5	4	4	4	4	4	4	4	4	3	5—62
E. F. Brooks	4	5	4	5	4	4	4	3	4	4	4	4	5	3	5	4—62
A. W. Howland	4	5	4	4	4	4	4	4	3	4	4	4	4	4	4	4—60
S. Lewis	4	4	5	4	3	4	3	4	4	3	5	3	4	4	4	5—59

The Winchester match was inaugurated on March 8, and has been continued on every Saturday, and proved to be one of the most successful matches ever shot at the range. Between 800 and 900 entries have been made, and the shooting has been exceptionally brilliant and again proved the Walnut Hill marksmen most formidable. W. M. Farrow of New York made a 71 out of the possible 75, and Captain W. H. Jackson a 72, the highest score made in this match, and said to be the largest on record. President Frye is to be congratulated upon the successful manner in which the match just closed has filled, being mainly due to his efforts. The elegant Winchester rifle, made expressly for this match, was won by Capt. Jackson in the early part of the shooting, as per the conditions, but he generously redonated it to the association, and by his superior shooting has again won the trophy against all comers.

The conditions of the match make it open to all comers. 200 yards, rounds fifteen without cleaning. Rifle and position, any within the rules. First entry fee, for members, $1; for non-members, $1.50. Re-entries, fifty cents each. Competitors divided into three classes. Non-members will shoot in the first-class. The competitor having the highest aggregate of three scores will have the first choice of prizes in his class; the next highest, the second, and so on. The principal prize in the match will be won by the competitor (of whatever class) making the highest score three times on the first entry made.

FIRST-CLASS WINNERS.

W. H. Jackson	72 70 71—213	E. B. Souther	68 67 67—202
W. M. Farrow	71 69 70—210	J. B. Osborn	66 67 66—199
O. M. Jewell	71 70 69—210	H. Tylor	66 68 65—198
J. N. Frye	71 69 69—209	J. Wemyss, jr	67 66 64—197
J. A. Lowell	71 67 70—208	E. W. Law	69 65 65—199
G. L. Hubbard	70 68 68—206	W. Poland	68 64 64—196
D. Kirkwood	69 68 68 205	F. Hollis	62 60 59—181
J. S. Sumner	69 68 68—205	G. J. Seabury	60 58 62—170

16 prizes, value $167.50.

SECOND-CLASS WINNERS.

C. W. Hinman	69 69 68—206	W. E. Guerrier	64 63 63—190
G. L. Winship	67 66 66—199	J. F. Schaffer	64 62 60—186
C. U. Meigs	68 65 65—198	C. A. Parker	68 61 61—186
J. Bonnett	65 64 68—197	A. J. Stephens	65 61 58—184
R. D. Archer	65 65 65—195	D. F. Hunt	64 58 57—179
J. B. Parker	65 65 65—195	L. Saunders	57 59 59—175
E. C. Spofford	66 65 63—194	A. W. Howland	62 58 60—170
H. Mortimer	66 64 63—192		

16 prizes, value $112.

THIRD-CLASS WINNERS.

E. F. Richardson	69 68 68—205	N. Kinsman	64 61 61—186
E. F. Brooks	67 67 66—200	R. P. Buzzell	63 60 60—183
A. B. Archer	66 66 66—198	G. S. Rice	62 60 60—182
E. W. Archer	66 64 66—196	E. E. Hardy	62 60 57—179
C. R. Griffing	66 64 64—194	F. W. Stevens	51 40 40—131
H. E. Jepson	64 63 61—188		

12 prizes, value $105,50.

MASSACHUSETTS.—*Boston.*—MAMMOTH RIFLE GALLERY. The regular July prize shoot is progressing finely. Some excellent shooting has been done so far this month, Mr. D. F. Little and Mr. C. Edwards, both being nearly successful in getting the extra prize of $20 for eight consecutive bulls-eyes. The following is the standing of the several competitors to date, 150 feet, rounds 8, possible 40:—

D. F. Little	5	5	5	5	5	4	5	5—39
C. Edwards	5	5	5	5	5	5	4	5—39
George Lamb	5	4	5	4	5	5	5	5—38
E. Whittier	5	4	4	4	5	5	5	5—37
James Wemyss, Jr	5	5	5	5	4	4	4	5—37
George Estes	5	5	5	5	4	4	4	5—37
M. O. Johnson	5	5	5	5	5	5	4	4—37
Charles Tupper	4	4	4	5	5	5	5	5—36
Henry Lowell	5	5	4	4	4	4	5	5—36
George M. Smith	5	5	5	4	4	4	4	5—36
D. F. Whitten	5	4	4	4	4	4	5	5—35
Louis Whitney	4	4	4	5	5	4	4	5—35
G. A. Miller	4	4	5	4	5	5	4	4—35

MASSACHUSETTS.—*Hopkinton, July* 15.—The rifle club of this town held their weekly shoot at Claflin's Grove, Saturday afternoon last. The following is the score, rounds ten, possible fifty, 500 yards:—

Nathaniel Jewell	48	George Jacobs	38
O. C. Whitney	47	Gardence Wood	29
A. Sumner	45	C. A. Frost	29
P. W. Smith	45	Joseph Wadsworth	27
Owen Wood	40		

SPRINGFIELD *vs.* PITTSFIELD.—The rifle clubs of these two towns met on July 18, for a contest at 200 yards, and so closely were the men matched, that after the 160 shots had been fired, there was but 2 points difference. The score stood:—

SPRINGFIELD.

L. H. Magott	5	4	4	4	5	4	4	4	5	4—43
T. H. Barrett	4	5	4	4	4	3	4	5	5	4—41

W. O. Johnson, Fredonia; Umpire.

"PINACENTER."

NEW JERSEY, *Brinton Range, July* 15.—The Ballard Match at 200 yards was shot to-day on the range of the New Jersey State Rifle Association. 10 shots 33 entries The leading scores were:

J. W. Mangam	45	D. F. Davids	42
A. Neirwand	44	Col. D. Lodor	42
J. W. Martin	43	P. Bonnett	41
E. W. Squier	43	Gerll J. A. Fay, Jr	38
F. W. Todd	43	J. A. Green	33
J. H. Holton	43	C. P. Bonnet	31

July 19th.—Sharp match; 10th competition 200 yards: 30 entries; 10 shots:—

			TOTAL.
E M Squier, *winner*	43	A Niemand	41
D F Davids	43	W A Multord, jr	41
St L H Greve	33	Col G E P Howard	41
Homer Fisher	43	J W Mangam	40
Capt W H De Hart	41		

Same day—Association match; handicap at 200 yards; 20 entries; 10 shots:—

J W Todd	47	D F Davids	43
E M Squier	46	J W Mangam	42
Homer Fisher	46	Capt W H De Hart	42
M Snarp	45	A Niemand	42
Col C H Houton	45	St L H Greve	41
T H Holton	43	W A Robinson	32
T Fitz	43		

Boston, July 19.—The following is the standing of the several competitors in the regular monthly prize shoot, only the best scores being given; 150 feet, rounds 8, possible 40:—

D F Little	5	5	5	5	5	4	5	5—39		
C Edwards	5	5	5	5	5	5	4	5—39		
George Lamb	5	4	5	4	5	5	5	5—38		
E Whittier	4	4	4	4	5	5	5	5—37		
James Wemyss, jr	5	5	5	5	4	4	4	5—37		
George Estes	5	5	5	5	4	4	4	5—37		
M O Johnson	5	5	5	5	5	5	4	4—37		
Charles Tupper	4	4	4	5	5	5	5	5—36		
Henry Lowell	5	5	4	4	4	4	5	5—36		
George M Smith	5	5	5	4	4	4	4	5—36		
D F Whitten	5	4	4	4	4	4	4	5—35		
Louis Whitney	4	4	4	4	5	5	4	4—35		
George A Miller	4	4	5	4	5	5	4	4—35		

In shooting off the tie for second and third prizes last month, Mr. D. F. Little won, defeating Mr. George Lamb by one point.

ILLINOIS—*Chicago, July 4.*—The Geo. H. Thomas G. A. R. Post went out for a shoot on Independence Day, and had two matches. The first was for the Giles Silver Cup, with 15 shots at 200 yards, but the scores were hardly up to the real merit of the club, the weather changing from dull to bright very quickly. The scores as made stood :—

J. A. Freeman	4	5	4	3	5	5	4	4	4	4	5	4	4	4	—61
H. L. Drury	3	4	4	4	4	4	4	4	4	1	3	4	4	4	4	4	—58
S. M. Tyrell	4	5	4	5	4	4	4	4	4	5	5	5	4	4	4	—65
D. B. Freeman	4	5	3	4	4	5	4	4	4	4	4	4	5	5	5	—61
W. H. Chenoweth	3	4	3	3	4	4	4	3	4	4	5	5	5	4	4	3	4	—58
A. M. Church	4	4	3	3	3	4	4	4	4	4	4	4	4	4	4	4	4	—56
T. C. Higby	4	5	3	3	4	3	3	5	4	4	3	5	4	4	4	5	4	—58
A. K. Ordway	4	4	4	4	4	4	5	3	4	5	4	3	4	3	4	4	3	—57
C. H. Smith	4	4	5	4	4	5	4	5	4	4	4	4	4	5	4	4	4	—63
J. D. Hobb	4	4	4	4	4	4	4	5	5	4	4	5	5	4	5	5	5	—64
G. M. Gunderson	3	3	4	4	4	4	4	4	4	5	5	3	5	3	4	5	0	—59
P. L. Goodrich	4	4	3	4	3	5	5	4	0	4	4	4	0	0	4	4	4	—54

An all-comers match opened at 4 o'clock with 17 entries, three were of the Thomas Club, coming in as visitors from the Lake View Club. The scores, with more uniform weather, showed improvement and stood :—

F. Henrotin	4	3	4	4	5	5	4	4	4	5	4	4	4	4	—62
A. M. Church	4	4	4	4	4	4	4	4	3	4	4	4	4	3	3	4	—57
S. M. Tyrell	4	4	4	5	4	3	4	4	4	4	4	4	4	3	4	3	—59
C. H. Smith	4	4	5	4	4	4	4	4	4	4	4	4	4	4	4	4	—61
D. B. Freeman	5	4	4	4	5	4	4	4	4	5	5	5	5	4	4	5	—67
S. G. Higby	4	4	4	4	4	3	3	0	4	4	3	3	4	4	3	2	—51
J. C. Borcherdt	4	4	4	4	4	4	4	5	3	4	3	5	4	3	4	4	—59
L. H. Drury	5	4	4	4	4	4	4	4	5	3	4	5	5	5	5	4	—64
W. N. Chenoweth	3	4	4	4	4	4	5	4	5	5	4	4	4	4	4	5	—63

J. O. Hobb	4	4	4	4	5	4	5	4	4	5	4	4	4	3	4	4	—62

Chicago, July 13.—The score of the George H. Thomas Post Rifle Club at their 200 yard range on the 12 inst., was as follows :—

Smith	5 5 4 4 5 5 5 4 5 5	—46	Higby	4 5 3 4 4 4 5 4 5 4	—42
Shaffer	5 5 4 5 5 4 5 4 5 4	—46	Tyrrell	4 5 5 4 4 4 4 5 4 4	—42
Hobbs	4 4 4 5 4 5 5 5 5 5	—46	Goodrich	4 4 4 4 4 4 5 4 4 4	—41
Freeman	4 5 4 4 4 5 4 4 4 5	—43	Austin	4 4 4 4 4 4 4 4 4 3	—39

GEORGIA—*Savannah, July* 3.—The great Southern Shooting Match under the management of the German Volunteers, was inaugurated to-day at the Schuetzen Park under very favorable auspices. The weather was delightful, the attendance good.

The first match was open to all military and rifle teams of five men, distance 300 yards, with military rifles, and six teams were entered—four from Savannah and two from Charleston.

The second match, open to military and rifle teams, of three men each, distance of 500 yards, any position and any rifle without regard to pull of trigger, had only two entries, German Volunteers and Savannah Schuetzen Gesellschaft. The latter was victorious by a score of 40 to 36.

The score stood—First Match :—

GERMAN FUSILEERS.						GEORGIA HUSSARS.					
Nichols	3	3	2	1	3	—15	J. W. McAlpin, Capt.	3	4	3	3	4—17
Ellis	3	4	2	4	4	—17	Lt. G. B. Pritchard	4	4	4	3	4—19

The result of the individual contest was as follows : The Mid Range Rifle offered by the Remington Rifle Company, was won by Mr. G. B. Pritchard, of Savannah, on a full score of 15. The second prize on this target, a case of wine, was a tie between O. L. Tilton and H. Kolshorn, on 14 out of possible 15. The Officer's Military Rifle, offered by the Sharp's Rifle Company, was tied on by Messrs. C. M. Cunningham and J. S. Coburn. A basket of wine offered as a prize on man target, was won by Captain J. W. McAlpin, the same making 15 shots.

Game Bag and Gun.

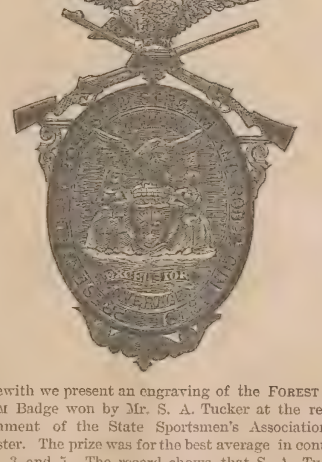
GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock in certain States.

☞ NEW YORK LAW.—The open season for woodcock in New York State begins August 1, throughout the State.

FOREST AND STREAM BADGE.

SHOT FOR AT THE ROCHESTER TOURNAMENT.



Herewith we present an engraving of the FOREST AND STREAM Badge won by Mr. S. A. Tucker at the recent Tournament of the State Sportsmen's Association at Rochester. The prize was for the best average in contests Nos. 1, 3, and 5. The record shows that S. A. Tucker killed 35 out of 40, C. W. Wingert, 33 out of 40, and H. B. Hooker, 33 out of 10, and H. R. Jones 33 out of 40. But although Mr. Tucker showed the best average, protest was entered on the ground that he was agent for the Parker Gun and a non-resident of the State. However, this protest was afterwards withdrawn in view the fact that he was a member of the Madison County Club, and had been shooting with the Association for two years.

BOGARDUS AT MANHATTAN BEACH.—Capt. Bogardus will give exhibitions of glass ball shooting, at Manhattan Beach, at 5 o'clock, to-night, to-morrow night and Saturday night. The Captain, among other feats, will attempt to break four balls thrown up into the air at once, two sprung from a trap and two thrown by hand. Master Eugene Bogardus, who with his rifle performs all the feats of Capt. Carver, also breaks three balls thrown as above, breaking the first one with a rifle and the other two with a shot gun. At 8 o'clock this evening Capt. Bogardus exhibits his new fireworks, among other displays, discharging 500 of the sky-rockets in 30 minutes, loading his own gun.

NARRAGANSETT GUN CLUB.—The officers of the Narragansett Gun Club, Newport, R. I., for the ensuing year are : President, James Gordon Bennett ; Treasurer, Frank B. Porter ; Secretary, S. Howland Robbins ; Governing Committee—James Gordon Bennett, Frank B. Porter, S. Howland Robbins, Travis C. Van Buren, John G. Heckscher, Martin Van Buren, Carroll Livingston and Perry Belmont. Committee on Birds—Henry W. Halleck, Carrol Livingston and Travis C. Van Buren.

BLOOMING GROVE PARK.—At a meeting of the stockholders of Blooming Grove Park Association held July 8 the following gentlemen were chosen directors :—

John McGinnis, jr.,	M. Bayard Brown,
C. P. Fearing,	C. A. Grymes,
D. B. Mozilly,	Chas. Hallock,
C. H. Read,	F. S. Giles,
John Avery,	Beverly Robinson.
Wm. F. Wharton,	

At a meeting of the directors held July 17 at 30 Broad street the following officers were elected for the ensuing year :—

President, John McGinnis, jr.; Vice-president, John Avery; Treasurer, C. H. Read; Executive Committee: John McGinnis, jr., C. P. Fearing, C. A. Grymes; Secretary, John Avery.

At the same meeting the thanks of the association were tendered to the president of the Brooklyn Gun Club for the donation of European quails received.

MICHIGAN SPORTSMEN'S ASSOCIATION'S ANNUAL BOOK.—The little book of the transactions of the Michigan State Sportmen's Association's annual meeting in 1878, having proved very successful, the Association now proposes to publish a like pamphlet giving the essays read at the Lansing convention last January, and thus to afford a means of preserving them. The Annual will be found a desirable advertising medium for gentlemen who wish to reach sportsmen.

THE BAKER GUN.—Noticing the establishment of the W. H. Baker & Co. Gun Works in Syracuse, the *Sunday Courier* of that city in a recent issue says of the firm and their workmanship :—

What is still more significant as to the merits of their guns, they have already received orders without any effort on their part from British Columbia, Canada, Australia and Brazil. This business enterprise has the active and substantial support of some of our well known and most reliable business men to whom the word failure is unknown, which fully guarantees financial success, while the ability of Mr. Baker as the inventor and practical manager of the manufacturing of the guns is amply demonstrated by the unparalleled success and reputation the guns have acquired in the short time they have been before the public. The most novel and important feature in their gun, and which attracted the attention of gun men from every part of the country, was the combination of three barrels, two shot and one rifle, in a breech loading gun, in so compact and perfect a manner that it has been acknowledged to have no equal among the class of guns that are used exclusively for hunting, and especially in locations where there is large or dangerous game. The mechanical arrangement of the gun was invented expressly to adapt it to admit of such a combination gun being successfully made, and which it has proved to be in the most perfect manner, and at the same time it was found that the same principle upon which its working parts were made had furnished the most complete model for a double-barrel shot gun of anything now in use, it making without exception the strongest, cheapest and the best gun for the money to be found in the market.

The firm have not been sparing in expense in procuring the finest tools and machinery to be had to enable them to successfully make a good, cheap gun. It has had its natural result of bringing them to a point where they can also compete in respect to finish and appearance with the finest guns that are made, either in this country or England.

All lovers of an article of this description would be cordially received at their factory, where they would see conclusive evidence that no statements in this article are exaggerated.

COURTESIES ACKNOWLEDGED.—The Long Island Gun Club sends us the following card in recognition of sundry courtesies received at Rochester during the recent State Tournament :

BROOKLYN, July 21, 1879.

Editor Forest and Stream : —

In behalf of the Long Island Shooting Club, we tender our thanks to the people of Rochester, and to the members of the State Convention, for the many favors shown us while there, hoping to return the same with interest when they visit Old Long Island shores

Yours truly.

G. F. GILDERSLEEVE,
Vice-President of Long Island Shooting Club.

NEW JERSEY—*Riverton, July* 21.—Match at pigeons between A. B. Dexter, New York Gun Club, and W. B. Edmunds, Social Gun Club, of Philadelphia ; 30 yards rise, 80 yards boundary ; 5 traps, 5 yards apart ; Hurlingham rules :—

W. B. Edmunds.—1 1 1 1 1, 1 1 1 1 1, 0 1 1 1 1, 1 0 1 1 1, 1 1 0 0 1, 1* 1 0 1 1, 1 1 1 1 1, 1 1 1 1 1, 1 1 1 1 1, 1 1 1 1—44
A. B. Dexter—1 1 1 1 0, 1 1 1 1 1, 1 1 1 1 1, 0* 1 1 1 1, 0 1 0 1 1, 1 0 1* 1 1, 0 1 1 1 1, 0 1 1 1 0, 1 1 1* 1 0, 1 1—38.

NEW YORK—*Glen Mitchel, July* 31.—Sweepstakes by a party of gentlemen from Saratoga ; 30 yards rise :

J. C. Heckscher	1 1 1	T. Van Buren	1 0 0
J Fellows	1 1 1	J. H. Bradford	0 0 1
C. Livingston	1 1 0	J. Lowery	0 0 0
P. Belmont	0 1 0		

Messrs. Heckscher and Fellows divided the stakes.

NEW HAMPSHIRE—*Nashua, July* 11.—The outlook for woodcock would be better if a few lawless pot-hunters would not hunt them until the open season begins Aug. 1st; however, the grounds are now watched and sportsmen who are willing to abide by the law propose to make it hot for those who break it. WEBB.

NEW YORK—*Hornellsville, July* 20.—Two deers were seen last week feeding right in the village. J. O. F.

NEW YORK—*White Plains, July* 21.—Woodcock are very plentiful, and I hope they will stay with us until August 1. I have not heard of a bird being shot, and in my opinion the law is generally respected. You can add my testimony to yours, that I almost positively know that woodcock and quail will raise two broods if the season is favorable. G. W. BASSFORD.

PENNSYLVANIA.—*Hollidaysburgh, July* 15. — First day woodcock hunting with Patrick Burk; out three hours and bagged forty-two birds; very large and plump. S. FLEISCHER.

OHIO.—*Wauseon, Ohio, July* 18, 1879. — Woodcock shooting in Ohio has opened with plenty of birds. Yesterday Squire Brailey and I bagged 22 before noon on the Maumee river, and then quit because we had enough. We shot over Frank Shuman's pointer "Duke", the best dog for all kinds of game I ever saw. He never flushes a bird and is as cool as the coolest of the setters. The indications are that we shall have plenty of quail this year, but our foolish law shut us out until next year. Grouse, ruffed, will also be plenty this fall. H. H. HANDY.

TENNESSEE—*Savanah July* 15.—The outlook for quail shooting this fall is unusually good. The "bob whites" are whistling everywhere, and owing to a dry June, numerous broods are reported. WILL.

PENETRATION.—*Catawissa, Pa., June* 24. —*Sir:* Below please find a pattern for consideration. W. H. Baker & Co's fifty dollar, 10-bore gun; 3½ drs. Dittmar powder; 1¼ oz. No. 7 American shot; 40 yards at 30 in. circle. No. pellets in. circle 326. Just one pellet less than the number contained in the charge as given in FOREST AND STREAM, equally distributed with excellent penetration. G. W. R.

FOUNTAIN GUN CLUB.—*Brooklyn Driving Park, L. I., July* 16.—Despite the thermometer register of 101 degrees on Hiram Howe's piazza, a goodly number of pigeon shooters presented themselves at the first meeting of the club after the return of its delegates from Rochester. The Brooklyn boys made themselves very popular at the Sportsmen's Convention, bringing away much hearty good will as well as four substantial prizes, among which was the second prize in the Dean Richmond cup shoot. Match at seven single rises :—

Mayhew	1 1 1 0	Singleton	0
Wagner	1 1 1 1 1	Henault	0
Mills	1 1 1 1 1		

Wagner and Mills divided.

Fifth match ; same as before :—

Rothwell	1 0	Mills	1 1 1 0
Wagner	1 0	Singleton	1 1
Morgan	1 1 1 1	Henault	1 1 1 0
Mayhew	1 1 1 1 1		

Morgan and Mayhew divided.

Sixth match ; same as before :—

Mills	1 1 0	Rothwell	0
Wagner	1 1 1	Henault	1 0
Mayhew	1 1 1	Daw	0
Morgan	1 0		

Mayhew and Wagner divided.

Seventh match ; glass balls ; 21 yards rise :—

Mills	1 1 1 1 1 1 1 1 1—10	Wagner	1 1 1 1 1 1 1 1 1—10
Case	1 1 1 0 1 w	Mayhew	1 1 1 1 1 1 0 1 1—10
Rothwell	1 1 1 0 0 w		

Ties on 10 balls.

Mills	1 1 1 1 1—5	Mayhew	1 1 1 1 1—5
Wagner	1 1 1 1 1—5		

Ties on 5 balls.

Mills	1 1 1 1 1—5	Mayhew	1 1 1 1 0—4
Wagner	1 1 1 1 1—5		

Mills and Wagner divided.

OHIO.—*Youngstown, July* 12.—Semi-monthly contest of the "Buckeye Breakers" for the championship of the club. Bogardus rules, Cards rotary trap, full spring, 15 balls each at 21 yards rise :—

	Total.
Frogget	0 0 1 0 0 1 1 0 0 0 1 0 1 0 1—6
Head	1 1 1 0 0 0 1 1 1 0 0 0 0 0 0—7
White	0 1 0 0 0 0 0 0 0 0 0 0 0 0 0—1
J. W. White	0 1 1 0 0 0 0 1 0 1 1 1 0 1 0—7
Quinilan	1 0 1 1 1 1 1 1 1 1 1 1 1 1 0—12
Cotter	1 1 0 1 1 1 1 1 1 1 1 1 1 0 1—11

BUCKEYE BOY.

MISSOURI.—*St. Louis, July* 16.—St. Louis Gun Club shoot on club grounds : 30 birds ; 21 yards :—

Wilson.....111111111111111111111111101—29.
Pierce.....011111110110110111111111111—26.
Dozier.....110111101111111101110111111—26.

Of the lost birds Wilson only had one and that fell dead out of bounds ; three of Pierce's four were dead out of bounds, but Dozier's four were clear misses. A shoot at six pairs of birds was then instituted with the following result :—

Wilson	10	11	11	10	11	11—10
Pierce	10	10	11	10	11	11 9
Dozier	11	10	10	00	10	10—5

Of the lost birds one each for Pierce and Dozier fell out of bounds. The birds were all strong and good flyers. The bird that was scored out of bounds for Wilson was the finest shot made during the match. It was a black pigeon and an incomer and it passed the gun so rapidly that he had to turn and shoot after it. The charge literally knocked it out of bounds, as there was a fence 30 yards in rear of the score, and to save time it was ruled that birds falling over the fence should be scored lost or dead out of bounds if hit. It fell 60 yards from the trap with Dittmar powder.

TENNESSEE.—*Jackson, July* 15.—Glass balls :—

Campbell....1111101010111111101110111011
1111011111111010111111 41.

Leonard	1 0 0 1 1—3	Zimmerman	* 1 1 1 1—4
Morse	1 1 0 0 1—3		

In the shoot-off, miss and out, Baldwin won first, Bodman second, and Becker third prize.

In the first sweepstakes, three single rises, first prize won by C. A. Zimmerman, second by G. W. Baldwin.

In the second sweepstakes, Baldwin and Timberlake divided first prize; second prize was won by P. J. Dreis, and third by G. A. Hamilton.

— A CORRESPONDENT writes from Old Point Comfort : "There is a little here of what would be considered dress in Newport. It has not been fashionable at the South to be rich since the war—affluence arguing that you failed to sacrifice all for the cause, and Southern ladies, lovers of ease, are little given to exhibiting several costumes in a day. They are fond of quoting Mrs. (Judge) Aiken of South Carolina who, with all her millions, used to appear at the White Sulphur Springs in cheap lawn and prunella shoes." Hotel prices are $2.60 a day for monthly and $2.85 for weekly guests. The same facts apply to all the southern watering places, and whatever the true motive or incentive to economy, the lesson is one which might be incalcated with profit everywhere.

GUN PATTERNS.

VICKSBURGH, MISS., May 31, 1879.

Editor Forest and Stream :

My brother and I each have a Scott gun. His is 10 gauge, 30-inch barrel, and weighs 9 pounds ; mine is 12 gauge, 31½-inch barrel, and weighs 8 pounds. Both are choked and breech-loaders. We have just made a careful, pains-taking trial of their capacity for shot and powder, and append a table of the result herewith. We began with an ounce of shot, with 3 drms. powder for the No. 12, and 3¼ for the No. 10, heaped up, always using a half drm. more in the larger gun. We made four shots each for every change of shot or powder, and the table gives the average of the four shots. When using the light charges of powder we did not deem it worth while to use No. 4 nor 5 shot ; and when using heavy charges we omitted the trial on 7 and 8. This test required 88 shots each.

To test penetration we used a long, narrow box, open at one end and on top, with perpendicular grooves an inch apart, opposite each other, on the inside. Into these grooves we slipped cards five inches long and four wide, the thickness of a postal card, which they very much resembled. These we had cut the proper size at a printing office. The box we fastened upon stakes, with the open end towards the point from which we shot, and on the line of sight. To insure a near approach to accuracy we took "a rest" when firing. For pattern we used paper 18 inches square, fastened upon stakes just in front of the open end of the box or trough containing the cards. The table below gives the average penetration and patterns of both the cards and the 18-inch square paper, in four shots. In taking penetration we only counted the cards perforated by a majority of the pellets entering the card at the mouth of the box. There was great irregularity in the penetration of different pellets of the same charge, especially with No. 4—it being often as much as ten or twelve cards, but the penetration of a majority of them in each of the four shots was surprisingly uniform. We used Dupont's FF powder, at forty yards, measured with a steel tape line. We used Ely's pink edge wads, and at first shot alternately with double wads on the powder, but discovering no perceptible advantage arising from two we discarded one of them. As we had to count for penetration and two patterns, and re-arrange our cards at each shot, it may readily be conceived how tedious the trial was, and the length of time it necessarily consumed.

It will be seen that the No. 12 made the best patterns on small shot with 3 drms. powder, and the 10 with 3¼ drms. ; and on the other sizes with 3¼ drms. and 4 drms. respectively. In all the trials the No. 10 beat the No. 12 in penetration, when using half a drm. more powder in the larger gun, while the guns were about equal in pattern. It will also be seen that the additional half drm. to 3¼ in the No.

12, and 4 in the No. 10, was not only a waste but a disadvantage—there being a decided loss in the pattern and no increase in penetration.

On a trial of a Scott, No. 10, not choked, we found it barely equal in penetration, and full one-third short in pattern on Nos. 4, 5, and 6, the test extending no further.

National Pastimes.

NATIONAL MEETING OF AMERICAN ARCHERS.

CRAWFORDSVILLE, Indiana, July 14th.

Editor Forest and Stream:—

Having done much of the work of organizing this first great public meeting of American Archers, as a member of the Executive Committee of the Association I wish to impress upon the minds of our archers who have had less acquaintance with the association and its objects, that no good scoring is to be expected at this first meeting. Archery is not learned in a year. No archer in England ever got his name into the prize lists in the second year of his practice. Mr. Thomas L. Coulson who began archery in his fifty-first year, and rose more rapidly than any one with whose career I am acquainted, won the seventh prize at the Grand National Meeting when he had practiced unremittingly for four years, and even this measure of success provoked the comment from Mr. Sharpe in his account of that meeting, that this was "a marvelous result for one only three or four years an archer." No young archer need fear that his scoring will appear ridiculous in the report of the tournament, as all the scoring will be low. Having received and compared the scores of a large number of the shooters throughout the United States, I feel safe in saying there will not be four scores of over 500 points at the Double York Round made at the meeting. That score is deemed respectable in England for archers of ten years practice. Out of the thirty leading archers (gentlemen) who shot at the great meeting at Leamington in 1878, only nine reached five hundred score. The other twenty-one scoring from that total down to 146. Taking their sixty yards scores, I find they range (with 48 arrows) from the highest of 223, by Mr. Yates Foot, to the lowest of 20, by Mr. C. E. Garrett. Yet the poorer shots, like Mr. Garrett, do not hesitate to enter such contests, and enjoy the meetings equally with the more expert. At our Grand National we will expect to see no fine scoring, but expect the Garretts to be the rule. But after reading so much, many will still ask, what will be a fair score for the different distances? My experience teaches me that for the archer who shot through the last season at short ranges, and began the longer ranges this season, the following scores at the different ranges to be shot at the meeting will be good shooting:

30 Arrows at 40 yards=145		48 Arrows at 60 yards=120	
30 " " 50 "	100	" " 80 "	140
30 " " 60 "	75	" " 100 "	100

This will yield him at the American Round a total of 320, and at the Double York Round a total of 360. Any archer who can reliably score 400 at the Double York Round can get one of the six first prizes offered by the association. In other words, one can safely say that there will not be six scores of 400 made upon that round at the meeting.

As to the ladies who shoot the Columbia Round of 24 arrows each, at 30, 40 and 50 yards, with them good scoring will run about thus:

30 yards, 24 arrows=	80.
40 " " "	50.
50 " " "	30.

Or a total at the double Columbia Round of 320. Any lady who can reliably score 150 at the single round, will get into the six first scores. This is not given in a spirit of prophecy, for it requires no gift of prescience to foretell the result.

The first Grand Annual meeting was not called with the hope of astonishing any one with great scores, but for the purpose of calling together the beginners in archery in this country, and by competitive practice for prizes, beget emulation and improvement in the future. Let no young archer (young in archery if not in years) forego the pleasure of participating in this first annual tournament through the fear that he cannot shoot sufficiently well to win a high place in the scores. When the Grand National Meeting of Great Britain was first held at York in 1844, a score of 221 at the York Round won the championship medal by the Rev. J. Higginson against sixty-four other gentlemen shooting, and a score of 186 won the Lady Champion badge by Miss Thelwall, shooting 72 arrows at 60 yards, and 72 arrows at 50 yards. And even in 1849, after five years practice at the national meetings, the Lady Champion badge was won by Mrs. Calvert with a score of 161 at the Double National Round of 96 arrows at 60 yards, and 48 arrows at 50 yards. If they should only do so well at their sixth annual meeting, we should scarcely expect to do better at our *first*. To show what years of practice did for the English, I may say that in 1857, Mr. H. A. Ford won the gentlemen's medal with a score of 1251, and in 1875, Mrs. Butt won the ladies badge with a score at the Double National Round of 752. It matters not, however, with the English ladies whether they can score well, they will attend the meetings and shoot. The prizes offered by the National Association of Chicago, are so arranged that the poorer shot will get as many as the more expert, and in fact, in the handicap shoots the less expert will be almost the certain winners, as no archer can carry a burden of 30 per cent and win. This meeting will do much for archery in this country, and every archer who attends will be greatly benefitted.

An interesting feature of the meeting which has never appeared at the English Nationals, is the "Team Shoot" upon the last day, four members from any club to constitute a team. Four prizes have been offered for the four highest "team scores" at the American Round. At this round 800 will be a respectable score for a team, and a score of 1,000 points will most probably obtain one of the four prizes. The practice of shooting together as a team should be cultivated by the best shots of each club, for matches between clubs are generally shot by teams chosen from each club. W. H. T.

A NEW ENGLAND ARCHERY ASSOCIATION,—All New England Archery Clubs are invited to send representatives (a lady and gentleman) to a meeting to be held at the Parker House, Boston, July 30, at 11:30 o'clock, A. M., for the purpose of organizing a New England Archery Association. This call is published by Messrs. A. S. Brownell, President, and S. P. Abbott, Secretary of the Pequossett Archers; and Harry Van Duzee, President West Newton Archers. Clubs are requested to communicate their intention of being represented to Mr. A. S. Brownell, 89 Water street.

A MOST REMARKABLE SCORE.—At the Newark Shooting Park on Thursday, July 10, Mr. Wm. Hayes made the following wonderful score on the ¾ inch, ring target at 200 yds., off hand: 25–22–24–25–22–23–25–25–25–25—241. These 10 shots were fired in succession in the presence six or seven members of the club who were watching the shoot, as it was a little match for cigars on each shot, with a fellow member. It would have made a string measurement of about 13½–14 inches, which is not easily beaten even with a rest, with globe and peep sights.

Newark, July 14. A MEMBER.

THE LOOSE.—The most difficult thing in archery practice is to become somewhat near perfect in letting go the string when the draw is completed. Two warnings must be heeded:

1st. Do not jerk.
2d. Do not hold.

The loose must be instantaneous, with a backward impulse of the hand, but it must be smooth and even. To get a good loose do not over bow yourself, and be careful to take the string near the points of the finger-tips. The rest depends upon intelligent practice. The correct flight of an arrow depends much on the loose. A very keen, swift flight is not best, if to get it, the archer sacrifices smoothness of loose.

CRICKET.

MERION (2D.) VS. YOUNG AMERICA (2D.).—On the grounds of the former club at Ardmore a match was played on the 12th inst., resulting in a victory by 24 runs over the visitors. It will be noticed that the Young Americas were two men short:

NOTES BY G. REICHELM.

(*a*) I hold that 3P-Q4, or Q Kt-B3, are really more subtle and dangerous attacks. The move in the text, however, has the sanction of time-honored usage and is based on the high authority of received analytical researches. This game, which I regard as a fine contribution to this opening, affords a striking illustration of the power of Mrs. Gilbert's play, and is doubly creditable to her when it is taken into consideration that she had to encounter so strong a player and learned a bookman as Mr. Gossip.

(*b*) White pursues his attack in accordance with the general theory of this opening.

(*c*) Best. Black now threatens P tks P and Kt-R4.

(*d*) If 10 Q tks Kt P, then the defence rejoins with Kt-R4 and Kt tks P with the preferable development. By the move in the text Mr. G. opens the Q's file, which he expects to use to the detriment of Black's interests.

(*e*) I must for once take issue with this beautifully conducted defence and counter attack. I prefer K P tks P with the view of, at the proper moment, utilizing the Q Kt file.

(*f*) A grave error. White's only move here is 14 Kt-K B4.

(*g*) From this point the lady champion assumes the counter attack and conducts it with such remarkable accuracy and force that her noted adversary is soon compelled to strike his colors.

(*h*) Mr. Gossip might have resigned hereabouts with perfect propriety.

CURSORY JOTTINGS.

—The Chess Editor in answer to numerous complaints, etc., of correspondents and readers regarding the non-appearance of "The Game of Chess" in these columns, would here state that he is in no wise at fault, having sent in his "copy" regularly every week. In the future this department will be crowded out only when *absolutely necessary*, and upon the assurance of the Editor-in-Chief, C. Hallock, Esq., inform our readers.

—The Delmar vs. Lloyd match resulted in a victory for Mr. Delmar, by a score of 5 games won, and only 1 game lost, and 1 game drawn. It is rumored that Mr. Delmar will now challenge Captain Mackenzie.

—The Cleveland *Voice* Chess column exists no more; at least we so infer, from the fact that we have not seen it for over a month —"One more unfortunate," etc. Why? The Croydon *Guardian* and Mr. Hamel's *Express*, do not reach us.

WHAT ARE WHITEBAIT?

IT is only a year ago that whitebait was fully inaugurated in America by a grand whitebait dinner, *a la Greenwich*, at Manhattan Beach Hotel on Coney Island, and it was but a short time previous that Prof. Baird, Eugene Blackford, and others, discovered that we had anything like whitebait in our waters. Our readers will remember what discussions have since taken place to determine what whitebait really are—whether they are merely the small fry of shad, herrings, bluefish, mackerel, and perhaps of a dozan varieties of our coast and estuary fishes. Now in England where whitebait has been the approved diet at seaside resorts among the aristocratic habitues especially. A gentleman has been recently investigating the matter and has sent the results of his study to *Land and Water*. Only last year, just at this time, (May) he commenced collecting specimens to determine whether they were really a distinct species. He writes:

I purposely excluded from my collection other fishes (as gobies and stickle-backs) which, accidentaly or fraudulently, are found mixed with the true forms, restricting my observations to what are the species known to the trade and epicures as whitebait.

In obtaining materials for this investigation, I have been assisted by Mr Carrington, naturalist to the Royal Westminster Aquarium, who kindly procured specimens from Southend from May until August, 1878, and also placed a number of healthy ones in a tank at that institution in order to ascertain what they would develop into, but unforeseen circumstances prematurely cut off what we can only hope were as happy as they were short careers. I likewise received specimens monthly from fish-mongers up to the end of October, after which period the demand ceasing, so did the supply. Through the kind services of Mr. Walpole I obtained from Mr Charles, the eminent fishmonger of Belgravia, a beautiful series of thirty-one examples of the "winter whitebait" (made during the months of January to March) from the Medway, where he maintains an establishment for the purpose of collecting this delicacy.

First, what do we understand by whitebait? Here we must first seek for the origin of the term, and at the outset I am inclined to admit that such appears to be lost in obscurity. The newspapers last year reported that a Mr. Cannon had "himself caught whitebait for sixty years, and his father's father did so forty years before him. 1780 is assigned as the exact date of the first catch. At first Cannon the elder used his captors merely as baits for eels, and hence the name which has of itself been the subject of controversy." The article continues that he subsequently introduced their use at the table of the higher classes. Unfortunately we must consign this account to the region of interesting romances, not only as regards the origin of the term, but likewise as to his having promoted his young friends from the hook where they were displayed as tempting baits for eels to the frying-pan and subsequently the dinner table. Readers interested on this point have only to refer to Pennant's "British Zoology," volume the third, page 371, published in 1776, or four years prior to Mr. Cannon's first catch (long before he believed he diverted the destination of these fish from baits for eels to luxuries for epicures), and we read as follows:—"During the month of July there appear in the Thames, near Blackwall and Greenwich, innumerable multitudes of small fish which are known to the Londoners by the name of whitebait. They are esteemed very delicious when fried with fine flour, and occasion, during the season, a vast resort of the lower order of epicures to the taverns contiguous to the places they are taken at."

Unable to trace the origin of the term whitebait, we have to investigate what this fish has been considered. Pennant states that they belong neither to the shad nor the sprat, nor are they the young of smelts, but bear a great similarity to the bleak, to which fish he appended them, although with doubt. Donovan (1808) obtained as whitebait the young of the shad, and calmly expressed his opinion that Pennant never saw a whitebait, or, if he did, his examples were bad, or his investigations hasty and negligent, while his figure conveyed no just idea of the fish. Next we have Yarrell (1828), who considered that both Pennant and Donovan were in error, as he saw in these fish a new species of *Clupea*, which he termed *Clupea alba*. M. Valenciennes (1847) went still further, instituting a novel genus (*Rogenia*) for their reception, while he remarks that some young sprats were captured along with the true forms during the months of April, May, and June. Dr. Gunther, the author of the "Catalogue of Fishes in the British Museum (1867)," did not coincide with any of the four previous writers, retaining whitebait in the genus *Clupea*, and considering it to be the young of the common herring.

It appears now to be universally admitted that the true whitebait belongs to some species of the herring family, but what we wish to ascertain is, are such mature forms, as asserted by Yarrell and Valenciennes, or immature fish, as believed in by the majority of inquirers, and as such were formerly protected by legislative enactments? In this investigation we must not lose sight of the fact that the herring family, more especially among the species composing the genus *Clupea*, possesses many pelagic forms, which live together in large assemblages or schools, the young of which but rarely enter brackish, and never as a rule fresh, waters. That these fishes are very variable in their migrations: abundant some years, they occasionally forsake their haunts for several successive seasons, returning again in enormous quantities. This phenomenon is not peculiar to such as whitebait in merely European seas, but is found to be universal. Another peculiarity is that, the teeth being small and deciduous, a considerable diversity may exist in examples of the same species.

Are whitebait mature fish? This question has been answered by most investigators in the negative, by Yarrell in the affirmative, while fortunately the specimens of this last author, being still in the British Museum, are open to re-examination. All are considered to be the young of the common herring. Yarrell remarked that these fish are taken in the Thames "from the beginning of April to the end of September . . . and specimens of the young fish of the year, four or five inches long, are then not uncommon, but mixed even at this late period of the season with others of very small size, as though the roe had continued to be deposited throughout the summer. Yet the parent fish are not caught." I have now a fine series of whitebait captured during the months referred to by Yarrell, and from the same locality (the Thames), and these I now propose enumerating, premising that, as the migrations of members of the herring family are variable, occasionally forsaking their usual spawning grounds, it does not appear improbable that one species may have left and given place to another, to be again changed to the original form on the return of the water to some condition which suited its first occupants. Thus Yarrell observes: "Formerly great quantities of the Twaite shad were caught with nets in that part of the Thames opposite Millbank, Westminster."

I examined 138 samples of whitebait taken during the months of May and June, 1878, the longest of which was 2¼ inches; out of these about one in ten were sprats, the remainder the young of the herring. In August I examined forty-six examples from 2 to 3½ inches in length; out of these twenty-four from 2 to 2·7 inches long were sprats, and twenty-one, from 2·8 to 3½ inches long, were young herrings, these latter now commencing to grow to a larger size than their smaller cousins, the sprats. In October out of forty-one examples from 2½ to 3½ inches in length, all were herrings. The foregoing examples were from Mr. Carrington, or else obtained from fishmongers who procured them in Bilingsgate Market, so they may be received as examples of Thames fish. It appears that both sprats and young herrings find their way into the London market as whitebait. Some inquirers may only obtain one species, some the other, while a third may receive both forms, in accordance with where the fishermen were working their nets and whether schools of one or both were present at the time.

Of the thirty-one examples of "winter whitebait" received from Mr. Charles, and which, as I have observed, came from the Medway, twenty-six varied from 2 to 4¼ inches in length, the larger ones possessing well developed roe, all were sprats; the remaining five were young herrings from 5 to 7¼ inches long, the largest having slightly developed roe.

How are these young fish to be distinguished? may be asked; and to this question a very simple reply will suffice. The sprats have sixteen to eighteen rays in the fin of the back, and seventeen to eighteen in that behind the vent. The ventral fins are situated beneath the first rays of the back fin. They have forty-seven or forty-eight vertebræ, no teeth in the front part of the palate (the vomer), and in a single or double row along the tongue, while internally they only possess seven or eight cæcal appendages to the stomach. The edge of the abdomen has very sharp points. The young herrings have seventeen to twenty rays in the fin of the back, and sixteen to eighteen in that behind the vent. The ventral fins are situated beneath the middle rays of the back fin. They have fifty-six vertebræ, teeth in the front part of the palate (the vomer) and in a long oval patch along the tongue, while internally they possess seventeen to twenty or more cæcal appendages to the stomach. The keeled abdominal edge is not near so sharp as in the sprats, while the scales do not fall off the body quite so readily as in the latter species, in which but few are seen on the sides in captured examples.

That Pennant's was the whitebait of the present time there can be but little doubt, and also that it was the young herring. It is also certain that Donavan's figure is that of a young shad, the immature of which, if in sufficient numbers, would do as well as those of the herring or sprat served up as whitebait; while I certainly possess the young of these last two forms which I have received as this fish. This year (1879) whitebait are said to be unusually early in the market; and we also are told in your last number that trout, which have commonly completed spawning in November, had not finished this operation during the last week of this month (March). Salmon have likewise been very late this year, and we are all aware what an abnormally cold season we have gone through. Has this anything to do with the whitebait? I suspect it has, that the growth of some of these sprats has been retarded, and they now form the present early whitebait of which I have received examples from Billingsgate Market, and all are young sprats. Most probably the true whitebait or the herring will be late in appearing this season.

F. DAY.

TIM POND.—This is a pleasant resort in Maine which has been often referred to in our columns. Mr. Kennedy Smith, who is located there, writes to us to-day that he has built a substantial log cabin which will accommodate eight persons, cut out a good road, put three boats on the pond, and fitted himself for company in a general way. He says: "A party was here last week from Biddeford. They caught trout by the hundreds. Take railroad to Farmington and thence stage to Kingfield, from which latter place hire a wagon to take you through." Smith agrees to furnish good "farmer's grub" at fifty cents per day.

By the way, there is a subscriber of ours out at Eldred, in Sullivan County, this State, who sends the following plaint:

"I have not advertised my place this year, and the result is there has not been a single angler here, though the trout are very plenty." As he promises to amend in the future we will give him this gratuitous notice. His name is J. M. Bradley. According to his account, deer, quail and woodcock can be obtained in his neighborhood.

CANADA AT WIMBLEDON.—The Canadian team now at Wimbledon is comprised as follows:—

1. Lt. Col. Gibson	13th Batt, Hamilton, Ont.

CURE BY ABSORPTION.

"SAPANULE."

THE GREAT EXTERNAL LOTION AND FLUID ABSORBENT. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath. "SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burnes, Scalds, Bruises Sores, Piles, Boils, Chilblaines, Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving itsmooth and soft. Soreness or Inflamation of Feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths. "SAPANULE" contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use itand find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY, FOURTH AVE., COR. 22d ST., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:
A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.
HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:
For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.
MRS. W. H. KINSLEY, 158 West 22d St., New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.:
GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,
JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:
GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I sufferred intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE."
Truly yours. N. ORMS, 59 West 22d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS.

SAMUEL GERRY & CO., Proprietors, 237 Broadway, N. Y.

This cut is a fac-simile of the Sportsmen's Chain, patented by N. M. SHEPARD, April 15, 1879. This Chain will be made from the very best quality of ROLLED GOLD PLATE, or what is known as Gold Filled, and will be warranted to wear equal to a Solid Gold Chain from four to six years. The retail price will be $8 each. Liberal discounts to Clubs or Societies ordering twelve or more at one time. Emblematic for Pigeon, Glass Ball or Target Shooting, consisting of Shot, Shells, Cartridges, and a Gun or Rifle for bar, will also be made of Solid Gold upon application, at the lowest market price.

PATENTED
APRIL 15, 1879

CAPT. A. H. BOARDMAN—FOREST AND STREAM AND ROD AND GUN.
This Chain is pronounced by every one who has seen it to be the handsomest thing of the kind ever presented to the public. The emblems can be worn on any streets upon A large assortment of Shell, Shot and Cannon Charms at low rates.

TAKE THE OTTAWA RIVER NAVIGATION CO'S STEAMERS, to or from OTTAWA CITY. The Capital of the Dominion may be reached from MONTREAL, by DAY BOAT, leaving daily at 7:15 a.m., and from PRESCOTT (opposite Ogdensburg, on the St. Lawrence, the point where the great stream of American travel diverges), by St. L. & O. Ry. Every Tourist should make the trip UP or DOWN the River Ottawa. The scenery of the Ottawa River is very picturesque, and has been compared to the famous "blue" Danube; the approach to Ottawa City by the river is grand in the extreme, and unsurpassed. The steamers of this line are new, comfortable, and well-appointed.

THIS IS THE CHEAPEST and ONLY DIRECT RIVER ROUTE TO OTTAWA.

First Class Fare from Montreal to Ottawa...$2.50
Return Fare from Montreal to Ottawa.....4.00

NEW BOOK!

The Two Spies!!

LEONIDAS PARKER, a Union Spy, and JOSEPH P. HARMAN, a Confederate Spy, are the authors of the above book, which, for literary merit, historical interest, truthfulness, easy and pleasant style, thrilling incidents, anecdotes and the general portrayal of the inner-working at Washington, Richmond, and at the headquarters of the contending armies, is second to no work ever published. If you want to read of dangers and difficulties, captures and escapes, strategy and stratagem, wit and wisdom, just buy and read THE TWO SPIES. Neatly Printed on fine calendered paper, containing 700 pages and 200 engravings. Subscription book publishers always sell books of such size and style for $3 and upward, but I will send a copy of "The Two Spies" by mail for $1.72. Orders for five copies and upward filled for $1.40 cash, and shipped by express.

☞ Disabled Soldiers, either Union or Confederate, can have a copy by mail for $1.50.

Feather Filled Glass Balls,

PATENTED AND INVENTED BY

IRA A. PAINE.

THE ONLY SUBSTITUTE EVER INVENTED FOR A LIVING BIRD.

Awarded the Medal of Progress and Grand Diploma at the American Institute Fair, 1878.

A sweeping reduction in price. Ask your gunmaker for the FEATHER FILLED AND TAKE NO OTHER. SPECIAL NOTICE TO DEALERS.—Owing to the great demand for the FEATHER FILLED BALL, we will from this date pay strict attention to our factory and the careful production of the ball only, and have appointed the well-known house of HAGGERTY BROS. & CO., 110 Platt Street, New York, as our authorized agents, to whom all orders and communications may be addressed. ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.
THE WINNING GUN.

AT THE International Pigeon Shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an *objet d'art*, valued £160, and a money prize of £705, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Choimondley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 29½ yards. He also won the second event, killing 8 birds in succession at 35 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the Choke-Bore Match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at fifty guineas, presented by Mr. J. Purdy, the gunmaker. The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South, for $500 a side, South killing 88 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE-FAST, BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 168,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. Greener, St. Mary's Works, Birmingham, England.

H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

Sportsmen's Routes.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the SHOOTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUS SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT Season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The Climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

NEW HAVEN, MERIDEN, Hartford, Springfield, White Mountains, Montreal and intermediate points. The new palace steamer *C. H. Northam* leaves Pier 25, East River, daily (Sundays excepted) at 3 P.M. A passenger train will be in waiting on the wharf at New Haven, and leave for Springfield and way stations on arrival of boat.

NIGHT LINE—The *The Continental* leaves New York at 11 P.M., connecting with passenger train in waiting on wharf at New Haven, leaving at 5 A.M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursions to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent.

DIRECT RIVER ROUTE

TO Ottawa.

TAKE THE OTTAWA RIVER NAVIGATION CO'S STEAMERS, to or from OTTAWA CITY. The Capital of the Dominion may be reached from MONTREAL, by *DAY BOAT*, leaving daily at 7:15 a.m., and from PRESCOTT (opposite Ogdensburg, on the St. Lawrence, the point where the great stream of American travel diverges), by St. L. & O. Ry. Every Tourist should make the trip UP or DOWN the River Ottawa. The scenery of the Ottawa River is very picturesque, and has been compared to the famous "blue" Danube; the approach to Ottawa City by the river is grand in the extreme, and unsurpassed. The steamers of this line are new, comfortable, and well-appointed.

THIS IS THE CHEAPEST and ONLY DIRECT RIVER ROUTE TO OTTAWA.

First Class Fare from Montreal to Ottawa.....$2.50

Ammunition.

Laflin & Rand Powder Co.,

No. 26 Murray Street, N. Y.,

Sole Proprietors and Manufacturers of

ORANGE LIGHTNING POWDER.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

ORANGE DUCKING POWDER.

For water-fowl, strong and clean. No. 1 to 5, in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

ORANGE RIFLE POWDER.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. BOGARDUS, the "Champion Wing Shot of the World."

Blasting Powder and Electrical Blasting Apparatus.

Military Powder

of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood-cut, sent free on application to the above address.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 50 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

PURE TIN-COATED AND BURNISHED

DROP AND BUCK SHOT.

American Standard--Eagle Brand.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:— NEW YORK, Jan. 13, 1879.

HAVING been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun.

A. H. BOGARDUS.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

A GREAT INVENTION!

IMITATION

STAINED GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented,* and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of **$1.00.**

Agents Apply to L. Lum Smith, Patentee & M'f'r. 717 SANSOM ST., PHILADELPHIA, Pa. (Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only

REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald.* Grand outfit, including circulars, terms, and a beautiful 10x14 engraving of the *Smithograph,* sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald,* all for 10 cents. For Forest and Stream and Rod and Gun.

THE DYING SEAMAN.

BY ISAAC M'LELLAN.

'TWAS in a dark and miry lane,
Far in the city's mighty heart,
Where tossing on a bed of pain,
With death devouring at his heart,
A rough and rugged seaman lay,
Life's current ebbing fast away.

There in the dark and dismal room,
The sick man on his couch repos'd,
The glare of fever in his eye,
To earthly objects well-nigh clos'd,
While fancy fixed his wandering gaze
On scenes of other climes and days.

"I see," he cried, "my early home
Shine in the sunshine as of old,
Where the tall elm-tree bends above,
Tipt in the sunset's burnish'd gold.
And by the porch, the roses bloom,
In all their fragrance and perfume.

"I see beneath the mossy eaves.
The room where I, a child, did sleep;
The sun shines on the window-pane,
The honey-suckles o'er it creep.
The well-sweep lifts its beam in air
And swings the dripping bucket there

"My mother spins before the door,
My old sire rests him from the toil,
And childhood with its voices sweet
Fills all the scene with blithe turmoil;
My brothers there are all at play,
And call me with their voices gay.

"Now shifts the scene—the hills of blue,
The moss-brown roof, the fields of green,
The river, the old mill, the wood,
Have vanish'd like a drama's scene,
And in their place I see the foam
Of ocean tides, so long my home!

"Again I walk along the shore,
I face the yellow waste of sand;
The tumbling billows toss their crests,
They tumble o'er the shining strand;
The ship-boat bears me o'er the spray,
The laboring vessel speeds away.

"Full many a year I've roam'd the deep
O'er Arctic waves, o'er tropic seas,
For years, a storm-toss'd mariner
I've battled with the surge and breeze,
And here at last, a hulk I lie
Upon this wretched straw to die."

For Forest and Stream and Rod and Gun.

Murphy's Ducks.

"WHY is it that I never see you out shooting, now days, Budge?"

Budge was a jolly big Englishman, with all of his features jammed up into the middle of his face and presided over and lighted up by a pair of laughing blue eyes. He looked at me quizzically for a moment, then replied:

"Lor' bless your 'art, sir, I was cured of my shootin' and fowlin' perpensities the very first year as I comed out to this country, and I ain't as much as looked at my gun since that orful scrape, sir."

"What kind of a scrape was it? It must have been a pretty bad one to have put a damper on such an eager sportsman as you used to be."

"Well, sir, when I first comed out I was rather green, to be sure, and I thought as everythink I seed in the shape of a bird was wild-fowl like—but I mostly blames a chap as I met down in Maine on the branch road one day when I was lookin' about for a likely place to settle down on. We was just passin' over a little bit of crik like, and all of a suddent this 'ere chap 'ollers out: 'By Jove, what a splendid shot!' I jumps up and looks out of the window, and there I sees the biggest lot of duck I ever seed, all bunched together. Lor', sir, they wos that close together you might 'ave covered 'em with a rug, and there was more'n three dozen of 'em. 'Be them wild fowl, sir?' I asked 'im. 'Wild fowl?' says 'e; 'of course they are; did you ever see tame ducks of that color?' Well, sir, there was no mistaken what he said must be true, for I never seed tame ducks in the old country such 'igh colors as them ducks was. I minded afterwards, all the other chaps in the car gave a kind of laugh like, and the chap as first spoke 'e winked at 'em, but lor', sir, I thought it was all along of my greenness in not knowin' they was wild fowl."

"I should have thought that such an old hand as you would have known the difference between domestic and wild fowls at a glance."

"Lor' bless you, sir, there ain't nothink as a man's so much deceived in as ducks, and these 'ere ducks was the wery queerest colored ones as I ever see. One on 'em 'ad a bunch of feathers growin' out of the top of his 'ead, and the rest on 'im 'ad as many colors as a jumpin'-jack. I never seed such a duck anywheres."

"I suppose in your eagerness that you got out at the next station and tried back after those ducks?"

"No, sir; I didn't do that exactly, but I did stop at next station and looked 'round for a bit of ground to suit me. But none of 'em as 'ad good places was willin' to sell, and I thought I'd 'ave to move farther along the road, when I 'eard of an old chap as was livin' all alone and kind of crippled up with the rheumatiz like. 'Is place wasn't much to look at, but I thought I could make summat of it until I got a better chance; so I buys it and sends off for my old 'oman and the kids, as was stoppin' with a friend up the road, and goes to work to put the place more decent like afore they comed along. Well, sir, all the time as I was gettin' some bits of things together and breakin' up the sile and puttin' in a bit of crop like, I was allus a thinkin' of them there ducks as I seed in the little crik; and whiles I seed flocks of ducks and geese a-goin' over and 'ears the boys a-poppin' at 'em and could 'ardly keep myself quiet from takin' my old double-barrelled Joe Manting and tryin' a blaze or two at 'em."

"Is your gun a real Joe Manton's? It is rare to meet with his make now days, and choke bored breech-loaders are all the fashion."

"Well, sir, strickly stickin' to the p'int, I can't say as it's a boner-fider Joe Manting, but we allus calls most guns as we thinks a deal on Joe Mantings, and this 'ere gun of mine was made a many long years ago, and my old grandfather 'ad 'er haltered from a flint to a purcushion—what was that you called them new-fangled guns, sir?"

"Choke bored breech-loaders."

"Well, I'll be danged if that ain't a rummy name for a gun!"

"I should think that such a venerable gun as yours must be getting rather unsafe, isn't it?"

"I don't know as she's to call exackly risky, but ever since faither 'ad about a foot of the barrels cut off she kicks like a two-year old and makes an orful n'ise, but she scatters the shot smartish, and 'its main hard yet, old as she is."

"I am quite anxious to hear what was the cause of your giving up shooting."

"Well, sir, I was just comin' to the p'int. As I was a sayin', I could 'ardly keep my 'ands off the old gun when I seed the boys goin' fowlin', and when I seed a chap comin' in one evenin' with a bunch of teal I fairly give in and dropped everythink and started out the next mornin' afore it was light. I allus thought I'd get fine sport on that little crik where I first seed the flock of duck, and minded pretty well the exack spot where to look for 'em, for ducks mostly 'as the 'abit of 'anging 'round the same feedin' ground."

"Well, sir, it was a pretty stiffish tramp of a matter of five or six miles from where I lived to strike that littlei crik, and an orful rough tramp it was through swamps and bogs, and I dunno but I'd 'ave give the job up but for hearin' some chaps poppin' away up at some little lakes as was at the 'ead like of the little crik.

"Well, sir, I was just about nigh beat out when I got out of the last bog and comed out on a clearin', where some Irish chaps 'ad cleaned up a bit of a farm like; and this 'ere little crik as I've been a tellin' you about flowed through their place.

"From where I comed out was a matter of a mile away from the little crik, and not through the best of walkin' neither, to a chap as beat out as I was; but I wasn't a-goin' to give in, so I worried my way down to the bank of the crik and looked sharp up and down the water, without spyin' out as much as a feather.

"Well, there was nothink for it now but to tramp up the crik towards the lakes in 'opes of comin' on the ducks somewhere, and of all the walkin' I ever did follerin' up that crik was the wery worst. It was just one boil of mud swamp, bog, water 'oles and the wery dangdest kind of briar bushes you ever seed. And when I worried out on to level ground again I was a pretty lookin' objick, to be sure, with my clothes a'most torn off my back and just one mass of mud and slime all over; and I dunno but I'd 'ave made back for 'ome again but for a n'ise I 'eard just beyond a p'int of alders as made out a bit into the crik. At first I thought as 'ow I was mistaken, when all of a suddent like I 'ears the wery dangdest quacking of ducks, and afore you could say 'Jack Robinson' out sails, as I live, the wery identical old duck with the top-knot as I seed from the car window the time as I told you about.

"Well, sir, you might 'ave knocked me down with a feather, I was that taken aback, and just as I was a watchin' of 'im out comes the wery biggest mob of ducks a-follerin' right after 'im. I'd no time to count 'em, but there must 'ave been nigh on to twenty on 'em as was old ones, besides a squad of little chaps about 'alf growed. When I first spied 'em out they was too far off for a shot, so I drops on my 'ands and knees and began to creep on 'em; and partly walkin' and partly creepin' I made out to reach a bunch of bushes as was between me and the ducks. By this time they 'ad reached a bit of a mud flat nigh on to a bit of cleared land as made down to the crik, and some on 'em was a walkin' on the flat and a shakin' of theirselves and a fixin' of their feathers, and the rest on 'em was a bobbin' up and down in the water a-feedin' like. I was just about to let 'em 'ave it when my foot caught in a tangle of bush and I got a 'ist into a bit of a mud puddle, and made sure my chance was gone and the n'ise would send 'em off. But they didn't seem to mind the n'ise much, only them as was on the land scrabbled into the water again and j'ined the other chaps; and they all sailed out into the crik again in a body like. 'Now, Budge, my boy,' says I, 'let 'em 'ave it,' and I lets go the right barrel at 'em as they was swimmin' and the left at 'em as they rose, leastways at 'em as did rise, for a many of 'em was dead and some on 'em was wounded.

"Well, sir, that was the wery purtiest double shot as I ever made, and I was that excited that I did not know exackly what I was a-doin' of, and took right into the water, which was only about waist 'igh, and picked up all of the dead ones and chased them as was wounded on to the mud flat, and was a batterin' on 'em with the gun and a-twistin' and a-wringin' of their necks for fear some on 'em would get away, when I seed a chap a-runnin' like mad from a bit of a 'ouse on the other side of the crik, and just as he comed nigh another chap as was doin' summat in a field he 'ollers out: 'Good lord, Tim, look at what that fellows doin' to Murphy's ducks!'

"Tame ducks, did you say, sir? Yes, sir; right you are; they was tame ducks, and I paid Murphy for 'em; and the old 'oman and the kids and me we lived 'igh for a week, and I've 'ad no perpensity for fowlin', sir, never since that there orful scrape, sir."

CHARLES C. WARD.

For Forest and Stream and Rod and Gun.

GRAYLING FISHING ON THE MANISTEE.

THE opening of the trout season has revived in my mind the recollections of days spent in this unexcelled sport; and I am again transported to the wild and picturesque Mainstee, at whose head waters the month of August last found the writer in camp. The object of many a former expedition had been for trout; but on this occasion we were to have a first cast for a "*Thymallus tricolor*," for which the Mainstee particularly is noted, and it is rightly said, to a sportsman Mainstee and grayling should be synonymous words. From Mr. Hallock's Vacation Rambles, the route by which this stream s reached was easily ascertained. A ride by the night boat from Cleveland to Detroit, by rail across the State of Michigan to Grand Rapids, the Grand Rapids and Indiana R. R. north to Fife Lake, and you are but a few miles from a choice location on the Mainstee for grayling fishing. We here hired our guide, (Joe Clark by name) familar with places most abounding in the desired fish, also a team to convey our traps to the river, as the Mainstee is distant from this point twelve miles. The route lay through the woods, and over one of the worst roads imaginable. Six hours were consumed in making the journey, and it was fast approaching sundown when we arrived at our intended camping ground.

We pitched our tent where Cannon Creek empties its waters into the Mainstee. It was the site of a former lumbermen's camp. We found it a most favored spot. Plenty of wood; a rising knoll sloping to the river, and a spring of water as cool as ice and clear as crystal but a furlong distant. There were no musquitoes or midgets, and any who go here at this season of the year need fear no discomfort from this quarter.

The 8th of August dawned bright and clear, and at an early hour we were astir and at breakfast. Winding a leader or two, furnished with flies around our hats, examining again the Orvis Rod, we were ready for business. Cannon Creek is fished entirely by wading, so we took our stations fully a mile apart, fishing down stream. How well I remember my first cast, and the excitement of catching my first grayling. The same novel sensation that fills a man when he catches his first trout is once more experienced when the first grayling is fast upon the fly. You can see him in the crystal stream, shoot up from the

bottom like a shaft of light, strike the fly, and with lightning rapidity dart away to escape from captivity. The rod is bent into a graceful curve by his movement, and out of the water he jumps, with a display of nerve and mettle, which provokes the warmest admiration. Instead of the bright red spots on the trout, you find dark ones on the sides of the grayling. But his chief glory is in the large dorsal fin, upon whose transparent surface are (so I found on the size of my first fish) some twenty spots of an opaline tint. Satisfied was our curiosity with the result of our examination, and we once more proceeded down stream with fresh zeal and inspiration to fill the basket. Some skill is required in places to so manipulate your rod as to avoid the overhanging branches of trees, and also to keep your leaders and flies safe from the occasional logs which often obstruct the stream; but in the main this tributary of the Mainstee has as a fishing locality many recommendations. The fish are as plenty as any one who appreciates the sport can desire. Often I have stood in one spot, and without moving my position, landed twenty. They bite best in the morning till ten o'clock, and from five until it is quite dark, the latter especially, when they will jump high for a white miller. Our first day's fishing resulted in the capture of some two hundred, (our party consisting of three, with little experience). They averaged in weight about nine ounces, some reaching one and a half lbs. In the main branch they grow to a larger size, frequently being caught to weigh five lbs. We remained some time on the river, and the fishing lost none of its charm. Game, (I mean the larger kinds) was very plenty, deer being frequently seen, and a blackberry patch but half a mile away being the rendezvous of two bears. One of the party wandering up the river, having hooked a fine fish heard a rustle on the bank, and looking up saw a fine large buck eyeing him critically. The man said the deer did not move for some minutes, and being himself unarmed, took off his hat and gave a loud whoop, at which the buck bounded away into the woods. I mention the incident for the benefit of sportsmen who might desire a trip here in the game season. October and November are good months for shooting.

The day at last arrived when we must bid farewell to the Mainstee and the grayling. Having packed all our camp outfit on board a flat bottomed boat, with the guide as coxswain of the craft, we pushed off and our descent of the Mainstee for a distance of forty miles began. The current of the river is very swift throughout the whole course. The effort, therefore, of propelling the boat was insignificant, and all we had to do was to enjoy the picturesque surroundings, the novelty of the situation, and wildness of the passing scenery, trusting the "man at the wheel" would look out for all breakers. This pleasant condition of things was, however, not of long duration. When some two miles advanced, in turning one of the sharp bends for which the river is famous, where the current was very swift we saw a tree had so blown across the stream as to leave but a very narrow place for getting through. The guide in spite of his efforts, was unable to control the boat in the treacherous waters, so it struck the tree with great violence and was drawn partially under by the great suction power of the pool into which we had gone. All of our traps were thrown out, the guide as well, and treated to an involuntary bath. My "compagnon du voyage" managed to grasp a limb of the tree, and keep the boat from being carried further downwards, and holding with one hand on to the trunk containing our worldly effects; following his example, with the other I managed to keep from being drawn under the tree. But before long the trunk filled with water, and the blankets saturated, became a load no longer able to be held up, so down stream they went to join our highly prized rods, and keep company with the provisions and other articles. The guide, however, redeemed somewhat his reputation by a lively rush and swim, recovered many of the traps, and having drawn myself up on to the trunk of the tree by an exercise of muscle that surprised me, caught the boat on the other side as it shot from under the feet of my friend as he extricated himself from his precarious position.

By efforts which now seem unaccountable, the remainder of the heavier articles were fished out of the bottom of the stream; the gun, landing nets, and the cooking utensils having of course sunk. We also found sundry other odd pieces, not of our own property, but which evidently belonged to a party from Pittsburgh, whom we afterwards learned had undergone a fate similar to our own. If they will call on Joe Clark at Fife Hill next season, when again after grayling, they will find them in his possession, and while not of any great value, yet may remind them of the temperature of the water of the Mainstee.

When we had collected as many of our things as we could find a large fire was built before which we warmed our chilled bodies, (for the water was as cold as charity) and commenced the process of drying out the traps. This occupied nearly all day, and the blankets were still wet, so we knew we must find some place to spend the night with a roof, or pass one in decided discomfort. The guide told us that distant some ten miles was the "clear out" of Dutch John, who lived near the river. For John's therefore we set off, and most hospitably did he and his wife receive us, and before a fire of crackling logs, after a warm and hearty supper, the day's mishap was viewed in the light of an adventure, rather than a misfortune. The next morning at an early hour found us again on our voyage, making rapid progress without encountering obstacles. During the day we passed a camp of log rollers, built upon a raft, who were following the logs down to the river's mouth. They told us we could proceed but little farther that night, as a "jam" over half a mile in length was but a short distance ahead, and would prevent any attempt to make much progress for at least three days. Not caring to wait this time, we sent the guide some four miles through the woods to a settlement for a wagon which he succeeded in procuring.

By making a portage of half a mile, we got all things loaded, and by ten oclock that night we were at Fife Lake. I leave the Mainstee here, and as my thoughts turn to other themes, it is with the wish that each reader may sometime visit this stream and cast his lines in its many delightful places.

From Fife Lake we went to Traverse City, where all the beauties of Grand Traverse Bay ever delight a sojourner. Taking the boat Jennie Sutton, we proceeded to Elk Rapids, and from there to Brownstown, through as pretty a chain of lakes as Michigan with all its notoriety in this regard can boast. It was towards evening when we passed through Torch Lake, the last of the chain, and well I remember the impressions made by the glories of its surroundings. The trout fishing here is good earlier in the season we were told, and we found the hotel kept by Mr. Fred Lewis, one of the cosiest and most homelike places we had encountered on our travels. A ride of a day and night on Lake Michigan via Charlevoix and Petosky (both interesting places) through the Straits of Mackinac, dotted all along the steamer's course with islands of rare beauty, brings one to Mackinac.

Of this island much has been said and a great deal written. Its points of interest are very numerous. Its high rocks, from which can be viewed for miles the beauties of the straits, and sceuery of the lake, are reached by paths winding through groves, and coves bearing the marks of numerous pleasure seekers. The Sugar Loaf, a high rock towering a hundred feet high, is particularly noted for its romantic locality. The hotels are poor as a class, and the "Old Mission" presents indeed an antiquated and dilapidated appearance, yet each year finds them all filled with people, willing to forego their discomforts, for an enjoyment of the island's attraction. The same feeling that has prompted us to honestly eulogize the many summer resorts in northern Michigan, prompts us also to bestow a parting encomium on Mackinac. Certainly the *fabric* that can be woven from the recollections of a visit here will ever keep it *warm* in memory.

NEPIGON.

Youngstown, Ohio, April 16, 1879.

Fish Culture.

RIVERS RESTOCKED WITH SALMON.—We have reports of full grown salmon having been taken during the past fortnight in the Connecticut, Farmington, and Mill rivers, in the State of Connecticut, and in the Genesee River, in this State. From the data received, these fish must all have come from the plants of five and six years ago, when so much ova was distributed. The fish were in fine condition, and full of roe, indicating that they were seeking the spawning beds of their native rivers. This is good enough news. From the fact that salmon have been credited with returning to their rivers three years after propagation, and that they have not so returned to many rivers where they were planted, has discouraged some fish breeders; but we should advise no one to cease watching for results for years to come. If planting of ova is continued annually the better the chances will be of success. Most of the headwaters of restocked streams are in every way favorable to the culture of salmon, and there is not the slightest doubt that the planted fry grow to fingerlings and parr in due time, and that the parr in their turn become smolts, or two years fish, and that the smolts leave the rivers and go to the sea; but whether they return in any considerable numbers has always been an open question with us. One thing is certain, viz.: that salmon and cultivated soil are not found together. While the headwaters of these rivers are as pure and clear as can be desired, the lower stream, as soon as it strikes plowed ground, is discolored with the detritus and wash of the soil. At Well's River Junction recently, we noticed that the water of the Connecticut was discolored, and thence all the way down. We do not believe the instinct of salmon will induce them to pass through two hundred miles of muddy water to reach the clear water above. In wilderness streams freshets roil the waters greatly, but the flood passes off in two or three days. Were the impurity to continue for months they would soon cease to be salmon rivers. If we have rivers whose banks are but little cultivated, then we shall raise and preserve salmon. Of such is the Dennis River in Maine, which has really never ceased to be a salmon river, although it was much depleted a few years ago. Now we understand it is rapidly recovering its old prestige. Its course runs chiefly through the forest.

THE U. S. FISHERY COMMISSION AT SUMMER WORK.—We have the following brief minutes from Prof. Goode, dated Provincetown, Mass., July 19.:

"We are just getting organized for work, and there is nothing of interest to report. Prof. Baird arrived on Wednesday, the steamer on the Saturday previous. We are fitting up a laboratory on the end of the old steamboat wharf. The most interesting exploration of summer will probably be on George's Banks. I shall keep you posted regarding any interesting discoveries.

G. B. G."

The *Fish Hawk*, the new steamer of the Commission, will be a model in her way, the plan of her construction being the fruit of the Commission's experience in the past. She will be 146 ft. 9 in. long on the water line, 27 ft. beam, 10 ft. 9 in. in depth of hold. She will be provided with four water-tight bulkheads, one 20 ft. from stem, one at forward end of boiler, and one abaft the engines, of double thickness, with felt between, tongued and grooved, with proper doors, etc. Her main cabin will be 48 ft. long, with 8 state-rooms, bath-rooms, water-closets, pantry, etc. The pilot house, captain's room, and laboratory will be on the promenade deck, in a house 24 ft. long, 10 ft. wide, and 7½ ft. high. The Commissioner's office will be in the main cabin aft. and his state-room on the starboard side. The lower forward cabin will be neatly fitted up for the use of the mates and assistant engineers. The forecastle will have 14 berths, and the lower after cabin will be 42 ft. long, with four lengths of berths. The kitchen will be 8½ ft. long. The steamer will be fitted with every possible facility for dredging, preparing and preserving specimens, the propagation of fish, and the other work of the Commision.

FOOD FOR YOUNG TROUT.—Mr. H. T. Woodman, a gentleman engaged in scientific fish culture at Dubuque, Iowa, recommends sweet cream mixed with bullock's blood as food for young trout. Curds, chopped liver, and much other food sinks to the bottom where trout will not seek it, whereas cream floats. Food which sinks to the bottom is not only wasted, but it defiles the pond and creates disease.

PENNSYLVANIA.—A new fish way has been adopted for the Columbia dam in the Susquehanna. It will be wedge-shaped with the large end below, and is to be constructed by Mr. A. J. Whitney, resident engineer of the Philadelphia and Reading R. R. Co's canals.

CULTURE OF LANDLOCKED SALMON.

HARTFORD, June 21, 1879.

Editor Forest and Stream:—

The plan pursued in this State in the introduction of land-locked salmon has been to select a dozen lakes or ponds apparently suited to them, and then for four years in succession to put from 5,000 to 10,000 young fry in each. The essential requisites of a lake for land-locked salmon are that it shall be large (the larger the better), at least in parts of it very deep; the water must be clear and cold, and there must be a stream running into it, into which the young fish should be put, and where the adults may eventually deposit their spawn. The following list, taken from our report of 1877, shows the ponds selected in 1876, and with one or two exceptions 10,000 young fry have been placed in each one of them every year since; the last lot, which completes the four years, having been recently distributed: Spectacle Pond, South Kent, 10,000; Long Lake, Winsted, 10,000; Twin Lakes, Chapinsville, 10,000; Wanouscoponus Lake, Lakeville, 10,000; Smith Pond, Norfolk, 10,000; Waramaug Lake, Warren, 10,000; Bantam Lake, Litchfield, 15,000; Beach Pond, Voluntown, 10,000; Hampton Pond, East Hampton, 10,000; Snipsic Lake, Rockville, 10,000; Rogers' Lake, Lyme, 10,000; Shetucket waters, Windham, 10,000; Gardiner's Lake, Salem, 10,000.

We have frequently had news from them in some of these lakes. Hon. H. B. Steele of West Winsted exhibited a specimen to our legislature last winter. It was taken from Long Lake, West Winsted, weighed one pound and three quarters (1¾ pounds), and it was in perfect condition. This fish probably was one of those planted in 1876. Many others have been taken in the same lake, but none so large as this one. One great difficulty to overcome is to prevent fishing in the streams in which these young fry are placed. As soon as they attain the length of six inches they bite ravenously at anything, and from the very stream which empties into Long Lake, our boy last summer took forty-seven of these young salmon, pretending that they were trout, for, when of that age, they have red spots, and might be mistaken for a trout by those who did not examine them carefully. We propose now to await the success of our labors in these ponds, thinking that four successive years of stocking with young fish ought to demonstrate the success or failure of the experiment. Shad fishing has been very profitable to the pounds in the sound this year, but not so good in the river. One pound, ten miles from the mouth of the river, in the town of Clinton, has this year taken 24,000 shad. Its largest catch for any previous year was 5,000. The salmon are fairly plenty, and notwithstanding the law are all sent to market, the fishermen claiming in each case that it is impossible to release the fish alive.

WM. H. HUDSON.

PLYMOUTH, June 23, 1879.

Editor Forest and Stream:—

The attempts at propagation of land-locked salmon in this State have been so recent that it is as yet difficult to give you any very satisfactory data. Some efforts to procure the eggs were made some six or seven years since by the Board of Commissioners then in office, but no positive result has ever appeared. A strange fish was reported two years since as having been taken in Newfound Lake in Bristol, one of the waters they attempted to stock, which answered the description of the *salmo sebago* very fairly, but the plant in Sunapee Lake has only turned out to be *salmo fontinalis* as is supposed by the reports of trout being taken in Sunapee, which presented slight differences in color from the natives of the lake. Still this is too uncertain to be relied on. Two years ago, in 1877, the present Board procured 10,000 young fry, which were hatched at Winchester, Mass., and distributed in small lots in three or four different waters. One of these fish was taken last year at Sunapee Lake about nine inches long. This spring two, respectively twelve and eighteen inches long, have been taken from a pond in Sandwich, in which about 1,000 were put in 1877, and one eighteen inches long, weighing 1¼ lbs., was taken last week at Ashland, in the Squam River, the outlet of Squam Lake, in which 1,000 were placed at the same time with those above mentioned. This one was caught four miles below the lake. Of those placed in the eastern part of the State we have as yet heard nothing. Last year we had but 20,000, which were distributed in small lots, and so far we have heard nothing from them. This year we secured 120,000 eggs, which have been hatched with small loss, and which we are now distributing. We have placed some in Winnepesaukee, Squam, Newfound, and Sunapee, some in waters in the eastern part of the State, some in Echo Lake, Franconia Notch, and I start from here in the morning with 10,000 for the Connecticut lakes, at the head of that river. When we get through, I will send you a full list of the waters stocked. We expect to stock several ponds in Chesire County in the southwest of the State next week, and finish our distribution for this season. We have now got a brace of salmon in our ponds at the hatching house, and one fine one was seen yesterday at the foot of the fishway at Manchester on its way up. One was seen ten days since in the fishway at Lawrence, Mass., estimated at from twenty to thirty pounds by good judges.

SAM'L WEBBER.

GENERATION OF EELS.—*Mr. Editor*:—I have read the remarks of your correspondent "C. A. K.", concerning eels, with interest, and would simply say that the discoveries which he shows were made long ago have only lately been proved. The question turns on "what is evidence?" Before the discoveries of Dr. Syrski, which were verified by Professor Baird in this country, we only had the bare announcement of Mr. Yarrel that eels were oviparous, and at the same time we had the assertions of other naturalists, equally entitled to credit, that they were viviparous and hermaphrodites. The same thing is true of the passage which is quoted from Wood; more assertion, unaccompanied with the proof furnished by Professor Baird, viz.: an eel with the ovaries *in situ*. It would certainly be strange if all the theories of those who have gone before us on this question were false, as they exhausted the subject, attributing the generation of eels to all kinds of unrelated animals as well as to slime rubbed from adult eels and other probable and improbable causes. The case stands, thus: Science is skeptical and continually cries "your proof, your proof!" If a man to-day asserts that eels spawn in mud, and another one that they attach it to sticks, weeds and stones, while a third asserts that it floats in the water like shad and codfish eggs (which I would not be surprised to find true), and fifty years afterward an investigator *proves* one of these propositions to be true, it is to him that the honor is due, for the man who guessed it, or who even proved it (to his own satisfaction), has failed to show how he came by his knowledge, and to exhibit his eggs dredged from the mud, attached to weeds, or caught floating on the surface. When Dr. Syrski, of Trieste, figured his eel with ovaries, (Rep. U. S. Commission of Fish and Fisheries, 1873-5, p. 719), it seemed conclusive, and was so accepted in the absence of better proof, but Dr. Syrski lived in Austria, and his specimens were not at hand whereby we could verify them and feel sure that no mistake had been made. The discovery of Professor Baird was not an original discovery, and has never been so claimed by that gentleman, whatever injudicious friends may have claimed. He simply verified the truly original discovery of Dr. Syrski, original perhaps only so far as published with proof that the author was not guessing or theorizing. Your correspondent "C. A. K." exhibits a commendable desire to award honor where it is due, and our only differences of opinion seem to be in what shall be admitted as evidence, and should I next week announce that eels spawn in the tops of trees, I hope he will be the first to ask, "how do you know?" and demand the proofs. F. M.

Natural History.

HABITS OF THE BEAVER.

I JOT down a few notes in reply to "Awahsoose," in relation to habits in detail of the beaver, as gained from practical observation by myself on various campaigns South, during the past eight years.

The beaver, once plentiful throughout our whole land, is fast going the way of poor "Lo," and at the expiration of the next fifty years few if any will be found within the United States. While up in Juniata County, this State, two years ago, pheasant shooting, we were informed by an old settler from Elk County that he could take us to where there are still beaver to be found on the head waters of some streams of that county. We always rather doubted the assertion, but have never had opportunity to test the veracity of our informant. There are still some beaver in S. E. Virginia, and in North Michigan. From the latter locality a specimen of "beaver cutting" was on exhibit in the State building of Michigan at the Centennial that was ten inches in diameter and showed plainly the chiseling of their teeth. The locality of our observation and base of operations was in a county of but little ice and considerable low land, remote from all improvements of civilization. The river we camped on was not over twenty-five yards wide, with a deep sluggish current and generally slippery high banks. At intervals along either side of said river, back from fifty to two hundred yards, were cypress ponds covering from one to ten acres of land, surrounded by lofty cypress, and innumerable cypress knees, with a depth of clear, cool water, from one to three feet, sometimes reaching a depth of five or six feet. In that country the beaver houses are always to be found in one of these ponds, yet they frequently take up their abode in a hollow cypress standing in the middle of the pond, going up from under the rocks below the water. Inside of the tree, if it be an old one, large, and entirely hollow, they build up a house of sticks and mud, similar to other habitations built alone in the center of ponds. When the tree is smaller, they kind of bridge over the inside with sticks to make a place to lie above water-mark during the day-time. We have frequently during the coldest of the weather, when there was for a short time ice sufficiently strong to bear us, quietly approached such trees and struck them a smart blow, when we would sometimes hear the beaver within plunge into the water and make off. Afterward, we would cut out a huge chip, set a trap on their landing, and replace the chip cut from the tree, filling up any cracks with moss to keep out all light. Habitations of this kind are used for many generations; and we remember one particular old tree, in which we set traps during our first season in that vicinity, when we caught one old beaver and two yearlings, using a sliding-pole to get them down into deep water and drown them. The fur on the young beaver was so much better than the older ones, that we saved one pelt, and had it tanned and made into a pair of gloves. The "Beaver House," as pictured years ago in some old spelling book or natural history, can here be studied to advantage. These habitations, rising up along the borders of the ponds, look like a massive pile of mud and rubbish. They are from four to five feet above the water, and will readily sustain a man's weight, as we can testify. One day, having concluded to examine more closely into the construction of one of these habitations, we took along with us an old axe. With this we cut a square hole into the top of one of these houses sufficiently large to admit our body. The sticks were quite decayed, from having so long been interspersed with the mud. The thickness of the top was from twelve to fifteen inches through, and, inside, raised some six or eight inches above the water, is the floor, which is covered with bark and small twigs. On this floor they lie and eat the branches and bark off small willow limbs brought up through the entrance from below; and here they spend the day in quiet and repose, only going out after night in quest of food. This "house" we examined was sufficiently large inside to admit of our sitting in upright posture. The sticks composing the main strength and support of the house were from half inch to two and a half inches in diameter, and generally from eighteen to thirty inches in length, woven together in a promiscuous manner, without pretentions to any system, and thicky interspersed with stiff mud and *débris* of various kind. It is a general opinion of many unacquainted with the habits of the beaver, that they use their flat tail to carry mud upon in construction of their houses and dams. This is not the case. I think they frequently use it to paddle down the mud, and thereby make it more solid. In the country we have referred to, there are only a few beaver dams. Some of these met our notice while trapping on a small "branch" out in the "hills," and were used to dam the water back to make it deep enough at all times to admit of them entering under water their burrows in the bank. They seem to have instinct to know, in very short time, if the dam has been broken, for frequently we have cut it to let only a small stream pass over, and the following morning found it securely rebuilt. SHETHAR-BOZNAL.

Dugdale, Pa., June 15, 1879.

Until within the last twenty-five years beavers were very scarce in the province of New Brunswick, and only met with in the most secluded parts of the dense forest. Since that period they have increased to a great extent and their dams and new houses may be seen at a distance of thirty miles from Fredericton, the capital of the province. The habits of these animals are almost entirely nocturnal; seldom feeding or working in the day, they show themselves only late in the afternoon. They commence building their dams about the first of September; for this purpose they select a stream which runs through good feeding ground. Their favorite food is the bark of the birch poplar and the roots of the yellow pond lily, of which latter they are extravagantly fond. They also devour the bark of most kinds of the hard woods, seldom touching fir, hackmatack or cedar.

Their first preparation for the dam consists in cutting small trees and brush wood of all kinds; this they float down to the place selected and make a jam; they then pile mud and stones upon it: these they carry in their paws, pressed up against their breast, swimming down the stream until they come to the incipient dam, upon which they walk erect until they come to the proper place to deposit their load. In carrying stones which are too heavy to swim with, they walk with them on the bottom of the pond. I have frequently seen them doing this. I have seen at Beaver Lake, Burnt Hill stream, Miramichi, a beaver's dam two hundred feet in length, built entirely of stone, the interstices between which are stopped with smaller stones and mud, much in the same manner as a mason builds a wall. The beavers who occupied this dam were caught last season. There is a dam on the county line near Restigouche and Madawaska, which is an eighth of a mile long and about four feet high.

After the dam is completed, they commence on their house, which is built in the following manner: A heap of brush and mud is piled up in the same way as they do when building their dam. An excavation is made in this under the surface of the water, and the mud and sticks removed from the interior are placed on the outside of the house, whose size is regulated by the number of the family.

They also bring mud and sticks from the nearest places which they put on the outside of the nucleus. As the exterior of the house is increased so is the interior enlarged. Only one family, ranging in numbers from two to six individuals, occupy the house, to which there are always, so far as I have seen, two doors.

The interior of the house consists of a circular room, having a flat floor just above the water; this floor is covered with soft splits of wool as fine as ordinary shavings; on these they sleep. In this floor are two holes, one leading to each door. The roof of the room is the shape of a bee-hive, and is made as smooth as circumstances will admit of.

They have their young in these houses from the latter part of May to the latter part of June.

The muskrat and beaver are particularly friendly, the former occupying the same room with the latter. The Meliciti Indians call the muskrat the beaver's cousin. The winter's supply of food is cut around the pond in the autumn and floated to the doors of the house and then sunk, which prevents it from freezing. This supply consists of pieces of birch and poplar, upon the bark of which they live.

Beavers living around large deep water lakes or streams do not build dams, since they have plenty of water without doing so. The object in building dams is to raise the water high enough to prevent their food from freezing, as well as to ensure an equable supply of water.

The beavers enemies are the black bear and the loup cervier, a Canada lynx. Both of these creatures attempt to capture the beaver when he is at work cutting wood. The lynx can do little with a large one, however, whose formidable teeth inflict fearful wounds, if, however, he falls into the paws of the bear there is no escape. I have seen where a bear has torn the beaver's house to pieces and waited around the dam for days to catch the builders. I have also caught beavers whose backs were scratched by the claws of the lynx.

I find beaver meat the best bait that I can use for any animal. Their terror of bears is something remarkable. On the 22d of May last on the South-west Miramichi, I caught in a steel trap, whose jaws I had protected so that the animal's leg might not be injured, a year old beaver. I put him in a barrel and polled him to my camp at Miramichi lake. I logged up a pen of large dry logs and covered it over, thinking that the animal would not be able to gnaw through this. He remained here quietly for two nights, until recovering from his terror, he commenced at one of the corners where the logs were dovetailed together and cut a hole big enough to crawl through.

On going out of my camp at 5 o'clock in the morning I found that my beaver had left. Taking my canoe I went down stream about a quarter of a mile, where there was a small brook. I looked up it, little thinking to find him. I took a walk up, however, to see whether I could meet him, which I did, and as he attempted to go over a log caught him by the tail and carried him back to his prison where he remained quiet all day; before night I piled stones around the corners of the pen. I had hardly lain down for the night's rest when I heard him commence gnawing his prison walls. I went out and filled the hole which he had made with a large stone. I had hardly lain down again when I heard him at work once more, and found when I went out that he had removed the stones.

I had caught a bear some days before, and seeing the beaver smelling around his pen as I approached, I held the skin close before him, at which he exhibited the utmost terror by standing on his hind legs, jumping furiously about and making a hissing sound very much like that of a cat. Thinking of this fact, I concluded that I would try the virtue of a piece of bear skin, and accordingly cut several small strips of this, and nailed one at each corner of his pen, and heard no more gnawing that night, the animal keeping in the middle all the time, showing great dread of the corners. He is now at the village of Stanley, about twenty-five miles from Fredericton; he is a very neat animal, and is careful to wash and comb himself every day, the latter operation being performed by a split claw which these animals have on each hind foot and with which they will comb out the smallest dirt.

The cleaning operation generally takes place in the early morning after they have done their night's work.

Yours Respectfully,

HENRY BRAITHWAITE.

Fredericton, New Brunswick, June 16, 1879.

MOTHER-LOVE.—An incident has just come under my notice which so entirely conflicts with my ideas with regard to the fighting qualities of wild rabbits, that I give it for an extreme oddity. During the morning one of my children came in with a very white face and an account of a large white snake, just seen in the back yard. A few minutes later a peculiar squaling or crying, in the quarter where the snake was reported, attracted my attention, and running hastily in that direction I was astonished to see the last half of a long chicken snake projecting from under a picket fence and a wild rabbit biting and stamping on it, apparently making a determined effort to hold on and prevent the snake from going entirely under. A second later, and before my presence seemed to be noticed by the combatants, the cause of the rabbit's efforts and of the peculiar noise was manifested by the appearance on one side of the fence of the snake's head with a tiny rabbit in its jaws. The little rabbit was held by the hind quarters and was struggling and crying vigorously for the liberty that a blow from my stick, administered to the back of the snake, secured to it. The little fellow seemed uninjured, and ran off a rod or so, where the mother rabbit, who had retreated a little at my near approach, joined it, and leading the way at a deliberate gait, took it to the woods near by.

It was the strongest evidence of a mother's love and care for its offspring I have ever seen or heard of, and is the only instance I have ever known of a rabbit showing the slightest aggressive disposition; in fact, I had supposed they were entirely without any.

Manatee, Fla., June 9, 1879. W. S. WARNE.

A PRIVATE ZOOLOGICAL GARDEN.—I had the pleasure a few days since of visiting a gentleman in an adjoining town who is something of a naturalist in his way, and, on looking over his collection of live stock, I felt well repaid for my trouble.

First we examined a tank of water, in which were confined five species of turtles, one specimen being about two feet in length. We next visited a small building in which were two foxes, one red, the other a fine silver gray. Although they are now shedding their coats, they looked quite well, and appeared very familiar with the gentleman's dog which he put in with them. Mr. Littlehale, their owner, showed me a young fox, raised from the two mentioned above. It is some four months old, and its hind legs to the first joint above the foot are white. It is very docile, playing, while at liberty, with dog, children, and men, but seemed particularly fond of Mr. L's little girl, who pets it as she would a kitten. It showed, however, a foxy interest in some small chickens near by. We were then shown a cage containing a fine old coon, with three young, eleven days old, whose eyes were not yet open. A very fine melanotic woodchuck was next in order. He is glossy black, except a gray tinge about the face, not extending back beyond the eyes, and the toes having a few gray hairs, the nails being light.

To say nothing of a few other woodchucks, porcupines, etc., the last, and to me by far, the most interesting specimen, was a beautiful, pure white porcupine; the former was a very fine specimen, fully supplied with its natural armor, being quilled from snout to end of tail. Certainly nothing finer in its way could be desired.

The woodchuck appeared to me slightly different from *Arctomys monax*, but it may be mainly owing to its color and long nails, which made its feet appear more like those of a squirrel. The nails were white and tidy, like those of some old recluse, who, though long having neglected to trim his nails, had not failed to keep them scrupulously clean.

Warner, N. H. M. C. H.

SNAKES FROM HORSE HAIRS.—Some time ago I clipt from the Polk County *Banner* an extract which I intended to send to FOREST AND STREAM, but have lost it. It told a tale almost as marvelous as that of the negroes about the jay-birds going to hell on Fridays; nevertheless it was given as an absolute fact, and such I believe it to be. A countryman had brought to the editor a living snake, 18 inches long, which was declared to have grown from a horse-hair. The countryman had secured the thing at its earliest indications of life, where the horse-hair was distinct, and preserved it until it developed into a true snake. As singular as this may seem, I witnessed a similar transmutation in San Saba county in the Spring of 1859. In a little dirty stagnant pool I saw a quantity of horse-hairs, some of which were wriggling at a great rate. It got off my horse and examined carefully. A minute snake's head was distinct at the upper end of the hairs, and I could even perceive what appeared to be the pulsation of the arteries in the body. For some length below the head the hair was greatly enlarged, only about half of the body or hair was instinct with life, while the other half was nearly or quite motionless. The upper half was in constant motion. I was sorry I could not stay to watch the result, but,

unless some calamity befell them, I have no doubt they continued to grow until they crawled off as fully developed snakes. I saw this with my own eyes and know it to be true. I could not be mistaken. Was not this a clear case of the spontaneous generation of life? What do the philosophers have to say about it?

Houston, Texas. N. A. T.

This is a venerable popular superstition for which, we need hardly say, there is not a shadow of foundation. Of course we do not doubt our correspondent's statement, but we feel sure that his observations were at fault. In other words, that the snakes which he saw were not partly horse hair. The history of the *Gordius* and its allies is pretty well known. They pass their larval stage as parasites in the intestines of other animals, and the adult stage in the water and mud. They have not the remotest connection with horse hairs. A complete account of the hair worm is given by Dr. Leidy in the *American Entomologist and Botanist*, May, 1870.

JUMPING HER CLAIM.—In one of my boy-day excursions after eggs, I came upon an old hen and a quail, both occupying the same nest. It was among the burdocks back of the barn. As I came very near stepping on them they scattered, and disclosed a nest containing three quail and two hen's eggs. Biddy, according to her kind, had appropriated the property of another, but the quail refused to surrender her rights, and thus I found them in joint occupancy. MILES.

It would be interesting to learn the sequel of this curious partnership, how the young were divided, etc. We presume that our correspondent has, however, no information on these points.

GALLINULES IN CANADA.—While in Canada recently Mr. Chas. Hallock learned that a female Florida Gallinule (*G. galeota*) was captured alive on June 2d, at Lake St. Charles, near Quebec, and another specimen was recently taken in the same section, which has been mounted and is now in the possession of a gentleman residing there.

ALBINISM.—*A Correction.*—In our issue last weeks' article on Albinism, page 488, for "judgment" read *pigment*, and for "snakes" read *hawks*. As it stands now the sentence is nonsense.

CASTRATION OF SQUIRRELS.—Our friend James M. McCann, of Bridgeport, W. Va., inquiring about this subject will find it fully treated of in FOREST AND STREAM, volumes IX., X. and XI.

THE NUTTAL BULLETIN.—The July *Bulletin* appears on time as usual, and its contents (equally as usual) is varied and attractive. Mr. Ridgway opens the number with an article on the Use of Trinomials in Zoological Nomenclature, in which he takes the ground, now generally held by cis-Atlantic workers, that the adoption of trinomials is necessary, not only because this course will greatly simplify the question of nomenclature, but also because such terms express "better than any others yet tested the relative rank of the forms which have to be recognized by name." Mr. Henshaw contributes to the present number two valuable articles, one on *Turdus Pallasii* and its Allies, and the other on *Melospiza melodia* and its Allies. Both of these are thoughtful studies and are veritable additions to our knowledge of the genera to which they refer.

Mr. Scott's article on Birds Observed during the Spring Migration in Western Missouri, is interesting as such lists always are, and the same may be said of Mr. Mearns Partial List of the Birds of Fort Klamath, Oregon, collected by Lieut. Willis Wittich.

In an article on the Rocky Mountain Golden Eye (*Bucephala Islandica*, by Dr. J. M. Brown, considerable information which will be new to most of our readers is brought out, and our knowledge of the habits and range of this species is much enlarged. In Notes on Lower Minnesota Birds, Mr. T. S. Roberts contributes some interesting facts with regard to nine species of the most important announcements being that the Florida Gallinule (*G. Galeata*) apparently breeds abundantly in Minnesota. The departments devoted to Recent Literature and General Notes, are very full of interesting matter.

In looking over the back numbers of the *Bulletin* we notice that a marked though gradual change has taken place in the character of the articles contributed to it; though whether this is to be attributed to its editing or simply to the lapse of time and consequent mental growth of its contributors, we hesitate to say; probably both these factors have combined to bring about the change. It is certain, however, that the *Bulletin* has steadily improved, and takes higher rank now as a scientific periodical than ever before. We miss now the tendency to "gush" and fine writing, so called, which we used sometimes to see, and which though often very pleasant to read, and no doubt tending to make the *Bulletin* popular with a certain class, was in the estimation of many ornithologists a waste of valuable space. The *Bulletin* comes to us at such short intervals, that many of us grudge any use of the pages which does not bring us some positive addition to our knowledge.

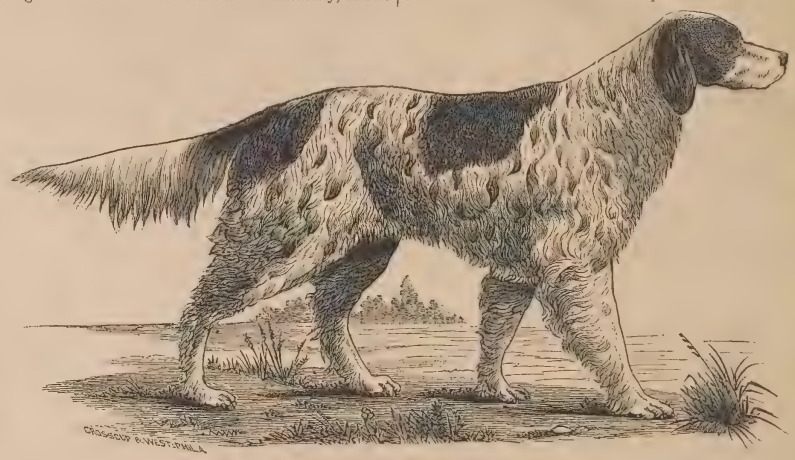
The change which has taken place will, we are sure, give the *Bulletin* a stronger scientific position, and will not, we think, lessen its popularity with any class of its readers.

RAINING TOADS AND "SICH."—Last Saturday, after the very heavy rain, vast multitudes of little toads were observed in the suburban towns along the Erie road hopping around. People used to think they rained down, but now they understand that they have been nicely tucked away in the deep, damp ground, and have come to the surface for a more abundant supply of moisture. After any heavy rain which happens after a protracted drouth it is common to observe great numbers of toads, land frogs, lizards, craw-fish and angle worms crawling over the surface.

—A Gun Club has been organized at Olean, N. Y., with membership of fifteen. The following are the officers: President, Hollis W. Moore; Vice-President, Selden J. Mudge, M.D.; Secretary, Myron A. Dodge; Assistant Secretary, Frank H. Oakleaf; Treasurer, Charles A. Still. Regular matches every Monday. D.

The Kennel.

BREAKING SPANIELS.—The many enquiries that come to us for field spaniels lead us to say that it is not only difficult to find these dogs already broken, but that there is no reason why every one who desires to shoot over them should not break them themselves. For after all, the only breaking a cocker requires, if he is well bred, is house or yard breaking. Obedience is the first principle, and the field breaking consists almost entirely in teaching him to range close, to come in at shot, and to keep his eye, when possible, on his master. As the cocker gives tongue, or should do so, on striking the close scent of game, of course he does not point, but flushes his bird, giving notice by his quick, impatient yelp when it is on wing. His "nose" should come to him naturally, and he can be easily taught to retrieve if necessary. As the setter is popularly supposed to be the descendant of the old setting spaniel, it is possible that the latter dog, of the present day, could be made to set or point also, but this is neither desirable nor necessary. Woodcock shooting, for which cockers are principally used, is done in very thick cover, particularly in summer, and it is desirable that the dog, by his bark, should give notice not only of the whereabouts of the game but of his own. It is very common, particularly in summer, when the cover is very dense and it is almost impossible to see a dog, to put a bell on his neck, so that by the tinkling of it the gunner may be kept appraised of the direction in which his dog is working. We believe that cockers can be made very useful in our ruffed grouse shooting, and we hope to see those merry little dogs come into more general use. We shall shortly print a cut of some celebrated field spaniels.



ENGLISH SETTER BITCH NETTOWITZ.
(THE PROPERTY OF C. Z. MILEY, ESQ).

MR. MILEY'S KENNEL.—In another column Mr. C. Z. Miley, of Lancaster, Pa., advertises for sale his entire kennel of dogs, comprising English, Irish, and Gordon setters, and pointers, all of fashionable blood. Among the English setters is the bitch Nettowitz, by Carlowitz, out of Queen Bess, whose portrait we print in this issue. Among the Irish setters is the imported dog York, an excellent stud dog. This sale offers an excellent opportunity to any one wishing to establish a kennel to obtain some first-class animals at reasonable prices.

THE LEONBERG DOG.—Mr. W. E. Sterling, of Philadelphia, writes us that on July 15th he received by steamer *Zeeland* a magnificent specimen of the Leonberg dog direct from the kennels of Baron Essig. He is ten months old, and has the color and appearance of a young lion, and is in every respect a worthy representative of that celebrated strain of dogs. Of the two imported this spring, but one survives. "Sultan," who is even larger than "Cæsar," though three months younger, standing thirty inches high, weighing 100 pounds, and still growing like a weed. Mr. Sterling can have no fears for Sultan on account of his teeth, as dogs of his age sometimes still have all their temporary teeth.

GORDON SETTERS SHOT 3D AND DI 2D.—At a recent visit made to the home of the genial old sportsman Uncle Tom Jerome, we had the pleasure of examining a fine brace of true Gordon pups two months old, by Roger Shot, Jr., he by Copeland's Shot, out of Belmont's Nerah, dam James R. Tilley's prize-winning bitch Di, she out of Tilley's Mah, by Dr. Gantier's Dandy. This dog and bitch had just been sold to Mr. Thos. Warner, one of the well-known New street brokers of a sportive mind, at a high figure.

—Geo. D. MacDougall, of Toronto, claims the name of "Brown Bess" for his all liver-colored cocker bitch, (imported stock) one year old. Also "Cora" for all liver-colored bitch pup, (Rollo.—Brownie) whelped April 28, 1879.

—Mr. Fred. McOwen, of Philadelphia, claims the name of "Earl" for his black and tan Gordon dog pup—out of A. E. Godeffroy's "Rhoda," sired by same gentleman's "Tandum."

—Dr. C. E. Wing, and W. H. Cowing, of Boston, claim the name of "Countess Lucas," for bitch bred by Harvard Kennel Club—out of imported Countess Vesta—by Champion Drake, owned by Luther Adams, Esq.

—Mr. Wm. Simond's English setter bitch Puff has whelped eight puppies, sired by Mr. Leavitt's Sir Lancelot.

The English setter bitch Fannie, owned by Mr. W. H. Brown, of Packersville, Conn., whelped on the 17th inst. twelve puppies, eight dogs and four bitches, sired by Mr. Ethan Allin's Chick.

—The black pointer bitch, Gillespie's Fan, the property of G. G. Barker, Esq., of Boston, whelped on the 13th inst. eleven puppies, sired by Mr. Fisher Howes' Rex.

—On July 23d the English setter bitch Abby (Young Laverack-Dido) whelped eight fine puppies, sired by Mr. Raymond's Guy Mannering.

—Mr. De T. H. Rewinke, of Chillicothe, Ohio, has purchased from Mr. Chas. K. Ward, of Detroit, the beagle bitch Beauty, by Ratter, out of Lady. Beauty traces to imported stock, her grand dam being Fannie, winner of first prize at both Detroit shows, and of second prize at Chicago.

—A splendid brace of young English setters, imported, and of the very best breeding, is advertised for sale in another column.

DOG LAWS.—A recent issue of the Albany Law Journal contains an article by Mr. Voshon Rogers, which is interesting as defining the relations of dogs to their owners, to strangers and to the community. He says:—

Of course one cannot write an article on dogs without quoting Dr. Watts, so we will do so at once and get over it. 'Let dogs delight to bark and bite.' Their right to bark, at all events, was admitted by Lord Kenyon in a case where one Street proved that his neighbor Tugwell kept six or seven pointers so near his house that Mr. Street and the little Streets were kept awake at night by the canines baying at the moon and disturbed in the daytime by their noisy yelpings. The jury declined to order Tugwell to pay any damages to Street for the nuisance. Lord Kenyon refused a new trial, although he said he knew that it was very disagreeable to have such neighbors; but he endeavored to console Street by remarking that if there was no reform in Tugwell's establishment, he might bring a new action and would perhaps then obtain relief.

In the land of freedom, however, where Columbia's banners wave, strange to say, dogs are not allowed such liberty, for it was decided by Judge Nelson forty years ago that one man may lawfully kill the dog of another when it is in the habit of "haunting his house, and by barking and howling by day and by night disturbs the peace and quiet of his family, if the dog cannot be otherwise prevented from annoying him. It would be mockery," quoth the Judge, "to refer a party to his remedy by action; it is far too dilatory and impotent for the exigency of the case."

The law laid down in this latter case is certainly more pleasing to the natural heart of man than the decision of Lord Kenyon, but its correctness may perchance be doubted when we have looked at more "dog cases" and when we find that the strumming of a piano next door, and the crying of the neighbor's children, are noises that we must expect in this world of woe, and to a considerable extent put up with, as was said by Lord Justice Mellish, and that the wheeling of a baby-carriage, the rocking of a cradle, the whirling and clicking of a sewing machine and the discordant notes of ill-played music, are sounds which, as a rule, will not be prevented in the present evil age. The Roman law held that it is the nature of dogs when unrestrained to do mischief, and that hence their owner is liable for the mischief they do when unrestrained. This was Plato's doctrine as well. Whether because in the course of centuries under the mollifying and improving effects of increasing civilization the nature of the domestic dog has become essentially changed, or whether, as it is most likely, the English judges were influenced by

the desire not to impose too great a liability upon those who kept dogs for hunting and sporting purposes, the English common law at an early period assumed that to make the owner of dogs liable for their mischievous acts, he must be shown to have been aware of their particular tendency to such acts. Sydney Smith said that pointers have always been treated by the legislature with great delicacy and moderation, and that to wish "to be a dog and to bay at the moon" is not quite so mad a wish as the poet thought.

Mr. Campbell, in his book on "Negligence," remarks: "The domestic dog has occasioned many legal disputes, and the presumption of the common law of England is that he is tame, and therefore the owner is not held responsible unless the dog in question is by disposition ferocious, and reasonable ground be shown for presuming that this ferocious character is known to the owner. But this presumption was carried to an absurd extent when the wolfish nature of the creature was deemed so completely extinguished that it was against his nature to worry sheep and cattle. And it did astonish the Scotch sheep farmers (incapable as they were of seeing the joke) when this doctrine was brought to their notice by the decision of a Scotch appeal by Lords Brougham and Cranworth, who applied the rule of Scotland, so that, as Lord Cockburn observed, "every dog became entitled to at least one worry!"

In speaking of a monkey which did attack, bite, wound, lacerate and injure Mrs. Sophia May, "Whoever," said Lord Denman, "keeps an animal accustomed to attack mankind, with knowledge that it is so accustomed, is *prima facia* liable in an action for damage at the suit of any person attacked or injured by the animal without any averment of negligence or default in the securing or taking care of it. The gist of the action is the keeping of the animal after knowledge of its mischievous propensities." Hence so far as members of the genus "homo" are concerned, every member of the family of Canis has the right to one bite or worry before his or his master's conduct can be called in question.

Gentle when stroked;
Fierce when provoked.

is the motto of the canine tribe, and as sufficient provocation will reduce what would otherwise be murder to justifiable homicide, so it will deliver a dog and his master from punishment. What is sufficient provocation is not clear. In the State of Illinois a bite, given on repelling a kick or other aggression and not from any mischievous propensity, is pardonable. Treading on the dog's toes is not sufficient in England if he has bitten human flesh before. But hurting the feelings of a noble animal by offering him candy when unaware of his stern and cross nature is no excuse for his springing at a lady and biting her, no matter what kind of stuff the candy may be. Nor was another lady unsuccessful in her action for damages against the owner whose dog she had insulted by undue familiarity. She was coming out of a butcher's shop with some meat in a satchel under her arm, but a dog with a muzzle on lay across the doorway. Thoughtfully she said: "Doggie, aint you going to let me out?" Without a reply the dog rose up and bit her. One would think that if it had been sausages the lady had been taking home for her breakfast the dog might have been justified in his action, as the lady's conduct would have been so harrowing to his paternal feelings that it might be affirmed that she brought the injury upon herself.

A dog has no right to punish a child of seven years old by throwing her down and biting her for merely meddling with the whip which was lying in his master's sleigh, although he had been left in charge of the team. And that dog's master was held to be liable, as he knew of his ferocious disposition and that he was accustomed to bite people.

In New Hampshire and Connecticut one bite before that complained of is sufficient to charge the owner with notice of the dog's bad habits, but in the Empire State there must be two instances of such bad behavior. In England it has been lately held that to maintain an action against a person for keeping a ferocious dog it is not necessary to show that the animal had actually nipped a person aforetime; it is enough to prove that it has, to the knowledge of the owner, evinced a savage and anthropophagical disposition by attempting to bite, and it has been very similarly decided in New York State.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Trout, *Salmo fontinalis.*
Salmon, *Salmo Salar.*
Salmon Trout, *Salmo confinis.*
Land-locked Salmon, *Salmo glaveri.*
Muskalonge, *Esox nobilior.*
Pike or Pickerel, *Esox lucius.*
Yellow Perch, *Perca flavescens.*
Grayling, *Thymallus tricolor.*
Black Bass, *Micropterus salmoides;* *M. nigricans.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Sheepshead, *Arehosargus probatocephalus.*
Striped Bass, *Roccus linneatus.*
White Perch, *Morone americana.*
Weakfish, *Cynoscion regalis.*
Bluefish, *Pomatomus saltrix.*
Spanish Mackerel, *Cybium maculatum.*
Cero, *Cybium regale.*
Bonito, *Sarda pelamys.*
Kingfish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, NO. 10 AND 11.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's herl; wings and setæ, hyaline.

BROWN COFLIN, NO. 10 AND 11.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's herl; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wings.

The white moth, for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season At this season use the small flies for day fishing, and the large flies for evening and night.

SALMON FISHING IN CANADA.—Angling parties visiting Canada, for salmon, trout, bass and other fish, will be satisfactorily fitted out at the tackle establishment of T. W. Boyd, 241 Notre Dame street, Montreal. See his advertisement elsewhere.

W. J. FLORENCE'S SCORE.—Dundreary's fishing party, comprising the Duke of Beaufort, Sir John Reid, W. J. Florence, and E. A. Sothern, returned from the Natashquan river, on the Lower St. Lawrence, last week. We append Mr. Florence's individual salmon score as presented to us by Messrs. Abbey & Imbrie, to whom it was sent. From all accounts the trip was quite an expensive one, far more so than was really necessary; yet it is evident, from what our own correspondent has told us in his series of letters from Canada, that the sport of salmon fishing cannot be indulged in to its fullest enjoyment without a great deal of outlay. For instance, the steamboat chartered by this party to take them from Quebec to the river cost them $1,000. Other expenses brought the bill up to $6,000 or so. With an expenditure not lavish, they should have got off with an expense of $4,000 at most, which is paying dear enough for a few score of fish.

These lower rivers are not only inaccessible except by special steamer or sailing vessel, but any party visiting them, in order to be comfortable, requires to build a commodious *cabane;* to have cooks, gaffers, and supernumeraries; to provide liberally with provisions and camp furniture, as well as personal outfit. The single item of fly-oil must be an important one of itself.

FISH AT FULTON MARKET.—The old Fulton Market in this city, which has been doomed to demolition by the Board of Health, has been twice partially destroyed by fire within a few months. This Fulton Market is the principal fish market in the United States. The New York *Star* has given the following interesting statistics:—

Ninety-five per cent. of the fish disposed of in this city comes through this market, and is distributed thence East, South and West. Six million pounds of codfish and 1,000,000 pounds of bluefish passed through the market last year. Thirty-two vessels, bringing fish direct to the market, were engaged in codfishing, and thirteen smacks at the same time in bluefishing. A large quantity of fish was in addition brought in boxes from the New Jersey and Long Island coasts and from Massachusetts and Rhode Island. The annual production of weakfish passing through the market is estimated at 235,000 pounds. There are in addition millions of pounds of other fish, eels, shad, mackerel, perch, etc. During the year 1876, according to the report of the Royal Canadian Fish Commission, there was imported from Canada into this country over 1,500,000 pounds of salmon, the greater part of which passed through this market, and this is represented to be a fair sample of the business done. In the season codfish, sea-bass, lobsters, eels and blackfish are kept alive in crates. Mr. Eugene G. Blackford also keeps trout alive in tanks expressly built by him for the purpose. This market is a favorite resort for ichthyologists. Mr. Blackford states that the fish business done at Fulton Market is considerably in excess of $2,000,000 per annum.

—Cape Vincent, on the St. Lawrence River, is proving itself one of the best points as headquarters for anglers who desire something beside a brown skin to show as the result of their fishing. Mr. Squires, of Cortlandt Street, who has just returned from there, has shown us a box of black bass, taken on a 16 oz. rod, with flies, on the last day he spent there. Sixty-seven of these gamy fellows were hooked by him within four hours, in some cases taking two at a cast. Mr. H. L. Fox, the gentlemanl proprietor of the Rathbun House, at Cape Vincent, will furnish any who desire information in relation to the famous fishing grounds full particulars, giving kind and amount of tackle needed, the best points for bass, pickerel, or the splendid muskalonge, which are just now in season, and of which several are taken weekly.

SETH GREEN'S APOTHEGHMS.—Every little while that Pythagorean philosopher, Seth Green, opens his mouth and speaks. When he speaks, he utters words of wisdom, and if a little collection were to be made of all his wise, quaint and practical sayings, they would constitute a book of apotheghms of much value to all anglers and students in ichthyology. Whatever he writes for our columns is always timely, as well as to the point. Here is what he says now:—

ROCHESTER, July 14, 1879.

Editor Forest and Stream:

A few hints to young and old who take time to lie off a few days and go fishing. Never take more fish than you can use while they are fresh. Take what you can use and then stop fishing, and lie in camp or on the banks of the lake or streams and enjoy the beauties of nature. It is a mistaken idea that any one will think any more of you because you have made a great catch. A good many go, and their excuse is to have a rest; and they work harder than ever they did when they were at their business. They will kill all the small fish to have a big story to tell when they get home. If the man knew how mean he looked to some of the parties that he is showing his fish to on telling his little fish story, he would sneak off and hide his fish and say to himself: "I will not do so any more."

I know a great many of the above kind of fishermen, and I have made many enemies by telling them their weakness, and I know a great many gentlemen who go fishing and do not make slaves of themselves, and have a good time. They take what they want for present use, and the last day or two fish hard and get a good mess to bring home to their families and friends. I will tell those gentlemen who wish to bring home a mess of fish and not work hard, to get them the last few days. If you are fishing for bass or trout on lakes or ponds, have a scow built with a water tight well under the seat, make the seat in the boot 18 or 20 inches wide, hang it on hinges and make a hole through it large enough to admit the fish. Then cut two holes 4 or 5 inches square through the bottom of your boot, one at each end of the well, and cover it with wire cloth. You will keep your fish alive until you get to your cabin. There you can have a dry-goods box or barrel with holes on each of the four sides, one foot square with wire cloth nailed over and sunk in the water near your cabin. You can keep your fish alive, and when you get ready to come home you can take them out and pack the large ones and put the little ones back in the water, and when you get home and tell your friends of the nice box of fish you brought home in good order and distribute them, you will feel well, that is if you have not forgotten some one you would have liked to have given a mess to, and when you meet that friend you will be very apt to wish you had not brought any fish home. For the man who brings a mess of fish and game home and distributes them among his friends, and goes to the trouble of sending them around, makes more enemies than he would if he had only brought a mess for his family. But when he comes to tell about how many little ones he put back, there will be a thrill of joy run through his veins which will make him feel that he too has helped to stock the waters. SETH GREEN.

☞ August is the best month of the year for salt water fishing, and fish are found then in greatest variety.

ARTIFICIAL POTATO BUGS.—Mr. Chas. F. Orvis, of Manchester, Vt., replies to "Mr. Webb," of Nashua, N. H., who wishes artificial potato bugs, that he can furnish him, or any one, all they desire, with hooks on them.

NEW HAMPSHIRE—*Ashland, July* 28.—Bass are getting quite plenty here, showing that the Fish Commissioners are doing a good work in restocking our waters about here with so gamy and fine fish. In the Pemigewasset River they have been caught weighing four pounds, while in Lake Waukewan, or Long Pond, so called, they run from two to four pounds; not very large, it is true, because they have been there but a few years, still it shows they are there, and find plenty of feed, and will well repay the cost of putting in. M.

MOVEMENTS OF THE FISHING FLEET.—The number of Bank arrivals reported since our last issue has been 14—2 with 75,000 lbs. codfish, and 12 with 417,000 lbs. halibut. The number of Georges arrivals has been 51, and the receipts 970,000 lbs. codfish, and 37,700 lbs. halibut. 16 arrivals have been reported from the Inshore codfishing grounds, with 315,000 lbs. The Shore mackerel fleet continue to meet with fair success, the number of arrivals since our last issue having been 19—a few via Boston, where they disposed of their fares—and the receipts 3,180 bbls. There have been no Bay arrivals. Whole number of arrivals for the week, 100.—*Cape Ann Advertiser, July* 25.

CONNECTICUT—*Putnam, July* 28.—The black bass seem to be inexhaustible in Webster Pond, which is about eight miles from here. Parties go every day, and often return with from 50 to 100 pounds. E. T. Whitmore bears the palm of the biggest string. It is estimated over 1,000 pounds have been taken by parties from Putnam. Your humble servant went once, and just saved his reputation by catching *one*. I was, however, very much amused by a boat fishing near us, containing three old, experienced fishermen, with their nice poles and splendid out-fit, while the boy of twelve years old fishing by hand line caught twelve nice ones, and three great fishermen caught but two. They were trying to purchase silence of the boy when he got home, while he was sharp enough to set his figures high. G. F. W.

SALMON IN THE FARMINGTON RIVER.—*Windsor, July* 20.—A salmon which measured three feet six inches was found floating dead in the Farmington, about three miles from the mouth of the river. I had a talk with the man who foufid it, and he says the fish was killed by the paper and woolen mills on the stream above, which empty their coloring and other matter into the river. He saw five or six salmon going up the day before, saw their back fins out of water on the rapids. So long as the mills are allowed to empty their filth into the river I cannot see the use of stocking them. In the early spring they take out lots of dead fish which float down in the nets killed by the poison water. No fishing in the river of any account thus far this summer. The fish weighed about twenty-eight pounds.
F. BOLLES JR

NEW YORK—*Elmira. July* 19.—Mr. Knapp, proprietor of the Knapp House, Penn Yan, kindly offering my friend, C. W. Ballard, Esq., from New York, and myself his camping grounds, which are about twelve miles down the lake, we put our boat, tent, etc., on the steamer and by 5 P.M., last Monday, were very well settled there. A summer hotel, called "Idlewild," has just been built near our camp, so we could occasionally step in and get a dinner, which was very convenient. Caught numbers of b ack and rock bass, the largest two and a half pounds, and one lake trout of four pounds.
F. H. WALKER.

NEW JERSEY—*River Side House. Forked River, July* 26.—Weakfishing is improving, and larger ones are being caught daily. The boats coming in to-day would average fifty fish each, some of which weighed five pounds. Kingfish are still biting and running larger. Sheepshead plenty for the net fishermen, but not many being taken with hook and line. A.

CANADA—*Quebec, June* 24.—Mr. C. Dugal, farmer of St. Michel, caught a sturgeon, on Saturday eight feet six inches long and three feet six inches in girth.

For Forest and Stream and Rod and Gun.

ALL ABOUT BUNKER FISHING.

AMONG the many occupations of the people living on the eastern portion of Long Island, a description of none of them would interest a casual reader more than the Menhaden fishing. The fish, how they are caught, and how reduced to oil and guano, is a subject most interesting.

The fish appear in large quantities along the southern shore of Long Island at about the first of May, and are caught just outside of the breakers until the middle of June, at which time they seem to have grown tired of "old ocean," and seek the quite and shelter of Gardner's and Peconic bays. Here and in Long Island Sound they are caught in abundance until December. During the five l st days in May, 1879, 40,000,000 of these fish were taken o f the south shore of Long Island, one gear along taking 1,500,000. Many would suppose that as these fish are caught in such vast numbers they would soon become extinct, or at least leave these waters, but the truth is the contrary, for during the season of 1878 more were caught than in any previous year.

How are these large quantities of fish caught and manufactured into oil and guano?

Steamer, sail boat and shore seines are all brought into play to catch the poor little Menhaden (or bunker as it is usually called), and of these three. we shall only describe one gear, and that the steamers, as they are taking the place of all other kinds. Steamers were first used down on the coast of Maine, indeed were both built and used there exclusively until a few years ago. Now they are commonly employed by the Long Island fishermen, who have most of them built at Portland, Maine, while a few are from New London, Conn., and Buffalo, N. Y. Those built at Buffalo are floated through the canal as far as Albany, where they have their boiler and engine set in, and then come down the Hudson. They are about 100 tons burden usually, and carry from three to four hundred thousand fish, allowing twenty-two solid inches to a fish, which is the way they are measured. Two small boats are used for working the seine, and these are twenty to twenty-six feet in length, and are towed by the steamer or carried on her cranes. The nets used are about 150 fathoms long and sixteen deep in the bunt or middle, shoaling down to one-half of that on the ends. One side of the seines is strung for floating, which is called the cork-line, the other, the purse-line, for the reason that large rings are placed on it, through which a rope passes, fastened together in the middle of the seine by a small swivel. This purse-line acts the same as the string on an old lady's knitting bag, viz: puckers the net right up, leaving a bag for the bunker to follow into.

So much for the seine and boats, and now for the capture of the bunker. A school of the fish being raised or found, their position taken carefully by the captain, the boats are rowed to within a safe distance, and then starting directly away from each other they describe a circle around the fish with the seine. Upon the boats coming together again, the men seizing purse and corklines pull and haul as only sturdy fishermen can pull. The rings of the purse-line are soon all on the boat and the fish are crowded together in the bunt of the net, captured. The steamer is now hauled alongside and soon the fish are transferred to her by means of a large dipping net which is dipped into the solid mass of bunkers and hoisted quickly out of the net over the rail and into the steamer's hold. The fish are bailed very rapidly in this way, about 100,000 an hour being the average work. Now the fish are taken to the factory, when they are measured in tubs that hold 800 apiece, dumped into a car, run up the railway into the tank-room of the factory and again dumped into the tanks, cooked by steam (which is conducted into the proper place by pipes leading from the boiler) until done, then the water is let off into large vats; the pumace or scrap, as it is usually called, is pressed by means of hydraulic power through a shoot into a cart below, wheeled into a platform for drying, then spread thinly and let to dry, being hurried into that condition by a continual harrowing. After lying through the middle of the day they are put into one long heap covered with canvass where they remain for a day or two, when they are pitched over, and after sweating for a day or two longer are again placed on the platform and thoroughly dried and taken to the house, and after being pitched over two or three times are ready for market.

The scrap being disposed of we will follow the work of getting the oil ready for market.

When the oil and water separate from the scrap, they are drained into large vats, and allowed to stand until the oil separates from the water. After separation the oil is led off into the oil receiver, and after becoming clear and settled it is run into barrels, and is now ready for market.

New York is the principal oil market, though other cities buy a great deal. These cities send a considerable quantity of cheirfine to Germany. Oil has been on a steady decline since the war. At that time it sold for $1,20 per gallon, and to-day the same grade is sold for less than one quarter of that. The decline in the price of oil is owing mostly to the same cause that all other merchandise suffers from, while of course the vast quantities manufactured have something to do with it.

While oil has been steadily declining in value, scrap has held its price and may even be said to be firmer and in more demand than it was fifteen years ago. Then it was sold in the crude state. Now it is found to be much more profitable to cure the scrap as here described. While the Southern States use most of the cured pomace, large quantities of it are exported to the old country, Italy taking the largest portion of it. A few years ago not more than a dozen factories were in existence. Now three-scores of them are steaming out for them, taking the fish in vast numbers and giving employment to thousands of men, and bringing large amounts of money into circulation that might otherwise be idle. X.

A PRIZE FOR NEATNESS.

During the cruise of the San Francisco Yacht Fleet to Napa on the 4th of July, after a number of burlesque prizes had been given to winners in a rowing regatta by members of the club, the commodore of the club, C. H. Harrison, announced his intention of presenting a handsome prize for the best equipped and maintained yacht in each of the two classes. He appointed a committee of two disinterested persons—Captain Huntington, of the United States man-of-war *Alert*, who was present with other navy officers from Mare Island, and Captain Moody, an old and experienced yachtsman—the committee to examine the yachts and report to him. They made a visit of inspection to each yacht in the fleet, examined all the rigging and gear critically, asked to see charts, side lights, lead lines, spare sculls for boats, compasses, etc., with a view of determining the state of the outfit of each yacht; looked at the lanyards of rigging, how the sails were bent, tautness of shrouds, backstays and head gear; examined ground tackle; saw that the ends of ropes were whipped, etc., etc.; and in fact thoroughly inspected each one. They made their report to the commodore, who that evening, after the concert on board the *Pearl*, announced the winners. The prize for first class yachts was awarded to the sloop *Clara*, Jabez Howes, Esq. That for second class yachts was given to the yawl *Enid*. Mr. Chas. Yale, secretary of the club, the latter a Corinthian yacht.

The whole thing was a surprise to the fleet, and no one had time to "fix up" before the inspection committee called. The prizes were given for the "best equipped and maintained yacht from a nautical point of view," and the example is one which may well be followed in other clubs. Racing prizes are plenty enough, but until now we know of none being given for neatness in appearance and thoroughness of rig. Emulation among yachtsmen in this respect can only be conducive of benefit. Our San Francisco correspondent tells us that immediately after inspection was over each crew went over its own yacht, criticizing closely the rigging, etc., their attention being called for the first time, apparently, to many little careless pieces of work. They also began to point out each other's deficiencies, and the affair has created no little talk in the club. Each one says that next year, on the annual cruise, his yacht will win it, showing that the idea is already bearing fruit. The commodore's yacht *Frolic* did not, of course, compete, as he presented the prize. The San Francisco Yacht Club is happy in having for its commodore a thorough seaman and experienced sailor, who desires to bring the fleet up to a standard from a nautical point of view higher than that of yacht clubs generally. The yachts of his fleet may hereafter be examined closely and critically by experienced sailors without them being shocked at crude or careless rigging or slovenly appearance. We know of many clubs on the Atlantic seaboard whose yachts and members stand sadly in need of the stimulating competition a "prize for neatness" would produce. Going on a cruise without a yawl, side lights, charts, or even a lead, is all but too common. A little less beer in the pantry and a good deal more seamanship, are among the many improvements we trust time and our efforts will bring forth.

THE YACHT RACING ASSOCIATION.

From many sources we have received the endorsement of yachtsmen in regard to what we have published concerning the necessity of forming a yacht racing association. In this connection the following from the commodore of the Neenah Yacht Club will prove of interest:—

I fully agree with your correspondent in your issue of July 10th in regard to a yacht racing association, as I think it is a long-felt want; for there are probably not more than two or three yacht clubs in the United States that agree as to the measurement of yachts, and I think it is time something was done to make it more uniform. Then yachts, whenever they went for racing, would have the same measurement, and once recorded would not need to be measured again, unless the model should be changed. I also think there should be something done with regard to the sails and ballast a yacht should carry—at least have it all uniform.

In fact, an association should be started at once, and I cannot see why all yacht clubs should not encourage it.
J. F. HENRY, Commodore, New York City.

The London *Field*, in commenting upon the formation of this association, says: "It seems to us a mere matter of common sense that yacht matches should be conducted under one set of sailing rules." So any one would think, and yet there will be serious obstacles to overcome, petty jealousies to sooth, and a great deal of stirring up of the subject required, before the yacht clubs of America will cease to stand in their own light by trying to keep sailing races down to the level of mere family recreations instead of open test of model and seamanship in which all legitimate yachts can come to the line, whether their names happen to be borne on the books of the club offering the prizes or not. The many "union regattas" instituted this year form the one hopeful sign of progress in this matter, and indicate the dawn of better things.

THE SCHOONER FROLIC.

The new schooner *Frolic*, built by Alonzo E. Smith, of Islip, L. I., for Philadelphia parties, has received her lead and racing sails and will rapidly be put in perfect condition. This schooner represents a departure from the Bourbonism which has so long ruled in all our shipyards, and is therefore worthy of more than passing notice. She is 56 feet 5 inches on deck, 15 feet 6 inches in beam, and 7 feet 6 inches draft extreme. As she was intended for a sea-going yacht, one in which you can "stay outdoors," she has been built with a keel, about 19 inches below the rabbet amidships. The model presents some of the features characteristic of nearly all of Smith's craft. Her bow is fine and easy, without being recklessly cut away. The bilge amidships is round and wholesome, and dies away gently forward, while her run-aft is very clean, obtained without a sacrifice of too much body. Both ends go very well together, the hull presenting

about as able and fast an appearance as could well be got out of the vessel's dimensions, for she may be termed a very "big little boat," and it is no easy thing to chip out a pretty vessel of that type. She has great freeboard, a point for special commendation, the wise headshaking of sundry barnacles who have inspected her notwithstanding. The man who would cut down valuable freeboard simply to obtain imaginary beauty is an individual of frequent occurrence, but he and his tribe understand nothing of the real problems of naval design, or they would not be quite so ready to sacrifice room below, power and safety, to obtain what they, with their experience limited to the type of frying-pan sailing machines, may consider as essential to beauty. Freeboard is exceedingly valuable in more ways than one, and we are glad to see the new schooner has plenty of it. Forward her forefoot is smartly cut away, and aft her sternpost has been raked, both in accord with the dictates of naval science; and judging by the easy way in which she works there is no danger of "spiking on a piece forward" as one luminary counselled. The midship section is something like that of *Niantic* and *Sagitta* in general mould, but of course deeper, and therefore with an easier bilge, a very important thing for comfortable qualities at sea. On deck she is flush, barring a house over the saloon and stateroomss 18 inches high at the side. Keel of oak, sided 7 inches on top and diminished to 3½ inches on the bottom. Post, stern and deadwood of oak; keelson, 7x12 inches; frames spaced 18 inches, 6x8 inches at heel and 6x4½ inches at head. Wales, 2½ inches thick; plank, of oak, 1¾ to 2½ inches thick; beams, yellow pine, 6x4½ inches; clamps, 5 streaks, 6x2½ inches each. The frames and knees are of hackmatack and the cabins furnished in pine, decorations being left to the painter's art. Mainmast, 48½ feet, heel to cap: foremast, 47 feet; topmast, heel to truck, 25 and 26 feet, including 6 feet poles: mainboom, 35 feet; gaff, 18½ feet; foreboom, 16 feet; gaff, 15½ feet; bowsprit, 28 feet, from foremast to stayhole and flying jibboom, 13 feet between stays; ballast, 13½ tons of iron inside and 2½ tons of lead in the keel. Saloon aft, 10½ feet square; one stateroom each side, with bath-room and water-closet. Captain's room, pantry and forecastle for a crew of four hands all told. She has a Hallet's Atlantic range, No. 1, to do the cooking on. Two boats, 13 feet long, by Saml. Ayers; mastwinch on each mast and one of Perley's on the bitts. Two "skeleton" anchors, long shanks and stocks, weighing 175 and 130 pounds, with 30 fins. B.B.B. Burden's iron chains of ⅞ inch rod. Wells' patent steering gear and wheel. Standing rigging, 2½ inch wire, galvanized. Bulwarks, 17 inches high forward and 14 inches aft. Topmasts fitted to house. Though supplied with a moderate rig she is to receive a full set of racing sails by John Curtin. A. B. Sands did the plumbing, Cottier & Co., of New York, the decorating, and rigging by Captain Jas. H. Berry, of Islip, well known to yachtsmen as mate of the *Clio* last year when that schooner did such excellent sailing, who will also have command. The *Frolic* combines many points we have insisted upon as necessary to an able, safe and honest yacht, and we note with satisfaction the tendency among builders and owners to get out of the old ways and take to something better than the stereotyped sailing machines and mantraps. She combines, first, great draft; second, cut-away forefoot and raking post; third, moderate beam and ample freeboard; fourth, an easy bilge; fifth, no cockpit; sixth, short lowermasts, with lofty housing topmasts; seventh, lead on the keel; eighth, high bulwarks; ninth, heavy scantling, and tenth, a very complete outfit in the way of appliances of all kinds. On all these ten points most yachts are lamentably deficient. The *Frolic* is an exception, and is one of the few craft of moderate tonnage in America in which we should care to meet a blow or a sea. The workmanship leaves little to be desired and is a standing card for the yard at Islip. She represents a type rapidly coming into favor, and with the many cutters now under way and to be built, will form the nucleus of a fleet of able vessels we may be proud of. The recent numerous disasters along our coast, by which whole families have become extinct and amateurs were drowned by the dozen like so many rats, are ample evidence of the terribly low condition yacht designing has sunk to in America. Viewed from the standpoint of a naval architect, nine-tenths of our yachts are a disgrace to modern civilization. We note with gratification the change now working, as indicating that we are at least realizing that perfect yachts must combine many more qualities to a high degree than that of speed alone. The well-designed yacht cannot capsize. Those of to-day are treacherous mantraps, and should be superceded by something worthy of confidence.

SAN FRANCISCO YACHT CLUB—*Annual Cruise, July 3 to July 6.*—The annual cruise of the San Francisco Yacht Club, from July 3 to 6, was in every way successful, some twenty-five yachts going in company to the head waters of Napa Creek, where lies the charming little town of Napa, famous for its vineyards and orchards. The sail was in the open bay, some thirty miles to Mare Island Straits, and from there about fifteen miles of narrow water navigation between tree-lined banks. The second class yachts left San Francisco under command of the Senior Captain, Chas. G. Yale, at 5:30 P.M., on the 3d, rendevouzing at Port Richmond, and sailing by moonlight up Pallo Bay, in a fine strong breeze to Mare Island Navy Yard. These were *Enid, Ariel, Lively, Magic, Mollie, Yaquiña, Fleta, Thistle, Laura, Twilight, Mist, Flirt,* and *Tommy.* At 1 P.M., on the 4th, they again got under way to stand down the straits to meet the Commodore and larger yachts. These were delayed, however, in the lower bay, and at 1:30 the signal was given from the yawl *Enid* to square away up the creek. At the same moment a fleet of some 14 Vallejo sloops started in the same direction on a race of their own, going with the yachts for two miles, and making a very pretty sight. The yachts kept in a bunch to Napa, each one striving for the lead, but there was not very much difference. Shortly after they anchored, *Clara*, the first of the large ones, hove in sight around the bend. Then came *Consuelo* in tow of the steamer, which had been provided to follow the fleet and pick up any one who got ashore in any of the narrow head waters. The others came along one by one, the steamer going back again and bringing up from a mile or two below schooner *Pearl*, and yawls *Esmeralda* and *Startled Fawn*. The yawl *Sappho* got in without a tow, but the Commodore's yacht, the yawl *Frolic*, got hopelessly ashore several miles below town with fifteen ladies and a number of officers from the U. S. ships *Alaska, Alert*, and *Independence* at Mare Island Navy Yard, on board. Carriages were sent down the road for them, and the yacht brought up later on. The big new yacht, *Viva*, 96 ft. long, did not get up till next day, and there was just width enough in the creek to turn her, the booms overreaching each bank, the yachts rendezvousing at the end of navigation. A fine display of fireworks was seen from the yachts in the evening, the residents of Napa turning out to witness it.

The Palace Hotel was taken possession by the club and its guests, and, as a band had been brought up from the city, all hands enjoyed themselves till the small hours. The rooms had been appropriately decorated with club flags and nautical emblems by the ladies of Napa.

Drives and rides to the vineyards and orchards were the order in the morning, and in the afternoon the annual burlesque regatta was held. The yachts were drawn up in double line on the bank, filled with guests, and crowds of Napa people were present also. The course was down in front of the line of yachts, and return. The first race was for captains of yachts, each in his own yawl boat, everything fair, no protests, fouls allowed. There wasn't room for all the boats ahead, so a double line was formed, and a very amusing race occurred, amid a great tangle of oars and boats of all sizes and shapes. Then followed a double scull race, each yacht being represented by its boat, and then a sculling race, single oar. The prizes had been made in the city (of tin) handsomely ornamented, designed, and inscribed. Presentation speeches were made in the yacht *Consuelo*, the winners being Captain Hyde, of the yawl *Startled Fawn*, Captain Williams, of the sloop *Lively*, and Captain Yale of the yawl *Enid*. There was more fun than in a *bona fide* regatta. The Commodore announced his intention of giving a handsome prize for the best equipped yacht, and the Committee appointed, after inspection, gave the first class prize to the sloop *Clara*, and the second class one to the yawl *Enid*.

In the evening a concert was given on the *Pearl*, and the *Consuelo* on one side, and steamer *Express* on the other, furnished accommodations for the audience. The *Pearl's* organ was brought into the cockpit. French horns and cornets were brought out by the musical members, and the ladies joined in it, singing. A programme was printed, and the whole thing went off successfully.

At 1 A.M., the two steamers which had been chartered, took the fleet in two double lines, one in charge of the Commodore, and one of the Vice-Commodore, and towed them down the creek to Mare Island, the creek being two narrow to beat down comfortably, and the steamers being provided for that purpose. At five o'clock in the morning they got to Mare Island Straits, and, at 5:30, with a strong, ample reef breeze, and fair tide, they started on the beat down Pallo Bay, arriving at the club house at Saucelito between half-past eight and nine, *Consuelo* leading. After a short sojourn at the club house the fleet dispersed, all hands having had a jolly time.

THE SHARPIE TRIED—*Sebec, Me., July 21.*—Having read in your excellent paper the letters on "Sharpies," I thought it would be just the boat for our river and lake, and notwithstanding I had the working drawings of an eighteen-foot cat-boat, I decided, after consulting you, to build a "Sharpie." Having noticed in the *Sportman's Gazetteer* that Mr. D. O. Twitchell, of New Haven, Conn., was spoken of as a sharpie builder, and as he had an advertisement in the FOREST AND STREAM, I wrote to him, and he furnished me with plans and specifications and kindly answered all my questions concerning its construction, thereby rendering invaluable assistance to me. I am pleased to say that my "sharpie" gives me and my friends the utmost satisfaction. She surpasses my most sanguine expectation, both as regards speed and general behavior. She sits on the water with the grace and buoyancy of a duck, while her many points of superior excellence as compared with the boats composing our "Sebec fleet," are very generally conceded. She is after the model of a twenty-five foot boat; but as she has a round stern it makes her about twenty-seven feet over all—beam, 6 feet 8 inches; carrier, two leg-of-mutton sails; foremast, 25 feet long; mainmast, 23 feet; centre board, 7 feet long. In heavy weather, or when you wish to take the ladies and children out and want to feel perfectly safe, you can step the mainmast just forward of the centre board and run her with one sail. Wish some of the sharpie men would give us a few hints on sailing sharpies through the FOREST AND STREAM.

—Yacht clubs will consult their own interests, by promptly forwarding all Club Fixtures and dates of special matches for publication in our list of fixtures. They will thereby serve their own ends in drawing large entries.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We cannot attempt to give specific directions where to go for game or fish. Correspondents must keep themselves posted by consulting our news columns.*

JAN. S. F. Olaska, Wis.—We know nothing of the gunmaker.

CALLIE.—The "O" in Collie has the sound of "ŏ" in following.

G. F. P.—You are mistaken about having seen the advertisment in this paper.

C. J. P., Lynn.—Let a surgeon examine your dog, and see if it is necessary to remove a portion of the sheath.

J. C. C., Fort Hamilton.—Will you direct me to where I can get an archery outfit? Ans. We refer you to our own full advertising columns.

W. J. W., Columbia, Tenn.—You may secure a market for your mocking birds by addressing the Eefche Bros., whose advertisement appears elsewhere.

M. B., Batavia, O.—We doubt if your dog can be cured. You will find in the back numbers of this paper articles on gun shyness.

ROB ROY, Nelsonville, O.—1. How often do wild rabbits breed in a year? 2. Is there a law in this State prohibiting the killing of quail till 1880? Ans. 1. Generally three litters a year. 2. Yes.

MAINE SUBSCRIBER, Waterford Maine.—I have a female collie which was in heat at thirteen months of age (March 1, 1879). She did not breed. When may I expect her to be in heat again? Ans. About September 1st.

H. H. B., Muncy, Pa.—The best law schools in the United States are those of Columbia College, New York, and of Harvard College, Cambridge, Mass. By addressing the treasurers of the above institutions, you will receive catalogues.

H. W., Rutherford N. J.—The dog requires a good purge, an. afterwards iron and quinine in doses of say six grains per day Where the spots appear rub with crude petroleum. Fowler's solution of arsenic might also be good, but should be given very carefully, commencing with six drops twice a day and increasing to ten.

J. D. J., Schnectady.—A few applications of crude petroleum will cure your dog; discontinue the carbolic and wash him once a week with Castile soap, applying the petroleum (which must be the *crude* article) afterwards. The diet should be light, with as little meat and much vegetables as possible.

C. E. Danville, Pa.—I have a setter dog eleven months old, his ear is discharging matter and has an offensive smell. I have washed it with Castile soap. It heals and breaks again. Can it be cured permanently so as not to cause deaftness? Ans. After washing the ear with Castile soap and drying thoroughly use the remedy for canker as prescribed for A. W. in this column.

J. F. H., Newark, N. J., *July 22*, 1879.—My dog has an eruption on his body, which has spread, until it now covers nearly the whole body. It is very fine, and not very close together. The pup seems to be in perfect health, otherwise. Ans. Your dog has mange. Rub him with crude petroleum, and administer, internally, 5 drops Fowler's Solution of Arsenic twice a day.

WASHINGTON, N. J.—Duke is out of Ruby, full Laverack, by a Gordon dog. A native setter bitch was bred to Duke, and a bitch out of that litter was bred again to Duke, her own father. Please inform me how much Laverack there is in the last puppy. Ans. Half Laverack, as that was the strongest infusion of Laverack blood that could be received through the sire, Duke.

THREE YOUNG TRAVELLERS.—You can learn the rates of fare and distances from New York to Texas and New Mexico, at any of the officers of the leading lines of railway, and get such other information as you want. You can buy buckskin suits at San Antonio, would refer you to Hallock's *Sportsmen's Gazetteer* for any full information as to localities, routes, game, &c. We will get you a copy, price $3.

MOXAM, Frelsburgh.—1. Yes, you can go by all rail to San Antonio, Texas, either via Missouri, Kansas & Texas Railroad, or you can take steamer from New York to Galveston, and thence by rail via Houston, connecting at San Antonio with the Iron Mountain & Texas Central. 2. Mexican sheep, best grade, can be bought from $1 a $1.75 per head; ponies, from $10 and $25. You can get them at San Antonio as cheap as anywhere. Address H. L. Bingham.

CO. K.—We have had a dispute about base ball and wish you to decide when base ball was first played in this country and when it became a national game? Ans. According to Henry Chadwick, a recognized authority, the first modern base ball club was organized in 1845. It was the Knickerbocker Club of New York, and is still flourishing. Of course base ball was played in a primitive way, long previously, but the nationalized improved and reconstructed game of base ball may be said to date from the year named.

J. F. B., West Eaglewood.—Tuesday my man found in the bushes the nest of a hen, in which were a number of eggs. Wishing to know their condition he broke the shell of one and therein found a well developped chicken (dead) with *four* legs. Is it a curiosity? Ans. Not much of a curiosity. Such abnormal freaks are quite common ammong animals, birds, and fishes. Have you any idea of the length of time the U. S. steamer *Jamestown* will remain at Sitka, Alaska? Ans. Until cold weather at least. She was detailed for six months, we believe.

ANIOUS, Harrisonburg, Va.—Will you give me directions for loading an English breech-loading shot gun according to the bore, length of barrels, and other particulars, which I send? I find that in loading heavy the recoil is unpleasant, and that the shoot scatters entirely too much for execution. I use the brass cartridges made by Parker, "12" "A," which fit the gun exactly. After one or two shots the scatter of shot increases. The barrels are smooth inside. Ans. Your remedy is to get your gun choked, and to use such charges of powder and shot as you discover by experiment to be the most pleasant and effective.

T. C. CLUB, TORONTO, CANADA.—When traps are set and match partly shot, can the traps be altered on account of *Sun shining* in the face? Ans.: The question depends largely whether it was a match between two persons or between some members of the club. In the former case it would be a matter for mutual consent and courtesy. In the latter, if some had shot and some had not it would be manifestly unfair to those who had shot with the annoyance of the sun in their faces to permit others to have the position of the trap changed. This, however, could be done at the conclusion of a round by mutual consent. 2. Is the Titusville Ball Co., got there *balls* manufactured, and when can they be got? We wrote some time ago for samples. No answer yet. We saw an apology in your paper some time ago for delay. Ans. No further news from those parties.

A. W., Pascoock, N. S.—1. My English setter dog, two and a half years old, has a skin disease which I cannot cure. It began on the throat. The skin becomes very red, and there are here and there little festers like points. I have used sulphur, whale oil ointment, which cures the eruption temporarily, but often I think it is all gone and wash the dog thoroughly with carbolic soap, the skin again becomes red and the scratching is renewed. 2. He also has the symptoms of canker of the ear, scratching his ears and shaking his head, but I can find no sore outside or inside Ans. 1. Give your dog Fowler's solution of arsenic commencing with six drops twice a day and increasing to twelve. Rub his skin with crude petroleum and if this does not cure him try the following: sulphur, 8 oz.; whale oil, 8 oz.; oil of tar, ½ oz.; ung. hydrarg, ½ oz.; mix. Wash off and repeat in three days and again at a similar interval if necessary. 2. Your dog has canker. Use the following: Goulard's extract, ½ oz.; wine of opium, ½ oz.; sulphate of zinc, ½ dr.; water, 8 oz.; mix. Clean the ear well and dry it; then twice a day pour in a small quantity of the above and hold the flap of the ear over it for a few moments.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*,*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 31, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

EDITORIAL ANGLING ETHICS.—Now that Congress is taking a rest, the country comparatively safe for a season, and the next campaign not yet "booming," the Ohio editors have turned their attention to the discussion of the ethics of angling. The particular issue at stake is the comparative excellence of the fly and the angle-worm. The editor of the Dayton *Journal*, as we infer, has been off on a fishing expedition with the Miami Fishing Association, of which he is the honored president. We further infer, from the one-sided evidence which has come to our notice, that his string of trout was so great as to demand, in the interest of his own fair name and fame, a defence of the methods of fishing employed, said method being worm and sinker. Thereupon the editor of the Cleveland *Leader*, in a number now before us, urges that a box of wriggling worms and a big string of trout are offences second in enormity only to election repeating and stuffed ballot boxes. Calling the Cuvier Club of Cincinnati to his support, he further contends that the only method of trout fishing, which may be legitimately pursued by a gentleman, a scholar, and a newspaper editor, is fly-fishing.

Our Cleveland friend is undoubtedly correct; but, while we admire his cogent reasoning, let us warn him that he is avowing on the angle-worm question advanced views, which, while eminently becoming in a journal like the FOREST AND STREAM, are, if not equally becoming, at least not equally safe for such a paper as his own. And, unless he is prepared to suffer ignominy for his principles, we counsel moderation. The angle-worm is a hobby with some men. It is always dangerous to trifle around the heels of a man's hobby-horse. The angle-worm moreover is a hobby of venerable age, which has the traditions of the fathers on its side. Men cling with barnacle tenacity to their traditions; it has always been a perilous undertaking to inaugurate any fundamental reform. The Cleveland man may well sit down and count the cost before committing himself further. Happy man, if the angle-worm, needlessly set foot upon by him, shall not rise, transformed into a dragon, to snap up his artificial flies and swallow himself in its maw!

Meanwhile we are rejoiced to know that Ohio editors go a-fishing. We are confident that their papers are more breezy and better humored in consequence. Editors' duties are such as to demand now and then a "week off." A day in the woods is worth more than a two-column circus ad.

COL. J. B. OLIVER, late of the Florida *New Yorker*, is preparing a book on Florida—its climate, products, resources, etc. The author is competent to treat the subject.

THE MORAL OF BASE BALL.—The game of base ball, which long ago won deserved recognition as the national game of the United States, has of late years no less deservedly acquired notoriety as a national disgrace. From the hands of amateurs the game passed largely to the control of professionals; and for very logical reasons. The professionals so conducted it as to bring it into very bad repute. When large sums of money were at stake individual players and clubs were bought up; the game was jockied and otherwise conducted with more or less "crookedness."

There has come a change. Base ball professionals have found "crookedness" less profitable than square, honest dealing.

The game, as a business, is conducted by certain stock companies, who select their nines of salaried players and derive their dividends from the gate-money and from betting upon the results of games. That club draws the most gate-money which maintains the highest position in the annual series of contests for the championship. Hence it is better in the long run for a club to win a good position, and to hold it, than it is for it to suffer unnecessary defeat, now and then, by selling a game. Individual players have also found that skill and fair dealing, which insure high-salaried positions, are surer and safer means of livelihood than "crooked" dealings and the betraying of their clubs. In short, honesty is the best policy, as much in base ball as in the newspaper business or any other business.

OTTAWA RIVER SCENERY.—Those of our readers who are seeking for a new and engaging route of summer travel are referred to the advertisement in our columns of the Ottawa Navigation Company. The steamers of this line run through from Montreal to Ottawa by day, and the whole route is a succession of beautiful rapids, precipitous cliffs, forests, and pastoral landscapes. For 150 miles above the city of Ottawa the scenery is wilder, more primitive and picturesque. The Twin Mountain lakes vie with Lake George in beauty, and are full of bass. On the upper river, above Pembroke, are lakes filled with speckled trout. Those who like to run rapids can have their fill of enjoyment here. The coming months of August and September, the latter in particular, are especially charming, when the foliage is tinged with the brilliant hues of autumn. We know of scarcely another route in Canada which we can recommend more heartily. The Parliament buildings at Ottawa, which overlook the river from a perpendicular cliff 120 feet high, constitute one of the chief attractions of the route, and for their massiveness and beauty of architecture justly command the pride of Canadians. The trip from Ottawa to Montreal is only $2.50.

OUR ARCHERY DEPARTMENT.—We take great pleasure in announcing that the Archery Department of the FOREST AND STREAM is under the supervision of Mr. Will H. Thompson, whose eminent fitness for the position is a sufficient promise of its excellence and high standard. The columns devoted to this popular sport will from week to week contain articles similar in character to that in the present issue. No archer can well afford to be without the paper. Our readers who are followers of the sport will confer a favor upon their friends by directing their attention to the FOREST AND STREAM.

NOTED CRICKETERS.—We were pleasantly surprised yesterday by a call from the Powgs brothers, Walter and Richard, formerly, if not now, well known as the foremost of English cricketers. They arrived on Saturday last in the *City of Berlin*, and will presently visit Virginia to look after their log cabin near Farmville, which they have not seen for three years. There were a few quail left around there when they broke camp, which they hope the negroes in charge have not potted.

CARRIER PIGEONS.—Six birds were liberated at Columbus, Ohio, at 5:30 A. M. last Sunday morning, the winner, Mr. O. W. Donner's red checkered cock Boss, reached its coop in Williamsburgh, at 11¼ Monday morning. The second prize winner, Mr. J. Van Opstal's blue checkered bird Swiftness settled down to its coop in New York city at 2:50 P. M. Monday. This was the longest flight ever attempted in this country, four hundred miles, air line.

THE WORLD'S FAIR IN 1883.—The great International Exposition, which is to be held at New York in 1883, the centennial year of the ending of the war for independence, promises to exceed in magnitude the Centennial Exhibition of 1876. The growth of the United States and the development of our resources and industries during even so short a period as that of the eight years which will have elapsed between the two exhibitions, warrant the expectation that the World's Fair of 1883 will surpass any other event of a similar character ever held.

PERSONAL.—We much regret to record the death of A. A. Mowry, Esq., at his residence in Putnam, Conn., on the morning of the 28th instant. He was an accomplished and much beloved gentleman, a thorough sportsman in all departments, and a superior rifleman.

THREE OF A KIND.—Considerable space was recently devoted in the newspapers to three entertainments, all of which transpired within a fortnight of each other; viz.: a wash bowl combat between a tarantula and a scorpion, presided over by the citizens of Bonanza City, Nev.; a sickening fight between a bull and a bear in a Pike county, Penna., pit, witnessed by the heathen, male and female, of the vicinity; and a New York city prize fight from which the police deferentially withheld their presence until a becoming amount of gouging had been done. Do not confound these separate encounters. The wash bowl belongs to the first one, not to the last.

GAME PROTECTION.

NEW AUTHORITY OF SUPERVISORS.—We have been at some pains, from time to time in the past, to define the power of County Supervisors in its relation to the general game law of this State. Under the old law, supervisors were empowered "to make any regulations or ordinances protecting other birds, fish, or game, than those mentioned" in the act; and without endorsing such limitation of authority, we have always insisted that the language employed could only warrant special county legislation affecting such birds, game, and fish, as were not provided for in the general statute. The chief difficulty under this provision arose in cases like this: A certain stream became almost depleted of trout; to prevent total extermination of the fish a law prohibiting their capture for a term of years was imperatively needed, and the supervisors enacted such a law; but the impatient angler claimed that such enactment was illegal, and that he might fish in the open season, in spite of all the supervisors in the land. Or, again, new fish were introduced into certain waters, where protection for a term of years was absolutely essential to their successful culture. The county supervisors had no authority to provide such protection, and to secure the enactment of special provisions at Albany was found to be a tedious and sometimes hopeless undertaking. That the law as it stood, in regard to this point, was insufficient, has been demonstrated again and again, and the necessity of a change has been long felt by intelligent game protectors. We are glad to note that such an amendment has been made in the new law, of which Section 37 reads:

It shall be lawful for the Board of Supervisors of any county, at their annual meeting, to make any regulations or ordinances protecting other birds, fish or game, than those mentioned in this Act; and also for the further protection of such birds, fish, or game, as are in this Act mentioned, except wild deer, and to this end to prohibit hunting or fishing in particular localities or waters lying wholly within their respective counties for limited periods and during certain months of the year, and to prescribe punishments and penalties for the violation thereof, and adopt all necessary measures for the enforcement of such punishments and the collection of such penalties; and such ordinances and regulations shall be published in the papers in such county in which the session laws are published, and a certified copy thereof shall be filed in the office of the clerk of the county.

This we judge is a sufficient reply to several correspondents who have just written to us upon this long-vexed question. Supervisors' ordinances adopted prior to the passage of the act (June, 1879), are not legalized by this section; but, to be binding, must have been adopted at a later date.

While necessary and desirable, for the reason which we have already stated, it is plain that so many county ordinances, conflicting with the State law and each other, add to the perpexity of the sportman who would conform to them—if he was only sure he knew just what they were.

A CONNECTICUT QUANDARY.

Editor Forest and Stream:

I want to ask you a question. As you of course know, the game laws of Connecticut are in very good shape, in fact as nearly perfect as we can, at present, hope to make them. Woodcock, quail and ruffed grouse are protected until October 1st, but this year in some sections of the State no one pays the slighest attention to the law. Some individuals have been shooting woodcock since the middle of June. A well known restaurant keeper of New Haven has been buying and selling them since that time. A "sporting man," a market gardener, I believe, in East Haven, has been shooting since June 20. I am told on good authority that members of the sportsmen's clubs in New Haven, Stamford, and Norwalk, are shooting as regularly as the veriest pot hunters. A Norwalk man who is very fond of sending his large scores to the papers (I can give his name) made a bag of twenty-seven woodcock about the first of July. Many respectable men, who last year observed the law, angered by the impunity and impudence with which the members of sporting and game protection clubs shoot out of season, have themselves commenced to kill the birds. There is no attempt at concealment of the facts among these men. They say that they must either break the law or lose all the shooting. They would be glad to refrain if others would.

THE ARION SOCIETY.—This well known social coterie promises a delightful re-union and festival to-night at the West Brighton Beach, Coney Island. The festival will commence at 4 o'clock P. M., and last as long as any one remains to enjoy it. The New York and Sea Beach trains and the Prospect Park and Coney Island railroads will run all night.

Now, what can those of us who obey the law do to stop this state of things? You ought to know. Tell us. I have myself offered $25 reward for evidence which will convict any one of killing birds out of season, but the constables, the only officers, so far as I know, who have power to arrest on suspicion, are either too cowardly to attempt to make arrests or too lazy to take the trouble to look out for law breakers. My own occupation will not admit of my taking time to catch these fellows myself. Now, when the officers of the law wont do their duty what is to be done?

I have a fine long list of names of sportsmen, so-called, who have taken a hand at this poaching, which I will send you for publication if this thing goes on much longer. In the mean time pray give us your idea on the subject.

A WOULD-BE GAME PROTECTOR.

We confess that we are at a loss what counsel to give our perplexed and discouraged game protector. We might adopt his suggestion to publish the names of the offenders, and would willingly do so, did we see any beneficial result likely to follow. But it is probable that these so-called sportsmen poachers who do not hesitate to brag of their lawless exploits would be little affected by the wider notoriety of newspaper posting. The only way to enforce these laws in Connecticut, and the only way to enforce any laws in any part of the world, is simply to enforce them. If our correspondent has the evidence of transgression of the law, let him prefer complaints against the transgressors, substantiate the complaints with his evidence, and fight the thing through. If he has evidence of criminal neglect of duty on the part of game constables he may, by the proper methods, punish them also for such malfeasance. But our "Would-be Game Protector" says he has not time for this. Until some willing conservator, of Connecticut game does find time to follow up such cases the abuse will go unremedied. The best game laws in the world are of no more avail than no laws at all so long as there is no power to enforce them. Game protective associations should provide this authority. When the members of the associations themselves join forces with the pot hunters and butchers the law must go to the dogs.

The above is our ruling and charge under the laws *as they now stand*: but we are free to say that we long since became convinced that our whole method of protection is radically wrong, even were the laws consistent and fundamentally right. We know of no better method of reaching poachers and violators of close seasons than through the *trespass laws*. If we can inculcate in the minds of our farmers that these sumptuary game laws are very proper and based upon true principles of economy, and induce them to respect and obey these laws themselves, then each farmer becomes a special constable, and each farm a police district directly under his own personal surveillance. Sportsmen found shooting on his land out of season or with the *prima facie* evidence of a gun in their hands, would be prosecuted without any trouble whatever, and brought to summary punishment.

FLORIDA.—The Legislature of Florida passed in March 1879 an act to protect the food fishes of that State, as follows: Sec. 1 provides that no gill nets for shad shall be used with a mesh less than five inches—penalty, thirty dollars.

SEC. 2. No shad shall be taken in nets between the 15th of April and the 1sth of December—penalty, twenty-five dollars and the confiscation of all nets, seines, boats, and tackle.

SEC. 3. No fykes, or purse nets, shall be erected in any of the waters of the State—penalty, forty dollars.

SEC. 4. No person who has not resided six months in the State, shall engage in the capture of any food fishes in the public waters of the State, for the purpose of selling or exporting them—penalty, seventy-five dollars, and confiscation of all nets, boats, and tackle.

SECS. 5th, 6th, 7th, and 8th, provide for the enforcement of this Act.

The law was needed, as much damage had been done to the shad fisheries of the St. John's River by reckless fishermen from other States, and at the very time of passing the act, a schooner was seining at Indian River Inlet, and another at Musquito Inlet, for fish to take to Charleston and Savannah.

This law, if enforced, will preserve a full supply of fish in Florida waters. No amount of hook fishing will do harm; but seines, pounds, and traps, are able to destroy any fishery, as we know from their effects on the Northern coast, and also upon the great lakes, where, twenty years ago, 100,000 barrels of white fish were put up in a year. Now it is difficult to get fresh fish for the markets of the lake cities.

LEWIS COUNTY SPORTSMEN'S ASSOCIATION.—We predicted, at the time of its organization, that this Association would be effective in securing proper observance of the game law in a region where its strict enforcement is so much to be desired. We are glad to hear from Mr. H. W. Hayt, of Lowville, that the Lewis County sportsmen are in earnest. Under date of July 19, he writes:

The Lewis County Sportsmen's Association upon the passage of the new game law, determined to devote their time and resources to its enforcement against all offenders (even although the law might not fully please them in all its particulars). After considerable expense, they have obtained the most positive and direct evidence against quite a number of parties for killing deer out of season,—often recklessly throwing meat and fish away. Others have been guilty of using nets in taking trout. The most of these, upon taking good legal counsel, have paid the costs and penalties without further useless expense.

SHOOTING PROSPECTS.

SOLOMON has the fame of having been a very wise man in his day and generation, but had he ever attempted to harmonize thirty-nine game laws, as unlike one another in each individual section, as were the odors which the poet discovered in Cologne, we fear the old King would have included game protection among the things whichhe had tried and found to be altogether vanity. Now, in this Nineteenth Century, is there any one enough wiser than Solomon to tell why the open season for woodcock begins to-morrow in three so widely separated sections of this broad land as Vermont, New York and Oregon, and in no one of the other thirty-seven states and territories having game laws? And if this be satisfactorily explained, will the necessity for a discrepancy between the laws for quail, and the laws for ruffed grouse, etc., and so on, be likewise expounded?

But we are not about to discuss game laws now; rather are we reminded by the beginning of the shooting season and by the "booming" of our own State campaign, that in due time will come the open seasons in other States; and that soon the sportsmen of the whole land will go forth to bring to bag the quail, grouse and woodcock, and other birds whose mission upon this terrestrial sphere it is to be shot at. Without consulting the game statutes, a word or two about the prospects of the coming sport will now be in order. From the outlook before us, we find that, despite the decimation of game birds in many sections of the country, during the extreme cold weather and the heavy fall of snow last winter, the prospects for an abundance of game are generally very promising. Those of our readers who have from week to week noted the reports published in our columns have learned that the spring-broods have been numerous and large, making ample the after supply of grown birds. Many an interested reader knows for himself a certain choice spot, the secret of whose location he jealously guards in his own breast, where he has watched the birds, old and young, and in fancy brought them to bag time and time again. Nor is there any adage forbidding a man thus to count his chickens after they are hatched. Others, who cannot themselves watch the multiplication and growth of the birds, manage to keep pretty well posted by correspondence with friends and acquaintances, or with men whose names and whereabouts they learn through the FOREST AND STREAM. To gentlemen who thus go long distances in search of sport we wish to give a word of caution, and we do this with all due deference to the integrity and good intent of our numerous correspondents whose reports go so far toward making up the sum total of the excellence of the paper. When an abundance of game is reported, it is well for the reader to remember that the word "abundance," used in connection with game, has a variable significance. What, to one man unused to game-abounding lands, may seem an extraordinary supply of birds, may to a more favored sportsman be but a beggarly pittance. Numerous instances have come under our notice where gentlemen have been disappointed in just this way, and ready to heap abuse upon their hosts as organizers of South Sea Bubbles.

Another frequent and equally annoying mistake is often made by eager sportsmen who read of a good game country, genial host, excellent accomodations and other requisites; and immediately set off post haste for a strange place and to go among strangers without telling any one that they are coming. Such inpetuous and improvident would-be sportsmen, as a rule, return to their homes again with their full complement of ammunition, empty game bags and wiser heads. Remember, then, always to write before hand. Besides securing a pleasant reception and a knowledge of what you are to expect in the way of sport, the written assurance of abundant game will come in handy if that game proves to be all in the landlord's eye.

If these precautions are followed, the gentlemen sportmen will not return wholly disappointed. We use the expression "gentlemen sportsmen," because it is to such we would give instructions. It too often happens that a sporting excursion is only a pretext for a grand carouse. The men who find no higher enjoyment in the woods and fields than giving free play to their inherent boorishness, constitute a very large class of sportsmen whose incursions are reasonably dreaded by farmers and land-owners: for such an incursion means fences broken down, crops trampled upon and sometimes stock sadly peppered with shot. Besides being a pest to those whose rights are invaded, these "sporting" boors do great damage to the fair fame of the fraternity of gentlemen sportsmen. Misplaced and abused confidence is not readily restored. The professional man, who seeks a week's shooting, is rebuffed by the farmer, whose patience has been tried by former guests; and here the innocent must suffer for the guilty. As year by year the area of available sporting territory is growing more and more circumscribed, as the trespass placards appear more and more frequently upon grounds heretofore free, and as the problem of where to go to becomes more and more difficult of satisfactory solution, it behooves the fraternity of gentlemen sportsmen, on their side, to draw the lines closer and closer, to discourage and denounce aught that compromises the courtsey and fair dealing which should hold between gunner and proprietor. Remember always that if a man accords you permission to shoot over his lands you are in so far his guest. If this be not forgotten, the same grounds will be open another season, and, our word for it, the birds will be cared for meanwhile.

SALMON FISHING IN CANADA.

FIFTH PAPER.

RIVER GODBOUT, Lower St. Lawrence, July, 1879.

Editor Forest and Stream:—

My piscatorial jottings have now become mere reminiscences, for it is four weeks since I came off the river, and I am chronologically far behind time. I remember we gaffed our first salmon on the 14th of June, a 17-pounder, credited to Allan Gilmour, Esq. Seventeen pounds is a good fish for the Godbout, though we have the profile and specifications of a big one caught there, which scaled thirty-four pounds. In the beginning of the season they run large, and the average is perhaps full fifteen pounds, but as the season advances the fish diminish in size, so that the average weight for the season is reduced to not more than eleven pounds. Fifteen years ago the average was only a little more than nine pounds; so we are enabled to chronicle a steady gain. Fish of different rivers vary conspicuously in size. The Restigouche, for instance, is noted for its immense weights, forty pounds being common. The fish of the Godbout are more numerous than anywhere else, but the average is possibly the lowest of all. It is estimated upon careful observation that 50.000 salmon run into the Godbout every year. It is a fact, established beyond question, that salmon always return to the river where they were propagated, and old fishermen claim that they can tell at a glance from what river a salmon has been taken. There would certainly be no difficulty in distinguishing a Godbout fish from a Restigouche fish, if their habitat is to be determined by their weight and inches.

The fish had been in the river five days when we arrived, the guardian told us. The water was in fair stage, with good fishing all the way from the "Upper Pool" down to tide water. Salmon seldom take a fly in salt water, though occasional instances are on record of their having done so. It is not unusual, however, for them to take bait. Feeding in salt water is their business. That is what they are there for. They eat ravenously, and come into the rivers gorged with caplin, sand eels, shrimp, and other sea food. Thus they fortify themselves for their long and abstemious journey up stream to their spawning beds, and for the work of procreation. It is astonishing what great weights of flesh salmon will gather in a single season—not uniformly, but in great variation, as we find them when they come to the scales with figures ranging from ten to thirty pounds. A salmon may go down stream in summer a respectable three-pound smolt, and return next June weighing twelve, eighteen, or twenty-five pounds. You cannot tell a salmon's age by his size and weight. I incline to the opinion that they do not grow very old. They are not like the pike and the carp which live 200 years. If all salmon survived they would stock their native rivers so full in a couple of years that there would not be room for them. They would soon thrash each other to pieces in the pools, and die for want of oxygen. No: salmon are short-lived. When they have reached their full and vigorous maturity, they have first to run the gauntlet at the river's mouth of the schools of porpoises, fin-backs, and seals, which cruise off and on and lie in wait to intercept their entrance. It is no easy task to run such a blockade. Then there are the pound nets set along the coast for six miles or so, above and below the river, which take a great many, and the stake nets and drift nets set in and across the river, which capture more than all the rest together. And after the salmon have evaded all these, and worked their way for a hundred or two hundred miles up the tortuous and rapid stream to headwaters, many die of exhaustion, and many more in the final effort of propagation. The proportion which returns to the sea is small. But new seed has been planted above, and a crop of salmon, peel or parr, which was planted the previous year, is still in the river and thriving, safe from enemies in the ocean below; while the smolts, which have been on probation for two years, are now matriculants on their way to salt water to gather flesh and strength, and anon to take their turn at the spawning beds. Fortunately, in the Godbout there are no nets or artificial obstructions to the free run of the fish.

What living creature can be imagined more beautiful

than a fresh-run June salmon, with his plump and shapely form, broad shoulders, keen bright eye, and armature of silvery scales, resplendent with the sparkling drops of the limpid river! The females are the most comely, and can readily be distinguished by their shorter heads. No wonder they frolic and leap for joy, when having escaped the great dangers of the passage, they find themselves in the clear, cool stream. What a change from the turbid waters of the ocean! Here there is nothing to vex or molest. There are no parasites, no devouring enemies. How they plash in the refreshing element, and toy with moving objects, which hover upon or over the surface; They are as keen as a kitten after a trailing bunch of feathers, and as easily tempted to the chase, only we must be particular how we make up the bob and present it to notice. Salmon will not rise to a fly if it be tossed clumsily and violently, but they run off affrighted, just as a kitten would run under a table in like circumstances. It is not the instinct of hunger which impels to the pursuit, for salmon do not eat in fresh water, but live on their accumulated flesh. With trout it is different, for they are constantly feeding, and it accounts very much to the angler whether they be hungry or not at the time of fishing.

I do not wonder that the soul of the salmon angler is in full sympathy with the leaping fish around him, and that he, too, leaps. Each is happy in his new element, like a butterfly just burst from its case. The woods and the air and the streams are everywhere vocal with natural sounds, and so the angler shouts and sings in unison. Fatigues do not enervate him; profound slumbers bring no lassitude; every drawn breath invigorates; and what he eats he grows upon. Day after day, for weeks together, will he go forth with his rod and gaff, and never cloy of the sport. There is an exhilaration about it which seems never to diminish or flag. I confess it is not wholly thus with me in these days. I like sport of any kind, but only in moderate quantities. A very little satisfies—a few fish, a few birds, or a single saddle. For this reason I took down my salmon rod but four times out of nine fishing days spent on the Godbout. I was on the river eleven days, but we never fished on Sundays. My score was nothing to boast of—two fish one morning, and one on each of two other days, but I was as well contented as if I had caught more. I enjoyed my rambles, my writing and sketching, and watching others fish. However, fish did not begin to take well until later in the season, so that the joint score of five rods was but sixty-two fish, as I have already written*. On my first day's outing I caught a kelt, but kelts don't count on our scores. They are never gaffed, but are returned to the river as soon as they can be detached from the hook.

Perhaps some readers will be interested to know what a kelt is. A kelt, then, is a spent salmon which has remained in the river all winter, and is now on his way to the sea to recuperate. He belongs to a late run of fish which are supposed to spawn in the higher pools in January. He is as disgusting and pitiful an object as can well be imagined. Place him side by side with a fresh-run salmon of the same length, and mark the difference in shape, weight, and appearance. Why, he looks almost like a pickerel. His stomach has shrunk entirely away, and he seems to be nothing but head, back, and tail. He has wasted to half his original weight. Whatever scales he has are very minute, being not more than one-eighth the natural size. Last February, when he became emaciated, his skin hung in loos folds and wrinkles, and the scales all sloughed off. These small ones are a new growth, and by next September they will have obtained their full size again. How he has starved for so long a time and managed to survive, is a marvel. And yet, you see, there was game enough left in him to take the fly in good style. Noble old Roman! As many as three dozen of these spent fish are often taken in a single season's rod fishing, and constitute a very serious nuisance to anglers. It is very disgusting to be obliged to waste a half hour on a lively kelt.

I caught my kelt in the "Glassy," which is accounted one of the best middle pools in the river. He afforded fine sport, though I was not aware of his quality and character until I brought him to beach. Comeau, the gaffer, however, detected him almost at the first, and I confess I was rather astonished, at the finale, to see him jump into the water, knee-deep, and scoop him out on the shore with his hands. In a twinkling the hook was out of his mouth and the fish back in his native element, before I had time to realize that I had caught him at all! This "Glassy pool" is one of the most quiet and beautiful of all the pools. It is perhaps a hundred yards in diameter. At its very head is a charming little islet, capped with evergreens, which divides a most turbulent and angry rapid, which comes surging into the pool. No boat could ever run these rapids, and they must be quite a formidable obstacle to the ascent of the salmon. For this reason the salmon are sometimes found here in large numbers, though the present season was too early for them. The outflow of the pool was more peaceful, but still a respectable dash of broken water, down which it is exhilarating to run a boat. One side of the pool is flanked by a wooded islet (twin to the one just above), and the other by a precipitous ledge of rock, fringed with evergreens, and an abrupt hill, rising above the ledge, and clothed with a primitive forest. At the foot of the island an immense mass of huge boulders fills one-half the channel. Looking up the river from below the pool, the vista is one of the wildest and most charming imaginable—the vivid green of the mantling forest enclosing the sweeping rapids, and the blue sky and fleecy clouds overarching from hill to hill. The two islets gem the middle foreground, while the boulders and the ragged ledges add most striking features to the picture. Mr. Gilmour, my host, who is the owner of the river, has a superb painting of this landscape, made by Sandham. Nothing can be more characteristic of this northern scenery than these lofty, firglad, towering hills, which are almost mountains, and the white churning foam of the ice-cold river, leaping down its rugged channel-way. A boat is always kept here exclusively for this pool. We cast from the boat, and having fastened a fish, push for the pebbly shore of the island as soon as possible, and kill him there. Nothing but bad management or defective tackle ought to lose a fish in this pool, which is reasonably large for ordinary play; and if a fish should succeed in getting into the lower rapids, he can be followed down the shore and gaffed below. Arcadia has no pools more perfect than this. The most fastidious angler might here find his Elysium, and rest content. Most of the pools above are of quite a different character. When you hook a fish in any of these you must fight him with all your might from the start to the finish. If you yield an inch, the captive gets into the rapids, and is captive no more.

We take things easy at camp. There is no stealing a march on your comrades by sneaking away to the river at earliest dawn. Indeed, it is against rules to fish before breakfast. We have breakfast at eight o'clock, and a good breakfast, too; oat meal "parritch" and fresh milk (Comeau, the guardian, has a cow), some ham and eggs, or broiled salmon, fried potatoes, a cup of coffee or tea, and the like. All rods and outfits have been put in readiness the night before; the cook has each crew's luncheon prepared; the boats are sponged out, and the setting poles, gaffs, and paddles handily bestowed; the gaffers are all at their posts; and so there is no time lost in getting away. As a rule an early start is no object, for each daily run of fish takes place with the tide, and the tides only serve once in a while. One after another each boat gets away, and the camp is left alone in charge of the cook, sole representative of the red flag which flutters and flouts from the tall staff on the tower. Who shall tell how much good company that waving flag is? It is an index of life and occupation in camp, and a perpetual beacon, guiding star, comfort, and friend. It is the last object we see, departing, and the first, returning. It waves us a final adieu, and is the first to welcome. No matter what nation's emblem it is, for the nonce it is our refuge and home. Long may it wave!

One boat drifts slowly down stream with the current, a drag at its stern, checking its progress. It has been assigned to the lower pools. A second poles up along shore to the foot of the first left hand rapid, which is the outflow of the "Belle," and the angler disembarks and walks up along the pebbly shore of an island to his proper casting ground. On the opposite side of the island is the companion pool of the "Belle," called the "Kate." These pools are always assigned to one rod, when there are four rods on the river: and beautiful and well-named they are. Sprightly, sparkling, and vocal with the music which thrills the angler. The camp is always visible from these pools, only a quarter of a mile distant. The two other boats cross the river and push for the foot of the "Kate," where they are beached, the occupants taking the path through the woods to the centre and upper pools. This path is no blind trail, tangled with roots, obstructed with stones and soft with miry spots, but a well-beaten track, whose irregularities of surface have carefully been removed; chasms and swampy places have been bridged with hewn logs: hand rails have been stretched along the precipitous ledges; huge rocks that obstructed the passage have been blown away; sides of the hill have been dug down; hollows have been filled up with earth. Here and there along the route sparkling springs, cooled by the ice which has not yet melted, gush from rocky clefts, and empty into cups which have been placed there for grateful service to the thirsty. As the banks are steep, the path, for the most part, is many feet above the river bed and within sight of the river. Sometimes it buries itself in the thick spruces and balsams, and betimes winds down to the very edge of the water. The view is constantly changing as we pass along, not only from placid pool to impetuous rapid, and from impending crag to sloping shore, but each rapid has its constantly varying moods and features, and each separate landscape some new point of view. In a dark retreating cleft on the opposite side is a large mass of clinging ice, which it will still take weeks to melt: and oh! how refreshing it is, when we are hot and moist with our long tramp, to turn and gaze thereon. More forbidding was the wintry storm which whirled the driving snow into the chasm, and deposited it there. Occasional patches of ice are seen all along the route. At the "Indian pool" there is another boat always on duty; and here those must cross who wish to fish the pools above. I fain would take my readers there at once, and review the sport which we so much enjoyed last June, but I find my space is shortening, and despite my promises last week to give them some salmon fishing in this letter, I am constrained by circumstances to defer it to my next. I will then begin at the "Upper Pool" without preliminary chin-music, and fish down, describing my own exploits, and noting what the other rods have done below.

HALLOCK.

*I have since learned that the aggregate score to the 24th of July was about 200.

The Rifle.

LONG RANGE TELESCOPES.—Perhaps the strongest and finest telescopes in the market are those imported by R. Merrill's Sons, 179 Water Street, New York. The rifle range telescopes are made especially to their order in Paris, and exceed anything in their power and lightness we have seen. At a distance of 400 feet, the time on a common watch dial can be distinctly read, a fact of which any one can convince himself by paying a visit to the establishment mentioned. Messrs. Merrill also keep in stock a large variety of spy-glasses, vinoculars and nautical instruments generally, charts, binnacles, pocket compasses, drawing tools, and in fact everything that goes into the outfit of the navigator's department of anything from a frigate down to a five ton yacht can be found at their place, and parties in need of an outfit in this line can do no better than by applying to them. Goods of their own make and importation they always guarantee. Sportsmen and yachtsmen alike can be suited.

THE ELCHO SHIELD MATCH.

"The 18th contest for the Elcho Shield came off on Wimbledon Common July 24. A cablegram dated from the range announces that the Scotch team won with a lead of eleven points over the Irish team, while the Englishmen were twenty-three points behind the winners." This makes the fifth victory for the Scottics, their previous success being in 1864, 1866, 1869 and 1874, while the Irish team took the shield in 1873 for the first time, and since then were victors in 1875, 1877 and 1878. It looked at the outset as though the Irish were to score another victory, for the team included such strong and steady shooters as the Rigby cousins, W. and John, Lieut. George Fenton, Coghlan, Dyas, McKenna, Johnson and Young, with Millner in reserve. The men were selected by competition at the ranges of the Louth Rifle Association at Dundalk on the 2d and 3d of July, and capital scores were then made, though the weather was very bad. Lieut. Geo. Fenton then headed the list, and for general excellence took the great silver trophy presented to the Irish Rifle Association by the American team on their way to Dollymount in 1875. The Scotch team had been selected at Cowglen, and had abundant practice together, and comprised Capt. Thornburn, Messrs. Fletcher, Boyd, M'Vittie, J. G. S. M'Kenzie, M'Kerrell, Sergt. Caldwell, and Corp. Caldwell, with Messrs. Johnson and Dunlop as reserves. While the English team, comprising such marksmen as Lieut.-Col. Sir Henry Halford, Mr. H. S. W. Evans, Capt. Phillips, Lieut. W. H. Toller, Mr. A. P. Humphrey, Sergt-Instructor W. H. Gilder, Lieut.-Col. Fenton, and Mr. T. Turner, had been chosen from the English Eight Club at Sandwell Park Ranges, near Birmingham, on the 11th and 13th of June. There were men on all the teams who had visited America and had learned somewhat of the American system in team shooting. Gilder in the English team, used a Sharp rifle, and Humphrey shot with a Remington rifle.

The day was not a good one for shooting, but the men did not shoot well together, and at the close of the 800 yards the Irishmen were leading by a few points, though the teams were close enough together to make the race anybody's. At 900 yards the leading team increased their advantage still more, while the Scotchmen did not hold their own, the figures standing: Ireland, 1,018; Scotland, 1,008, and England, 999. The weather was now more to the liking of the men from above the Tweed, and while the Irishmen have always accounted themselves best for the 1,000-yard range, they got the poorest score there, averaging but 59½ in the possible 75 per man. The Englishmen picked up some, but not enough for the Irish team, who held second place, while the Scotch team took the shield by 1,505 points in the possible 1,800. This is the best score Scotland has ever had and better than anything shown by England, but Ireland has on three occasions beaten it. The table shows the scores made for the shield since 1874, when the target now in use with the three-foot circular bull's-eye came into use. Before that time the square bull's-eye was employed and the scoring was different. Each man fires 15 shots at 800, 900 and 1,000 yards, making 45 in all per man, without sighting shots, making a possible 225 per man, or a team total of 1,800. The best Elcho Shield score made at Wimbledon was by the Irish team in 1878, when 1,610 was scored.

THE ELCHO MATCH—WIMBLEDON.

		800 yds.	900 yds.	1,000 yds.	Total.
1874	Scotland	504	488	445	1,437
	England	483	422	460	1,405
	Ireland	466	473	440	1,378
1875	Ireland	502	527	471	1,500
	Scotland	498	511	494	1,503
	England	515	504	483	1,502
1876	England	489	490	484	1,463
	Scotland	504	503	451	1,458
	Ireland	479	449	455	1,383
1877	Ireland	543	517	508	1,568
	England	513	473	473	1,464
	Scotland	520	470	449	1,439
1878	Ireland	543	535	532	1,610
	England	534	521	505	1,560
	Scotland	532	523	497	1,552
1879	Scotland			497	1,505
	Ireland			478	1,491
	England			483	1,432

The Creedmoor scores, which may be compared with these, are those for the Centennial trophy in 1876 and 1877, and the walk-over match in 1878. The conditions of men, distance and number of shots are precisely the same. In 1876 the weather was changeable and the scores ran ir-

regularly, while in 1877 on two very hot days, the clear sky and freedom from annoying winds enabled each team to do its very best, and magnificent scores were piled up, but in September, 1878, the men from Boston without any previous team practice made a very good showing, but on the second day were compelled to stop by rain, and the individual score of J. S. Sumner in that match of 221 in the possible 225 is the best on record. The American record shows :

THE "PALMA" MATCH—CREEDMOOR.

		First Day.			
		800 yds.	900 yds.	1,000 yds.	Total.
1876	Scotch	535	528	523	1,586
	Irish	535	524	523	1,582
	American	550	518	509	1,577
	Australian	531	324	490	1,345
	Canadian	521	476	493	1,490
		Second Day.			
	American	525	515	509	1,549
	Irish	502	485	535	1,522
	Australian	522	495	501	1,518
	Scotch	535	562	490	1,477
	Canadian	492	465	476	1,433
		First Day.

1878.	First day	563	553	544	1,660
	Second day	584	544	448*	1,576

*17 shots short.

MASSACHUSETTS—*Boston, July* 16.—The thirteenth contest for the *Spirit of the Times* trophy at Walnut Hill, today, opened with a fine weather opportunity. The light was almost perfect, just enough of that peculiar gray which always gladdens the heart of the expert marksman; the atmosphere was also very clear, and the wind gave no trouble. The heat was intense, the thermometer being 100 in the shade, and the men suffered considerably from its effects. Before the shooting was finished at 900 yards the wind suddenly changed, but it was easily handled by the riflemen, the only serious drawback being elevations, the great heat producing this effect, so that the men all shot high. At the long distance of 1,000 yards the rumbling thunder foreboded the coming storm, the light became bad, and the smoke from the rifles hung to the ground, affecting good sighting. The proper cleaning of the guns had to be abandoned in many cases, and the men shot in rapid succession, and hardly had the last shot been fired when the storm came upon them with great violence. The following summary gives the record :

J. F. BROWN.

800	5	5	5	5	5	5	5	5	5	5	5	5	5	5	4	4—71
900	5	4	5	5	5	4	5	5	5	5	3	5	5	5	4	4—72

W. M. Ward	64	62	62	188

MASSACHUSETTS—*Walnut Hill Range, July* 26.—The threatening weather to-day prevented a large attendance of spectators, and a considerably less number of riflemen than usual were present at the firing points. Rain falling at intervals throughout the shooting so interferred with the comfort of the marksmen that the two new short-range matches were postponed. The light was good, but the wind was execrable, holding unsteadily to the northeast during the major portion of the day, and so chilly that no pleasure could be had in fighting it. The 500-yard off-hand match, the only event of the day, had 13 entries, seven rounds per man :

J. H. Williams	5 5 5 3 4 5 5—32	H. Tyler	4 4 4 3 2 5 3—24
B. Edward	4 4 3 3 5 4 4—27	B. J. Page	3 0 2 4 5 5 3 2—19
W. E. Guerrier	4 4 5 4 3 5 2—27		

MASSACHUSETTS, BELLEVUE, *July* 26.—The Raymond Sporting Club at 200 yards, to-day scored as follows :

E. Bennett	4 5 4 4 4 5 5 5 5—46	W. H. Emerson	1 5 4 1 5 4 5 5 5—34—12

MASSACHUSETTS—*Hopkinton, July* 23.—The shooting club held a shoot at their grounds last Saturday, the following being some of their best scores :

W. G. Stone	36 out of a possible 40	
C. Ward	31	" "
F. L. Tucker	29	" "
Fred. Wood	29	" "
E. Temple	15	" "
G. W. Smith	11	" "
O. L. Brown	9	" "
James Braithwait	9	" "

BELLEVUE RANGE—*Medford, Mass., July* 28.—The regular competition in 200 yards, or Sharp's Rifle Match of the Medford A. R. A., occurred Wednesday afternoon. A heavy southwest wind blowing, with occasional showers, made the scores rather slim :—

C. H. Russell	5	5	5	4	4	4	4	5	4	5	4—45					
Re-entry	5	5	3	4	5	4	5	4	4	4	4—43					
R. Sawyer	4	4	4	4	5	5	4	4	5	5	4—44					
Re-entry	4	5	3	5	5	5	4	4	5	4	4—44					
D. D. Harrison	4	4	5	4	5	4	4	5	4	4	5—44					
G. W. Hallington	4	4	5	4	4	4	4	5	4	5	5—43					
F. E. Gardner	4	3	5	3	3	5	4	5	5	4	5—41					
Re-entry	3	4	4	4	4	4	3	4	4	4	4—38					
A. J. Greene	5	3	4	5	3	5	5	3	3	4	4—39					
L. F. Graves	4	2	2	2	2	2	3	2	3	5	5—25					

There was no shooting at the 500 yard range Saturday on account of severe rain storm.

—The Raymond Sporting Club made some good scores at Bellevue on Friday. E. Bennett leading with a good score of 46 out of possible 50 :—

E. Jennett	4	5	4	4	4	4	5	5	5	5—46						
D. Kirkwood	5	4	5	4	4	4	5	5	5	5—46						
S. S. Bennett	4	5	5	5	4	4	5	5	5	5—46						
R. F. Shaefer	5	5	4	4	4	4	5	5	5	4—45						
H. Max	44										L. E. Johnson	36				
W. H. Emerson	42										V. L. Secke	37				
J. P. Cross	40															

At the glass ball practice of the Raymond Sporting Club, Friday, at Bellevue Range, good scores were made. Schaefer leading with a perfect score :—

	Single	Double	Rotary	T'l.
R. F. Schaefer	10	10	10	30
L. E. Johnson	10	10	9	29
G. B. Blanchard	10	9	9	28

SCHUETZEN NOTES.—Messrs. Shoverling, Daley & Sales offered one of their rifles to the leading team, at the northwestern Schuetzen Board at Chicago, and it fell to the team of the Manhattan Rifle Club of this city. The first contest for its individual possession took place the 16th inst., at (Union Hill, Schuetzen Park). 10 shots at the ring target at 200 yards, were fired as follows : L. Vogel, 200 rings ; Wm. Klein, 200 rings ; Wm. Hayes, 193 rings ; John Roschen, 177 rings ; the further two shooting off the ties became ties again, each one making 198 ; at five shots L. Vogel became victorious, making a score of 100 rings against Wm. Klein's 97 rings.

—The Independent New York Schuetzen's, under command of Capt. F. J. Diehl, are also early risers. They hold their practice shooting every other Thursday at Hartung's Park, near the bridge on Harlem aiver in the morning from 7 to 10 o'clock.

—All riflemen are cordially invited to the shooting of the New York corps, which takes place the 4th, 5th and 6th of August.

CREEDMOOR—*July* 23, 1879.—The New York Rifle Club met to-day to shoot for the badge for 500 yards shooting, off-hand, which was presented to the club by J. B. & H. D. Blydenburgh, to be shot for under the following conditions : 10 shots, 500 yards ; position, off-hand. The member winning the badge the greatest number of times will become the owner of said badge. Six of the best scores stood :

A. J. Howlett	4	4	4	4	5	4	3	5	5	5—43
Fred. Alder	2	3	5	4	5	4	5	3	3	2—36
V. Daly	3	4	5	3	5	5	4	2	0	3—34
N. O'Donnell	2	5	3	3	4	3	4	3	4	2—33
E. B. Barker	4	4	3	4	5	2	4	4	0	3—33
W. H. Dunlap	2	3	5	3	3	0	3	0	4	3—26

Mr. Howlett winning the badge for the third time, he having won it twice before with the scores of 39 and 44 successively.

They also shot at 200 yards, off-hand, at the word of command. In consideration of the growing popularity in rapid shooting, and as a memento of his Eastern visit, Mr. Charles E. Blydenburgh presented a badge to the club to be shot for under the following conditions :—

Distance, 200 yards, off-hand, *at the word.*

Rounds, 10, the scorer is to call, "Are you ready?" shooter, "Ready." The scorer then calls "fire"—"*one,*" "*two,*" "*three,*" looking at his watch and giving 5 seconds from the word "*fire*" to "*three,*" both inclusive. If the competitor does not fire *within the time*—namely, between "*fire*" *and* "*three,*" his shot is *counted a miss.*

In all cases the butt of the gun must be held below the shoulder, until the word "*fire*" is called.

The badge to be worn three (3) times, to become the property of the winner.

Winners once, handicapped (1) one point, twice (2) two points. *Ties to be shot off shot for shot.*

Open only to members of the N. Y. Rifle Club.

Six members to enter to fill the match.

The match will be open at any time when six members are at the firing point.

Any member winning the badge once will be handicapped one point ; twice, two points ; three times, three points, and so on.

The badge will be shot for every other Wednesday, between May 14 and November 1, 1879.

The member winning the badge the greatest number of times will become the owner of said badge.

In case of ties on final count, the competitor making the greatest number of points in all, his winning scores to win.

All other conditions according to the rules of N. R. A.

Yours, etc,
J. B. & H. D. BLYDENBURGH.

The best scores stood :—

N. O'Donnell	4	4	4	4	5	4	3	4	4	4—40
A. J. Howlett	4	4	5	4	4	4	4	5	3	4—40
J. S. Conlin	4	4	5	3	4	4	4	4	4	4—40
W. H. Dunlap	4	4	4	4	5	4	3	5	4	4—41
J. W. Mangam	4	4	4	4	4	4	4	4	4	4—40
V. Daly	3	4	4	5	4	3	4	4	4	4—39
Fred. Alder	3	3	4	3	4	3	3	4	4	5—36
E. B. Barker	3	3	4	4	5	0	2	4	4	4—33
W. H. Cadwell	3	3	0	4	3	4	4	3	4	3—31

Mr. Dunlap having won the badge twice was handicapped 2 points, which reduced his score to 39. Mr. Mangam won the badge once, was handicapped 1 point, making *his* score 39. In shooting off the tie on 40, Mr. O'Donnel won with the following score : N. O'Donnell, 4 4 5 ; A. J. Howlett, 4 4 5 ; J. S. Conlin, 3 0 0.

LONG ISLAND—*Jamaica.*—At the weekly meeting of the Jamaica Rifle Club on their range July 19, some of the members entered into a spirited contest for the "High Score" badge, at 200 yards, off-hand, Creedmoor rules, with the following result :

Theodore Rogers	5	5	5	5	5	5	5	5	4—49
Jno. M. Crane	5	4	5	5	5	3	4	5	4—44
Chas. J. Stewart	4	5	4	5	4	4	5	5	4—44
Geo. A. Hilliard	4	5	4	4	5	4	4	4	4—42
Case	4	4	4	5	4	4	4	5	4—42

Mr. Rogers holds this badge until his score of 49 is beaten ; and, if not beaten, it will become his property at the end of the season. Mr. Crane has held it for some time on a score of 46.

NEW YORK—*Ogdensburg, July* 16.—An international small-bore match, on a small scale, but a very interesting match withal, finished on the Rideau range, Ottawa, today, and gave a victory to the State team against the Dominion riflemen. The weather and wind were fairly average, while shooting at 800 yards and 1,000, but very bad, indeed, at times, at the 900 yard range, a heavy thunder storm stopping the shooting for an hour or more. It being late when finished at 900 yards, yesterday, it was agreed to shoot the 1,000 yards at 7 A.M. the next day. The Ottawa Club were principally armed with rifles, made by Mr. Booth of the Ottawa team ; are patterned after the Remington, same breech action and all, except as to the barrels. They also used one English muzzle loader, a Metford, and a Remington. The Ogdensburg Club used Ballards only. The scores ran 15 shots per man, at each distance :—

LEE.

GOLD HILL, *Nevada, July 13—Editor Forest and Stream.*

The target shooting at the Turn Verein picnics at Treadway's Park, Carson, to-day was one of the main features of the day, and again resulted in victory for the Sarsfields of Gold Hill. The respective scores were as follows—which are fair, considering they again had a heavy wind from the left. On August 10th will be held another shoot at the Caledonia picnics.

SARSFIELD GUARD.

W. S. Haskins	4	4	4	5	4	4	5	5	5	4—44
T. Gallagher	4	4	4	4	4	4	5	3	4	5—41
J. D. Channell	5	4	4	3	8	3	5	5	4	4—40

BEN.

THE NEVADA BADGE.—General Wingate, by circular No. 3, from the office of the General Inspector of Rifle Practice, calls the attention of the N. G. S. N. Y. to the contest for the Nevada Badge.

THE BALLARD RIFLE ABROAD.—The Ballard rifle has fully maintained its reputation abroad, having done excellent work in the Wimbledon matches. In the hands of Mr. W. M. Farrow it won the great Prince Albert contest, and other victories were scored to its credit.

Editor Forest and Stream:—

CHALLENGE.—A member of the South Brooklyn Rifle Club is prepared to shoot a match with any man in the United States for a purse of from $25 to $100, distance to be 200, 300 and 500 yards; off hand, according to the rules of the National Rifle Association, the match to come off within three weeks from date.

Man and money ready at Glover's rifle gallery, No. 245 Court street, Brooklyn, L. I.

Brooklyn, July 29th.

Game Bag and Gun.

GAME IN SEASON FOR AUGUST.

*Woodcock, *Philohela minor.*
Black-bellied plover, ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe, or dwitcher, *Macrorhumpus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flaripes.*

*In Vermont, New York, and Oregon oly.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15.

THE BOGARDUS SIGNAL SHELLS.—Captain Bogardus has patented a signal shell which may be fired from an ordinary gun like any cartridge. It is projected into the air some 200 feet or more, and when at its maximum height it bursts into vari-colored lights and presents as brilliant a display as the ordinary Roman candles used in pyrotechnics. The signal shell is placed in a blank gun cartridge and a time fuse regulates its explosion. The utility and beauty of these new fireworks are sufficiently manifest. They can be used for any of the numerous purposes for which signal fireworks are used on land and water. Their advantage to a sportsman who is lost, or who wishes to communicate with his friends from a distance, will be readily perceived. Besides, they afford a cheap and convenient pleasure to those who wish to improvise a pyrotechnic entertainment in town or country; and we can readily imagine that the time may come when persons who are isolated from places where fireworks are sold will keep a supply of these on hand for occasional or special service. Last Thursday Captain Bogardus gave an exhibition on the grounds of the Manhattan Beach Company, at Coney Island, when he fired off 500 of these shells in the very short space of twenty-four minutes. The display was very brilliant and satisfactory. It may be worthy of mention that these shells were fired from two guns only, which were used without being cooled in water, as is customary. Sportsmen who understand how rapidly fired guns will heat, will appreciate the inconvenience of handling them on this occasion, gloves or no gloves.

BOGARDUS' MOVEMENTS.—The rain interferred very greatly with the intended exhibition of Capt. Bogardus and his son Eugene at Manhattan Beach. The fireworks show was given on the evening of the 24th, the captain putting up 500 meteors in 24 minutes; and on Saturday afternoon Eugene broke 96 out of 100 glass balls thrown up after the style of Carver. Yesterday the Captain gave an exhibition at Saratoga. To-morrow he shoots at Elmira, and on Saturday at Binghampton. He will then start for home, to be present at the match between Jewett and Buzzard on August 7.

Before leaving the city the Captain issued another of his pronunciamentoes as follows:

NEW YORK, JULY 26, 1879.

Since my arrival in New York I have been informed that a challenge has appeared from Mr. "Wallace," of England, to shoot me a pigeon match. I have not seen such a challenge myself and I think my friends who say they saw it are mistaken. However, if such a challenge has been made, I beg to say that I will make a match with any English gentleman or any man in the world to shoot at 100 or 200 pigeons, any rules, single or double, for the sum of $1,000 or $10,000 a side. If this is accepted in England I will take $250 for expenses to shoot there or I will give the same for the match to be shot on this side of the Atlantic. This challenge will remain open for three months from date.

I have twice visited England to meet the expert shooters there, and paid my own expenses. Now, I think some of them ought to return the compliment and come here. If any man from England visits this country and shoots me American rules, as I shot English rules when there, I will bet $2,000 to $1,000 that I defeat him. Further, I will bet $1,000 that there are no two men in the world that can do what my son Eugene (age, fourteen years) and myself can do with shot gun, rifle and pistol, or I will back Eugene against any young man in the world, under twenty-one years of age, to shoot 100 glass balls each with rifle, shotgun and pistol, for $100 or more a side. A. H. BOGARDUS.]

"THE MOST BRILLIANT ACHIEVEMENT AT PIGEON SHOOTING ON RECORD."—This is what the New York *Herald* terms D. C. Zellner's feat of killing forty birds straight, at Bergen Point, N. J., last Friday. The achievement was a brilliant one, but not the most brilliant one upon record, simply because there are upon record others which are more brilliant. For instance: ten years ago, in 1869, at Chicago, Bogardus killed 100 birds in 100 shots; and ten years before that Mr. William King, at St. Louis, April, 1859, killed 44 birds straight. Nothing is more common than to herald a memorable performance as the most remarkable, when in fact, it has been suppassed a score of years ago.

CARE IN LOADING SHELLS.—A Wisconsin correspondent writes: "Carelessness is often as much a matter of habit or the result of recklessness as it is of inexperience. With this prelude I desire to relate, for the benefit of the careless, a little experience of my own. I had been hunting and attempted to fire three or four brass shells, the caps of which would not explode. They were flat caps. I had grooved out a block of wood two by four inches, and about four inches long, in which I laid shells, the open end pressing against a piece of round leather and an iron bolt, fitted so that when a powerful screw was turned with the right hand it pressed on the cap. Thinking these caps were not on far enough, and holding the block in my hand, with my thumb keeping the shell in place, I gave a couple of turns to the handle of the screw with my right hand. I had removed the shot, but there were three drachms of powder and two wads on it still in the shell. I was seated with the machine on my knees and my face over it. The shell exploded, and as soon as the smoke cleared away, there was nothing in my hand but the handle of the screw. I could hear nothing for a few seconds, and could see nothing of the shell or the rest of the apparatus. With the exception of a blood blister on the thumb which held down the shell I was unhurt. Some of the brass was imbedded in a door on my right, but where the block of wood went, and the rest of the concern, is a mystery now. My escape from injury was a narrow one. This should be a warning to all that the care with which one begins the use of a gun should never relax for an instant under any circumstances. R. W. H.

THE CLOSE SHOOTING HOBBY.—*Cairo, Ga., May 30.—Editor Forest and Stream:*—If the American people have a single pre-eminently distinguishing characteristic, it is the gusto with which they ride hobbies. The hobby just now is close-shooting guns, and from the impetus it has already received, it bids fair to be ridden to death. In your issue of 22d, "Joy," of Michigan, steps to the front with a pattern he made with a Parker gun, which I think reaches the climax I have been expecting for several months. Such a gun as "Joy" boasts of would be almost worthless in the field, for several reasons. I take it that the great desideratum in a gun is its excellence in bringing down the game for which it is adapted, taking everything into consideration.

Take "Joy's" pattern for a basis, and I think sportsmen will see the force of my position. He put sixty No. 7 shot in a six inch circle at thirty-five yards. Diminish circle and pattern in equal ratio, and the same charge would put from fifteen to twenty No. 7, or twenty-five to thirty-five No. 8 or 9 pellets in a quail, snipe or woodcock at same distance. One of two things would certainly happen to the sportsman who used such a gun in the field; he

would either miss his bird entirely, or reduce it to such condition as to be worthless as a bag trophy.

After an experience covering several years on game—I do not shoot at targets much—I have found that what the field sportsman needs is a gun that can be relied on with reasonable certainty to put six or eight No. 9 shot in a three-inch circle at forty yards, with penetration to correspond with pattern.

In this connection I will respectfully commend to the consideration of some of the correspondents of FOREST AND STREAM, the advice given by Lord Chesterfield to his son on the practicability of telling the truth even when opposed to reasonable probability, or when its concoction is beyond the capacity of the hearers. NEMO.

Quogue, Long Island, July 21.—Why is it that in all the letters of the watering-place correspondents we never hear anything of the glories of Quogue?

Situated as it is at the extreme eastern end of the Great South Bay and the western end of the Shinnecock, it is a place visited by all the coolest breezes; all through the melting heats of the past week the fortunate sojourners in this favored spot have slept under blankets, and have not seen the mercury as high as 80 deg., even at noon.

Bracing, cool, and delightful as we find the atmosphere, that is Quogue's least attraction. Think of starting out over the flats of the Shinnecock, staying an hour and a half and coming in with one hundred soft-shell crabs, all large and fat. The regular flight of snipe has not come in as yet, but there are always a few unwary birds that the early sportsman bags. By starting out betimes one can always come in with six or eight yellow legs and dowitch before breakfast. In August the birds are generally very abundant, and old baymen predict fine sport for that month. Almost any of the grounds are good, and decoys may be borrowed from every man you meet. You only need a gun and ammunition, with an unlimited stock of patience, to be sure of something in the shape of game. Another necessary is a pair of old shoes, which sportsmen will find much more comfortable than rubber boots at this season of the year. But the crowning glory of Quogue is its beach; all the hotels and boarding-houses are within easy walking distance, and the beach when you reach it is superb, the bathing unsurpassed. There is not a great deal of dress and display, but I do not know so delightful a summer resort for a sportsman to take his family with him, as the hotels are all good and the prices reasonable; and the shooting, the fishing, the crabbing, and the bathing are all near the houses and near each other, which is an important fact to those who have only a limited holiday. FRED.

VIRGINIA—*Lexington, July* 23.—The prospect for quail shooting is more promising by far than for years. Numerous pairs and nests in abundance, and without some very dire and unforseen disaster, there can but be a superabundance this fall. C. P. T.

MASSACHUSETTS—*Hyannis, July* 26.—A Sportsman's Club was formed here July 18, under the name of Cape Cod Sportsman's Club, with Dr. Peter Pierce as President; Chas. H. Nye, Esq., Vice-President; S. A. Hinckly, Secretary and Treasurer, and Wm. Watts, Esq., and Capt. B. D. Baxter, with the officers, the Board of Direction. We hope to announce a large membership, and to give a good account of prosecutions of violators of fish and game laws. Quail and partridges promise to be plenty.

MASSACHUSETTS—*Marlborough, July* 21.—To-day, at the house of the Marlborough Sportsmen's Club, there was a 20 ball match, open to the club members and invited guests. From out of town, there were several Westborough and Natick shooters. The regular club prizes were also shot off in the same string. This was the score:

N. S. Chamberlain	16	W. H. Leighton, Jr.	17
H. W. Eager	18	A. D. Johnson	12
F. B. Gleason	18	H. M. Rice	9
E. L. Collins	8	G. N. Smalley, W	13
L. Lanois	5	G. B. Clark, W	13
D. S. Mooney	12	W. B. Rice, W	15
T. J. Beaudry	13	M. Brigham, N	13
F. A. Marshall	17	— Harrington, W	13
O. B. Bush	19	O. H. Gates, W	14
H. S. Fay	14	— Jackson, W	6

First special prize, Brush; Second, Eager; Third, Marshall; Fourth, Chamberlain.

Club prizes of five pounds powder won by Eager in first and Brush in second class.

MASSACHUSETTS—*Milford, July* 19.—Regular weekly glass ball shoot; 20 balls, 18 yards, screen trap:

G. Whitney	16	D. F. McIntire	11
W. Spary	16	W. R. Dewitt	11
C. White	12	C. B. Fletcher	10
J. S. Martin	15	T. Wilkinson	10
C. S. Evans	12	R. Best	7

QUILL DRIVER.

FOUNTAIN GUN CLUB—*Brooklyn Driving Park, L. I., July* 23.—Ninth contest for Weaver gun; 5 ground traps; handicap rise; 80 yards boundary; club rules; ties shot off at 3 birds each; second tie, miss and out:

	Yds.		Killed.
C. Wingert	31	111111*111111111	14
J. White	23	11*111111111110	13
A. Carlin	33	11111101111110	13
Mr. Shirden	23	11011111110	9
Mr. Slane	27	111111*1*1	8
Mr. Smith	27	11111*110	8
Mr. Lenken	23	1111101011	8
Mr. Haas	15	*1111*1	5
W. R. Hunter	21	00111*1	4
Mr. Chase	25	00111110	4

NEW YORK—*Ithaca, July* 27.—The Forest City Shooting Club dedicated their club house the 25th with a glass ball shoot and clam bake. The following is the percentage of balls broken by members present:—

A. H. Fowler	84	L. Colegrove	661
S. R. Tisdale	80	A. J. Drake	661
Geo. Coy	724	Orgniceister	65
Ed. Van Dorn	70	T. Debelle	60
F. C. Sherman	70	J. McIntosh	60
W. Scott	70	Ed. Clark	60
W. H. Willson	70	J. Coryell	50

"RARO."

NEW YORK GUN CLUB—*Bergen Point, N. J., July* 26.—Match at 30 yards; 80 yards boundary; 5 traps, 5 yards apart; Hurlingham rules:—

Armstrong	24	Reblin	23
Zellner	22	Butler	30

Colonel Armstrong, Colonel Butler, and Dr. Zellner next shot a twenty-five bird sweep, at the same rise and on the same conditions as the above. The result was as follows:—

Armstrong	23	Butler	20
Zellner	22		

NEW YORK—*Geddes, July* 17.—The North Side Farmers, of Geddes, against the Village Boys, of Geddes; the losing party to pay; 10 men a side; 5 birds, 5 balls:—

VILLAGE BOYS.	Birds.	Balls.	FARMERS.	Birds.	Balls.
Ed. Earl	2	3	C. R. Steves	4	3
A. M. Smart	1	3	George Steves	4	3
E. Klock	5	3	Ike Steves	5	2
George A. Cool	1	2	Ross Steves	3	2
Ben Randall	3	3	Steve Winchel	5	1
A. Howlett	2	3	Cal Lockwood	5	3
George Gere	2	2	M. Hall	3	2
H. Bronson	5	1	Ike Winchel	4	2
D. Case	2	3	Clay Brand	3	3
Roda Rogers	4	4	James Bennett	3	4
Total	27	27	Total	39	25

NEW JERSEY—*Morgans, July* 26.—Match between S. De Long, of Brooklyn, and J. B. Sanford, New York, at 25 yards rise, H and T traps:

De Long—* 1 1 1 1 0 1 1 1 1 1 1 1 1 * 0 1 1 1 1 * 1 0 1 0 1 1 0
1 1 1 1 0 1 1 1 1 0 1 0 1 0 1 0 1 1 1—killed 38, missed 12.
Sandford—1 1 1 1 1 1 1 1 1 1 * 0 1 0 1 1 0 0 1 0 1 1 0 1 1 0 1 1 0 0
0 1 1 1 1 1 0 1 1 1 0 1 1 0 1 0 0 1 1 1—killed 34, missed, missed 16.

NEW JERSEY—*Bergen Point, July* 23.—Meeting of New York Sportsmen. In a 10-bird sweep M. M. Martin won first money, killing 9 at 29 yards; C. K. McLean won second money, killing 8 at 27 yards, and H. T. Thomas won third money. In another 10-bird sweep, Haswell, at 20 yards, won first money, killing 9; Mr. Davids and Mr. Dart tied on 8 birds at 29 yards, resulting on the shoot off in Mr. Davids' winning second money and Mr. Dart third. H. S. Dart then shot a 20-bird match with H. F. Davids for the birds, at 30 yards, five traps:—

Dart—1 1 1 1 1 0 1 1 0 1 1 1 0 1 1 1 1 1. Killed, 17.
Davids—1 0 1 0 0 1 1 1 1 1 1 1 1 1 1 0 1 1. Killed, 16.

—A Glass Ball Tournament, open to all comers, will be held on the grounds of the Columbia Rifle Association, at West End, N. J., on Thursday next. Shooting will begin on arrival of train on Erie railroad at 10 A.M., from foot of Chambers street, New York.

First Event—Twenty-five single balls.

Second Event—Sweepstakes at twenty-five single balls. Entrance fee, $2.00.

Third Event—Sweepstakes at ten pairs of double balls. Entrance fee, $2.00.

Fourth Event—Classified sweepstakes at ten pairs of double balls. Entrance fee, $2.00.

Fifth Event—Classified sweepstakes at twenty-five single balls. Entrance fee, $2.00.

Sixth-Team Match—Open to teams of four from any Club or Association. Entrance, $10.00 for each team.

PENNSYLVANIA—*Catawissa, July* 22.—Score of eighth shoot of Catawissa F. & G. P. Club; Cards rotary trap; 18 yards rise:—

G. W. R.

CORNING VS. DANSVILLE.—The Corning Gun Club of Corning, N. Y., challenged the Dansville Sportsmen's Association to a home and home shooting match, with teams of ten each, twenty single rises. The first match was shot at Corning, on Friday, July 25. The Dansville Club wining after an exciting contest. At the close the score was a tie, which was shot off with five extra rises per man. After the regular match a couple of sweepstakes were indulged in. In the absence of birds glass balls were used. The return match will be shot at Dansville, August 5. Appended is the full score:

THINGS TO BE REMEMBERED IN ARCHERY PRACTICE.

When Mr. Horace A. Ford said that there are "about twenty-four little things to be remembered" every time an arrow is shot, he came near the truth, but beginners would have reaped more benefit from his book if he had given the twenty-four things in their order. Without being sure that I have not omitted several important things, I will give my idea of the twenty-four chief things to be remembered. Taking it for granted that the archer has a good bow in his hand, a fine string properly lapped in the middle, with the nocking point plainly marked, and standing at least six inches from the belly of the bow; a good quiver belted round his waist containing three finest arrows; a green woolen tassel hung to his belt; a good arm guard neatly buckled on, and closely fitting finger gloves upon the three first fingers of his drawing hand, and a closely fitting, rimless cap upon his head, then the twenty-four important things come somewhat in this order:

1st. Let the feet be flat upon the ground with the heels six inches apart, the left toe pointing forty-five degrees to the right of the mark, the right toe pointing ninety degrees farther to the right, so that in shooting south, the left toe points to the southwest, the right to the northwest.

2d. Grasp the bow with a firm but easy hold by the handle with the left hand, and hold it about one foot from the left thigh, the left forefinger closing round even with the top of the handle, the thumb closely bent round the inside of the bow.

3d. Draw the arrow from the quiver by taking hold of it just below the feathers, and pass the point over the string and across the bow just above the handle till the arrowhead extends ten inches beyond the bow. Raise the left forefinger and place it over the arrow to hold it in place until the right hand is shifted to the nock of the arrow. Take hold of the nock with the thumb and forefinger of the right hand, pass the arrow forward (slightly lifting the left forefinger) until the nock reaches the string, when the cockfeather (the one which is put on directly at right angles to the nock) should be turned to the top and the nock placed exactly upon the mark upon the string.

4th. Hook the fingers around the string so that the string will draw upon their tips about half way from the

crease of the first joint to the extreme ends, holding the arrow nock between the first and second fingers.

5th. Do not touch the arrow or string again with the thumb.

6th. Turn the face over the left shoulder, squarely fronting the mark.

7th. Holding the bow and string as above advised, raise the whole until the left hand is on a level with the gold of the target, and *while raising*, draw the string back until only about six or eight inches of the arrow are beyond the bow.

8th. Fix the aim over the end of the arrow upon the centre of the gold, quickly and without a noticeable pause in the steady draw, pull smoothly back until the nock of the arrow comes under the point of the chin.

9th. Steady the aim by an almost imperceptible pause, in which the point of the arrow at full draw seems to be, or should seem to be, covering the centre of the gold.

10. Loose by *straightening the fingers*, and at the same time *drawing them back* off the string.

11th. In drawing do not pull the string *sideways* but straight back from the centre of the bow.

12th. Do not jerk, but pull steadily throughout.

13th. When at full draw the left arm—the arrow—and the right arm from the drawing fingers to the elbow must be in a straight line.

14th Of course the aim will only be over the point of the arrow and *upon the centre of the gold at one particular distance for each archer.* This is called the *point blanc* range, and is usually for a fifty pound bow, about sixty yards. In other words, at the one particular distance the point of the arrow will seem to cover the centre of the gold, just as the sight of a gun will seem to do.

15th. If the distance is greater, say eighty yards, the "point of aim," or the spot to be covered by the point of the arrow, will not be the gold, but a point perhaps several feet above the top of the target. Having selected this point of aim to the best of the judgment at the first shot, note carefully just how much the arrow goes above or below the centre of the target, and change the point of aim accordingly.

16th. Be sure to draw the string *always*, and for *all ranges*, to the same spot just under the chin.

17th. Make the difference in the elevation always by *raising* the left hand and correspondingly dropping the *right elbow*, raising the fingers of the right hand drawn under the chin as the fulcrum.

18th. See each time that the arrows are free from a particle of clinging earth. Rub them with the tassel before putting them in the quiver.

19th. Keep the sleeve of the left arm closely about the arm so that the string shall never *touch* it.

20th. Hold the left arm extended for a moment after the arrow has gone. This will apprise the shooter of any motion made by the bow hand at the moment the loose is made—a very common fault.

21st. See at each shot that the arrow is still *straight* before putting it into the quiver.

22d. Stand straight, not stiffly, but easily, the weight resting equally upon both feet.

23d. Do not be in a hurry, but see where one arrow strikes before preparing to shoot another.

24th. Never suffer yourself to become vexed at your poor shooting, or exclaim *in any way* at the unfortunate result of a shot. It is very tiresome and annoying to hear a shooter continually calling attention to his unlucky shots, and offering some weak excuse therefor. Shoot your three arrows in silence quietly, and without ostentation, note where they each struck, and step aside for the next archer.

These rules do not all come *seriatim* as the operations of archery are performed. Some of them are general, some special, but all are true. Of course they only apply to target practice, at fixed distances, for in shooting at game one cannot fix a "point of aim," and must then draw, not under the chin, but to the right ear, look squarely at his mark and shoot where the *mind thinks* is right. And rounding the series of rules above given might well be added the advice of Ascham: "Nock evermore alike; Stand evermore alike; Draw evermore alike; Loose evermore alike," if you would always hit the mark.

WILL H. THOMPSON.

CRICKET.

STATEN ISLAND (2D.) VS. GERMANTOWN (2D.)—The Staten Island's second eleven went to Philadelphia on the 15th inst. to play the Germantown's second on the following day. With the thermometer 102° in the shade, the Island team turned up on the Nicetown grounds on the morning of the 16th, and after a hard day's battle won a victory by 15 runs. Play was commenced at 10:55, the visitors in the field. The heat was positively terrific, and there was not a breath of air to give relief. Before the home team could be got rid of they had scored 111 runs; the poor fielding and misses of the Islanders enabling them to score with impunity. The side should have not got over 70. At 2.15 the S. I. went to the wicket. Nine men were out for 93; but the fine stand made by the last two bats pulled the match out of the fire for their side, the innings closing for 126. The following is the full score:—

GERMANTOWN VS. CHESTNUT HILL.—On the 19th, first eleven of these clubs met at Nicetown. The feature of the game was the fine bowling of Henry Hargreave (second eleven). The score will show that the home club won by an inning and 106 runs:

GERMANTOWN—FIRST INNING.

YOUNG AMERICA (2D.) VS. STATEN ISLAND (2D.).—The second match of the Island's second eleven trip to Philadelphia was played at Nicetown on the 17th inst, and resulted in the defeat of the visitors. The heat of the previous day had completely prostrated many of the Island team, and their fresh adversaries had, in consequence, an easy walk over. The day was cool, and a pleasant breeze from the N. W. made the play enjoyable. At 11, the Islanders, having won the toss, went to the bat and scored only 60 runs, of which Satterthwaite contributed 16, and Outerbridge 13, after being badly missed at 5. The bowling and fielding of the home team was first-class—only the one chance referred to not being taken. Then began one of the most absurd exhibitions of cricket that probably was ever witnessed on the Germantown grounds. There were no end of "cuts to leg," "pull backs," and "leg hits to the off," made by the Y. A. swipers. Mr. James Eyre bowled like a charm; and, had the field supported his bowling, he would have cooked the Young America's goose in short order. In three successive balls did our "Our Jim" find his way to the enemy's wicket, and the clinking of the tins, as the small boys changed the telegraph, was the only sound that disturbed the death-like silence which prevailed during that exciting portion of the game. Catch after catch was dropped, and the hot balls were gently fanned by the hands through which they passed. Even in the heavens there were "Nine rolling suns to blind"—two more, and each player would have had one to point at after dropping the ball. It seemed as if those from the "The island of the sea" were vying among themselves which could display the worst fielding average. The quickness and dexterity with which they "ducked" and "dodged" the catches, however, partially assured the spectators that the fielders were not wooden images or plaster-head nodding mandarins. It was painful to see the ghastly look of astonishment depicted in the faces of the Germantown youths, when this "merry lot of muffins" got fairly under way; but Heaven forbid that this is intended to tread on the toes of any *one* particular man! At last when the score had mounted to 226, three times as great as it should have been, Pease having been missed first ball, and the other double-figure having been missed first ball, and the other double-figure men early in their innings, the Jack-in-the-box performance and venture of the home club came to a rather sudden end, and the Young America boys having howled themselves hoarse trotted off to their respective homes, to recount to their "sisters and cousins and aunts" how the "Yorkers had been done *Brown*. Score:—

WILLIAMSBURGH ATHLETIC CLUB.—This club will hold games at their grounds, Bedford avenue, Rutledge and Hayward streets, Brooklyn, E. D., August 16, at 5 P.M. The following handicap events will be open to all amateurs: One mile walk; one mile run; half mile run. Entries close August 12, 1879. Gold and silver medals in each event, except 220 yards run—one silver medal.—JOHN WOOD, Jr., Secretary, 52 South Tenth Street, Brooklyn, E. D.

BUGS AROUND THE SUN.—Our lurid contemporary, the daily *Sun*, has an electric light in front of its office which throws its own natural effulgence quite in the shade. One of its effects is to attract myriads of bugs and beetles into the editorial rooms and printing office. They swarm all over the desks, galleys, cases, and forms to such an extent as to interrupt work. The foreman and his assistant are kept constantly busy mashing them with mallets, while the office boy is combing them out of the night editor's hair. One day last week the paper was delayed several minutes in getting to press. Every handful of type had a crust of bugs on it which had to be brushed off before it was lifted, and the stones had to be brushed again before the type could be set down. When the forms came to be sent to the press-room below, the leaves of the enclosing box were clapped together as quickly as possible; notwithstanding all this pains, when the box was opened below the foreman discovered 451 bugs and beetles, of which 437 were coleoptera, and seventeen of them entirely new species. He immediately notified Professor Holden, of the Park Museum, by telephone, and sent a special messenger to Professor Edison to devise means to abate the plague.

Hereafter, when we see spots on the *Sun* we should know they are bugs.

"Look at Charles L. Ritzmann's list of second-hand guns, advertised in this issue."

Publications.

NEW BOOKS.

OCEAN WONDERS: A COMPANION FOR THE SEASIDE.—By William E. Damon. New York: D. Appleton & Co., 1879.

We take pleasure in commending this book as one which will serve to attract attention to the common science of the seashore. The forms of animal life here discussed are such as are obtainable by almost every seaside visitor; and many of them fitted for aquarium culture, to which the author has given especial attention.

BODINES; OR, CAMPING ON THE LYCOMING, A COMPLETE GUIDE TO "CAMPING-OUT." By Thad. S. Up De Graff, M. D. Philadelphia: J. B. Lippincott & Co., 1879. Price, $1.50.

Some weeks ago in a note of this book, then in press, we predicted that it would be received with special favor by anglers and the great fraternity of those who camp out. We are in no wise disappointed either in the book or in its reception. "Bodines" is a book thoroughly enjoyable, from the illumination upon its cover to the last page of the advertisements in the back. The author, in whom our readers will recognize a frequent contributor to the angling columns of the FOREST AND STREAM, has for the past eight years tented upon the banks of lovely Lycoming. In these pages he gives us what we may term the practical results of this long camping out experience, so that we have here besides many pleasant chapters of narrative description, complete and explicit directions regarding outfit, necessary camping utensils, construction of camps, and all the other varied information sought by the novice.

We welcome Dr. Up De Graff's book as an addition to the rapidly increasing store of American local angling literature. Well written sketches of this character are worthy of the permanent character of book form. They have a mission of their own in so picturing the pleasures of the woods and streams that the reader may be led to go and do likewise.

COLORADO: ITS AGRICULTRE, STOCK-FEEDING, SCENERY AND SHOOTING.—By S. Nugent Townshend, J. P. London: "The Field" Office, 1879. Price, 2s. 6d.

Mr. S. Nugent Townshend, for sometime the American correspondent of the *London Field*, contributed to that journal during the years 1876, '77 and '78, a series of valuable papers upon Colorada. These papers have been revised and brought up to date; and are now published in book form under the above title. Besides giving to it the character of a book of travels, the author has evidently aimed to incorporate much information for the intending immigrant, to whom we may commend the work.

THE ADIRONDACKS: ILLUSTRATED.—By O. R. Stoddard. Glen's Falls, N. Y.: Published by the Author, 1879.

There was a time when a man might go into the Adrondack wilds and find himself severely lost, without much chance of anyone else ever finding anything but his bleached skeleton up in a tree. That time has gone by. It is no longer possible to be lost in the North Woods provided the stranger in those parts avail himself of the numerous guide books to the country. To lug all the Adirondack books into the woods would require a special guide or a pack mule; but if the seeker after game be not a particularly stupid being, he may find his way safely out of the wilderness if he take no more than half a dozen of these guide books. The latest addition to this useful catalogue is Mr. Stoddard's, illustrated and accompanied with maps. It has the advantage of being up to date and containing the latest information.

OUR AUTUMN HOLIDAY ON FRENCH RIVERS. —By J. S. Malloy. Boston: Roberts Brothers. Price, $1.25.

Two young professional gentlemen of London off for a holiday, rowing their boats over the rivers of France for sight-seeing and recreation, have enough queer experiences to fill this little book with a most entertaining narrative. Ever since Sterne made his "Sentimental Journey," travelers have found abundant literary material in France. There is just enough of sentiment in this book, with humor and seriousness, to make its perusal pleasant occupation for August weather.

TRAVELS WITH A DONKEY IN THE CEVENNES. —By Robert James Stephenson. Boston: Roberts Brothers. Price, $1.

Because a man can write an exceedingly clever book is no reason why he should excel as a donkey driver. Our author has written the book; he did not drive the donkey. He did succeed in displaying a truly heroic faculty for falling into trouble, and equally heroic ingenuity in extricating himself from a thousand and one predicaments. Mr Stephenson's ass deserves a place beside Balaam's.

TROUTING ON THE BRULE RIVER.—In the notice of this book, last week, by an error of type, the author's middle name was mis-printed. It should have been John Lyle King.

Messrs. Peck and Snyder have imported a number of copies of Hansard's "Book of Archery," for which we should presume there would be an especial demand among the devotees of the newly popular sport. Hansard's book contains about all there is to be read on the subject. The same firm supply "The Archer's Register for 1879," which contains a full annual register of all archery work in England; and James Lilly White's "Cricketer's Annual."

E. S. Farrow has revised his hand-book, "West Point and the Military Academy," and a second edition of the book has been issued by Orange Judd & Co., 245 Broadway. The author aims to give in compact form all the information naturally desired by those about to enter the Academy; embracing a particular statement of all requirements for admission, and the work of the course.

THE AUGUST MAGAZINES.

The *Eclectic* has as a frontispiece this month, a portrait of Prof. James D. Dana of Yale College. The selections from English periodical literature are made with the same good taste usually characterizing the *Eclectic's* contents.

Lippincott's devotes the place of honor this month to an illustrated paper upon the Catskills which is a much more agreeable article for mid-summer than the second of the "Summerland Sketches" in the same number. The fiction comprises installments of "Through Winding Ways," That Last Rehearsal," "Women's Husbands," "The Death Rain," and "A Narragansett Idyl. Miss Annie Porter continues to chat about "My Village in the South," and other papers of an entertaining and instructive nature make up an excellent summer number.

The *Atlantic* discusses American Preaching, and although the name of the writer is not given, we may congratulate him upon saying a great many good things, and saying them well. The fiction, literary papers and poems, are of *Atlantic* character. In the Contributor's Club, to which we always turn first, is the usual quota of spicy communications.

Scribner's appears as a mid-summer holiday number. There are 160 pages, and we have not counted the illustrations, of which the most important one is the protrait of Whittier which forms the frontispiece. An illustrated paper on "Summer Entomology" is timely and valuable. The long table of contents includes stories, sketches and essays by many favorite writers. We have always regarded *St. Nicholas* as a young brother of this magazine. The August number contains a score of papers, some instructive, some grave, others funny, and all healthful.

The *Magazine of Art* contains the usual number of cuts and accompanying articles.

The *American Naturalist* opens with a paper on the "Adjectives of Color in Indian Languages." Mrs. Mary Treat describes "The Habits of the Tarantula;" Warren Upham discusses "The Formation of Cape Cod," and the concluding article is descriptive of "The Geological Museum of the School of Mines, Columbia College."

Harper's has an admirable paper by Mr. Benjamin, on "Lake George," which is very comprehensive in its illustrations of the picturesque scenery of that famous region; "Snug Hamlet and Hometown" is also noticeable for its illustrations; Mr. Rideing describes the nautical schoolship St. Mary's; D. Loring has an important paper on the "Consequences of Defective Vision." Other papers discribe the "Chatagua Sunday-school Association." and "Japanese Rock Crystal;" and William Brown has an essay on "The Foreign Indebtedness of the United States." The fiction of the number is varied and excellent.

The Popular Science Monthly has the usual number of articles upon scientific subjects. By reading this magazine one can keep fairly abreast of the day. The editors have done much to popularize scientific and technical information.

The only accredited American written article in the August number of *Appleton's Journal* is a story by S. G. W. Benjamin, entitled "Out of the Depths." The selections from the English magazines are varied, comprising the work of such writers as Walter Besent and James Rice, D. C. Macdonald, Francis H. Grundy, Matthew Arnold, the Earl of Dunraven's very well written description of "Moose-hunting in Canada," etc. The Editor's Table discusses "Patriots Abroad," "The Wisdom of Leaders," "The Poetry of Distance," and "The Objective Novel."

jy31 1t

FOR SALE.—Full blooded Gordon Setter Bitch; very handsome and kind to children; in color, black and tan; not a white hair on her; was broke on quail; is good on woodcock and snipe. Lowest cash price, $50.

Lemon and white Pointer Dog, 16 months; has been hunted and handled; some retriever, and charges at word of command.

Gipsy Irish Setter Bitch, sired by Rodman's Dash, the best Irish dog of his day.

Pups out of France, sired by the Llewellin setter Brussels, full brother to L. H. Smith's celebrated Paris, he got by Leicester and Dart. These pups must make good ones for the field. France's pups turn out first-class. H. B. VONDERSMITH, Lancaster, Pa.

FOR SALE.—The imported Setter Bitch Mollie, in whelp to Irish setter Czar. Mollie is staunch, drops to shot, retrieves, etc. She is litter sister to Mr. John E. Develin's Moya. For further particulars address DAVID G. HARTT, Northport, L. I.

FOR SALE.—A brace (dog and bitch) of imported English Setters, 16 months old, orange and white in color, with black noses and eyes; sired by one of the best dogs in England (pure Laverack), and are out of a bitch belonging to a strain of celebrated field trial winners. Have never been shown and are now in the hands of a breaker; will be sold reasonably. Full particulars can be obtained by addressing the Kennel Editor of this paper. jy31 1t

The Kennel.

BROKEN SETTER—Three years old, for sale. A red and white setter dog, broken on woodcock, quail, and ruffed grouse, fast, busy worker, no day or week too long for him; keen scented, and as staunch as a rock. There is no stauncher dog; will hunt and point any game bird staunch, retrieving from land and water. Will be sent on trial to responsible parties paying express charges. Sold for no fault. Price, only $45. Address, W. H. PIERCE, Peekskill, N. Y.

Jy 31, 1t.

For Sale.

FOR SALE.—Finest No. 10 bore Hammerless gun; complete trouting and camping outfit; double glass ball trap; all good as new and far below cost. Address "SPORT," P. O. box 527, Pittsburgh, Pa.

STEAM YACHT FOR SALE.—At a great sacrifice—21 feet long, 6½ beam, 3 feet deep. Upholstered; lined with awning. 3 horse engine and boiler. Carries 20 passengers. Speed 8 miles an hour. GEO. F. SHED, Waltham, Mass.

FOR SALE CHEAP.

A VERY FINE W. & C. SCOTT & SON MUZZLE LOADER, 7¼ lbs, 30-inch, 11-bore; costing new $100. In perfect order and an excellent shooter. Price, including leather case, $35. L. H. COE, Hartford, Conn. jul24 1t

Best Six-Section Black Bass Minnow Rods,	45
Same, without full metal reel plate,	40
Best Six-Section Grilse Rods,	60
" " Salmon Rods, (according to length)	65 to 75

Second quality, which we guarantee equal to any except our own Best, 25 per cent. less than corresponding calibres of our Best.

It is impossible to remain long sick when Hop Bitters are used, so perfect are they in their operation. For Weakness and General Debility, and as a preventive and cure for Fever and Ague, nothing equals it.

USE HOP BITTERS.

Balmy sleep, good digestion, rich blood and perfect health in Hop Bitters.

A little Hop Bitters saves big doctor bills and long sickness. Cures Drowsiness, Biliousness pains and aches.

CURE BY ABSORPTION.

"SAPANULE."

THE GREAT EXTERNAL LOTION AND FLUID ABSORBENT. Nature's Remedy Applied by a Natural Method. Used in Sponge or Foot Bath it Immediately Relieves Pain and Soreness of Body and Limb from whatever cause. It also brings a refreshing coolness, and destroys offensive perspiration. It is the only Lotion offered to the public to be used through the Bath. "SAPANULE" is a sure and specific remedy for Rheumatism, Neuralgia, Lumbago, Headache, Burns, Scalds, Bruises, Sores, Piles, Boils, Chilblaines, Bunions, Corns, etc. Cures all Eruptive Disorders of the Skin, leaving it smooth and soft. Soreness or Inflamation of Feet from whatever cause, immediately relieved and permanently cured by using "SAPANULE" in Foot Baths. "SAPANULE contains nothing injurious to the most delicate organism, and can be used with perfect safety by all. Recommended by physicians of all schools, and by thousands who daily use it and find relief. Satisfaction guaranteed or money refunded.

TESTIMONIALS.

FROM THE PRESIDENT OF THE AMERICAN SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

HEADQUARTERS OF THE SOCIETY,
FOURTH AVE., COR. 22d ST., New York, March 4, 1879.

MESSRS SAMUEL GERRY & CO.:

A lotion ("SAPANULE") manufactured by you has been given me for the purpose of testing its curative effects on mankind and animals. I have not yet had occasion to apply it to the latter, but I have done so to myself, and have received immediate relief. Being an animal myself, I have every reason to believe that brute creatures would experience similar benefit from its use. This Society will so employ it whenever the necessity shall present itself, and, in the meantime, I commend it to the patronage of all having need of relief from suffering.

HENRY BERGH, President.

MESSRS SAMUEL GERRY & CO.:

For several years I have been troubled with a humor on my face under the skin. I commenced using "SAPANULE" in water whenever I washed my face. After using two large bottles, my complexion is clear and the skin smooth. I have also found it very strengthening. Shall always keep it and use it.

MRS. W. H. KINSLEY, 158 West 22d St., New York.

FROM HON. JOHN BEATTIE.

SAMUEL GERRY & CO.:

GENTLEMEN: I was troubled with a lame back of eight months' standing. At times the pain was almost unbearable. I decided to try "SAPANULE." Three applications cured me. I have recommended it to several persons for rheumatism, and it has always proved a success. You can refer to me. Respectfully,

JOHN BEATTIE, Providence, R. I.

MESSRS SAMUEL GERRY & CO.:

GENTLEMEN: Recently I took a severe cold, which settled all over me. For three days I sufferred intense pain and soreness of body and limb. Was fearful I would have a fever. By advice of a friend and fellow-boarder I procured a bottle of "SAPANULE," and used a portion in a hot bath. In thirty minutes I was as well as ever before in my life. Too much cannot be said in praise of "SAPANULE."

Truly yours, N. ORMS, 59 West 22d St., New York.

The proprietors will furnish over one thousand testimonials, if desired, from reliable persons who have used "SAPANULE" and like it.

PRICE, 50c. and $1.00 per bottle.
SOLD BY ALL DRUGGISTS.

OF 1879.

Distancing all his Competitors-Greener, Malcham (Scott's), Lesson (Webley), and the Whole Competition.

"In the second class for 16-bores Mr. Green distanced his competitors in all the three classes, beating Mr. Greener's 12-bore by 32-23 points—a most marvelous performance truly. In the third class for 20-bores, Mr. Green again beat the winning 12-bores."—Editorial London *Field*, May 10.

ALSO MANUFACTURERS OF THE BEST PLAIN BALL IN THE MARKET.

Office of the Bohemian Glass Works, 214 Pearl Street, New York.

Attention, Sportsmen!

Kay's Improved and Perfected Ball for 1879.

[PATENTED OCTOBER 13, 1877.]

A SUBSTITUTE FOR GLASS.

HAVING succeeded in producing a Ball for professional and amateur use at the trap, we offer the same with the following recommendations, viz: In breakage, the equal and superior to any glass; Uniformity, being of an exact uniform thickness of 1-20th of an inch, is superior to any blown material; Durability, is not affected by their solubility; Residuum, can be used anywhere, and on finest lawns, leaving neither injurious or unsightly refuse. Packed in barrels by a device peculiar to us, we guarantee against breakage in shipment. For particulars see circulars. Price, $2 per 100. All orders addressed to dealers, or **A. B. KAY & CO.,** Newark, N. J., Manufacturers of Buck and Heavy Drop Shot, Cartridges for Long-Range, viz.: Deer, Duck, and Geese, $3 50 per 100; also, the Chip or Expansive Concentrator, $1 25 per 100. A box of 50 sent on receipt of 75 cents by mail.

THE CARVER TARGET BALL.

[CAVEAT FILED.]

GREENVILLE, PA., May 26, 1879.

DEAR SIR:—We take pleasure in notifying all admirers of Target and Ball Shooting that we have introduced a COMPOSITION TARGET BALL for Trap Shooting that is perfect in every particular. It has been thoroughly tested by many of the leading Sportsmen, and pronounced by all as the only perfect and unobjectionable Target Ball in existence. This Ball is very uniform in weight and standard size, and when broken leaves no *debris*, but will EVAPORATE in five days and acts as a FERTILIZER. They can be used on Lawns, Gardens, Fields or Parks, thereby doing away with the danger and annoyance consequent in using Glass Balls. We are now prepared to fill orders. Drafts or P. O. Order must accompany all orders. Organized clubs are invited to send for Sample Box, (25 balls) and Circular free. J. H. WAUGH, Inventor.

PRICE LIST—Per thousand, $12. No charge for packages. Address

CARVER TARGET BALL CO., Greenville, Mercer Co., Pa.

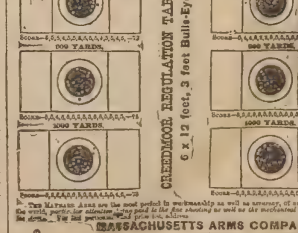
Maynard Creedmoor Rifle

THE MAYNARD AHEAD!

The following Targets were made by Prof. Chas. E. Dewese of Wheeling, West Va., on Range August 13th and 15th, 1878, with a *Maynard Long Range Rifle*, and are the MARKS-OF RECORD. The grand total of 497 is a possible 500, and about as few ties never before been accomplished by any Rifleman, or Rifle, in the world.

Those scores were made in the competition for position on the American Team for 1876; and were taken citizens of the United States, and were also before the rules of the N. R. A. Four re-sighting shots at either distance. These scores were all examined and sworn to by Judge [illegible], Secretary *Maynard Rifle Club*, Wheeling, West Va.



The Maynard Arms are the most perfect in mechanism as well as accuracy, of any rifle in the world, perfect for offhand shooting or used as all mechanical principles are the best. We are prepared to fill orders promptly. Send for illustrated price list, with full directions.
